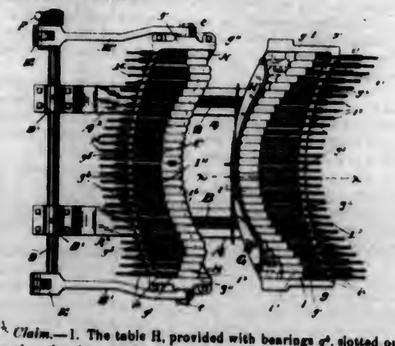
2. In an indicator-lock, the combination, with the locking mechanism, of rotating indicating mechanism provided with exposed characters, said mechanism being loosely mounted and having no definite limit to its forward movement, an actuating-spring carrying a dog engaging the indicating mechanism, and a bar connecting said spring with the lock, whereby as the lock is operated the spring is placed under tension and suddenly released, acting on the indicating mechanism through the medium of the dogs, substantially as described.

3. In an indicator-lock, the combination, with the locking mechanism, of the rotating indicating mechanism, a spring acting on said mechanism, a bar connecting the lock with the spring, and a bell-crank locking-lever connected with said bar and adapted to engage the indicating mechanism, the connection between these parts being such that as the lock is operated the locking-lever is released from engagement with the indicating mechanism and the spring placed under tension and released, substantially as described.

4. The combination, with a locking bolt, of a plural number of independently-rotating disks provided with exposed characters, a spring, a bar connecting the bolt with the spring, and dogs connecting the spring with the disks, whereby as the bolt is manipulated the disks are subjected to an uncontrolled or chance adjustment, substantially as described.

483,093. COIN-OPERATED VENDING-MACHINE. WILLIAM B. ENGLER, Washington, D. C., assignor of one-half to Miles S. Handley, Waverly, N. Y. Filed Apr. 5, 1892. Serial No. 427,988. (No model.)



Claim.—1. In a coin-controlled vending apparatus, the horizontal sliding gates guided on suitable supports, the vertical shaft having rigid horizontal arms extending in opposite directions, the elongated slot and pin connections between said gates and arms, and the push-rod connected to an arm on the vertical standard, all combined substantially as described.

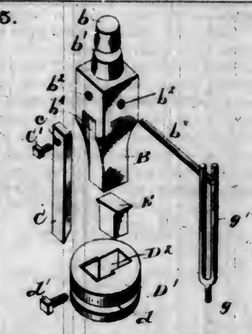
2. The vertical rock-shaft and its operating lever and rod, the slotted arms extending in opposite directions from said rod and at different elevations, and the sliding gates connected to said arms by slot-and-pin connection, each gate slotted in the direction of its line of movement, and having a plurality of guide-pins projecting into the slot, whereby the gates are guided in right lines of movement without regard to the movement of the arms, all combined substantially as described.

3. The vending box or compartment having cut-off gates and operating means therefor, substantially as described, the partition through which said gates operate of size to receive the end of the box *f*, and the springs 38 on the wall of the compartment, tending to press the box *f* against said partition and the box-retaining catch 39, all combined substantially as described.

483,094. MACHINE FOR BENDING AND FORMING SPRINGS. EDWARD W. ARMSTRONG, Connersville, Ind. Filed Oct. 29, 1891. Serial No. 410,373. (No model.)

Claim.—1. The table H, provided with bearings g^3, slotted openings g^4, and end projections g^5, bending-bars l^4 with heads l^5, rods l^3, collars l^2, springs g^7, and sliding boxes M, together forming the sliding frame C, in combination with the table H', bearings g^3, end projections g, bars l, with heads l^5, rods l^3, collars l^2, and springs g', together forming the stationary former G, and the slide-bars B, substantially as and for the purposes set forth.

2. The combination of the sliding frame C with a stationary former G, each having a series of bending-irons capable of adjustment to conform to the shape of the spring to be bent and held from longitudinal movement by an upwardly-projected flange integral with or secured to the bed-plate of the machine, said flange being slotted vertically to allow the end of the bending-irons to be dropped into place therein, and easily removed in adjusting the length of the irons, substantially as described.



3. In a machine for bending vehicle-springs, the bearings g^3 and g^5 with slotted openings to receive the rods l^3 and l^4, whereby the bending-rods may be easily and quickly adjusted, in combination with the bending-rods l^3 and l^4, having suitable heads to contact with the leaf of the spring being bent, mechanism for impinging the leaf between the said heads by forcing the series of heads on opposite sides of the leaf together, and a suitable framework to connect and support the several parts, and a steel blank to be bent into the leaf of a vehicle-spring.

4. The combination of the sliding frame C, having adjustable bending-irons with a stationary former-frame G also having adjustable bending-irons, said former and frame each having upwardly-projected bearings with slots therein to receive the rods of the bending-irons, and said bending-irons for both sliding and former frames being constructed on the same pattern, viz: a four-sided elongated metallic head with a rod extension, and each of said rods being provided with a series of collars and a coiled spring, substantially as described and specified.

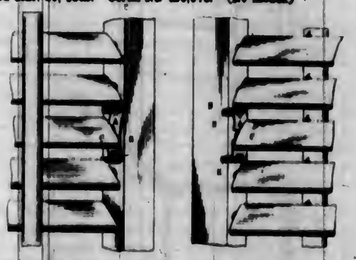
483,095. PUNCHING-MACHINE. THOMAS BARROW, Chester, Pa., assignor, by mesne assignments, of one-half to Robert L. Coursen, New York, N. Y. Filed Dec. 19, 1891. Serial No. 415,866. (No model.)

Claim.—1. A revoluble punch provided with a guide projecting into and constantly engaging a die of a punching-machine during its operation.

483,095.

2. A revoluble punch provided with a guide projecting into and constantly engaging a die of a punching-machine during its operation and a handle for turning said punch.

3. The combination, with the revoluble punch provided with a depending guide, of a die having a recess and a removable nib adapted to fit into said recess, substantially as described.



4. The combination, with a revoluble punch provided with a depending guide, of a revoluble die having a removable nib, said depending guide engaging the said die.

5. The combination, with a revoluble punch provided with a handle, of the guide *g'*, engaged by said handle, and the revoluble die, substantially as described.

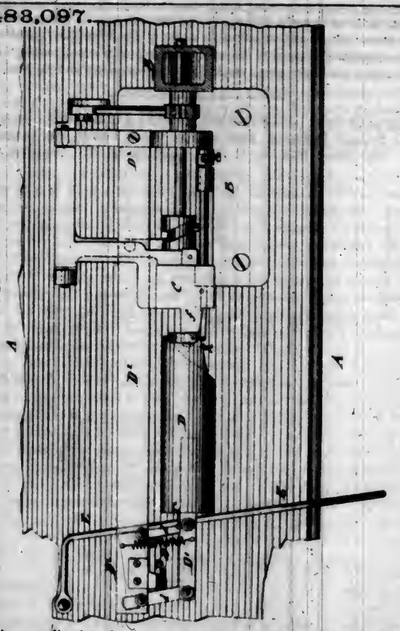
6. The combination, with the cross-head or sliding part of a punching-machine, of a revoluble punch having a groove around its head, a recess, and a guide secured in said recess, and a handle adapted to enter openings in said punch.

7. The combination, with the bed-plate of a punching-machine and a set-screw therein, of a revoluble die having a groove extending entirely around its periphery and a removable nib adapted to be placed in the opening in said die.

483,096. BLIND-STOP. FERDINAND BLAUER, New York, N. Y. Filed Mar. 29, 1892. Serial No. 426,978. (No model.)

Claim.—A blind-stop formed from a single plate of metal, curved as at X Y, for the purpose described, and provided with recess F to receive the pivot of the slat, legs D D to extend to the opposite edge of the shutter, and toes E E to take over said edge of the shutter, substantially as described.

483,097. ATTACHMENT FOR SEWING-MACHINES. ARTHUR A. BOOTH, Brooklyn, assignor to Julius Kayser, New York, N. Y. Filed Aug. 20, 1891. Serial No. 402,196. (No model.)



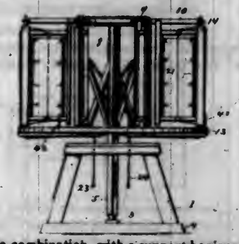
Claim.—1. The combination, with an organized sewing-machine having a needle-plate with a laterally-extending finger, of a cylindrical guide-tube arranged in line with the longitudinal axis of the needle-plate and provided with a horn extending over the finger of the needle-plate, substantially as set forth.

2. The combination, with an organized sewing-machine having a needle-plate with a laterally extending finger, of a cylindrical guide-tube having a cut-away inclined end adjacent to said finger and a horn extending over said finger, substantially as set forth.

3. The combination, with an organized sewing-machine having a needle-plate provided with a laterally-extending finger, of a cylindrical guide-tube having an inclined cut-away end adjacent to the needle-plate, and a projecting portion or horn extending over said needle-plate and means for moving said guide-tube away from or toward the needle-plate, substantially as set forth.

4. The combination, with an organized sewing-machine provided

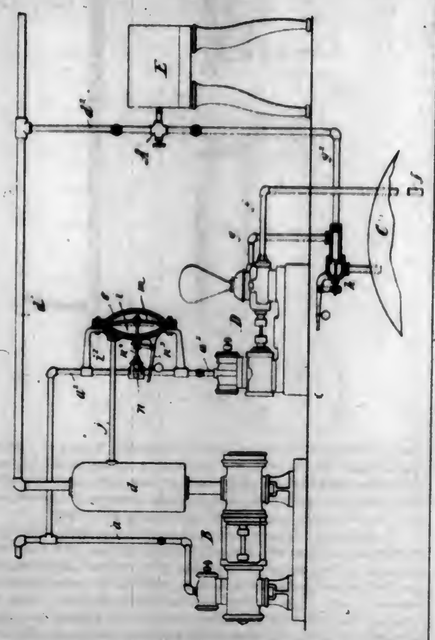
483,097.



with a needle-plate having a laterally-extending finger, of a guide-tube arranged in line with said needle-plate, means for moving said guide-tube away from said needle-plate or toward the same, and a stop for arresting the guide-tube when the same arrives in its normal position relatively to the needle-plate, substantially as set forth.

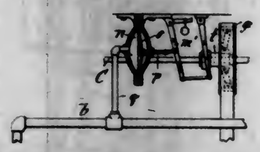
5. The combination, with an organized sewing-machine having a needle-plate provided with a laterally-extending finger, of a guide-tube arranged in line with said needle-plate, a longitudinal supporting-bar attached to said guide-tube, a fixed longitudinal bar, pivot-straps for connecting said supporting-bar with the longitudinal bar, a stop for arresting the guide-tube, and a bent lever that is adapted to engage a fixed pin on one of the pivot-straps and move the guide-tube away from the needle-plate, substantially as set forth.

6. In an organized sewing-machine for sewing the thumbs to the bodies of gloves, mits, or other articles, a cylindrical guide-tube for the glove or mit body, having its inner edge adjacent to the working parts of the sewing-machine arranged at a suitable inclination and provided at its upper front part with a forward-extending portion or horn that projects over the needle-plate in front of the needle, substantially as set forth.



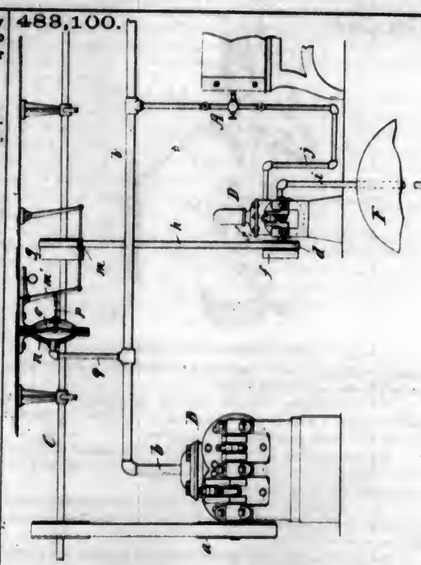
483,098. WIND-WHEEL. BOSTON BRASHER, Terrebonne, Minn. Filed Sept. 8, 1891. Serial No. 405,110. (No model.)

Claim.—The combination, with a support having a central guide-aperture in its top, of a vertical revoluble angular shaft having an apertured disk thereon contained in the said guide-aperture, whereby the said shaft is steadied, a frame removably mounted on the said shaft above the said disk and consisting of an upper and lower hub through which the said shaft passes, the said hubs having radial arms, an annular ring connecting the outer ends of the lower arms, pins projecting upwardly from the said ring to serve as stops for the sail-frames, posts having their upper and lower ends pivoted in the outer ends of the upper and lower arms, respectively, and a sail-frame carried by



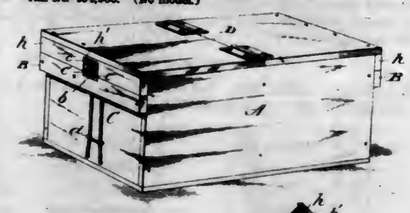
each of the said posts, having an upright adapted to be stopped by the upper arm, a sail mounted in each of the said frames, and two ropes attached to each of the said sails, the said ropes passing over the upper and lower arms, respectively, substantially as described.

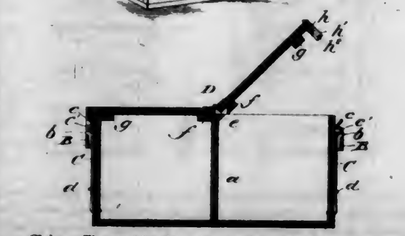
483,099. HYDROCARBON-BURNING APPARATUS. JAMES H. BULLARD, Springfield, Mass., assignor to the Aerated Fuel Company, same place. Filed Dec. 21, 1891. Serial No. 415,752. (No model.)



Claim.—In an apparatus for burning hydrocarbon, in combination, a hydrocarbon-burner, a supply-tank, a steam-driven pump having an induction-conduit leading thereto from the tank and an eduction-conduit leading therefrom for conveying oil to the burner, an air-compressor and a conduit for supplying air therefrom to the burner, a steam-pipe for supplying the working pressure to the oil-pump, having an automatic normally-closed valve therein, an air-chamber, one wall of which is constituted by a movable diaphragm, a medium of connection between the diaphragm and valve, and a pipe in communication with the air-compressor and the said chamber, and all arranged for conjoint action, substantially as set forth.

483,100. HYDROCARBON-BURNING APPARATUS. JAMES H. BULLARD, Springfield, Mass., assignor to the Aerated Fuel Company, same place. Filed Dec. 26, 1891. Serial No. 416,256. (No model.)

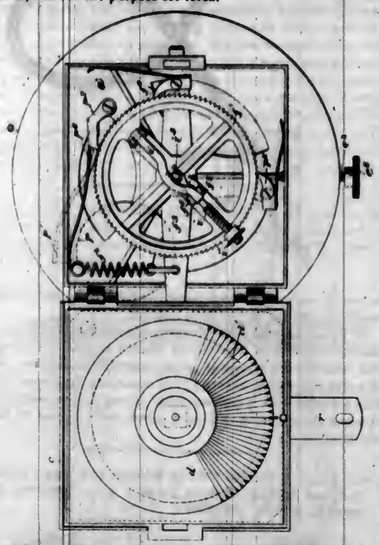




Claim.—In a hydrocarbon-burning apparatus, in combination, an injector-burner, an oil-tank, an oil-pump having a driving-shaft and having its induction-pipe leading from the oil-tank and its eduction-pipe leading to and serving the burner, a power-driven shaft and shiftable driving connections between same and the oil-pump shaft, an air-compressor and a conduit leading therefrom to the burner, and a chamber having air communication with the compressor, one wall of said chamber being constituted by a movable diaphragm, which has an engagement with the aforesaid shiftable connections, for the purpose set forth.

483,100.

483,101. CRATE. HENRY C. BURKHEAD, Summit, assignor of one-half to M. S. Van Meter, Meeting Creek, Ky. Filed May 31, 1892. Serial No. 434,965. (No model.)



Claim.—The combination, with a packing box or receptacle A, having at each end a spring-catch constructed substantially as shown, of a central partition having a beveled strip secured to its upper edge and a top or cover made up of two sections hinged together and provided with transverse stripes *f f*, beveled to lock with the beveled strip at the upper end of the partition when the cover is closed, and with end stripe having cross-bars with which the spring-catches carried by the receptacle engage, substantially as set forth.

483,102. FARE REGISTER AND RECORDER. CHARLES CROOK, Brooklyn, assignor to Eli Baldwin, New York, N. Y. Filed Nov. 30, 1891. Serial No. 413,453. (No model.)

Claim.—1. The combination, in a fare register and recorder, with the face or visible dial and the index-hand or pointer, a permanent recorder located within the outer casing of the instrument, consisting of a dial and a device for marking said dial, and a direction-indicator plate, of a main operating-shaft and means for connecting the same with the said index-hand, the marking device, and the direction-indicator plate, in a manner whereby the index-hand and the direction-indicator may be reset and the end of the trip be recorded upon said inner dial simultaneously at one operation of said main operating-shaft, substantially as described, and for the purpose set forth.

2. The combination, in a fare register and recorder, with the face or visible dial, the index-hand or pointer, and a shaft for carrying said index-hand, provided with an operating-wheel attached thereto, of a screw-threaded arm carried by said wheel, provided with a roll or wheel composed of one or more parts located thereon, forming a double-toothed periphery, one periphery being of greater circumference than the other and adapted to mark on a dial located within the outer casing of the instrument to record the fares and trips, respectively, and means for causing said marking device or wheel to press against the inner dial with different degrees of pressure to insure a single and a double mark thereon, as required, substantially as described, and for the purpose set forth.

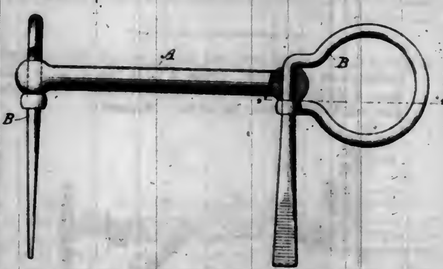
3. The combination, in a fare register and recorder, with the outer or face dial and the index-hand or pointer, a shaft for carrying said index-hand, provided with an operating-wheel secured thereto, and means for operating said wheel, of a disk or dial located within the outer casing of the instrument, a screw-threaded arm carried by the said operating-wheel and provided with a device for marking said inner disk or dial, a main operating-shaft provided with a cam or eccentric thereon, and connecting mechanism operated by the latter to cause said marking device to press against the inner dial with an increased pressure, substantially as described, and for the purpose set forth.

4. The combination, in a fare-register, of the index-hand provided with the pin or projection b^3 on its under side, projecting through an opening in the dial-plate in position to be engaged by the index-hand-resetting mechanism, means for giving the index-hand its forward step-by-step movement, and means for resetting said index-hand to zero, consisting of a gear loosely mounted on a shaft or stud to rotate thereon, provided with the yielding projection or catch *e'* for engaging said pin or projection b^3 on the index-hand, and an operating-shaft capable of rotation in one direction only, provided with a pinion having a fixed connection therewith adapted to engage with the said gear to move and reset the connecting index-hand, substantially as described, and for the purpose set forth.

5. The combination, in a fare register and recorder, with a direction-indicator plate centrally pivoted in the rear of and adjacent to the face or dial plate in position to be inspected through an opening in the latter and a trip hand or pointer, of mechanism for resetting said indicator-plate and trip hand or pointer simultaneously, consisting of a pivoted plate or disk provided with an arm for engaging said indicator-plate and with means for operating said trip hand or pointer, and means for rotating or operating said pivoted plate or disk, substantially as described, and for the purpose set forth.

6. The combination, in a fare-register, of a direction-indicator plate pivotally supported in the rear of the face or dial plate in position to be inspected through an opening therein and provided with a series of projections, an operating-shaft provided with an arm or projection, and a second shaft or rod provided with an arm or projection, both of said shafts being adapted for operating the indicator-plate, substantially as described, and for the purpose set forth.

7. In a fare register and recorder, the combination, with the index-hand or pointer, its pivoted operating-lever f^9, and intermediate connecting mechanism, the arms f^8, secured to said lever f^9, provided with the hook or catch at or near one end thereof, and the pivoted cam-lever f^6 for operating said lever f^9, of an alarm mechanism consisting of a bell and a pivoted bell-hammer adapted to be operated by the arm f^8, carried by the said operating-lever on the return stroke of the latter after moving the index-hand, the rebound of the bell-hammer being secured by a spring acting on the same, substantially as described, and for the purpose set forth.

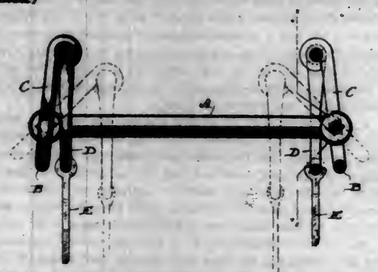


8. The combination, in a fare register and recorder, with the index-hand or pointer, the means for giving the same its forward step-by-step movement, and the means for resetting the same to zero, consisting of an operating-shaft and gear and an intermediate gear operated by the latter, having a catch for engaging the index-hand, of a centrally-pivoted direction-indicator plate provided with a series of peripheral sections, which are adapted to be engaged by an arm of the gear on said operating-shaft to lock the latter from movement when the index-hand has been reset to zero, and means for moving said direction-indicator to allow movement of the engaging-arm, substantially as described, and for the purpose set forth.

9. The combination, in a fare register and recorder, with the index-hand or pointer and its resetting mechanism, the latter consisting of a toothed wheel or disk provided with a catch for engaging the index-hand when operated and with a projecting arm and an operating shaft and gear for operating said toothed wheel or disk, of a centrally-pivoted direction-indicator plate provided with peripheral sections adapted when the plate is in a normal position to engage the arm of said toothed wheel or disk to lock the resetting mechanism from undue movement, and a device for giving the direction-indicator a preliminary move to free the said engaging-arm and allow movement of the resetting mechanism and be reset thereby, substantially as described, and for the purpose set forth.

10. The combination, in a fare-register, with the index hand and its resetting mechanism, the latter consisting of a disk or wheel provided with means for engaging the index-hand and with an arm or projection and a shaft for operating said disk or wheel, of a centrally-pivoted direction-indicator plate provided with peripheral sections adapted when the plate is in a normal position to engage the arm or projection of said disk or wheel to lock the resetting mechanism from undue movement, and a spring-actuated rod or shaft provided with a catch for engaging the direction-indicator to give the same a preliminary move and allow movement of the resetting mechanism, substantially as described, and for the purpose set forth.

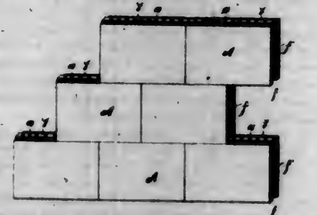
11. The combination, in a fare-register, with the index-hand, means for giving the same its forward step-by step movement, and means for resetting the same to zero, consisting of an operating-shaft and pinion and a disk or gear operated by the latter, of a centrally-pivoted direction-indicator plate adapted to engage at its outer periphery with an arm carried by said disk or gear to lock the connecting operating shaft from movement, substantially as described, and for the purpose set forth.



483,103. BRIDLE-BIT. JOHN DEAN, Racine, Wis., assignor to John P. Davies, same place. Filed Apr. 21, 1892. Serial No. 430,068. (No model.)

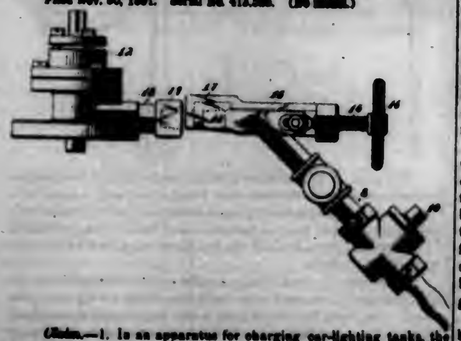
Claim.—1. A bridle-bit comprising a mouth-bar and cheek-pieces pivotally connected to the same, each cheek-piece being a single wire that is bent from above the bar to form a rein-loop and turned around itself below said bar, the non-bent portion of the wire being extended down from that point at which the bent portion is joined thereto, substantially as set forth.

2. A bridle-bit comprising a mouth-bar and cheek-pieces pivotally connected to the same, each cheek-piece being a single wire that is bent from above the bar to form a rein-loop, turned around itself below said bar, and flattened at its lower free end, substantially as set forth.



488,104. BRIDLE-BIT. JOHN DEAN, Racine, Wis., assignor to John P. Davies, same place. Filed Apr. 21, 1892. Serial No. 430,069. (No model.)

Claim.—1. A bridle-bit comprising a mouth-bar, levers pivotally disposed thereon to have their forward ends swing toward the same, and rein-attaching cheek-pieces that encircle the mouth-bar independent thereof and are pivoted to said forward ends of the levers, substantially as set forth.



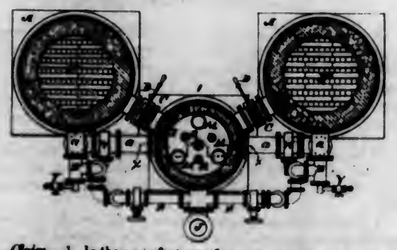
2. A bridle-bit comprising a mouth-bar, castings pivoted to the ends of the mouth-bar and comprising rein-loops B, integral with levers C, disposed to swing toward said mouth-bar from in front of the same, and parallel cheek-pieces D, that encircle the aforesaid mouth-bar free of the same and are pivoted to the lever portions of the castings, substantially as set forth.

488,105. BRICK. LEONARD H. DE FERNELMONT and HENRY H. DE FERNELMONT, Detroit, Mich., assignors, by mesne assignments, of one-third to said Leonard H. de Fernelmont. Filed Nov. 24, 1890. Serial No. 372,401. (No model.)

Claim.—A hollow rectangular brick having a raised tongue on two adjacent right-angle edges and corresponding grooves in the two opposed edges, a series of transverse partitions joining the sides of said brick and forming a series of vertical chambers, said chambers opening into the groove in the edge of the brick at their base, the raised tongue on the opposite edge of the brick having a series of small apertures passing therethrough that communicate with a series of vertical chambers within the brick.

488,106. APPARATUS FOR CHARGING CAR GAS-LIGHTING TANKS FROM GAS-MAINS. ROBERT M. DIXON, East Orange, N. J., assignor to the Safety Car Heating and Lighting Company, of New York. Filed Nov. 30, 1891. Serial No. 413,598. (No model.)

Claim.—1. In an apparatus for charging car-lighting tanks, the combination, with a section of hose having fittings with cocks on opposite ends, of a pressure-indicator connected to one of said fittings



488,106.

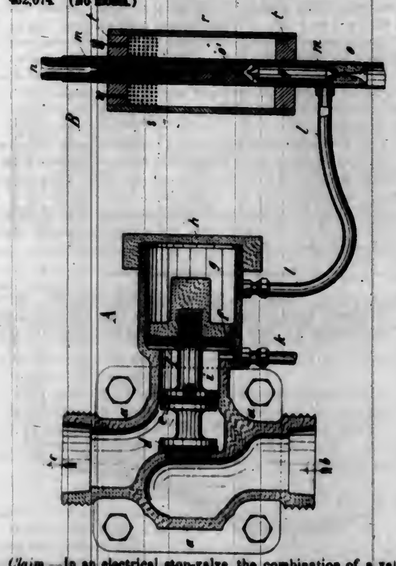
between the cock thereof and the connecting end of said fitting, substantially as and for the purposes specified.

2. In an apparatus for charging car-lighting tanks, the combination of a section of hose having secured at each end fittings with cocks, whereby the escape of gas is prevented throughout the hose, and one of said fittings having a joint connection for a tank, the other fitting provided with a recessed collar having a joint sliding therein, and means for operating said joint, substantially as and for the purposes specified.

488,107. APPARATUS FOR MAKING GAS. IRA S. ELKINS, New York, and REINHOLD ROEHLEN, Brooklyn, N. Y. Filed Mar. 31, 1892. Serial No. 427,263. (No model.)

Claim.—1. In the manufacture of gas, in combination with a generating and fixing chamber, an oil heater or vaporizer having at one end a pipe connected with the fixing-chamber for receiving the hot gases from said fixing-chamber and provided with pipes for steam, air, and oil and pipes to deliver therefrom the steam, heated air, and oil-vapors and connected with the aforesaid generating and fixing chamber.

2. An oil and air heating chamber having a double-chambered base and a double-chambered head, both provided with stuffing-boxes, in combination with tubes secured at one end through said stuffing-boxes and passing through said stuffing-boxes in the other end, whereby unequal expansion and contraction in the tubes and shell are provided for, substantially as set forth.



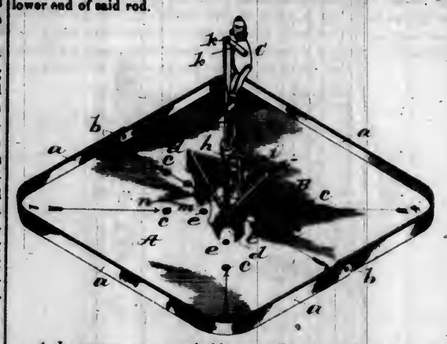
3. In the manufacture of gas, a tubular heating-chamber provided with pipes for introducing oil, steam, and air, in combination with two or more generating and fixing chambers and valved pipes connecting the lower portion of the heating-chamber and the generating-chambers and valved pipes connecting the fixing-chambers and upper portions of the heating-chamber, so that while one of said generating and fixing chambers is receiving oil-vapors and steam from the heating-chamber and fixing the same the other generating and fixing chamber is receiving gas and air and blowing up preparatory to fixing gas, as set forth.

4. In the manufacture of gas, the combination of a heating-chamber and a generating or fixing chamber connected by suitable pipes, the heating-chamber having passing through it air supply and return or delivery pipes, the air-pipes connecting at their upper ends with a

common chamber and at their lower ends with separate compartments of a chamber, a pipe connecting one of said compartments with said fixing-chamber, and oil-pipes connecting at their upper ends with a common chamber and at their lower ends with separate compartments of a chamber, a pipe connecting one of said compartments with said fixing-chamber at the lower end, and a steam-supply pipe connecting with the oil-supply pipe.

5. In the manufacture of gas, the combination of a heating-chamber and a fixing or generating chamber, the heating-chamber having passing through it air-supply and delivery pipes and oil-supply and delivery pipes, the air-supply pipes connecting at their upper ends with a common chamber and at their lower ends with separate compartments of a chamber, a pipe connecting one of said compartments with the fixing-chamber, and the oil-pipes connecting at their upper ends with a common chamber and at their lower ends with separate compartments of a chamber, an additional pipe also connecting one of said compartments with said fixing-chamber, and a steam-supply pipe connecting with the oil-supply pipe, the pipes connecting the air-pipe compartment-chamber with the fixing-chamber, and a gas-pipe connecting said fixing-chamber with the pipes connecting said heating and fixing chambers together and provided with burners located in the combustion-chambers of the brick checker-work in the fixing-chamber, substantially as specified.

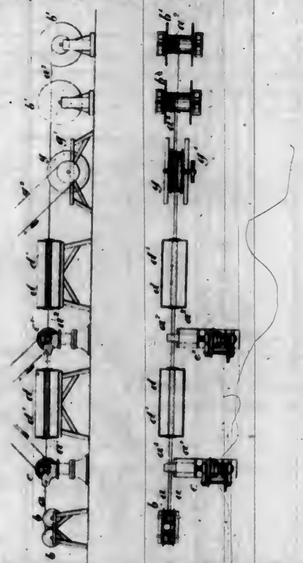
488,108. ELECTRICAL STOP-VALVE. ADOLF FRAHM, Berlin, Germany, assignor to the Uranie-Uhren-und-Stinlen-Commandit-Ges. Brenlauer & Dr. Von Orth, same place. Filed May 6, 1892. Serial No. 432,074. (No model.)



Claim.—In an electrical stop-valve, the combination of a valve-box *a*, a valve-disk *d*, pistons *e* and *f*, connected with the same, the diameter of piston *f* being larger than that of piston *e* and that of valve-disk *d*, a spiral coil *s*, a pipe *m*, extending through said coil and connected at its upper end to the pressure-pipe and having interior valve-seats *o* and *o'*, an iron rod *q*, arranged between said valve-seats and provided with faces at its ends to fit the valve-seats, and a connection between the space intermediate of the valve-seats and the space in the valve-box in front of piston *f*, all combined and operating substantially as and for the purpose set forth.

488,109. GAME APPARATUS. JOHN GREEN, Renovo, Pa., assignor of one-half to Crescenzo Cerrano, same place. Filed May 31, 1892. Serial No. 433,970. (No model.)

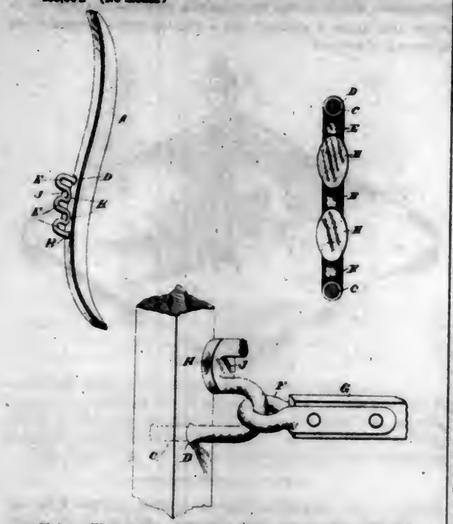
Claim.—1. In game apparatus, suitable projectiles and a curb or wall having ports or passages, in combination with a drop-figure, a rod to which the figure is attached, and a tripping-section upon which the figure rests.



2. In game apparatus, suitable projectiles and a curb or wall having ports or passages, in combination with a jointed drop-figure, a rod to which the figure is movably attached, a bracket supporting the figure and attached to the curb, and a tripping-section upon which the figure rests.

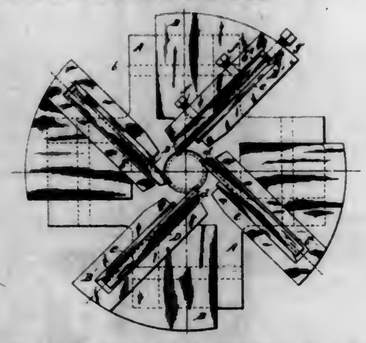
3. In game apparatus, suitable projectiles and a board having a curb or wall in the center thereof provided with ports or passages, in combination with a jointed drop-figure, a vertically-movable rod to which said figure is attached, and a tripping-section secured to the lower end of said rod.

4. In game apparatus, suitable projectiles, a board having a series of indicated rests for projectiles, a curb or wall provided with ports or passages, and indicated rests on the board near said ports, in combination with a drop-figure, a vertically-movable rod to which the figure is attached, and a tripping-section at the lower end of said rod.



488,110. MANUFACTURE OF RUBBER-COATED WIRE, &c. THEODORE GUILLEAUME, Cologne, Germany. Filed Oct. 2, 1891. Serial No. 407,570. (No model.) Patented in England June 18, 1890, No. 9,472, and in Germany Aug. 14, 1890, No. 60,167.

Claim.—1. The herein-described method of coating a wire, rope, or cable with india-rubber or rubber compound, which consists in applying to the wire a seamless coating of rubber, refrigerating or cooling the wire thus coated to harden and consolidate the coating, then applying a second seamless coating of rubber, and thereupon refrigerating or cooling the coated wire to harden or consolidate the second coating, substantially as described.

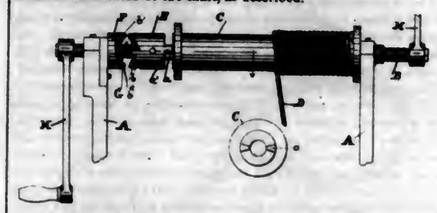


2. The herein-described apparatus for applying successive seamless layers of rubber or rubber compound to a wire, rope, or cable, comprising a coating apparatus having a die through which the wire is drawn, a refrigerating or cooling apparatus through which the coated wire passes, a second coating apparatus provided with an inner die *c*, having an elongated bore tapering at the exit end inwardly toward its axis to its extreme outer end, and a second refrigerating or cooling apparatus through which the wire with the double coating passes, substantially as described.

488,111. ADJUSTABLE HAME-STAPLE. JOHN G. HAGLOCK and WILLIAM H. HAGLOCK, Sterling, Ill. Filed Sept. 8, 1891. Serial No. 405,094. (No model.)

Claim.—The combination, with a hame, of a staple secured thereto, the body or main part of the staple being formed into a series of loops lying in the same plane with the ends of the staple, said loops being connected at their ends by guards near the side of the hame, the loops having a length from the arch to the base of the guards greater than the length of the aperture of the clip to be secured thereby, the dimensions of the guards and their distance from the hame being such that the clip cannot pass over the guards, except when it is turned substantially at right angles to the plane of the loops, substantially as set forth.

488,112. SCREW-CUTTING MACHINE. JAMES A. HAMER, Reading, Pa., assignor of one-half to Charles D. Gilham, same place. Filed Dec. 19, 1891. Serial No. 415,618. (No model.)

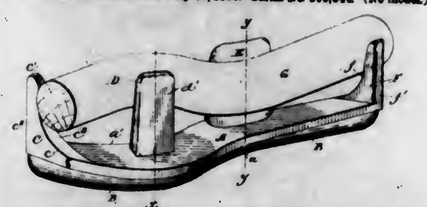


Claim.—In a die stock or head, the combination, with the pivoted cutter-levers arranged to swing in radial planes, of the longitudinally-grooved cutters fixed to said levers with their grooved faces at an angle to said radial planes, substantially as and for the purpose set forth.

488,113. WINDLASS. JOSHUA J. HAMBLIN, Heathsville, assignor of one-half to Chas. R. Lewis, Lewisetta, Va. Filed Mar. 5, 1892. Serial No. 423,840. (No model.)

Claim.—1. In a windlass, the combination of a shaft having suitable means for revolving it and allowed a longitudinal movement, a roller loose on said shaft and on which the line is wound, a clutch-block fast on the shaft and arranged to engage at one end with the roller and provided with teeth on the opposite end, and a pawl stationarily located to engage said teeth on the clutch-block, substantially in the manner described.

2. In a windlass, the combination of a shaft having suitable means for revolving it and allowed a longitudinal movement, a roller loose on said shaft and on which the line is wound, a clutch-block fast on the shaft and arranged to engage at one end with the roller and provided with spirally-arranged teeth on the opposite end, and a pawl stationarily located to engage said teeth on the clutch-block, and thereby both draw said block in toward it and push it away, according to the direction of rotation of the shaft, as described.



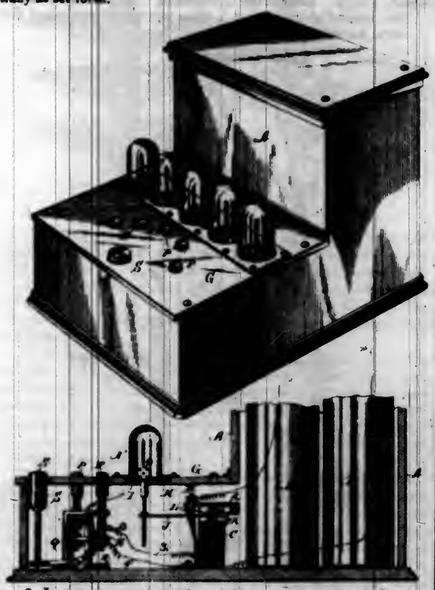
3. In a windlass, the combination of a shaft having suitable means for revolving it and allowed a longitudinal movement, a roller loose on said shaft and on which the line is wound, a clutch-block fast on the shaft and arranged to engage at one end with the roller and provided with teeth on the opposite end, and a pivotal spring-actuated pawl stationarily located to engage said teeth on the clutch-block, substantially in the manner described.

4. In a windlass, the combination of a shaft having suitable means for revolving it and allowed a longitudinal movement, a roller loose on said shaft and on which the line is wound, a clutch-block fast on the shaft and arranged to engage at one end with the roller and provided with teeth on the opposite end, and a stationary block having a number of clutch-teeth for engagement with those of the said clutch-block, one or more of said teeth arranged to give as the clutch-block teeth pass over it in the winding of the line, substantially as and for the purpose described.

5. In a windlass, the combination of a shaft having suitable means for revolving it and allowed a longitudinal movement, a roller loose on said shaft and on which the line is wound, said roller having lugs of dovetail shape projecting from one end, a clutch-block fast on the shaft and having dovetailed lugs arranged to engage those of the roller and also provided with clutch-teeth, and a pawl stationarily located to engage said teeth, substantially in the manner described.

488,114. FORM FOR HOLDING SHOVEL-HANDLES. WILLIAM H. JOHNSON, Industry, assignor to the Oliver Ames & Sons Corporation, North Easton, Ma. Filed July 17, 1891. Serial No. 399,644. (No model.)

Claim.—1. In a form for holding shovel-handles while being dried, the combination, with a base or bed-piece having a longitudinal stiffening backbone or rib under it, of the standards at the ends and between the ends, each curved and shaped and arranged relative to the others, in the manner and for the purposes set forth.



2. In a handle-drying form, the combination of the end standards C and F, curved and shaped substantially alike, but placed oppositely to each other and combined with the intermediate standards D and E, in the manner and for the purposes set forth.

3. In a handle-drying form, the combination of the bed or base having flanges *a* and *a'* and the backbone B with the end standards C and F and the standards D and E intermediate between them, each of said standards shaped substantially as described.

488,115. GAME APPARATUS. SIDNEY H. JOHNSON, Chicago, Ill., assignor, by direct and mesne assignments, to the Marion Manufacturing Company, same place. Filed Oct. 5, 1891. Serial No. 407,687. (No model.)

Claim.—1. In a game apparatus, the combination of a series of independent dice supporting and agitating disks or devices and a corresponding series of independent push-buttons for operating said dice supporting and agitating devices, said push-buttons being arranged in the vicinity of each other, whereby they may be pushed simultaneously or individually, substantially as set forth.

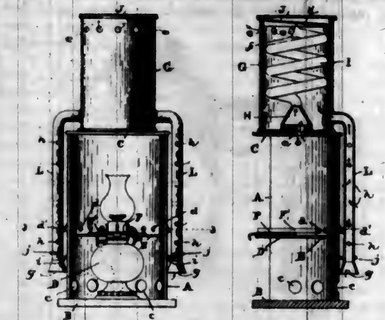
2. In a game apparatus, the combination of a series of vibratory disks or supports, each having a loose body confined thereon, electric buzzers upon whose armature-levers said disks are respectively supported, and a series of independent contacts for closing the circuit through said buzzers independently, plurally, or collectively, substantially as set forth.

3. In a game apparatus, the combination of a series of vibratory disks or supports, each having a loose body confined thereon, devices for vibrating said disks, and means for actuating said devices simultaneously, substantially as set forth.

4. In a game apparatus, the combination of a series of vibratory disks or supports, each having a loose body confined thereon, electric buzzers connected with said disks for vibrating the same, and a single contact for closing the circuits through all of said buzzers simultaneously, substantially as set forth.

5. A game apparatus comprising a series of vibratory disks, each having a loose body resting thereon and adapted to be agitated thereby, an inclosing cage or shell for confining each of said bodies to certain limits, a device for vibrating each of said disks separately, and a device for vibrating two or more of them simultaneously, substantially as described.

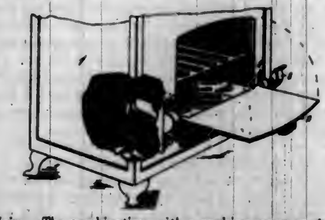
6. A game apparatus comprising a series of vibratory disks or supports, each having a loose body confined thereon, electrical devices for vibrating said disks or supports, a series of contacts for closing the circuit through said electrical devices independently, and a contact for closing the circuit through two or more of said electrical devices simultaneously, substantially as described.



7. A game apparatus comprising a series of vibratory disks or supports, each having a loose body confined thereon, an electro-magnet for causing the vibration of each of said disks, a series of floating circuit-closers E, corresponding in number to the number of said magnets, independently-movable push-buttons having circuit-closers D, one for each of said closers E, and a lever for simultaneously moving all of said closers E against the closers D, substantially as described.

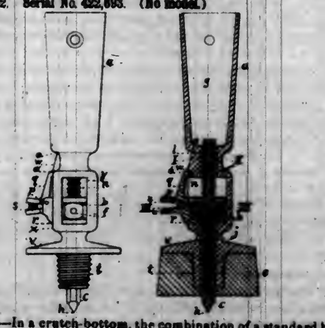
488,116. HEATING-DRUM. SOLOMON M. KEMP, Baltimore, Md., assignor of two-thirds to Edward S. Stubbs and William T. Henderson, same place. Filed Mar. 30, 1892. Serial No. 427,001. (No model.)

Claim.—1. The combination of a suitable casing or shell for containing a burner, a drum located above the burner and having an inlet for air at the lower part and an outlet-opening at the upper part, and a coil in the drum, having its lower end open and over the burner and its upper end open and within the drum and directed toward the outlet-opening in the latter.



2. The combination of a suitable casing or shell for containing a burner, a drum located above the same and containing a coil having its inlet end over the burner and its outlet at the upper part of the drum, the latter provided with an inlet for air at the lower part and an outlet at the upper part, a cover fitting the top of the drum, and a deflector-plate in said cover.

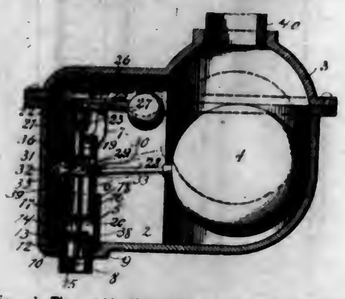
3. The combination of a suitable casing or shell for containing a burner, a drum located above the same and containing a coil having its inlet end over the burner and its outlet at the upper part of the drum, the latter provided with an outlet for air at the upper part, and perforated pipes opening into the lower part of the drum and extending downward therefrom and open at the lower ends.



4. The combination of a suitable casing or shell for containing a burner, a drum located above the same and containing a coil having its inlet end over the burner and its outlet at the upper part of the drum, the latter provided with an outlet for air at the upper part, perforated pipes opening into the lower part of the drum and extending downward adjacent to the exterior of the casing or shell and open at their lower ends, and hinged hasps on the said casing and arranged to take around and hold the pipes, in the manner described.

488,117. OVEN-DOOR FOR COOKING STOVES OR RANGES. FRANK V. KRAUSE, Portsmouth, Ohio, assignor to the Portsmouth Stove and Range Company, same place. Filed June 4, 1892. Serial No. 435,548. (No model.)

Claim.—The combination, with a cooking range or stove, of the herein-described oven-door provided with a counterbalancing lever or arm, a friction-spring adapted to engage the arm and control the falling movement of the door, and a double-acting pedal or tumbler adapted to open or close the door, substantially as and for the purposes herein set forth.



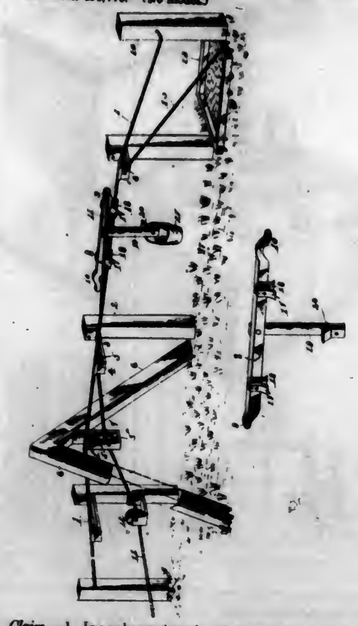
488,118. CRUTCH. ROBERT M. LAMP, Madison, Wis. Filed Feb. 23, 1892. Serial No. 422,693. (No model.)

Claim.—In a crutch-bottom, the combination of a standard having a shank within which moves a spur that is vertically adjusted by

means of a pawl and ratchet, the ratchet-teeth for the engagement of the spring-pawl being placed in the shank and the spring-pawl being carried by a nut fitted to the spar, and the termination of the standard and shank into a threaded spindle having a circular flange rising from its base, all said parts combined and operated substantially as set forth.

483,119. STEAM-TRAP. NILS NILSON, Minneapolis, assignor of one-half to Edward F. Quactenbush, *Le Sueur*, Minn. Filed Dec. 8, 1891. Serial No. 414,432. (No model.)

Claim.—1. The combination, with the box, of the valve-casing arranged therein and having an extension leading through the bottom of the box, a float arranged in said box, a stem arranged in said casing, said float provided with an arm to engage said stem, a weight arranged to raise said stem and valve, a shoulder provided in said casing, a disk 20, arranged on said stem to engage the same, a valve and seat, openings in the lower part of the casing, larger openings in the upper part thereof, and a condensation-pipe extending into said box, substantially as described.



2. The combination, in a steam-trap, of the trap-box or chamber with a valve arranged therein and consisting of a disk, a seat therefor, a spindle whereon said disk is arranged, guides therefor, a casing inclosing said valve, openings 38, arranged in the lower part thereof, a shoulder 17 therein, a disk arranged on said spindle and adapted to engage said shoulder, a weight arranged to automatically open said valve when the pressure is relieved, a float arranged in said box, an arm extending therefrom and pivoted back of said spindle, said arm adapted to engage a shoulder on said spindle when the arm is raised, openings arranged above the shoulder 17 and of a greater diameter than the combined area of the hole or holes provided in the lower part of the casing, and a condensation-pipe leading into said box, as and for the purpose specified.

3. The combination, with the steam-trap box, of the valve-casing arranged therein and provided with the internal shoulder 17, openings 38 in the lower part of said casing, an opening through the lower end of said casing and wherethrough the water or steam is discharged, a valve-disk arranged within said casing, the spindle thereof, a disk 20 thereon to engage the shoulder 17, the pivoted weight-lever provided with the weight 27 and connected with said spindle and normally tending to lift the same, a float 2, an arm 28 thereof pivoted back of said spindle, a shoulder or collar arranged on the spindle to be engaged by said arm when raised, openings in the upper part of the valve-casing greater in area than the openings in the lower part thereof, and a condensation-pipe connected with said box, all substantially as described.

4. The combination, with the closed box, of the condensation-pipe, through which condensed steam enters the same, a separate valve-casing arranged in said box and composed of the lower part 5, having the nipple 8, extending through the bottom of the box, and the upper part 6, extending into the lower part and provided with slots 30 and 31, the spindle 19, arranged in said case and having the valve disk 14, a seat arranged in the lower part 5 to receive said disk, a disk 20, provided on the spindle to engage the lower end or shoulder of the part 6, the arm 7, arranged on the upper part of the lever 25, pivoted thereon, the link 24, pivotally connecting the same with the upper end of said spindle or stem, the adjustable weight on said lever, the float arranged in the box, the arm 28 thereof, having the forked end and pivoted back of the stem, raised shoulders thereon, and a collar on said stem to be engaged thereby to raise the stem when said arm and float are raised, and said lower part 5 being provided with a hole or holes 38 of smaller area than the openings in the upper part 6, as and for the purpose specified.

5. The combination, with the box having the cover 3 and the smaller portion, of the valve-casing arranged in said smaller portion and having a nipple leading through the bottom of the box, a float arranged in said box, a stem arranged in said casing, said float provided with an arm to engage said stem, a weight arranged to raise said stem, a shoulder provided in said casing, a disk 20, arranged on said stem to raise the same, a valve and seat, openings in the lower part of the casing, larger openings in the upper part thereof, and a condensation-pipe extending into said box, substantially as described.

488,120. CONVEYING APPARATUS. ISAAC N. ROWE, Wood's, Tex., assignor of one-half to D. D. Mims, same place. Filed May 4, 1892. Serial No. 431,778. (No model.)

Claim.—1. In an elevated carrier, the combination, with the track, of a carriage mounted thereon having inclined and curved points at opposite ends, guides with flaring lower ends connected at the sides of the carriage, and rollers journaled in said guides, and means connected to the carriage for operating the same, substantially as and for the purposes specified.

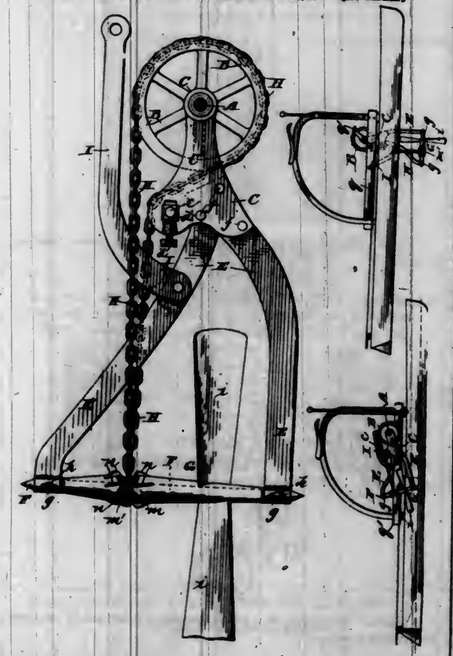
2. In an elevated carrier, the combination, with a track, of a carriage of the character described mounted thereon, the inclined posts on opposite sides of the wire for elevating the center of the track, a bracket secured to one of said posts, with rollers journaled therein, a bearing on the upper end of the bracket for the wire, a rope connected to the carrier and interposed between the rollers of said bracket, and a series of posts arranged on opposite sides of the inclined posts, with supports and rollers for the wire and rope, respectively, substantially as and for the purposes specified.

3. In an elevated carrier, the combination, with a track, of a carriage mounted thereon having inclined and curved points at opposite ends, guides with flaring ends at the side of the carriage and rollers journaled in said guides, a bar pivoted to the carrier, having at its lower portion a hook adapted to convey different articles, and means connected to the carriage for operating the same, substantially as and for the purposes specified.

4. In an elevated carrier, the combination, with the track elevated at its center, of a series of posts on opposite sides of said center, with rollers thereon, the elevated center being provided with two rollers arranged one above the other, and means connected to the carrier and interposed between said rollers for operating said carrier, substantially as and for the purposes specified.

5. The combination, with an elevated carriage, of a track-wire elevated at the center of its length and inclined on opposite sides thereof, and one of said sides extending above a water-reservoir, an inclined catch-wire arranged below the terminus of the track-wire, the carriage adapted to travel upon the track-wire, said carriage provided with a pivoted supporting-bar provided with a hook at its lower portion for engagement with said catch-wire, and the operating means connected to said carriage, substantially as and for the purposes specified.

488,121. PICKER-STEM AND MECHANISM FOR OPERATING THE SAME. GEORGE H. TODD, Chicago, Ill., assignor to The Todd Cotton Harvester Company, of Illinois. Filed Nov. 15, 1892. Serial No. 218,052. (No model.)



Claim.—1. In mechanism for operating picker-stems, a sectional stem-support the opposing adjoining faces of whose sections are provided with bearings for the picker-stems, substantially as described.

2. In a sectional support for picker-stems, a section composed of two disks, one on each end of a hub, the outer faces of which disks are provided with one-half of bearings for picker-stems, substantially as described.

3. In mechanism for operating picker-stems, a stationary vertical shaft and annular gears or racks rigidly secured to said shaft, in combination with the sectional stem-support mounted on the vertical shaft, mechanism for rotating the same, picker-stems, bearings for said stems between the sections of the support, and gears on the inner ends of said stems, meshing with the gear on the upright stationary shaft, substantially as described.

4. In mechanism for operating picker-stems, a stationary shaft *c* and the annular racks or gears rigidly secured thereto, in combination with the hub *b*, disks *a a*, cast therewith, said hubs being sleeved on shaft *c* and the opposing adjacent disks of adjoining sections being bolted together, picker-stems projecting radially from said disks, having bearings therebetween, gears on the ends of said picker-stems engaging the racks *e*, and mechanisms for rotating the said disks about the shaft *c*, substantially as described.

488,122. PROPELLER FOR VESSELS. DAVID UBER, Portsmouth, N. H. Filed May 27, 1892. Serial No. 434,647. (No model.)

Claim.—1. In a propeller for marine craft, the combination of a chain, a driving-pulley arranged on a driving-shaft supported upon a portion of a craft and having the chain passed around it, a directing-pulley supported upon a suspending-frame, also supported by the craft, and having the chain also passed about it, and a propeller hung in the said suspending-frame and provided with a hub, around which the chain is passed, said propeller having its supporting-shaft and its hub at right angles, or nearly so, to the said driving-shaft and the said chain being passed around said hub in a direction at right angles, or nearly so, to the direction in which it is passed around the driving-pulley and the directing-pulley, substantially as described.

2. In a propeller for marine craft, a driving-chain constructed with a half-twist, in combination with a driving-pulley supported by a portion of a craft and having the chain passed about it, a directing-pulley supported by a suspending-frame hung upon a portion of the craft and swinging concentrically with the driving-shaft of the driving-pulley, and a propeller-hub supported by the said suspending-frame, the said directing-pulley having the chain passed about it at right angles, or nearly so, to its axis and the said hub having the chain passed about it at right angles, or nearly so, to its axis, substantially as described.

3. In a propeller for marine craft, the combination of the pulley D, having its shaft arranged in adjustable bearing-boxes, of a suspending-frame supported by a portion of the craft, and which are mounted on set-screws, the driving-pulley B, supported by a portion of the craft, the chain, and the propeller-hub, the said chain being arranged about the pulleys and the hub and the hub being at right angles, or nearly so, to the driving-shaft and supported by the suspending-frame, substantially as and for the purpose described.

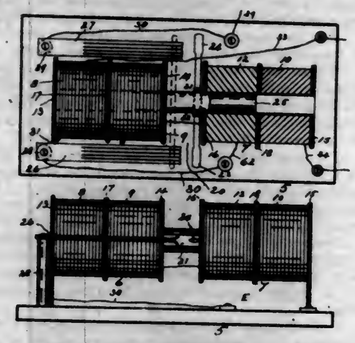
4. In a propeller for marine craft, the combination of the bearing of the shaft having lateral extensions, the suspending-plates fitted around said extensions, the suspender connected to the ends of a stationary shaft; the driving-shaft, the driving pulley, the directing-pulley, the chain, and the propeller-hub arranged at right angles to the driving-shaft and having the chain passed around it in a direction at right angles to the direction in which it is passed around the driving-pulley, and the directing-pulley, the said bearings, shaft, suspending-plates, suspender, stationary shaft, the driving-shaft, and the driving-pulley being supported by a portion of the craft, while the directing-pulley and the propeller-hub are supported by the suspending-frame, substantially as described.

5. The combination of the suspending-frame, the propeller having a sleeve or hub with a stationary shaft, said frame being supported by a portion of the craft, substantially as and for the purpose described.

6. In a propeller for marine craft, the shaft-bearings having lateral extensions, in combination with the supporting-craft, the propeller, and the means by which said propeller is suspended, and with the shaft, and the means by which the propeller is revolved, substantially as described.

7. The propeller-hub formed with a groove for the chain and with spiral ribs on each side of said groove, in combination with a stationary shaft and a chain for revolving the propeller, substantially as described.

8. In a propeller for marine craft, the combination of a screw-propeller, a suspending means supported by a portion of the craft and hung concentrically with the driving-shaft and adapted to swing around said shaft in a circle or a part of a circle, and a lifting and holding bar, substantially as and for the purpose described.



9. In a propeller for marine craft, the combination, with a boat, of a crank-shaft, a driving-pulley on said shaft, a directing-pulley, a suspending means, a propeller having its shaft arranged at right angles to the driving-shaft, a chain passed around said pulley and around the hub of the propeller, and a lifting and holding bar, the said mechanism being supported by subetantial portions of the boat, substantially as described.

10. The combination of a boat provided with the inner and outer bearings, the driving-shaft, the plates C, the bifurcated suspender E, the supporting-shaft for the propeller, the propeller having revolving hub, the driving-pulley, the directing-pulley, and the chain passed around the pulleys and the hub of the propeller, substantially as described.

483,128. CIRCUIT-SWITCH. GEORGE W. RUSSELL, Jr., and DARIAL B. MINOR, Denver, Colo., assignors to said Russell, Jr., and ALEXANDER V. Officer, same place. Filed June 1, 1892. Serial No. 435,196. (No model.)

Claim.—1. The combination, with the main circuit, of an automatic switch interposed therein and consisting of two solenoids suitably connected, a loose bar supported therein and carrying contact projections, metallic brushes or plates connected with the circuit-wires on each side of the switch, a branch circuit in which the solenoids lie, and push-buttons located therein, whereby the current is alternately

passed through the solenoids and the main circuit closed or broken, substantially as described.

2. The combination, with the main circuit, of switch mechanism interposed therein and consisting of two solenoids, each composed of two oppositely-wound coil-sections, a bar movably supported therein composed of magnetic material and carrying contact projections, suitable stationary contacts to which the circuit-wires lead on each side of the interposed switch, a branch circuit in which the solenoids lie, and push-buttons located in said last-named circuit, whereby the current is alternately passed through the solenoids, the movable bar reciprocated by the induced magnetic force, and the main circuit closed or broken, substantially as described.

3. The combination, with the main circuit, of a pair of solenoids, a reciprocating bar supported therein, a branch circuit in which the solenoids lie, and push-buttons whereby the current is alternately passed through the solenoids and the main circuit closed or broken, substantially as described.

DESIGNS.

21,860. SUSPENDER-RING. FRANCIS W. SHILLITTO, West Haven, Conn., assignor to the American Buckle and Cartridge Company, same place. Filed Aug. 22, 1892. Serial No. 443,901. Term of patent 3½ years.

Claim.—The design for a suspender-ring, as herein described, and shown in the accompanying illustration.

21,861. LENS FOR ILLUMINATING-TILES, &c. JACOB JACOBS, Brooklyn, N. Y. Filed July 18, 1892. Serial No. 440,406. Term of patent 14 years.

Claim.—The design for lenses for illuminating-tiles, vault-covers, &c., in which the lens-body has its sides scalloped, so that they consist of a series of upright ribs extending throughout the body to the top of the latter, as herein shown and described.

21,862. MEMORIAL SHIELD. WILHELM MAYER, Stuttgart, Germany. Filed May 31, 1892. Serial No. 435,127. Term of patent 3½ years.

Claim.—The design for a memorial shield, as herein shown and described.

21,863. PAPER-WEIGHT. LAURENCE J. HEFFERNAN, New York, N. Y. Filed Aug. 27, 1892. Serial No. 444,329. Term of patent 3½ years.

Claim.—The design for a paper-weight herein shown and described.

21,864. PENCIL-SHARPENER. STEPHEN A. DAVIS, Newark, N. J., assignor to the Domestic Sewing Machine Company, of New Jersey. Filed Aug. 26, 1892. Serial No. 444,200. Term of patent 7 years.

Claim.—The design for a pencil-sharpener, substantially as herein shown and described.

TRADE-MARKS

REGISTERED SEPTEMBER 20, 1892.

21,754. WRITING-PAPER, ENVELOPES, AND FINE CARD-BOARD. HARD & FISK, New York, N. Y. Filed Aug. 4, 1892.

Royal Court

Essential feature.—The words "ROYAL COURT." Used since February, 1891.

21,755. PILLS, CAPSULES, AND TABLETS. MCKESSON & ROBBINS, New York, N. Y. Filed Aug. 23, 1892.

PALATINOID.

Essential feature.—The word "PALATINOID." Used since June 20, 1890.

21,756. LADIES' AND MISSES' CLOAKS AND SUITS. A. POPKIN & Co., New York, N. Y. Filed Aug. 17, 1892.

DOLGORUKI

Essential feature.—The word "DOLGORUKI." Used since May 1, 1892.

21,757. CONFECTIONERY. A. L. CAUBER MANUFACTURING COMPANY, New York, N. Y. Filed Aug. 12, 1892.

TROPICAL BRAND

Essential feature.—The words "TROPICAL BRAND" above a shield containing several stars in the upper left-hand corner, with parallel stripes in corresponding lower right-hand corner, and a palm-tree to which an alligator is secured. Used since May 15, 1892.

21,758. CORSETS, WAISTS, AND SUSPENDERS. CORONET CORSET COMPANY, Jackson, Mich., and New York, N. Y. Filed Aug. 5, 1892.

C. C. Co. JAXON.

Essential feature.—The word "JAXON" in connection with the symbol abbreviation "C. C. Co." Used since May 1, 1889.

21,759. ARTIFICIAL GEMS. F. H. SADLER & Co., Attleborough, Mass. Filed July 5, 1892.

BORNEO

Essential feature.—The word "BORNEO" and the representation of a faceted gem. Used since July 27, 1889.

21,760. A LINE OF REMEDIES. JOSEPH WILLIAMS, Jr., Pittsburg, Pa. Filed July 22, 1892.

THE WORLD'S FAIR

PAIN RELIEF

Essential feature.—The words "THE WORLD'S FAIR PAIN RELIEF." Used since March, 1892.

21,761. COUGH MEDICINES. DR. SETH ARNOLD MEDICAL CORPORATION, Woonsocket, R. I. Filed Aug. 11, 1892.

COUGH-KILLER

Essential feature.—The words "COUGH-KILLER." Used since April 1, 1842.

21,762. A REMEDY FOR CATARRH AND ALL DISEASES OF THE THROAT, LUNGS, AND BOWELS. ROBERT M. DAVIS, Denver, Colo. Filed June 27, 1892.

SALOINE

Essential feature.—The word "SALOINE." Used since June 17, 1892.

21,763. ELECTRIC INSULATED WIRE. EASTERN ELECTRIC CABLE COMPANY, Boston, Mass. Filed Aug. 16, 1892.

CLARK.

Essential feature.—The word "CLARK." Used since April, 1885.

21,764. SEDLITZ-POWDERS. JAMES F. GIBSON, Providence, R. I. Filed Aug. 20, 1892.

Essential feature.—The fac-simile signature "B. D. BAILEY." Used since January 20, 1891.

21,765. POWDER MEASURES AND RAMMERS. HARTLEY & GRAHAM Co., Bridgeport, Conn. Filed Aug. 5, 1892.

NITRO

Essential feature.—The word "NITRO." Used since December 31, 1891.

21,766. UNDERWEAR, INCLUDING HOSIERY. J. S. LOWERY & Co., New York, N. Y. Filed Mar. 14, 1892.

Essential feature.—The representation of a crescent and a polygonal figure inclosing the letter "L." Used since February 1, 1892.

21,767. TEMPERAMENTAL REMEDIES. JOHN H. PATTY, Chicago, Ill. Filed June 24, 1892.

Essential feature.—The words and figures "43 SYMBOLS AND 43 PHRENOLOGICAL REMEDIES" and a representation of a phrenological chart upon a human head in profile. Used since July 20, 1891.

21,768. PLUG-TOBACCO. JOSEPH G. PERS, PETER P. WATSON, and ABEL D. WITTEN, Martinsville, Va. Filed Aug. 18, 1892.

N&W

Essential feature.—The letters and character "N & W." Used since June 17, 1892.

21,769. A SUBSTITUTE FOR LARD. SAMUEL H. READ, New Haven, Conn. Filed Aug. 17, 1892.

LARDENE

Essential feature.—The word "LARDENE" inclosed in a diamond-shaped panel. Used since August 10, 1892.

21,770. A MONTHLY MAGAZINE. THE GREAT DIVIDE PUBLISHING COMPANY. Denver, Colo. Filed June 21, 1892.

Essential feature.—The words "THE GREAT DIVIDE." Used since March, 1889.

21,771. HOES, FORKS, RAKES, AND OTHER AGRICULTURAL HAND IMPLEMENTS. THE IOWA FARMING TOOL COMPANY, Fort Madison, Iowa. Filed Jan. 23, 1892.

Essential feature.—The word "CRUCIBLE." Used since January, 1889.

21,772. LAGER-BEER. THE NATIONAL BREWING COMPANY, OF BALTIMORE COUNTY, MARYLAND, Baltimore City and Baltimore County, Md. Filed Aug. 17, 1892.

Essential feature.—The words "STONE JUG" and the representation of a jug upon a large circle or medallion with a small medallion upon the body of the jug. Used since July 1, 1892.

21,773. LEATHER, BOOTS, SHOES, AND OTHER FOOT-WEAR. EAST NEW YORK BOOT, SHOE, AND LEATHER MANUFACTURING COMPANY, Albany, N. Y. Filed Aug. 3, 1892.

Essential feature.—The letters "E. N. Y." Used since January 1, 1889.

21,774. CANDY, CHOCOLATE, AND COCOA FOR CONFECTIONERS' USE. ODE & GERBEREUX, New York, N. Y. Filed Aug. 5, 1892.

Essential feature.—The words "BELL BRAND" and the representation of a swinging bell. Used since July 1, 1887.

21,775. MEDICATED LOTIONS AND EYE-WATERS. RICHARD P. STRICKER, Springfield, Ill. Filed Aug. 8, 1892.

ORIENTAL EYE LOTION

Essential feature.—The representation of an open eye with the words "ORIENTAL EYE LOTION" over it on a slight curve. Used since June 6, 1891.

THE NORRIS PETERS CO., PHOTO-LITHO., WASHINGTON, D. C.

DECISIONS

OF THE

COMMISSIONER OF PATENTS

AND OF

UNITED STATES COURTS IN PATENT CASES.

REPORT OF THE COMMISSIONER OF PATENTS.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., July 29, 1892.

SIR: I have the honor to submit the following report of the business of this Office during the fiscal year ending June 30, 1892.

The following statement, prepared in the usual condensed form, exhibits the transactions in the Office during the period specified and compares them in important particulars with the corresponding transactions during four previous years. It also shows the balance now in the Treasury of the United States on account of the patent fund:

Applications and Caveats received.

Applications for letters patent	39,987
Applications for design patents	983
Applications for reissue patents	314
Applications for registration of trade-marks	1,919
Applications for registration of labels	541
Caveats	2,401
Total	45,945

Patents granted and Trade-Marks and Labels registered.

Letters patent granted, including reissues and designs	23,026
Trade-marks registered	1,563
Labels registered	6
Total	25,195

Patents withheld and Patents expired.

Letters patent withheld for non-payment of final fee	3,022
Letters patent expired	12,427

Receipts and Expenditures.

Receipts from all sources	$1,268,727 35
Expenditures (including printing and binding, stationery, and contingent expenses)	1,114,134 23
Surplus	$154,593 12

Comparative Statement.

	Receipts.	Expenditures.
June 30, 1888	$1,122,994 83	$983,730 14
June 30, 1889	1,186,557 22	999,697 24
June 30, 1890	1,347,203 21	1,081,173 56
June 30, 1891	1,302,794 59	1,145,502 90
June 30, 1892	1,268,727 35	1,114,134 23

Change in the number of applications for Patents, including Reissues, Designs, Trade-Marks, and Labels.

June 30, 1888	37,769
June 30, 1889	39,702
June 30, 1890	43,810
June 30, 1891	43,616
June 30, 1892	45,544

Number of applications awaiting action on the part of the Office.

July 1, 1888	7,277
July 1, 1889	7,073
July 1, 1890	6,585
July 1, 1891	8,911
July 1, 1892	9,447

Very respectfully yours,

W. E. SIMONDS,
Commissioner.

The SECRETARY OF THE INTERIOR.

COMMISSIONER'S DECISIONS.

EX PARTE RAEYMAECKUS.

Decided September 9, 1892.

ABANDONED APPLICATION—REVIVAL OF.

The abandoned application of a foreign applicant will not be revived upon a showing that the two years' limit was allowed to expire without action solely through the inadvertence of the associate attorney's clerk.

ON petition.

PROCESS OF AND APPARATUS FOR THE TREATMENT OF SACCHARINE SOLUTIONS, ETC.

Application of Raymond Raeymaeckus filed October 5, 1889, No. 326,087.

Mr. James L. Norris for the applicant.

SIMONDS, *Commissioner:*

This is a petition for the revival of an abandoned application, the case having become abandoned August 14, 1892. The applicant is a foreigner, having attorneys resident in London, with associate attorney in Washington. The London attorneys forwarded an amendment which arrived about a month before the case became abandoned; but through pressure of business in the office of the Washington attorney and by inadvertence on the part of a clerk it was not examined and filed in the Patent Office.

The action of the clerk is the action of the attorney and the action of the attorney is the action of the applicant. The failure to act for two years was a matter purely of inadvertence on the part of the attorney's clerk, which a little more diligence and care would have prevented. It was not unavoidable.

The petition is denied.

DECISIONS OF THE U. S. COURTS.

U. S. Circuit Court—District of Massachusetts.

AMERICAN BOX MACHINE COMPANY *v.* CROSMAN *et al.*

Decided September 7, 1892.

PATENT—INFRINGEMENT—PLEADING—BILL WITH DOUBLE ASPECT.

Where a complainant's bill asks for the specific performance of a contract set out, and also contains expressions looking to relief, as on a bill for infringement, *Held* impossible to sustain the bill as one for a double aspect, because in a bill for infringement the determination who are necessary parties must be made from a standpoint different from that in a bill for specific performance, and the title to relief is not the same in each event.

Messrs. Wetmore & Jenner for the complainant.

Mr. Thomas W. Clarke and *Mr. George J. Carr* for the defendants.

PUTNAM, *J.:*

The prayer of the bill in this case asks expressly for a specific performance of the contract set out. It also contains some expressions looking to relief as on a bill for infringement of a patent. It is impossible to sustain the bill as one with a double aspect, because in a bill for an infringement the determination who are the necessary parties must be made from a different standpoint from that in a bill for specific enforcement of a contract. Other substantial reasons might be given; but it is sufficient to add that for a bill with a double aspect the title to relief must be precisely the same in each event, which seems not possible in the class of bills to which this at bar belongs. (Story's Eq. Pl., sec. 254.)

Unless, therefore, the complainant confesses that this bill is strictly for an infringement and has arranged parties accordingly, or that it is for a specific performance of a contract and has arranged parties accordingly, it must be treated as multifarious, though, as the respondents have not made that point, it cannot be dismissed on that account. Nevertheless the court of its own motion must see that the litigation is put in form to be disposed of understandingly.

The complainant cites the opinion of Judge Shipman in *The Magic Ruffle Company* v. *The Elm City Company* (13 Blatchf., 151) as though it justified a double remedy under this bill; but it seems Judge Shipman, page 156, declined to commit himself to that position, and his conclusion was that although the bill was so framed that it might perhaps have been considered either as for infringement or for specific performance, yet on the whole it was to be held that the pleader made the alleged breach of agreement the basis of the action and sought to recover damages for injury arising from a violation thereof. Thereupon Judge Shipman evidently worked out the case as though the bill was founded solely on the contract.

It is also apparent in the case at bar that the respondents accepted the bill as one for specific performance. This is particularly apparent from the method in which they meet the claim that they had not denied infringement, for they point out that the answer denies that respondents "in violation of the covenant" had made use and sold, etc. So far as the bill is uncertain in this particular or has a double sound the respondents were entitled to elect the construction to be put upon it, and the court approves their election. It is only by treating the bill as respondents have treated it that the court can avoid the difficulties which appear in *Hartell* v. *Tilghman*, (99 U. S., 547,) in *White* v. *Rankin*, (144 U. S., 628,) and in the other cases therein cited.

This conclusion renders it easy to dispose of the relations to this case of Metcalf as a special partner in Frank & Duston. I see some difficulties in the way of his being made a party defendant to a bill for infringement without joining his partners also; but on a bill for specific performance of a contract executed by Metcalf, I think he can be holden because he is a contractor, although it may embarrass the partnership with which he has allied himself. I think, also, that he cannot be permitted to avail himself of the profits of that partnership in violation of his own contract and then excuse himself on the ground that his relations as a partner are inactive, dormant, silent, or limited.

It is sufficiently plain that a mere recovery of damages, which is the only remedy the common law affords, would not be an adequate remedy for the complainant in the case at the bar, and therefore I must hold that there is jurisdiction in equity to furnish the relief which the complainant desires.

I do not consider it necessary to investigate the mass of evidence bearing on the proposition that the contract at bar was made with reference to a certain existing machine or machines. Neither do I concur in the proposition of the complainant that so far as the contract provided for a license to Kilham, as trustee, it covered only what was expressly claimed in the Glazier patent.

That the contract did not relate to specific machines appears from many expressions in it apportioning the rights between the complainant and the respondents according to patents and not according to existing structures. I find not a word in it which refers to the latter, while the sixth clause gives the trustee the right to make or cause to be made "the single-strip machines" "that embody the inventions or substantial parts thereof described in the said patents," meaning the Glazier patents; and this was the only license given to the trustee or any of the defendants under this contract. As to the other proposition, while the mere letter of what I have just cited touches only "the inventions or substantial parts thereof" described in the Glazier patents, yet it seems a strained construction to deny that Kilham, as trustee, was licensed to make or cause to be made the machine as actually shown in the specification and drawings attached to them. This is the practical interpretation given by the joint circular of May 25, 1888, found on the cover of complainant's Exhibit H, as at least so much as this was covered by the expression "Lynn Covering-Machines," which that circular expressly allotted to Kilham, trustee, or his agent.

It is a simple principle, especially with reference to parties asking a specific performance of a contract by an equity court, that when it has been varied in the execution of details by common understanding and

mutual consent the change will be insisted on by the court, either as a practical construction, illustrating the original intention of the contract, or as a supplemental agreement. But, although in the case at bar it appears, and is claimed by the complainant, that the modifications of the respondents' machine complained of were adopted by it immediately after the contract was executed, and although I might, perhaps, find enough in the record, showing that the complainant had slept on its rights, to bar an account or assessment of damages, if the case came to that, yet I am not satisfied that the complainant was properly aware of the course of manufacture, knowingly waived its rights, or has intentionally given any construction to the agreement, except such as it properly bears on its face.

Subject to the possible effect of the above qualifications, it must be held that all parties to the contract agreed in the strongest terms to maintain in the complainant not only the exclusive right to the peculiar machines described in any of the patents originally owned by it, but also any method of covering boxes with a plurality of strips simultaneously. The portion of the contract which provided that some of the defendants might experiment on the single-strip machine with a view of converting it into a double-strip machine on terms to be accepted by the complainant makes especially clear the extent to which that contract intended to go in this direction.

It is apparent, for reasons which are stated at length in the testimony of Inman, that no machine shown by the Glazier patents could be used for a simultaneous plurality of strips without some adaptation for that purpose. It is also plain that the respondents' machine has been adapted, either intentionally or otherwise, so that now it is capable of the extended use, this coming apparently from the interposition of a circular guide, which operates as a double guide, in lieu of the finger or single guide shown in the specification and drawings of the Glazier patent, No. 360,682, and from the omission, in connection with the reversing the frame of the machine, of the weighted lever *m*, and possibly in part from the addition of another roller, as shown in complainant's Exhibit A.

It is not necessary, however, for the court to go into these details. It is sufficient that it holds that no machine shown in the Glazier patents was capable of the use of a simultaneous plurality of strips without some change or adaptation, while the machine as sold is thus capable. Of course respondents cannot be limited to a precise form of machine, so far as concerns mere mechanical details which are not injurious; but what may be allowed or not allowed in that direction will be a matter for consideration when the terms of the final decree are settled.

Complainant's brief enters on a discussion of matters not charged in the bill—as, for example, a claim that the Lynn Box Machine Company be enjoined from making, selling, or using any box-making machinery covered by any of the patents. Indeed, so far as this is concerned the nineteenth paragraph of the bill alleges that what this corporation has done was with "the consent of the defendant Kilham;" and as he was authorized by the contract to appoint such selling agents as he saw fit and was also to procure the manufacture of the single-strip machines by such persons as he deemed proper, subject to being personally responsible for agents not approved by the complainant, it is of no consequence whether his appointment was formal or informal or by ratification or consent. The pith of the bill aims only at respondents' making, using, or selling a two-strip machine, and when this call of the bill is met nothing further remains to be answered for.

It is admitted by the complainant's brief that the Lynn Box Machine Company neither manufactured nor sold the offending machine. There is no proof of any complicity on its part unless it be by what appears on page 2 of the catalogue of complainant's Exhibit H. There is nothing in the text of this page and I have not been referred to anything in the proofs which indicates that the machine there shown was adapted for two strips or was offered as such, and the drawing is not sufficiently accurate to throw light on that point. Taken in connection with the joint circular of May 25, 1888, which appears in this catalogue, I am unable to see that it furnishes any ground of complaint. I have no doubt of the right of Kilham, trustee, or of his selling agent, Metcalf, or of any other person interested in selling the single-strip machine to advertise it through the catalogues of the Lynn Box Machine Company, or of any other person or corporation, unless the advertisement is shown to contain some unauthorized feature, and such is not the case with this in question.

I do not find any claim of any act by Crosman individually or anything connecting him with this case except as director of the Lynn Box Machine Company, and I therefore think he must go out of the suit with that corporation.

Rollins and Glazier are properly charged as the manufacturers and Metcalf as the seller of the offending machine, and therefore must be retained in the bill.

It also appears that Metcalf is a special partner in the limited partnership of Frank & Duston and that this partnership has been using the machine in question for covering boxes with two strips simultaneously. For reasons already stated Metcalf must be charged with the acts of the partnership so far as his obligations under the contract are concerned; but no account can be taken of profits as against him in the absence of his copartners as defendants in this suit.

In *The Magic Ruffle Company* v. *The Elm City Company*, *supra*, Judge Shipman ordered an account of profits; but in the case at bar the complainant has not proven specific facts sufficient to show that any of the respondents have made any profits on account of the features complained of in the machines which they sell, and while it is very probable that unrestricted sale would eventually seriously impair the trade of the complainant, which fact is the basis of jurisdiction in this case, yet the proofs also lack specific evidence of actual damage already suffered. On the whole, I do not find enough in the record to justify ordering an account or making a reference for the purpose of assessing damages.

Let there be a decree dismissing the bill as against Crosman and the Lynn Box Machine Company, with costs; but for the complainant against the remaining respondents for an injunction, with costs, and, further, against Metcalf from continuing in the partnership of Frank & Duston so long as they are using the machines complained of, the terms of the decree to be settled in accordance with this opinion.

U. S. Circuit Court—District of Minnesota.

LEE *v.* PILLSBURY *et al.*

Decided January Term, 1892.

1. PATENTS FOR INVENTIONS—PROPERTY RIGHT—DAMAGES FOR INFRINGEMENT.

The exclusive use granted by a patent is a property right, and a plaintiff in an action at law for infringement may recover actual damages therefor.

2. SAME—CONSTRUCTION OF CLAIM—INOPERATIVE CLAIM.

The words "substantially as specified" in the claim of a patent are to be given effect, and where the claim read literally would be inoperative their effect is to include in the claim elements or devices contained in the specification that are wanting in the claim.

3. SAME—DAMAGES—GENERAL EVIDENCE.

Where there is no license-fee and nothing to show that the patentee puts his machine upon the market, he must furnish other evidence to enable the jury to come to a proximate amount of the damage which he has sustained by the infringement, and for this purpose general evidence may be resorted to.

4. SAME.

The actual damages suffered by plaintiff may be arrived at by evidence showing the value of that which defendants have used, the utility and advantage of the invention of the plaintiff over the old modes or devices that have been used for working out similar results, and the saving effected thereby.

5. SAME—NOMINAL DAMAGES.

Plaintiff can recover only nominal damages for the infringement of an impracticable machine or if he fails to show actual advantage to defendants by the use of his machine.

6. SAME—PROOF OF DAMAGES—MERE OPINION.

Plaintiff must prove the actual damages directly or show such facts as will enable the jury to ascertain the amount, and mere opinion as to the amount of that damage cannot be considered.

7. SAME—MEASURE OF DAMAGES.

The proper measure of damages for infringement of a patent is an indemnity to the plaintiff for the loss sustained by the infringement.

STATEMENT OF THE CASE.

Action at law for the infringement of Letters Patent No. 155,874, issued to the plaintiff October 13, 1874, for a seed-separator. It was claimed by plaintiff that certain machines of defendants used in their mills infringed the third claim of his patent. Plaintiff's machine consists of a revolving sheet-metal cylinder, into which the grain is spouted. The cylinder is perforated with holes large enough to receive such grains as cockle, but too small to receive the wheat-grains completely within them. On the outside a skin belt, as wide as the length of the cylinder, surrounds it, so as to cause the perforations to retain the cockle. A trough is suspended lengthwise within the cylinder, and as the cylinder revolves the cockle is retained in the perforations, carried above the trough, and is dropped upon it to be discharged out of the machine. This chute or trough has a brush at one edge, which rubs against the inner surface of the cylinder to brush down the wheat and leave the cockle in the holes to be carried up and discharged in the trough.

The third claim reads:

The brush J, in combination with the perforated cylinder A and trough C, substantially as specified.

Defendants contended that the claim was inoperative, because it did not include the skin belt; that they did not infringe it; also, that it was anticipated by the prior art exhibited in American Patents No. 92,073, June 29, 1869, to Mace; No. 142,170, August 26, 1873, to Miller; No. 73,803, January 28, 1868, to Hancock and Leaman; No. 118,094, August 15, 1871, to Balch; in three French patents, two English patents, and a German publication prior to Lee's patent. It was conceded that the perforated cylinder with a jacket around it as well as cylinders with indentations for the same purpose and used in connection with a trough were old; also, that brushes for various purposes were shown in some of the prior foreign patents in connection with such revolving cylinders. The machines of defendants have an indented cylinder, instead of a perforated one with a jacket. Plaintiff admitted that he had never made nor put into operation but a single specimen of his machine, which occurred a few months prior to his application for his patent; nor had there been any manufacture thereof under licenses. On behalf of defendants it was contended that under such circumstances plaintiff could at most recover only nominal damages, citing 3 Rob. Pat., secs. 1053, 1054, 1062, and note; also, pp. 352–366; *Rude* v. *Westcott*, (130 U. S., 152; 9 Sup. Ct. Rep., 463;) *Mayor* v. *Ransom*, (23 How., 487; 7 Brod Pat. Cas., 88.) Plaintiff cited, contra, *Suffolk Co.* v. *Hayden*, (3 Wall., 315;) *Packet Co.* v. *Sickles*, (19 Wall., 617;) *Root* v. *Railway Co.*, (105 U. S., 198)

Defendants requested the following instructions to be given the jury on the subject of damages:

That the loss sustained by the plaintiff depends upon the use which he makes of his right; that vindictive damages are not allowable, and that plaintiff is not entitled to more damages than the advantages he would have enjoyed but for the infringement complained of; that where an inventor has not exercised his invention in any way, and neither derives nor purposes to derive any advantage from his rights under the patent, he cannot sustain more than nominal damages from the use of his invention by others; that the plaintiff having proved that he never made more than one machine embodying his invention, which was long since destroyed, and having produced no evidence that he had ever manufactured or intended to manufacture his device, no evidence that he had ever granted any license, and no evidence that he made any use of his invention by using it himself, he is in case of infringement entitled to only nominal damages; that, the plaintiff having failed to prove an established license-fee or a depreciation of the value of his exclusive use by the infringement, he can recover only nominal damages in case defendants have infringed.

The court refused these instructions and instructed on that question as contained below. The same question arose on a former trial of the case, and the instructions of the court were then the same in substance as now given.

Messrs. Davis, Kellogg & Severance and *Messrs. Keith, Evans, Thompson & Fairchild* for the plaintiff.

Messrs. Winkler, Flanders, Smith, Bottum & Vilas for the defendants.

NELSON, *J.:*

This suit is brought to recover damages for an alleged infringement of Letters Patent granted to the plaintiff on October 13, 1874, for an improvement in seed-separators. The patent has three claims. The third only is alleged to be infringed by the defendants. The patent laws are passed to promote the progress and to encourage inventions of the useful arts. Meritorious inventors are protected and they are granted the exclusive right to manufacture, sell, and use their inventions. If the subject-matter of the patent possesses novelty and utility, the owner is protected against the use of it by any other person without his consent. The exclusive use granted is a property right, as much so as any other property of the patentee. So in this case, if the third claim in the plaintiff's patent is determined by you from the evidence to be valid and the evidence also proves infringement by the defendants, the former is entitled to recover

actual damages for such infringement. The third claim is as follows:

The brush J, in combination with the perforated cylinder A and trough C, substantially as specified.

The language "substantially as specified" is to be given effect. Such phrase relates to material features of the combination specified, to be ascertained by considering the purpose of the machine and what are the elements of the combination which are effective in producing the result intended. It refers to the specification for such elements or devices wanting in the claim, and elements of the combination not specifically mentioned in the claim may be included therein—that is, in the claim—in the light of other parts of the specifications which are applicable. So that, as this third claim, reading it in its literalism, would be inoperative, in my opinion the skin belt may be included as a part of it, jacketed about the perforated cylinder in the manner described in the specification, and I instruct you that my construction of this third claim is that the skin belt must be embraced in it, and when considering the defenses interposed you must so construe the claim. Now, gentlemen, you are to determine this question as a jury of business men. Some of you, I know, are familiar with mechanism to a certain extent; others are familiar to some extent with the operations of milling. You will give this case careful consideration, weigh all of the testimony that has been introduced here on both sides, and determine whether the plaintiff has sustained a case which entitles him to damages. If in your judgment he has done so and his rights has been invaded under this patent by the defendants, then he is entitled to actual damages, and the question then presented is what amount is he entitled to recover? You can readily see where there is no license-fee, no price fixed for royalty, and nothing disclosed which would show that the patentee puts upon the market a machine for the use of which he charges so much it is a very difficult matter to determine what the amount of damages may be in a certain case; but, like all questions presented to a jury for their determination, the plaintiff is bound and required to give some data and must furnish the the jury with evidence, so that they may be enabled to come to a proximate amount of the damage which the patentee has sustained by the infringement. In other words, general evidence may be resorted to for the purpose of furnishing data for the jury to come to a conclusion. They are to take into consideration and look at the value and utility and advantages of the patentee's machine over other makes of seed-separators and ascertain that value from all the evidence as to its character, operation, and effect, and you will take into consideration the value, if any, of that which the defendants have used belonging to the plaintiff to aid you in forming a judgment of the actual damage plaintiff has sustained.

It is conceded that during the time for which plaintiff seeks to recover the price of wheat was sixty cents a bushel. The value of the cockle-seed which is extracted also has been shown, and evidence has been introduced tending to show the saving effected by the use of the plaintiff's invention. This evidence has been offered here, and it is very appropriate and pertinent as going to show the utility and advantage of the invention of the plaintiff over the old modes or devices that have been used for working out similar results. Upon those data you are furnished with something by which you can arrive at perhaps not an accurate but a proximate conclusion as to what amount of damage has been suffered by the plaintiff, if you think he is entitled to recover damages. I have been presented with many requests by counsel for defendants, some of which I will give you, some I have qualified, and others I have refused. I will read those I propose to give and those I have qualified, giving the qualifications, and I state to you that these instructions I give are to be received by you as part of the law in the case: that in case the jury find an infringement the plaintiff is only entitled to the damages he has sustained, and if the jury believe his machine to be impracticable and useless practically he would only be entitled to nominal damages for the infringement; that it is the duty of the plaintiff to set forth and prove the actual damage to which he claims to be entitled, and that if he fails to show actual advantage to the defendants by the use of his machine he would be entitled to only nominal damages in case the defendants infringe; that it is necessary to the showing of actual damage by the plaintiff that he should prove the same directly or show such facts as will enable the jury to ascertain the same, and that mere opinion as to the amount of that damage cannot be received or considered; that the proper measure for damages for the infringement of a patent is an indemnity to the plaintiff for the loss sustained by the infringement. You will recollect that there is some claim with regard to this trough or this device with a flexible brush attached to it; that it was unserviceable and was not put on for any such purpose, as the wheat never rose up to that point. There is evidence on the part of the plaintiff that the wheat did rise up to that point. That is a question for you to determine. You are to determine what the operation of this brush was for that purpose and what the operation of the machine was and say do or do not the defendants infringe the combination in the patent issued to Mr. Lee. The plaintiff might have brought his suit in equity and had it settled without intervention of a jury; but he presents his case in an action at law, as he has a perfect right to do. If the jury come to the conclusion that the plaintiff's invention was a valid one and that there has been infringement on the part of the defendants, they can award damages to the plaintiff, but not to exceed the amount claimed, $1,600.

The jury returned a verdict in favor of the plaintiff in the sum of $1,600.

U. S. Circuit Court—Northern District of California.

TATUM *et al. v.* GREGORY *et al.*

Decided June 9, 1892.

1. PATENTS FOR INVENTIONS—EDGERS—ESSENTIAL FEATURES.

Claim 1 of Letters Patent No. 227,926, dated May 25, 1880, and claim 1 of Letters Patent No. 290,358, dated December 18, 1883, both granted to J. A. Robb for improvements in edgers, embrace and cover the essential features of the patented machine and give it its merit, without which features it would be valueless and unsalable.

2. SAME—MEASURE OF DAMAGES—WHEN CALCULATED ON WHOLE MACHINE.

When a patent covers only certain features of a machine and not the entire machine, if the patented features constitute the essential features of the machine and give it its merit, without which the machine would be valueless and unsalable, the damages and profits for infringement must be calculated on the basis of the entire machine and not merely on the patented features alone.

3. SAME—SAME.

To entitle a patentee to recover as damages for infringement the profits he would have realized if he had made the sales which were made by the infringer, he must show that he had the ability to make and that he would have made said sales but for the infringement.

EXCEPTION to a master's report.

STATEMENT OF THE CASE.

Complainant brought suit for an injunction and recovery of damages and profits for infringement of the first claim of Letters Patent No. 227,926, dated May 25, 1880, and the first claim of Letters Patent No. 290,358, dated December 18, 1883, both granted to J. A. Robb for improvements in edgers. The first patent covered a mechanism for laterally shifting the saws along the arbor of an edger for the purpose of regulating the distance between them, and thereby cutting different widths of boards. The second patent covered a mechanism for simultaneously raising the upper feed-rolls of an edger. On final hearing the two claims mentioned were held to be infringed by the respondents, and the case was referred to the master of chancery to take an accounting, (see *Tatum v. Gregory*, 41 Fed. Rep., 42.) Accounting was taken, in which the master found that the patented features were the essential features of the machine and gave it its merit and value, and without them the machine was valueless and unsalable. He further found that respondent had made and sold nine edgers containing the two patented features; that the complainants granted no licenses, but kept the patent a close monopoly and supplied the market themselves; that they owned and operated a machine-shop, where the edgers were made and sold; that if no infringement had occurred they could and would have sold an equal number of their edgers to the purchasers who bought from respondents, and they would have made as profits on such sales $1,742.62. On the accounting respondent admitted making a profit of $900 on the infringing edgers sold by them.

Mr. John H. Miller for the complainants.
Mr. John L. Boone for the respondents.

MCKENNA, *J.*:

The patented device was invented by one Robb, and is one for shifting the saws and simultaneously raising the top feed-rolls of a machine used in sawmills called an "edger." The device does not form the whole machine; but it is the essential feature, makes the merit of the new one, and the edger has no value or use without it It is not salable without it.

The case of *Yale Lock Co.* v. *Sargent* (117 U. S., 536) applies, and damages must be adjudged on the basis of the entire edger.

What are the damages?

The plaintiff was the owner of the patent and reserved to himself the right of manufacture and sale. The measure of damages therefore is either the profits he would have made but for the infringing sales, together with the reduction of price on his own sales, or the profits that the respondent made. There was no reduction in the prices of his own sales. These were maintained.

To enable complainant to recover its rate of profit on respondent's sales involves the two conditions that he had the ability to and would have sold his machine to the purchasers who bought of respondent. The first condition is established; the second, the master said, "does not so clearly appear." He infers it, however, from the testimony of a Mr. Smiley, a witness and employé of plaintiff, whom he quotes as follows:

I know that people haven't bought from us on account of our high prices, as they have said, and they placed the order with Spaulding, [meaning respondent.]

This is a positive assertion that plaintiff lost sales by the competition of respondent; but its positiveness is abated on further examination and the statement shown to be based on conjecture and, so far as it asserts sales to customers of complainant, a mistake. In explanation of what he meant by lost sales he said that parties made inquiries at complainant's store, but were deterred from purchasing by the high prices, saying that they "could do better." Though claiming a good memory, so good that it was appealed to in cases of doubt by his fellow-clerks, he was only able to remember one instance of this. One of whom he called "the Korbell Brothers," which one he did not remember, told him that he had bought an edger of Spaulding, and the witness concluded by saying—

that an examination of Mr. Spaulding's books will prove that I am right.

An examination of Mr. Spaulding's books proved that he was wrong. Mr. Spaulding did not sell to Korbell Brothers an edger. A transcript of his books showed a sale of nine edgers, but none to Korbell Brothers or to the company to which they belonged. From testimony so vague and mistaken no judgment can be formed. There was no other testimony of lost sales, and no presumption can be safely indulged in against the fact that there were other competitors of complainant besides respondent, other edgers, and other infringers. If the other edgers are conceded to have been inferior, they were cheaper, and, the testimony shows, were salable, and there are suits pending against other infringers. In this condition of things and the evidence it would be incurring too much risk of doing injustice to decide that plaintiff would have made the sales which respondent made—in other words, that the purchasers from respondent would not have bought of him or another some other edger or bought the same edger from another infringer, but would have bought of plaintiff at a higher price—that they would not have done what the witness said they did do. I do not think, therefore, that the evidence sustains the finding of the master that plaintiff incurred $1,742.62 damages by respondent's sales.

The contention of respondent's counsel that complainant can only recover nominal damages cannot be sustained. There is proof of other damages. Respondent admits that he made a profit of $100 on each edger, or $900 in all. Therefore final decree will be entered for complainant for $900 damages, costs of suit, and the injunction will be made perpetual.

Todd v. Campbell	1884
DECISIONS OF THE U. S. COURTS—	
Watson v. Stevens et al	1884
Masten v. Hunt et al	1886
Waite v. Robinson et al	1888

Changes in Classification.

(ORDER No. 776.)

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., September 16, 1892.

In Class 139, Weaving, Division XXI, the following sub-classes are established:

4. Driving and lay motions.
26. Looms, swivel.
31. Shuttle-motions, pneumatic.

Fabrics—
34. Elastic.
9. Fabrics.
35. Pile.
55. Tubular.

Looms, pile fabric—
62. Longitudinal wires.
23. Pile fabric.
63. Pile wires.
64. Pile-wire motions.
65. Terry.
66. Tufted.

W. E. SIMONDS,
Commissioner.

Copies of Decisions Furnished.

Hereafter an uncertified copy of every decision or action by any tribunal in this Office will be furnished by such tribunal to the interested party or parties without charge.

This order does not include the written statements of the grounds of decisions made by Examiners to the appellate tribunal in *ex parte* cases.

Names of Applicants.

When the full first name of the applicant does not appear either in his signature or in the preamble to the specification, the Examiner will, in his first official letter, require an amendment supplying the omission, and he will not pass the application to issue until the omission has been supplied, unless an affidavit shall have been filed setting forth that the full first name of the applicant is the one originally given by him.

World's Columbian Exposition.

DEPARTMENT OF THE INTERIOR,
UNITED STATES PATENT OFFICE,
Washington, D. C., March 8, 1892.

To the Inventors and Manufacturers of the United States:

It is the intention of the Patent Office to make at the World's Columbian Exposition at Chicago in 1893 an exhibit which will show that great advance in the several arts which is due, in large measure, to the encouragement and support afforded by our patent system. This exhibit is to consist of models of patented inventions, which will be carefully selected, to show as far as is possible the inception of each art, the stages through which the art has advanced, and the final development reached at the present time. This display of typical inventions, embodied in concrete form and properly arranged, will, it is believed, constitute a grand historical exhibit of the progress of the useful arts and one which will be of great interest not only to inventors and manufacturers, but to the public generally.

The Office collection of models has been seriously impaired by fire, and is further incomplete by reason of the fact that models have not generally been required or received during the last ten years. The Office is not, therefore, in possession of the models of many valuable inventions which might properly be included in such an exhibit, and without which, indeed, the exhibit would be incomplete. The limited appropriation for this exhibit will not permit the Office to make such models. An urgent appeal is therefore made to all inventors and manufacturers to come to the assistance of the Office in this matter, either by loans of models already built or by the construction of such models not in the possession of the Office as should properly be placed in such a collection. Of course, where models are loaned to the Office all proper credit will be given both in labels and catalogues to the parties by whom the loans are made, and such disposition will be made of the models after the close of the exhibit as the owners shall direct. Many inventors and manufacturers have already indicated a willingness to co-operate with the Office in this matter, and it is confidently expected that such a response will be made to this general appeal as will assure the unparalleled success of this attempt to graphically and concretely show the development of American invention.

W. E. SIMONDS,
Commissioner.

Price of Printed Copies of Patents.

Attention is called to the fact that under date of May 14, 1891, the price of uncertified printed copies of patents was fixed at the *uniform price of ten cents each*, whether purchased singly or in quantities.

Women Inventors.

The Patent Office has published and has for sale a volume containing a list of women inventors to whom patents have been granted by the United States from 1790 to July 1, 1888. 44 pages. Paper covers, 50 cents.

The Official Gazette.

THE OFFICIAL GAZETTE is published every Tuesday, simultaneously with the weekly issue of patents. From January 1, 1872, (the commencement of its publication,) to June 30, 1883, it was published and bound in semi-annual volumes; since July 1, 1883, in quarterly volumes. All subscriptions must commence with the beginning of a volume; none taken for less than three months. Terms: To all subscribers within the United States and Canada, $5 per annum; to foreign subscribers, $7; single copies, 10 cents; bound semi-annual volumes, (prior to June 30, 1883,) full sheep, $4 per volume; bound quarterly volumes, (subsequent to July 1, 1883,) full sheep, $2.75 per volume. No club rates. *Payment in advance.* All orders should be addressed to "The Commissioner of Patents, Washington, D. C."

Issue of September 27, 1892.

Patents	394	No. 483,124 to No. 483,517, inclusive.

PATENTS

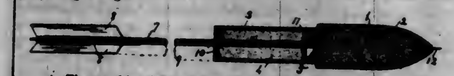
GRANTED SEPTEMBER 27, 1892.

483,124. ELECTRIC HEATER. THOMAS AHEARN, Ottawa, Canada. Filed Apr. 4, 1892. Serial No. 427,758. (No model.)

Claim.—1. In an electric heater, the combination of a tube A, strips of asbestus B, laid upon said tube longitudinally, strips of mica B', laid upon said asbestus strips, a coil of wire or strip C, of refractory metal of low electric conductive power, wound upon said strips and its terminals connected with leads, an outer tube D, inclosing said coil and leaving an annular space, a filling of powdered non-combustible non-electric-conducting material in said annular space, insulating packing-rings E', closing the ends of said annular space, covers E, having lugs e upon said packing-rings, and bolts E", passing through said lugs and holding said covers together, substantially as set forth.

2. In an electric heater, the combination of a tubular core A, insulated with strips of asbestus B and mica B', carrying a coil C, of wire or strip of refractory metal of low electric conductive power, an outer tube D, inclosing said core and forming an annular space around said core and containing insulators through which pass the leads connecting the terminals of said coil, a powdered non-electric-conducting material filling F in said annular space, insulated covers E, closing said annular space and held in place by bolts E", insulating-feet G on one of said covers, an inner tube A', closed at the bottom, and a casing A" around the external tube D, open at the bottom and forming an annular space around the same, substantially as set forth.

483,125. BLASTING-POWDER. FERDINAND ADOLPHI, Graz, Austria-Hungary, assignor to Anton Mosebek and August Brunner, both of same place. Filed May 12, 1891. Serial No. 392,505. (No specimens.)

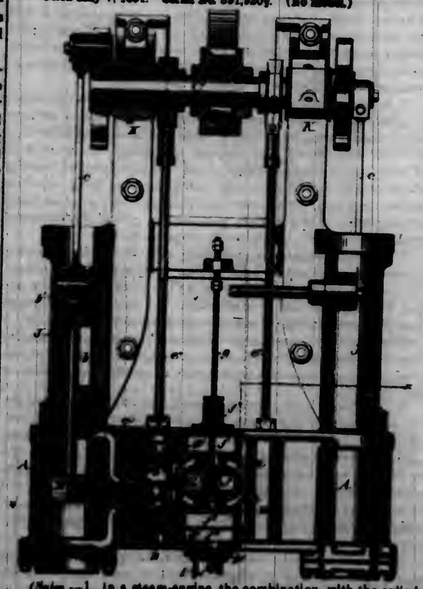


Claim.—As a new article of manufacture, a blasting compound consisting of malt germs or coarse, nitrate of ammonia, and chlorate of potash, substantially as described.

483,126. TORPEDO. JAMES H. BATES, New York, N. Y. Filed Feb. 11, 1892. Serial No. 421,132. (No model.)

Claim.—1. In a torpedo, the combination, substantially as set forth, of two shells connected together, one containing an explosive charge to be exploded at the destination of the device and the other containing a propelling-charge of slow-burning powder to propel the device, and a stem projecting rearwardly from said shells to guide them in their course.

2. In a torpedo, the combination, substantially as set forth, of a double shell, one chamber of which contains an exploding charge and the other a propelling-charge, a cushion between the two charges to prevent the transmission of shock, and a stem projecting rearwardly from said shells to guide them in their course.



3. The combination, substantially as set forth, in a torpedo, of the two shells, with a loose piston 11 in the after shell in front of the propelling-charge.

4. The combination, substantially as set forth, in a torpedo, of the shell containing the explosive charge, the shell containing the propelling-charge, a stem projecting rearwardly from said shells, and guide-blades on said stem.

5. The combination, substantially as set forth, in a torpedo, of the double shell with a partition between its chambers, the stem secured to said partition and extending rearwardly through the after shell, the spider to brace the stem at the end of the after shell, and the guide-wings upon the stem.

483,127. STEAM-ENGINE. MATTHIAS A. BECK, Milwaukee, Wis. Filed May 7, 1891. Serial No. 391,990½. (No model.)

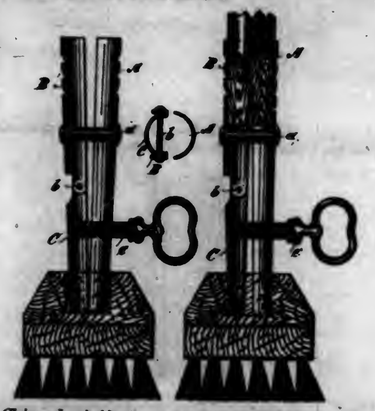
Claim.—1. In a steam-engine, the combination, with the cylinder and piston, of a reversing-valve and its case having steam and exhaust connections, a cylindrical main-valve case having ports in one side connected by steam-passages with opposite ends of the cylinder and two ports in another side connected with the reversing-valve chamber, and a cylindrical valve fitting within said case and having steam-passages arranged to register with the ports therein and closed ends outside of said ports and passages, whereby economy of steam is effected in the operation of the engine, substantially as and for the purposes set forth.

2. In a steam-engine, the combination, with the cylinder and piston, of a reversing-valve and its case having steam and exhaust connections, a cylindrical main-valve case having two ports connected by steam-passages with opposite ends of said cylinder and two ports communicating with the reversing-valve chamber, and a cylindrical valve having steam ports and passages arranged to register with the ports in said case and extended bearing-surfaces at the ends outside of the ports therein, whereby economy of steam is effected and wear of the valve-faces between said bearing-surfaces is avoided, substantially as and for the purposes set forth.

3. In a steam-engine, the combination, with the cylinder and piston, of a cylindrical valve-case connected with opposite ends of said cylinder by steam-passages and having suitable steam and exhaust connections, and a cylindrical valve fitted within said case, having suitable passages arranged to register with the ports therein and extended bearing-surfaces outside of said ports, said valve-case being formed with annular grooves, with waste-openings near the ends adjacent to the extended bearing-surfaces of the valve, whereby leakage past the ends of the valve is prevented, substantially as and for the purposes set forth.

4. In a reversing engine, the combination, with a cylinder and piston, of a reversing-valve and its case having exhaust-chambers at the ends and an intermediate steam-chamber and passages connecting it with the main-valve chamber, a main-valve case connected by steam-passages with opposite ends of said cylinder and having at or near its ends openings into the exhaust-chambers of said reversing-valve case, and a cylindrical main valve having closed ends fitting within the main-valve case and formed with intermediate ports arranged to register with the ports in said main-valve case, substantially as and for the purposes set forth.

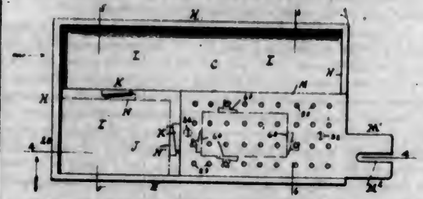
5. In a reversing engine, the combination, with a cylinder and pistons, of cylindrical main and reversing valve cases, the main-valve case being connected with opposite ends of the cylinder and with the reversing-valve case by suitable passages, and the reversing-valve case having connected exhaust-chambers at the ends and an intermediate steam-chamber, a reversing-valve consisting of two cylindrical heads fitted to a cylindrical bore in the partitions separating said steam and exhaust chambers and controlling the passages leading through said partitions into the main-valve case, and a cylindrical main valve formed with the steam-passages arranged to register with the ports in its case and having closed ends and extended bearing-faces outside of said ports, the main-valve case being formed near the ends adjacent to the extended bearing-surfaces of the valve with annular grooves which open into the exhaust-chambers at the ends of the reversing-valve case, substantially as and for the purposes set forth.



6. In a steam-engine, the combination, with the cylinder and piston, of a cylindrical valve-case connected with opposite ends of said cylinder by steam-passages and having steam and exhaust connections, a cylindrical valve formed with passages registering with the ports in said valve-case and provided with closed ends and extended bearing-surfaces outside of said ports, said bearing-surfaces being provided near the outer ends with suitable packing, and the valve-case being formed adjacent to said surfaces with annular grooves having waste-openings, substantially as and for the purposes set forth.

7. In a steam-engine, the combination, with the cylinder and piston, of a reversing-valve and its case having steam and exhaust connections, a cylindrical main-valve case having two ports connected by passages with opposite ends of said cylinder and two opposite alternating ports in communication with the reversing-valve chamber, and a cylindrical main valve having closed ends and between them connected ports, and a separate intermediate port arranged to register with the ports in the main-valve case, substantially as and for the purposes set forth.

8. In a steam-engine, the combination, with two cylinders and pistons, of a reversing-valve and its case having steam and exhaust connections, two cylindrical main-valve cases, each having two ports connected by passages with opposite ends of the adjacent cylinder and two opposite and alternating ports in communication with the reversing-valve case, and cylindrical main valves having closed ends and between them connected ports, and separate intermediate ports arranged to register with the ports in said main-valve cases, substantially as and for the purposes set forth.



9. In a twin-cylinder reversing engine, the combination, with the cylinders and pistons, of cylindrical main-valve cases, each having two ports communicating with opposite ends of the adjacent cylinder, an intermediate reversing-valve case having exhaust-chambers at the ends, a steam-chamber between them, and intermediate ports connected with ports in the main-valve chambers opposite to and alternating with the ports therein, communicating with the cylinders, a reversing-valve controlling communication between the steam and exhaust connections and the passages leading from the reversing-valve chamber into the main-valve chambers, and cylindrical main valves having closed ends with extended bearing-surfaces and intermediate ports arranged to register with the ports in the main-valve cases, said main-valve cases having at or near their ends openings into the exhaust-chambers in the ends of the reversing-valve case, substantially as and for the purposes set forth.

483,128. SCRUBBING-BRUSH. JOHANN J. BEILMANN and ERNST LEVI, Mannheim, Germany. Filed Nov. 10, 1890. Serial No. 370,946. (Model.) Patented in Austria-Hungary Oct. 22, 1890; in France Oct. 25, 1890, No. 208,121; in Belgium Oct. 27, 1890, No. 93,503; in England Oct. 26, 1890, No. 17,360; in Germany Nov. 11, 1890, No. 57,232, and in Switzerland Dec 3, 1890, No. 2,969.

Claim.—In a holder for scrubbing-brushes, the combination of the tube-half A with the tube-halves B and C, connected by the hinge *b*, the screw *c*, and the loose pin *a*, uniting the tube-halves A and B, as and for the purpose set forth.

483,129. DESK-COVER. CHARLES A. BENNETT, Montclair, N. J. Filed Mar. 21, 1892. Serial No. 426,052. (No model.)

Claim.—1. A removable desk-cover consisting of the cover having the ledges D and E, adapted to project downwardly outside and beyond the sides of the desk, and the wedge adapted to fit between one of said ledges and the desk, whereby the cover can be laterally clamped in place without alteration of the desk, substantially as described.

2. A removable desk-cover consisting of the cover having the downwardly-projecting ledges D and E, adapted to fit outside of the desk, the ledge E having an inclined recess *e*, and the wedge adapted to fit into said recess *e*, whereby the cover can be clamped to the desk, substantially as described.

3. The removable desk-cover having the pocket I, the surface J, and the removable block M, substantially as described.

4. The removable desk-cover having the base C, the rib H, extending around the same, the raised surface J in the base, the wedges K and K', fastened on said surface J, and the removable block M, having the projecting slotted arm M', the surface J and block M not extending the full width of the cover, whereby a pocket, as I, will be formed, substantially as described.

5. A removable desk-cover having a number of holes bored in the same, and pins having square heads and rounded shanks adapted to fit into said holes, and wedges adapted to be forced between said square heads and material to be clamped to said board, whereby the pins will be turned to accommodate the wedge, substantially as described.

483,130. MEANS FOR OPERATING HEAVY ORDNANCE. FREDERICK BEE, Washington, D. C. Filed Jan. 11, 1892. Serial No. 417,660. (No model.)

Claim.—1. In a gun-carriage, the combination of a supporting-base, a rotating platform on the base, a rotating and tilting platform on the said rotating platform, means, as described, for tilting the platform, and a gun-floor, with rails and masts, on the tilting platform, arranged to accommodate the motions and be tilted therewith, substantially as described.

2. In a gun-carriage, the combination of the rotating platform B, a centrally-arranged sliding block on the platform, the tilting platform C, the connecting-rods between the platform C, the sliding block, and means, substantially as described, for moving the sliding block, as and for the purpose set forth.

3. In a gun-carriage, the combination of the rotating platform B, a centrally-arranged sliding block on the platform, the tilting platform C, the connecting-rods between the platform C and the sliding block, a sliding yoke on the platform B, having racks in its arms, lifting-screws to engage the racks and tilt and sustain the platform C, and means to move the yoke and the sliding block, substantially as described.

4. In a gun-carriage, the combination of the platform B, a yoke on the floor of the platform, having racks formed in it, a tilting platform C, arranged above the platform B, lifting-screws arranged to engage the racks of the yoke and tilt the platform, and a screw to move the yoke, substantially as described.

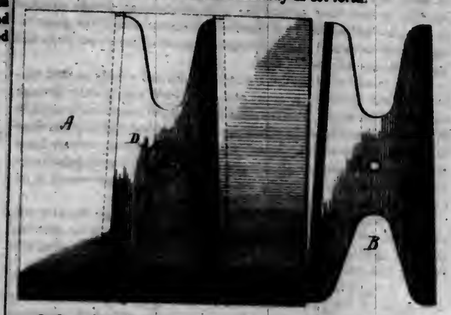
5. In a gun-carriage, the combination of a supporting-base, a rotating platform on the base, a rotating and tilting platform, means, as described, for tilting the platform, and a gun-floor on the tilting platform arranged to accommodate the motions and be tilted therewith, substantially as described.

6. In a gun-carriage, the combination of a base, a central vertical shaft and gear for actuating the same, and a series of platforms centrally mounted on the said shaft, the extremity thereof terminating in a ball, which engages with a socket on the gun-platform to permit the gyratory motion of the same.

7. In a gun-carriage, the combination of a base having a central vertical shaft and gearing connecting it with a suitable motor, a series of platforms centrally located on said shaft, mechanism for tilting and rotating said platforms, and a ball-and-socket joint on the terminal of said shaft to permit the gyratory movement of the gun-platform supported thereon.

8. In a gun-carriage having a suitable base, a vertical shaft, a series of rotary platforms mounted thereon, and mechanism for actuating the same, of a ball-and-socket joint terminating said shaft, said ball having a recess on the surface thereof for the reception of an antifriction-roll, whereby the wave-like motion of the platform is facilitated.

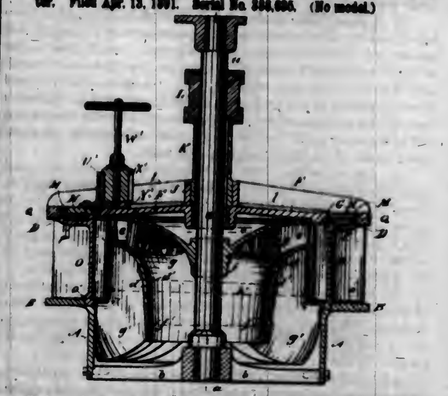
483,131. TIRE FOR VEHICLE-WHEELS. JOHN H. BINGHAM, Chicago, Ill. Filed Oct. 6, 1891. Serial No. 407,985. (No model.)



Claim.—1. A vehicle-wheel tire consisting of an elastic tube and cup-shaped cushions arranged radially in pairs back to back and one above the other within the bore thereof.

2. A vehicle-wheel tire consisting of an elastic tube and a series of cup-shaped cushions placed therein and filling the bore thereof, one-half of said cushions having their concave sides facing the rim of the wheel and the other one-half facing the tread thereof and supporting said rim-facing cushions, as set forth.

483,132. MASON'S HAWK. CHARLES W. BRAY, Janesville, Wis. Filed Jan. 16, 1892. Serial No. 418,203. (No model.)



Claim.—1. The combination, with a table or other surface provided with converging kerfs or grooves, of a flanged metal wedge the flanges of which are adapted to fit in said kerfs or grooves, substantially as set forth.

2. The combination, with a table or other surface provided with converging kerfs or grooves, of a flanged metal wedge the flanges of which are adapted to fit in said kerfs or grooves and a handle secured to said table or other surface, substantially as set forth.

3. In a mason's hawk, the combination, with a table having a centrally-located recess on its under side, said table being provided with converging kerfs or grooves, and a nut located in said recess, of a flanged metal wedge the flanges of which are adapted to fit in said kerfs or grooves, a handle, and a bolt passing through the handle and engaging the nut, substantially as set forth.

488,133. WATER-WHEEL. FRANCIS M. BOOKWALTER and WILLIAM W. TYLER, Springfield, Ohio; said Tyler assignor to said Bookwalter. Filed Apr. 13, 1891. Serial No. 388,695. (No model.)

Claim.—1. A water-wheel having an upper set of buckets and a lower set of buckets, the diameter of the lower part of the wheel being greater than that of the upper part of the wheel.

2. A water-wheel having an upper set of central-discharge buckets and a lower set of downward-discharge buckets, the lower diameter of the wheel being larger than the upper diameter of the wheel.

3. A water-wheel having a set of slow-operating buckets and a set of faster-operating buckets and constructed with two diameters, the slow-operating buckets being in the smaller diameter and the faster-operating buckets being in the larger diameter.

4. A water-wheel having a crown-plate and a shell or body with a space between them which increases in size from the upper end inward, a set of central-discharge buckets in said space, and a set of downward-discharge buckets outside of said shell or body, the wheel being of two diameters.

5. A water-wheel having a crown and a shell or body with a space between them which widens inward from the outer entrance end, a set of central discharge-buckets in said space and a set of downward-discharge buckets outside of the body or shell, the said body or shell being located in the lower portion substantially equidistant from the center of the wheel to the periphery thereof, the walls constituting both sets of buckets lying in their outer portion at an angle to a radial line drawn from the center of the wheel to said outer portion, the said angle of the bucket-walls increasing the capacity of the buckets to take in water and the said widening of the space between the shell and body increasing the discharge capacity of the upper set of buckets, and the

said location of the lower part of the shell or body increasing the radial depth of the lower buckets to increase their discharge-capacity.

6. In a water-wheel, the combination, with a case and pivoted oscillating gates mounted therein, the pivots of the gates being outside of their inner ends, thereby leaving the inner portion of the gates capable of movement in and out to and from the periphery of the wheel opposite to such inner ends of the gates, of the wheel proper mounted in said case and having two diameters, the inner ends of the gates being adapted to extend over the larger diameter of the wheel when said inner ends are adjusted inward.

7. A water-wheel having a curved crown and a body or shell continuously curved from its upper end downward and inward through a portion of its length, with the remainder thereof located substantially equidistant from the center to the periphery, central-discharge buckets in the space between the crown and the shell or body, whose inner ends terminate remote from the main shaft, and downward-discharge buckets outside of the shell or body whose radial measurement is increased by reason of said position of the shell or body.

8. A water-wheel having a set of central-discharge buckets and also a set of downward-discharge buckets, the respective entering edges of each set of buckets being at the same angle to a radial line running from the center of the wheel to said entering edges.

9. A water-wheel having a set of central-discharge buckets and also a set of downward-discharge buckets, the respective entering edges of both sets of buckets being at an angle of forty-five degrees to a radial line drawn from the center of the wheel to the said entering edges.

10. A water-wheel having a set of central-discharge buckets and a set of downward-discharge buckets, the respective entering edges of each set of buckets being at the same angle to a radial line drawn from the center to said entering edges and the lower diameter of the wheel larger than the upper diameter.

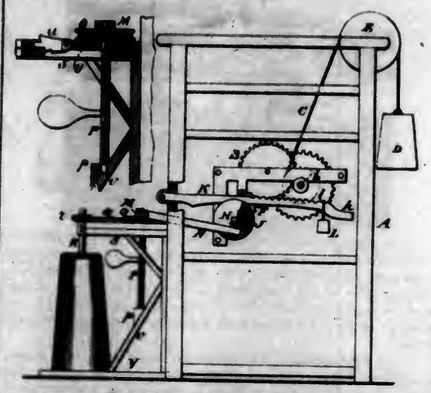
11. A water-wheel having two sets of buckets and two diameters, the part consisting of the larger diameter being contracted from the lower end upward.

12. A water-wheel having an upper set of buckets and a lower set of buckets, with a crown over the upper set and a body or shell between the two sets, the upper end of the body or shell being nearer to the crown than to the place on the lower set opposite to which stands the lower end of the gate when the wheel is mounted, the lower part of the remainder of the shell being located substantially equidistant from the center of the wheel to the periphery, whereby the entering end of the lower set of buckets is increased and whereby the radial measurement of the lower buckets is increased.

13. In a water-wheel, the combination, with the case and oscillating gates mounted therein, the inner ends of the gates being deflected on one side and extended on the other to form a lip, of a wheel proper mounted in the case and having two diameters, the inner ends of said gates being adapted to be adjusted inward over the larger diameter, the deflected part to permit the water to drop downward and the extended part to support the water, for the purpose set forth.

14. In a water-wheel, the combination, with the case, of oscillating gates mounted therein, and an operating ring or annulus and means to operate it, arms carried by the gates and having studs and engaging with a ring through a shifting bearing to vary the leverage, for the purpose set forth.

15. In a water-wheel, the combination, with the case, of oscillating gates mounted therein, and an operating ring or annulus, and a shifting or traveling bearing between the gates and said ring or annulus to vary the leverage of the ring over the gates, and means to operate the ring or annulus.



16. In a water-wheel, the combination, with the case and gates pivoted within it and each having an arm provided with a stud substantially of the form described, of a ring having slots to receive said studs and between which there is a readily-shifting contact, and means to actuate the ring.

17. A water-wheel having an upper set of buckets whose inner ends terminate remote from the main shaft and a lower set of buckets with a crown over the upper set and a body or shell between the two sets, the upper end of the body or shell being nearer to the crown than to the place on the lower set opposite to which stands the lower end of the gate when the wheel is mounted and the remainder of the shell located substantially equidistant from the center to the periphery, whereby the entering end of the lower set of buckets is increased, and whereby the radial measurement of the lower portion of the lower buckets is increased.

18. A water-wheel having a crown and a shell or body, the body having a continuous curve from its upper end inward, buckets located between the crown and the shell, their discharge ends inclined and terminating remote from the shaft, whereby they become central-discharge buckets, and downward-discharge buckets located outside and around the lower part of the shell or body.

19. A water-wheel having an upper set of buckets and a lower set of buckets, with a crown over the upper set and a body or shell between the two sets, the upper end of the body or shell being nearer to the crown than the place on the lower set opposite to which stands the lower end of the gates when the wheel is mounted, the portion of the wheel below the lower end of the gates being of greater diameter than the remainder of the wheel.

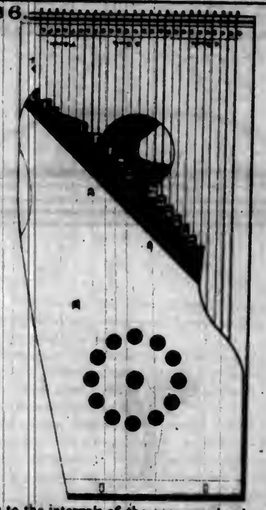
488,134. CHURN-POWER. WILLIAM T. BROWN, Sandy Hook, Ky., assignor of three-fourths to Bryant B. Putnam, Robert T. Parsons, and James M. Duvall, all of same place. Filed Apr. 30, 1892. Serial No. 431,266. (No model.)

Claim.—1. The combination, with a crank-pin, a disk J, and mechanism to rotate said disk, of a pivoted pitman N, arm M, pulley O, fan-shaft P, cord Q, pulley *r*, and shaft R, whereby fan and shaft may be simultaneously operated, as set forth.

2. The combination of a fan-shaft P, platform S, and movable bearing U, the latter being provided with a hinged handle *u*, notched on the under side, as and for the purpose specified.

488,135. DIAPHRAGM FOR PHOTOGRAPHIC LENSES. EDGAR R. BULLARD, Wheeling, W. Va. Filed Sept. 30, 1891. Serial No. 407,261. (No model.)

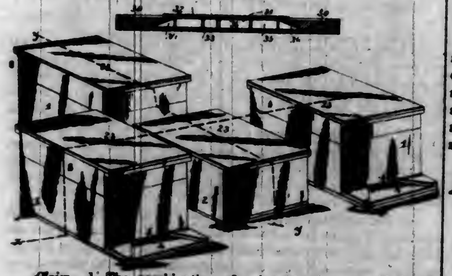
Claim.—In a photographic camera, the lens-tube within the camera-casing, adapted to be shifted to and from the exposure-orifice, a curved plate or slide having openings therein, said plate inserted through openings in the lens-tube, a radial arm connected to said curved plate and pivotally secured to the frame for shifting the lens-tube, a square sleeve extending through the radial arm at its pivotal point, and a square spindle extending through the camera-casing and loosely engaging the square sleeve, substantially as described, and for the purpose specified.



488,136. STRINGED MUSICAL INSTRUMENT. WILLIAM J. CHERRY, San José, Cal. Filed Mar. 16, 1892. Serial No. 425,415. (No model.)

Claim.—1. In a musical instrument of the kind herein described, the finger stops or guides over the strings in diagonal line and stepped order, adapted to present obstructions above the level of the strings for the finger of the player, substantially as described.

2. In a musical instrument of the kind herein described, the stationary diagonal bar D, having the steps or finger-guides D D formed on the edge thereof in stepped order to present edges substantially parallel with the strings over which they set, in combination with strings tuned in groups to the intervals of the common chords, substantially as described.



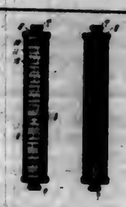
3. The herein-described stringed musical instrument, consisting of the body A, top board B, having finger-stops D D, set diagonally across the sounding-board, and the strings arranged and tuned in three

488,186.

separate groups to the intervals of the common chords, substantially as described.

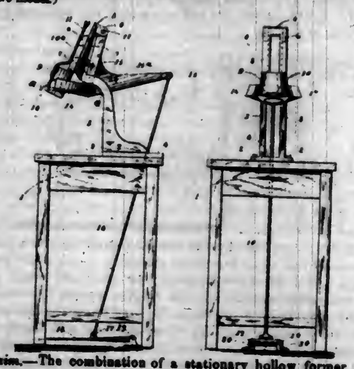
488,187. BEEHIVE. JOHN COMER, Sedalia, Mo. Filed Oct. 29, 1891. Serial No. 410,259. (No model.)

Claim.—1. The combination of a hatching-box provided with compartments adapted for the reception of brood-frames, hives arranged adjacent to the hatching-box and having brood-frames adapted to be placed into the compartments of the hatching-box, and conductors connecting the hives with the compartments of the hatching-box and provided with queen-excluders, substantially as and for the purpose described.



2. The combination of a hatching-box provided with an opening, a hive arranged adjacent to the hatching-box and provided with an opening, and a queen-excluder connecting the box and the hive and composed of two blocks secured together and having their opposed faces provided with recesses, a perforated plate interposed between the blocks, and tubular conductors extending from outer faces of the block and adapted to fit in the openings of the hatching-box and the hive, substantially as described.

3. A bee-escape comprising a board provided with a central opening and having recesses arranged at the sides of the opening, an upper plate secured to the board and arranged over the central opening and provided with openings, a lower plate secured to the board and arranged below the central opening, and the series of angle-pieces interposed between the plates and arranged in the form of a star and forming contracted bee-openings, substantially as and for the purpose described.



488,188. PERPETUAL TRAIN TIME-TABLE. JOHN I. COVINGTON, Brooklyn, N. Y. Filed Sept. 3, 1891. Serial No. 404,003. (No model.)

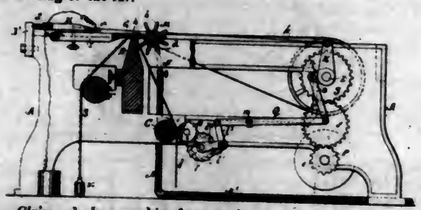
Claim.—In a pocket time table or indicator, the combination, with a rod or core having a screw-threaded end, of indicating-rings rotatable thereon, a slotted cylindrical sleeve surrounding said rings, and a screw threaded flanged cap encircling the sleeve in close frictional contact therewith to prevent rotation of sleeve and serving to press the rings together to prevent them from turning, substantially as described.

488,138.

488,139. MACHINE FOR FORMING COLLARS. ADELBERT W. CUMMINGS, Dunkirk, N. Y. Filed June 15, 1892. Serial No. 436,789. (No model.)

Claim.—The combination of a stationary hollow former and a means for heating it with forming-jaws pivoted to the upper portion of the frame, so as to have a swinging motion to or from the former, a spring for keeping said forming-jaws away from the former and in a normal position, a connecting-rod pivoted to the forming-jaw arm, and a treadle for forcing them forward when shaping a collar, substantially as described.

488,140. DOOR-CLOSER. ETHAN W. DAILY, Kansas City, Kans. Filed Jan. 11, 1892. Serial No. 417,723. (No model.)



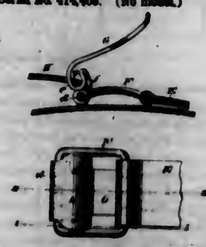
Claim.—A door-closer comprising a bracket having a pair of outwardly-extending parallel arms provided with a number of oppositely-disposed openings, a second bracket also provided with a pair of outwardly-extending parallel arms which are also provided with a number of oppositely-disposed openings, a pin or plate inserted removably through one pair of openings of the first bracket-arms, an operating-rod loosely surrounding said pin and externally screw-threaded near each point of connection with the pin, a pair of pins inserted through two pairs of openings in the arms of the second bracket, peripherally-grooved rollers surrounding said pins, the free end of the operating-rod extending between said rollers, a nut screwed adjustably upon the threaded end of the operating-rod, a cylindrical casing surrounding said part of the rod and having an internal end flange abutting against the nut, a spiral spring surrounding the rod and inclosed within the casing and also abutting against the end flange thereof, and a bearing-plate having a horizontal slot to receive the free end of the rod and formed upon one side of the bracket-arms of the second bracket and also serving to receive the thrust of the spring, substantially as set forth.

488,141. PROCESS OF PURIFYING TANNIC EXTRACTS. GEORGES DELVAUX, Montigny-en-the-Loing, assignor to Alfonse Hutinet, Surosnes, Seine, France. Filed June 6, 1892. Serial No. 436,240. (No specimens.) Patented in France Oct. 15, 1890, No. 210,264; in Germany Feb. 10, 1891, No. 62,454; in England Apr. 24, 1891, No. 7,106; in Belgium May 2, 1891, No. 94,799; in Spain June 6, 1891, No. 13,044; in Italy June 30, 1891, No. 29,091, and in Austria-Hungary Dec. 7, 1891, No. 2,900 and No. 50,967.

Claim.—The herein-described process of decoloring and clarifying tannic extracts, consisting in adding to the extract a compound of strontium, and thereby precipitating the coloring-matters, substantially as described.

488,142. MACHINE FOR REMOVING WATER-HAIRS FROM PELTS. JOHN DERBOGLOW, New York, N. Y. Filed Oct. 31, 1891. Serial No. 410,551. (No model.)

Brief.—The machine includes a knife-edged bar over which the pelt is intermittingly fed, a comb G adjacent to said bar, a reciprocating plate of platinum heated to incandescence for burning off the water-hairs, and a wiper for holding down the fur. This wiper comprises a hollow sleeve and hollow vanes connecting therewith, the sleeve being connected to a source of steam-supply. The hollow vanes are perforated at their outer edges, and through the same small jets of steam are forced against the pelt to dampen the same and prevent the burning of the fur.



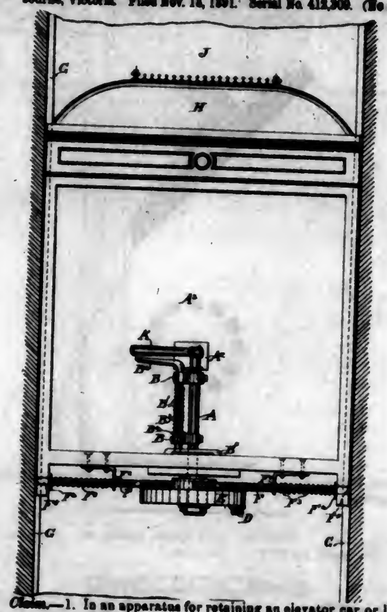
Claim.—1. In a machine for removing water-hairs from pelts, the combination, with a bar over which the pelt is drawn, of a wiper comprising a hollow sleeve or tube and hollow vanes held in said tube or sleeve and communicating with the interior thereof, the vanes being formed with perforations, substantially as and for the purposes set forth.

2. The process of removing water-hairs from pelts, which consists in burning said water-hairs and simultaneously depressing and dampening the fine hair and fur to prevent burning the same, substantially as described.

488,143. COMPOSITION OF MATTER FOR CLEANING BROWNSTONE, &c. HENRY J. BOEHM and GEORGE F. BOEHM, Philadelphia, Pa. Filed May 5, 1892. Serial No. 431,871. (No specimens.)

Claim.—A composition of matter to be used for scouring brownstone or like substances, consisting of pulverized quartz and oxide of iron in about the proportions specified.

488,144. SHOE-FASTENING. ALBERT D. FIELD, Bridgeport, Conn., assignor to the Metal Goods Manufacturing Company, same place. Filed Dec. 8, 1891. Serial No. 414,408. (No model.)



Claim.—1. The combination of the buckle-frame F with the lever G, pivoted thereto, the said lever forming an eye around the pivot *d* and having the double folds *f g* and drawing-loop *e*, the loop *e* being upon and slightly behind the eye around the pivot, substantially as herein shown and described.

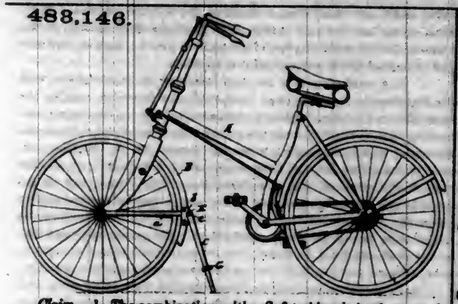
2. The lever G, constructed to form an eye around the pivot *d*, the folds *f g*, and loop *e*, combined with the buckle-frame F, having pivot *d*, and with a spring contact between the buckle-frame and the folds *f g*, said folds *f g* being adapted to pass through and under said buckle-frame F, substantially as herein shown and described.

3. The combination of the buckle-frame F and the lever G, pivoted thereto, said lever carrying the drawing-loop *e*, said drawing-loop being between the extremities of the buckle-frame when the parts are in the closed position, the portion of the lever G which in the closed position passes through and under the buckle-frame being slightly wider than said buckle-frame to form a snap-lock, substantially as and for the purpose herein shown and described.

488,145. ELEVATOR. FREDERICK GILES, South Yarra, near Melbourne, Victoria. Filed Nov. 14, 1891. Serial No. 412,209. (No model.)

Claim.—1. In an apparatus for retaining an elevator car or lift at any point of its travel, the combination, with transverse rods operating in guides secured to the under side of the floor of the car and adapted to enter holes in the skids against which the car works, of an actuating-rod mounted within the car and extending through the bottom thereof, actuating mechanism connecting the lower end of said actuating-rod with the inner ends of said transverse rods, and a movable rod attached to the aforesaid actuating-rod within the car and serving to lock said actuating-rod against rotation or when elevated to permit its rotation, substantially as set forth.

2. The combination, with transverse rods having bent inner ends operating in guides secured to the under side of the bottom of the elevator and adapted to enter holes in the skids against which the elevator-car works, and a disk supported centrally on the under side of the bottom of the car and having connected thereto the bent inner ends of said transverse rods, of a vertical actuating-rod mounted within the car and extending through the bottom thereof, a lever secured to the lower end of the said actuating-rod, and a connecting-rod jointed to the outer end of said lever and attached at its opposite end to the aforesaid disk, substantially as set forth.



3. The combination, with transverse rods having bent inner ends and operating in guides secured to the under side of the bottom of the elevator-car, and a disk supported centrally on the under side of the bottom of the car and having connected thereto the bent inner ends of said transverse rods, of a vertical actuating-rod mounted within the car and extending through the bottom thereof, a lever secured to the lower end of said actuating-rod, a connecting-rod jointed to the outer end of said lever and having its opposite end attached to the aforesaid disk, and a locking rod or bar connected to the actuating-rod within the car and under control of the elevator-driver, substantially as set forth.

4. The combination, with disk E, transverse rods F, having bent inner ends which are connected to said disk, and spiral springs, as F^3, surrounding said rods F, of a vertical actuating-rod provided with a handle and mounted within the car and extending through the bottom thereof, and actuating mechanism connecting the lower end of said vertical actuating-rod to the aforesaid disk, substantially as set forth.

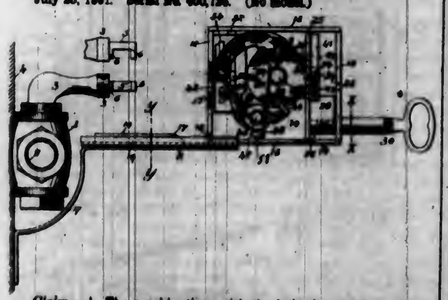
5. The combination, with the transverse rods, as F, adapted to enter holes in the skids against which the car works, disk E, lever C, and rod D, of the vertical actuating-rod A, connected to lever C and having a handle, locking-rod B', having a thumb or hand piece and connected to the actuating-rod A, a spiral spring surrounding said locking-bar, and a base-plate, as B^3, with which the locking-rod B' co-operates, substantially as set forth.

488,146. BICYCLE-SUPPORT. FRANCIS GLEASON, Philadelphia, Pa. Filed Oct. 30, 1891. Serial No. 410,361. (No model.)

488,146.

Claim.—1. The combination, with a Safety bicycle having a mud-guard, of a laterally-bent supporting-arm pivoted to said guard at one side thereof, substantially as described.

2. The combination, with a Safety bicycle having a mud-guard, of a supporting-arm pivoted to said guard, a brake-plate, and means for forcing said plate against the wheel as the arm is moved to its upright position, substantially as described.



3. The combination, with a Safety bicycle having a front mud-guard, of a supporting-arm pivoted to the guard at one side, a brake-plate secured to the inner side of the guard, and a cam-piece connected with the arm and adapted to force said plate into engagement with the wheel as the arm is moved to an upright position, substantially as described.

4. The combination, with a Safety bicycle having a front mud-guard, of a supporting-arm pivoted thereto, a spring-metal brake-plate secured at one end to the guard, and a cam-piece connected with the arm and adapted to move the free end of the brake-plate against the wheel as the arm is adjusted to an upright position, substantially as described.

5. The combination, with the mud-guard having a slot and the brake-plate carried by the guard, of a bearing on the guard at one side of the slot, a pin journaled in said bearing, a supporting-arm at the outer end of the pin, a cam-piece at the other end of the pin and extending through the slot to engage the brake-plate, and a shoulder on the cam-piece, substantially as described.

6. The combination, with the mud-guard connected at or near its lower end by brace-rods, of a supporting arm pivoted to the guard at one side thereof and a spring-clasp carried by said supporting-arm and adapted to engage the adjacent brace rod, substantially as described.

488,147. LOCK. BENJAMIN GOLDBERG, New York, N. Y. Filed July 26, 1891. Serial No. 400,736. (No model.)

Claim.—1. The combination, with the bolt-plate having a finger extending therefrom, the bolt-plate being recessed between the finger and the body thereof, a segmental rack on the bolt opposite the finger, and another segmental rack adapted to engage the rack on the bolt-plate, and a keyway for the key, the said key being adapted to enter the teeth of the last-mentioned rack, substantially as described.

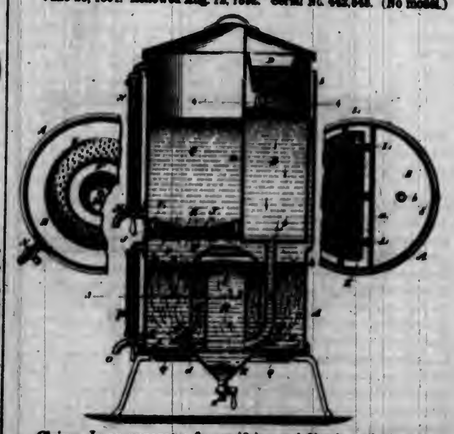
2. The combination, with the bolt-plate having a bolt and a rack, another rack adapted to be operated by a key engaging the teeth of the rack, the last-mentioned rack engaging the rack on the bolt-plate, and a stop independent of either of the racks, adapted to engage the key-operated rack to limit its movement in either direction, substantially as described.

3. The combination, with the bolt-plate 32, rotatably supported on the spindle 31 and having the concentric bolt 33 at one end and the segmental rack 34 at the other, a segmental rack 40, rotatably supported on the septum 25, the racks 34 and 40 engaging, and a key 30 for vibrating the rack 40, substantially as described.

4. The combination, with the key-operated segmental rack 40, having the inclined face 42, adapted to strike the wall 21 of the lock-casing, a key for vibrating the said rack, and a bolt operatively combined with the said rack, the wall 21 limiting the movement of the bolt within the space required for the locking or unlocking movement of the parts, substantially as described.

5. The combination, with the bolt-plate 32, rotatably mounted on the spindle 31, having the concentric bolt 33 on one side and the segmental rack 34 at the other, a spring 38, secured on the said spindle and bearing against the lug 37, a rocker-arm 46, centered on the spindle 47, having the striker-plate 48 at one end and the inclined dog 44 at the other, a detent 45 in the bolt-plate, and a spring 49 about the spindle 47, one end of which engages the rocker-arm, substantially as described.

6. The combination of a valve or the like having a projection 5, provided with outwardly-extending shoulders 6, a lock-casing having the aperture 43, a bolt-plate 32 on the spindle 31, having the concentric bolt 33 on one side and the segmental rack 34 on the other, a spring 38, secured on the said spindle and bearing against the lug 37, a rocker-arm 46 on the spindle 47, having the striker-plate 48, opposing said aperture, and an inclined dog 44, a detent 45 in the bolt-plate, and a spring 49, engaging the spindle 47 and rocker-arm, the striker-plate 48 being adapted to free the dog 44 and throw the bolt 33 between the shoulders 6, substantially as described.



7. A lock-casing having the septum 25, a segmental rack 40, rotatably secured thereto and provided with the inclined face 42, a wall 21 to engage therewith, the key-spindle 26 on the septum, an opening 27 in the end plate 19, conforming to the shape of the key and aligning with the key-spindle, a bolt-plate 32 on the spindle 31, a segmental rack 34, engaging the rack 40, and a concentric bolt 33, substantially as described.

8. A lock-casing having the aperture 43, the sliding plate 50, guided on the casing, a plate 55, extending from said plate and opposing the said aperture, a lever 56 on the spindle 47, having two arms 58 59, the arm 59 engaging the plate 50, a spring 38, engaging said lever, the slot 13 15 in the casing, and a support for the lock, having the strip 16, aligning with said slot and adapted to engage the arm 58 of the lever 56, substantially as described.

9. A lock-casing having the removable septum 25 and end plate 19, the end plate 19 being apertured to conform to shape of a key, the septum having the key-spindle 26, aligning with said aperture, and the segmental rack 40, adapted to be vibrated by a key, substantially as described.

10. The bracket 7, having the bed 8, the plate 9, with overlapping sides 10, secured to the bed, and a strip 16, fixed to the plate 9, in combination with the lever 56, having the arms 58 59, the arm 58 being adapted to engage the strip 16, and the movable plate 50, having the outwardly-extending plate 55, the arm 59 of the lever 56 engaging the plate 50, substantially as described.

488,148. OIL-FILTER. JOHN S. HALL, New York, N. Y. Filed June 26, 1891. Renewed Aug. 12, 1892. Serial No. 442,848. (No model.)

Claim.—In an apparatus for purifying and filtering oil, the combination of the receiving-chamber B, oilway *b*, and purifying-chamber E, having perforated top and closed bottom, dome F, having closed top and open bottom and flaring lower edge *g*, and the washing-chamber H, with the pure-oil chamber C, filter-plate J, and partition *a*, said partition *a* separating the chambers B and C, the pipe *b* enter-

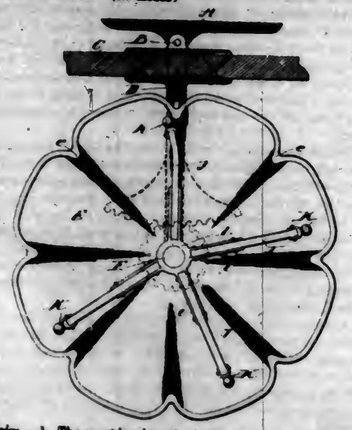
ing the lower part of the chamber E, substantially as and for the purposes specified.

488,149. GONG-BELL. WILLIAM S. HAM, Chicago, Ill., assignor to the Adams & Westlake Company, of Illinois. Filed Jan. 23, 1892. Serial No. 418,042. (No model.)

Claim.—1. The combination, with the frame-work, the transverse rock-shaft, the lever for rocking the same, the rock-arms extending from the rock-shaft, the depending connecting-rods, the cutter-shaft, the rotary cutters mounted thereon, the stationary cutter-bar located under the rotary cutters, the arms pivoted to the cutter-shaft, and the boxes mounted for sliding in the free ends of the arms, of the axle journaled on the frame, the wheels mounted on the axle, said axle being also journaled in the free ends of the arms, the cutter-shaft, the rotary cutters mounted thereon, the stationary transverse cutter-bar, the axle having the wheels, the arms pivoted on the axle and on the cutter-shaft, and the train of gearing between the axle and the cutter-shaft, substantially as specified.

2. In a track-cleaner of the class described, the combination, with the framework, the transverse rock-shaft, the lever for rocking the same, the rock-arms extending from the rock-shaft, the depending connecting-rods, the cutter-shaft, the rotary cutters mounted thereon, the stationary cutter-bar located under the rotary cutters, the arms pivoted to the cutter-shaft, and the boxes mounted for sliding in the free ends of the arms, of the axle journaled on the frame, the wheels mounted on the axle, said axle being also journaled in the free ends of the arms, the cutter-shaft, the rotary cutters mounted thereon, the stationary transverse cutter-bar, the axle having the wheels, the arms pivoted on the axle and on the cutter-shaft, the train of gearing between the axle and the cutter-shaft, the spring-pressed bell-striker, and the lever for operating the same, substantially as specified.

2. A time-stamp having an impulse-receiving device, a one-minute mechanism operated thereby to register the minutes, a cam having six inclines gearing intermediate of said cam and the one-minute mechanism, an escapement controlled by said cam, and a ten-minute wheel governed by said escapement.

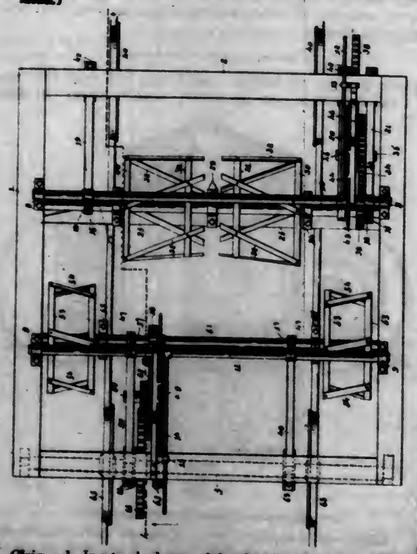


3. A time-stamp comprising an impulse-receiving mechanism, a one-minute wheel operated thereby, printing characters controlled by said minute-wheel, repeated in three series from "0" to "9," inclusive, a ten-minute wheel arranged adjacent to the one-minute wheel, connections intermediate the impulse-receiving device and the ten-minute wheel for actuating said ten-minute wheel once every ten minutes, printing characters controlled by said ten-minute wheel, repeated in six series from "0" to "5," inclusive, and a hand-wheel for operating the impulse-receiving device, substantially as described.

4. A time-stamp having an impulse-receiving device, a one-minute mechanism operated thereby to register the minutes, a cam having six inclines gearing intermediate of said cam and the one-minute mechanism, an escapement controlled by said cam, a ten-minute wheel governed by said escapement, and a hand-wheel for operating the impulse-receiving device, substantially as described.

5. A time-stamp comprising an impulse-receiving mechanism, a one-minute wheel operated thereby, printing characters controlled by said minute-wheel, repeated in three series from "0" to "9," inclusive, a ten-minute wheel arranged adjacent to the one-minute wheel, connections intermediate the impulse-receiving device and the ten-minute wheel for actuating said ten-minute wheel once every ten minutes, printing characters controlled by said ten-minute wheel, repeated in six series from "0" to "5," inclusive, a hand-wheel for operating the impulse-receiving device, and a flexible band passing over said wheel and positively geared to the same and a small wheel at the bottom of the stamp, the said band carrying printing characters to represent the hours, a day-wheel upon a second or independent shaft, controlled by the impulse receiving and storing mechanism, and a second flexible band passing over said day-wheel and positively geared to the same and a second small wheel at the bottom of the stamp, the said second band having printing characters thereon to represent the days, the axes of said wheels and shafts being arranged substantially parallel, whereby the hours and days may be printed within small compass and the time registered by the stamp

ing the lower part of the chamber E, substantially as and for the purposes specified.



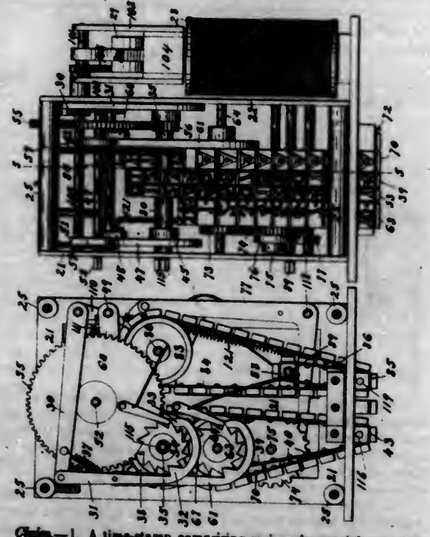
488,149. CORE-MILL. WILLIAM S. HAN, Chicago, Ill., assignor to the Adams & Westlake Company, of Illinois. Filed Jan. 23, 1892. Serial No. 419,049. (No model.)

Claim.—1. The combination of a bell having a series of internally-projecting ridges, a rotatable spindle centered within the bell, one or more flexible strips extending radially from said spindle, and strikers supported upon the outer end of said flexible strips and adapted to make contact with said internal ridges, substantially as described.

2. The combination, with a bell having a series of inwardly-projecting radial ribs, of a rotatable spindle centrally located with reference to the bell, a series of radial flexible strips carried by said spindle and unsymmetrically arranged with reference to the ridges of said bell, and a series of strikers supported upon the outer end of said flexible strips and adapted to make contact with the ridges of said bell, substantially as described.

488,150. WEED-CUTTER FOR RAILROAD-TRACKS. WILLIAM G. HAY, Concordia, Kans. Filed July 6, 1891. Serial No. 398,559. (No model.)

Claim.—1. In a track-cleaner of the class described, the combination, with the truck or frame, the transverse rock-shaft, the lever for operating the same, and the rock-arms depending from the shaft, of the transverse cutter-shaft, connections between the rock-arms and cutter-shaft, the rotary cutters mounted thereon, the stationary transverse cutter-bar, the axle having the wheels, the arms pivoted on the axle and on the cutter-shaft, and the train of gearing between the axle and the cutter-shaft, substantially as specified.



2. In a track-cleaner of the class described, the combination, with the framework, the transverse rock-shaft, the lever for rocking the same, the rock-arms extending from the rock-shaft, the depending connecting-rods, the cutter-shaft, the rotary cutters mounted thereon, the stationary cutter-bar located under the rotary cutters, the arms pivoted to the cutter-shaft, and the boxes mounted for sliding in the free ends of the arms, of the axle journaled on the frame, the wheels mounted on the axle, said axle being also journaled in the sliding boxes, the gear mounted on the cutter-shaft, the master-gear mounted on the axle, the intermediate gears between the master-gear and that of the shaft, the lever mounted upon the arms and adapted to reciprocate the same, and means for locking the lever, substantially as specified.

3. In a track-cleaner of the class described, the combination, with the truck, the transverse rock-shaft, the lever for operating the same, and the rock arms extending from the rock-shaft, of a cutter-shaft mounted for rotation and connected with the rock-arms, the rotary cutters mounted on the shaft, the stirrups depending from the shaft, and the stationary cutter-bar located in the stirrups and having its ends mounted for vertical movement in ways located at the inner sides of the truck, substantially as specified.

4. In a track-cleaner of the class described, the combination, with the truck, the rotatable cutter-shaft, and means for rotating the same, of rotary cutters located upon the shaft and adapted to depend at opposite sides of a track and a stationary cutter-bar extending transverse the track and depressed at those portions occurring underneath the rotary cutters, substantially as specified.

5. In a track-cleaner of the class described, the combination, with the rotatable cutter-shaft and means for driving the same, of opposite pairs of polygonal heads, the inner head of each pair being the smallest, inclined cutters or blades connecting each pair of heads and extending at their inner ends beyond the inner heads, the transverse stationary cutter-bar convexed at its center to agree with the inclination of the cutters or blades, and the central pointed deflector secured to the cutter-bar and extending forwardly underneath and between the cutters, substantially as specified.

488,151. TIME-STAMP. SAMUEL H. HODGSON, St. Louis, Mo., assignor to the Stevenson-Hodgson Electric Company, same place. Filed Feb. 23, 1892. Serial No. 422,414. (No model.)

Claim.—1. A time-stamp comprising an impulse-receiving mechanism, a one-minute wheel operated thereby, printing characters controlled by said minute-wheel, repeated in three series from "0" to "9," inclusive, a ten-minute wheel arranged adjacent to the one-minute wheel, connections intermediate the impulse-receiving device and the ten-minute wheel for actuating said ten-minute wheel once in every ten minutes, and printing characters governed by the ten-minute wheel and repeated in five series from "0" to "5."

2. A time-stamp having an impulse-receiving device, a one-minute mechanism operated thereby to register the minutes, a cam having six inclines gearing intermediate of said cam and the one-minute mechanism, an escapement controlled by said cam, and a ten-minute wheel governed by said escapement.

3. A time-stamp comprising an impulse-receiving mechanism, a one-minute wheel operated thereby, printing characters controlled by said minute-wheel, repeated in three series from "0" to "9," inclusive, a ten-minute wheel arranged adjacent to the one-minute wheel, connections intermediate the impulse-receiving device and the ten-minute wheel for actuating said ten-minute wheel once every ten minutes, and printing characters governed by the ten-minute wheel, repeated in five series from "0" to "5," and an hour-wheel actuated by mechanism intermediate the same and the impulse-receiving device, and controlling printing characters from "1" to "12" repeated in two series and operated once each hour.

4. A time-stamp comprising an impulse-receiving mechanism, a one-minute wheel operated thereby, printing characters controlled by said minute-wheel, repeated in three series from "0" to "9," inclusive, a ten-minute wheel arranged adjacent to the one-minute wheel, connections intermediate the impulse-receiving device and the ten-minute wheel for actuating said ten-minute wheel once every ten minutes, and printing characters governed by the ten-minute wheel, repeated in five series from "0" to "5," an hour-wheel actuated by mechanism intermediate the same and the impulse-receiving device, controlling printing characters from "1" to "12" repeated in two series and operated once each hour, and a meridian-wheel moving with the hour-wheel and controlling the printing characters "A" and "P," the former repeated twelve times and the latter eleven times, with a blank space between the two, with the character "M" fixedly arranged adjacent to the said meridian-wheel and adapted, together with the "A's" and "P's" of the meridian-wheel, to print "A. M." and "P. M."

5. A recording-stamp comprising a series of traveling recording flexible bands located side by side and means for actuating said bands one from another, said means being arranged about the assembled bands so as not to interfere with the proximity of the one band to the other, substantially as described.

6. A time-stamp comprising minute and hour recording flexible bands located side by side and impulse receiving and storing mechanism for actuating said bands one from the other, said impulse receiving and storing mechanism being arranged about the series of bands so as not to interfere with the proximity of the one band to the other, substantially as described.

7. A time-stamp comprising two minute-recording flexible digit-bands and an hour-recording flexible band located side by side, and impulse receiving and storing mechanism for actuating one of the digit-bands from the other and the hour-recording band from the second digit-band, said impulse receiving and storing mechanism being arranged about a series of bands so as not to interfere with the proximity of the one band to the other, substantially as described.

8. A time-stamp comprising an impulse receiving and storing mechanism automatically and intermittently operated, a minute-wheel carried by a shaft controlled thereby, a flexible band passing over said minute-wheel and positively geared to the same, and a small wheel at the bottom of the stamp, the said band carrying numbers to represent the minutes, an hour-wheel upon an independent or second shaft, controlled by gearing intermediate the impulse receiving and storing mechanism, and a second flexible band passing over said hour-wheel and positively geared thereto and a small wheel at the bottom of the stamp, the said second band carrying printing characters to represent the hours, the axes of said wheels and shafts being arranged substantially parallel, whereby the printing of the minutes and hours may be gotten within small compass and the time registered by the stamp will not be interfered with by printing.

9. A time-stamp comprising an impulse receiving and storing mechanism intermittently and automatically operated, a minute-wheel carried by a shaft controlled thereby, a flexible band passing over said minute-wheel and positively geared thereto and a small wheel at the bottom of the stamp, the said band carrying numbers to represent the minutes, an hour-wheel upon a second or independent shaft, controlled by gearing actuated by the impulse receiving and storing mechanism, a second flexible band passing over said hour-wheel and positively geared to the same, and a small wheel at the bottom of the stamp, the said second band carrying printing characters to represent the hours, a meridian wheel rigidly fixed upon the last-mentioned shaft, and a third flexible band passing over said meridian-wheel and positively geared to the same, and a third small wheel at the bottom of the stamp and carrying suitable printing characters, the axes of said wheels and shafts being arranged substantially parallel, whereby the minutes, hours, and meridian characters may be printed within small compass and the time registered by the stamp will not be interfered with by printing.

10. A time-stamp comprising an impulse receiving and storing mechanism, an hour-wheel carried by a shaft operated thereby, a flexible band passing over said wheel and positively geared to the same and a small wheel at the bottom of the stamp, the said band carrying printing characters to represent the hours, a day-wheel upon a second or independent shaft, controlled by the impulse receiving and storing mechanism, and a second flexible band passing over said day-wheel and positively geared to the same and a second small wheel at the bottom of the stamp, the said second band having printing characters thereon to represent the days, the axes of said wheels and shafts being arranged substantially parallel, whereby the hours and days may be printed within small compass and the time registered by the stamp will not be interfered with by printing.

11. A time-stamp comprising an impulse receiving and storing mechanism intermittently and automatically actuated, an hour-wheel controlled by a shaft operated thereby, a flexible band passing over said hour-wheel and positively geared to the same and a small wheel at the bottom of the stamp, the said band carrying printing characters to represent the hours, a meridian-wheel upon said shaft, controlled by the impulse receiving and storing mechanism, a second flexible band positively geared to said meridian-wheel and a second small wheel at the bottom of the stamp, the said second band carrying suitable printing characters, a day-wheel also upon a second or independent shaft, controlled by the impulse receiving and storing mechanism, and a third flexible band passing over said day-wheel and positively geared to the same and a small wheel at the bottom of the stamp, the said third band having printing characters to represent the days, the axes of all of said wheels being arranged substantially parallel, whereby the hours, meridian characters, and days automatically registered by the stamp may be printed within small compass and the time registered by the stamp will not be interfered with by printing.

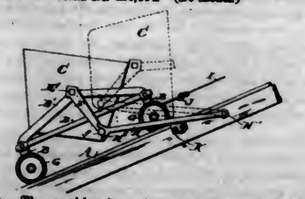
12. A time-stamp comprising an impulse receiving and storing mechanism; a minute-wheel controlled by a shaft operated thereby, a flexible band carrying printing characters to represent the minutes positively geared to said minute-wheel and a small wheel upon a shaft at the bottom of the stamp, an hour-wheel upon an independent or second shaft, governed by the impulse receiving and storing mechanism, a second flexible band positively geared to said hour-wheel and a small wheel on the aforesaid shaft at the bottom of the stamp, the said second flexible band carrying printing characters to represent the hours, a meridian-wheel upon the hour-wheel shaft, also governed by the impulse receiving and storing mechanism, a third flexible band positively geared to the same and a third small wheel on the said shaft at the bottom of the stamp, the said third flexible band carrying suitable meridian printing characters, a day-wheel upon a third shaft, controlled by the impulse receiving and storing mechanism, a fourth flexible band positively geared to said day-wheel, and a fourth small wheel upon a second shaft at the bottom of the stamp parallel and adjacent to the aforementioned shaft at the bottom of the stamp, the said fourth band having printing characters to represent the days, the axes of all of said wheels being arranged substantially parallel, whereby the minutes, hours, meridian characters, and days automatically registered by the stamp may be printed within small compass and the time registered by the stamp will not be interfered with by printing.

13. A time-stamp comprising an impulse-receiving mechanism, a one-minute wheel operated thereby, a band traveling over said one-minute wheel and having the digits thereon repeated in three series, a small wheel at the lower end of the stamp over which said band passes, a ten-minute wheel arranged adjacent to the aforesaid one-minute wheel, mechanism intermediate the said ten-minute wheel and the said one-minute wheel for actuating the said ten-minute wheel once in every ten minutes, a band traveling over said ten-minute wheel, having the numbers from "0" to "5" repeated thereon in five series, and a small wheel at the lower end of the stamp adjacent to the previously-mentioned small wheel, over which second-mentioned small wheel the said latter band travels.

14. A time-stamp comprising an impulse-receiving mechanism, a one-minute wheel operated thereby, a band traveling over said one-minute wheel and having the digits thereon repeated in three series, a small wheel at the lower end of the stamp over which said band passes, a ten-minute wheel arranged adjacent to the aforesaid one-minute wheel, mechanism intermediate the said ten-minute wheel and the said one-minute wheel for actuating the said ten-minute wheel once in every ten minutes, a band traveling over said ten-minute wheel, having the numbers from "0" to "5" repeated thereon in five series, a small wheel at the lower end of the stamp adjacent to the previously-mentioned small wheel, over which second-mentioned small wheel the said latter band travels, an hour-wheel governed by the impulse-receiving mechanism, and a band upon the hour-wheel, having numbers thereon from "1" to "12" repeated in two series and passing over a third small wheel at the bottom of the stamp adjacent to the small ten-minute wheel at the bottom of the stamp.

15. A time-stamp comprising an impulse-receiving mechanism, a one-minute wheel operated thereby, a band traveling over said one-minute wheel and having the digits thereupon repeated in three series,

a small wheel at the lower end of the stamp over which said band passes, a ten-minute wheel arranged adjacent to the aforesaid one-minute wheel, mechanism intermediate the said ten-minute wheel and the said one-minute wheel for actuating the said ten-minute wheel once in every ten minutes, a band traveling over said ten-minute wheel, having the numbers from "0" to "5" repeated thereon in five series, a small wheel at the lower end of the stamp adjacent to the previously-mentioned small wheel, over which second-mentioned small wheel the said latter band travels, an hour-wheel, an escapement therefor, a cam controlling said escapement and actuated by the aforesaid mechanism between the one-minute and the ten-minute wheels, and a band upon the hour-wheel having numbers thereon from "1" to "12" repeated in two series and passing over a third small wheel at the bottom of the stamp.



16. A time-stamp comprising an impulse-receiving mechanism, a one-minute wheel operated thereby, a band traveling over said one-minute wheel and having the digits thereon repeated in three series, a small wheel at the lower end of the stamp over which said band passes, a ten-minute wheel arranged adjacent to the aforesaid one-minute wheel, mechanism intermediate the said ten-minute wheel and the said one-minute wheel for actuating the said ten-minute wheel once in every ten minutes, a band traveling over said ten-minute wheel, having the numbers from "0" to "5" repeated thereon in five series, a small wheel at the lower end of the stamp adjacent to the previously-mentioned small wheel, over which second-mentioned small wheel the said latter band travels, an hour-wheel controlled by the impulse-receiving mechanism, a band upon the hour-wheel, having numbers thereon from "1" to "12" repeated in two series and passing over a third wheel at the bottom of the stamp adjacent to the small ten-minute wheel at the bottom of the stamp, a meridian-wheel also controlled by the impulse-receiving mechanism and carrying a band with the characters "A" and "P" thereupon, the former repeated twelve times and the latter eleven times with a blank space between the two and corresponding with the numbers upon the hour-wheel, a fourth small wheel at the bottom of the stamp over which said latter band travels and adjacent to the one-minute band, and the character "M," permanently affixed to and arranged adjacent to the meridian-band at the bottom of the stamp.

17. A time-stamp comprising an impulse-receiving mechanism, a one-minute wheel operated thereby, a band traveling over said one-minute wheel and having the digits thereon repeated in three series, a small wheel at the lower end of the stamp over which said band passes, a ten-minute wheel arranged adjacent to the aforesaid one-minute wheel, mechanism intermediate the said ten-minute wheel and the said one-minute wheel for actuating the said ten-minute wheel once in every ten minutes, a band traveling over said ten-minute wheel, having the numbers from "0" to "5" repeated thereon in five series, a small wheel at the lower end of the stamp adjacent to the previously-mentioned small wheel, over which second-mentioned small wheel the said latter band travels, an hour-wheel, an escapement therefor, a cam controlling said escapement and actuated by the aforesaid mechanism between the one-minute and the ten-minute wheels, a band upon the hour-wheel, having numbers thereon from "1" to "12" repeated in two series and passing over a third small wheel at the bottom of the stamp adjacent to the small ten-minute wheel at the bottom of the stamp, a meridian-wheel controlled by the same escapement which governs the hour-wheel and carrying a band with the characters "A" and "P" thereupon, the former repeated twelve times and the latter eleven times, with a blank space between the two and corresponding with the numbers upon the hour-band, a fourth small wheel at the bottom of the stamp over which said latter band travels and adjacent to the one-minute band, and the character "M," permanently affixed to and arranged adjacent to the meridian-band at the bottom of the stamp.

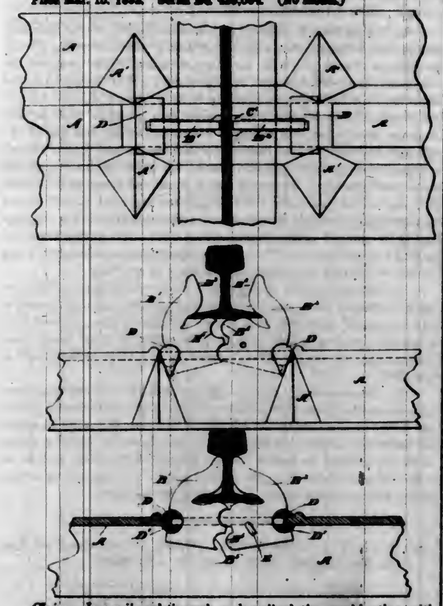
18. A time-stamp comprising an impulse-receiving mechanism, a one-minute wheel operated thereby, a band traveling over said one-minute wheel and having the digits thereupon repeated in three series, a small wheel at the lower end of the stamp over which said band passes, a ten-minute wheel arranged adjacent to the aforesaid one-minute wheel, mechanism intermediate the said ten-minute wheel and the said one-minute wheel for actuating the said ten-minute wheel once every ten minutes, a band traveling over said ten-minute wheel, having the numbers from "0" to "5" repeated thereon in five series, a small wheel at the lower end of the stamp adjacent to the previously-mentioned small wheel, over which second-mentioned small wheel the said latter band travels, an hour-wheel controlled by the impulse-receiving mechanism, a band upon the hour-wheel, having numbers thereon from "1" to "12" repeated in two series and passing over a third small wheel at the bottom of the stamp adjacent to the small ten-minute wheel at the bottom of the stamp, a meridian-wheel, also controlled by the impulse-receiving mechanism and carrying a band with the characters "A" and "P" thereupon, the former repeated twelve times and the latter eleven times, with a blank space between the two and corresponding with the numbers upon the hour-band, a fourth small wheel at the bottom of the stamp, over which said latter band travels and adjacent to the one-minute band, the character "M," permanently affixed to and arranged adjacent to the meridian-band at the bottom of the stamp, a day-wheel governed by the impulse-receiving mechanism, and a band passing over said day-wheel, having numbers thereon from "1" to "31" and traveling over a small wheel at the bottom of the stamp arranged parallel with and contiguous to the aforesaid small wheel at the bottom of the stamp.

19. A time-stamp comprising an impulse-receiving mechanism, a one-minute wheel operated thereby, a band traveling over said one-minute wheel and having the digits thereon repeated in three series, a small wheel at the lower end of the stamp over which said band passes, a ten-minute wheel arranged adjacent to the aforesaid one-minute wheel, mechanism intermediate the said ten-minute wheel and the said one-minute wheel for actuating the said ten-minute wheel once in every ten minutes, a band traveling over said ten-minute wheel, having the numbers from "0" to "5" repeated thereon in five series, a small wheel at the lower end of the stamp adjacent to the previously-mentioned small wheel, over which second-mentioned small wheel the said latter band travels, an hour-wheel, an escapement therefor, a cam controlling said escapement and actuated by the aforesaid mechanism between the one-minute and the ten-minute wheels, a band upon the hour-wheel, having numbers thereon from "1" to "12" repeated in two series and passing over a third small wheel at the bottom of the stamp adjacent to the small ten-minute wheel at the bottom of the stamp, a meridian-wheel controlled by the same escapement which governs the hour-wheel and carrying a band with the characters "A" and "P" thereupon, the former repeated twelve times and the latter eleven times, with a blank space between the two and corresponding with the numbers upon the hour-band, a fourth small wheel at the bottom of the stamp over which said latter band travels and adjacent to the one-minute band, the character "M," permanently affixed to and arranged adjacent to the meridian-band at the bottom of the stamp, a day-wheel, an escapement governing the same, mechanism intermediate the day-wheel and said latter escapement for controlling said day-wheel, and a band passing over said day-wheel, having numbers thereon from "1" to "31" and traveling over a small wheel at the bottom of the stamp arranged parallel with and contiguous to the aforesaid small wheel at the bottom of the stamp.

488,152. DUMP-CAR. MALVERN W. ILES, Denver, Colo. Filed Feb. 3, 1892. Serial No. 420,164. (No model.)

Claim.—The combination of a truck, a receptacle having trunnions E, said receptacle being pivotally supported by said trunnions on the truck, one or more levers F, connected with the trunnions E, and a hinged stop or stops H, arranged in the path of the trucks to engage the levers F and dump the receptacle, said stop or stops being arranged to move with the lever or levers F after they have engaged them and while the receptacle is being dumped, all substantially as and for the purpose specified.

488,153. SAFE. WILLIAM C. IRELAND, Boston, Mass. Filed Dec. 21, 1891. Serial No. 415,785. (No model.)

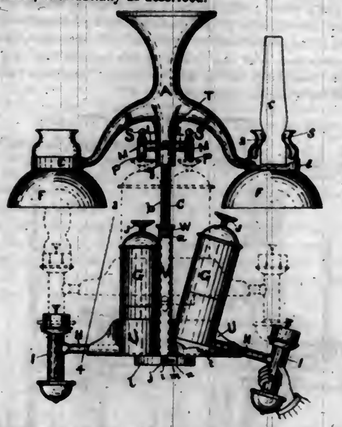


Claim.—1. The combination, with a safe having a door-opening and a door, of a board or plate made of a material which is non-combustible and a non-conductor of heat fitting said door-opening and removable and replaceable therein independent of the door, substantially as described.

2. A board or plate made of a material which is non-combustible and a non-conductor of heat and is shaped to fit the side, top, and bottom walls of a fire-proof safe at the inner portion of the door-opening and has a handle by which to place it in and out of position in said opening, as described, for the purpose specified.

488,158.

488,154. RAILROAD-TIE. WILLIAM R. KINNEAR, Columbus, Ohio. Filed Mar. 15, 1892. Serial No. 425,094. (No model.)



Claim.—In a railroad-tie such as described, the combination, with pivots attached to the tie, of fastenings having bearings on the said pivots and forming supports for the rail between the said bearings, connections between the said fastenings to cause them to move in unison, and clamping-jaws attached to the said fastenings and adapted to grasp the sides of the rail as the said fastenings are depressed between the bearings, substantially as described.

488,155. LAMP. JOHN KIRBY, Jr., Dayton, Ohio, assignor to the Dayton Manufacturing Company, same place. Filed June 27, 1891. Serial No. 397,673. (No model.)

Claim.—1. In a lamp, a hanger or frame carrying shade-holders and having a dependent reservoir-holder support, in combination with a horizontal reservoir-holder having a plurality of basket-like receptacles, said holder being attached to said support, and two or more reservoirs detachably held in the receptacles in said holder, said reservoirs having arms or branches which carry burners, substantially as described.

2. In a lamp, a hanger or frame carrying shade-holders and having a dependent reservoir-holder support, in combination with a horizontal reservoir-holder having a plurality of basket-like receptacles, said holder being attached to said support, reservoirs detachably held in the receptacles in said holder, and means for steadying said reservoirs at their tops, the reservoirs having arms or branches which carry burners, substantially as described.

3. In a lamp, a hanger or frame carrying shade-holders and having a dependent reservoir-holder support, in combination with a horizontal reservoir-holder having a plurality of basket-like receptacles, said holder provided with means for coupling with the support in such a manner as to be movable thereon, and two or more reservoirs carried by said holder, the reservoirs having arms or branches which carry burners, substantially as described.

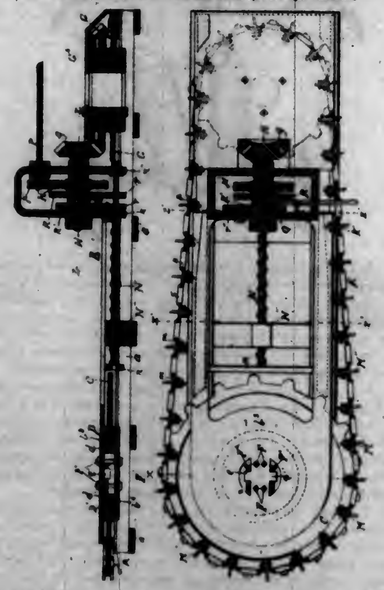
4. In a lamp, a hanger or frame carrying shade-holders and having a dependent reservoir-holder support, in combination with a horizontal reservoir-holder having a plurality of basket-like receptacles, said holder provided with means for coupling with the support in such manner as to be movable thereon, reservoirs carried by said holder, and means for steadying said reservoirs at their tops, the reservoirs having arms or branches which carry burners, substantially as described.

5. In a lamp, a hanger or frame carrying shade-holders and having a dependent reservoir-holder support, in combination with a horizontal reservoir-holder having a plurality of basket-like receptacles, said holder provided with means for coupling with the support in such manner as to be movable thereon, and reservoirs carried by and detachable from said holder, the reservoirs having arms or branches which carry burners, substantially as described.

6. In a lamp, the combination, with a hanger or frame carrying shade-holders, of a horizontal reservoir-holder having a plurality of basket-like receptacles, said holder provided with means for coupling with said hanger or frame in such manner as to be movable thereon, reservoirs carried by said holder, and means for steadying said reservoirs at their tops, the reservoirs having arms or branches which carry burners, substantially as described.

7. In a lamp, the combination, with a hanger or frame carrying shade-holders, of a reservoir-holder provided with means for coupling with said hanger or frame in such manner as to be movable thereon, reservoirs carried by and detachable from said holder, and means for steadying said reservoirs at their tops, the reservoirs having arms or branches which carry burners, substantially as described.

8. In a lamp, the combination, with a hanger or frame carrying shade-holders, of a reservoir-holder provided with means for coupling with said hanger or frame in such manner as to be downwardly detachable therefrom, two or more reservoirs carried by said holder, and means for steadying said reservoirs at their tops, the reservoirs having arms or branches which carry burners, substantially as described.



9. In a lamp, the combination, with a hanger or frame carrying shade-holders and having a dependent notched reservoir-holder support, of a reservoir-holder provided with spring-actuated devices adapted to engage with the notches in the support, whereby the holder may be coupled with the support at different elevations and in a downwardly-detachable manner, and two or more reservoirs carried by said holder and having arms or branches which carry burners, substantially as described.

10. In a lamp, a hanger or frame carrying shade-holders and having a dependent reservoir-holder support, in combination with a horizontal reservoir-holder having a plurality of channeled basket-like receptacles, said holder being attached to said support, and two or more reservoirs detachably held in the reservoir-holder, said reservoirs having arms or branches resting in the channels in the receivers and carrying burners, substantially as described.

11. In a lamp, the combination, with a hanger or frame adapted to be supported from above and carrying shade-holders, of a reservoir-holder supported by said hanger or frame, reservoirs having recessed knobs and provided with arms or branches carrying burners, a horizontal bar carried by the hanger or frame, and spring-actuated bolts carried by said bar, said bolts being arranged to engage with the recesses in the reservoirs, substantially as described, and for the purpose set forth.

12. In a lamp, the combination, with a hanger or frame adapted to be supported from above and carrying shade-holders above the burners, and a dependent bracketed support having the grooves *b*, shoulders *c*, and notches *f*, of a reservoir-holder having sleeves V, adapted to fit over the brackets of said support, a spring-actuated bolt in each sleeve for engagement with the grooves in the support, a locking-bar *d* for engagement with the notches in the support, and two or more reservoirs detachably held in said holder, said reservoirs having arms or branches which carry burners.

488,156. MINING-MACHINE. JEFFERSON L. LOCKNER, Pittsburg, Pa. Filed Apr. 23, 1891. Serial No. 390,019. (No model.)

Claim.—1. In a machine for mining coal, in combination, the sprocket-wheels, the endless chain composed of alternate double and single links, said single links being provided upon opposite sides with parallel radial arms having longitudinal channels in their outer walls, the set-screws mounted upon said arms and projecting into the said channels, and cutters of even section throughout fitting in said channels and provided with longitudinal grooves with which the inner ends of the set-screws engage, substantially as specified.

2. In a machine for mining coal, in combination, the sliding frame or carriage having parallel horizontal plates, the hollow bearing clamped between said plates and capable of forward and rearward adjustment, the sprocket-wheel mounted upon said bearing and adjustable therewith, the tension-screws mounted in supports upon the plates to engage the bearing, and the cutter-chain carried at its front end by said wheel, substantially as specified.

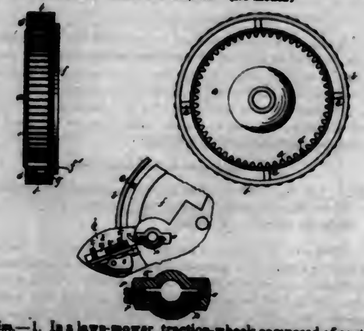
3. The combination, in a mining-machine, with a frame or carriage, of the bearing for the cutter-chain wheel, consisting of a hollow ring provided with a diametrical bar provided with slots, and clamping-bolts carried by said frame or carriage and engaging the slots in the diametrical bar, substantially as and for the purpose specified.

4. In a machine for mining coal, in combination, the frame or carriage having parallel horizontal plates, the circular adjustable bearings arranged vertically between said plates and provided with parallel slots upon opposite sides of its diameter, the clamping-bolts carried by said plates and engaging the slots in the bearing, and the cutter-chain wheel mounted upon said bearing between the parallel plates, substantially as specified.

5. In a mining-machine, the combination, with a frame provided with parallel upper and lower plates, of a hollow annular bearing for the chain-wheel, arranged between said plates and provided with a diametrical slotted bar, the clamping-bolts carried by the parallel plates and engaging said slotted bar, and tension-screws mounted on the frame within the hollow bearing and engaging the latter, substantially as and for the purpose specified.

6. In a mining-machine, the combination, with the frame having parallel horizontal plates, one of which is provided with an opening spanned by a diametrical bar, of the hollow bearing arranged between the plates and registering with the said opening, the bearing being provided with a diametrical bar having longitudinal slots, the clamping-bolts secured at their ends in the parallel plates and engaging the slotted bar, and the tension-screws carried by the frame within the hollow bearing and engaging the interior walls thereof, substantially as and for the purpose specified.

7. In a machine for mining coal, in combination, the frame or carriage having parallel horizontal plates, the hollow bearings arranged between said parallel plates and carrying the cutter-chain wheel, and the tension-screws mounted in tapped ears upon one of said plates and bearing at their ends against the interior surface of the said bearing, substantially as specified.



8. The combination of the sliding frame having side I-shaped rails, the upper flanges of which are connected at the front end of the frame by a plate b^3, the journal disposed beneath said plate and connected thereto by clamping-bolts, the sprocket-wheel mounted upon said journal and operating between the flanges of said I-rails, the webs of said rails being cut away at their front ends, and the cutter-chain carried by said wheel, substantially as specified.

9. In a machine for mining coal, in combination, the carriage having parallel I-shaped side rails, the horizontal plate connecting the upper flanges of said side rails, the front sprocket-wheel arranged beneath said plate and mounted upon a bearing which is secured to the same, said sprocket-wheel projecting at its periphery slightly beyond the front and side edges of the plate, the rear sprocket-wheel smaller than the front wheel and arranged in a casing at the rear end of the carriage, the cutter-chain carried by said wheels and provided with cutters which lie upon opposite sides of the plane of the wheels, the main shaft geared to the rear sprocket-wheel and mounted in a casing O in rear of the latter, and the feeding-screw mounted at its front end in a cross-bar *n*, which extends between the side rails of the carriage and at its rear end in the front and rear sides of the casing O and engaging a stationary nut N° on the stationary frame, said screw being geared to the said main shaft, substantially as specified.

10. In a machine for mining coal, in combination, the carriage having a horizontal plate, a hollow exteriorly-grooved bearing formed in two horizontal separable sections, an annular bushing formed in a single piece and interiorly ribbed, as described, a wheel fitting upon the bushing, and a cutter-chain carried by the latter, substantially as specified.

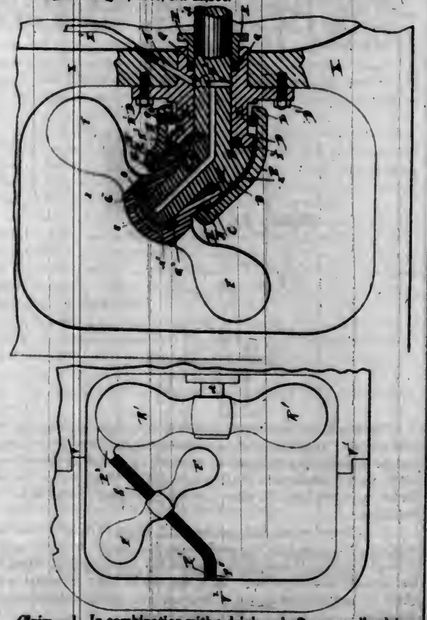
11. In a machine for mining coal, in combination, the carriage having a horizontal front plate, a hollow bearing having an exterior groove and formed in two separable horizontal sections, the bolts to secure the separable sections together and to the plate, the bushing to encircle the bearing, formed in a single piece and provided with an interior annular rib to fit in the groove of the bearing, the sprocket-wheel, and the cutter-chain, substantially as specified.

488,157. LAWN-MOWER. WALDO A. LOUD, Springfield, Mass. Filed Nov. 26, 1890. Serial No. 372,999. (No model.)

Claim.—1. In a lawn-mower, traction-wheels composed of central circular plates formed with inwardly-directed annular rim-flanges having internal gear-teeth, spokes projected radially from the periphery of said flanges, and a tread-rim integral with the spokes, in combination with a frame provided with circular end plates having annular rim-flanges and oppositely-turned edge flange, forming an annular groove between the flanges to engage and sit over the edges of the annular rim of the circular plates of the wheels, whereby the disk or body of the end plates sit within the openings of the wheels, as and for the purpose specified.

2. The combination, in a lawn-mower, of two traction-wheels having the tread-surface arranged about and made integral with the spokes *c* and having the central portion of the wheel closed and formed with a rim having integral gear-teeth, and a frame the ends of which consist of plates *f*, having outwardly-extended annular flanges *f'*, with an inwardly-extended rim-flange, and a groove between the flanges in the interior to sit over the rim-wall of the body portion of the wheel, whereby the distance between the inner faces of the wheels is increased, as and for the purpose specified.

3. The combination of an outer shell or box *c*, a cap *p*, arranged therein and fulcrumed at one end and having oppositely-inclined faces at its opposite end, and set-screws having taper ends to bear one against each of said inclined faces, and thus move the free end of the cap, substantially as shown.



4. The box-body *c*, having a V-shaped recess at one end and having adjusting-screws *r* at its opposite end, in combination with a cap *p*, arranged in said box, one end being V-shaped to rest within said recess and the opposite end having oppositely-inclined faces at the point of the engagement of the set-screws therewith, substantially as shown.

5. The combination, with one or more adjusting-screws located adjacent to and with the axis of said adjusting-screws approximately parallel with a plane surface, of a lock *u*, consisting of a bar located between said surface and said adjusting-screws and bearing against the side of the latter, and one or more set-screws passing through said bar and bearing with their ends against said surface, substantially as and for the purposes shown.

6. The combination, in a lawn-mower, of a lock *u*, having a set-screw, with adjusting-screws *t t*, the lock being arranged between the sides of the screws and face of part *h* and bearing against the screws *t*, substantially as shown.

7. The lock *u*, having turned-up end and provided with a set-screw, in combination with adjusting-screws *t* and part *h*, substantially as shown.

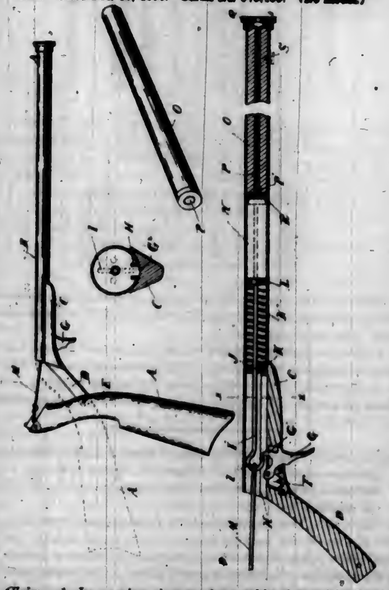
488,158. SCREW-PROPELLER. JOHN MACHAFFIE, Schenectady, N. Y. Filed Jan. 14, 1891. Serial No. 377,708. (Model.) Patented in England Aug. 7, 1890, No. 12,961.

Claim.—1. In combination with a driving-shaft, a propeller driven thereby provided with radially-extending blades, the axis of the propeller extending at an angle to the line of the driving-shaft, said propeller being free from restraining connections to prevent rotation, substantially as described.

2. In combination with a driving-shaft having its end bent at an angle to its main portion, a hub fitting over the said bent end, and propelling-blades extending from said hub radially, said hub being free to rotate, substantially as described.

3. A propeller consisting of blades secured to a hub, an eccentric driving-shaft fitting said hub loosely, and means for clamping the hub to the driving-shaft, whereby it is actuated by the rotation of the driving-shaft, substantially as described.

4. A propeller consisting of blades secured to a hub and a cranked shaft having a reduced end portion forming a shoulder, said hub fitting said reduced end and bearing against the shoulder formed by the reduced end of the shaft, substantially as described.



5. A propeller consisting of a shaft having a cranked free end, propeller-blades carried by a hub fitted to said cranked end, and a thrust-block encircling said shaft to sustain the thrust of the parts, substantially as described.

6. A propeller consisting of a cranked shaft, propelling-blades carried on a hub, said hub being fitted to the cranked shaft, a shoulder on the shaft to sustain the thrust of the hub, a thrust-block encircling the shaft, and a shoulder on the shaft, bearing against the thrust-block, substantially as described.

7. A propeller consisting of a cranked driving-shaft, a hub mounted thereon carrying propelling-blades, and a clutch-tube encircling the end of the hub and shaft, said shaft being longitudinally movable for clamping the parts together, substantially as described.

8. A propeller consisting of a hub carrying propeller-blades, a cranked shaft adapted to receive the hub, a clutch-tube encircling the end of the hub and shaft, a collar on the shaft, and a power device encircling the collar and adapted to apply power to one side or the other of the collar to move the shaft, substantially as described.

488,159. SPRING AIR-GUN. WILLIAM F. MARKHAM, Plymouth, Mich. Filed Dec. 18, 1890. Serial No. 375,155. (No model.)

Claim.—1. In a spring air-gun, the combination, with the stock having a slot in its under side, of a false barrel, a fore-arm secured thereto, a rearwardly-inclined extension D, integral with the fore-arm and pivotally connected in the slot of the stock, a slotted bearing in the fore-arm, and a trigger pivoted in the bearing, substantially as described.

2. In a spring air-gun, the combination, with the stock having a slot in its under side, of a barrel, a fore-arm on the barrel, and a rearward extension integral with the fore-arm, pivotally connected to the stock and resting in the slot thereof when the stock is raised, substantially as described.

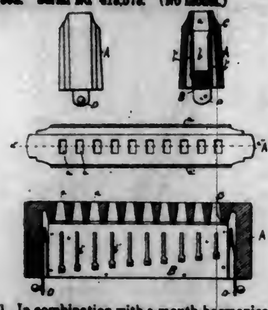
3. In a spring air-gun, the combination, with the barrel, piston, and spring for actuating the piston, of inwardly-extending flanges struck from the material of the barrel, forming abutments with which the spring engages, and means for compressing the spring against the abutments, substantially as described.

4. In a spring air-gun, the combination, with the barrel, the spring,

the piston, the piston-rod having a hooked rear end, and the trigger with which said hook is adapted to engage, of inwardly-extending guide-flanges for said hook and the abutment against which the spring is compressed, formed by the forward end of said flanges, substantially as described.

5. In a spring air-gun, the combination, with the barrel, the spring, the piston, the piston-rod having a hooked rear end, and the trigger, of a guide-block through which the piston-rod passes and an abutment against which said block bears in the compression of the spring, formed by upwardly-extending flanges on the barrel, substantially as described.

6. In a spring air-gun, the combination, with a false barrel rigidly secured, of a removable apertured plug in the same, a true barrel in the plug, and means, such as the screw-cap Q, for normally retaining the plug in and permitting the removal of the same from the false barrel, substantially as described.



7. In a spring air-gun, the combination, with the false barrel and the air-compressing piston, of an apertured plug supporting the true barrel and forming with its rear end the air-compressing abutment, substantially as described.

8. In a spring air-gun, the combination, with a false barrel, of a true barrel therein, a yielding seat for the piston, formed at the rear end of the true barrel, and means for detaching the true barrel and seat, substantially as described.

9. In a spring air-gun, the combination, with a false barrel and the air-compressing piston, of an apertured plug supporting the true barrel, and a rubber facing R at the rear end of said plug beyond the true barrel, forming an elastic abutment for the piston, substantially as described

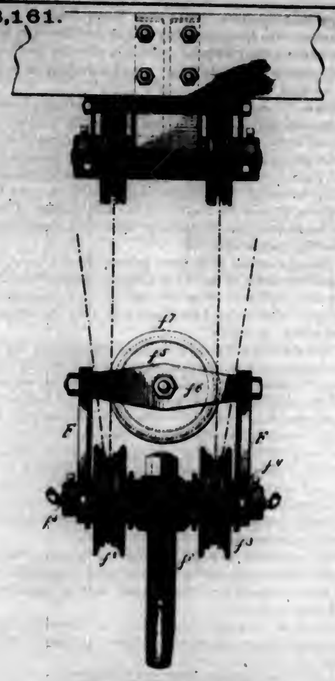
---

488,160. HARMONICA. OTTOMAR MEISEL, New York, N. Y. Filed Jan. 19, 1892. Serial No. 418,573. (No model.)

Claim.—1. In combination with a mouth-harmonica, a glass cover forming a mouthpiece and shield within which the harmonica is placed, substantially as specified.

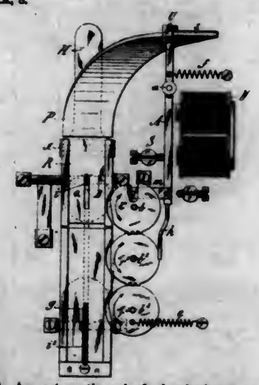
2. The combination, with a mouth-harmonica having a non-absorbent mouthpiece, of an elastic filling, substantially as specified.

3. The combination, with a mouth-harmonica having a non-absorbent mouthpiece, of springs or catches, substantially as specified.



488,161. CHAIN-BLOCK. JOHN R. MORGAN, Alliance, Ohio, assignor of three-fourths to Thomas R. Morgan, Sr., Thomas R. Morgan, Jr., and William H. Morgan, same place. Filed July 6, 1891. Serial No. 398,632. (No model.)

Claim.—1. The combination of a hoisting-block consisting of a series of sheaves and a single sheave at right angles thereto, the said latter sheave adapted to remain practically stationary on its axis during the operation of hoisting, a second block, and a chain, the center of which is carried by the right-angled sheave, the ends of said chain being rove through the other sheaves in the two blocks, substantially as set forth.

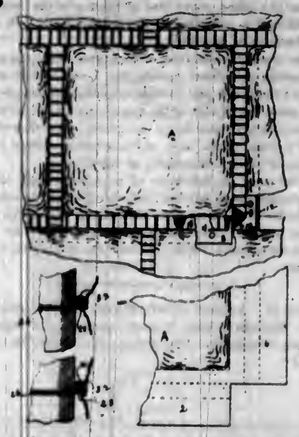


2. The combination, with a hoisting-block consisting of a series of sheaves and a single sheave at right angles thereto and in a plane above said first-mentioned sheaves, the said single sheave adapted to remain practically stationary on its axle during the operation of hoisting, of a second block having a series of sheaves and a chain, the center of which is carried by the right-angled sheave, the ends of said chain being rove through the other sheaves on the two blocks, substantially as set forth.

3. The combination, with a hoisting-block consisting of a series of sheaves, a single sheave adapted to remain practically stationary on its axle during the operation of hoisting, and a hook, of a second block having a series of sheaves and a chain, the center of which is carried by the single sheave, the ends of said chain being rove through the other sheaves in the two blocks, substantially as set forth.

488,161.

488,162. AUTOMATIC COIN-ACTUATED TELEPHONE. FRANZ MÜLLER, Berlin, Germany. Filed Aug. 25, 1891. Serial No. 403,726. (No model.) Patented in Germany Mar. 30, 1891, No. 59,276; in Switzerland May 4, 1891, No. 3,564, and in Italy June 30, 1891, XXV, No. 29,746, LIX, 3.



Claim.—1. An automatic coin-feed telephone consisting of the coin-conduit P and chute R R', having wheel-segments $r\,r'\,r^2$ projecting into the same and geared together, in combination with an electro-magnet N, having armature A, having spring f and pivoted at a, and carrier m, engaging into the uppermost wheel-segment r, substantially as described.

2. In combination with the conduit P, chute R R', and wheel-segments $r\,r'\,r^2$, projecting into said chute, the contact-forming lever i, arranged to project into chute R above the upper segment-wheel and the contact-breaking lever i' below the lowest segment-wheel in the chute R^2, and connecting-rod g between said levers, substantially as described.

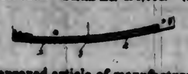
3. In combination with the conduit P, chute R R', and wheel-segments $r\,r'\,r^2$, projecting into said chute, the lever U, attached to the armature A and projecting with its roll into the conduit P at its mouth I, substantially as described.

4. In combination with the conduit P, chute R', and wheel-segments $r\,r'\,r^2$, projecting into said chute, the chute R, pivotally arranged at x, the exit-chute R^2 and spout Z, the lever H of chute R, and button K, substantially as described.

488,163. SHEET-METAL BUILDING-FRONT. CLARENCE D. PRUDEN, St. Paul, Minn. Filed Jan. 5, 1892. Serial No. 417,077. (No model.)

Claim.—1. A rectangular sheet-metal wall-section having a right-angled notch in one of the lower corners, the edges of the notch being parallel with the edges of the section, the portion of the section above the notch being formed with a double fold near the edge to receive the edge of the adjacent section, the inner bead of the fold being approximately in line with the vertical edge of the notch, the edge of the section being outturned to form a water-conduit with the inner bead of the fold, and the inner bead of the fold at the bottom of the section extending above the upper edge of said notch.

2. The sectional sheet-metal wall-covering having horizontal and vertical joints, the lower edge of each section being secured to the wall, a double fold or return-bead being formed in the section just above the edge to receive the upper edge of the section beneath, and the vertical joints being formed of a double fold on one section, the edge of said fold being outturned to form with the inner bend of the fold a conduit for conducting the water entering the joint downward over the section below.



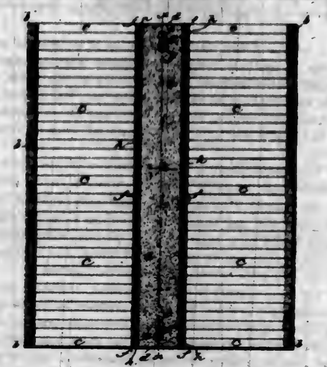
3. The sectional sheet-metal wall-covering having vertical and longitudinal joints both formed with double folds, the fold on one section receiving the edge of the adjacent section, the vertical joint having a water-conduit extending below the fold of the horizontal joint and overlapping the section below, substantially as described.

4. The combination, with a vertical brick wall, of upturned hooks anchored in the horizontal joints of the brick, similar sheet-metal sections provided with inturned upper edges or horns adapted to engage said hooks, and with reverse or double folds at the bottom adapted to engage with and overlap the upper edges of the adjacent lower sheets, substantially as described.

5. In a sectional sheet-metal wall-covering, the combination of rectangular sections connected together by vertical and horizontal joints, consisting each of a double fold on one section, securing the edge of the adjacent section, and a water-conduit underneath the vertical joint, entering the outer fold of the horizontal joint, substantially as described.

6. In a sectional sheet-metal wall-covering, the vertical and horizontal joints connecting the sections, each consisting of a double fold on one section engaged by the edge of the adjacent section, the inner bend of the vertical fold with the outturned edge of the section forming a water-conduit entering the outer bend of the horizontal fold in the adjacent section, substantially as described.

488,164. TROUSERS-SHIELD. JOHN H. PROTZMAN, Plankinton, S. D. Filed June 13, 1892. Serial No. 436,611. (No model.)



Claim.—As an improved article of manufacture, a shield for trousers, adapted to be applied at the lower portion of the fly, and consisting of a heart-shaped piece of moisture-proof material having an opening between the oppositely-located duplicate portions, provided with an upper converged portion, and the device entire provided with an edge binding of tape, substantially as described.

488,164.

488,165. FRICTION-MATCH CARD. JOSHUA PUSEY, Lima, Pa. Filed Aug. 6, 1890. Renewed Nov. 3, 1891. Serial No. 410,788. (Model.)

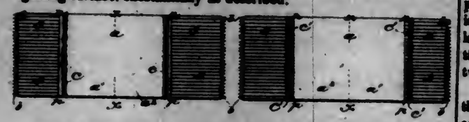
Claim.—1. A friction-match card or device consisting of a series of separate splints having their free ends provided with an ignitible composition and frangibly connected to a common marginal strip provided with an igniting surface or composition, whereby any one of said splints may be detached and struck upon said igniting-surface and the said strip remain intact after all the splints have been so detached, substantially as and for the purpose recited.

2. A friction-match card or device consisting of two series of separate splints provided with an ignitible composition at their free ends and having their opposite ends frangibly connected to a common strip, from which the respective series of splints extend laterally, together with the intermediate prepared igniting surface or composition, substantially as described.

3. The friction-match card or device consisting of a marginal strip provided with a prepared igniting surface or composition and a series of separate splints having their free ends provided with an ignitible composition and their opposite ends frangibly connected to said marginal strip and adapted to be detachably secured to the wall, &c., substantially as described.

4. The friction-match card consisting of an integral sheet of paper or other like suitable pliable material partially divided into a series of splints having their free ends provided with an ignitible composition, the surface of the plain or undivided portion of said sheet being provided with a prepared igniting surface or composition, substantially as described.

5. As a new and complete article of manufacture, the friction-match card consisting of a sheet of paper, wood, or other like suitable material partly divided into a series of splints having their free ends provided with an ignitible composition and the undivided portion of the sheet provided with an igniting surface or composition and with the openings $g\,g'$, substantially as and for the purpose specified.



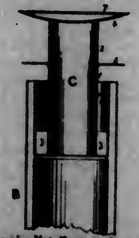
6. In combination with the card consisting of the series of match-splints connected to the marginal strip provided with the igniting surface and the lines of luminous paint A between the line of connection of the splints and said igniting-surface, substantially as specified.

488,166. FLEXIBLE MATCH. JOSHUA PUSEY, Lima, Pa. Filed Aug. 6, 1890. Renewed Mar. 17, 1892. Serial No. 426,374. (Model.)

Claim.—1. The improvement in friction-matches, consisting of the series of splints placed edge to edge and their sides respectively in the same places and provided with an ignitible composition at their free ends and at their opposite ends frangibly attached to, so as to be inclosed by and between, the sides of the cover and so as to be practi-

cally integral with said cover, whereby the latter may be opened out like a book and any one of said splints be torn or broken off, substantially as described.

2. The improvement in friction-matches, being a new and complete article of manufacture, consisting of the series of splints placed edge to edge and their sides respectively in the same plane and provided with an ignitible composition at their free ends and at their opposite ends frangibly attached to, so as to be inclosed by and between, the sides of the cover and so as to be practically integral with said cover, and which cover is provided with an igniting surface or composition, whereby said cover may be opened out like a book and any one of said splints be torn or broken off and struck against the said igniting-surface, substantially as described.



3. A friction-match device consisting of a series of splints provided with an ignitible composition, placed edge to edge and their sides respectively in the same plane, and frangibly secured to and within a flexible waterproof cover of paper or the like, which cover is adapted to be opened like a book, whereby when said cover is opened out any one of said splints may be broken or torn off from its attachment to the cover.

4. The improvement in friction-matches, consisting of a sheet of inflammable paper or other like pliable material having its end or ends divided into a series of splints having their ends provided with an ignitible composition, the remainder of the sheet being left plain and the said splints folded over upon the plain portion, which latter is again folded over so as to inclose the series of splints, and is adapted to be opened out as a book in order to detach said splints.

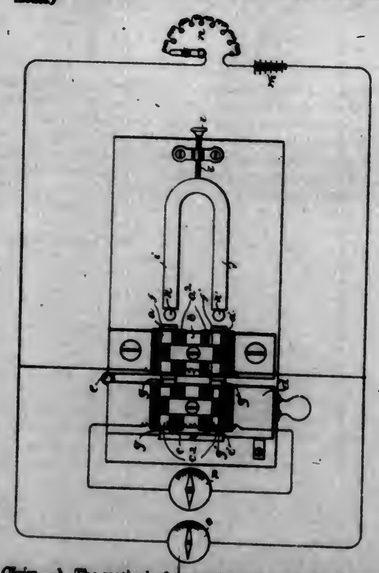
5. The improvement in friction-matches, consisting of a sheet of inflammable paper or other like pliable material having its end or ends divided into a series of splints having their ends provided with an ignitible composition, the remainder of the sheet being left plain and provided with an igniting surface or composition and the said splints folded over upon the plain portion, which latter is folded over so as to inclose the series of splints, and is adapted to be opened out as a book in order to detach said splints.

6. In a friction-match device consisting of two opposite series of splint-strips provided with an ignitible composition and inclosed and secured to and between the sides of a common cover, the said composition of the one series of splints out of line or contact with that of the other series, substantially as and for the purposes specified.

483,167. ARGAND LAMP. FRANK REED, Meriden, Conn., assignor of one-half to the Edward Miller & Company, same place. Filed June 15, 1891. Serial No. 396,268. (No model.)

Claim.—1. In an inner air-distributer of an Argand lamp, the combination of a substantially-cylindrical foraminous portion, an annular flange on said cylindrical portion in a plane above that of the central air-tube of the lamp, and a perforate deflecting-button of larger diameter than and surmounting said cylindrical portion, the perforations in said deflecting-button being so arranged as to permit the upward passage through said button of a current of air, substantially as described.

2. In an inner air-distributer of an Argand lamp, the combination of a substantially-cylindrical portion, the lower part of which is imperforate and the upper part perforate, an annular flange on said cylinder in a plane above that of the central air-tube of the lamp, and a perforate deflecting-button of larger diameter than and surmounting said cylindrical portion, the perforations in said deflecting-button being so arranged as to permit the upward passage through said button of a current of air, substantially as described.



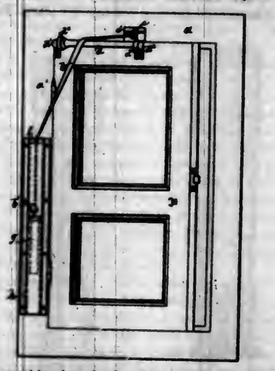
3. In an inner air-distributer of an Argand lamp, the combination of a substantially-cylindrical portion, the lower part of which is imperforate and the upper part perforate, an annular flange on said cylinder in a plane above that of the top of the central air-tube of the lamp, and a deflecting-button consisting of two foraminous disks, substantially as described.

4. In an inner air-distributer of an Argand lamp, the combination of a substantially-cylindrical portion, the lower part of which is imperforate and the upper part perforate, a perforate annular flange on said cylinder in a plane above that of the top of the central air-tube of the lamp, and a deflecting-button consisting of two foraminous disks, substantially as described.

5. In an inner air-distributer of an Argand lamp, the combination of a substantially-cylindrical portion, the lower part of which is imperforate and the upper part perforate, an annular flange on said cylinder in a plane above that of the top of the central air-tube of the lamp, an annular perforate flange in a plane below that of the top of the central air-tube of the lamp, and a deflecting-button consisting of two foraminous disks, substantially as described.

6. In the inner air-distributer of an Argand lamp, the combination of a substantially-cylindrical perforate portion, an annular flange on said cylinder in a plane above that of the top of the central air-tube of the lamp, a deflecting-button consisting of two foraminous disks, and a foraminous diaphragm between said disks, substantially as described.

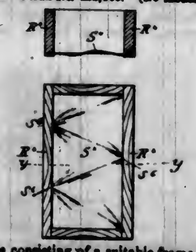
483,168. METHOD OF MEASURING THE STRENGTH OF MAGNETS. CHARLES R. ROSS, Evanston, assignor to the Western Electric Company, Chicago, Ill. Filed Nov. 6, 1891. Serial No. 411,091. (No model.)



Claim.—1. The method of measuring the strength of magnets, which consists in balancing the magnetic field of the magnet by a counter-magnetic field generated by an electric current, measuring said current, and comparing the value of the current with the current required to balance a standard magnet, substantially as herein described.

2. The method of determining when a balance is effected between two magnetic fields, which consists in interrupting the magnetic continuity of a bar of magnetic material placed in the fields and in the direction of the lines of force and surrounded by a coil in circuit with a suitable current-detector and noting the presence or absence of current in the said coil, substantially as herein described.

3. The method of effecting a balance between two magnetic fields acting in opposite directions, which consists in interrupting the magnetic continuity of a bar of magnetic material placed along the lines of force of the fields and surrounded by a coil connected in circuit with a suitable current-detector and adjusting the strength of one of the fields until no current is created in the said coil when the continuity of the bar is completed or interrupted, substantially as herein described.



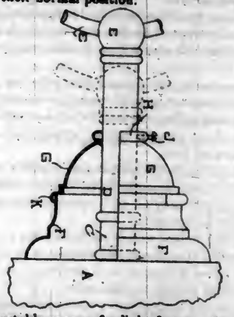
4. The method of measuring the strength of magnets, which consists in creating by means of a current a field in opposition to the field of the magnet to be measured, effecting a balance between the two fields by adjusting the strength of the field-producing current until no current is induced in a coil surrounding a bar of magnetic material placed in the fields along the lines of force when the magnetic continuity of said bar is interrupted or completed, and comparing the strength of current required to balance the magnet-field with the strength of current required to balance the field produced by a standard magnet, substantially as herein described.

483,169. GRAVITATING DOOR-CLOSER. HUGO SCHREWIND, Crefeld, Germany. Filed Dec. 2, 1891. Serial No. 413,767. (No model.)

Claim.—In combination, the door having the bar extending along its upper edge and the band attached to the door-frame over the door and extending from this point diagonally to the side of the door-frame to which the door is hinged and the weight attached to the lower end of the band and guided on the door-frame, the intermediate inclined portion of the band passing freely over the bar and adapted to slide longitudinally of said bar toward and from the hinges as the door is opened and closed, substantially as described.

483,170. SIEVE-SURFACE. OTTO SCHELLE, Berlin, Germany. Filed Feb. 26, 1892. Serial No. 422,883. (No model.)

Claim.—1. A sieve consisting of a suitable frame and the screening material extending across the said frame, the said material being drawn taut on lines running from side to side of the frame, the portions intermediate of the said taut lines being loose and capable of free movement, substantially as described.



2. A sieve consisting of a suitable frame and the screening material extending across the said frame, the said material being drawn taut on lines running from side to side of the frame and the intermediate portions being loose and arranged in folds, substantially as described.

483,171. ADJUSTABLE CANOPY FOR LIGHT-FIXTURES. EMIL C. SCHALK, Chicago, Ill. Filed Mar. 5, 1892. Serial No. 423,841. (No model.)

Claim.—1. In an adjustable canopy for light-fixtures, the combination of a base with a crown, the one adapted to pass within the other, and an intervening part which normally holds them in rigid relation, but when released permits one to pass within the other.

2. In an adjustable canopy for light-fixtures, the combination of a base with a crown, the one adapted to pass within the other, and an intervening part which normally holds them in rigid relation, but when released permits one to pass within the other, and an adjustable set-screw whereby the crown may be fixed at any position along the supporting pipe or rod.

3. In an adjustable canopy for light-fixtures, the combination of two parts to inclose light-supporting pipe and conceal the point of its engagement with the wall, one of said parts larger than the other, with an intervening divided ring adapted to extend inside the smaller and outside the larger of such parts and to hold them in rigid engagement when all are in their normal position.

4. In an adjustable canopy for light-fixtures, the combination of two parts to inclose light-supporting pipe and conceal the point of its engagement with the wall, one of said parts larger than the other, with an intervening divided ring adapted to extend inside the smaller and outside the larger of such parts and to hold them in rigid engagement when all are in their normal position, and a set-screw whereby said parts may be held in rigid position against the wall about the point of engagement of the supporting part therewith.

5. A canopy for light-fixtures, consisting of a series of successive parts each larger than its successor and a series of intervening divided rings which hold the parts in rigid relation when all are in position, but permit them to telescope one upon the other when such rings are released.

483,172. VALVE FOR PNEUMATIC TIRES. GEORGE H. F. SCHRADER, New York, N. Y. Filed June 15, 1892. Serial No. 436,792. (No model.)

Claim.—1. In a valve, a casing having a conduit, in combination with a flexible valve interrupting said conduit, and a movable part at the ingress side of said flexible valve, constructed when moved toward the latter to permit an outward flow through the valve.

2. In a valve, a casing having a conduit, in combination with a flexible disk interrupting said conduit, having a leak-tight joint with said casing around its outer portion, but left free at its center and perforated at its free portion, and a movable part at the ingress side of said flexible valve, constructed when moved toward the latter to permit an outward flow through the perforation of said disk.

3. In a valve, the casing, in combination with a perforated flexible disk inclosed therein, an imperforate plug passing through the perforation in said disk, and a movable part at the ingress side of said disk, constructed when moved against it to permit an outflow through its perforation.

4. In a valve, the casing, in combination with a perforated flexible disk inclosed therein, an imperforate plug passing through the perforation in said disk, and an annular movable part surrounding said plug and constructed when moved against said disk to distend the latter and permit an outflow around said plug.

5. In a valve, the casing, in combination with a perforated flexible disk inclosed therein, an imperforate plug passing through the perforation in said disk, and an annular movable part surrounding said plug and constructed when moved against said disk to distend the latter and permit an outflow around said plug, said movable part having a tapering end for distending said disk.

6. In a valve, a casing having a conduit, in combination with a flexible disk inclosed therein to interrupt said conduit, having a leak-tight joint with said casing around its outer portion, but left free at its center and perforated at its free portion, and an imperforate plug passing through the perforation in said disk, movable independently of said casing and constructed with a reduced portion at the ingress side of said disk, whereby when moved until its reduced portion is opposite said perforation an outflow through the valve is permitted.

7. In a valve, the combination, with an induction-casing having a conduit and a valve connected thereto, of a fibrous material in said conduit at the ingress side of said valve, adapted to arrest foreign matter entering said conduit.

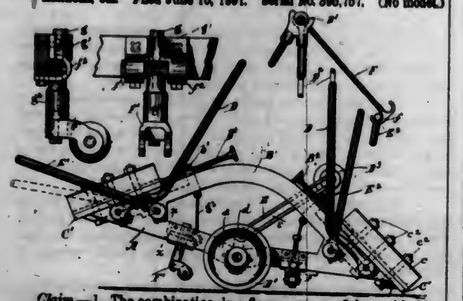
8. In a valve, the combination, with an induction-casing having a conduit and a valve connected thereto, of an absorbent material in said conduit at the ingress side of said valve for absorbing oil entering said conduit.

9. In a valve, a casing having a conduit, a flexible perforated disk in said casing and interrupting said conduit, a plug passing through said disk and partially filling said conduit at the induction side of the valve, and an absorbent material carried on said plug, substantially as and for the purpose set forth.

10. In a valve, a molded rubber washer having a thin central portion and an integral outer annular rib of greater thickness than said central portion, said rib adapted to be clamped between the parts of the valve and serve as a packing.

11. In a valve, a molded rubber washer having a thin central portion and an integral outer annular rib adapted to be clamped between the parts of the valve and serve as a packing, and a metallic ring molded in said rib to prevent its distortion.

12. In a valve, the casing and a perforated valve-disk, as G, in combination with a movable plug, as H, traversing the perforation in said disk and constructed with a tapered portion, as *j*, constructed when said plug is moved toward the egress side of the disk to permit a reverse flow through the valve.



13. In a valve, the casing constructed with an annular lip *o*, in combination with a disk, as G, having an enlarged annular rib fitting exteriorly against said rib *o* and adapted to be clamped in position thereagainst, whereby its inward distortion is prevented by said lip.

14. In a valve, the combination, with a casing constructed of two parts and a disk adapted to be clamped between said parts, of an anti-friction-ring, as K, arranged at the ingress side of said disk and between the latter and the adjacent part of the casing and adapted to permit relative movement of the parts of the casing and prevent distortion of the disk thereby.

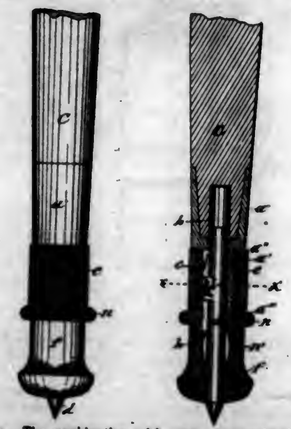
15. In a valve, the combination, with the shell or casing, the induction-conduit, and the movable part therein, of a cap adapted to close the upper end of the casing and constructed with a groove projection M, adapted to be inserted into the induction-conduit for actuating said movable part.

16. In a valve, the casing and a perforated disk, as G, in combination with the plug, as H, traversing the perforation of said disk and constructed with an enlarged head, as *j'*, at the egress side thereof, substantially as and for the purpose set forth.

488,173. FLOOR-SCRAPING MACHINE. FREDERICK C. SCHROEDER, Alameda, Cal. Filed June 10, 1891. Serial No. 396,757. (No model.)

Claim.—1. The combination, in a floor-scraper, of the tool-holder arranged at an incline, scraping-tools secured therein so as to have their scraping-edges at an angle to the floor, and the swinging weight supported above the tool for giving sufficient pressure thereto, as and for the purpose set forth.

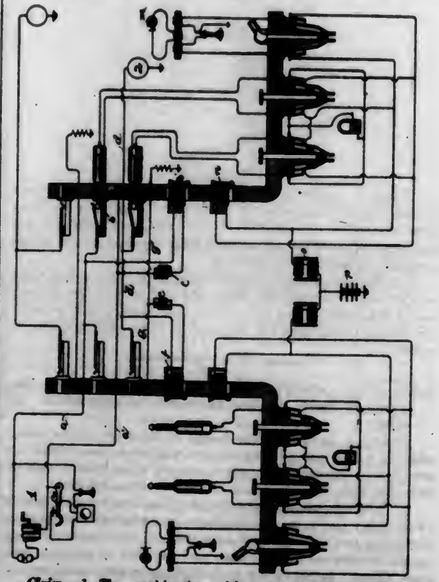
2. The combination of an oscillatory frame, scraping-tools mounted on the ends of the same, and a shifting weight mounted on a frame above the tools.



3. In a scraping-machine for floors, the combination, with the frame, of curved supporting-braces, scraping-tools at the ends of said braces, vertical rods secured to the frame and united by a cross-rod, and the swinging weight supported by said cross-rod and adapted to shift as either end of the machine is thrown upward, as and for the purpose set forth.

4. The combination of a tilting frame, a swinging weight supported thereby, tools secured on the ends of the frame, and guide-rods adapted to hold the weight over either end of the frame.

5. The combination of a main frame, tools secured to the ends of the same, a vertical frame carried thereby, a hook suspended on said vertical frame, and handles pivoted to the ends of the main frame and adapted to be held in a raised position by the said hook.



6. The combination of the supporting-braces having inwardly-projecting flanges, the tool-holder secured on said flanges, the tools carried by said holder, and the adjusting-screws mounted in the flanges and bearing against the tools.

488,174. TIP FOR CRUTCHES OR CANES. WASHINGTON I. SCOVILLE, Manlius, N. Y. Filed Feb. 12, 1892. Serial No. 421,945. (No model.)

Claim.—The combination, with a cane or crutch, of the ferrule *a*, formed with the stud *a'*, shoulder *a''*, channel *b*, and slot *c*, the prod *d*, provided with the lug *d'*, the nut *e*, engaging said lug, and the jam-nut *n* on the end of the stud, as set forth and shown.

488,175. TEST SYSTEM FOR MULTIPLE SWITCHBOARDS. CHARLES E. SCRIBNER, Chicago, Ill., assignor to the Western Electric Company, same place. Filed Dec. 5, 1891. Serial No. 414,184. (No model.)

Claim.—1. The combination, with a telephone-line having one limb or portion thereof permanently connected with the springs of the switches of the line and by the other limb or portion thereof with the frames or test-pieces of the same switches, of a wire permanently connecting said limbs together at the central office, said connecting-wire including a condenser and an individual annunciator.

2. The combination, with a telephone-line extending from the subscriber's station to the central office, of switches upon different switch-boards, each switch being provided with a switch lever and frame insulated from one another, one portion of the telephone-line being permanently connected with the springs of said switches and the other portion being connected with the frames or test-pieces thereof, a wire at the central office connecting the two portions of telephone-line together, and an individual annunciator and a condenser included in said connecting-wire, substantially as and for the purpose specified.

3. The combination, with a telephone-line extending from the subscriber's station to the central office, of switches upon different switch-boards, each switch being provided with a switch lever and frame insulated from one another, one portion of the telephone-line being permanently connected with the springs of said switches and the other portion being connected with the frames or test-pieces thereof, a wire at the central office connecting the two portions of telephone-line together, and an individual annunciator and condenser included in said wire, and switching apparatus consisting of pairs of double-pointed plugs and cords, one strand of said cords (the strand connecting the sleeves thereof) being connected to ground through a retardation-coil and battery, a listening-in key for bridging the telephone between the strands, and a bridge-wire, including a clearing-out annunciator, permanently connected between said strands.

4. The combination, with a telephone-line extending from the subscriber's station to the central office, of switches upon different switch-boards, each switch being provided with a switch lever and frame insulated from one another, one portion of the telephone-line being permanently connected with the springs of said switches and the other portion being connected with the frames or test-pieces thereof, a wire at the central office connecting the two portions of telephone-line together, and an individual annunciator and condenser included in said wire, and switching apparatus consisting of pairs of double-pointed plugs and cords, one strand of said cords (the strand connecting the sleeves thereof) being connected to ground through a retardation-coil and battery, a listening-in key for bridging the telephone between the strands, and a bridge-wire, including a clearing-out annunciator and a condenser, permanently connected between said strands.

488,176. DEVICE FOR COLLECTING METALLIC FUMES. DENNIS SHEEDY and MALVERN W. ILES, Denver, Colo. Filed Dec. 5, 1891. Serial No. 414,259. (No model.)

Claim.—1. Dust-screens having, in combination, a frame J, two rows of rods or wires K K, and a mat of fibrous material held between the two rows of rods or wires, substantially as and for the purpose specified.

2. In combination with a metallurgical furnace and a fume-conduit leading therefrom, a series of removable dust-screens set across said conduit and formed of a mat-like mass of fibrous material held in a frame by slats or bars, substantially as and for the purpose specified.

3. In combination with a metallurgical furnace, a fume-conduit leading therefrom, openings G in said conduit-doors *g* for closing the same, and removable screens arranged to enter said openings G and formed of a fibrous mat held in place by slats or wires, substantially as and for the purpose specified.

4. The combination, with a metallurgical furnace, of a stack B, leading from the furnace to the atmosphere and having a dust-chamber B at its base, and one or more pivoted screens I, formed of a mat-like mass of fibrous material, held in a frame by slats or bars and secured in said stack, substantially as and for the purpose specified.

5. Dust-screens having a mat formed of fine lead wire secured in frames, substantially as and for the purpose specified.

488,177. DEVICE FOR CONVERTING MOTION. SEXTUS SLOAN, Painesville, Ohio. Filed Feb. 12, 1892. Serial No. 421,234. (No model.)

Claim.—1. In a device for converting motion, a disk rigidly attached to the shaft, with the periphery thereof extending out each side, forming two annular chambers, in combination with the plates *c*, *d*, and *d'* of the form shown, the balls *f* and *f'*, two geared covers, and the rack-frame containing the two racks *l* and *k*, and the plate *c*, provided with a rigid screw or lug *i*, arranged substantially in the manner set forth.

2. In a device for converting reciprocating motion, a rack-frame containing two racks *k* and *l*, in combination with two geared covers *g* and *g'*, arranged loosely on a shaft and operating alternately with the balls *f* and *f'*, the plates *c*, *d*, and *d'*, and the corresponding balls and plates in the chamber in the manner described, whereby the shaft is caused to revolve in the same direction on one stroke of the frame as it does on the other, substantially as described.

488,178. MECHANISM FOR OPERATING AND LOCKING JAIL-DOORS. CHARLES H. SPARKS, St. Louis, Mo. Filed Mar. 10, 1892. Serial No. 424,444. (No model.)

Claim.—1. In combination with the worm-sleeves longitudinally stopped and the rotary shaft extending within said sleeves, the rod or bar in said shaft, longitudinally movable independently of the shaft, having the projections D′ related to the sleeves as described, and suitable means for adjusting said rod longitudinally, substantially as set forth.

2. In combination with the worm-sleeves longitudinally stopped and the rotary shaft extending axially through said sleeves, the rod or bar in said shaft, longitudinally movable independently thereof, having the projections D′ related to the sleeves as described, the lever L, suitably connected to the said sliding rod or bar to move the latter longitudinally with respect to the shaft, and means for locking the lever at positions corresponding to the engagement of the projections D′ with the sleeves, respectively, substantially as set forth.

3. In combination with the worm-sleeves longitudinally stopped and the rotary shaft extending axially through said sleeves, the rod or bar in said shaft, longitudinally movable independently thereof, having the projections D′ related to the sleeves as described, a collar adapted to slide on the shaft, pinned fast to said rod or bar, the lever L, fulcrumed outside the corridor and suitably connected to said collar to move the latter longitudinally with respect to the shaft, and means for locking the lever at positions corresponding to the engagement of the projections D′ with the sleeves, respectively, substantially as set forth.

4. In combination with the worm-sleeves longitudinally stopped and the rotary shaft extending axially therethrough, the rod or bar in said shaft, longitudinally movable independently thereof, having the projections D′ and D¹⁰ related to the sleeves as described, the lever L, suitably connected to the sliding rod or bar to adjust the same longitudinally without interfering with its rotation with the shaft, and a graduated scale along which said lever oscillates, having graduations corresponding to the adjustment of said sliding rod or bar for engagement with the several sleeves, respectively, and for engagement with all the sleeves and for non-engagement with the sleeves, the gearing-train by which the shaft is rotated to operate the sleeves, a case which incloses said gearing-train, and the mechanism for longitudinally adjusting said rod or bar, and the securable door for said case through which access is obtained to the adjusting mechanism, the primal shaft of said rotating train protruding from said case and adapted to receive a rotating crank or hand-wheel outside the case, whereby it is rendered unnecessary to make the compass of the case sufficient to inclose the operating-wheel or crank, substantially as set forth.

5. In combination with the rotary shaft and the sliding bar therein, the mechanism which said shaft operates by means of said sliding bar at its respective longitudinal positions, the mechanism for adjusting said bar longitudinally to its various operative and inoperative positions, and the mechanism for rotating the shaft, and a case inclosing the bar-adjusting mechanism, having a securable door through which access is obtained thereto, substantially as set forth.

6. In combination with the rotary shaft, the sliding bar therein, and the mechanism which said shaft operates by means of said sliding bar longitudinally to its various operative and inoperative positions, the mechanisms for rotating the shaft and for longitudinally adjusting the bar, and a case inclosing said adjusting and rotating mechanism, provided with a securable door through which access is obtained to the adjusting mechanism, the primal shaft of said rotating mechanisms extending outside of said case and exteriorly adapted to receive an operating-crank or hand-wheel, substantially as set forth.

7. In combination with the sliding cell-doors, the upright posts which stop the sliding movement at closed position, the locking-bars H, sliding vertically on said posts, plates mounted on the doors and having short horizontal movement relative thereto and having the inclined notches *f*, the locking-bars having the studs A, adapted to enter said inclined notches, and means for actuating the said plates horizontally and for engaging them with the doors, respectively, until the latter reach closed position against their respective posts and for disengaging them therefrom and permitting longitudinal movement relative thereto thereafter, whereby such longitudinal movement operates the locking-bars, substantially as set forth.

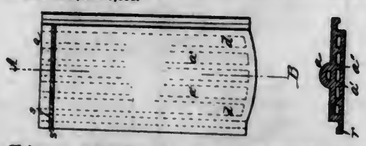
8. In combination with the locking-bars H, the levers H³, connected thereto and provided with weights to counterpoise the weight of the locking-bars, and mechanism which operates such locking-bars, substantially as set forth.

9. In combination with the locking-bars H, levers connected thereto provided with weights to counterpoise the locking-bars and the sliding bars F, operating the locking-bars by the inclined groove engaging therewith, substantially as set forth.

10. In combination with the sliding cell-door and a rail adjacent to which it moves, the plate connected to the door and having a short horizontal movement relatively thereto, the dog pivoted to the plate and having its nose riding on the rail and longitudinally stopped against the lug on the door, and the rail having the track of the dog cut away at the point reached by the nose when the door is fully closed, substantially as set forth.

11. In combination with the cells opening upon a common corridor and the door operating and locking mechanism mounted outside the cell-walls within the corridor, a case inclosing said operating mechanism, extending from end wall to end wall of the corridor and secured to the said end walls by screw-bolts inserted from the outer side of said walls and inaccessible from within the corridor, substantially as set forth.

488,179. ART OF MAKING COMPOSITE MILLSTONES. THOMAS L. STURTEVANT, Framingham, assignor to the Sturtevant Mill Company, Boston, Mass. Filed Sept. 29, 1890. Serial No. 366,554. (No model.)



Claim.—1. The herein-described improvement in the art of making millstones, which consists in forming a number of segments for the skirt of small irregular lumps of emery and molten metal, arranging the segments around an eye, and securing them thereto.

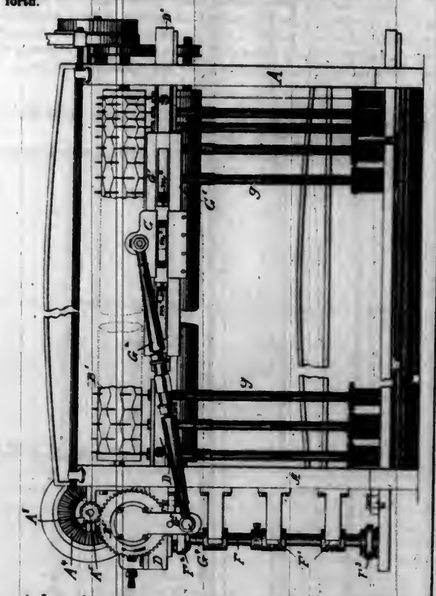
2. The herein-described improvement in the art of making millstones, which consists in forming a number of segments by binding together small irregular lumps of emery with molten metal, arranging the segments with furrow-strips around an eye, and securing them thereto.

3. The herein-described improvement in the art of making millstones, which consists in forming the skirt of the stone by arranging at suitable distances apart furrow-strips, arranging small irregular lumps of emery between the furrow-strips, then pouring molten metal over the furrow-strips and the lumps of emery, and then securing the skirt thus formed to the eye.

488,180. TILE. HENRI STURM, Paris, France. Filed Aug. 3, 1891. Serial No. 401,458. (No model.) Patented in France Feb. 18, 1891, No. 211,503; in Belgium Feb. 23, 1891, No. 93,870, and in England Mar. 3, 1891, No. 3,833.

Claim.—1. A flat tile having a series of parallel division-walls forming channels, said division-walls extending to one end of the tile, and an arched projection *a*, the walls of which form a continuation of two of the division-walls, as at *a′ a″*, substantially as described.

2. A tile having parallel flat faces and overlapping edges, a series of channels divided by parallel division-walls, an arched projection at one end, having its walls in line with two of the division-walls, and a transverse groove on the upper face of the tile at the same end with the packing therein, substantially as described.



488,181. WIRE-NETTING MACHINE. HENRY K. SWINCOCK, Clinton, Mass. Filed May 21, 1891. Serial No. 393,608. (No model.)

Claim.—1. In a machine for the manufacture of netting, main front and back carriages provided with twisting-segments and auxiliary front and back carriages provided with twisting-segments, combined with separately-movable rack-bars, each to engage and rotate its own proper segment, substantially as described.

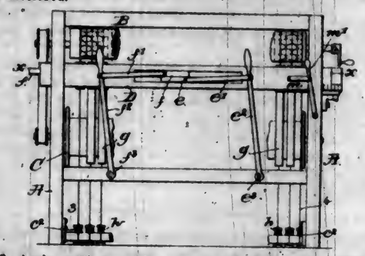
2. A wire-netting machine containing the following instrumentalities, viz: main front and back carriages, means to reciprocate them,

twisting-segments mounted in the said carriages, auxiliary front and back carriages containing twisting-segments, separately-movable rack-bars, each to engage and rotate its own proper segments, and a segment having a toothed surface, substantially as described, and adapted to be engaged by one and then by both of the said rack-bars, according to the position of the carriages, to operate substantially as described.

3. A wire-netting machine containing the following instrumentalities, viz: main front and back carriages provided with twisting-segments, the segments in each carriage being located at a distance apart corresponding to a mesh of one size, combined with auxiliary front and back carriages having each a series of twisting-segments located at a distance apart other than the segments in the main front and back carriages to make a mesh of a different size, and means for actuating the said carriages one in advance of the other, as and for the purposes set forth.

4. In a wire-netting machine, front and back main and auxiliary carriages and independent means to reciprocate the said main and auxiliary carriages, combined with a twisting half-segment which rotates in connection with a twisting half-segment of the main carriage for a portion of the time and then with a half-segment of the auxiliary carriage, whereby meshes differing in width may be made side by side and connected together as one fabric, substantially as described.

5. In a wire-netting machine, main and auxiliary carriages, substantially as described, and twisting-segments carried thereby, the twisting-segments of the main and auxiliary carriages, respectively, being arranged at different distances apart and having their teeth in different horizontal planes, connections between each main carriage and its auxiliary carriage, whereby there is lost motion between them, and means to reciprocate said carriages, for the purposes set forth.

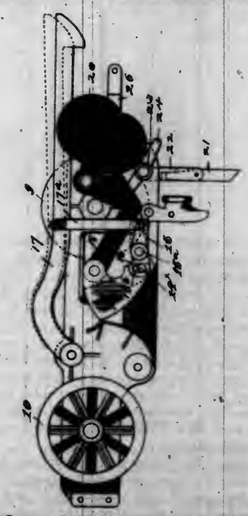


6. In a wire-netting machine, shifting carriages provided with twisting-segments, combined with two superimposed rack-bars having their acting teeth in different horizontal planes and means to actuate the said rack-bars to rotate the said segments.

7. In a wire-netting machine, main and auxiliary carriages, two series of segments, one series for each carriage, and two independent rack-bars, one-half of one of the said segments being adapted to be rotated at one time by one of the said rack-bars and at another time by the other of said rack-bars, combined with devices to move the said carriages independently, substantially as described.

488,182. WIRE-NETTING MACHINE. HENRY K. SWINCOCK, Clinton, Mass. Filed Nov. 16, 1891. Serial No. 412,065. (No model.)

Claim.—1. In a machine for the production of wire-netting, the following instrumentalities, viz: sliding carriages, a series of twisting-segments carried by said carriages, actuating devices for some of the said twisting-segments, and independent separate actuating devices disconnected therefrom for others of the said twisting-segments, whereby some of the segments may be rotated independently of the other of the said segments and in different directions to form reverse twists, substantially as described.

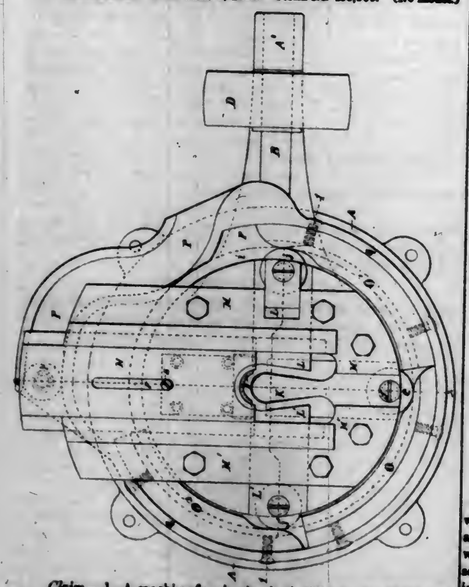


2. In a machine for the production of wire-netting, the following instrumentalities, viz: sliding carriages, a series of twisting-segments for the body-wires and twisting-segments for the selvage-wires, carried by the said carriages, actuating devices for the segments, containing the body-wires, and separate independent actuating devices for the remaining or selvage-wire segments, said latter actuating devices being disconnected from the actuating devices for the body-wire segments, whereby the travel of each of said actuating devices may be varied independently and one series of the said segments may be rotated more than the other series of said segments, substantially as and for the purpose described.

3. A wire-netting machine containing the following instrumentalities, viz: a series of twisting devices for the wires to be twisted together in the production of the netting, the gears of one of the said series of twisting devices being in a different horizontal plane from the gears of the other of the said series of twisting devices, supports for the said twisting devices, and independent rack-bars, one for actuating one of the said series of twisting devices and the other to actuate the other of the said series of twisting devices, and disconnected mechanism to move each of the said rack-bars independently one of the other in either the same or opposite directions, substantially as described.

4. In a wire-netting machine, shifting carriages provided with a series of twisting-segments mounted therein, combined with two independent rack-bars having their teeth in different horizontal planes and separate and disconnected means to actuate the said rack-bars to rotate some or others of the said twisting-segments, as desired, and for the purposes set forth.

488,183. TRANSFER-CARRIAGE FOR ELEVATED WAYS. HENRY B. TRUFF, Chicago, Ill., assignor of two-thirds to Walter S. Bogle, same place. Filed Mar. 19, 1892. Serial No. 425,584. (No model.)

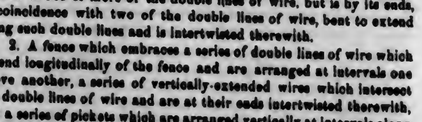


Claim.—1. In a transfer-carriage having a bucket-block, the combination of a locking-lever, a rocking beam and a link connecting the lever and beam, a cam device pivotally supported on the carriage and adapted to bear upon the rocking beam, and means for returning the cam to its normal position after it has been rocked by the upward

passage of the bucket-block, whereby to lock said block to the carriage, substantially as described.

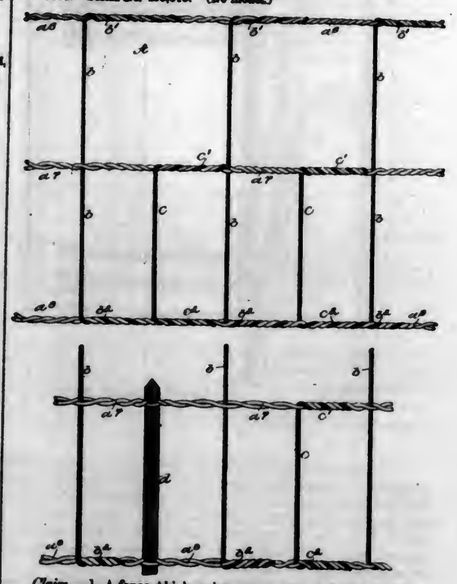
2. In a transfer-carriage, the combination of a locking-lever pivotally connected at its forward end to the frame of the carriage and having its rear end hooked to engage a locking-stop on the track, a link pivotally connected to said lever and depending therefrom, a rocking beam pivoted on the frame of the carriage below the lever and pivotally connected with said link, a heart-shaped cam pivotally connected to the frame of the carriage and adapted to bear upon the front end of the rocking beam; a link connected to the cam above its bearing on the beam, and a bell-crank pivoted to the frame of the carriage, whereby the cam may be rocked by the passage of the bucket-block, and means for forcing the point of the cam under the bolt of the bucket-block, whereby the weight of the bucket on the cam operates to rock the beam and disengage the locking-lever to free the carriage, substantially as described.

3. In a transfer-carriage, the combination of a cam device pivotally connected to the carriage, a link connected to the cam above its pivotal attachment to the carriage, a bell-crank one arm of which is connected to the link, a weight or equivalent actuating device to act upon the other arm of the bell-crank, and a tripping device comprising a cranked lever pivoted on the carriage and adapted when tripped to raise the bell-crank, whereby to withdraw the cam, substantially as described.



483,184. HEEL-STIFFENER MACHINE. ASA H. THOMPSON, Groton, Mass. Filed June 3, 1892. Serial No. 435,386. (No model.)

Claim.—1. A machine for shaping heel-stiffeners, comprising the following elements, viz: a fixed circular bed-plate, a former and a three-part mold carried by said bed-plate, the heel-section of said mold being secured in a fixed position to said bed-plate and the two side sections of said mold and the former being fitted to and movable in bearings in said bed-plate, toward and from the center of said bed-plate, a reciprocating flange-turning plate, and a cam-ring mounted upon and revolvable about said fixed bed-plate and having formed thereon or secured thereto four separate and distinct cams constructed and arranged to act, respectively and in proper order, directly upon said former, the two side mold-sections, and the flange-turning plate to move them toward each other and compress a heel-stiffener at each revolution of said cam-ring.



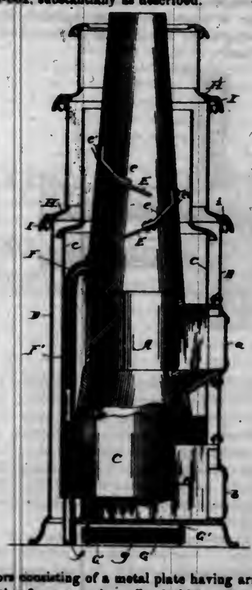
2. In a machine for shaping heel-stiffeners, the combination of the circular bed-plate E, the heel mold-section J, secured in a fixed position in said bed-plate, the side mold-sections L and L', fitted to and movable toward and from each other in bearings in said bed-plate, the former K, fitted to and movable endwise in a bearing in said bed-plate, the cam-ring F, mounted upon and revolvable about said bed-plate, the cam-segments O, O', and O^2 for moving said former and side mold-sections toward the center of said bed-plate, springs for moving said former and side mold-sections outward, the flange-turning plate N, provided with the truck *p*, the path-cam P, formed in or secured to said cam-ring F, the annular bevel-gear G, secured to said ring F, the bevel-pinion O, and any suitable means for imparting rotary motion to said pinion.

483,185. PRINTER'S QUOIN. WILLIAM J. TIBBLEY, Brooklyn, N. Y. Filed Feb. 1, 1892. Serial No. 420,001. (Model.)

Claim.—An extensible printer's quoin consisting of two plates A and B, in combination, having grooves *h h* and the opposed raised and depressed surfaces *a a a* and *b b*, axis *c*, uniting plates inseparably, and lug *e*, operated by the rotation of the plate A to produce extension of the parts, the whole combined, arranged, and operated as set forth.

483,186. FENCE. PHILIP TRICK, Crestline, Ohio. Filed May 21, 1892. Serial No. 433,515. (No model.)

Claim.—1. A fence which embraces a series of double lines of wire which are extended in parallel lines longitudinally of the fence and are arranged at intervals one above another and a series of single lines of wire, each of which is in its main portion arranged vertically in intersection of one or more of the double lines of wire, but is by its ends, in coincidence with two of the double lines of wire, bent to extend along such double lines and is intertwisted therewith.



2. A fence which embraces a series of double lines of wire which extend longitudinally of the fence and are arranged at intervals one above another, a series of vertically-extended wires which intersect the double lines of wire and are at their ends intertwisted therewith, and a series of pickets which are arranged vertically at intervals along the fence in alternation with the intersecting vertical wires and which are engaged between the two members of the double lines of wires, substantially as shown and desired.

3. A fence which embraces a series of double lines of wire which extend longitudinally of the fence at intervals in a vertical plane and a series of vertically-extended wires which in their main portion intersect and are received between the members of the double lines of wire and are by their ends intertwisted therewith, substantially as set forth.

483,187. STOVE OR WARM-AIR FURNACE. WILLIAM H. TURNER, Indianapolis, Ind., assignor to Jennie Annis Turner, same place. Filed Nov. 23, 1889. Serial No. 331,302. (No model.)

Claim.—1. In a warm-air furnace, the combination of an ash-box adapted to support a fire-pot and to have suspended therefrom an

evaporating-pan, an evaporating-pan, an opening in the center of the evaporating-pan, and a wall surrounding such opening, and means for suspending the evaporating-pan from the ash-box so that the upper edges thereof are near to but not in contact with the bottom of the ash-box, whereby liquid may be contained in the evaporating-pan and air may ascend through the central opening of such pan and pass over the contents thereof and between such evaporating-pan and the bottom of the ash-box, substantially as described.

2. Deflectors consisting of a metal plate having arms thereon, in combination with a fire-pot, to the walls of which such arms are rigidly secured, holes in the fire-pot, having projecting rims on the inner edge thereof, and bolts passing through the walls of the fire-pot and through one end of the arms of the deflectors, all substantially as described.

3. In a stove or furnace having outer mantles or casings surrounding the fire-pot thereof, the combination of such outer mantles or casings with rings flaring outward and downward and projecting lugs on the under side thereof secured thereto and adapted to rest on the diminishing-rings of the outer mantle or casing, whereby ascending currents of air are deflected inward by the rings and pass between them and the outer mantle or casing, all substantially as described.

483,188. COIN CONVEYER AND TESTER FOR AUTOMATIC VENDING-MACHINES. JOHN H. VOLLMANN, New York, N. Y. Filed Apr. 19, 1892. Serial No. 429,760. (Model.)

Claim.—1. A coin-detector constructed mainly of a fixed plate D and of a movable plate E, so inclined that the coin in traveling through the space between said plates will lean against the movable plate, and means, substantially as described, for operating said movable plate, substantially as and for the purpose herein shown and described.

2. The combination of the front plate B, having slot *b*, with the coin-detector, consisting of plates D and E, the plate E being movable away from the plate D, and with the toe *s* on said movable plate E in proximity to the plate B, all arranged so that a coin inserted through the slot *b* will on striking the toe *s* cause the plates D and E to separate, substantially as herein shown and described.

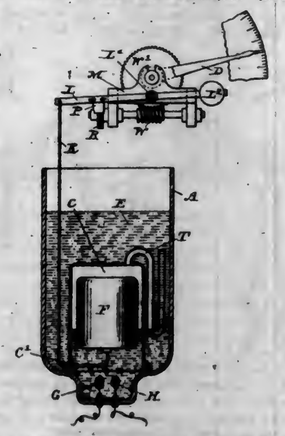
3. In a coin-detector, the combination of the plate D, having a rail *d* and rib *h* on the lower portion thereof above said rail *d*, with the spring-pressed movable plate E, having rib *i* facing rib *h*, substantially as herein shown and described.

4. The combination of the plate D, rail *d* on the lower portion thereof, movable plate E, and spring *m*, adapted to hold said plate E in contact with the plate D, the said plate E having the opening *l* above the rail *d*, substantially as herein shown and described.

5. The coin-detector consisting, mainly, of two plates D E, and the rail *d*, formed on one of said plates, combined with the movable washer-arrester F, having prongs *n* and *p*, that project through holes in one of said plates, substantially as herein shown and described.

6. The combination of the plates D E, one of said plates carrying the intervening rail *d*, having slit K, with the spring *m*, adapted to hold said plate in contact with the plate D, and means, substantially as described, for moving said plate E, all as specified.

7. The plate D, having rail *d* on the lower portion thereof, and concave forward extension *g* of said rail, combined with the movable plate E, having overhanging roof-like lip *e*, the plates E and D facing each other, substantially as herein shown and described.



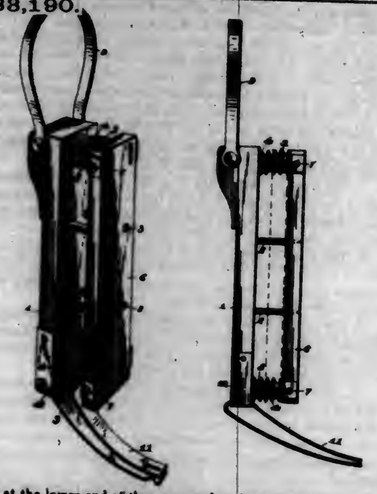
8. The plate D, having rail *d* on the lower portion thereof, and concave forward extension *g* of said rail, and upper roof-like lip *f*, combined with the movable plate E, having roof-like lip *e*, substantially as herein shown and described.

9. The combination of the plates D E, the plate E, having slot or opening *l*, with the washer-arrester F, having prongs *n p*, and with the spring *m*, adapted to hold the said plate E in contact with the plate D, substantially as herein shown and described.

10. The coin-detector consisting of the fixed plate D, having rail *d* and slit K thereon and having the projection *h* and apertures *o* and *r*, the plate E, having aperture *l*, toe *s*, and projection *i*, the spring *m*, pivot-pin a^3, and the washer-arrester F, having prongs *n* and *p*, all combined and arranged for operation substantially as herein shown and described

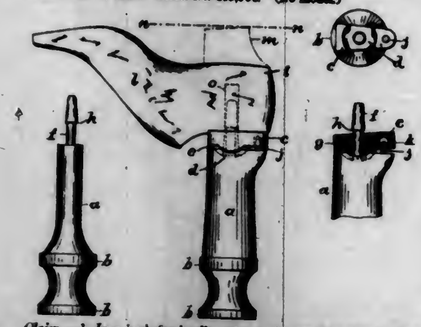
11. A coin-detector comprising plate D, movable plate E, means for operating said movable plate E, and a rail *d* for the coins to roll on, and a face-plate B, with coin-slot *b*, said parts being so arranged that the said rail is below said slot, so that the coin after passing said slot must descend vertically before it reaches the rail *d*, substantially as herein shown and described.

483,189. ELECTRIC METER. ADDISON G. WATERHOUSE, Hartford, Conn. Filed Jan. 4, 1892. Serial No. 416,929. (No model.)



Claim.—An electric meter consisting of a vessel adapted to hold a fluid electrolyte provided with electrodes, a gas-collector placed over one or both of said electrodes, said collector being provided with a tube or gas-passage leading from the upper interior of the gas-collector, having the elements within itself for discharging the gas from the collector after a certain amount has been collected, in combination with a float placed within said gas-collector and being provided with connections through which the movement of the float is imparted to a recording mechanism, substantially as and for the purposes set forth.

483,190. ANIMAL-POKE. CLEMENT V. WHALLON, North Star, Ohio, assignor of one-half to Isaac H. Booker, same place. Filed Apr. 16, 1892. Serial No. 429,266. (No model.)



Claim.—In an animal-poke or device of the character set forth, the combination of an outer strip having pointed pins projecting therefrom and slotted guides arranged in pairs at the ends thereof and surrounded by coiled springs, said guides being flat and freely movable through narrow openings in the opposite portion of the yoke, for the purpose set forth, a yoke connected to the upper end of said strip and

488,190.

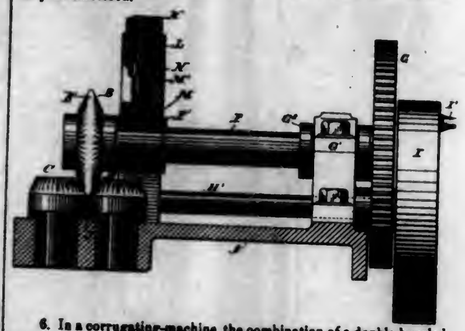
a strap at the lower end of the same, and an inner movable strip having slots in the ends thereof through which the pins may project and openings in the body thereof through which the pins may protrude, pins extending transversely through the said slotted ends of the inner strip and the said guides, a metallic plate surrounding the lower end of said outer strip, and a strap inserted between said metallic plate and the lower end of said outer strip, which is adapted to be secured to a girth-strap, substantially as described.

488,191. PEGGING-JACK. DANIEL WHITLOCK, Newark, N. J. Filed Dec. 18, 1891. Serial No. 415,861. (No model.)

Claim.—1. In a jack for heeling shoes, the combination, with the post *a*, of the guide-pin *f*, fixed rigidly in and projected from the top of the post, and the yielding bearing-block *c*, fitted to rock upon the head of the post and provided with the hole *g* of greater diameter than the pin, as and for the purpose set forth.

2. In a jack for heeling shoes, the combination, with the post *a*, of the yielding bearing-block *c*, having the hole *g*, fitted to rock upon the head of the post, and the guide-pin *f*, provided with the shoulder *h* to engage the edge of the hole *g* when the bearing-block is tipped, as and for the purpose set forth.

488,192. CORRUGATING-MACHINE. JOHN WHITE, Allegheny, assignor of one-half to the J. L. Brown Company, Pittsburg, Pa. Filed Apr. 9, 1892. Serial No. 428,476. (No model.)



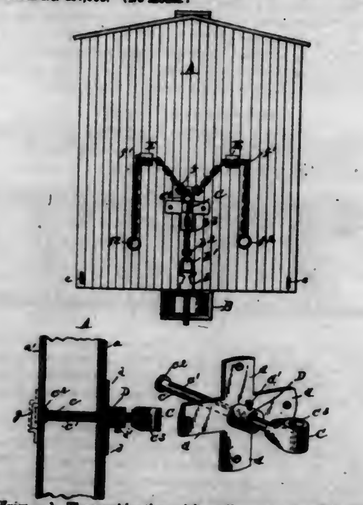
Claim.—1. The herein-described rolls for corrugating or crimping metal, consisting of a double-beveled corrugated male roll operating in conjunction with a pair of corrugated single-beveled rolls forming the female element, substantially as described.

2. The herein-described rolls for corrugating or crimping metal, consisting of a double-beveled corrugated male roll operating with a pair of frusto-conical rolls corrugated on their inner faces and forming the female element, substantially as set forth.

3. The herein-described rolls for corrugating or crimping metal, consisting of a double-beveled corrugated male roll operating with a pair of single-beveled corrugated rolls, which revolve on parallel or oblique axis and form the female element, substantially as set forth.

4. The herein-described rolls for corrugating metal, consisting of a double-beveled male roll operating with a pair of single-beveled rolls forming the female element, all of said rolls having corrugations or teeth on their engaging surfaces which gradually increase in size as they approach the center, substantially as set forth.

5. In a corrugating-machine, the combination of a double-beveled male roll, a pair of single-beveled rolls operating therewith, and a work-guide fitting snugly between said single-beveled rolls, substantially as described.

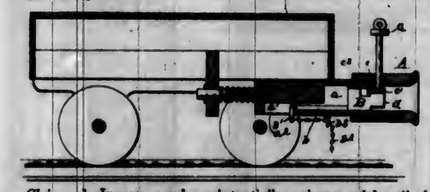


6. In a corrugating-machine, the combination of a double-beveled male roll, a pair of single-beveled rolls operating therewith, and a work-guide fitting snugly between the said single-beveled rolls and having side recesses for their reception, substantially as described.

7. In a corrugating-machine, the combination of a double-beveled male roll, a pair of single-beveled rolls operating therewith, and a work-guide fitting snugly between the said single-beveled rolls and having a longitudinal groove formed therein for the passage of the work, substantially as described.

8. In a corrugating-machine, the combination of a double-beveled male roll, a pair of single-beveled rolls operating therewith, and a work-guide fitting snugly between the said single-beveled rolls and having side recesses and a longitudinal groove, substantially as described.

488,193. PIN-LIFTER FOR CAR-COUPLINGS. JOHN W. WILES, Wilkesburg, and CHARLES WHITE, Chester, S. C. Filed Jan. 13, 1892. Serial No. 417,968. (No model.)

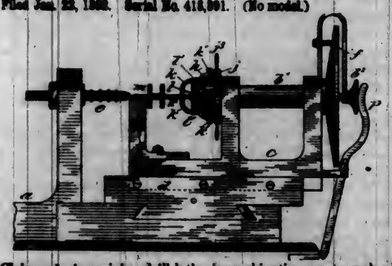


Claim.—1. The combination, with a railway-coach and draw-head, of the pin *b*, link *b'*, pivoted to the head of said pin, chain b^2, secured to the upper end of said link and passing through the sleeve C and having on its upper end a ring c^4, sleeve E, secured to the end of said coach, hooks *c*, secured at each lower corner of said coach, chains *f''*, having one end attached to said ring c^4 and their other ends adapted to be hooked over the hooks *c*, and a sleeve D, secured to the end of said coach, the distance between the lower end of said sleeve and the link *b'* being such that the pin cannot be entirely drawn out of the pin-hole by pulling on the chains *f''*, substantially as shown and described, and for the purposes set forth.

2. The combination, with a railway-coach and head-draw, of the pin *b*, link *b'*, pivoted to the head of said pin, chain b^2, secured to the upper end of said link and passing through the sleeve C and having on its upper end a ring c^4, sleeve E, secured to the end of said coach, hooks *c*, secured at each lower corner of said coach-chains *f''*, having one end attached to said ring c^4 and their other ends adapted to be hooked over the hooks *c*, sleeve D, having the arms *d* and secured to the front end of said coach, grooved pin *c*, having secured on its front end the sleeve C and on its rear end the nut c^3, set-screw d^2, working through said sleeve D and in the groove *d'*, the distance between the lower end of the sleeve C and the link *b'* being such that the pin *b* cannot be drawn out of the pin-hole by pulling on the chains *f''*, substantially as shown and described, and for the purposes set forth.

3. The combination, with the front end of a coach A and drawhead B, of pin *b* and means for lifting the same, the sleeve C, secured on the outer end of the pin *c*, pin *c*, having the groove *d'* and on its inner end the nut c^3, sleeve D, having the arms *d* and adapted to be secured to the end of the coach A, set-screw d^2, working through the sleeve D and into the groove *d'*, substantially as shown and described, and for the purposes set forth.

4. The combination, with the front end of a coach A and drawhead B, of pin *b* and means for lifting the same, the sleeve C, secured on the outer end of the pin *c*, pin *c*, having the groove *d'* and on its inner end the nut c^3, sleeve D, having the arms *d* and adapted to be secured to the end of the coach A, set-screw d^2, working through the sleeve D and into the groove *d'*, and cap *g*, secured to the inner face of the inner wall *a*, substantially as shown and described, and for the purposes set forth.



488,194. CAR-COUPLING. JOHN W. WILES, Wilkesburg, and CHARLES WHITE, Chester, S. C. Filed Jan. 13, 1892. Serial No. 417,969. (No model.)

Claim.—1. In a car-coupler, substantially as shown and described, the combination of the bulk-head A, provided with a throat *a c'*, pin-seat B, its head provided with the upper recess *c* and lower recess *c'*, perforation *c*, headed pin *c'*, working in said perforation, and opening c^5 to allow the said pin to work back and forth, said pin-rest being provided with proper means to operate the same, substantially as shown and described.

2. In a car-coupler, substantially as shown and described, the combination of the bulk-head A, provided with a throat *a* and *c'*, pin-seat B, its head provided with the upper recess *c*, perforation *c*, headed pin *c'*, working in said perforation, and opening c^5 to allow the said pin to work back and forth, said pin-rest being provided with proper means to operate the same, substantially as shown and described, and for the purposes set forth.

488,195. PINION-CHUCK. GEORGE B. WOODBURY, Winsted, Conn. Filed Jan. 23, 1892. Serial No. 418,991. (No model.)

Claim.—1. In a pinion-drill lathe, in combination, a rotary chuck-spindle supported in bearings, the clamping-jaws supported on a laterally-moving yoke on the head of the chuck, and the cam-ring with its surface in contact with the inner ends of the clamping-jaws, all substantially as described.

2. In a pinion-drill lathe, in combination, the clamping-jaws supported on a laterally-moving yoke, a cam-ring having on its outer surface the jaw-operating cams and on its inner surface the slide-clamp cam, the slide-clamp supported in a socket in the spindle, and the slide movable lengthwise within the spindle, all substantially as described.

3. In a pinion-drill lathe, in combination, a chuck-spindle having a transverse slide-clamp socket near the head of the spindle with a contracted inner end, a yielding plug borne in the head of the slide-clamp, the cam-ring supported on the spindle-head and having a cam on the inner side for operating said clamp, the clamping-jaws, and the surface cams for operating the clamping-jaws, all substantially as described.

4. In a pinion-drill lathe, in combination, the jaw-operating cams, the clamping-jaws with the inner ends in operative contact with the rotary cams, and the laterally-yielding yoke to which said jaws are pivoted, all substantially as described.

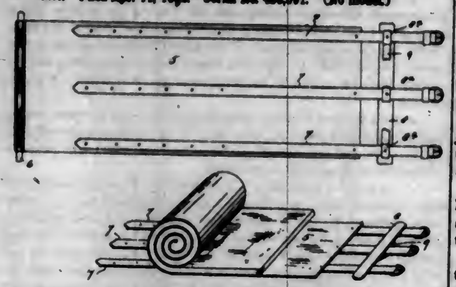
5. In a pinion-drill lathe, in combination with a chuck-spindle, a slide supported within said spindle, a slide-clamp supported in a transverse socket in the spindle and having an oval opening through which the slide passes and a tapered end having a tapered socket, a cam-ring arranged upon the spindle with an inner cam in contact with one end of the said slide-clamp, the outer cams in operative contact with the inner ends of the clamping-jaws, and the handles projecting radially from the outer surface of a ring secured to the clamping-ring, and the clamping-jaws pivotally supported upon the spindle-head, all substantially as described.

6. In a pinion-drill lathe, in combination with a rotary chuck-spindle, a slide arranged within the spindle, a tapered split plug arranged within a socket within the end of the chuck-spindle, a nut adapted to seat the plug in the socket, an index-wheel fast to the chuck-spindle, the clamp borne in a transverse socket in the chuck-spindle, the rotary cam-ring arranged upon the chuck-spindle, having an inner cam for operating the slide-clamp and the outer cams for operating the clamping-jaws, the clamping-jaws pivotally supported in a yoke that has lateral play in its supports, and the adjusting-screws passing through the inner ends of the levers and bearing upon the surface of the cams, all substantially as described.

488,196. CAR-COUPLING. RUSSELL M. WOODARD, Norton, Vt. Filed Apr. 26, 1892. Serial No. 430,468. (No model.)

Claim.—1. In a car-coupler, a draw-bar, pin, and link, combined with a heavy bush which encircles the pin and is fitted loosely into the upper part of the draw-bar and which serves by its weight (combined with the weight of the pin) to hold the link in a horizontal position by pressing it down upon a horizontal portion of the throat of the draw-bar, substantially as described, and for the purpose set forth.

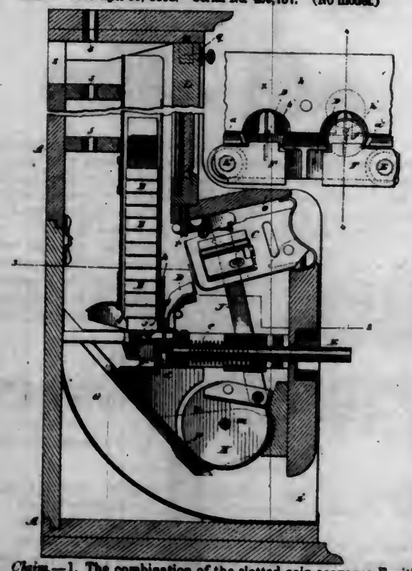
2. In a car-coupler, a draw-bar, pin, and link, combined with a bush which encircles the pin and is fitted loosely into the upper part of the draw-bar and with a latch carried by the bush and arranged to swing under the end of the pin when it is raised and to be tripped by the link as it enters the throat of the draw-bar, substantially as described, and for the purpose set forth.



488,197. REFLECTOR. ALBERT SALUS, Chicago, Ill., assignor of one-half to Andrew J. Erhart, same place. Filed Aug. 31, 1891. Serial No. 404,301. (No model.)

Claim.—The combination of a pair of gas-burners located in close proximity to each other, an upwardly-projecting pin between the burn-

ers, and a vertical reflecting-disk provided with a transverse recess to fit over the burner-pipe, and a vertical socket to receive the pin, as set forth.



483,198. PACKAGE-WRAPPER. WILLIAM J. ADKISON, Denver, Colo. Filed Apr. 11, 1892. Serial No. 428,891. (No model.)

Claim.—1. In a package-wrapper, the combination of a single piece of fabric provided with a rod or roller at one extremity, straps to which the fabric is attached at the opposite extremity, said attachment to the straps being made in proximity to their buckle extremities, the straps and wrapper being otherwise disconnected, so that the wrapper may be rolled independently of the straps, and a suitable handpiece attached to the straps, substantially as described.

2. A package-wrapper composed of a single integral piece of flexible material provided with a rod or roller at its free extremity, and straps to which said piece of material is attached at its opposite extremity, the straps and wrapper being otherwise disconnected, so that the wrapper may be rolled independently of the straps, said straps being perforated and provided with buckles, whereby the package when rolled may be securely fastened and a bar attached to the straps and provided with a handpiece, substantially as described.

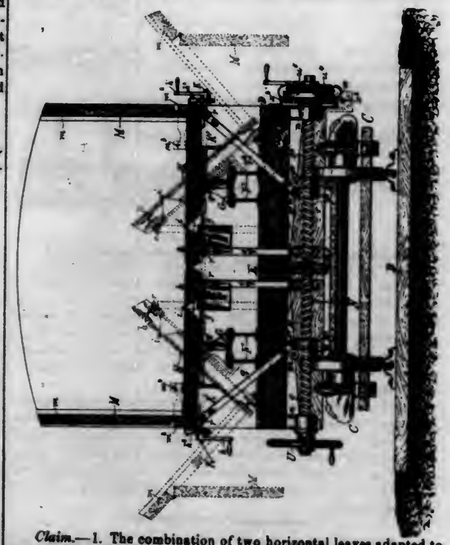
483,199. VENDING APPARATUS. BENJAMIN ADRIANCE, Brooklyn, and JOHN H. VOLKMANN, New York, N. Y., assignors to said Volkmann. Filed Apr. 19, 1892. Serial No. 429,737. (No model.)

Claim.—1. The combination of the slotted coin-conveyer F with stationary rails *a b*, placed closer together than the diameter of the coin, and with means for imparting longitudinal motion to the slotted conveyer along and beyond the rails *a b*, or either of them, and by the coin to a package resting on said rails, substantially as herein shown and described.

2. The combination of the slotted coin-conveyer F with the rails *a b*, having notches *a'*, substantially as and for the purpose herein shown and described.

3. The combination of the slotted coin-conveyer F with the rails *a b*, said rails being nearer together than the coin which the conveyer is adapted to carry, and with the spring-detents *j* along the edge of one of said stationary rails, substantially as herein shown and described.

4. The combination of the slotted coin-conveyer F with the stationary rails *a b*, stationary plate A, and spring *g*, substantially as and for the purpose herein shown and described.



5. The combination of the slotted coin-conveyer F with the stationary rails *a b*, which are adapted to support a package above them and also to support the coin behind said package, and with means, substantially as described, for moving said package and said coin, substantially as and for the purpose specified.

6. The combination of the swiveled cash-box H with the lever J, jointed thereto, and with the front door L of the casing A, all arranged so that said front door when in place holds the cash-box locked, as and for the purpose specified.

7. The combination of the swiveled cash-box H and its projecting lever J with the removable shelf *o* and with the door L, having pin *r*, all arranged so that said door shall lock the removable shelf and also the cash-box, substantially as and for the purpose specified.

8. In a vending apparatus containing packages in vertical column, the combination of a coin-conveyer, a set of rails adapted to support the lowermost package, and means, substantially as described, for moving the coin-conveyer and for discharging the coin at a place vertically underneath the column of packages and substantially in line with the ends of the said rails, substantially as herein shown and described.

483,200. TIP-WAGON. GEORGE ANDERSON, Madras, India. Filed Apr. 13, 1891. Serial No. 389,121. (No model.) Patented in England Nov. 20, 1890, No. 18,822.

Claim.—1. The combination of two horizontal leaves adapted to together form the bottom of the wagon, each pivoted upon a more or less central axis, one or more transverse shafts carrying four differentially-handed screws, four respectively-formed traveling nuts, and links adapted to effect changeable and operative connections between said screws (through their nuts) and the respectively-desiderated leaves, as set forth with reference to the accompanying drawings.

2. The combination of two horizontal leaves adapted to together form the bottom of the wagon, each pivoted upon a more or less central axis, one or more transverse shafts carrying four differentially-handed screws, four respectively-formed traveling nuts, and links adapted to effect changeable and operative connections between said screws (through their nuts) and the respectively-desiderated leaves and wagon sides, the latter adapted by being pivoted along lines in their tops to be swung outward during the act of tipping by the pressure of the load against the retaining power of automatic operating devices, as set forth.

3. The combination, in a tip-wagon bottom, of four leaves, two principal and two subsidiary, the latter respectively pivoted along the adjacent edges of the former, and screw-nut and link devices by which the said leaves can be tipped right or left below the horizontal axes of the leaves, as set forth.

4. The combination, in respect of a tip-wagon bottom, of four leaves, two principal and two subsidiary, and bolting devices adapted to hold each subsidiary leaf in the same plane as its principal one or to release it therefrom, as set forth.

5. The combination, in respect of a tip-wagon bottom, of four leaves, two principal and two subsidiary, bolting devices adapted to hold each subsidiary leaf in the same plane as its principal one or to release it therefrom, and raising-plates adapted to be operated from the side of the wagon, as set forth.

6. The combination of transverse tipping-screws, traveling-nut and link gear, and rope-pulley with the link upon each tip-wagon of a train, and an endless driving-cord adapted to be driven from any source passing round all the pulleys of the train, as set forth.

7. The combination, in a tip-wagon, of sides adapted to swing outward when it is tipped against the pressure of the load, bottom consisting of four leaves, two principal and two subsidiary, centrally pivoted, a pair of rams, and links connecting the respective edges of each link to the cross-head of the respective ram, as set forth.

8. The combination of hopper sides, two longitudinal leaves respectively hinged to the adjacent edges of the said sides and adapted to together form the bottom of the wagon, one or more transverse shafts, each carrying two differentially-handed screws, a traveling nut upon each screw, and a link connecting each nut to the respective leaf, as set forth.

9. The combination of four longitudinal leaves of equal width hinged together longitudinally in pairs upon fixed pivots and adapted to together form the bottom of the wagon, one or more transverse shafts, each carrying four differentially-handed screws, four internally-screwed nuts adapted to travel upon the said screws, respectively, and four links adapted to effect changeable and operative connections between the said screws through their nuts and the respectively-desiderated leaves, as set forth.

10. The combination of four longitudinal leaves of equal width hinged together longitudinally in pairs upon fixed pivots and adapted to together form the bottom of the wagon, one or more transverse shafts, each carrying four differentially-handed screws, four internally-screwed nuts adapted to travel upon the said screws, respectively, four links adapted to effect changeable and operative connections between the said screws (through their nuts) and the respectively-desiderated leaves, and a horizontal flap hinged to each side of the wagon and standing as to its free edge within the path of the adjacent leaf when the latter is tipped upward, as set forth.

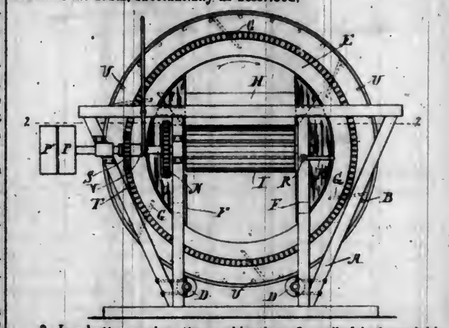
11. The combination of four longitudinal leaves of equal width hinged together longitudinally in pairs upon fixed pivots and adapted to together form the bottom of the wagon, one or more transverse shafts, each carrying four differentially-handed screws, four internally-screwed nuts adapted to travel upon the said screws, respectively, four links adapted to effect changeable and operative connections between the said screws (through their nuts) and the respectively-desiderated leaves, a horizontal flap hinged to each side of the wagon and standing as to its free edge within the path of the adjacent leaf when the latter is tipped upward, and wagon sides hinged to fixed longitudinal top rails, as set forth.

12. The combination of a tip-wagon having sides adapted to swing outward when it is tipped against the pressure of the load with any of the tipping-gears hereinbefore described and illustrated, as set forth.

13. The combination of two leaves pivoted along a longitudinal axis common to them both and an automatic closing-plate adapted to close and to keep closed any gap between the said leaves, as set forth.

14. The combination of two leaves pivoted along a longitudinal axis common to them both and transverse pivoted beams, as set forth.

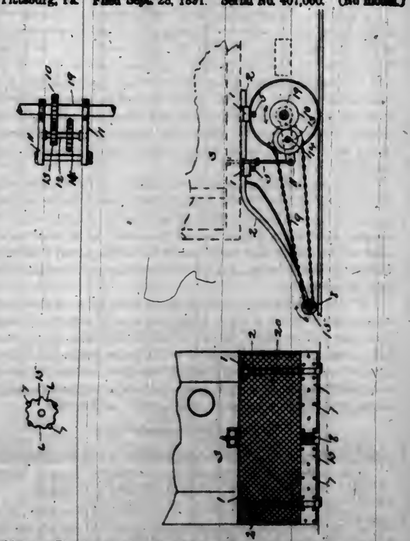
15. The combination of leaves pivoted along a longitudinal axis, a wagon side, and a flap hinged to the latter, as set forth.



16. The combination of leaves pivoted along a longitudinal axis, transverse beams pivoted at right angles to the said longitudinal axis and pivoted wagon sides, as set forth.

17. The combination of leaves, subsidiary leaves, and rope-and-pulley gear for actuating the said subsidiary leaves, as set forth.

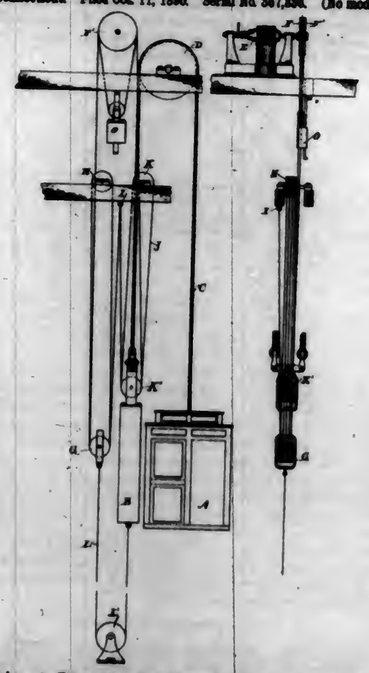
483,201. BUTTER-WORKER. HANS J. ANDERSON, Lake Mills, Wis. Filed Sept. 4, 1891. Serial No. 404,600. (No model.)



Claim.—1. A butter-worker consisting of a frame, a cylindrical drum open centrally at one end, a gudgeon fixed centrally to the drum on its closed end, and wheels axled on the frame under the open end of the drum, whereby the drum is supported revolubly, a driving-shaft arranged at right angles to the axis of the drum, having a pinion gearing with an annular rack on the partially-open end of the drum, buckets on the inner peripheral wall of the drum, projecting inwardly therefrom and extending intact from one end wall to the other end wall of the drum, a plurality of corrugated rollers in the drum, centrally arranged parallel and near to each other at right angles to the axis of the drum, journaled in arms fixed on the frame and projecting into the drum through its open end, and gear-wheels on the axles of the rollers, meshing with each other, the outer one meshing, also, with a pinion on the driving-shaft, substantially as described.

2. In a butter-worker, the combination of a cylindrical revoluble drum, one end of which is open partially centrally, the drum being also provided with apertures at its periphery for the escape of buttermilk therefrom, flat buckets projecting inwardly from the peripheral wall of the drum and forwardly at oblique angles to the radii and extending intact from end to end of the drum, adapted by the revolution of the drum to elevate the butter therein, two corrugated pressure-rollers near to and parallel with each other, geared together, supported centrally in the drum at right angles to its axis on a frame therefor, an annular-toothed rack on the front end of the drum, and a driving-shaft geared independently to the rack on the drum and to one of the rollers in the drum, substantially as described.

3. In a butter-worker, the combination of a cylindrical revoluble drum partially open at one end and provided with means about its periphery for elevating butter therein, butter-working rollers near to and substantially parallel with each other, located horizontally and centrally in the drum at right angles to its axis on a suitable frame therefor, wheels on the rollers at one end, meshing with each other, journal-boxes adjacent to the wheels, movable slightly on the supporting-frame and connected together by a link, and other journal-boxes movable on the frame, in which other boxes the other extremities of the rollers are journaled, and a right and left hand screw secured to the frame against endwise movement, turning into and connecting the latter journal-boxes, whereby the rollers may be moved toward and from each other, substantially as described.



483,202. GUARD FOR RAILWAY-CARS. PATRICK BARRON, Pittsburg, Pa. Filed Sept. 23, 1891. Serial No. 407,060. (No model.)

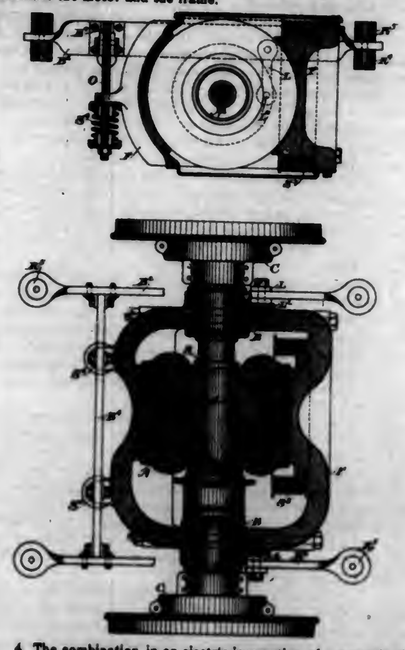
Claim.—The herein-described guard for street and other railway cars, consisting of the frame 2, arranged in sides, and a means for

securing the same in any desired position, the roller 15, journaled to the said frame at the front of the guard, and a sprocket-wheel attached to the roller and connected by a chain belt to a sprocket-wheel which is connected by intermediate gearing to one of the axles of the car, whereby the said roller is given a rapid rotary movement to cast obstructions upward upon a wire-netting arranged on the frame across the front of the car, substantially as herein shown and described.

483,208. GEARING FOR ELEVATORS. NORMAN C. RAMSEY, Lynn, Mass., assignor to the Thomson-Houston Electric Company, of Connecticut. Filed Oct. 11, 1890. Serial No. 367,836. (No model.)

Claim.—1. The combination of an elevator-car, counter-weight, slow-running sheave, and cable passing around said sheave and attached to the car and weight, whereby the main portion of the total load divides into two portions balanced upon and carried by said sheave, with a reversible motor, a fast-running winding-drum driven thereby, and a rope fastened to a fixed point and passing around said winding-drum and around movable pulleys and connected with the counter-weight, whereby a fraction only of the weight of the unbalanced portion of the total load comes upon said winding-drum, substantially as described.

2. The combination, with an elevator-car, of a counter-weight, a slow-running sheave, a cable passing around said sheave and attached to the car and weight, a motor, a fast-running winding-drum driven thereby, and a rope having its ends permanently fastened to a fixed point and passing around said drum and also around fixed and movable pulleys, the latter being connected with the counter-weight, substantially as set forth.

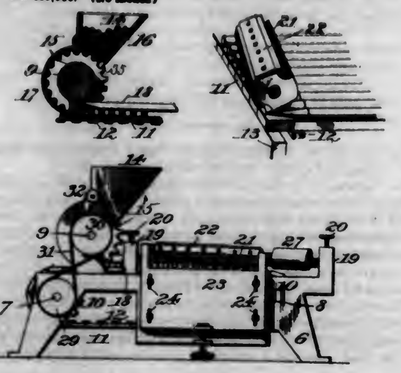


3. The combination, with an elevator-car, of a counter-weight, a slow-running sheave, a cable running over said sheave and attached to the car and weight, a motor, a fast-running drum driven thereby, and a rope the middle portion of which passes around the drum, the end portions passing around fixed and movable pulleys and being permanently fastened to a fixed point, said movable pulleys being connected with the moving parts, substantially as described.

483,204. ELECTRIC LOCOMOTIVE. NORMAN C. RAMSEY, Lynn, Mass., assignor to the Thomson-Houston Electric Company, of Connecticut. Filed Apr. 1, 1891. Serial No. 387,201. (No model.)

Claim.—1. The combination, in an electric locomotive, of a motor having its armature concentric with the axle of the locomotive and having a field-magnet with a single coil embracing the armature, a hollow shaft for the armature, through which passes the axle, a yielding connection between the said shaft and the wheel, and a yielding support for the motor from the frame of the locomotive.

2. The combination, with an electric locomotive, of a motor and means for suspending it from the frame of the locomotive, comprising links extending to the center of gravity of the motor.

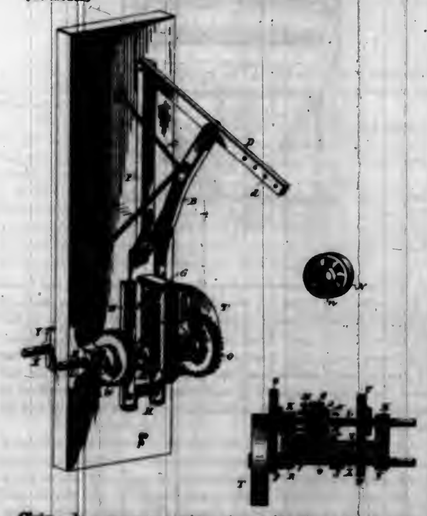


3. The combination, in an electric locomotive, of a motor suspended from the frame of the locomotive by links extending to the center of gravity of the motor and a supplementary spring connection between the motor and the frame.

4. The combination, in an electric locomotive, of a motor having its armature concentric with the axle, a field-magnet having bearings to secure proper alignment between it and the armature, a yielding connection between the said armature and a wheel of the vehicle, and means for supporting the motor, consisting of links extending from the frame of the locomotive to the center of gravity of the motor, and a spring connection between the motor and frame.

5. In an electric locomotive, the combination, with a motor-armature having a hollow shaft concentric with the axle, of a wheel having radial arms, a drum made in two parts clamped on the hollow shaft and provided with radial ribs, and yielding cushions between the arms and ribs, substantially as set forth.

488,205. SEWER-POINTING MACHINE. JAMES H. BENNY, Kokomo, and HIRAM L. BENNY, Leesburg, Ind. Filed Aug. 27, 1891. Serial No. 403,916. (No model.)

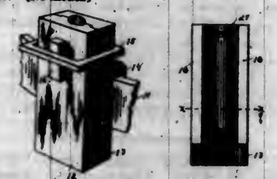


Claim.—In a power-transmitter, the combination, with the frame, of a horizontal rotary shaft mounted in bearings upon the front of said frame, means for imparting motion continuously to said shaft on the windmill, large spur-wheels mounted upon said shaft and of different diameters, a stub balance-wheel shaft parallel with said main shaft and journaled in bearings on the opposite side of said frame and provided at one end with a balance-wheel, and a small cog-wheel meshing with one of said spur-wheels and having its inner end terminating in a centrally-disposed bearing, a stub counter-shaft parallel with said main shaft and journaled upon the same side of the frame as the balance-wheel shaft and in a line therewith having its inner end terminating in the same central bearing and provided with a small cog-wheel meshing with the other large spur-wheel upon the opposite shaft, substantially as set forth.

488,207. STOVEPIPE. GEORGE O. CALDERWOOD, Biddeford, Me. Filed May 9, 1892. Serial No. 432,990. (No model.)

Claim.—The combination of a stovepipe provided with a vertical opening, a rectangular frame having an inwardly-extending flange, a plate arranged within the stovepipe and on the flange and provided with an outwardly-projecting collar extending through the frame and adapted to be adjusted therein, said plate being provided with slots, set-screws arranged within the slots and securing the plate in its adjustment, and a reversible cap or plate provided with an inwardly-extending flange and adapted to be secured at either end of the frame, substantially as described.

488,206. WINDMILL ATTACHMENT. HENRY D. BUTLER and GEORGE C. FERGUSON, Odell, Neb. Filed Nov. 23, 1891. Serial No. 412,813. (No model.)

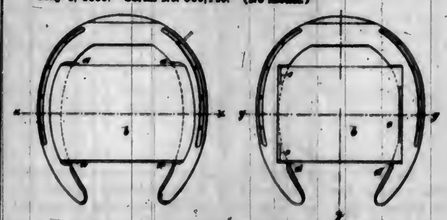


Claim.—The combination, in a skewer-pointing machine, of a plain feeding-belt, guide-rails located in a plane opposite to the belt, a cylinder fluted to receive skewers and journaled above and parallel with the belt, and a rotary cutter journaled obliquely to the plane of the belt and to the edge thereof, the fluted cylinder being adapted to deliver the skewers parallel with each other across the belt, the feed of the belt and the fixed guide-rails being adapted to revolve the skewers in advancing and the oblique cutters being adapted to cut the skewers from the shoulders thereof toward the point spirally, substantially as described.

488,210. COAL-AUGER. FRANCIS W. CORRIGAN, Luzerne, Pa. Filed Dec. 22, 1891. Serial No. 415,911. (No model.)

Claim.—A coal-auger having a hollow mandrel provided with an annular series of dovetailed grooves or recesses for the reception of a bit, in combination with a hollow bit having a serrated cutter and an annular series of rearward projections to engage the dovetailed grooves upon the mandrel, the mandrel-shaft being provided with a series of spiral openings throughout its length, substantially as described.

488,208. SASH-WEIGHT-CASTING APPARATUS. JOHN CARTER, Niles, Ohio. Filed Dec. 15, 1890. Renewed Oct. 31, 1891. Serial No. 410,413. (No model.)



Claim.—1. A mold for sash-weights, having a circumferential groove in the mold-chamber near its top, and a gage-collar supported in said groove, substantially as described.

2. A gage-collar for sash-weight molds, having a projection about its outside to enter a groove or recess in the mold-sections, and a central opening through which the metal is poured, in combination with a two-part mold having a groove or recess near its top to receive the projection on the said gage-collar, substantially as described.

3. A circular revolving frame having a flat supporting-band and molds having hooks on their backs constructed to engage said band, substantially as described.

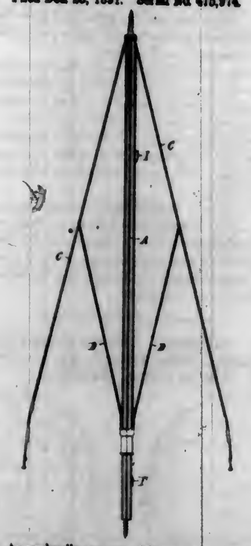
4. A mold formed in longitudinal sections, one of said sections having a recess on its meeting face below its center and the other section having a projection to engage said recess, in combination with a gage-collar locked between said sections at their upper ends and a band about the upper portion of the mold binding said parts closely together, substantially as described.

488,209. HORSESHOE. GEORGE T. CHAPMAN, White Plains, assignor of one-half to William Harvey Merritt, New York, N. Y. Filed May 1, 1889. Serial No. 309,140. (No model.)

Claim.—1. The combination, with a horseshoe having the dovetail or undercut rabbet-grooves in the inner lower edges of the sides, of the metallic guard-plate sprung into said grooves and secured therein by its resilient force, as and for the purposes set forth.

2. The combination, with a horseshoe having the dovetail or undercut rabbet-grooves in the inner lower edges of the sides, of the metallic guard-plate having one or more calks produced from a portion or portions of its ends and sprung into said grooves and secured therein by its resilient force, as and for the purposes set forth.

483,211. CAR-TRUCK. ROBERT L. ELLERY, Taunton, Mass., assignor of one-half to Francis R. Fuller, same place. Filed Dec. 26, 1891. Serial No. 416,156. (No model.)

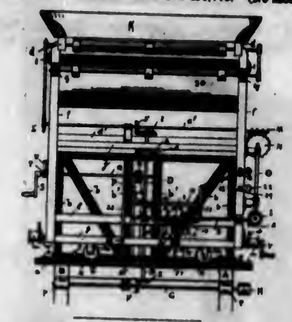


Claim.—1. In combination, a car-body, a main truck fast to the car-body, and a two-wheeled truck to support part of the weight of the car and with its inner end supported by the main truck, all substantially as described.

2. In combination, a car-body, a middle truck fast to the car-body, and front and rear two-wheeled trucks, each to support a part of the weight of the car-body and each with its inner end supported by the main truck, all substantially as described.

3. In combination, a car-body, a middle truck fast to the car-body, a two-wheeled truck to support part of the weight of the car and with its inner end supported by the main truck, and a motor driving the wheels of the middle truck, all substantially as described.

483,212. UMBRELLA OR PARASOL. HENRY A. FLEURE, London, England. Filed Dec. 23, 1891. Serial No. 415,974. (No model.)



Claim.—1. An umbrella or parasol frame comprising a stick formed with a square central tube and webs or ribs radiating outward from its angles, a square rod fitting at one end into one end of the stick and having a top notch formed around it close to the end of the stick and a screw-thread formed around that portion of it which projects outward beyond the top notch and upon which is fitted a ferrule, a similar square-ended rod secured to the opposite end of the stick and having a screw-thread cut upon its projecting end to receive a handle, a square runner carrying two stretchers on each face and formed with a groove or recess at one end of its angles for the ends of the wire by which the stretchers are jointed to the runner, and lock-ribs and stretchers jointed to the top notch and runner, respectively, substantially as described.

2. An umbrella or parasol frame comprising a stick formed with a square central tube and webs or ribs radiating outward from its angles, a square runner sliding on the tube, a top notch secured to the stick and ribs, and stretchers which lie or lock one within the other, jointed to the top notch and runner, respectively, and adapted when closed to lie within the ribs, substantially as described.

3. An umbrella or parasol frame comprising a stick formed of a square central tube with webs or ribs radiating from its angles, so as to form four longitudinal troughs with broad flat bottoms extending down the exterior of the tube, a square runner sliding on and a top notch secured to the stick, and ribs and stretchers jointed to the top notch and runner, respectively, and arranged to lie in each trough when the frame is closed, the bottom of each trough being broad enough, as described, for two stretchers to rest upon, substantially as described.

4. An umbrella or parasol frame comprising a stick formed with a square central tube and webs or ribs radiating outward from its angles, a square rod fitting at one end into one end of the stick and having a top notch formed around it close to the end of the stick and a screw-thread on that portion of it which projects outward beyond the top notch, and a ferrule secured to the screw-threaded end of the rod, substantially as described.

483,213. STRAW-STACKER. CHARLES R. GAUMER, Lawn Ridge, Ill. Filed Sept. 26, 1891. Serial No. 406,773. (No model.)

Claim.—1. In a straw-stacker, the combination of a bed-frame A B, a supporting-frame *b b*, placed transversely across the machine, a swinging frame composed of the lower horizontal beams *j e d'*, vertical beams *d f*, the upper horizontal beams *d*, and hopper K, said vertical beams *f* extending downward, beams *g* and A, located between the extremities of said beams *f* and having mounted thereon the casters *n*, the flange *o*, engaged by said casters, and a master-wheel C, mounted on said frame A B, substantially as herein set forth, and for the purposes described.

2. In a straw stacker, the combination of a bed-frame A B, a supporting-frame *b b*, placed transversely across the machine, a swinging frame composed of the lower horizontal beams *j e d'*, vertical beams *d f*, the upper horizontal beams *d*, and hopper K, the vertical shaft D, journaled in the center of the frame *b b* and provided with a gear-wheel on either end, the horizontal shaft G, journaled on the bed-frame, and the horizontal shaft K', journaled on the swinging frame and provided at one end with a sprocket-wheel and at the other with a bevsled gear-wheel, substantially as and for the purposes herein set forth and described.

3. In a straw-stacker, a bed-frame A B, a master-wheel mounted thereon and provided with a flange *o* on its upper surface, and the adjustable pins 7, in combination with the operating mechanism composed of the vertical shaft 24, having bearings on the beams *g* and *h*, said shaft provided with the beveled gear-wheel 26, the gear-wheel 27, meshing with the teeth of the said master-wheel, the sleeve 6, mounted on the shaft 3 and provided with the beveled gear-wheels 4 and 5, said shaft having bearings on the beam *h* of swinging frame, the horizontal shifting rod 11, having sliding bearings in boxings 14 and 15 on beam *h*, a vertical lever 22, pivoted on beam *g*, said lever having a hook 25 formed on its lower extremity, the bar 18, pivoted to the upper extremity of said lever, the rod 19, pivoted to said bar 18, said rod 19 also being pivoted at its opposite end to the vertical extension of shifting rod 11, and the weighted throw-bar 17, pivoted at its lower end to the bearing 14 and pivoted near its upper extremity to the bar 18, and all working together in the manner and for the purposes herein set forth and described.

4. In a straw-stacker, the combination of a swinging frame composed of the lower horizontal beams *j e d'*, vertical beams *d f*, the upper horizontal beams *d*, and hopper K, said vertical beams *f* extending downward, beams *g* and *h*, located between the extremities of said beams *f* and having mounted thereon the casters *n*, the flange *o*, engaged by said casters, and a master-wheel C, mounted on said main frame A B, the horizontal shaft K', journaled on the said swinging frame, with the sprocket-wheel L and gear-wheel J, and the slanting shaft O, with the gear-wheels N and 1, substantially as described.

5. In a straw-stacker, the operating mechanism composed of the vertical shaft 24, having bearings on the beams *g* and *h*, said shaft being provided with the beveled gear-wheel 26, the gear-wheel 27, the sleeve 6, mounted on the shaft 3 and provided with the beveled gear-wheels 4 and 5, said shaft having bearings on the beam *h* of swinging frame, the horizontal shifting rod 11, having sliding bearings in boxings 14 and 15 on beam *h*, a vertical lever 22, pivoted on beam *g*, said lever having a hook 25 formed on its lower extremity, the bar 18, pivoted to the upper extremity of said lever, the rod 19, pivoted to said bar 18, said rod 19 being also pivoted at its opposite end to the vertical extension of shifting rod 11, and the weighted throw-bar 17, pivoted at its lower end to the bearing 14 and pivoted near its upper extremity to the bar 18, and all working together in the manner and for the purposes herein set forth and described.

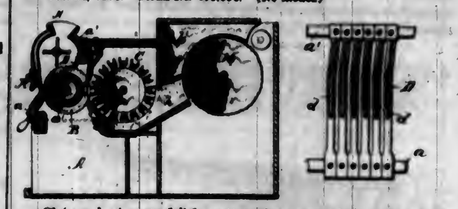
483,214. EAR-RING. THOMAS F. GAYNOR, Louisville, Ky. Filed Feb. 27, 1892. Serial No. 423,067. (No model.)

Claim.—1. The combination, in an ear-ring carrying a jewel, of a narrow V-shaped band adapted to fit over and clasp the jewel at its girdle, substantially as described.

2. The combination, in an ear-ring carrying a jewel, of the narrow V-shaped band adapted to fit over and clasp the jewel at its girdle and being provided with a link and a fastening connected by the link with the band, substantially as specified.

3. The combination, in an ear-ring, of a narrow V-shaped band provided with a series of prongs projecting from each of the side edges and adapted to fit over and clasp a jewel at its girdle and having a link, and an ear-fastening also provided with a link loosely connected with the link of the band, substantially as specified.

483,215. NECKTIE-FASTENER. LOUIS GREENWALD, Leadville, Colo. Filed Feb. 26, 1891. Renewed Feb. 20, 1892. Serial No. 422,514. (No model.)



Claim.—1. A necktie-fastener consisting of a single piece of metal bent to form an approximately-rectangular casing, consisting of the sides 4 and 5, the side 2, secured to the side 5 and having its lower portion separated from the casing and forming a spring 8, provided at its free end with a flange bent inward and arranged at the lower end of the casing, and the side 3, arranged opposite the spring and provided at its lower end with an extension interposed between the spring and the free edges of the sides 4 and 5 and completing the casing, substantially as described.

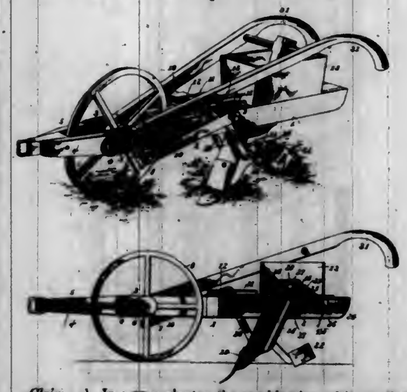
2. A necktie-fastener consisting of a single piece of metal bent to form an approximately-rectangular casing, consisting of the sides 4 and 5, the side 2, having its lower portion separated from the casing and forming a spring, provided at its free end with a flange 9, arranged at the lower end of the casing and having an opening, and the side 3, arranged opposite the spring and provided with the angular extension composed of the plate interposed between the spring and the free edges of the sides 4 and 5 to complete the casing, and the end portion 12, provided with an opening, substantially as described.

3. A necktie-fastener consisting of a single piece of metal bent to form an approximately-rectangular casing, consisting of the side 4, the side 5, provided with a projection 6, the side 2, provided with a slot 7 to receive the said projection and having its lower portion forming a spring separated from the casing and provided at its free end with a flange having an opening, and the side 3, provided at its lower end with the angular extension composed of a plate arranged beneath the spring to complete the casing and an end portion having an opening, and a flange 15, arranged to be engaged by the spring, substantially as described.

483,216. COTTON-GIN. SAMUEL S. HALL, Little Rock, Ark. Filed Dec. 24, 1891. Serial No. 416,096. (No model.)

Claim.—1. A grate-fall for cotton-gins, comprising a series of ribs having fins on their upper surfaces at one end, all of said ribs being inclined laterally at the upper ends in the same direction, substantially as and for the purpose set forth.

2. In combination with the roll-box of a cotton-gin, the saws, the ribs having their upper ends inclined laterally in the same direction, and a screw conveyer projecting into the end of said cotton-box to agitate the seed and discharge the same at the end of the roll-box, substantially as described.



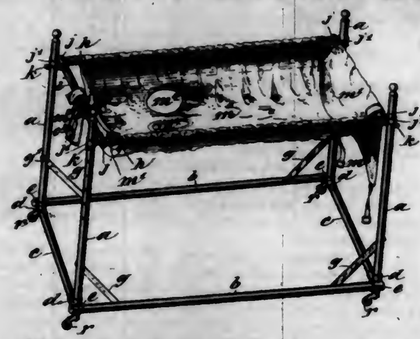
3. In a cotton-gin, the combination, with the roll-box, the ribs having their upper ends inclined laterally and provided with fins on their upper sides, of a conveyer arranged in the opening at one end of said roll-box and extending into the same to agitate the seed and discharge the same at the end of said roll-box, and the adjustable strip secured to the front of the roll-box and having projections on its lower edge to enter between the saws, substantially as described.

4. In a cotton gin, the combination, with the brush-cylinder, of the condensing-roller and an adjustable shield or partition made in two sections, the front section extending under the brush-cylinder and in rear of the same and the rear section being arranged over the condensing-roller to separate the different grades of fiber, substantially as described.

5. In a cotton-gin, the combination, with a condensing-roller, a brush-cylinder, and means for stripping the cotton fiber from the seed, of a laterally-adjustable shield or partition arranged over the condensing-roller and extending under the brush-cylinder, substantially as described.

6. In a cotton-gin, the combination, with a condensing-roller, a brush-cylinder, and means for stripping the cotton fiber from the seed, of a laterally-adjustable shield or partition arranged over the condensing-roller and adapted to separate the different grades of fiber, substantially as described.

483,217. CORN-PLANTER. PETER P. HAYNE, Ellendale, Va. Filed Nov. 14, 1891. Serial No. 411,906. (No model.)



Claim.—1. In a corn-planter, the combination, with a seed-spout terminating at its lower end in a shovel, of opposite covering-blades merging at their upper ends into shanks pivoted at their extremities to the sides of the spout and below their pivots provided with transverse slots, and bolts passed through the slots into the spout, whereby the said blades are made adjustable, substantially as specified.

2. In a corn-planter, the combination, with the opposite beams, of the platform 2, mounted thereon and provided with a shallow longi-

tudinal recess, a sliding cut-off plate 24, mounted thereon and removable therefrom and provided with a perforation 17, registering with that of the platform and with a lug 26, depending through an opening in the platform and forming a handle below the same, a hopper mounted upon the platform, and a seed-slide 15, perforated and mounted in the hopper and adapted for sliding over the plate, substantially as specified.

483,218. COMBINED INFANT'S CRIB AND CHAIR. HENRY A. HAYDEN, Jersey City, N. J., assignor to the Hayden Specialty Company, of New Jersey. Filed Feb. 27, 1892. Serial No. 423,001. (No model.)

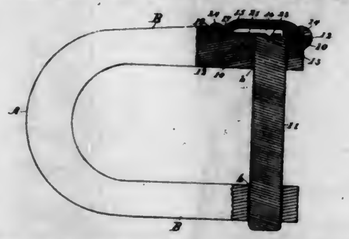
Claim.—1. In a combined crib and chair, the combination, with a stand having uprights, of a frame having rings at its corners, which embrace said uprights and the fabric-support *m*, mounted loosely on the side rails of the frame and having holes m^4, a flap m^3, and securing-straps m^2, substantially as set forth.

2. The combination, with the stand comprising the uprights *a* and end bars *c*, fixed in socket-pieces *d*, the said socket-pieces having tenons or journals *d'*, the side bars *b*, fixed in socket-pieces *e*, the said socket-pieces *e*, the screws *e'*, which secure the two socket-pieces *d* and *e* together, and the braces *g*, hinged to the side bars at one end and adapted to be removably secured to the respective uprights at their other end, of a frame provided with rings to loosely embrace the respective uprights of the stand, studs or pins for supporting the frame on said uprights, and the fabric-support *m* on said frame, as set forth.

483,219. KITCHEN-CABINET. FRANKLIN HOLMES, King City, Mo., assignor of one-half to C. H. Sandford, same place. Filed Aug. 27, 1891. Serial No. 403,553. (No model.)

Claim.—1. In a kitchen-cabinet, the combination of bearing-plates having vertical flanges provided with bearing-recesses, a bin, journal-plates secured to the bin and provided with depending flanges and having journals to engage the said bearing-recesses, and plates adjustably secured to the bearing-plates and adapted to be engaged by the depending flanges to limit the tilting of the bin, substantially as described.

2. In a kitchen-cabinet, the combination of the bearing-plates having vertical flanges provided with inclined recesses, plates 17, arranged in the recesses and provided with longitudinal slots and having lugs, a bin, journal-plates secured to the bin and engaging the bearing-plates and provided with depending flanges, and set-screws arranged in said slots and securing the plates 17 in their adjustment, substantially as and for the purpose described.

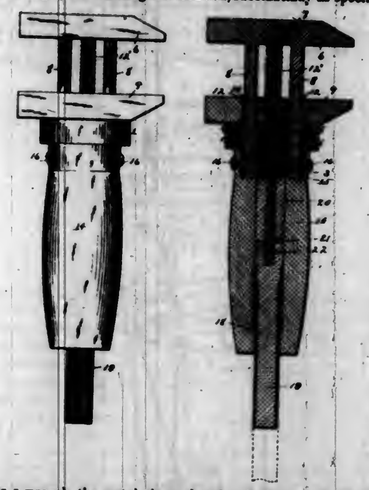


3. In a kitchen-cabinet, a receptacle consisting of a bottom provided with grooves, a front having its edges rabbeted and provided with kerfs, and sheet-metal sides secured to the bottom and the front and having its vertical edges arranged in said kerfs and its lower edges bent upon the bottom and arranged in the grooves thereof and forming ribs, substantially as described.

483,220. TRACTION-WHEEL. HERBERT L. HOLT, Trivoli, Ill. Filed Mar. 31, 1892. Serial No. 427,178. (No model.)

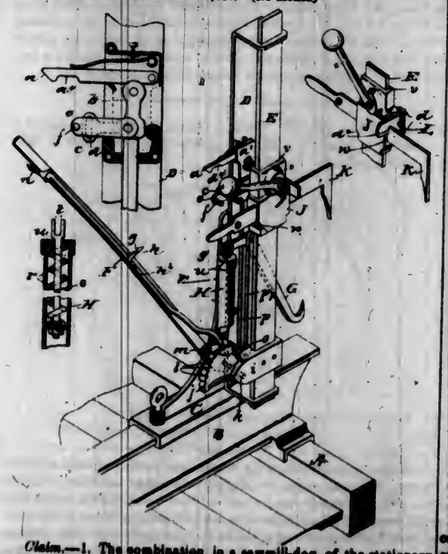
Claim.—In a traction-wheel, one or more rows of spurs H, of the form described and shown and arranged on the inner face of said wheel in the manner set forth, said spurs being provided with the springs and adjustable pins P, of the construction and arranged in the manner and for the purposes set forth and described.

483,221. CLEVIS. MARSHALL E. HUST and FREDRICK W. LEECH, Davenport, Iowa. Filed Aug. 13, 1891. Serial No. 402,581. (No model.)



Claim.—1. In a clevis having a bow with rigid arms extending therefrom, with openings near the ends thereof and an independent pin adapted to be engaged in said openings, the combination of the cap and flat spring within such cap, both pivoted to the top of one of said rigid arms, such cap and spring adapted to be turned together on such pivot, the free end of such spring provided on its under surface with a projection, the top of the opening in said rigid arm enlarged, the head of said independent pin enlarged to engage said enlarged opening, and such head provided with a depression adapted to engage the projection on the under surface of said spring, substantially as described.

2. In a clevis having a bow with rigid arms extending therefrom, with openings near the ends thereof and an independent pin adapted to be engaged in said openings, the combination of the cap and flat spring within said cap both pivoted to the top of one of said rigid arms, such cap and spring adapted to be turned together on such pivot, the free end of such spring provided on its under surface with a projection, the top of the opening in said rigid arm enlarged, the hook at the end of such rigid arm, the tongue and stop at the free end of said cap adapted to engage said hook, the head of said independent pin enlarged and adapted to engage the enlarged part of the opening in said rigid arm, and such head provided with a depression adapted to engage the projection on the under surface of said spring, all for the purposes set forth, and substantially as described.



483,222. WRENCH. JAMES C. JOHNSON, Concord Church, W. Va. Filed Feb. 16, 1892. Serial No. 421,997. (No model.)

Claim.—1. In a wrench, the combination, with the hollow handle, the guide-rods extending therefrom, the fixed jaw supported at the upper ends of the guide-rods, and the movable jaw mounted for reciprocation on said guide-rods, of a feed-screw passing through the movable jaw and journaled in the fixed jaw and handle and having its lower end extending into the latter, and an operating-rod for the feed-screw, mounted for reciprocation and rotation within the handle and for reciprocation and non-rotation upon the lower end of the feed-screw, said rod being adapted to be drawn out beyond the handle to form a hand-grip for rotating the feed rod, substantially as specified.

2. In a wrench, the metal plug reduced at its lower end and provided with a central and opposite side bores, combined with the hollow handle having its upper end fitting the lower reduced end of the plug and its lower extremity provided with an internal shoulder, the rod fitting within the shoulder and provided at its upper end with an enlarged head having a squared socket and fitting the bore of the handle, the fixed jaw, the guide-rods extending from the same into the side openings of the plug, the movable jaw mounted on the guide-rods, and the feed-rod threaded in the perforation of the movable jaw and at its lower end squared and fitting the socket of the rod, substantially as specified.

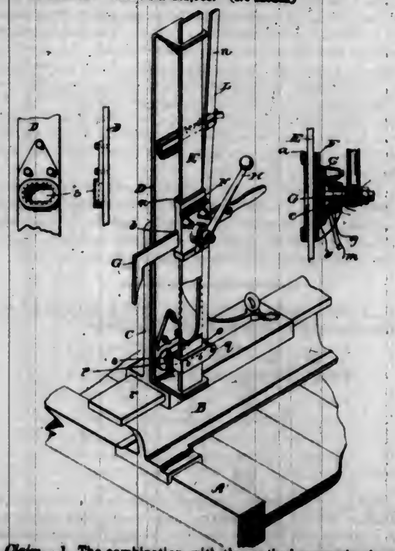
483,223. SAWMILL-DOG. GEORGE F. KNIGHT, Canton, Ohio. Filed Aug. 21, 1891. Serial No. 403,267. (No model.)

Claim.—1. The combination, in a sawmill-dog, of the stationary bar D, a vertically-sliding dog-carrying bar E, located adjacent thereto, an actuating-lever, a finger *h* and pin d^5, carried by said lever, latches *a* and *c*, secured to said bar D, a pawl *b*, against which said latch *a* bears and to which said latch *c* is pivoted, a dog G, bars *p p'*, pivoted to the lever with their lower ends and one engaging the pawl *b* with its upper end and the other pivoted with its upper end to the dog G, and a yielding connection between said dog G and a stationary part.

2. The combination of a supporting frame or stand, a pivoted actuating-lever, a dog G, having a laterally-projecting arm, bar *p'*, pivoted to said lever and to said dog, and a yielding connection between the lateral arm and the supporting-frame.

3. In a sawmill-dog, the combination of the frame, the bar D, a sliding-bar E in close proximity thereto, a dog-supporting head J, located on said bar E means for securing said head to the sliding bar, a dog K, secured to said head, an actuating-lever F, a dog G, a bar *p'*, connecting said actuating-lever with said dog G, and a yielding connection between dog G and a fixed part of the frame.

4. In a sawmill-dog, the combination of a bar D, a pivoted lever F, a dog G, a connection between said lever and dog, a latch *a*, pivoted to said bar, a latch *c*, pivoted beneath said latch *a*, a pawl *b*, having a frictional engagement with the latch *a* and latch-operating finger *h*, and latch-pin d^5, carried by said lever.



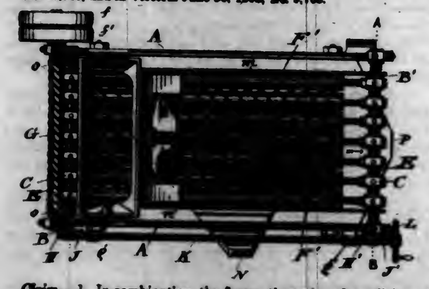
5. In a sawmill-dog, the combination, with a sliding bar E, of a head J, adjustably clamped to said bar, a dog K, having a sliding engagement in said head, and a latch L, pivoted to said head at a slight distance from the edge thereof to swing in a path at right angles to a vertical line drawn through said head said latch having a notch the walls of which embrace the dog K, whereby the outward movement of said dog is prevented and an inward movement allowed.

6. In combination, a supporting-frame, a stationary bar D, a sliding bar E in close proximity thereto, a dog K, carried by said bar E, a lever F, a dog, means for connecting said lever to said dog, and a yielding connection between the bar and supporting-frame, comprising a cylinder H, spring *r*, arranged therein, and rod *s*, actuated by said spring and connected to said dog G.

7. In a sawmill-dog, the combination, with the sliding bar E, of a bracket *i*, secured thereto and provided with a segmental rack, a lever F, journaled to said rack and provided with a dog to engage therewith, a dog G, having a yielding connection with a stationary part, and a bar *p'*, connecting the lever F with the dog G.

8. In a sawmill-dog, the combination, with a dog moving downward in vertical line, of a second dog having an upward and outward swinging movement toward the first-named dog and a yielding connection between the swinging dog and a fixed part, and means for simultaneously moving said dogs at different rates of speed, substantially as set forth.

483,224. SAWMILL-DOG. GEORGE F. KNIGHT, Canton, Ohio. Filed Feb. 27, 1892. Serial No. 422,965. (No model.)



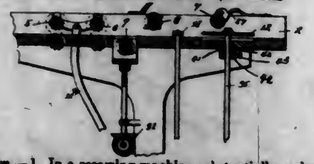
Claim.—1. The combination, with the vertical supporting-bar D, of the vertically-slidable bar E, the head F, having an aperture *a*, an offset aperture *b*, a recess *c*, threaded hub *d*, plate *e*, and a locking mechanism comprising a lever H, having an apertured axle portion to turn into the hub *d*, and a through pin or screw whereby the length of said axle may be maintained or increased, substantially as described, and for the purpose set forth.

2. The combination, with the vertical slidable bar E, of the adjustable head F and dog G, a crank-lever H, having an apertured spindle to turn into said head, having adjustable therein means whereby the length of said axle may be maintained against wear or the length increased, as the case may be, substantially as described, and for the purpose set forth.

3. The combination, with the supporting-knee C, of the bar D, having its end turned and apertured to receive the slidable bar E, and an actuating-lever L, pivotally secured to the bar E and adapted to engage a loop or slide *s* at the lower portion of the stationary bar D, substantially as described, and for the purpose set forth.

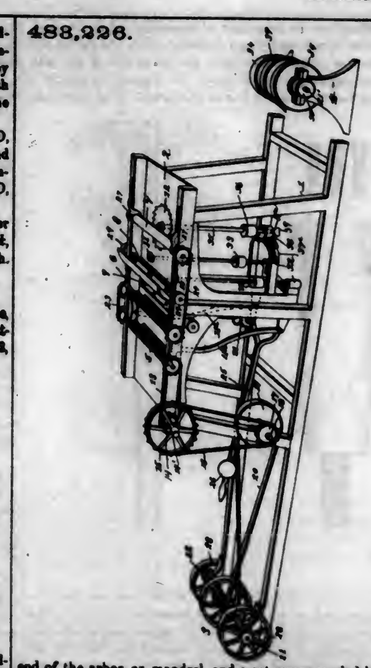
4. The combination, with the adjustable head, of the crank-lever having an apertured crank portion to turn in said head, the pin *k*, and set-screw *j*, substantially as described, and for the purpose set forth.

483,225. GRADING-MACHINE. CHARLES LAMPITT, Southgate, England. Filed Mar. 14, 1892. Serial No. 424,999. (No model.) Patented in England Apr. 9, 1891, No. 6,100; in Canada June 10, 1892, No. 40,263, and in Victoria June 30, 1892, No. 9,763.



Claim.—1. In combination, the frame, the series of parallel grading rollers, means for rotating the rollers, the bearing-blocks at the ends of the rollers, the means for supporting the rollers and bearing-blocks, consisting of the cross-shafts, and the means for adjusting the bearing-blocks, said means being supported directly by the cross-shafts and in operative connection therewith, substantially as described.

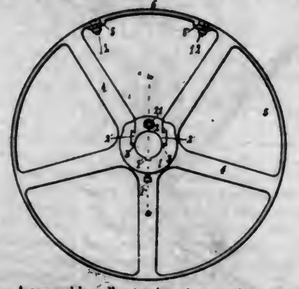
2. In combination, the frame, the series of parallel grading rollers, means for rotating them, the bearing-blocks and adjusting-disks therefor, the means for supporting the said parallel rollers, the blocks, and adjusting means, and for operating the latter, consisting of the cross-shafts B B', having a spliced connection with the disks, and the means for operating both the said shafts in unison, including the operating connection from one shaft B to the other B', substantially as described.



3. In combination, the series of parallel grading-rollers, with operating means therefor, the movable bearing-blocks for said rollers, the interposed disks between the bearing-blocks, screw-threaded to engage the same, and the means for supporting the blocks and operating the threaded disks, consisting of the shaft having a spline connection with the disks, substantially as described.

4. In combination, the series of parallel grading-rollers, the movable blocks therefor, the shafts for supporting the bearing-blocks, and the interposed screw-threaded disks E, having a spline connection with the shaft, the said blocks having screw-threaded recesses to receive the screw-threaded ends of the disks, substantially as described.

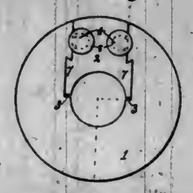
483,226. RESAWING-MACHINE. FRANK R. LEE, Lead Hill, Ark. Filed June 2, 1891. Serial No. 394,536. (No model.)



Claim.—1. In a resawing-machine substantially as described, the combination, with the main frame having the supporting-frame 37ª provided with a curved face, the saw-table having the curvilinear slot, and the matching heads 10 and 11, arranged above the saw-table in advance of the slot, of the adjustable curvilinear bracket 37, having the slots 37ᵇ and carrying the bearing 36, bolts taking through the slots of the bracket 37 and into the curved face of the supporting-frame below the table, an upright saw arbor or mandrel stepped in the bearing 36 and having its upper end passing through the slot 41 in the saw-table, the horizontally-disposed saw mounted on the upper

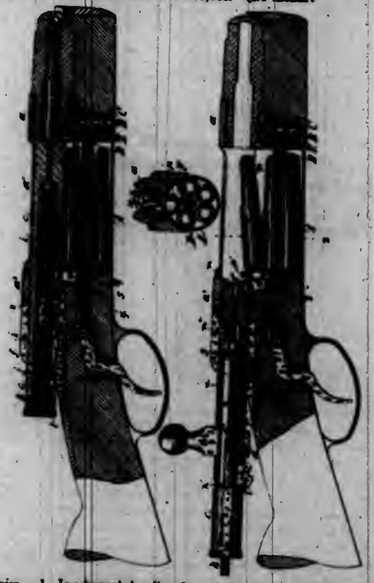
end of the arbor or mandrel, and a set-screw carried by the bearing 36 for adjusting the arbor or mandrel and the saw vertically, substantially as specified.

2. In a resawing-machine substantially as described, the combination of the horizontally-disposed vertically and laterally adjustable saw, the pressure-roller 7, arranged above said saw and having a vertical adjustment, the matching heads 10 and 11, arranged in advance of the saw and upon opposite sides of a longitudinal line drawn through the center of said saw, the upper planer-head 8, arranged in advance of the matching heads and above the horizontal plane of said matching heads, the lower planer-head 9, arranged in advance of the upper planer-head 8 and in a horizontal plane below that of the matching heads, and the feed-rollers 5 and 6, arranged in advance of the planer-head 9 and above the horizontal plane of said head and having a vertical play, all adapted to operate substantially as specified.



488,227. PULLEY. ORTON C. LITTLE, Menasha, Wis., assignor of one-half to Duncan T. H. MacKinnon, same place. Filed Sept. 23, 1891. Serial No. 406,561. (No model.)

Claim.—A separable pulley having that portion which is adjacent the bore provided with a slot slightly wider than said bore, said slot having upon each side thereof and outward from the axial line of said pulley recesses whose bottom sides are a diametrical plane of said pulley, their back or outer sides planes at right angles with their bottom sides and parallel with the axial line of the pulley, and their upper sides planes lying at an acute angle with both of the aforesaid sides of each recess and forming thereby half-dovetail recesses whose transverse area decreases gradually from their outer ends inward, two blocks for filling said slot, each block having a wing on two of its sides which



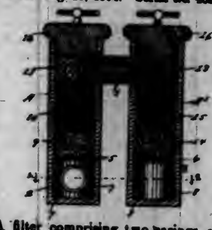
corresponds with said recesses and being adapted to be driven into said recesses from their outer ends and to clamp the pulley upon a shaft, and a bolt passing through the blocks for retaining said blocks within the slot, substantially as described.

483,228. COLLAR. ORTON C. LITTLE, Menasha, Wis., assignor of one-half to Duncan T. H. MacKinnon, same place. Filed Apr. 4, 1892. Serial No. 427,884. (No model.)

Claim.—A separable collar having its main portion which is adjacent the bore provided with an opening slightly wider than said bore, said opening having upon each side thereof outward from the axial line of said collar recesses whose bottom sides are a diametrical plane of said collar, their back or outer sides planes lying parallel with the bore of the collar and at right angles with the diametrical plane aforesaid, and their upper sides planes lying at such an angle with the aforesaid sides as to form recesses of a gradually-decreasing area from one end of the collar to the other, a block having wings on two sides thereof corresponding with said recesses and being adapted to be driven into said opening and to clamp the collar upon a shaft, and a bolt or bolts for retaining said block therein, substantially as described.

483,229. MAGAZINE-GUN. ADOLPH LIEBERS, Berlin, Germany. Filed Mar. 18, 1889. Serial No. 303,711. (No model.)

Claim.—1. In a breech-loading firearm, the combination, with the breech-bolt *c*, having a dovetailed groove and a recess, of an extractor *n*, having a dovetailed central part and at its forward and rear end springs terminating in a claw or hook, the rear claw being adapted to engage said recess, whereas the forward claw grasps the cartridge, substantially as described.

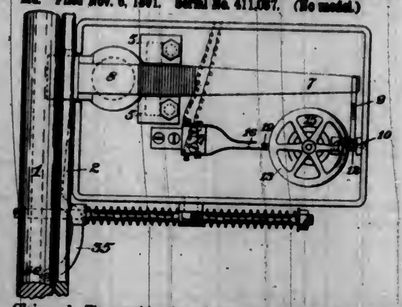


2. In a breech-loading firearm, the combination, with the magazine and pivot *q*, of the laterally-arranged spoon or lever *p*, with the nose *p'* and curved edge *p²*, arranged to turn on the pivot *q*, and means for oscillating said spoon, substantially as described.

3. In combination with the barrel and bolt of the magazine-drum, the shaft having a ledge F, an actuating-spring for turning said shaft, and a spoon for retaining the cartridge in place, said spring being arranged within the frame of the arm at one end of the shaft, substantially as described.

4. In breech-loading firearms, the device for securely holding the parts in cocked position, consisting of the combination, with the breech-receiver and firing-pin, of a movable flap *m*, arranged to engage in the slot *i²* of the part *i'* of the firing-pin, substantially as described.

5. In combination, the barrel, the bolt, the magazine-drum, the shaft having the ledge and the spring for operating it, and the means for receiving the cartridges from the ledge, consisting of the spoon having vertical movement in the magazine, substantially as described.

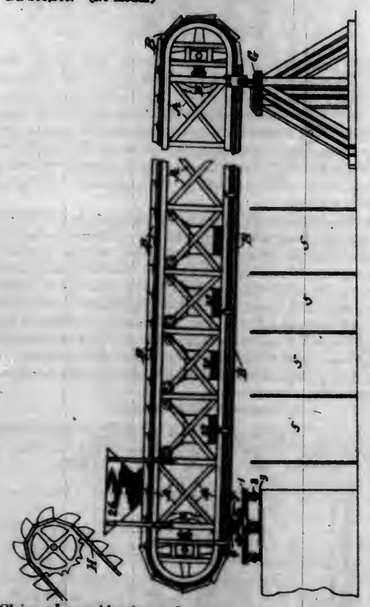


483,230. FILTER. CHARLES C. LOSENHARDT and JOHN F. GORDON, Chicago, Ill. Filed Aug. 15, 1891. Serial No. 402,776. (No model.)

Claim.—1. A filter comprising two casings, each having water-chambers at one end thereof, a supply and outlet port communicating with one of said water-chambers and an outlet-port communicating with the other water chamber, a pipe or passage between the casings at the opposite ends thereof, a mass of filtering material located within and filling up the remaining portions of said casings and located over and covering the ends of said pipe or passage connecting said casings, and covers located within said ends of the casings and bearing upon said filtering material.

2. A filter comprising a casing A, having supply and outlet ports 2 and 3 near its closed end, a perforated plate 5, located between said ports 2 and 3 and the other end of the casing, filtering material located upon said perforated plate, a cover 12, secured in the open end of the casing A and bearing upon said filtering material, a casing A', having an outlet-port 4 near its closed end, a perforated plate 6, located between said port and the other end of said casing A', filtering material located upon said perforated plate 6, a cover 16, secured in the open end of the casing A' and bearing upon said filtering material, and a communication between said casings near the ends within which the covers are located.

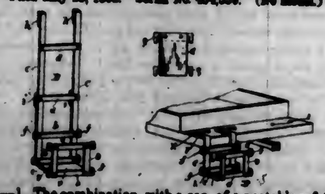
483,231. CIRCUIT-CLOSER FOR RAILROAD-CROSSING SIGNAL MECHANISMS. IRVIN W. LOY and RICHARD O'TOOLE, Mechanicstown, Md. Filed Nov. 6, 1891. Serial No. 411,087. (No model.)



Claim.—1. The combination of a track-bar located by the side of a railroad-track with a lever pivoted near the same, one end of which protrudes beneath the track-bar and the other end of which operates a spring-controlled fly-wheel, and a pair of contact-points which are the terminals of an electric circuit containing a bell and which are maintained out of contact with one another by the fly-wheel when it is at rest under the influence of its spring.

2. In a circuit-closing device for a railroad-crossing signal, the combination of a track-bar secured to suitable supports parallel to the track and standing above it in position to be depressed by a passing train with a lever pivoted near the track, one end of which extends below the track-bar in position to be struck by said bar when it is depressed, the other end of which operates a bell-crank lever pivoted in position to operate, a spring-controlled fly-wheel, a fly-wheel mounted upon a suitable shaft and retained in a desired position by a spiral

spring, one end of which is secured to the shaft and the other end to the wheel and which is provided with means by which it is caused to revolve by the operation of the bell-crank lever, and a pair of electric contact-points which form the terminals of an electric circuit in which there is a signaling apparatus, said fly-wheels striking one of said terminals and operating under the influence of its spring to prevent its contact with the other terminal, substantially as described.

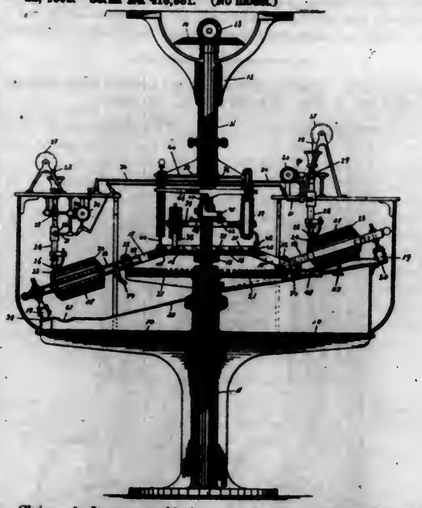


3. In a circuit-closing device for a railroad-signal apparatus, the combination of a track-bar, located beside the track, having a portion of its surface slightly above the track in position to be depressed by a passing train, a circuit-closing mechanism included in an electric circuit and closed by mechanism operated by the track-bar, a second track-bar on the opposite side of the track, located in position nearer to the crossing than the other one, so that it will be depressed before the other one by a train leaving the crossing, and a bell-crank lever operated by the second track-bar, to which is connected a rod, said rod passing below the track and connected to a third lever, which is suitably pivoted by the side of the track and normally stands below the first track-bar, but which is withdrawn from below said track-bar when the second track-bar is operated.

488,282. CONVEYER. THEODORE L. MARVEL, Trenton, Mass., assignor to William H. Phillips, same place. Filed Mar. 23, 1892. Serial No. 426,319. (No model.)

Claim.—In combination, a frame, an endless chain of pans, two sets of wheels, two sets of tracks, and end wheels mounted on the frame, the frame and end wheels supporting the endless chain of pans, and the pans being also supported by the two sets of wheels, one set of wheels on one set of tracks and the other on the other set of tracks, and means whereby one set of tracks may be lowered and raised, all substantially as set forth.

488,283. PLATFORM. JAMES MATTHEWS, Collins Centre, New York. Filed May 26, 1892. Serial No. 434,230. (No model.)



Claim.—1. The combination, with a car, of a portable safety-platform and suitable devices to detachably connect the platform to the car, substantially as described.

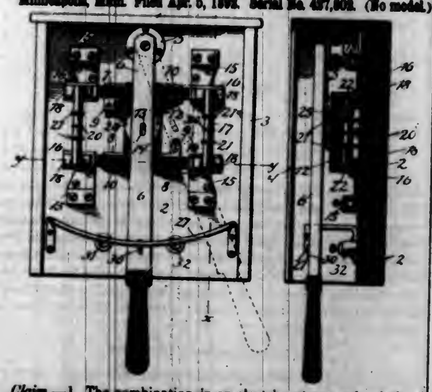
2. The combination, with a car, of a portable safety-platform, an end-gate, suitable devices to detachably connect the gate to either end of the platform, and means to detachably connect the platform to the car, substantially as described.

3. The combination, with a car, of a portable safety platform and ladder and suitable means to detachably connect the ladder and platform to the car, substantially as described.

488,284. CAN-SOLDERING MACHINE. DAVID M. MONROE, Baltimore, Md., assignor to Robert Tynes Smith, same place. Filed Jan. 22, 1892. Serial No. 418,881. (No model.)

Claim.—1. In a can-soldering machine, the combination, with mechanism for giving the can an intermittingly-circumferential movement and continuously rotating it upon its axis during said movement, changing its position vertically during said circumferential movement and also reversing the inclination of its axis when at its lowest and highest points, of two sets of soldering devices above the can, each set consisting of a solder-feeding mechanism and a blow-pipe, the blow-pipe being arranged tangentially to the can-seam, whereby the flame from the blow-pipe will strike the can and the solder at the same time, said sets of soldering devices being arranged at different heights and each can being caused to cease its circumferential movement when under said devices until it has made a complete revolution upon its axis, substantially as set forth.

2. In a can-soldering machine, the combination of a continuously-rotating shaft, an intermittingly-movable plate upon the shaft provided with a series of can-carriers, an undulating track for supporting the outer end of each of said carriers, two sets of soldering devices arranged at different heights, whereby one of the devices will solder one end when the can is at its lowest point and the other device will solder the other end when the can is at its highest point of elevation, each set of said soldering devices consisting of a guide-tube provided with feed-rollers, a knife for cutting the solder, two cams upon the shaft of the machine, and a double set of levers for connecting the



cams with the said feed-rollers and the knives, respectively, substantially as set forth.

3. In a can-soldering machine, the combination, with a can-carrier having a rotating and circumferential movement, of a flux-box, a movable plate within the box, and means for connecting the carrier with the plate and moving it within the box, substantially as described.

4. In a can-soldering machine, the combination, with a can-carrier having a rotating and circumferential movement, and provided with a piece 55, projecting laterally therefrom, of a flux-box, a plate therein provided with a projection adapted to be engaged and operated by the piece 55, and springs for retracting said plate, substantially as set forth.

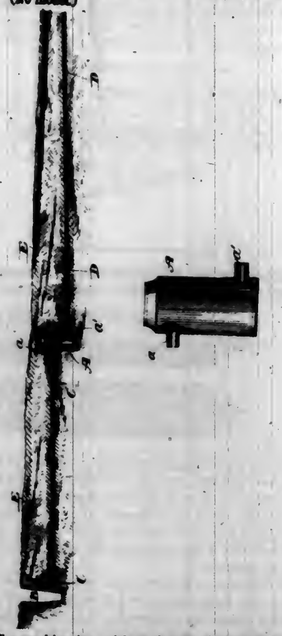
5. In a can-soldering machine, the combination, with an inclined track provided with a level portion, of a can-carrier provided with a support for moving upon said track, a chute from which the can is dropped into the carrier, an adjusting-plate located at said level portion of the track, whereby the can is centrally placed in the carrier, soldering devices, and means for imparting a circumferential movement to the carrier, substantially as set forth.

488,285. ELECTRIC CUT-OUT AND SWITCH-BOX. LLEWELLYN D. MCMUNN, Cresswell, N. D., assignor of one-half to Milton R. Utley, Minneapolis, Minn. Filed Apr. 5, 1892. Serial No. 427,802. (No model.)

Claim.—1. The combination, in an electric cut-out and switch, of the lamp-circuit-terminal plates with the slidable contact or bridge bars arranged thereon, dynamo-circuit terminals arranged opposite the ends of the lamp-circuit-terminal plates and with which said sliding bars are adapted to make contact, a short-circuiting bar or jumper extending between the dynamo-circuit terminals, said bar adapted to be lifted by the sliding bars, and means for moving said bars, substantially as described.

2. The combination, in an electric cut-out and switch-box, of the insulated plates with the insulating-blocks arranged to slide thereon and carrying conductor-bars in engagement with said plates, a lever for moving said blocks, dynamo-circuit terminals arranged opposite the same, and a short-circuiting bar extending between the dynamo-circuit terminals and adapted to be lifted therefrom by said insulated blocks, substantially as described.

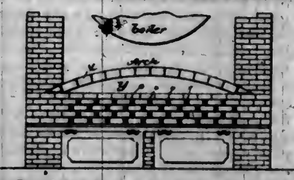
3. The combination, in an electric switch-box, of the grooved contact-terminal plates 7 and 8, with the insulating-blocks arranged thereon and carrying the sliding contact or bridge plates adapted to engage the parts 7 and 8, the cross-block extending between said insulating-blocks, a lever attached thereto for shifting said blocks, dynamo-circuit terminals insulated from one another and from the parts 7 and 8, and a spring-bar extending between the dynamo-circuit terminals and having jumper-feet to rest thereon, said jumper-feet having the convex under surfaces, substantially as set forth.



4. The combination, with the grooved terminal plates 7 and 8, of the insulating-blocks 10, the contact-plates 11, secured on said blocks and in constant contact with the parts 7 and 8, respectively, a lever arranged in connection with said blocks, dynamo-circuit terminals having grooved parts, the jumper-bar, guides therefor, the feet of said bar having convex lower surfaces, and a spring connection connected with said bar, substantially as described.

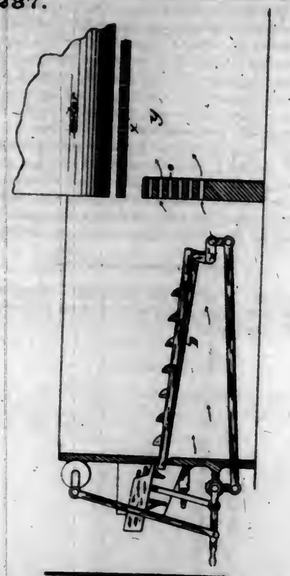
5. The combination, with the plates 7 and 8, of the insulating-blocks 10, carrying the conductor-plates 11, a block connecting the parts 10, the lever to engage said block, said insulating-blocks being longer than the bars 11, two pairs of dynamo-circuit terminals having the parts 16, the short-circuiting bars 17, springs connected therewith, vertical guides for said bar, the jumper-feet of said bars adapted to rest upon the dynamo-circuit terminals, and means for securing said lever, substantially as described.

6. The combination, with the containing-box, of the grooved plates 7 and 8, insulated from one another, the sliding contacts 11, the longer insulating-blocks 10, whereto they are secured, a cross-block connecting them, the pivoted lever, said cross-block provided with the stud to engage the same, a spring arranged between the two parts, dynamo-circuit terminals, and the bridging and spring bar 27, extending across the blocks and notched, as described, and a lug 30 on said lever to engage the same, substantially as described.



7. The combination, with the dynamo-circuit terminals, of the slidable contact-plates 11, the insulating-blocks having the wedge-like ends and being longer than said parts 11, the dynamo-circuit terminals grooved as described, the jumper-bar provided with the feet having the convex lower surfaces, the guide-staples, a spring connected with said bar, and said bar grooved to engage said staples, substantially as described.

488,286. SYSTEM OF DRAINAGE. JOSIAH NICHOLSON and FRANCIS H. NICHOLSON, Belvidere, N. C. Filed May 9, 1892. Serial No. 432,347. (No model.)



Claim.—The combination, with a submerged receptacle having inlet and outlet nipples at top and bottom upon opposite sides, of piping communicating with said nipples and extending therefrom in opposite directions in oppositely-inclined parallel planes, with the inlet end of one above the outlet ends of both, substantially as shown and described.

488,287. SMOKE-CONSUMING FURNACE. WILLIAM OBELSTROM, Cleveland, Ohio. Filed July 16, 1890. Serial No. 359,262. (No model.)

Claim.—In a boiler-furnace, the combination of the grate, the bridge-wall having perforations whereby the air passing beneath the grate may pass therethrough and into the air-chamber Y, and the perforated arch extending at a slight distance below the boiler longitudinally thereof and rearward from the bridge-wall, whereby the products of combustion mingling with the air in the chamber Y and igniting will be utilized to heat the boiler by passing through the perforations in the arch and consuming the smoke passing between the perforated arch and the bottom of the boiler, substantially as described.

488,237.

488,238. PEDAL FOR VELOCIPEDES. FREDERICK C. ROCKWELL, Hartford, Conn. Filed Oct. 1, 1891. Serial No. 407,431. (No model.)

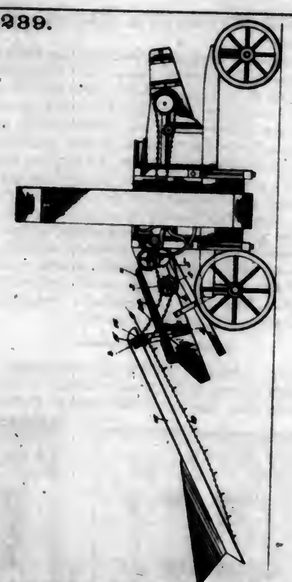
Claim.—1. In combination with the crank of a velocipede, a pedal having a tread of elastic material provided with a spindle-opening and an air-chamber with flexible walls, substantially as specified.

2. In combination with the crank of a velocipede, a pedal having a tread provided with an air-chamber and an outlet from the air-chamber, provided with a valve whereby the tread may be inflated, substantially as specified.

3. In combination with the crank of a velocipede, a pedal having a pair of treads supported upon hollow spindles and provided with air-chambers and valves attached to the hollow spindles, whereby the treads may be inflated, substantially as specified.

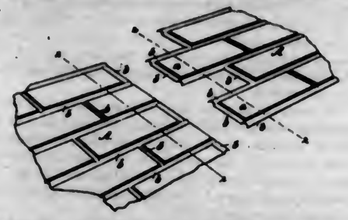
488,239. EXTENSION-FEED FOR CORN-SHELLERS. WILLIAM H. RUSS, Elmwood, Neb. Filed Feb. 10, 1892. Serial No. 421,045. (No model.)

Claim.—1. The combination, with the feeder and extension-feed of a corn-sheller, of a pair of intermediate standards removably connected at their lower ends to the feeder and at their upper ends to the extension-feed, substantially as specified.



2. The combination, with the feeder, of a pair of standards having bearings at their upper ends, the shaft located therein, the extension-feed having bearings receiving and supported on the shaft, the end-less carrier operated by the shaft, and means for communicating motion from the sheller to the shaft, substantially as specified.

3. The combination, with the feeder and extension-feed of a corn-sheller and the transverse feed-shaft of the extension-feed, of the opposite standards secured to the feeder, one of said standards being provided with a bearing-box and the other with a separable bearing-box, substantially as specified.



4. The combination, with the feeder having the flared side walls and the extension-feed of a corn-sheller, of a pair of standards connected at their upper ends to the extension-feed, recessed below the same to receive the flared walls of the feeder, and securing devices for the lower ends of the standards, substantially as specified.

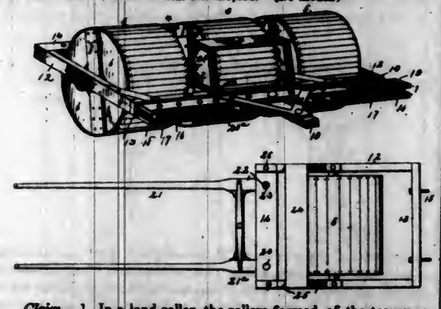
5. The combination, with the feeder, the upper edges of which are flared, the vertically-opposite pairs of bolts provided with heads at their inner ends and at their outer ends beyond the walls of the feeder with pairs of nuts, the pair of standards slotted at their lower ends to straddle the bolts and having their inner faces countersunk to receive the inner nuts, said standards being further provided with the transverse recesses for fitting the upper flared edges of the feeder, the closed bearing 11, mounted upon one standard, and the separable hinged bearing 12 upon the opposite standard and provided with the screw for locking the same, of the extension-feed 15, having the bearings 17, the transverse feed-shaft 16, mounted therein and in the bearings of the standards, the sprocket 18, and the chain 24 for driving the same, substantially as specified.

488,239.

488,240. METALLIC FACING FOR BUILDINGS. LOUGLEY L. SAGENDORPH, Philadelphia, Pa., assignor of one-half to Charles H. Harder, Philmont, N. Y. Filed Feb. 18, 1892. Serial No. 421,690. (No model.)

Claim.—1. A metallic facing-plate having at one end thereof the projecting portions *a*, the latter being adapted to overlap the adjacent plate at one end thereof, substantially as set forth.

2. A metallic facing-plate having longitudinal grooves and alternating cross-grooves, one end of said plate being cut away along the base of said latter grooves, leaving the projecting portions *a*, substantially as set forth.



3. A metallic facing-plate having longitudinal and alternating cross-grooves, each groove having centrally therein the convex head *b*, one end of said plate having the portions cut away along the base of said beads, the latter being adapted to overlap the corresponding beads on the adjacent sheet or plate, substantially as set forth.

488,241. NUT-LOCK. ALEXANDER STONEDALE, Wolcott, Iowa. Filed July 30, 1892. Serial No. 441,268. (No model.)

Claim.—In a nut-lock, the combination, with a bolt and nut, of the longitudinal groove in the thread of said bolt, the circular washer provided with a tongue to engage said groove, the depression in the circumference of the aperture in said washer, the channeled portion in the periphery of said washer, the circular locking-plate provided with the circular aperture, the projecting lug upon said plate adjacent to said aperture, the horizontal extension in the periphery of said plate, and a portion of said plate bent outward against the plane of said nut, substantially as described.

488,242. LAND-ROLLER. BENJAMIN A. THOMAS, Bardwell, Ky. Filed Mar. 17, 1892. Serial No. 425,256. (No model.)

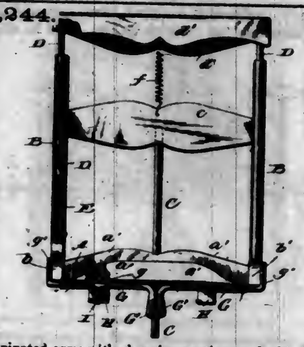
Claim.—1. In a land-roller, the rollers formed of the transverse staves 5 and the ends or heads consisting each of the four segments 6, all arranged in the same vertical plane with their beveled ends in contact, and the cross-pieces 7 8, crossing each other at right angles and arranged one on the inner and one on the outer side of the four segments, with their ends bolted to and connecting the ends of the segments, substantially as set forth.

2. In a land-roller, the combination of the forward transverse frame formed of the two parallel bars 1, having the open space between them and formed with the registering openings 18, the central rigid frame secured between the parallel bars and having a roller mounted in it, the two side frames having the rollers mounted in them and having the hooks 15 in their front cross-bars, the adjusting-bars 17, formed with the openings 17ª and having the projecting staples 16, and the retaining and securing screw-bolts 20, substantially as set forth.

3. The combination of the two parallel transverse bars 1 1, having the inner end of the tongue secured between them and formed with the series of openings 18, the central rigid frame 2, having a roller mounted in it and having its forward end removably secured between the parallel bars 1 by the bolts 20ª, the two side frames having the rollers mounted in them and having the hooks 15 in their front cross-bars, the adjusting-bars 17, formed with the openings 17ª and having the projecting staples 16, and the retaining and securing screw-bolts 20, substantially as set forth.

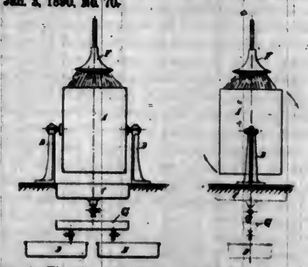
4. The combination, in a land-roller, of the transverse forward frame, the central rigid frame having a roller mounted in it, the two outer frames connected by the hooks at their ends, with the adjusting-bars 17, having the rollers journaled in them and having the open frames 14 provided with the bolts 23 at their rear ends and adapted to receive the ends of a pair of shafts, substantially as set forth.

488,243. METALLIC COVERING-PLATE. RUDOLF G. WESTPHALEN, Vienna, Austria-Hungary. Filed June 9, 1891. Serial No. 396,096. (No specimens.)



Claim.—1. The herein-described mode of manufacturing water and fire proof materials made of non-conductive fibers, which consists in combining with the fibrous substances oxide of zinc, chloride of zinc, soap, alum, soda, and sugar of lead in or about in the proportions set forth, and sufficient water to form a composition adapted to be molded or otherwise formed into slabs or sheets, converting the material into slabs or sheets, applying thereto a conductor of electricity, and electroplating the said slabs or sheets, for the purpose set forth.

2. As an article of manufacture, a water and fire proof slab or sheet composed of mineral fibers, oxide of zinc, chloride of zinc, soap, alum, and sugar of lead, and an outer coating of metal, as set forth.



488,244. MUSIC-RACK. IGNATIUS W. LAVADIE, Humphrey, Nebr. Filed May 23, 1892. Serial No. 434,736. (No model.)

Claim.—The book-holder described, consisting of the base portion with flanges and tubular rods, the movable portion with flanges and rods movable in the tubular rods, the spring connecting the two portions, the cross-bar connecting the tubular rods, the rod connected to the base portion and to said cross-bar, the loops on the base portion, the pivoted arms with clamping portions and with finger-pieces, and the springs around the pivots of the said arms in the loops and bearing on the arms, substantially as and for the purpose specified.

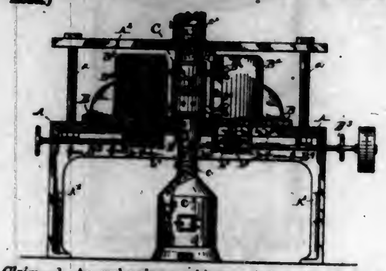
488,244.

488,245. PROCESS OF SEPARATING TIN FROM OTHER METALS. IVAR A. F. BARS and MARIE C. A. RUFFIN, Paris, France. Filed July 26, 1890. Serial No. 360,043. (No specimens.) Patented in France Dec. 30, 1889, No. 202,065; in Belgium Jan. 2, 1890, No. 89,062, and in England Jan. 2, 1890, No. 70.

Claim.—1. The described process of separating tin from tinned iron by subjecting the latter to the action of a stream of hot alkaline lye and at the same time inducing by natural draft a current of air through the mass, as and for the purpose described.

2. The process of separating tin from a mass of stanniferous metal by subjecting the mass to a spray of hot lye, the mass being supported in such manner that the action of the hot spray induces upwardly a natural draft of air, substantially as described.

3. The process of separating tin from a mass of stanniferous metal by subjecting the latter to the action of hot lye, the mass being supported in such manner that a natural draft of air can circulate upwardly through the same, and from time to time inverting the charge, so as to reverse the direction of the air-current, substantially as described.



4. In apparatus for separating tin from iron or other metals, the combination of a vessel having perforated heads, so that air and liquid can freely circulate through the same, said vessel being mounted on trunnions, so that its position can be reversed at will, a hose or sprinkler for showering lye on the upper end of the vessel, and a receptacle for receiving it beneath said vessel, substantially as described.

488,246. SLIPPER. JAMES D. CHANDLER, Pittsburg, Pa. Filed Feb. 10, 1892. Serial No. 421,075. (No model.)

Claim.—The improved canvas slipper herein described and shown, consisting of a sole, an upper secured to the sole and terminating a short distance from the front end of the same, a protective toe-piece uniting the ends of the upper and the sole, and a reinforcing-strip secured to the rear end of the upper and extending slightly above the same.

488,247. EMBOSSING-MACHINE. WILLIAM GRAHAM and THOMAS BIRCH, Indianapolis, Ind. Filed Oct. 20, 1891. Serial No. 409,205. (No model.)

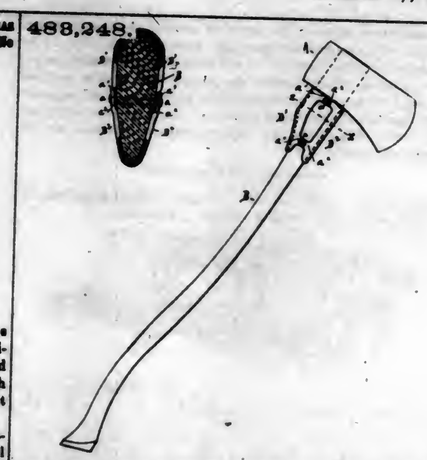
Claim.—1. An embossing-machine consisting of a suitable frame and driving mechanism, an embossing-roll mounted in a vertical position and connected with a heating apparatus, and a feed roll mounted on each side of said embossing-roll, whereby lumber may be fed through said machine in both directions at the same time, substantially as set forth.

2. In an embossing-machine, the combination of the frame, suitable feeding mechanism, and an embossing-roll, said embossing-roll being arranged in a vertical position and connected at its lower end with the heating apparatus and at its upper end with an exhaust-flue, substantially as set forth.

3. In an embossing-machine, the combination of the main frame, the adjustable frames carrying the feed-rolls, the driving mechanism for said feed-rolls, and the embossing-roll journaled between said feed-rolls and formed hollow, connected at one end with the heating apparatus and at its other end with an exhaust-flue, substantially as set forth.

4. In an embossing-machine, the combination of the framework, the embossing-roll journaled in a vertical position centrally therein, said embossing-roll being formed hollow and connected at its lower end with a heating apparatus and at its upper end with a flue, a feed-roll mounted on each side of said embossing-roll in an adjustable framework, means for adjusting said frames carrying said feed-rolls toward or from said embossing-roll, each of said feeding-rolls being provided with gear-wheels on one of its journals, and a driving-shaft provided with gearing arranged to mesh with the gear-wheels on said feed-rolls, substantially as set forth.

5. The combination, in an embossing-machine, of the frame A, the frames B, mounted thereon, means for adjusting said frames transversely thereof, the adjustable supports B^3 and B^4, the adjustable rolls A^2 for supporting the ends of the lumber, and the driving-shaft provided with the worm-gears arranged to engage with the gear-wheels on the lower journal of each of said feed-rolls B^2, said worm-gears being secured on said shaft by means of splines, whereby they are adapted to slide thereon when the frames B are adjusted, all substantially as shown and specified.



6. In an embossing-machine, the combination of the frame, the embossing-roll vertically arranged and formed hollow and connected with a heating apparatus, a feed-roll journaled in suitable bearings on each side of said embossing-roll, a gear-wheel being provided on the end of one of the journals of each, a driving-shaft, and worm-gears mounted on said driving-shaft, one of which meshes with each of said gear-wheels on the journals of the feed-rolls, whereby said feed-rolls are driven and lumber may be fed through against the opposite sides of the embossing-roll, substantially as set forth.

7. In an embossing-machine, the combination of the frame, the embossing-roll, the heating apparatus connected with said embossing-roll, the feed-rolls journaled in suitable bearings in adjustable frames on each side of said embossing-roll, means for adjusting said frames, and the driving-shaft provided with gears which mesh with gears on the journals of said feed-rolls, said gears being mounted on said shaft by means of splines, whereby they are adapted to slide as said frames are adjusted, substantially as set forth.

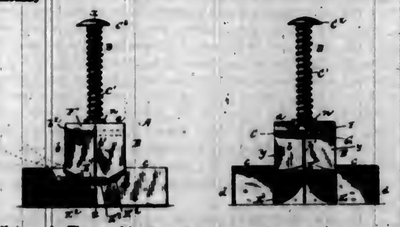
488,248. ATTACHMENT FOR AX-HELVES. WILLIAM DUNLOP, Hopkins, Minn. Filed May 23, 1891. Serial No. 393,674. (No model.)

Claim.—1. In an ax-helve guard, a shield D^2, adapted to inclose the lower surface and sides of the ax-helve next the ax-head and provided with lugs a^3, in combination with a guard or shield D', adapted to inclose the upper portion and sides of the ax-helve and provided with lugs a', corresponding to the lugs a^3, and rivets a, adapted to pass through both of said sets of lugs and also through the ax-helve, substantially as and for the purpose set forth.

2. In an ax-helve guard, a shield D^2, adapted to inclose the lower surface and sides of the ax-helve next the ax-head and provided with lugs of about one-half the thickness of the body of the shield, in combination with a guard or shield D', inclosing the upper portion of the ax-helve and with corresponding reduced lugs, and rivets adapted to pass through both of said sets of lugs and also through the axe-helve, whereby the lugs and rivets offer no obstruction to the action of the ax, substantially as and for the purpose set forth.

488,249. MACHINE FOR GRINDING. AARON FRYER, Bath, N. Y. Filed Oct. 10, 1890. Serial No. 367,766. (No model.)

Claim.—1. The combination, with a revolving cylinder having the primary teeth *a a*, running in rows in direction of the line of rotation of the cylinder and alternating with the parallel rows of the secondary teeth *c c* described, of a concave provided with the checking-teeth *m m*, arranged in vertical rows, which are opposite the rows of the said secondary teeth *c c* of said cylinder, and alternating vertical rows of the short teeth *n n*, arranged so as to be opposite the rows of the primary teeth *a a* of the cylinder, and the series of feeding-teeth *e* above the plane of the teeth *m* and *n*, inclined forwardly and downwardly and projected between the rows of primary teeth *a a* of the cylinder and directly opposite the secondary teeth of the same, substantially as and for the purposes set forth.



2. The combination, with a concave having the long checking-teeth *m*, arranged in vertical rows, and the short teeth *n*, in similar rows and alternating with those of teeth *m*, of a coacting cylinder of uniform diameter and having the primary teeth *a a*, arranged in rows parallel with the line of rotation of said cylinder, and the secondary teeth *c*, arranged in rows alternating with those of teeth *a*, teeth *a a* of the cylinder being opposite teeth *n n* of the concave and teeth *c c* opposite teeth *m m*, and a hopper which is located relatively forward of a line drawn vertically through the axis of the cylinder and having its end pieces *f* extended downwardly and seated on the annular seats *g*, provided in the peripheries of the head ends of the cylinder, substantially as and for the purposes set forth.

3. The combination, with a cylinder which is of uniform diameter and having primary teeth *a a* in a series of rows arranged parallel with the line of rotation of the cylinder and the series of secondary teeth *c c*, arranged in rows alternating with those of teeth *a a*, of the adjustable concave provided with the series of checking-teeth *m m*, arranged in vertical rows opposite the rows of the said secondary teeth, and with the series of short teeth *n n* in rows alternating with those of teeth *m m* and opposite to the rows of teeth *a a*, and a hopper provided with the notched piece *f'* and connected with said concave and in situation forward of a vertical line drawn through the axis of said cylinder, plate B, secured to the said hopper, flange D, connected with the said concave and provided with slots, and the set-bolts *D'*, substantially as and for the purposes set forth.

4. The combination, with the revolving cylinder B, provided with teeth *a a* and *c c*, above described, of a concave provided with coacting teeth *m m* and *n n* and *e e* and hinged to the frame, so as to be turned at will up toward said cylinder or back from the same, and a hopper which is so connected with said concave as to be moved with the same in either direction, substantially as and for the purposes set forth.

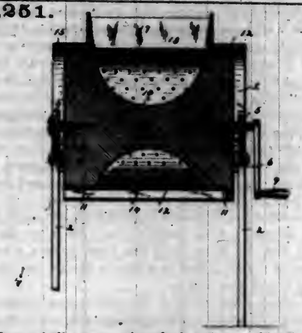
5. The combination, with the revolving cylinder B, provided with teeth *a a* and *c c*, above described, and a concave provided with coacting teeth, of the guard-piece G, hinged to the frame and arranged over the rear upper quarter of the said cylinder and extending to the rear side of the hopper, substantially as and for the purposes set forth.

488,250. MACHINE FOR AFFIXING STAMPS. WILLIAM M. GRAY, Brooklyn, N. Y. Filed Feb. 1, 1890. Serial No. 338,883. (No model.)

Claim.—1. The combination of a frame having guideways on opposite sides thereof, a presser mounted in said guideways and having a convex face, segmental pads normally in and pivoted adjacent to the path of said presser and provided with flat faces, and springs for holding the presser and pads in their normal positions, substantially as described.

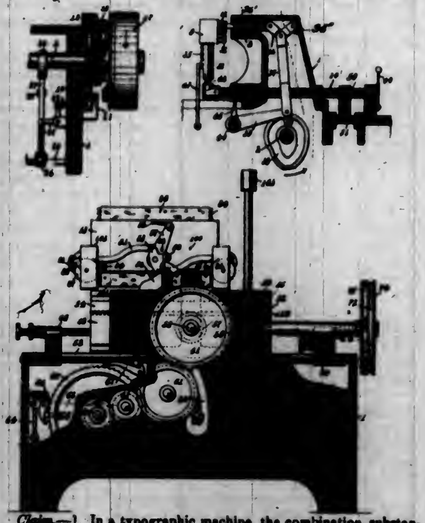
2. The combination of a frame made from a single piece of sheet metal slitted and bent to form the ends, the sides, and the top, and provided with guideways in its sides and an opening in its top, a presser mounted in said guideways and having a stem extending through said opening and provided with a handle, a spring bearing against said handle, pads pivoted in the frame and normally in the path of the presser, and springs for holding the pads in their normal positions, substantially as described.

3. The combination of a frame having guides on each of two sides and an inwardly-extending cutting-edge on each of the two alternate sides, a presser mounted in said guides and having a yielding convex face, and having, also, a cutting-edge on each of two sides co-operating with one of the cutting-edges of the frame, and movable pads with flat faces normally situated in the path of the presser, substantially as described.



4. The combination of a frame, a presser mounted in guideways in said frame, a moistening-pad having water-tight hinges normally in the path of the presser, a water-reservoir carried by the frame and provided with a depending partition situated close to the wall nearest the pad, and a wick extending from the reservoir and constituting a continuation of the pad, substantially as described.

488,251. POTATO-GRINDER. JOHN B. HARTMAN, Davenport, Iowa. Filed Mar. 31, 1892. Serial No. 427,262. (No model.)



Claim.—1. In a grinding or grating device, as set forth, the combination of an inner cylinder or drum of hour-glass shape to reduce the central portion thereof and provide enlarged heads at opposite ends and a grating or grinding cylinder removably fitted to the aforesaid cylinder or drum and bearing on the enlarged heads only thereof and adapted to be rotated therewith, said parts being covered by a semicylindrical removable cap with a feed-opening centrally located in the top thereof, substantially as described.

488,251.

2. In a grinding or grating device, the combination of an inner drum or cylinder having slots therein and an outer grating or grinding cylinder having a flange adapted to engage said slots to removably fasten the parts together, substantially as described.

488,252. TYPOGRAPHIC MACHINE. THOMAS T. HEATH, Loveland, and ALVIN H. VERDIN, Glendale, Ohio; said Verdin assignor to said Heath. Filed July 6, 1891. Serial No. 398,601. (No model.)

Claim.—1. In a typographic machine, the combination, substantially as set forth, of a frame, a fixed plunger-guide and abutment supported by said frame in a line of collimation, a reciprocating plunger in said guide, a movable case of parallel types disposed in front of the plunger, a pad-carriage disposed in front of the type-case, an anvil disposed in said line of collimation in front of and adjustable to and from said pad-carriage and abutment, forcing means acting between the plunger and abutment, and a finger-key and connections for each type.

2. In a typographic machine, the combination, substantially as set forth, of a frame, a fixed plunger-guide and abutment supported by said frame in a line of collimation, a reciprocating plunger in said guide, forcing means acting between the plunger and abutment, a movable case of parallel types disposed in front of the plunger, a rail supported by the frame in front of the type-case and below the line of collimation, a pad-carriage mounted on the rail and projecting above the same, a fixed anvil disposed in the line of collimation and projecting over the rail and through the pad-carriage, and a finger-key and connections for each type.

3. In a typographic machine, the combination, substantially as set forth, of a frame, two parts projecting upwardly and rigidly therefrom and carrying in a line of collimation one an endwise-adjustable anvil and the other an abutment, a pad-carriage, a type-case of endwise-movable types, a plunger disposed in the space between said anvil and abutment, forcing means, as a toggle, between the plunger and abutment, and a finger-key and connections for each type.

4. In a typographic machine, the combination, substantially as set forth, with a type-case containing types arranged to be dealt with singly as brought into a line of collimation by the movement of the type-case, of a finger-key pertinent to each type, a part moving up and down by power a constant distance at each impulse of the machine to provide for lifting the type-case, a case-lifter, dogs for causing the motion of said power-moved part to be imparted to the case-lifter in degree according to the dog brought into action, connections from the dogs to the appropriate finger-keys, whereby a finger-key brings an appropriate dog into action, a driving-shaft, a cam thereon, and connections between said cam and the dogs, whereby at each rotation of the cam all dogs are restored to normal idle position.

5. The combination, substantially as set forth, of a shaft, a toothed pulley loose thereon, a fixed notched rim, a driver on the shaft, a sliding pin to push the driver from the notch, a lever, a connection from the lever to the pin, a cam to withdraw the pin, and connections from the cam to said lever and pin.

6. In a typographic machine, the combination, substantially as set forth, with a pad-holder, types, type-impressing mechanism, a driving-shaft, unit-feed devices to positively advance the pad-holder a unit of distance at each rotation of said shaft regardless of the type requirement, and a finger-key for each type, of a feed-adding mechanism for advancing the pad-holder more than a unit of distance and connections from some but not all of said finger-keys to said feed-adding mechanism.

7. In a typographic machine, the combination, substantially as set forth, with a pad-holder, types, type-impressing mechanism, a driving-shaft, and a finger-key for each type, of a pulley, a stop-clutch to turn the shaft and arrest it at the end of one rotation, a part to be moved to engage the clutch with the shaft, and connections from all the finger-keys to said starting part.

8. In a typographic machine, the combination, substantially as set forth, with a pad-holder, a movable type-case, a type-impressing plunger, pad-feeding devices, type-case-moving devices, and a driving-shaft to actuate the type-movements and pad-feeds, of dogs to admeasure the degree of pad-feed to be produced by said driving-shaft, dogs to admeasure the type-case movement, a part to be moved to start the driving-shaft, and finger-keys connected with said dogs and starting part.

9. In a typographic machine, the combination, substantially as set forth, of a pad-holder, a movable type-case, endwise-movable types in the type-case to be brought singly to a line of collimation by the movement of the type-case, a fixed anvil engaging the back of the pad, a plunger reciprocating in the line of collimation and adapted to impress a type in said line to a pad on the pad-holder, a driving-shaft arranged to reciprocate the plunger a definite distance at each rotation, and a finger-key for each type for starting said shaft.

10. In a typographic machine, the combination, substantially as set forth, with a pad-holder, a type-case, types, a plunger, and a finger-key for each type, of a driving-shaft, a cam thereon, a pressure-finger near the impression-point of the pad-holder, and connections from said cam to said plunger and pressure-finger.

11. In a typographic machine, the combination, substantially as set forth, with a pad-holder, a movable type-case, types, type-impressing mechanism, and a finger-key for each type, of a power-driven driving-shaft, a stop-clutch, a part to be moved to start the driving-shaft, a unit-space finger-key, and connections from said unit-space key to said starting part.

12. In a typographic machine, the combination, substantially as set forth, with a pad-holder, a movable type-case, types, type-impressing mechanism, and a finger-key for each type, of a driving-shaft, a stop-clutch, a part to be moved to start the driving-shaft, connections from said finger-keys to said starting part, a cam on the driving-shaft, having a low place to permit the depression of any key and an immediately-following swell to lift all finger-keys, and connections from said cam to all the finger-keys.

13. In a typographic machine, the combination, substantially as set forth, with a pad-holder, types arranged to be dealt with singly, type-impressing mechanism, a power-driven actuating-shaft, and a finger-key for each type, of a constant-stroke feed part moved by said actuating-shaft at each impulse of the machine to provide for feeding the pad-holder, a variable-stroke feed part moving in accordance with the degree of pad-feed, dogs for causing the motion of said constant-stroke part to be imparted to said variable-stroke part in degree according to the dog brought into action, connections from the dogs to appropriate type-keys, a space-key for each dog, and a connection from each space-key to a dog.

14. The combination, substantially as set forth, of a shaft, a toothed pulley loose thereon, a driver secured to the shaft by a transverse pivot and adapted to engage the pulley, and means for rocking the driver on its pivot into and out of engagement with the pulley.

15. The combination, substantially as set forth, of a shaft, a toothed pulley loose thereon, a fixed notched rim, a driver secured to the shaft by a transverse pivot and arranged to engage the pulley and be so held by the rim and released at the notch, and a movable piece at the notch to push the driver out of the notch.

16. In a typographic machine, the combination, substantially as set forth, with a pad-holder and a plunger arranged to reciprocate in a line of collimation, of a type-case mounted on an axis of oscillation, endwise movable types mounted parallel in said type-case and disposed in an arc struck from said axis, a finger-key for each type, two parts, as sliding blocks, moved by power simultaneously in respectively opposite directions, and connections between said blocks and type-case for transmitting motion to said type-case from said blocks alternatively.

17. In a typographic machine, the combination, substantially as set forth, with a pad-holder and a plunger arranged to reciprocate in a line of collimation, of a type-case mounted on an axis of oscillation, endwise-movable types mounted parallel in said type-case and disposed in an arc struck from said axis with a radius equal to the distance from said axis to said line of collimation, a finger-key for each type, two parts, as sliding blocks, moved by power simultaneously in respectively opposite directions, and connections between said blocks and type-case for transmitting motion to said type-case from said blocks alternatively.

18. In a typographic machine, the combination, substantially as set forth, with a pad-holder and a plunger arranged to reciprocate in a line of collimation and provided with a clutch-hook, of a type-case mounted on an axis of oscillation and arranged for radial adjustment with reference thereto, endwise-movable types mounted in several segmental rows in said type-case and having notched heels projecting toward and beyond the plane of the end of said plunger, and mechanism for normally holding said type-case in such angular position that no type will be engaged by the plunger, whereby the type-case may be shifted radially without interference from the overlapping plunger and type-heels.

19. In a typographic machine, the combination, substantially as set forth, with a pad-holder and a plunger arranged to reciprocate in a line of collimation, of a type-case mounted on an axis of oscillation and arranged to swing either way from the normal, endwise-movable types mounted parallel in said type-case and disposed in an arc located at each side of the normal radial plane of the line of collimation and struck from said axis, a finger-key for each type, means for bringing the types selectively to the line of collimation, and a look to secure the type-case rigidly in central position instantly upon reaching the same.

20. In a typographic machine, the combination, substantially as set forth, with a pad-holder and a plunger arranged to reciprocate in a line of collimation, of a type-case mounted on an axis of oscillation in fixed location and arranged for radial movement to and fro from said axis, endwise-movable types mounted parallel in said type-case and disposed in several arcs, a finger-key for each type, and means for bringing said types selectively to the line of collimation.

21. In a typographic machine, the combination, substantially as set forth, with a pad-holder and a plunger arranged to reciprocate in a line of collimation, of a type-case mounted on an axis of oscillation in fixed location and arranged for radial movement to and fro from said axis, endwise-movable types mounted parallel in said type-case and disposed in several arcs struck from said axis with a radius equal to the distance from said axis to the line of collimation, a finger-key for each type, and means for bringing said types selectively to the line of collimation.

22. In a typographic machine, the combination, substantially as set forth, with a pad-holder and a plunger arranged to reciprocate in a line of collimation, of a type-case mounted on an axis of oscillation and arranged for radial movement to and fro from said axis, endwise-movable types mounted parallel in said type-case and disposed in several arcs and in straight non-radial rows transverse to said arcs, a finger-key for each type, and means for bringing said types selectively to the line of collimation.

23. In a typographic machine, the combination, substantially as set forth, with a pad-holder and a plunger arranged to reciprocate in a line of collimation, of a type-case mounted on an axis of oscillation in fixed location and arranged for radial movement to and fro from said axis, endwise-movable types mounted parallel in said type-case and disposed at equal distances on several arcs, a finger-key for each type, and means for bringing said types selectively to said line of collimation.

24. In a typographic machine, the combination, substantially as set forth, with a pad-holder and a plunger arranged to reciprocate in a line of collimation, of a type-case mounted on an axis of oscillation in fixed location and arranged for radial movement to and from said axis, endwise-movable types mounted parallel in said type-case and disposed in several arcs located at each side of the normal radial plane of the line of collimation, and a finger-key for each type, and means for bringing said types selectively to the line of collimation.

25. In a typographic machine, the combination, substantially as set forth, with a pad-holder, a movable type-case, types movable endwise in the type-case, and type-impressing mechanism, of a rigid face-plate disposed between the pad-holder and type-case and engaging the front of the type-case.

26. In a typographic machine, the combination, substantially as set forth, of a movable type-case carrying a row of endwise-movable types, a plate having an eye for the passage of a type, and a rigid guide on said plate engaged by the type-case and serving to guide the row of types accurately past said eye.

27. In a typographic machine, the combination, substantially as set forth, with a pad-holder, a movable type-case, types movable endwise in the type-case, and type-impressing mechanism, of a rigid face-plate disposed between the pad-holder and type-case and having guide-ribs and teeth on the type-case to engage said ribs.

28. In a typographic machine, the combination, substantially as set forth, with a pad-holder, a movable type-case, types, and type-impressing mechanism, of a face-plate disposed between the pad-holder and type-case and having interrupted guide-ribs and teeth on the type-case at the interruption of said ribs and adapted to engage said ribs.

29. In a typographic machine, the combination, substantially as set forth, with a pad-holder, a movable type-case, types, and type-impressing mechanism, of a shaft of oscillation and a radial shank and socket uniting the type-case adjustably to said shaft.

30. In a typographic machine, the combination, substantially as set forth, with a pad-holder, a movable type-case, types, and type-impressing mechanism, of a shaft of oscillation and a radial shank and socket uniting the type-case adjustably and removably to said shaft.

31. In a typographic machine, the combination, substantially as set forth, of a type-case mounted for oscillation on an axis and arranged for radial movement with reference to said axis and a type-case lifter reciprocating in guides in a line radial to said axis and connected with the type-case by teeth having sliding engagement.

32. In a typographic machine, the combination, substantially as set forth, with a pad-holder, a movable type-case, types, and type-impressing mechanism, of a face-plate disposed between the pad-holder and type-case and having guide-ribs, a toothed type-case lifter, and teeth on the type-case normally engaged by said lifter and adapted to engage said guide-ribs.

33. In a typographic machine, the combination, substantially as set forth, with a type-case containing types arranged to be dealt with singly as brought into a line of collimation by the movement of the type-case, of a finger-key pertinent to each type, an arm moving up and down by power a constant distance at each impulse of the machine to provide for lifting the type-case, a case-lifter, dogs for causing the motion of said power-moved arm to be imparted to the case-lifter in degree according to the dog brought into action, and connections from the dogs to the appropriate finger-keys whereby a finger-key brings an appropriate dog into action.

34. In a typographic machine, the combination, substantially as set forth, with a type-case containing types arranged to be dealt with singly as brought into a line of collimation by the movement of the type-case, of a finger-key pertinent to each type, a driving-shaft, a lift-cam thereon, a moving arm operated through constant distance by said cam, a case-lifter, dogs for causing the motion of the cam-moved arm to be imparted to the case-lifter in degree according to the dog brought into action, and connections between the dogs and finger-keys whereby a finger-key brings an appropriate dog into action.

35. In a typographic machine, the combination, substantially as set forth, with a type-case containing types arranged to be dealt with singly as brought into a line of collimation by the movement of the type-case, of a finger-key pertinent to each type, a driving-shaft, a lift-cam thereon, a moving arm operated through constant distance by said cam, a case-lifter, dogs for causing the motion of said cam-moved arm to be imparted to the case-lifter in degree according to the dog brought into action, a dog-operating cam for each dog, and connections between said cams and finger-keys whereby a finger-key brings an appropriate dog into action.

36. In a typographic machine, the combination, substantially as set forth, with a type-case containing types arranged to be dealt with singly as brought into a line of collimation by the movement of the type-case, of a finger-key pertinent to each type, an arm moving up and down by power a constant distance at each impulse of the machine to provide for lifting the type-case, a case-lifter, dogs for causing the motion of said power-moved arm to be imparted to the case-lifter in degree according to the dog brought into action, a lift-blade along each rank of finger-keys pertinent to a given lift of type-case and engaged by the keys of that rank, and connections from the blades to the dog whereby a finger-key brings into action a dog appropriate to the rank of the key.

37. In a typographic machine, the combination, substantially as set forth, with a type-case containing types arranged to be dealt with singly as brought into a line of collimation by the movement of the type-case, of a finger-key pertinent to each type, an arm moving up and down by power a constant distance at each impulse of the machine to provide for lifting the type-case, a case-lifter, dogs for causing the motion of said power-moved arm to be imparted to the case-lifter in degree according to the dog brought into action, a tumbling-shaft connected with each dog, and connections from the keys to the tumbling-shafts whereby a finger-key rocks an appropriate tumbling-shaft and brings an appropriate dog into action.

38. In a typographic machine, the combination, substantially as set forth, with a type-case containing types arranged to be dealt with singly as brought into a line of collimation by the movement of the type-case, of an arm moving up and down by power a constant distance at each impulse of the machine to provide for lifting the type-case, a case-lifter, dogs for causing the motion of said power-moved arm to be imparted to the case-lifter in degree according to the dog brought into action, a rank of finger-keys for each degree of type-case lift, an additional rank of keys, and connections between said dogs and first-mentioned rank of keys whereby keys in those ranks bring appropriate dogs into action.

39. In a typographic machine, the combination, substantially as set forth, with a pad-holder, a swinging type-case, type-impressing mechanism, and a finger-key for each type, of a part, as a sliding rack, moving variably in correspondence with the type-case as it swings, a power-moved part, as a sliding rack, having a constant stroke sufficient for the maximum swing of the type-case, dogs arranged to connect said two parts and cause the motion of the power-moved part to be imparted to the variably-moving part in degree according to the dog brought into action, and connections between said finger-keys and dogs whereby a finger-key brings into action an appropriate dog.

40. In a typographic machine, the combination, substantially as set forth, with a pad-holder, a swinging type-case, type-impressing mechanism, and a finger-key for each type, of a part, as a sliding rack, moving variably in correspondence with the type-case as it swings, a power-moved part, as a sliding rack, having a constant stroke sufficient for the maximum swing of the type-case, dogs arranged to connect said two parts and cause the motion of the power-moved part to be imparted to the variably-moving part in degree according to the dog brought into action, connections between said keys and dogs whereby a finger-key may move an appropriate dog into action while the power-moved part is at rest, and an obstruction to prevent the displacement of the dogs while said power-moved part is in motion.

41. In a typographic machine, the combination, substantially as set forth, with a pad-holder, a swinging type-case, and type-impressing mechanism, of a part, as a sliding rack, moving variably in correspondence with the type-case as it swings, a power-moved part, as a sliding rack, having a constant stroke sufficient for the maximum swing of the type-case, dogs arranged to connect said two parts and cause the motion of the power-moved part to be imparted to the variably-moving part in degree according to the dog brought into action, a row of finger-keys pertinent to each degree of type-case swing, and connections from each row of keys to a dog whereby any key in a given row will bring into action a dog appropriate to that row.

42. In a typographic machine, the combination, substantially as set forth, with a pad-holder, a swinging type-case, type-impressing mechanism, and a finger-key for each type, of a part, as a sliding rack, moving variably in correspondence with the type-case as it swings, two power-moved parts, as sliding blocks, having constant stroke in opposite directions, dogs arranged to connect said power-moved parts with the variably-moved part and cause motion of the power-moved part to be imparted to the variably-moved part in direction and degree according to the dog brought into action, and connections between the finger-keys and dogs whereby a key brings into action an appropriate dog.

43. In a typographic machine, the combination, substantially as set forth, with a pad-holder, a swinging type-case, type-impressing mechanism, and a finger-key for each type, of a part, as a sliding rack, moving variably in correspondence with the type-case as it swings, a power-moved part, as a sliding block, having a constant stroke sufficient for the maximum swing of the type-case, dogs arranged to connect said two parts and cause the motion of the power-moved part to be imparted to the variably-moving part in degree according to the dog brought into action, a swing-blade engaged by each group of keys calling for the same degree and direction of type-case swing, and a connection from each blade to a dog appropriate to its degree and direction of type-case swing.

44. In a typographic machine, the combination, substantially as set forth, with a pad-holder, a swinging type-case, type-impressing mechanism, a finger-key for each type, a bar reciprocating in correspondence with the swing of the type-case, and a block moved by power a constant distance at each impulse of the machine, of movable pins in said block, a shoulder on said bar for each block-pin and of peculiar appropriate distance from each block-pin, and connections between keys and pins whereby a key will bring an appropriate block-pin in position to engage its bar-shoulder.

45. In a typographic machine, the combination, substantially as set forth, with a pad-holder, a swinging type-case, type-impressing mechanism, a finger-key for each type, a bar reciprocating in correspondence with the swing of the type-case, and a block moved by power a constant distance at each impulse of the machine, of a plate having

buttonholes under said block, movable pins in the block and presenting heads below said plate which can rise at one point only in the length of the buttonholes, and connections from said keys to the pins whereby a key may push the head of an appropriate pin through a buttonhole and cause each pin to engage said bar.

46. In a typographic machine, the combination, substantially as set forth, with a pad-holder, a swinging type-case, type-impressing mechanism, a finger-key for each type, a bar reciprocating in correspondence with the swing of the type-case, and a driving-shaft, of a swing-cam on said shaft, a block moved with a constant stroke by said cam, dogs arranged to impart the block motion to said bar in degree according to the dog in action, and connections between said keys and dogs.

47. In a typographic machine, the combination, substantially as set forth, with a pad-holder, a swinging type-case, type-impressing mechanism, and a finger-key for each type, of a part, as a sliding rack, moving variably in correspondence with the type-case as it swings, a power-moved part, as a sliding block, having a constant stroke sufficient for the maximum swing of the type-case, dogs arranged to connect said two parts and cause the motion of the power-moved part to be imparted to the variably-moved part in degree according to the dog brought into action, a separate swing-blade engaged by each lot of finger-keys calling for the same swing motion of the type-case, and levers connecting said blades with their appropriate dogs.

48. In a typographic machine, the combination, substantially as set forth, with a pad-holder, a swinging type-case, type-impressing mechanism, and a finger-key for each type, of a part, as a sliding rack, moving variably in correspondence with the type-case as it swings, a power-moved part, as a sliding block, having a constant stroke sufficient for the maximum swing of the type-case, dogs arranged to connect said two parts and cause the motion of the power-moved part to be imparted to the variably-moved part in degree according to the dog brought into action, springs tending to hold the type-case in normal position, and connections between the finger-keys and dogs.

49. In a typographic machine, the combination, substantially as set forth, with a pad-holder, a swinging type-case, type-impressing mechanism, and a finger-key for each type, of a part, as a sliding rack, moving variably in correspondence with the type-case as it swings, a power-moved part, as a sliding block, having a constant stroke sufficient for the maximum swing of the type-case, dogs arranged to connect said two parts and cause the motion of the power-moved part to be imparted to the variably-moved part in degree according to the dog brought into action, a driving-shaft, a stop-clutch, a starting-bar to move and cause the machine to make an impulse, and connections between the finger-keys and dogs and starting-bar whereby a finger-key brings an appropriate dog into action and moves the starting-bar.

50. In a typographic machine, the combination, substantially as set forth, with a pad-holder, a swinging type-case, type-impressing mechanism, and a finger-key for each type, of a part, as a sliding rack, moving variably in correspondence with the type-case as it swings, a power-moved part, as a sliding block, having a constant stroke sufficient for the maximum swing of the type-case, dogs arranged to connect said two parts and cause the motion of the power-moved part to be imparted to the variably-moved part in degree according to the dog brought into action, a driving-shaft, a stop-clutch, a starting-bar to move and cause the machine to make an impulse, a clutch-cam on the driving-shaft, and connections between the finger-key and dogs and starting-bar and cam whereby a finger-key brings an appropriate dog into action and moves the starting-bar and whereby the impulse of the machine restores the starting-bar and finger-key.

51. In a typographic machine, the combination, substantially as set forth, with a pad-holder, a swinging type-case, types, type-impressing mechanism, and a finger-key for each type, of a pair of power-moved reciprocating swing-blocks normally holding said projection between them, dogs in the blocks for connecting the blocks and bar, and connections between the keys and dogs.

52. In a typographic machine, the combination, substantially as set forth, with a pad-holder, a swinging type-case, types, type-impressing mechanism, and a finger-key for each type, of a segmental series of obstructions or teeth corresponding with degrees of swing of the type-case, a locking-finger connected and oscillating with the type-case, and devices to move said obstructions into the path of said locking-finger.

53. In a typographic machine, the combination, substantially as set forth, with a pad-holder, a swinging type-case, types, type-impressing mechanism, and a finger-key for each type, of a lock-finger oscillating with the type-case, a notched segment fixed against circumferential movement and normally free of said finger, and mechanism for bringing the segment to the finger as the case swings.

54. In a typographic machine, the combination, substantially as set forth, with a pad-holder, a swinging type-case, types, type-impressing mechanism, and a finger-key for each type, of a pair of lock-fingers oscillating with the type-case, a pair of notched segments normally free of said fingers, and devices for bringing the segments toward the fingers as the type-case swings.

55. In a typographic machine, the combination, substantially as set forth, with types, type-impressing mechanism, and a pad-carriage, of a rack and pinion to advance the carriage, a pawl and ratchet, a power-moved pawl-arm, a change-gear on the shaft of said ratchet, a change-gear on the shaft of said pinion, an adjustable sector-bracket, and intermediate gearing carried by said sector-bracket and gearing into said two change-gears.

56. In a typographic machine, the combination, substantially as set forth, with types, type-impressing mechanism, and a pad-carriage, of a rack and pinion to advance the carriage, a feed-pawl and ratchet to turn the pinion, a stop-pawl to prevent retreat of the ratchet, a stop to hold the feed-pawl normally disengaged, a limit-stop to be engaged by the advancing carriage, and connections from the limit-stop to the stop-pawl whereby the advancing carriage releases the ratchet from the stop-pawl.

57. In a typographic machine, the combination, substantially as set forth, with types, type-impressing mechanism, and a pad-carriage, of a rack and pinion to advance the carriage, a feed-pawl and ratchet to turn the pinion, a stop-pawl to prevent retreat of the ratchet, a stop to hold the feed-pawl normally disengaged, a limit-stop to be engaged by the advancing carriage, a limit-stop to be engaged by the retreating carriage, and connections from the limit-stops to the stop-pawl whereby the advancing carriage releases the ratchet from the stop pawl and the retreating carriage restores the stop-pawl.

58. In a typographic machine, the combination, substantially as set forth, of a driving-shaft, a pulley loose thereon, a clutch for engaging the pulley with the shaft, a pad-carriage, carriage-feeding mechanism operated by said shaft, and carriage-backing mechanism operated by said pulley, whereby the carriage may feed forward only when the shaft is in motion, but may move back when the shaft is at rest.

59. In a typographic machine, the combination, substantially as set forth, with types, type-impressing mechanism, and a pad-carriage, of a carriage-feeding mechanism, a carriage-backing shaft, a slip-pulley thereon, a stop to prevent retreat of the carriage, and connections to said stop to be engaged by the advancing carriage to release the stop.

60. In a typographic machine, the combination, substantially as set forth, with types, type-impressing mechanism, and a pad-carriage of a carriage-feeding mechanism, a carriage-backing shaft, a friction-disk thereon, a pulley-rim driving said disk by friction, a stop to prevent retreat of the carriage, and connections to said stop to be engaged by the advancing carriage to release the stop.

61. In a typographic machine, the combination, substantially as set forth, with types, type-impressing mechanism, and a pad-carriage, of a carriage-feeding mechanism, a carriage-backing shaft, a slip pulley thereon, a driving-shaft, a stop-clutch, a belt from the stop-clutch to the slip-pulley, a stop to prevent retreat of the carriage, and connections to said stop to be engaged by the advancing carriage to release the stop.

62. In a typographic machine, the combination, substantially as set forth, with types, type-impressing mechanism, a pad-carriage, and feed devices to advance the carriage, of an intermittently-rotating driving-shaft, a continuously-rotating carriage-backing slip-pulley, a stop to prevent retreat of the carriage, and connections to said stop to be engaged by the advancing carriage to release the stop.

63. In a typographic machine, the combination, substantially as set forth, with types, type-impressing mechanism, and a pad-carriage, of a pinion to advance the carriage, a pinion to back the carriage, a driving-shaft arranged to operate the first pinion, and a slip-pulley to operate the backing-pinion.

64. In a typographic machine, the combination, substantially as set forth, with types, type-impressing mechanism, and a pad-carriage, of two limit-stops to be engaged by the carriage, a driving-shaft, a lock therefor, and connections from said limit-stops to said lock whereby the driving-shaft cannot operate while the carriage is retreating.

65. In a typographic machine, the combination, substantially as set forth, with a pad-holder, types arranged to be dealt with singly, type-impressing mechanism, and a finger-key for each type, of a constant-stroke feed part, as a rocking arm, moved by power at each impulse of the machine to provide for feeding the pad-holder, a variable-stroke feed part, as a lever, moving in accordance with the degree of pad feed, dogs for causing the motion of said constant-stroke part to be imparted to said variable-stroke part in degree according to the dog brought into action, and connections from the dogs to the appropriate finger-keys whereby a finger-key brings an appropriate dog into action.

66. In a typographic machine, the combination, substantially as set forth, with a pad-holder, types arranged to be dealt with singly, type-impressing mechanism, and a finger-key for each type, of a constant-stroke feed part, as a rocking arm, moved by power at each impulse of the machine to provide for feeding the pad-holder, a variable-stroke feed part, as a lever, moving in accordance with the degree of pad feed, dogs for causing the motion of said constant-stroke part to be imparted to said variable-stroke part in degree according to the dog brought into action, a connection between the constant-stroke part and variable-stroke part whereby a minimum of motion or unit of feed is imparted at each and every impulse of the machine, and connections from dogs to the type-keys pertinent to type calling for more than a unit of pad feed.

67. In a typographic machine, the combination, substantially as set forth, with a pad-holder, types arranged to be dealt with singly, type-impressing mechanism, and a finger-key for each type, of a driving-shaft, a first-cam thereon, a constant-stroke feed part, as a rocking arm, operated by said cam, a variable-stroke feed part, as a lever, dogs for causing the motion of the constant-stroke part to be imparted to the variable-stroke part in degree according to the dog brought into action, and connections between the dogs and appropriate finger-keys.

68. In a typographic machine, the combination, substantially as set forth, with a pad-holder, types arranged to be dealt with singly, type-impressing mechanism, and a finger-key for each type, of a constant-stroke feed part, as a rocking arm, moved by power at each impulse of the machine to provide for feeding the pad-holder, a variable-stroke feed part, as a lever, moving in accordance with the degree of pad feed, dogs for causing the motion of said constant-stroke part to be imparted to said variable-stroke part in degree according to the dog brought into action, a tumbling-shaft connected with each dog, and connections from the tumbling-shafts to the appropriate finger-keys.

69. In a typographic machine, the combination, substantially as set forth, with a pad-holder, types arranged to be dealt with singly, type-impressing mechanism, and a finger-key for each type, of a constant-stroke feed part, as a rocking arm, moved by power at each impulse of the machine to provide for feeding the pad-holder, a variable-stroke feed part, as a lever, moving in accordance with the degree of pad feed, dogs for causing the motion of said constant-stroke part to be imparted to said variable-stroke part in degree according to the dog brought into action, feed-levers engaged by the appropriate finger-keys, and connections from the levers to the dogs.

70. In a typographic machine, the combination, substantially as set forth, with a pad-holder, types arranged to be dealt with singly, type-impressing mechanism, and a finger-key for each type, of a constant-stroke feed part, as a rocking arm, moved by power at each impulse of the machine to provide for feeding the pad-holder, a variable-stroke feed part, as a lever, moving in accordance with the degree of pad feed, dogs for causing the motion of said constant-stroke part to be imparted to said variable-stroke part in degree according to the dog brought into action, feed-levers, each disposed alongside of and engaged by several finger-keys, and connections from the levers to the dogs.

71. In a typographic machine, the combination, substantially as set forth, with a pad-holder, types arranged to be dealt with singly, type-impressing mechanism, and a finger-key for each type, of a constant-stroke feed part, as a rocking arm, moved by power at each impulse of the machine to provide for feeding the pad-holder, a variable-stroke feed part, as a lever, moving in accordance with the degree of pad feed, dogs for causing the motion of said constant-stroke part to be imparted to said variable-stroke part in degree according to the dog brought into action, a tumbling-shaft for and connected with each dog, and feed-levers adjustable alongside said shafts and engaged by appropriate finger-keys.

72. In a typographic machine, the combination, substantially as set forth, with a pad-holder, types arranged to be dealt with singly, type-impressing mechanism, and a finger-key for each type, of a constant-stroke feed part, as a rocking arm, moved by power at each impulse of the machine to provide for feeding the pad-holder, a variable-stroke feed part, as a lever, moving in accordance with the degree of pad feed, dogs for causing the motion of said constant-stroke part to be imparted to said variable-stroke part in degree according to the dog brought into action, a driving-shaft, a cam thereon, and connections between said cam and dogs whereby the rotation of the cam restores a displaced dog to normal idle position.

73. In a typographic machine, the combination, substantially as set forth, of a carriage-rail, a carriage sliding thereon, a pad-holder sliding in the carriage at right angles to the rail, a rack and pinion to move the pad-holder in the carriage, a pawl and ratchet to turn said pinion, a connection to transmit motion to said pawl, and a wiper on the rail to engage said connection and move the pawl forward as the carriage travels back on the rail.

74. In a typographic machine, the combination, substantially as set forth, of a carriage-rail, a carriage sliding thereon, a pad-holder sliding in the carriage at right angles to the rail, a rack and pinion to move the pad-holder in the carriage, a pawl and ratchet to turn said pinion, a connection to transmit motion to said pawl, and a wiper mounted on the rail and arranged to engage and move said connections and advance the pawl as the carriage travels back upon the rail and to be moved by said connection without pawl movement as the carriage travels forward on the rail.

75. In a typographic machine, the combination, substantially as set forth, of a carriage-rail, a carriage sliding thereon, a pad-holder sliding in the carriage at right angles to the rail, a rack and pinion to move the pad-holder in the carriage, a pawl and ratchet to turn said pinion, a rocking lever mounted on the carriage and connected to said pawl and having a projection, a wiper engaging and moving said projection as the carriage moves back upon the rail and serving to advance the pawl, a stop to limit the return motion of said projection, and devices for changing the position of said stop to regulate the vertical feed of the pad.

76. In a typographic machine, the combination, substantially as set forth, of a carriage-rail, a carriage sliding thereon, a pad-holder sliding in the carriage at right angles to the rail, a rack and pinion to move the pad-holder in the carriage, a pawl and ratchet to turn said pinion, a rocking lever mounted on the carriage and connected to said pawl and having a projection, a wiper engaging and moving said projection as the carriage moves back upon the rail and serving to advance the pawl, an adjusting-lever mounted on the axis of said rocking lever, a stop on said adjusting-lever to limit the return motion of said projection, and a series of detents for adjusting the position of said adjusting-lever.

77. In a typographic machine, the combination, substantially as set forth, of a carriage-rail, a carriage sliding thereon, a pad-holder sliding in the carriage at right angles to the rail, a rack and pinion to move the pad-holder in the carriage, a pawl and ratchet to turn said pinion, a rocking lever mounted on the carriage and connected to said pawl and having a projection, a wiper engaging and moving said projection as the carriage moves back upon the rail and serving to advance the pawl, and a stop to limit the return motion of said projection.

78. In a typographic machine, the combination, substantially as set forth, of a carriage-rail, a carriage sliding thereon, a pad-holder sliding in the carriage at right angles to the rail, a rack and pinion to move the pad-holder in the carriage, a pawl and ratchet to turn said pinion, a connection to transmit motion to said pawl, a wiper on the rail to engage said connection as the carriage moves back, a roof-piece over said pawl and clear thereof as the pawl works its ratchet, and devices to abnormally extend the back-stroke of the pawl and bring its heel into engagement with said roof to disengage the pawl from its ratchet.

79. In a typographic machine, the combination, substantially as set forth, of a carriage-rail, a carriage sliding thereon, a pad-holder sliding in the carriage at right angles to the rail, a rack and pinion to move the pad-holder in the carriage, a ratchet connected with said pinion, a feed-pawl therefor, a roof-piece to engage the feed-pawl heel and disengage the pawl when drawn abnormally back ward, a stop-pawl engaging said ratchet, a connection to transmit motion to said feed-pawl and having a projection to engage said stop-pawl, a wiper on the rail to move said connection as the carriage goes back, and devices to move said connection abnormally back ward to release both said pawls.

80. In a typographic machine, the combination, substantially as set forth, of a carriage-rail, a carriage sliding thereon, a pad-holder sliding in the carriage at right angles to the rail, a rack and pinion and pawl at each side of the pad-holder, a three-armed lever pivoted on the carriage, connections from said lever to the pawls, and a wiper to engage and rock said lever as the carriage moves back on the rail.

81. The combination, substantially as set forth, of a case having a wicket, a cylinder having a spiral groove and arranged to rotate and rise and fall in said case, a spindle for said cylinder, and a series of graduations on the cylinder parallel with said spiral groove.

82. The combination, substantially as set forth, of a frame having guide-holes for finger-keys, finger-keys having stems engaging said guide-holes, levers or blades disposed alongside the stems, and pins projecting from the stems over the levers or blades.

83. The combination, substantially as set forth, of a frame having guide-holes for finger-keys, finger-keys having bored and slotted stems engaging said guide-holes, springs within the stems, and abutment-strips having teeth projecting into the key-stems.

84. In a typographic machine, the combination, substantially as set forth, with a pad-holder, types, and mechanism for forcing the types singly toward the pad-holder, of a pressure-finger near the impression-point of the pad out of the path of types and standing normally free from the pad and means for pressing the pressure-finger to the pad at the time of impression.

85. In a typographic machine, the combination, substantially as set forth, with a pad-holder, types, and mechanism for forcing the types singly toward the pad-holder, of a pressure-finger near the impression-point of the pad out of the path of types and standing normally free from the pad, means for forcing the pressure-finger to the pad at the time of impression, and a yielding connection between the forcing means and pressure-finger whereby the finger is forced to the pad with an elastic pressure.

86. In a typographic machine, the combination, substantially as set forth, with a pad-holder, types, and mechanism for forcing a type toward the pad-holder, of a pressure-finger near the impression-point of the pad and standing normally free from the pad, means for forcing the pressure-finger to the pad at the time of impression, a spring connection between the forcing means and pressure-finger whereby the finger is forced to the pad with an elastic pressure, and adjusting devices for regulating the tension of said spring connection.

87. In a typographic machine, the combination, substantially as set forth, with a pad-holder, types, and mechanism for forcing a type toward the pad-holder, of a pressure-finger near the impression-point of the pad and standing normally free from the pad, a wedge engaging the pressure-finger, and means for moving the wedge to force the finger to the pad at the time of impression.

88. In a typographic machine, the combination, substantially as set forth, with a pad-holder, types, and mechanism for forcing a type toward the pad-holder, of a pressure-finger near the impression-point of the pad and standing normally free from the pad, a wedge engaging the finger, a rocking arm, and connections between the wedge and the rocking arm.

89. In a typographic machine, the combination, substantially as set forth, with a pad-holder, types, and mechanism for forcing a type toward the pad-holder, of a pressure-finger near the impression-point of the pad and standing normally free from the pad, a wedge engaging the finger, a driving-shaft, a rocking arm, connections between the wedge and the rocking arm, and a cam on the driving-shaft adapted to move the wedge and force the finger to the pad at each rotation of the driving-shaft.

90. In a typographic machine, the combination, substantially as set forth, with a pad-holder, types, and mechanism for forcing the types singly toward the pad-holder, of a rigid plate disposed between the types and pad-holder, an eye in said plate for the passage of a type, a pressure-finger mounted on the plate near the eye, and means for forcing the finger to the pad at the time of impression.

91. The combination, substantially as set forth, of a pad-holder having a fixed pad-gripping rib, a pad-clamp arranged to move on the holder to and from said rib, and a cam to lock the clamp in adjusted position.

92. In a typographic machine, the combination, substantially as set forth, with a pad-holder and a movable case of endwise-movable types, of a hook-ended plunger adapted to engage any type brought to the plunger-line, an anvil rigidly supported in the plunger-line and adjustable to and from the plunger independent of the position of the pad-holder, a driving-shaft, and means for causing rotation of said shaft to force the plunger a definite distance toward said anvil.

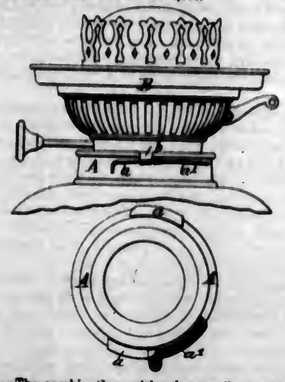
93. In a typographic machine, the combination, substantially as set forth, with a pad-holder and a movable case of endwise-movable type, of a plunger adapted to engage any type brought to the plunger-line, a fixed anvil engaging the back of the pad in that line, a toggle connected with the plunger, and a driving-shaft for operating the toggle to advance the plunger and engaged type a definite distance toward the anvil.

94. In a typographic machine, the combination, substantially as set forth, with a pad-holder and a movable case of endwise-movable type, of a fixed anvil engaging the rear of the pad, a plunger adapted to engage any type brought to the plunger-line and force the type a definite distance toward the anvil, a driving-shaft, a cam on the driving-shaft, and connections from the cam to the plunger to produce one advance and retreat of the plunger at each rotation of the shaft.

95. The combination, substantially as set forth, of a shaft, a toothed pulley loose thereon, a fixed rim having a notch, a driver secured to the shaft and arranged to engage the pulley and be held in such engagement by said rim and to disengage at said notch, and a movable piece at said notch to push the driver out of the notch and into engagement with said pulley.

96. The combination, substantially as set forth, of a shaft, a toothed pulley loose thereon, a fixed rim having a notch with an arresting-wall, a driver on the shaft arranged to engage said pulley and be held in such engagement by said rim and to disengage at said notch and rest against said wall, and a movable piece at said notch to push the driver out of the notch and into engagement with the pulley.

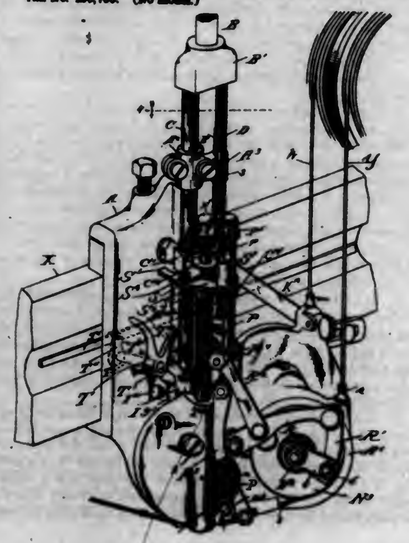
97. The combination, substantially as set forth, of a shaft, a toothed pulley loose thereon, a fixed rim having a notch, a driver on the shaft arranged to engage said pulley and be held in such engagement by said rim and to disengage at the notch, a fixed incline at the notch to move the driver from the pulley to the notch, and a movable piece to move the driver from the notch to the pulley.



98. The combination, substantially as set forth, of a shaft, a toothed pulley loose thereon, a fixed rim having a notch with an arresting-wall, a driver on the shaft arranged to engage the pulley and be so held by the rim and to disengage and rest at the notch-wall, a fixed incline to move the driver from the pulley to the notch, and a movable piece to move the driver from the notch to the pully.

99. The combination, substantially as set forth, of a shaft, a toothed pulley loose thereon, a fixed rim having a notch with an arresting-wall, a driver on the shaft arranged to engage said pulley and be so held by the rim and to disengage and rest at the notch-wall, a latch to prevent the rebound of the driver from the wall, and a movable piece to move the driver from the notch into engagement with the pulley.

100. The combination, substantially as set forth, of a shaft, a toothed pulley loose thereon, a fixed notched rim, a driver on the shaft arranged to engage the pulley and be so held by the rim and released at the notch, and a sliding pin at the notch to push the driver from the notch.



101. The combination, substantially as set forth, of a shaft, a toothed pulley loose thereon, a fixed notched rim, a driver on the shaft arranged to engage the pulley and be so held by the rim and released at the notch, a sliding pin at the notch to push the driver from the notch, and a cam on the shaft to withdraw the pin.

488,253. LAMP-BURNER ATTACHMENT. JAMES KIDD, London, England. Filed Oct. 23, 1891. Serial No. 410,067. (No model.) Patented in England Apr. 9, 1891. No. 6,006.

Claim.—The combination, with a lamp-collar and a burner, of a claw dependent from the burner, a lug on the collar with which the said claw engages, and a spring safety-catch on the collar, arranged to be depressed by the claw in the act of attaching the burner to the collar and to pass behind the claw after said attachment, substantially as described.

488,254. STAPLE FORMING AND DRIVING MACHINE. THURSTON L. KNUDSON and JACOB UHRI, Chicago, Ill. Filed Feb. 8, 1892. Serial No. 420,735. (No model.)

Claim.—1. In a staple-forming machine, the combination, with the stationary frame and feed and severing mechanisms for the wire, of the staple-former mounted in the stationary frame, a carrier reciprocating in the stationary frame, a bender reciprocated by the carrier and operating in the movement of the carrier in one direction to engage the staple-blank, force it into the staple-former, and then release the staple, and a ram upon the carrier, operating in the reverse movement thereof to engage and discharge the staple from the staple-former, substantially as described.

2. In a staple-forming machine, the combination, with the stationary frame and feed and severing mechanisms for the wire, of a staple-former mounted in the stationary frame, a bender reciprocated by the carrier and having an independent oscillating movement and operating in the movement of the carrier in one direction to engage the staple-blank, force it into the staple-former, and then release the staple, and a ram upon the carrier, operating in the reverse movement thereof to engage and discharge the staple from the staple-former, substantially as described.

3. In a staple-forming machine, the combination, with the stationary frame and feed and severing mechanisms for the wire, of a discharge-passage in the frame for the staple, a staple-former mounted in the frame and movable into and out of coincidence with the said discharge-passage, a reciprocating carrier in the frame, a bender reciprocated by the carrier and operating in the movement of the carrier in one direction to engage the staple-blank, force it into the staple-former, and then release the staple, and a ram upon the carrier, operating in the reverse movement thereof to engage the staple and force it out of the staple-former and through the discharge passage, substantially as described.

4. In a staple-forming machine, the combination, with the stationary frame and feed and severing mechanisms for the wire, of a discharge-passage in the frame for the staple, a staple-former movable into and out of coincidence with the said discharge-passage, a carrier reciprocating in the stationary frame, a bender engaged and released by the carrier in its movements and reciprocated thereby a distance less than that traversed by the carrier and having an oscillating motion independent of the carrier and operating when engaged by the carrier in the movement thereof in one direction to engage the staple blank, force it into the staple-former, and then release the staple, and a ram upon the carrier, reciprocating past the engaging end of the bender and operating in the reverse movement of the carrier to engage the staple and force it out of the staple-former and through the discharge-passage, substantially as described.

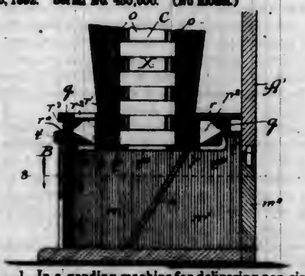
5. In a staple-forming machine, the combination, with the frame having a discharge-passage for the staple and with the feed and severing mechanisms for the wire, of an oscillating staple-former pivoted to the frame and provided with forming-grooves which in the backward oscillation of the staple-former are brought into coincidence with the said discharge-passage and with a transverse opening between the forming-grooves, a bender reciprocating in and longitudinally of the said transverse opening and movable at its engaging end into and out of coincidence with the forming-grooves, and a ram reciprocating in the said discharge-passage and in the transverse opening of the staple-former past the engaging end of the bender, substantially as described.

6. The combination of the staple-former, a reciprocating ram, a bender, means for oscillating the bender, and means for reciprocating the same upon the movement of the said ram a distance less than that traversed by the ram, whereby the ram with each reciprocation passes the engaging end of the bender, substantially as described.

7. The combination of the frame provided with the discharge-passage for the staple, reciprocating ram, bender having a reciprocating and an oscillating motion, oscillating staple-former pivoted to the frame and having staple-forming grooves, and a spring-stop on the frame, operating to maintain the staple-former normally, with its forming-grooves coincident with the said discharge-passage, substantially as described.

8. The combination, with the reciprocating rod C, ram thereon, and staple-former, of a reciprocating slotted rod F, a socket-piece G on the rod, having a stem p, provided with stops p' and p^2, an arm C^3 on the rod C, loosely embracing the stem p between the stops p' p^2, and a bender G', pivoted to the socket-piece G, extending in the slot of the rod F and having a cam-shaped end to engage the end of said slot, whereby in the reciprocation of the rod C the stops on the socket-piece are alternately engaged by the arm C^3, the rod C has limited movement in advance of such engagement, the rod F and bender are reciprocated, and the bender is oscillated, substantially as described.

9. In a staple-forming machine, the combination, with the staple-forming and wire-severing mechanisms, of a reciprocating bearing and intermittent-grip feeding mechanism for the wire, comprising a reciprocating clutch to engage and advance the wire and adjustable lever mechanism between the reciprocating bearing and clutch, whereby the distance of movement of the clutch with relation to the movement of the bearing may be varied at will, substantially as described.



10. The combination, with the reciprocating staple-driving mechanism and discharge-opening for the staple, of strengthening-wire-severing mechanism, feed mechanism adapted to engage and advance said wire across the said discharge-opening, and means for automatically throwing the said severing and feed mechanisms into and out of operation, substantially as described.

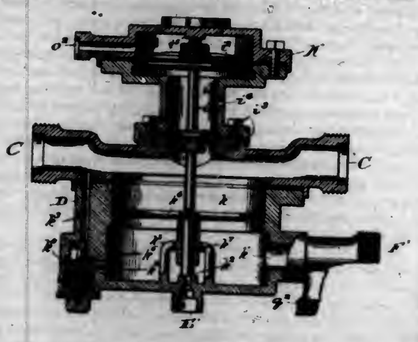
11. The combination, with the reciprocating staple-driving mechanism, of a movable support, strengthening-wire-severing and intermittent-feed mechanisms connected with the said support, support-engaging mechanism reciprocating with the staple-driving mechanism and adapted to engage and release the said support, and intermittingly-actuated switch mechanism in the path of the said support-engaging mechanism operating to throw the said engaging mechanism into and out of engagement with the said movable support, whereby the said severing and feed mechanisms are operated, substantially as described.

12. The combination, with the reciprocating staple-driving mechanism, of strengthening-wire-severing and intermittent-feed mechanisms, a longitudinally-movable rod with which the said severing and feed mechanisms are connected, a spring resisting movement of the said rod in one direction, rod-engaging mechanism reciprocating with the staple-driving mechanism and adapted to engage and release the said rod, and intermittingly-actuated switch mechanism in the path of the said rod-engaging mechanism operating to throw the said engaging mechanism into and out of engagement with the said rod, whereby the rod is moved against the resistance of its spring and is returned by its spring, substantially as and for the purpose set forth.

13. The combination, with the staple-driving mechanism, of a feed-passage for the strengthening-wire, an oscillating cutter extending across the said feed-passage and having an opening through it for the wire, normally coinciding with said feed-passage, a cutting-edge at the said feed-passage past which the said cutter oscillates, and feed mechanism for said wire arranged to engage the wire behind the cutter and advance the wire after severance, substantially as described.

488,255. COIN-OPERATED VENDING-MACHINE. ROBERT H. LITTLE, Chicago, Ill., assignor to Everell D. Stiles, same place. Filed June 6, 1892. Serial No. 436,550. (No model.)

Claim.—1. In a vending-machine for delivering non-circular articles, a reservoir in which the articles to be vended are stacked one upon the other to extend alternately at different angles, means for turning the stack on a central longitudinal axis, and a stationary plate against which the stack bears at one end, having a non-circular opening to admit the passage through it of an article only when the stack is turned to a certain relative angle, substantially as described.



2. In a vending-machine for delivering non-circular articles, the combination of a rotary reservoir adapted to receive a single column of the articles to be vended, said articles being stacked one upon another to turn with the reservoir, the axis of rotation of the reservoir and contents being in a line through the longitudinal center of the said column of articles, means for turning the reservoir and contents on their axis, and a stationary plate against which the column of articles rests at one end, having a non-circular opening through which the articles pass when turned to a certain relative angle, substantially as described.

3. In a coin-operated vending-machine for delivering non-circular articles, the combination, with a stationary base plate provided with a non-circular opening through which the articles pass by gravity when turned to a certain angle, of a bottomless rotary reservoir upon the base-plate in which the articles are stacked one upon the other to rest upon the base-plate across said non-circular opening and extended alternately at different angles in the horizontal plane, the said reservoir operating to hold the articles against independent rotation, and means for rotating the reservoir in the horizontal plane on the insertion into the machine of a coin, whereby the articles are turned on their axes and the lowest article drops through the non-circular opening with each operation, substantially as described.

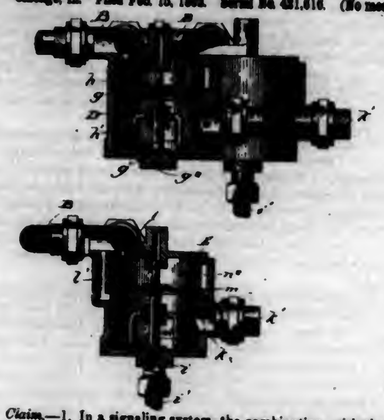
4. In a coin-operated vending-machine for delivering non-circular articles, the combination, with a bottomless rotary reservoir mounted upon a stationary base-plate provided with a non-circular opening

through which the articles drop when turned with the reservoir to a certain angle, of a rotary plate around and integral with the reservoir, provided with radial slots, each arranged to receive and hold a coin, and a spring-controlled lever operating when turned against the resistance of its spring to engage a coin introduced into one of said radial slots and through the medium of the coin rotate the reservoir, substantially as and for the purpose set forth.

483,256. TRAIN SIGNALING APPARATUS. HARRY B. MASON, Chicago, Ill. Filed Feb. 15, 1892. Serial No. 421,615. (No model.)

Claim.—1. The combination, with a pipe, means for charging the same with fluid under pressure, and a signal-actuating valve communicating with the pipe and operated by impulses of reduction of pressure in the pipe, of automatic locking mechanism connected with the said valve and operating, as described, to lock the said valve when the inflow of charging-pressure to the pipe is cut off, substantially as set forth.

2. In a pneumatic signaling system, the combination, with the signal-pipe and signal-actuating valve communicating therewith, of signal-valve automatic locking mechanism and a valve governing said locking mechanism, said governing-valve operating in its movement to actuate the locking mechanism and then throw the signal-valve into and out of operation, substantially as described.



3. In a signaling system, the combination, with the signaling-pipe, compressed-air-supply valve governing the inflow of pressure from the said supply to the pipe, venting-valve upon the pipe, and signal-actuating valve communicating with the pipe and operated by impulses generated at the said venting-valve, of locking mechanism for the signal-actuating valve, controlled by movement of the said governing-valve, substantially as and for the purpose set forth.

4. In a signaling system for railway-trains, the combination, with the train-pipe and the engineer's brake-valve and signal-valve communicating therewith, of signal-valve-locking mechanism controlled from the engineer's brake-valve and operated thereby in its movement to and from release position to lock and unlock the signal-valve, substantially as and for the purpose set forth.

5. In a signaling system for railway-trains, the combination, with the train-pipe and the engineer's brake-valve and signal-valve communicating therewith, of signal-valve-locking mechanism comprising a chamber provided with a diaphragm movable under air-pressure, having a stem which extends into the signal-valve to engage and release the valve mechanism therein in the movement of said diaphragm, the said diaphragm-chamber communicating with the engineer's brake-valve to be charged with pressure when said brake-valve is turned to release position to lock the signal-valve and be vented of pressure when the said brake-valve is turned from release position to unlock the signal-valve, substantially as and for the purpose set forth.

6. In a signaling system for railway-trains, the combination, with the train-pipe and engineer's brake-valve, of a signal-valve having a chamber communicating with the train-pipe, containing a valve movable by differential pressure, and an escape-port from said chamber to the signal controlled by said valve, and a shell containing a diaphragm-chamber communicating with the engineer's brake-valve, to be charged with and vented of pressure thereby when said brake-valve is turned to and from release position, and having a diaphragm moved in one direction by pressure entering its chamber and movable in the opposite direction when pressure is vented from its chamber, and provided with a stem which extends into the signal-valve chamber to engage and lock the valve therein when moved by pressure entering said diaphragm-chamber and to release said valve when pressure is vented from said diaphragm-chamber, substantially as and for the purpose set forth.

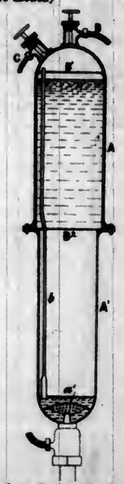
483,257. TRAIN SIGNALING APPARATUS. HARRY B. MASON, Chicago, Ill. Filed Feb. 15, 1892. Serial No. 421,616. (No model.)

Claim.—1. In a signaling system, the combination, with the signaling-reservoir and signaling-pipe both charged with fluid under pressure, of two or more valve devices provided with movable diaphragms exposed on opposite sides, respectively, to pressure from the said pipe and reservoir, and vent-openings for the reservoir normally closed by the said diaphragms, the diaphragms of the respective valve devices being of gradually-increasing resistance and movable by reductions of pressure in the said pipe to open the said vent-openings, substantially as described.

2. In a signaling system, the combination, with the signaling-pipe charged with artificially-created fluid-pressure, signal-valve, and conductor's signaling-valve, of pressure-relief-valve mechanism communicating with the signal-pipe and supplementing the action of the signal-valve to vent pressure from behind the same when the signal-pipe pressure is reduced, substantially as described.

3. In a signaling system, the combination, with the signaling-pipe charged with artificially-created fluid-pressure, signal-valve, signal-reservoir, and conductor's signaling-valve, of pressure-relief-valve mechanism communicating with the signal-pipe and signal-reservoir and supplementing the action of the signal-valve to vent pressure from the signal-reservoir when the signaling-pipe pressure is reduced, substantially as described.

4. In a signaling system, the combination, with the signaling-pipe charged with artificially-created fluid-pressure, signal-valve, signaling-reservoir, and conductor's signaling-valve, of pressure-relief-valve mechanism communicating with the signaling-pipe and signaling-reservoir, the moving parts of which offer a greater resistance than those of the signal-valve, whereby the said pressure-relief-valve mechanism is operated only by impulses of reduction of pressure in the signaling-pipe greater than those necessary to operate the signal-valve to vent pressure from the signaling-reservoir, substantially as described.



483,258. PACKING-JAR. JULIUS W. MEYER, Baltimore, Md., assignor of one-half to Robert B. Mason, same place. Filed Oct. 17, 1891. Serial No. 408,992. (No model.)

Claim.—The herein-described jar, constructed of friable material, the same consisting of the downwardly-tapered body portion J, having its upper large end exteriorly reduced and threaded, the flat annular rubber gasket mounted on the reduced portion, the closure for the jar, having an annular interiorly-threaded flange, the smaller end of the jar having the annular concaved foot F, the center of which is

provided with a threaded perforation, and the threaded plug therefor, substantially as specified.

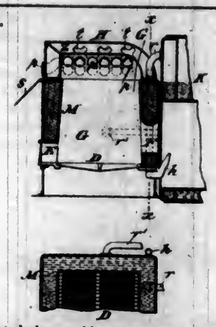
483,259. METHOD OF AND APPARATUS FOR AERATING LIQUIDS. JAMES H. MINTO, Liverpool, England. Filed Mar. 11, 1892. Serial No. 424,538. (No model.)

Claim.—1. The herein-described method of aerating liquids, which consists in automatically regulating the supply of liquid to the saturating-chamber in proportion as the saturated liquid therein is withdrawn, whereby a constant degree of saturation is maintained and the process is made substantially continuous, as set forth.

2. The herein-described method of aerating liquids in a substantially-continuous manner, which consists in supplying the liquid to the saturating-chamber in a gradual automatically-regulated manner and in proportion as the saturated liquid is withdrawn therefrom, as set forth.

3. In an apparatus for aerating liquids, the combination, with a saturating-chamber provided with a gas-inlet and a liquid outlet at its lower part and a supply-chamber above the saturating-chamber and connecting with the upper part thereof through the medium of a spraying-inlet, of a pipe connecting the lower portion of the saturating-chamber with the upper portion of the supply-chamber, whereby the lower extremity of said pipe may be unsealed by the withdrawal of liquid from the saturating-chamber, substantially as and for the purposes set forth.

4. In an apparatus for aerating liquids, the combination, with a saturating-chamber provided with a gas-inlet and liquid-outlet at its lower part and a supply-chamber to contain liquid closed against the atmosphere and arranged above the saturating-chamber and separated therefrom by a perforated diaphragm through which the liquid may fall as a spray into the upper portion of the saturating-chamber, of a pipe or like conduit which connects the lower part of the saturating-chamber with the gas-space in the upper part of the closed supply-chamber, whereby when the lower extremity of said pipe is unsealed by the withdrawal of liquid from the saturating-chamber the gaseous pressure in the chambers will be equalized, for the purpose set forth.



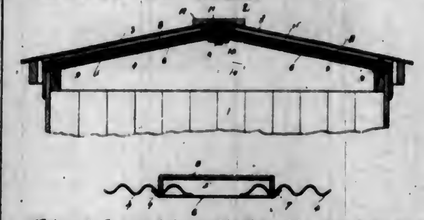
5. In an apparatus for aerating liquids, the combination, with the saturating-chamber provided with the inlet for the gas and outlet for the charged liquid, of the supply-chamber A, arranged over the same and provided with the liquid-inlet and gas-outlet, the perforated diaphragm B^3, and the tube b, communicating between said chambers, whereby the level of the liquid in the saturating-chamber is maintained, substantially as set forth.

6. In an apparatus for aerating liquids, the combination, with the chambers A and A', separated by the perforated diaphragm B^3 and provided with outlets and inlets for the liquid and gas, of the tube b, communicating between said chambers, whereby the level of the liquid in the saturating-chamber is maintained, substantially as set forth.

483,260. STEAM-BOILER AND FURNACE. RUDOLF MÜLLER, Reiherstieg, Hamburg, Germany. Filed May 19, 1892. Serial No. 433,504. (No model.)

Claim.—The combination, with a boiler, of a water-jacket consisting of hollow upright walls which constitute the surrounding walls of a fire-box, a grate constituting the bottom of said fire-box, and a

483,260.



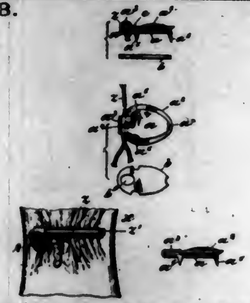
double hood situated above said water-jacket and constituting the top of said fire-box, the said double hood containing an air-space and having in it air-inlets to the fire-box above said water-jacket, substantially as set forth.

483,261. THILL-COUPLING. JOHN V. MYERS, Industry, Ill. Filed May 11, 1892. Serial No. 432,660. (No model.)

Claim.—In a thill-coupling, the combination of an axle-clip having forwardly-projecting ears, a coupling-bolt, and a clip comprising a thill-iron provided on its upper face with upwardly-projecting ears and having a socket and a threaded opening communicating with the socket and provided with a concave shoulder, a J-shaped section provided at its hooked end with an ear pivoted between the said perforated ears and adapted to receive the coupling-bolt between its hooked or curved end and the concaved shoulder, an elastic block arranged in said socket, a screw arranged in the threaded opening and adapted to force the elastic block against the coupling-bolt, and means for detachably locking the J-shaped section to the shaft-iron, substantially as described.

483,262. ROOF. JAMES J. MCCARTHY, Austin, Ill. Filed Apr. 1, 1892. Serial No. 427,607. (No model.)

Claim.—1. In a roof, the combination, with a plate 6, having upturned edges 7, of a channel-bar 8, inverted over said plate 6 and secured thereupon, and plates 4, having their edges secured between said plate 6 and channel-bar 8, substantially as described.

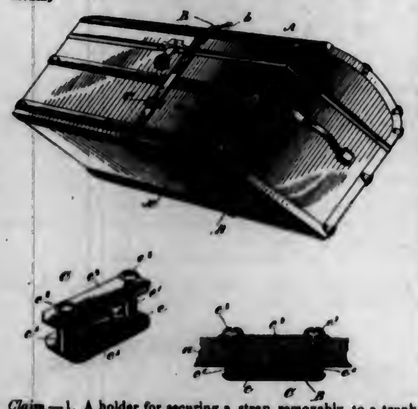


2. In a roof, the combination, with a longitudinally-extending channel-bar 13, of a ridge-pole 15, the lower portion of which is adapted to fit into said channel-bar, and carlings having their ends secured between said ridge-pole and channel-bar, substantially as described.

3. In a roof, the combination, with a longitudinally-extending channel-bar 13 and a T-shaped ridge-pole 15, the lower portion of which is adapted to fit into said channel-bar, of carlings the ends of which are adapted to fit between the lateral portions of the ridge-pole and the edges of the channel-bar and means for securing said ridge-pole to said channel-bar, substantially as described.

483,263. CORD-CLASP FOR GLOVES. ALEXANDER B. MCDONALD, Brooklyn, N. Y. Filed Nov. 24, 1891. Serial No. 413,009. (No model.)

Claim.—1. A cord-clasp for a glove, comprising a base-plate a, a cleat-plate a^4, arranged over said base-plate, and a tubular cord-

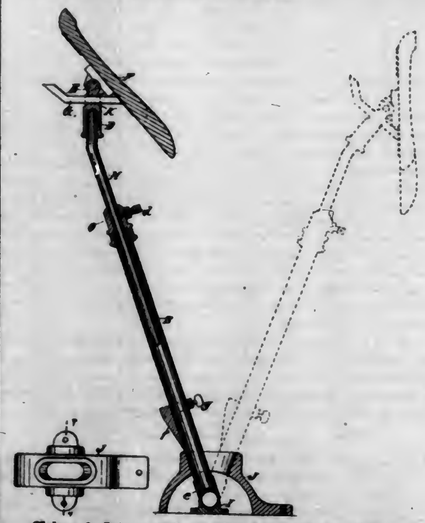


483,263.

guide a^3, uniting said base-plate and cleat-plate and having a hole a^4 in its bottom, the said cleat-plate being brought into contact with the base-plate at c in order to segregate the cord-guide, and the said base-plate provided with clinching-points, substantially as set forth.

2. A metal cord-clasp for a glove, comprising a base-plate a, a cleat-plate a^2, arranged above said base-plate, and a tubular cord-guide a^3, uniting said base-plate and cleat-plate and provided with a hole a^4 in its bottom for the passage of one end of the cord, and the cord z in said guide, the passage in the cord-guide being separated at c from the space under the cleat-plate, as set forth.

483,264. STRAP-HOLDER FOR TRUNKS. ALEXANDER H. MCDONALD, Brooklyn, N. Y. Filed Apr. 23, 1892. Serial No. 430,178. (No model.)



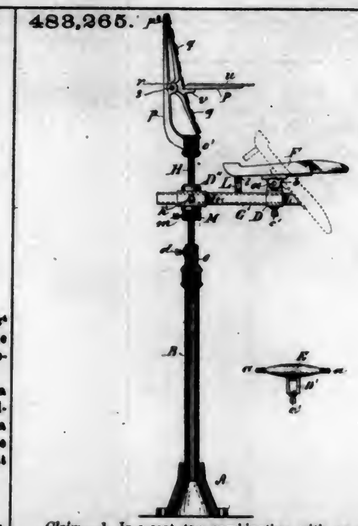
Claim.—1. A holder for securing a strap removably to a trunk without puncturing or injuring the strap, said holder comprising a clamping-plate c to press on the strap, provided with two studs c' to pass through holes in the trunk-wall at the respective edges of the strap, and screw-fastenings for securing the said plate removably to the trunk from the inside of the latter and for causing the clamping-plate to press on the strap, as set forth.

2. The combination, with a trunk and a strap to embrace it, as described, of a holder for said strap, comprising a plate c, which extends across and bears on said strap, two studs c', integral with said plate and spaced to leave room for the strap between them, said studs extending through holes in the trunk-wall, and screw-fastenings at the inner ends of the respective studs for drawing the plate c and causing it to press forcibly on the strap, as set forth.

3. A holder C for securing a strap removably to a trunk, the same comprising a clamping-plate c, provided with studs c', having sockets in their extremities to receive the screws c^3 and the said screws.

4. A holder C for securing a strap removably to a trunk, the same comprising a clamping-plate c, having a roughened inner face and provided with studs c', having sockets to receive the screws c^3, the said screws, and a washer-plate c^4.

483,265. SEAT. CASPAR C. A. SCHINDLER, Basle, Switzerland. Filed May 26, 1892. Serial No. 434,763. (No model.) Patented in Switzerland Jan. 25, 1890, No. 1,803; in France Mar. 10, 1890, No. 204,970; in Belgium Mar. 14, 1890, No. 90,558; in England July 5, 1890, No. 10,447; in Germany Aug. 26, 1890, No. 57,536, and in Austria-Hungary Nov. 9, 1890, No. 23,326 and No. 43,492.

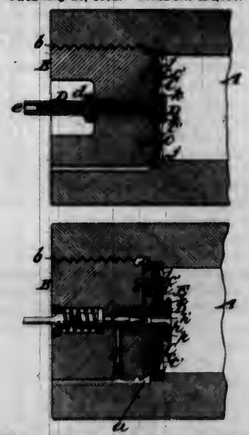


Claim.—1 In a seat, the combination, with an upright support capable of longitudinal extension in order to regulate the height of the seat and mounted to rock on pivots at its base, of a guide and limiting-stops for said support, the socketed coupling D, rotatively mounted on said support, the cross-bar E, affixed to said coupling, the seat-board F, pivotally mounted on said cross-piece, and stops to limit the movement of the seat-board about its pivots.

2. In a seat, the combination, with the upright support for the seat-board, of the cross-bar E, carried by said support, the seat-board F, pivotally mounted on said bar, and the bar G, mounted in the base of said cross-bar, the ends of the bar serving as stops to limit the movements of the seat on its pivots.

3. In a seat, the combination of the extensible upright B H, provided with a T-piece e at its lower end, the shoe I, which receives said T-piece, the slotted guide-piece J, embracing the upright, and the tapered limiting-piece f, mounted adjustably on the upright, of the seat-board F, pivotally mounted on the upper end of said upright.

483,266. SEAT. CASPAR C. A. SCHINDLER, Basle, Switzerland. Filed Jan. 11, 1892. Serial No. 417,623. (No model.) Patented in Switzerland Jan. 25, 1890, No. 1,803; in France Mar. 10, 1890, No. 204,970; in Belgium Mar. 14, 1890, No. 90,558; in England July 5, 1890, No. 10 447; in Germany Aug. 26, 1890, No. 57,536, and in Austria-Hungary Nov. 9, 1890, No. 23,326 and No. 43,492.

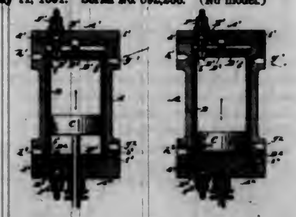


Claim.—1. In a seat, the combination, with an upright support provided with a horizontal bar G', of the cross-piece E, mounted on said bar G', the seat-board F, pivotally mounted on said cross-piece, and the cushion-spring L, mounted on said seat-board.

2. In a seat, the combination, with the upright support provided with a sleeve D', rotatable thereon, and an adjustable supporting-collar M, of the bar or arm G', mounted in a socket in the sleeve D', the socketed coupling D', mounted adjustably on the arm G', the cross-bar E on the coupling D', and the seat-board F, pivotally mounted on the cross-bar E and provided with a cushion-spring L, as set forth.

3. In a seat, the combination, with an upright support, of the back-rest and arm-rests on the upper end of said support, the seat-supporting arm or bar G', mounted on said upright support, and the pivotally-mounted seat-board carried by said bar G'.

483,267. BREECH-LOADING ORDNANCE. SAMUEL SEABURY, U. S. Navy. Filed May 28, 1892. Serial No. 434,700. (No model.)



Claim.—1. The combination, with the breech-block of a breech-loading gun, of one or more gas-check disks secured to the face of said block and having a forward bulge, behind which there is a space between the said disk or disks and said face, substantially as and for the purpose herein set forth.

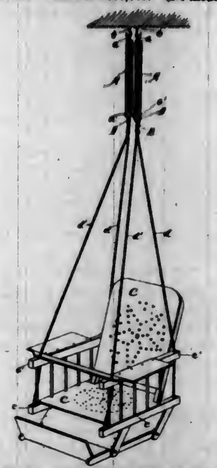
2. The combination, with a breech-loading gun and a breech-block fitted thereto and entering it from the rear, of gas-check disks secured to the face of said block and having their outer edges presented circumferentially and also having forwardly-bulged portions, behind which there is a space into which said bulged portions can be forced back to expand said circumferentially-presented edges against the bore of the gun, substantially as herein set forth.

3. The combination, in a breech-loading gun, of a breech-block having a bulged face and one or more gas-check disks secured to said face and having a forward bulge fuller than the bulge of said face, whereby a space is provided between the bulged portions of said face and said disk or disks, substantially as and for the purpose herein set forth.

4. The combination, with the breech-block of a breech-loading gun, of a gas-check disk secured to the face of said block and having separate bearings against said face near the circumference thereof and near the center thereof and having between said bearings a forward bulge, behind which there is a space between the said disk and the said face, substantially as herein described.

483,268. GAS-COMPRESSOR. ALFRED SIEBERT, New York, N. Y. Filed May 11, 1891. Serial No. 392,288. (No model.)

Claim.—1. In a compressor for gaseous fluids, a reciprocating piston, an internal cylinder and an external cylinder movable relatively to each other, and provisions for admitting fluid under pressure to the spaces between the two cylinders at the ends of the same alternately, so as to aid in moving the internal cylinder from one extreme position to the other at the required periods, as herein specified.

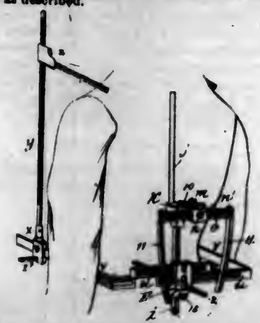


2. In a compressor for gaseous fluids, having a reciprocating piston and a movable internal cylinder, provisions for admitting oil or analogous fluid under pressure to the two ends of the external cylinder, so as to aid in throwing the internal cylinder from one extreme position toward the other, and ports f' f^2 in the external cylinder near the ends thereof, alternately opened by the reciprocations of the internal cylinder, in combination with each other and check-valves in the suction-pipe, said parts being adapted to allow gas to freely escape from such oil at the proper time, as herein specified.

483,269. INSECTICIDE-DISTRIBUTER. REUBEN J. TALLEY, Louisville, Tex., assignor of one-half to S. P. Gordon, same place. Filed June 11, 1892. Serial No. 436,379. (No model.)

Claim.—The combination of a base, a bellows mounted thereon, a receptacle arranged in advance of the bellows and adapted to contain poison to be distributed, a forwardly-projecting discharge-tube, laterally-extending discharge-tubes comprising inner rigid sections, outer rigid sections having series of discharge-nozzles, and flexible couplings connecting the rigid sections, and the braces having their inner ends pivoted to the base and their outer ends pivoted to the outer sections and supporting the same, substantially as described.

483,270. BABY-JUMPER. WILLIAM S. TOTHILL, Chicago, Ill. Filed Jan. 11, 1892. Serial No. 417,673. (No model.)



Claim.—A baby-jumper consisting of a pair of suspension-springs A, arranged in close proximity and having their lower ends connected by a loose ring or link B, and a chair C, having cords or ropes d d' secured to the lower ends of the loosely-connected springs, so that if one spring breaks the loose link or ring instantly adjusts itself and the chair will be properly supported without unduly tilting or overturning, substantially as described.

483,271. TAILOR'S MEASURING APPARATUS. ATHANASE TROCHU, Redon, France. Filed Nov. 9, 1889. Serial No. 329,748. (No model.) Patented in France Feb. 16, 1889, No. 196,131.

Claim.—1. In combination, a base, a standard extending therefrom, the supplemental frame supported independently of the standard and extending up alongside the standard from the base thereof, and an adjustable connection between the upper part of said frame and the standard, substantially as described.

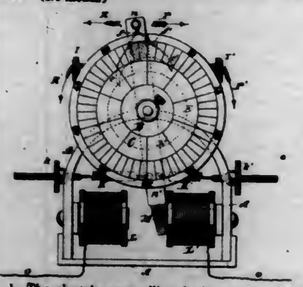
2. In combination, the base, the standard, a supplemental frame adjustable independently of the main base and standard and bearing upon the floor, and the connection between the said frame and the standard, substantially as described.

3. In combination, the main base, the standard D, the supplemental frame having adjustable feet to bear on the floor, and the adjustable connection between the said frame at its upper end and the standard, substantially as described.

4. In combination, the main base, the standard D, the supplemental frame, the connection between the said frame and the standard, and the adjustable feet for the supplemental frame, consisting of the pivoted parts q q and the means for holding them adjustably, substantially as described.

5. In combination, the main base, the standard extending therefrom, and the adjustable supplemental frame including the bent portions p and the wedges S between the said portions and the main base, substantially as described.

6. In combination, the main base, the graduated standard, the supplemental adjustable frame, including the rule o, and the adjustable connection between said rule and the standard, substantially as described.



7. In combination, the main base, the standard, the adjustable block E, the transverse rules carried by the said block, the arms at the ends of the rules, and the uprights y, adjustable on said arms and the arms on the uprights, said arms being adjustable and extending rearwardly to bear on the shoulders of the person, substantially as described.

8. In combination with the frame comprising the base, the standard, the rules u u, and the arms v v, and the pins 1 2, substantially as described.

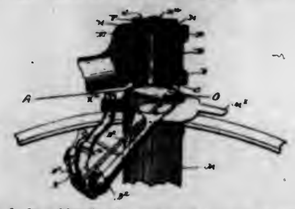
9. In combination with the frame comprising the base and the standard, the rule f on the base and the blocks carried thereby, and the arms projecting from said blocks, substantially as described.

10. In combination, the base, the standard, the block E, adjustable vertically thereon, the rules and arms carried by the said block, and the depending arm 3, also carried thereby, substantially as described.

483,272. MEANS FOR CONTROLLING THE OPERATION OF MECHANISMS. HENRY R. VINNING, Roseville, N. J., assignor of one-half to Robert S. Walker, New York, N. Y. Filed Feb. 27, 1892. Serial No. 422,986. (No model.)

Claim.—1. The electric controlling device consisting of a pin or lever actuated by a disk and intermediate mechanism caused to rotate in alternately-opposite directions by mechanism operated by a number of successive electrical impulses of one polarity, then a break in the circuit, and then a number of successive electrical impulses of an opposite polarity, substantially as described.

2. In a series of electrically-controlled devices, (such as locks, lamps, &c.,) a corresponding series of pins or levers to operate said devices, all located on one circuit, and each of said pins being actuated independently of the others by a disk, (and intermediate mechanism,) caused to rotate in alternately-opposite directions by mechanism operated by a number of successive electrical impulses of one polarity, then a break in the circuit, and then a number of successive electrical impulses of an opposite polarity, substantially as described.



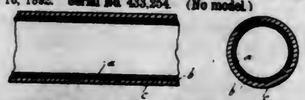
3. In an electric controlling device, the combination of a pin or lever actuated by a disk and tumblers, said disk caused to rotate in alternate opposite directions by ratchet-wheels and pawls, said ratchet-wheels and pawls operated by the armature of a polarized magnet, said polarized magnet causing the armature to move in alternately-opposite directions corresponding to the change in polarity of successive electrical impulses, an electric generator, and an electric circuit, all arranged and operated substantially as described.

4. In a series of electrically-controlled devices, (such as locks, lamps, &c.,) the combination of a corresponding series of pins actuated independently of the others by a disk and tumblers, each of said disks caused to move in alternately-opposite directions by ratchet-wheels and pawls, said ratchet-wheels and pawls being moved by the armature of a polarized electro-magnet, said magnet causing its armature to move in opposite directions corresponding to the change in polarity of successive electrical impulses, an electric generator, and an electric circuit, substantially as described.

5. In an electric controlling device, the combination of electro-magnets L L, armature M, swinging bar N, pawls e e', ratchet-wheels E E', and shaft B, substantially as described.

6. In an electric controlling device, the combination of two or more disks C to operate tumblers, the corresponding pins or levers D, ratchet-wheels E E', pawls e e', shafts B, swinging bars N, armatures M, electro-magnets L L', an electric circuit, and an electric generator, substantially as described.

483,273. BICYCLE. WILLIAM O. WAKEFIELD, Lynn, Mass., assignor to F. W. Webster and Edwin W. Rice, Jr., same place. Filed Mar. 28, 1889. Serial No. 305,152. (No model.)

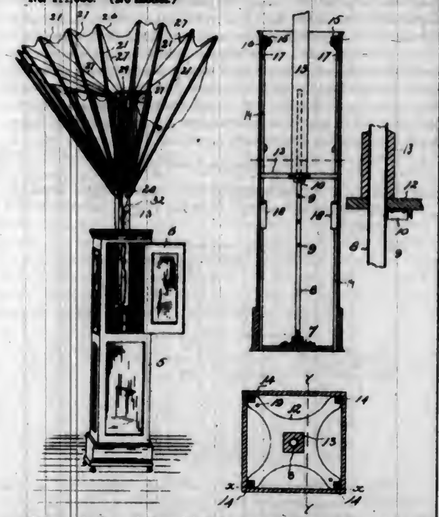


Claim.—1. In a bicycle, the combination, with the steering-head secured to the fork, of handle-bars the ends of which pass upwardly through a projection from the head and nuts K^3, engaging with the screw-threaded ends of said bars, as and for the purpose described.

2. In a bicycle, a brake-spoon engaging with the periphery of the main driving-wheel forward of the steering-head and pivoted to the steering-head or fork at a point below the circumference of the wheel, as and for the purpose described.

3. The combination, with the brake-lever and the brake-spoon, of the connecting-link extended as a spring, as and for the purpose described.

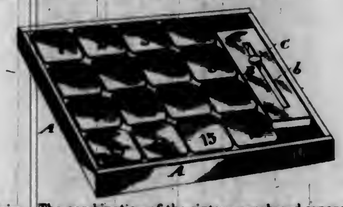
4. The combination, in a bicycle having a handle-bar extending downwardly, outwardly, and upwardly from the steering-head, of a brake-spoon, a brake-lever pivoted on the handle-bar, and a connecting-link between said lever and the brake-spoon, as and for the purpose described.



483,274. PIPE FOR THE CONVEYANCE OF LIQUIDS OR GASES. EDWIN WALKER and JOSEPH SHAW, Heckmondwike, England. Filed May 16, 1892. Serial No. 433,254. (No model.)

Claim.—1. A compound pipe consisting of an inner core-pipe of ductile material, an external pipe of rigid material, and an elastic cushion interposed between the said two pipes and adapted to permit the core-pipe to expand when the liquid inside it freezes and to cause the said core-pipe to contract when the liquid thaws.

2. A compound pipe consisting of an inner core-pipe of ductile material, an external pipe of rigid metal, and a tubular cushion of india-rubber interposed between the said two pipes, substantially as and for the purpose set forth.



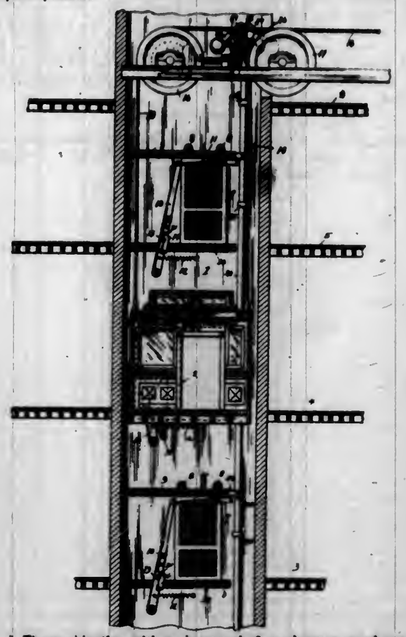
483,275. CLOTHES-DRIER. HATTIE ADLER, Denver, Colo., assignor of one-half to Carl C. Mollerup, same place. Filed Nov. 6, 1891. Serial No. 411,020. (No model.)

Claim.—1. In a clothes-drier, the combination, with a post, of a vertically-movable plate supported thereon, a stationary plate located above the movable plate and provided with pulleys, arms hinged or pivoted to the movable plate, cords secured to these arms, passing over the pulleys of the stationary plate and secured to the movable plate, and suitable means for causing the movable plate to recede from or approach the stationary plate, according as it is desired to open or close the pivoted arms, substantially as described.

2. In a clothes-drier, the combination of an upright cabinet or case open at the top, a fixed standard located therein, a hollow post receiving the standard and vertically movable thereon, a guide-plate secured to the post and adapted to slide in the cabinet-frame, and weights connected with the post by cords passing over suitable pulleys attached to the cabinet-frame, the movable post being provided with adjustable arms adapted to enter the cabinet at the top, substantially as described.

483,276. PUZZLE. PETER W. ANDERSON, Roanoke, Va. Filed June 9, 1892. Serial No. 436,108. (No model.)

Claim.—The combination of the sixteen numbered square blocks described with the rectangular box A, one-fifth larger than the space or square occupied by the blocks, and the slide B, having the longitudinal slot b, straddling a headed bolt or screw, as and for the purpose set forth.



483,277. ELEVATOR. CASSIUS M. BARTHOLOMEW, Newark, Ohio, assignor to himself and James Atherton, same place. Filed Oct. 13, 1891. Serial No. 408,617. (No model.)

Claim.—1. The combination, with an elevator-shaft and a car, of sliding doors, devices operated by the car to automatically slide the doors open, and locking mechanism operated by the motion of the car to automatically and simultaneously lock all the doors in their closed position, substantially as described.

2. The combination, with an elevator-shaft and a car, of sliding doors, lever-and-spring mechanism operated by the car to automatically slide the doors open, and a rising-and-falling locking-rod moved by the motion of the car and having devices which engage and lock all the doors in their closed position while the car is in motion, substantially as described.

3. The combination, with an elevator-shaft, an elevator-car adapted to move therein, and pulleys and cables for operating the car, of a governor adapted to be rotated by the rotation of one of the pulleys and mechanism operated by the governor for locking the doors leading into the elevator-shaft, substantially as described.

4. The combination, with an elevator-shaft, an elevator-car adapted to move therein, pulleys 16 and 17, and cables 18 for operating the car, of a governor 19, having arms 26, said arms having inward extensions 27, a shaft 20, rod 24, and devices carried by said rod for locking the doors opening into the elevator-shaft, said extensions 27 being connected with the upper end of the shaft 20, substantially as and for the purpose specified.

5. The combination, with an elevator-shaft, an elevator-car adapted to move therein, and pulleys 16 and 17 and cables 18 for operating the car, of a governor 19, having arms 26, said arms having inward extensions 27, a shaft 20, rod 24, hooks 30, carried by said rod, adapted to engage corresponding hooks 29 upon the doors opening into the elevator-shaft, and collar 28, journaled upon the upper end of the shaft 20, said collar being connected to the inward extensions 27, substantially as and for the purpose specified.

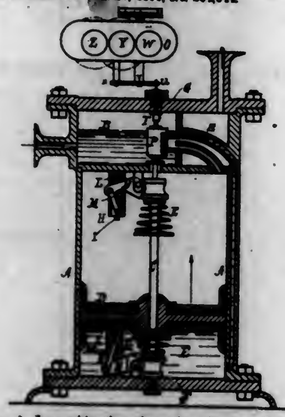
6. The combination, with an elevator-shaft, a car 2, adapted to move therein, and doors 7, opening into said shaft, of swinging levers 10, door-opening springs 11, connecting the levers with the doors, springs 12 for moving the levers in one direction, and devices carried by the car for moving the levers in the opposite direction to cause the door-opening springs to pull the doors to their open position, substantially as described.

7. The combination, with an elevator-shaft, a car 2, adapted to move therein, and doors 7, opening into said shaft, of swinging levers 10, door-opening springs 11, connecting the levers with the doors, springs 12 for moving the levers in one direction, and a cam 15, mounted on the car for moving the levers in the opposite direction to cause the door-opening springs to pull the doors to their open position, substantially as described.

8. The combination, with an elevator-shaft, a car, and doors opening into the shaft, of a main locking mechanism operated by the motion of the car to automatically lock all the doors in their closed positions, supplementary locks for locking each of the doors shut, and devices for unlocking the supplementary lock at each door when the car stops opposite such door, substantially as described.

9. The combination, with an elevator-shaft, a car, and doors opening into the shaft, of a movable vertical locking-rod having locking devices to engage the doors and lock them in their closed positions and gearing operated by the motion of the car to move the locking-rod into position to engage its locking devices with the doors, substantially as described.

10. The combination, with an elevator-shaft, a car, and doors hav-



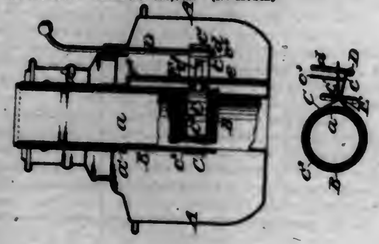
ing hooks, of a vertically-movable locking-rod having hooks and mechanism operated by the motion of the car to move the rod lengthwise and cause its hooks to engage the hooks on the doors, substantially as described.

11. The combination, with an elevator-shaft, a car adapted to move therein, a door 7, lever 10, and spring 11, of a catch 31, having hook 32, bar 34, having a notch 33, and devices for operating said lever and catch, substantially as and for the purpose specified.

12. The combination, with an elevator-shaft, a car adapted to move therein, a door 7, lever 10, and spring 11, of a catch 31, having hook 32, bar 34, having a notch 33, and a cam 15, carried by said car, said cam being adapted to operate the lever 10 and the catch 31, substantially as and for the purpose specified.

13. The combination, with an elevator shaft, car 2, adapted to move therein, a door 7, lever 10, springs 11 and 12, and devices for locking said lever to hold the door shut, of devices carried by said car adapted to operate the lever to open the door, substantially as described.

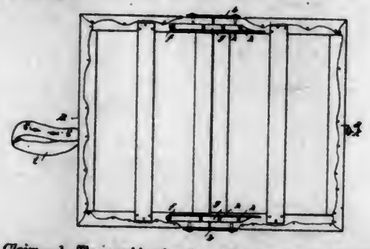
488,278. PISTON METER. TONY BLEIN and EDOUARD BERAUD, Lyons, France. Filed Oct. 13, 1890. Serial No. 367,911. (No model.) Patented in France Mar. 27, 1890, No. 204,644.



Claim.—1. In combination, the casing, the central rod C, arranged to slide in bearings in said casing, the piston D, arranged to slide on the rod, the passages leading to the ends of the cylinder, a valve P, controlling said passages and carried directly on the sliding rod, the springs for placing the said rod under tension, and the means for gripping the said rod, said means being in the path of the sliding piston to be operated thereby, substantially as described.

2. In combination, the casing, the piston therein, the sliding rod C, passing loosely through the piston, the springs on the rod and directly in the path of the piston to be engaged thereby, and the gripping means also in the path of the piston, said means being arranged to grip the rod and being located entirely within the piston-chamber, together with the springs, substantially as described.

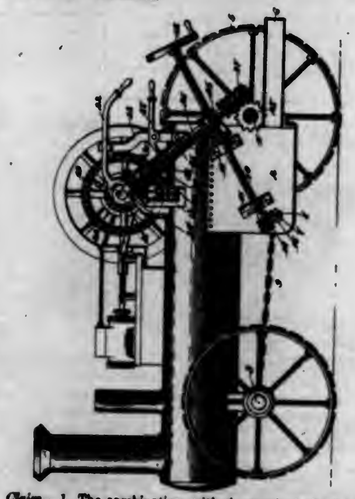
3. In combination, the casing, the valve-chamber, the two passages leading therefrom to the ends of the casing, the piston within the casing, the sliding rod passing loosely through the piston, the means in the path of the piston to be operated thereby for controlling the action of the rod, and a single valve P, controlling the inlet and outlet of the water, said valve being carried directly on the sliding rod C, substantially as described.



488,279. WICK-RAISER. GEORGE S. BROWN, Forestville, Conn., assignor to the Bristol Brass and Clock Company, New York, N. Y. Filed Jan. 22, 1892. Serial No. 418,909. (No model.)

Claim.—1. The wick-raising device comprising a resilient band adapted to surround the wick, the ends of the band projecting laterally therefrom, a guide for drawing the said extended ends of the band toward each other as the band is moved longitudinally along the wick-tube, and means for moving the band, substantially as set forth.

2. The wick-raiser comprising the resilient band adapted to surround the wick and terminating at its ends in laterally-projecting lips, means for interlocking the lips one with the other, an operating device engaged with the lips, and a guide the sides of which approach and recede from each other and between which the lips of the strap are adapted to slide, substantially as set forth.

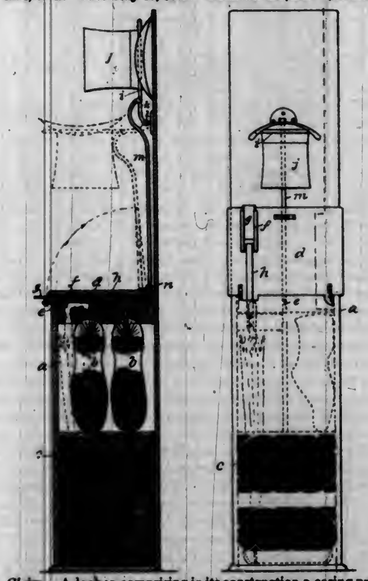


488,280. FOLDING STRETCHER FOR PICTURES. EDUARD R. BUTLER, Ueberlingen, Germany. Filed Mar. 14, 1891. Serial No. 384,983. (No model.)

Claim.—1. The combination, in a folding stretcher for pictures, of a pair of frames provided with curved slits at their ends, with a pair of arms *b*, having pins that engage such curved slits, substantially as specified.

2. The combination of a pair of frames *a* with plates *c*, having curved slits, arms *b*, having pins *e* engaging such slits, and with hook *g* and pin *h*, substantially as specified.

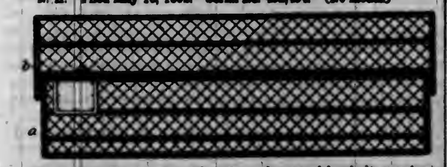
488,281. DRIVING MECHANISM FOR ROAD-ENGINES. CALVIN F. CHRISTOPHER, Spartanburg, S. C., assignor of one-half to David R. Duncan and Thomas C. Duncan, same place. Filed Dec. 2, 1891. Serial No. 413,786. (No model.)



Claim.—1. The combination, with the crank-shaft of a traction-engine, a gear mounted thereon, the drive-axle, and a gear mounted thereon, of an intermediate worm-gear mounted on the lower end of the shaft and meshing with the gear of the axle, a toothed gear loosely mounted on the upper end of the shaft and engaging with the gear of the crank-shaft and having a toothed hub, and a toothed clutch mounted for sliding and non-rotatably on the shaft and provided with a lever for operating the same, so as to engage the toothed hub of said gear, substantially as specified.

2. The combination, with the crank-shaft of a traction-engine, a master-gear mounted thereon, and a pinion mounted loosely on the shaft and provided with a shifting-lever for throwing the same into a

fixed position with the shaft, of a drive-axle, a gear thereon, an inclined power-shaft, a gear on the lower end of said power-shaft engaging that of the axle, a pinion fixed on the upper end of the shaft and adapted to engage with the pinion of the crank-shaft when the latter is drawn outwardly by its shifting-lever, a toothed gear loosely mounted on the power-shaft and having a toothed hub and in mesh with the master-gear, a sliding clutch splined upon the power-shaft, toothed at its upper end, and a lever for throwing the same into engagement with the toothed hub of said gear, substantially as specified.

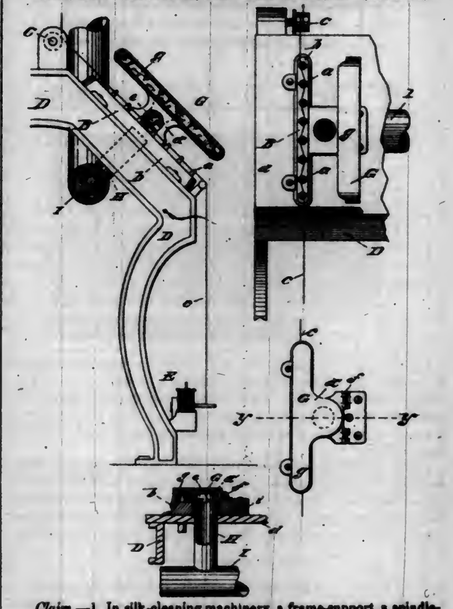


3. The combination, with the crank-shaft of a traction-engine, a master-gear mounted thereon, and a pinion mounted loosely on the shaft and provided with a shifting-lever for throwing the same into a fixed position with the shaft, of a drive-axle, a gear thereon, an inclined power-shaft, a worm-gear on the lower end of said power-shaft engaging that of the axle, a pinion fixed on the upper end of the shaft and adapted to engage with the pinion of the crank-shaft when the latter is drawn outwardly by its shifting-lever, a toothed gear loosely mounted on the power-shaft and having a toothed hub and in mesh with the master-gear, a sliding clutch splined upon the power-shaft, toothed at its upper end, and a lever for throwing the same into engagement with the toothed hub of said gear, substantially as specified.

488,282. LOCKER FOR APPAREL, &c. JAMES M. COTTON, Ashland, N. H. Filed May 10, 1892. Serial No. 432,433. (No model.)

Claim.—A locker comprising in its construction a casing provided with compartments for the reception of articles of apparel, a lid for closing said compartments, said lid having its hinges located at a point intermediate its front and rear edges, a hinged hat-holder, and a rod pivotally connected at one end with the hat-holder and at the other end with the lid at a point in rear of the hinges, as set forth.

488,283. BUNDLE-RACK FOR CARS. JAMES M. COTTON, Ashland, N. H. Filed May 10, 1892. Serial No. 432,434. (No model.)



Claim.—1. The improved bundle-rack comprising in its construction a fixed part and a movable part adapted to be closed and locked upon the fixed part and a key or key-check ejector connected with the fixed part, as set forth.

2. The key or key-check ejector consisting of the stud or eye-bolt *k*, the lever *h*, and the cam *g*, as set forth.

3. A lock comprising in its construction the stud or bolt *d*, provided with notches *e*, the bolts *f f*, the cam *g*, lever *h*, bar *j*, and stud *k*, as set forth.

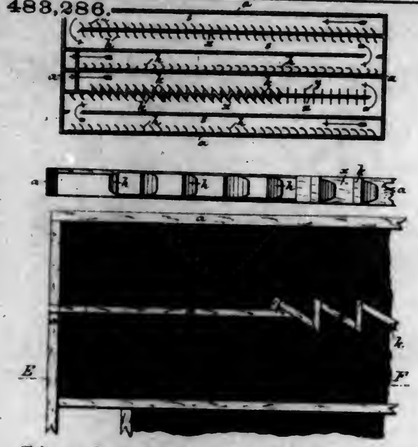
488,284. SILK-MANUFACTURING MACHINERY. LOCIUS DUNCK, Leeds, Mass. Filed Jan. 23, 1892. Serial No. 418,979. (No model.)

Claim.—1. In silk-cleaning machinery, a frame-support, a spindle-bar secured thereon, a train of spindles seated in the spindle-bar, a drawing-roll for taking a thread over said spindles, a removable cover provided with end openings and adapted to fit over the spindles and form an air-passage from end to end of the train and through its open ends, a port in the cover connecting said passage with an exhaust-chamber, and an exhaust-current of air induced through said chamber from the outside of the closed train of spindles, all combined and operated as and for the purpose set forth.

2. The combination, substantially as set forth, of a train of silk-cleaning spindles, a hinged cover for the same, forming an air-passage around the spindles, provided with ports for the admission of air thereto, and an exhaust-chamber communicating with the interior of said cover and through which the air is drawn from the cover, all operating as and for the purpose set forth.

488,285. ELECTRIC CABLE. THEODORE GUILLEAUME, Cologne, Germany. Filed May 5, 1892. Serial No. 431,927. (No model.)

Claim.—1. An electric cable or strand for the same, consisting of one or more pairs of naked conductors, the conductors constituting each pair being separated by a strip of non-conducting material, the conductors and the intervening non-conducting material being twisted together, substantially as herein described.

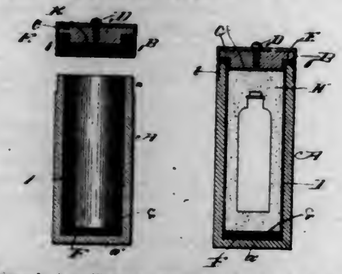


2. In an electric cable, a strip of non-conducting material twisted about its own axis to form spiral grooves or air-channels in which conductors may lie, substantially as herein described.

3. In an electric cable, a strip of non-conducting material twisted about its own axis to form spiral grooves or air-channels and provided with a radially-projecting part, which can be laid over the said grooves or channels for the purpose of closing them, substantially as herein described.

4. In an electric cable, the combination, with the conductors *a* and *a'*, of the non-conducting strip *b*, substantially as and for the purpose herein set forth.

488,286. BOLTING OR SIFTING MACHINE. CARL HAGENMACHER, Buda-Pesth, Austria-Hungary. Filed May 11, 1892. Serial No. 432,691. (No model.)



488,286.

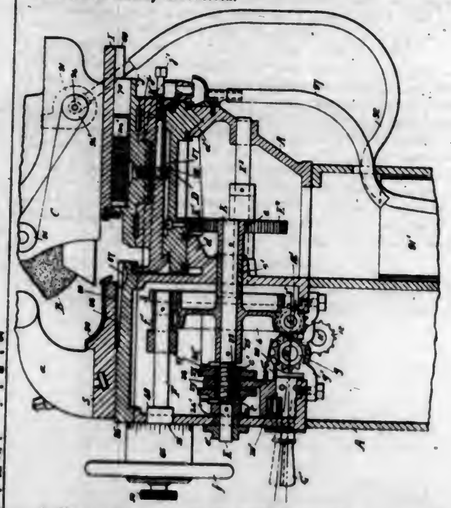
Claim.—1. The combination, with a frame constructed to swing in a substantially-horizontal plane, of guides arranged in the main direction of the travel of the material over the frame and inclined ribs connected to the said guides and arranged with their free ends foremost in the main path of the material, substantially as and for the purpose set forth.

2. The combination, with a frame constructed to swing in a substantially-horizontal plane, of guides arranged in the main direction of the travel of the material over the frame, the said guides consisting of ribs arranged zigzag and provided with end pieces projecting forwardly into the main path of the material, substantially as set forth.

483,287. MAILING-CASE. GUSTAVUS J. JOHNSON, Chicago, Ill., assignor to the Chicago Mailing Case Company, same place. Filed May 16, 1892. Serial No. 433,169. (No model.)

Claim.—1. A mailing-case comprising the thin cap adapted to screw upon the body of the case and the separately-formed plunger arranged within and secured to the cap, substantially as set forth.

2. A mailing-case containing within its bottom a ductile layer of tough pitchy substance, substantially as and for the purpose set forth.



3. A mailing-case containing a body of packing of powdered silicate of magnesia or like silicate, said layer being filled within the case about the vial or receptacle to be mailed, substantially as and for the purpose set forth.

4. A mailing-case comprising a wooden body A, a sheet-metal cap B, and a wooden plunger C, arranged within and secured to the cap, substantially as described.

483,288. GRINDING-MACHINE. ABRAHAM R. LANDIS, Waynesborough, Pa. Filed Feb. 27, 1892. Serial No. 423,006. (No model.)

Claim.—1. The combination, with the shaft E, adapted to traverse the grinding-wheel, and the worm-wheel secured on the said shaft, of a longitudinal driving-shaft, a bracket provided with trunnions encircling the said longitudinal shaft, a worm secured on a short shaft journaled in the bracket and adapted to be moved into and out of gear with the worm-wheel by turning the bracket on its trunnions, and driving-wheels operatively connecting the worm-shaft with the longitudinal shaft, substantially as set forth.

2. The combination, with the longitudinal driving shaft H, of a bracket for carrying the driving-worm, the driving-worm secured on a short shaft journaled in the bracket and adapted to drive the mechanism for traversing the grinding-wheel, a toothed idle-wheel mounted on a pin projecting from the bracket, the toothed wheels provided with clutch-jaws and mounted on the shaft H, the toothed wheels secured on the worm-shaft, and a sliding sleeve provided with clutch-jaws and revolved by the shaft H, whereby the direction of the traverse may be reversed, substantially as set forth.

3. The combination, with the shaft E, adapted to traverse the grinding-wheel, and the worm-wheel secured on the said shaft, of the longitudinal driving-shaft H, a bracket for carrying the driving-worm, the driving-worm secured on a short shaft journaled in the bracket, the toothed driving-wheels and the sliding clutch-sleeve revolving with the shaft H for driving the worm in opposite directions, a sleeve mounted on a screw-threaded portion of the shaft E, an oscillating plate secured on the said sleeve and operatively connected with the said sliding clutch-sleeve, and lugs operatively connected to the shaft E at each end of the sleeve and adapted to engage with lugs operatively connected with the said plate at each end of the travel of the sleeve on the shaft, whereby the said plate may be rocked and the clutch-sleeve slid on the shaft H to reverse the direction of the traverse of the grinding-wheel, substantially as set forth.

4. The combination, with the shaft E, adapted to traverse the grinding-wheel, and the toothed wheel and the worm-wheel, both rigidly secured on the said shaft, of a shaft provided with a toothed pinion gearing into the said toothed wheel, and a hand-wheel for operating the traverse by hand, a worm operatively connected with a driving-shaft and adapted to operate the traverse automatically, and means for disengaging the said hand-wheel and the said worm from operative connection with the said toothed wheel and with the said worm-wheel, respectively, substantially as set forth.

5. The combination, with the shaft H for actuating the traverse mechanism, and the friction-disk secured on the said shaft, of a sleeve sliding in a boss on the bed, a driving-shaft journaled in the said sleeve and having a friction-disk secured to it, a friction-disk interposed between the two aforesaid friction-disks and provided with devices for adjusting its position so that the speed of the shaft H may be varied, and means—such as a screw—for setting up the said sleeve and keeping all the friction-disks in operative contact, substantially as set forth.

6. The combination, with the shaft and the toothed pinion 32, secured thereon and adapted to be turned to vary the extent of the automatic traverse of the grinding-wheel, of a hand-knob adapted to turn the said shaft direct, a worm-wheel, a worm adapted to turn the said shaft through the worm-wheel, and clutch mechanism permitting the said worm and worm-wheel to be disconnected from the said shaft, substantially as set forth.

7. The combination, with the shaft and the toothed pinion 32, secured thereon and adapted to be turned to vary the extent of the automatic traverse of the grinding-wheel, of a hand-knob splined to the said shaft and provided with a friction-clutch, a worm-wheel journaled on the said shaft, a worm gearing into the said worm-wheel, a split sleeve connected to the worm-wheel and provided with a friction-clutch, and a nut screwed on the end of the shaft and adapted to press the two said clutches together and couple the worm-wheel to the shaft, substantially as set forth.

8. The combination, with the retractible shaft and the toothed pinion 32, secured thereon, of the hand knob splined to the said shaft and provided with a friction-clutch, a worm-wheel journaled on the shaft and provided with a projecting pin, a worm for turning the worm-wheel, a sleeve engaging with the said pin and provided with a friction-clutch, a nut screwed on the end of the shaft and adapted to couple the said clutches, and a spring normally holding the said sleeve and worm-wheel coupled together and permitting the shaft to be retracted so that the said sleeve may be clear of the pin, substantially as set forth.

9. The combination, with the shaft F for traversing the grinding-wheel, of a hand-wheel journaled on the said shaft, intermediate driving-wheels operatively connecting the hand-wheel with the said shaft, a locking-bolt adapted to be slid longitudinally in a hole in the said shaft and provided with two reversely-inclined portions, and two friction-blocks resting on the said inclined portions and adapted to connect the hand-wheel direct to the shaft or through the said intermediate driving-wheels, substantially as set forth.

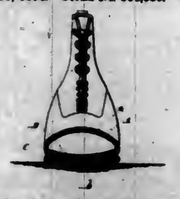
10. The combination, with the shaft F for traversing the grinding-wheel, of a hand-wheel journaled on the said shaft, a stationary toothed wheel encircling the shaft, a toothed wheel journaled on the shaft, a shaft carried by the hand-wheel and provided with two toothed wheels gearing, respectively, into the aforesaid toothed wheels, and locking mechanism adapted to connect the said shaft to the hand-wheel direct or to the said toothed wheel journaled on it, substantially as set forth.

11. The combination, with the shaft F for traversing the grinding-wheel, of a hand-wheel journaled on the said shaft, a toothed wheel also journaled on the said shaft, intermediate toothed wheels operatively connecting the said toothed wheel with the hand-wheel, a locking-bolt sliding in a hole in the said shaft and provided with two reversely-inclined portions, two friction-blocks resting on the said inclined portions and adapted to be pressed against the hubs of the hand-wheel and of the first said toothed wheel, and means for moving the locking-bolt longitudinally, substantially as set forth.

12. The combination, with the grinding-wheel shaft, of a disk of abrasive material and a carrier secured to the said disk and shaft and provided with a chamber upon one side partially inclosing the shaft-bearing, whereby the said disk may be held opposite the middle portion of the said bearing, substantially as set forth.

13. The combination, with the grinding-wheel bracket, of a pivoted plate provided with a toothed rack, a reciprocating plate arranged between the said bracket and pivoted plate and provided with a sleeve projecting through a slot in the bracket, means for clamping the said bracket to the reciprocating plate, and a shaft journaled in the said sleeve and provided with a toothed pinion gearing into the said rack and adapted to adjust the position of the grinding-wheel bracket, substantially as set forth.

14. The combination, with the shaft n, supported by the grinding-wheel bracket and adapted to adjust its position, of a hand-knob splined to the said shaft and provided with a friction-clutch, a worm-wheel journaled on the said shaft and also provided with a friction-clutch, a worm for turning the worm-wheel, springs interposed between the said worm-wheel and hand-knob, and a nut screwed on the end of the shaft and adapted to press the two clutches together against the pressure of the said springs, substantially as set forth.



15. The combination, with the sleeve i and the shaft journaled therein and adapted to adjust the position of the grinding-wheel, of a bracket journaled on the said sleeve and adapted to be secured to it in any position, a worm-wheel operatively connected to the said shaft, and a shaft journaled in the said bracket and provided with a hand-wheel for revolving it, and a worm gearing into the said worm-wheel, substantially as set forth.

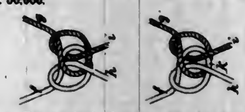
16. The combination, with the sleeve i and the shaft journaled therein and adapted to adjust the position of the grinding-wheel, of a bracket secured to the said sleeve and provided with a bearing, a worm-wheel operatively connected to the said shaft, a shaft journaled in the said bearing and provided with a worm gearing into the said worm-wheel, a hand-wheel secured to the worm-shaft, and an adjustable stop secured to the periphery of the hand-wheel and adapted to come in contact with a stop projecting from the said bearing and to arrest the motion of the hand-wheel, substantially as set forth.

17. The combination, with the plate secured to the top of the bed and provided with recesses in those portions of its upper surface upon which the grindings may fall, and a gutter for carrying off the water from the said recesses, of the pivoted table for carrying the head-stock and the foot-stock, said table being provided with recesses in its under surface corresponding with the aforesaid recesses in the plate and having a longitudinal groove near its front edge, substantially as set forth.

18. The combination, with the bracket K, adapted to be traversed longitudinally, of the revolvable plate J, provided with a central boss journaled in a hole in the said bracket, a pin passing through the said plate into a hole in the bracket, and a clamping-screw engaging with the said bracket and provided with a conical end engaging with a conical hole in the said pin, the said plate being adapted to support the grinding-wheel, substantially as set forth.

483,289. WATERPROOF SHOE. EDWARD ROCHE, Providence, R. I. Filed Feb. 13, 1891. Serial No. 381,355. (No model.)

Claim.—1. The shoe herein described, consisting of the upper, the insole, and the waterproof covering of the size of the inner sole and cemented to the lower or outer surface thereof, the upper being turned over upon the outer surface of the inner sole and its waterproof covering, the outer sole being applied over all, and the parts united in the usual way, as set forth.



2. The shoe herein described, having the waterproof covering of the size of and applied to the outer surface of the inner sole, the upper, and a waterproof layer of the size and form thereof applied between said upper and the lining, the upper, lining, and waterproof layer turned over upon the outer surface of the inner sole and its covering, and the outer sole applied over all and the parts united in the usual way, as set forth.

483,290. PROCESS OF MAKING SALICYLALDEHYDE-ALPHAPHENYLMETHYL HYDRAZONE. ISRAEL ROSE, Frankfort-on-the-Main, Germany. Filed Mar. 16, 1892. Serial No. 425,140. (Specimens.)

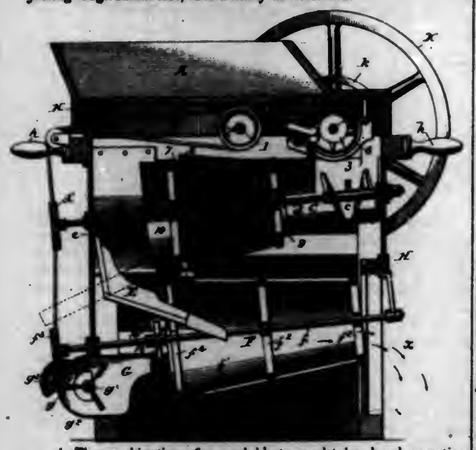
Claim.—1. The chemical composition salicylaldehyde-alphamethylphenylhydrazone, the same being a white crystalline powder, which melts at 73° centigrade, is insoluble in water, but soluble in alcohol and benzene, and is decomposed by boiling it in concentrated hydrogen chloride, substantially as hereinbefore described.

2. The method of making salicylaldehyde-alphamethylphenyl hydrazone, which consists in combining together salicylaldehyde and alphamethylphenyl hydrazine, substantially as and in the proportions hereinbefore set forth.

483,291. KNOT FOR NET FABRICS. ROBERT SEHNLER, Sr., of Vegmar, Germany. Filed Jan. 29, 1892. Serial No. 419,696. (No model.) Patented in Germany July 7, 1891, No. 60,948, and in Italy Nov. 12, 1891, No. 30,606.

Claim.—1. The method of connecting the threads in net fabrics, &c., consisting in arranging and interlacing the said threads to provide each with a loop capable of forming a separate knot and drawing said loops taut to establish an immovable connection comprising a knot for each thread, substantially as set forth.

2. A net fabric having its threads joined by two independent and interlaced knots, affording an immovable connection for each thread with the other, substantially as set forth.

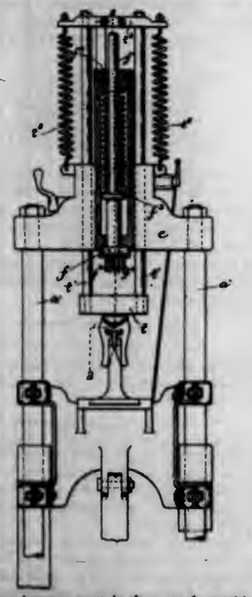


483,292. TOBACCO GRANULATING, GRADING, AND SEPARATING MACHINE. WILLIAM W. SMITH and GEORGE R. HAYNE, York, Pa.; said Smith assignor to said Hayne. Filed Nov. 10, 1891. Serial No. 412,432. (No model.)

Claim.—1. In a machine of the class described, the combination of the granulator, the revolving screen, and the separator consisting of the revolving tube closed excepting at its ends and having internal longitudinal ribs, the blower at one end of said tube arranged to produce a blast of air through the same, and chutes for conveying the material from the granulator to the screen and from the screen to the separator, substantially as described.

2. In a machine of the class described, the combination of the hopper, the granulator, the revolving screen, chutes for receiving the fine dirt and the tobacco, respectively, from said screen, the revolving tapered tube closed excepting at its ends and having internal longitudinal ribs, and the blower at the larger end of the tube, arranged to produce a blast of air through the same, substantially as described.

3. The combination of a revolvable tube having its lower side in-

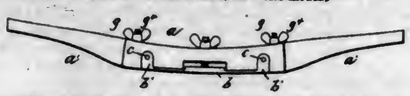


olined to facilitate the discharge of the heavier particles from the lower end with a blower arranged to produce a current of air through the tube to discharge the lighter particles from the upper end, said tube being closed excepting at its ends and provided with inwardly-projecting longitudinal ribs, substantially as described.

4. The combination of a revoluble tapered tube closed excepting at its ends and having inwardly-projecting longitudinal ribs with a blower at the larger end of said tube, arranged to produce a current of air through the same from the larger to the smaller end, substantially as described.

5. In a machine of the class described, the combination, with a revolving tapered tube closed excepting at its ends and having internal longitudinal ribs and an inwardly-projecting circular rib near its larger end, of a blower at the larger end, arranged to produce a blast through the tube toward the smaller end, substantially as described.

483,293. METHOD OF ATTACHING HEELS TO BOOTS OR SHOES. HAROLD A. WEBSTER, Haverhill, assignor to James W. Brooks, trustee, Cambridge, Mass. Filed Apr. 4, 1892. Serial No. 427,626. (No model.)

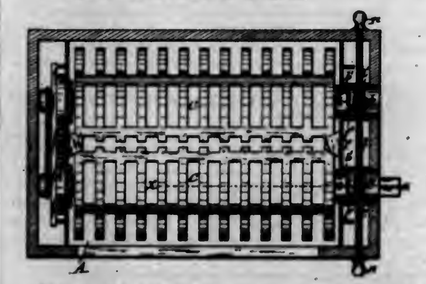


Claim.—1. That improvement in the art of attaching heels to boots or shoes which consists in exerting simultaneously on a gang of attaching-nails a percussive yielding pressure the force of which is absorbed in driving the nails, as set forth.

2. That improvement in the art of attaching heels to boots or shoes which consists in alternately storing up an elastic force and distributing and expending said force percussively on the gang of attaching-nails in the direction required to simultaneously drive said nails, as set forth.

3. That improvement in attaching heels to boots or shoes which consists in first securing the heel-blank by driving all the attaching-nails simultaneously with a percussive yielding blow and then spanking on the top lift with a yielding blow, as set forth.

483,294. SPOKESHAVE. EDWARD D. WHITE, Hartford, Conn. Filed Jan. 22, 1892. Serial No. 418,975. (No model.)



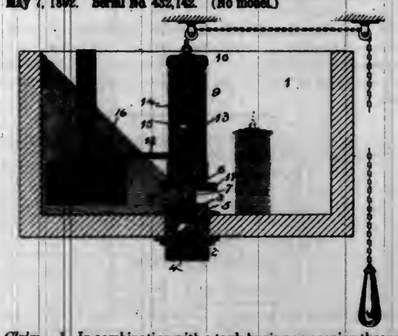
Claim.—1. In a spokeshave, in combination with the body part, the adjustable throat-piece comprising a flat portion, the upturned arms, the fastening means whereby the throat-piece is loosely secured to the body part of the spokeshave, and the clamp-screw whereby the throat-piece is adjusted, the removable blade having the beveled and serrated ends, and the clamp devices having the corresponding beveled and serrated edges, all substantially as described.

2. In a spokeshave, in combination with the body part, an adjustable throat-piece comprising a flat portion, the upturned arms having sockets, the bolt or like part smaller in diameter than said sockets for loosely securing the throat-piece to the body portion of the spokeshave, the clamp-screw whereby the throat-piece is adjusted, the removable blade having the beveled and serrated ends, and the clamp devices having the corresponding beveled and serrated edges, all substantially as described.

3. In a spokeshave, in combination with the body part, the adjustable throat-piece comprising a flat portion, the upturned arms, the fastening means whereby the throat-piece is loosely secured to the body part of the spokeshave, the adjusting-screw having its lower end engaging a socket in the throat-piece and a threaded portion engaging the body of the spokeshave, whereby said adjusting-screw has a vertical movement, the removable blade having the beveled and serrated ends, and the clamp device having the corresponding beveled and serrated edges, all substantially as described.

4. In a spokeshave, in combination with the body part, the adjustable throat-piece comprising a flat portion, the upturned arms, the fastening means whereby the throat-piece is loosely secured to the body part of the spokeshave, the adjusting-screw having its lower end engaging a socket in the throat-piece and a threaded portion engaging a nut located on the body of the spokeshave, the nut, the means for turning the adjusting-screw, the removable blade having the beveled and serrated ends, and the clamp devices having the corresponding beveled and serrated edges, all substantially as described.

483,295. STOVE-GRATE. CHARLES L. REESE, Scranton, Pa. Filed Apr. 18, 1892. Serial No. 429,562. (No model.)



Claim.—1. The combination, with the grate-supporting frame provided with journal-bearings and the grate-bars having their journals mounted removably in said bearings and provided with circumferential grooves in said journals, of a longitudinally-movable rod extending across said journals and engaging the grooves thereof and thereby confining the journals in their bearings, as set forth.

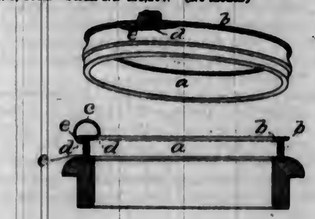
2. In combination with the grate-supporting frame provided with journal-bearings, journals mounted removably in said bearings and provided with circumferential grooves and grate-bars detachably connected to said journals, caps fixed to the frame and extending over the journals, a longitudinally-movable rod passing through said caps at right angles to the journals and engaging the grooves of the latter, and the fire-box provided with a perforation for the insertion and removal of the aforesaid rod, as set forth.

3. In combination with the grate-bars, journals provided with circumferential grooves, the supporting-frame *f*, formed with the journal-bearings *f' f'* and lug *g*, the yoke *h*, formed with caps *h' h'* and grooves *i i* in said caps, the pin *k*, passing through said lug and confining the yoke in its position, and the rod *l*, passing through the grooves of the caps and journals, substantially as described and shown.

4. In combination with the grate-supporting frame and grate-bars, journals seated in said frame and provided with circumferential grooves, the fire-box provided with apertures through its front and rear walls, a rod extending through the said apertures and grooves of the journals and having screw-threaded ends protruding from the fire-box, and nuts on said ends to confine the rod in its aforesaid position and allow said rod to be withdrawn from either end, substantially as set forth.

483,296. TANK-VALVE. CORNELIUS BIRKERY, Hartford, Conn., assignor to the Birkery Manufacturing Company, same place. Filed May 7, 1892. Serial No. 432,142. (No model.)

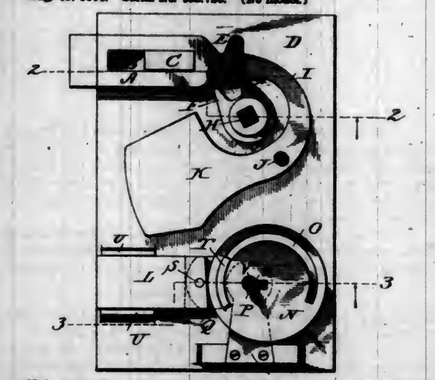
Claim.—1. In combination with a tank having an opening through the bottom and a valve-seat around the opening, a reciprocating and rotary cylinder supported above the opening, a handle and connection for lifting the cylinder, a float located adjacent to the cylinder, a trip attached to the float, and an arm projecting from the cylinder into the path of the trip, substantially as specified.



2. In combination with a tank having an opening through the bottom and a valve-seat around the opening, a reciprocating and rotary cylinder supported above the opening, a handle and connection for lifting the cylinder, a float located adjacent to the cylinder, and an arm projecting from the cylinder and adapted to engage the float, substantially as specified.

3. In combination with a tank having an opening through the bottom and a valve-seat around the opening, a reciprocating cylinder supported above the opening, a handle and connection for lifting the cylinder, a stationary rod supported by a projection from the valve-seat, and a valve-disk connected with said rod, substantially as specified.

4. In combination with a tank having an opening through the bottom and a valve-seat around the opening, a movable cylinder supported above the opening, a handle and connection for lifting the cylinder, an incline for rotating it when lifted, a float located adjacent to the cylinder, and an arm projecting from the cylinder, adapted to engage the float, substantially as specified.



5. In combination with a tank having an opening through the bottom and a valve-seat around the opening, a cylinder attached to a sleeve borne by a post supported by the tank, a handle and connection for lifting the cylinder, an incline and pin for rotating the cylinder when lifted, a float located adjacent to the cylinder, and an arm projecting from the cylinder and adapted to engage the float, substantially as specified.

483,297. SPINNING-RING. JOHN BOOTH, Central Falls, R. I. Filed Apr. 8, 1892. Serial No. 428,297. (No model.)

Claim.—A spinning-ring having a point in its circumference at which it is reduced or cut away to permit the traveler to be applied without spreading, the ring beyond such reduced or cut-away point being of normal or enlarged size, whereby the traveler may become locked on the ring after passing the reduced point, as set forth.

483,298. LOCK. HERMAN BRUNS, Bremerhaven, Germany. Filed Aug. 18, 1891. Serial No. 402,723. (No model.)

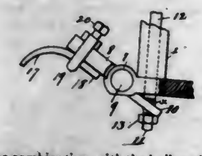
Claim.—1. A lock having a reversible latch formed on its top and bottom faces with a notch E, a gravity-lever having one end bearing directly against the rear end of the latch to thrust it forward and formed with a recess to receive a knob-spindle and collar thereon, and the knob-spindle fitting in said recess and provided with a collar having a finger to fit in the notch of the latch and bear against the latch, said spindle and collar being located below said latch, substantially as and for the purposes described.

2. A lock having a bolt, a pivoted member secured thereto, and an eccentric to which the pivoted member is connected, whereby the bolt is thrust forward and drawn backward by the movement of said eccentric, substantially as set forth.

3. A lock having a bolt formed with a projection on opposite sides thereof and an eccentric lying on each side of the bolt, having a way into which the projection on each side of the bolt fits, whereby said bolt is moved in opposite directions by said eccentric, substantially as set forth.

4. In a lock, the combination of the bolt having a projection thereon, an eccentric having a way to receive said projection, whereby the bolt and eccentric are moved together, a bracket, a slotted thimble passing through said bracket, and a key to pass through said thimble and engage the eccentric to turn the same to shift the bolt, substantially as set forth.

5. A lock having plates or disks formed with openings for the passage of a key and a movable sleeve connected with some of said plates or disks to turn the same and destroy the register to prevent the passage of a key, whereby the lock is prevented from being picked, substantially as described.

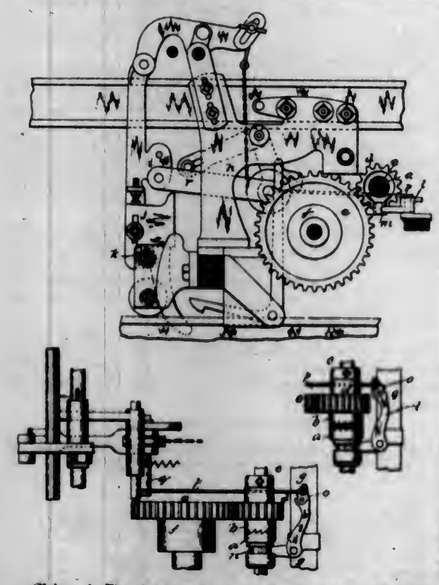


483,299. CLOTHES-LINE. JONATHAN W. CADWELL, Meriden, Conn. Filed Aug. 7, 1891. Serial No. 401,968. (No model.)

Claim.—The combination, with a main endless clothes-line supported on two pulleys with its strands in one vertical plane, an auxiliary line attached removably to the lower strand of the main clothes-line by a snap-hook that engages a projection on this strand near one pulley, and a rope-clamp having a cam-lever, to the projecting end of which lever the other end of the auxiliary line is attached to hold said

line extended by the weight imposed on it, of intermediate hooks that connect the auxiliary line with the main line at intervals, substantially as described.

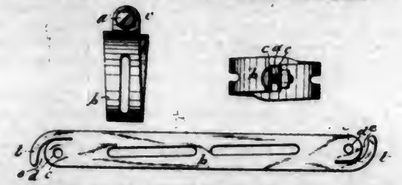
483,300. EARTH-AUGER. WILLIAM H. CLARK and HENRY C. KEEVER, Kingfisher, Okla. Filed Feb. 25, 1892. Serial No. 422,777. (No model.)



Claim.—1. The combination, with the hollow shank provided with a handle, of a spider having a pivoted arm provided with a forked extension 10, a sliding rod arranged within said shank and having a spring-catch at its upper end and a nut or head at its lower end, and cutting-blades removably secured to the spider by clamp-yokes 19 and set-screws 20, substantially as described.

2. The combination, with the hollow shank and spider, of cutting-blades provided with shanks and removably secured to the arms of the spider by clamp-yokes 19 and set-screws 20, substantially as set forth.

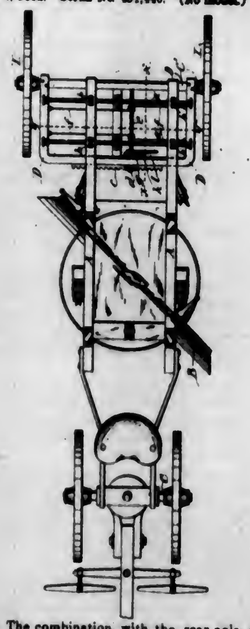
483,301. COTTON-SPINNING MULE. CHARLES A. DAM, Lowell, Mass. Filed May 2, 1892. Serial No. 431,506. (No model.)



Brief.—The clutch whereby the winding mechanism may be thrown out of and into operation is operated by a bell-crank lever from the follower-leg, the arm of the lever connected indirectly to the follower-leg having a swivel or latch whereby a limited movement of the latter will not affect the clutch-lever, so that the clutch is held out of engagement until the backing-off is effected and the follower is locked.

Claim.—1. The shaft *c* and the clutch-box thereon, comprising the fixed and sliding clutch parts, in combination with the lever *l*, one arm of which is engaged with the sliding clutch part, the end of the other arm being provided with a swivel or latch adapted to have a limited movement independent of the lever, the follower-leg, and means connecting the follower-leg with the swivel or latch, as set forth.

2. The combination, with the shaft *c*, of the clutch-box comprising the fixed and sliding parts, means connecting the fixed parts with the band-cylinder, a bell-crank lever, one arm of which is engaged with the sliding part to operate the same, the end of the other arm being provided with a swivel adapted to be moved to a limited extent without affecting the movement of the lever, and connections between the said swivel and follower-leg, as set forth.



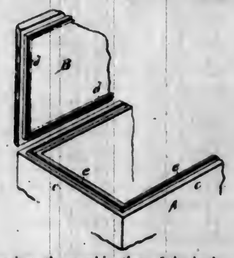
483,302. HOSE-CLAMP. AUSTIN R. DICKINSON, Syracuse, N. Y., assignor to the Syracuse Specialty Manufacturing Company, same place. Filed Jan. 6, 1892. Serial No. 417,173. (No model.)

Claim.—1. As an improved article of manufacture, a hose-clamp formed of a single band of sheet metal perforated at each end and tongues extending from one or both ends, said band being bent circular shape and its perforated-end portions bent radially outward and the tongues continued in the same line of curvature with the band and extending under the opposite end of the band, substantially as described and shown.

2. The within-described blank, consisting of the band *b*, having the perforated-end portions *c c* and the tongues *t t*, respectively, on opposite sides of said end portions and extending beyond the same and toward the opposite edges of the band, substantially as described and shown.

483,303. ROAD-SCRAPER. SAMUEL B. JAMIESON, Marathon, N. Y. Filed May 2, 1892. Serial No. 431,446. (No model.)

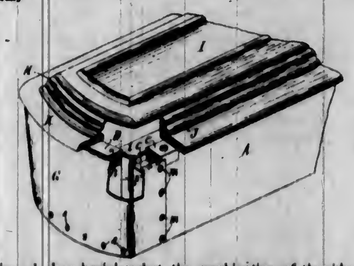
Claim.—1. The combination, with the rear axle, of a platform-frame rigidly secured to said axle and the main frame mounted movable laterally on said platform-frame, as set forth.



2. The combination, with the rear axle, of a platform-frame rigidly attached to said axle, the main frame mounted movable laterally on said platform-frame, and locking devices confining said main frame in its adjusted position on the platform, as set forth.

3. The combination, with the rear axle, of a platform-frame rigidly attached to said axle, guides extending across said frame parallel with the axle, the main frame connected movable laterally to said guides, and locking devices confining the main frame in its adjusted position, as set forth.

4. The combination, with the rear axle, of a platform-frame fixed to said axle, guide-rods secured to said frame parallel with the axle, the main frame connected to said guide-rods movably lengthwise of the latter, a shaft journaled on the main frame parallel with the line of draft, chains or cables wound upon said shaft and extending in opposite directions therefrom and secured to the platform-frame, a ratchet-wheel fixed to said shaft, a lever fulcrumed on the shaft, and a pawl connected to said lever and engaging the ratchet-wheel, as set forth and shown.



5. The combination, with the rear axle, of a platform-frame fixed to said axle, guide-rods secured to said frame parallel with the axle, the main frame connected to said rods movably lengthwise of the latter, a rack on the platform-frame parallel with the guide-rods, and a bolt connected to the main frame and engaging said rack, as and for the purpose set forth.

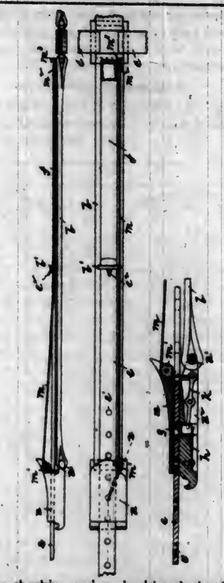
483,304. BURIAL-CASKET. J. ALBERT JONES and CHARLES E. MYERS, Marcellus, Mich., assignors of one-half to Dan Russell and Alexander Taylor, same place. Filed Mar. 31, 1892. Serial No. 427,183. (No model.)

Claim.—In a casket, the combination of the body and cover, the wedge-shaped packing-strip attached to the edge of the body, and the metal strip attached to the under side of the cover, said strip having the tapering groove therein that receives said packing-strip, and also having the acuminated side flanges that are adapted to be forced into the edge of the body when the cover is placed thereon, whereby a tight joint is formed and the packing-strip is completely protected from the elements.

483,305. BURIAL-CASKET. J. ALBERT JONES and CHARLES E. MYERS, Marcellus, Mich., assignors of one-half to Dan Russell and Alexander Taylor, same place. Filed May 11, 1892. Serial No. 432,600. (No model.)

Claim.—1. In a burial-casket, the combination of the sides and bottom and the adjacent metal sheets attached to said sides and embracing the ends thereof between their adjacent faces, forming a hollow metallic end to the casket, substantially as set forth.

2. In a burial-casket, the combination of the sides and bottom, the adjacent metal sheets attached to the sides and forming the ends of the casket, and the wooden rails interposed between said adjacent sheets at the top and bottom, substantially as specified.



3. In a burial-casket, the combination of the sides and bottom, the framework at the end, and the metal sheet mounted on said framework and attached to the sides.

4. In a burial-casket, the combination of the sides and bottom, the framework at the end, and the metal sheets inclosing said framework and the ends of the sides onto which they extend.

5. In a burial-casket, the combination of the sides and bottom, the adjacent metal sheets forming the end, said sheets having flanges at their upper edges, and the rails interposed between said sheets, the upper rail having grooves in its opposite faces that receive the flanges of said sheets, substantially as specified.

6. In a burial-casket, the combination of the sides and bottom, the sides having vertical grooves in opposite faces thereof, and the adjacent metal sheets forming the end of the casket, the ends of said sheets embracing the sides and having flanges that enter the grooves therein, substantially as specified.

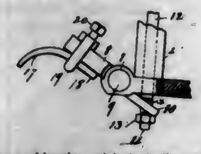
483,306. HORSE-CHECKING DEVICE. ISRAEL LABELLE, Holyoke, Mass. Filed Apr. 2, 1892. Serial No. 427,478. (No model.)

Claim.—1. In a checking and unchecking device for harness, the combination, with a saddle having extending therethrough from front to rear a passage to receive a strap, of a strap adapted for longitudinal movement through said passage, said strap having at its front end means for detachably securing it to the checkrein and having its rear portion superposed and guided for longitudinal movement upon the back-strap of the harness, a spring-actuated detent movably supported upon the saddle beneath said passage and adapted in its normal position to engage said strap and securely hold it against forward movement, and a cord or similar device extending along and guided by the back-strap to the rear end of the latter and having its front end operatively connected with said detent, whereby by pulling said cord the detent will be operated to release said strap, arranged and operating substantially as set forth.

2. In a checking and unchecking device for harness, the combination, with the saddle, of a strap passing loosely therethrough, said strap being adapted at its front end to be connected to the checkrein and having its rear end connected to the back-strap of the harness near the rear end of the latter by an elastic extension of the former, adapted to automatically check the horse, a spring-actuated detent on the saddle, adapted to engage said strap and hold it against forward movement, and means, substantially as described, for retracting said detent from the rear end of the harness to cause it to release said strap, substantially as set forth.

3. The combination, with the saddle *a*, having a passage *p* extending therethrough, of the strap *e*, passing through said passage, said strap having its rear end secured to the back-strap *b*, its front end adapted to be connected to the checkrein and being elastic at some point in its length, whereby it is adapted to automatically check the horse, a spring-actuated detent movably supported upon the saddle and adapted to engage said strap *e* and hold it from movement in a forward direction, and cord *m*, operatively connected with said detent at its front end and having its rear portion suitably guided upon said back-strap, substantially as set forth.

4. The combination, with saddle *a*, provided with passage *p*, of detent *o*, pivotally supported upon the saddle adjacent to said passage and adapted to project into the latter in its normal position, spring *s* for retaining said detent in its normal position, and flexible metallic connection *t*, secured at its front end to said detent and having its rear end projecting beyond the rear side of the saddle and having cord *m* connected to said rear end thereof, substantially as and for the purpose described.



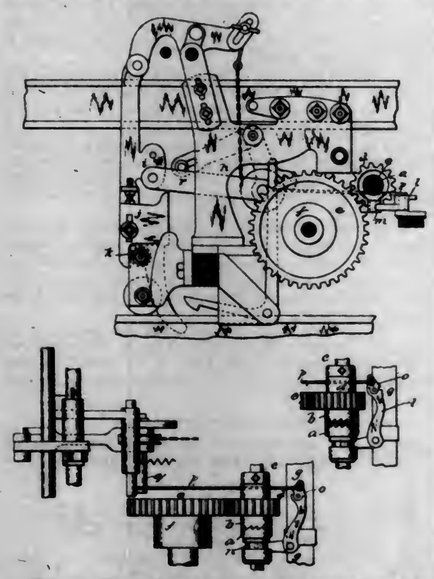
483,307. FIREPROOF PAINT. RUFUS W. LAMPREY, Manchester, N. H. Filed Nov. 2, 1891. Serial No. 410,621. (No specimens.)

Claim.—1. A fireproof paint comprising the following ingredients, namely: ground slate, ground mica, a suitable gum or gums, an alkali, such as soda carbonate, oil, lead carbonate, and a salt of ammonia, substantially as described.

2. The improved fireproof paint consisting of ground slate, ground

hoe extended by the weight imposed on it, of intermediate hooks that connect the auxiliary line with the main line at intervals, substantially as described.

483,300. EARTH-AUGER. WILLIAM H. CLARK and HENRY C. KEMPER, Kingfisher, Okla. Filed Feb 26, 1892. Serial No. 423,777. (No model.)



Claim.—1. The combination, with the hollow shank provided with a handle, of a spider having a pivoted arm provided with a forked extension 10, a sliding rod arranged within said shank and having a spring-catch at its upper end and a nut or head at its lower end, and cutting-blades removably secured to the spider by clamp-yokes 19 and set-screws 20, substantially as described.

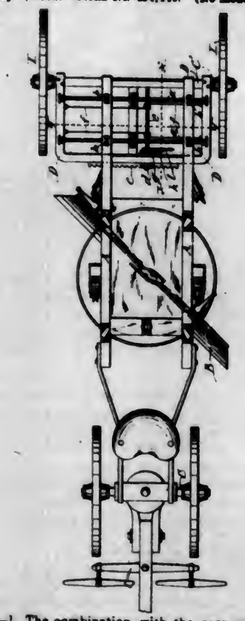
2. The combination, with the hollow shank and spider, of cutting-blades provided with shanks and removably secured to the arms of the spider by clamp-yokes 19 and set-screws 20, substantially as set forth.

483,301. COTTON-SPINNING MULE. CHARLES A. DAN, Lowell, Mass. Filed May 2, 1892. Serial No. 431,506. (No model.)

Brief.—The clutch whereby the winding mechanism may be thrown out of and into operation is operated by a bell-crank lever from the follower-leg, the arm of the lever connected indirectly to the follower-leg having a swivel or latch whereby a limited movement of the latter will not affect the clutch-lever, so that the clutch is held out of engagement until the backing-off is effected and the follower is locked.

Claim.—1. The shaft *c* and the clutch-box thereon, comprising the fixed and sliding clutch parts, in combination with the lever *l*, one arm of which is engaged with the sliding clutch part, the end of the other arm being provided with a swivel or latch adapted to have a limited movement independent of the lever, the follower-leg, and means connecting the follower-leg with the swivel or latch, as set forth.

2. The combination, with the shaft *c*, of the clutch-box comprising the fixed and sliding parts, means connecting the fixed parts with the band-cylinder, a bell-crank lever, one arm of which is engaged with the sliding part to operate the same, the end of the other arm being provided with a swivel adapted to be moved to a limited extent without affecting the movement of the lever, and connections between the said swivel and follower-leg, as set forth.



483,302. HOSE-CLAMP. AUSTIN R. DICKINSON, Syracuse, N. Y., assignor to the Syracuse Specialty Manufacturing Company, same place. Filed Jan. 6, 1892. Serial No. 417,178. (No model.)

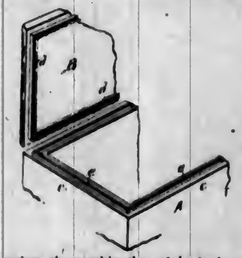
Claim.—1. As an improved article of manufacture, a hose-clamp formed of a single band of sheet metal perforated at each end and tongues extending from one or both ends, said band being bent circular shape and its perforated-end portions bent radially outward and the tongues continued in the same line of curvature with the band and extending under the opposite end of the band, substantially as described and shown.

2. The within-described blank, consisting of the band *b*, having the perforated-end portions *c c* and the tongues *t t*, respectively, on opposite sides of said end portions and extending beyond the same and toward the opposite edges of the band, substantially as described and shown.

483,303. ROAD-SCRAPER. SAMUEL B. JAMESON, Marathon, N. Y. Filed May 2, 1892. Serial No. 431,446. (No model.)

Claim.—1. The combination, with the rear axle, of a platform-frame rigidly secured to said axle and the main frame mounted movable laterally on said platform-frame, as set forth.

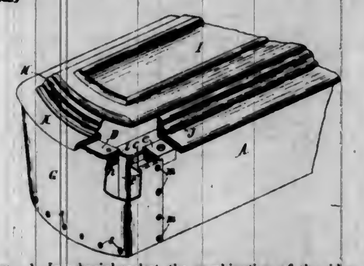
2. The combination, with the rear axle, of a platform-frame rigidly attached to said axle, the main frame mounted movable laterally on said platform-frame, and locking devices confining said main frame in its adjusted position on the platform, as set forth.



3. The combination, with the rear axle, of a platform-frame rigidly attached to said axle, guides extending across said frame parallel with the axle, the main frame connected movable laterally to said guides, and locking devices confining the main frame in its adjusted position, as set forth.

4. The combination, with the rear axle, of a platform-frame fixed to said axle, guide-rods secured to said frame parallel with the axle, the main frame connected to said guide-rods movably lengthwise of the latter, a shaft journaled on the main frame parallel with the line of draft, chains or cables wound upon said shaft and extending in opposite directions therefrom and secured to the platform-frame, a ratchet-wheel fixed to said shaft, a lever fulcrumed on the shaft, and

a pawl connected to said lever and engaging the ratchet-wheel, as set forth and shown.



5. The combination, with the rear axle, of a platform-frame fixed to said axle, guide-rods secured to said frame parallel with the axle, the main frame connected to said rods movably lengthwise of the latter, a rack on the platform-frame parallel with the guide-rods, and a bolt connected to the main frame and engaging said rack, as and for the purpose set forth.

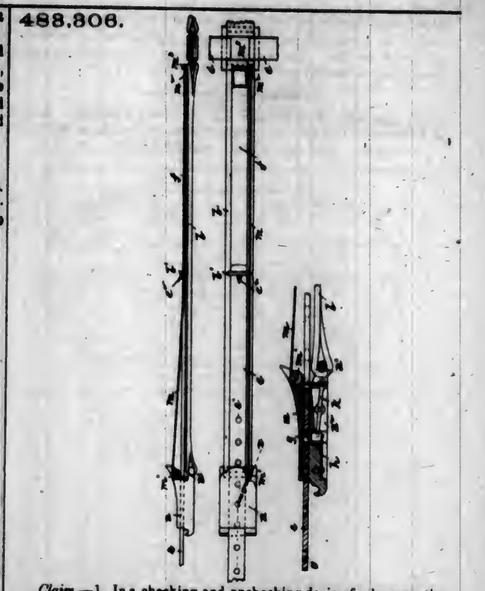
483,304. BURIAL-CASKET. J. ALBERT JONES and CHARLES R. MYERS, Marcellus, Mich., assignors of one-half to Dan Russell and Alexander Taylor, same place. Filed Mar. 31, 1892. Serial No. 427,183. (No model.)

Claim.—In a casket, the combination of the body and cover, the wedge-shaped packing-strip attached to the edge of the body, and the metal strip attached to the under side of the cover, said strip having the tapering groove therein that receives said packing-strip, and also having the acuminated side flanges that are adapted to be forced into the edge of the body when the cover is placed thereon, whereby a tight joint is formed and the packing-strip is completely protected from the elements.

483,305. BURIAL-CASKET. J. ALBERT JONES and CHARLES R. MYERS, Marcellus, Mich., assignors of one-half to Dan Russell and Alexander Taylor, same place. Filed May 11, 1892. Serial No. 432,600. (No model.)

Claim.—1. In a burial-casket, the combination of the sides and bottom and the adjacent metal sheets attached to said sides and embracing the ends thereof between their adjacent faces, forming a hollow metallic end to the casket, substantially as set forth.

2. In a burial-casket, the combination of the sides and bottom, the adjacent metal sheets attached to the sides and forming the ends of the casket, and the wooden rails interposed between said adjacent sheets at the top and bottom, substantially as specified.



3. In a burial-casket, the combination of the sides and bottom, the framework at the end, and the metal sheet mounted on said framework and attached to the sides.

4. In a burial-casket, the combination of the sides and bottom, the framework at the end, and the metal sheets inclosing said framework and the ends of the sides onto which they extend.

5. In a burial-casket, the combination of the sides and bottom, the adjacent metal sheets forming the end, said sheets having flanges at their upper edges, and the rails interposed between said sheets, the upper rail having grooves in its opposite faces that receive the flanges of said sheets, substantially as specified.

6. In a burial-casket, the combination of the sides and bottom, the sides having vertical grooves in opposite faces thereof, and the adjacent metal sheets forming the end of the casket, the ends of said sheets embracing the sides and having flanges that enter the grooves therein, substantially as specified.

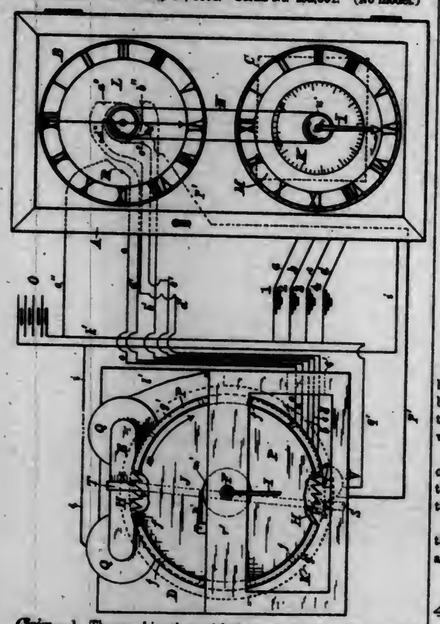
483,306. HORSE-CHECKING DEVICE. ISRAEL LABELLE, Holyoke, Mass. Filed Apr. 2, 1892. Serial No. 427,478. (No model.)

Claim.—1. In a checking and unchecking device for harness, the combination, with a saddle having extending therethrough from front to rear a passage to receive a strap, of a strap adapted for longitudinal movement through said passage, said strap having at its front end means for detachably securing it to the checkrein and having its rear portion superposed and guided for longitudinal movement upon the back-strap of the harness, a spring-actuated detent movably supported upon the saddle beneath said passage and adapted in its normal position to engage said strap and securely hold it against forward movement, and a cord or similar device extending along and guided by the back-strap to the rear end of the latter and having its front end operatively connected with said detent, whereby by pulling said cord the detent will be operated to release said strap, arranged and operating substantially set forth.

2. In a checking and unchecking device for harness, the combination, with the saddle, of a strap passing loosely therethrough, said strap being adapted at its front end to be connected to the checkrein and having its rear end connected to the back-strap of the harness near the rear end of the latter by an elastic extension of the former, adapted to automatically check the horse, a spring-actuated detent on the saddle, adapted to engage said strap and hold it against forward movement, and means, substantially as described, for retracting said detent from the rear end of the harness to cause it to release said strap, substantially as set forth.

3. The combination, with the saddle *a*, having a passage *p* extending therethrough, of the strap *c*, passing through said passage, said strap having its rear end secured to the back-strap *b*, its front end adapted to be connected to the checkrein and being elastic at some point in its length, whereby it is adapted to automatically check the horse, a spring-actuated detent movably supported upon the saddle and adapted to engage said strap *c* and hold it from movement in a forward direction, and cord *m*, operatively connected with said detent at its front end and having its rear portion suitably guided upon said back-strap, substantially as set forth.

4. The combination, with saddle *a*, provided with passage *p*, of detent *o*, pivotally supported upon the saddle adjacent to said passage and adapted to project into the latter in its normal position, spring *e* for retaining said detent in its normal position, and flexible metallic connection *t*, secured at its front end to said detent and having its rear end projecting beyond the rear side of the saddle and having cord *m* connected to said rear end thereof, substantially as and for the purpose described.



483,307. FIREPROOF PAINT. RUFUS W. LAMPREY, Manchester, N. H. Filed Nov. 2, 1891. Serial No. 410,621. (No specimens.)

Claim.—1. A fireproof paint comprising the following ingredients, namely: ground slate, ground mica, a suitable gum or gums, an alkali, such as soda carbonate, oil, lead carbonate, and a salt of ammonia, substantially as described.

2. The improved fireproof paint consisting of ground slate, ground

mica, lead carbonate, ground calcium sulphate, a suitable gum or gums, a salt of an alkali, such as soda carbonate, a soluble salt of ammonia, and an oil, the slate, mica, calcium, and gum being boiled in water, substantially as described.

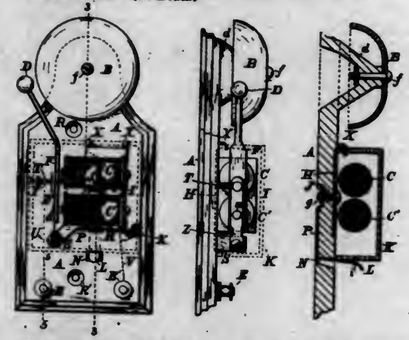
483,308. WATCHMAN'S ELECTRIC TIME-RECORDER. NELSON H. RAYMOND, Buffalo, N. Y., assignor of one-half to Charles M. Proctor, same place. Filed Aug. 17, 1891. Serial No. 402,801. (No model.)

Claim.—1. The combination, with the toothed wheel H, provided with the pointer I, of the electro-magnet Q and the pivoted lever J, having the pawls T and S, located on opposite sides of the wheel and provided with the armature E, attached to the lever between its pivot and one of the pawls, the said lever being arranged to vibrate in a plane at right angles with the plane in which the wheel revolves, substantially as described.

2. The combination, with the toothed wheel H, carrying the pointer I, and the contact-wheel P, of the electro-magnet Q, the vibrating lever J, having pawls T and S, and one or more electric circuits *a*, having circuit-closing device 1, substantially as described.

3. The combination, with the toothed wheel H, carrying the pointer I, and the contact-wheel P, of the electro-magnet Q, the vibrating lever J, having pawls T and S, the retolving dial K, clock mechanism L, arranged to revolve the dial K, and electrical mechanism operated by the clock and adapted to make a visible mark on the dial at predetermined intervals, substantially as described.

4. The combination, with the toothed wheel H, carrying the pointer I, and the contact wheel P, of the electro-magnet Q, the vibrating lever J, having pawls T and S, one or more electric circuits *a*, having circuit-closing device 1, and a revolving dial operated by clockwork, and electrical mechanism operated by the clock and adapted to make a visible mark on the dial, substantially as described.



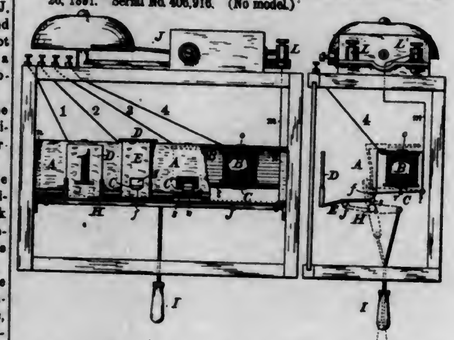
5. The combination, with the clock-movement L, of the electrically-operated pointer I, the dial M, and the revolving dial K, operated from the clock movement by a suitable connection, as N, substantially as described.

6. The combination, with the clock-movement L, of the electrically-operated pointer I, the dial M, the revolving dial K, operated from the clock-movement by a suitable connection, as N, and suitable electrical mechanism operated by the clock and adapted to make a visible mark on the dial, substantially as described.

7. The combination, with the revolving pointer I, arranged to be operated by the making or breaking of an electric circuit or circuits, of the clock-movement L, the revolving dial K, actuated by the clock-movement, and suitable electrical mechanism adapted to make visible marks on the dial at predetermined intervals at times when the pointer-circuit is inoperative, substantially as described.

8. The combination, with the revolving pointer I, of the toothed wheel H, contact-wheel P, dial K, electro-magnet Q, lever J, having pawls T and S, clock L, arranged to actuate the dial, the needle M, electro-magnet V, and suitable mechanism for closing the electric circuit operated by the clock, substantially as described.

483,309. ELECTRIC BELL. NELSON H. RAYMOND, Buffalo, N. Y., assignor to Charles M. Proctor, same place. Filed Aug. 29, 1891. Serial No. 404,053. (No model.)

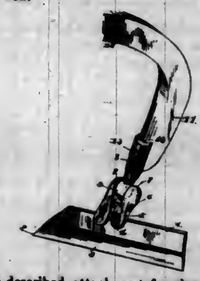


Claim.—1. The combination, in an electric bell, of the porcelain base A, having integral projecting boss *d*, the gong O, attached to the boss by screw *f*, and the electro-magnet C, having frame H, seated on the front of the base and secured thereto by a suitable attaching device, substantially as described.

2. The combination, with the porcelain base of an electric bell, of an electro-magnet having a frame seated in a recess in the front of the base and secured thereto by a suitable attaching device, substantially as described.

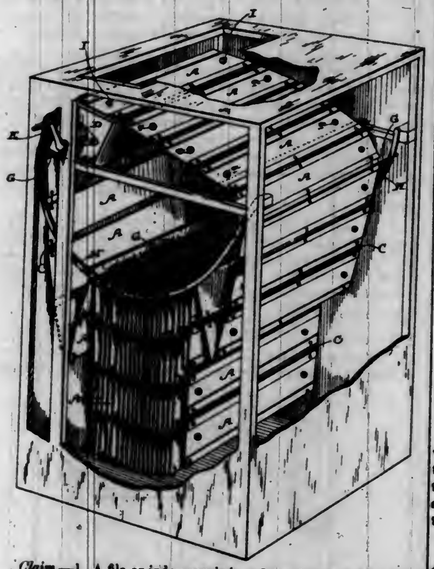
3. The combination, with the porcelain base of an electric bell, of the electro-magnet C, the frame H, cover K, spring L, passing through an aperture in the base, and bolt or screw J, substantially as described.

483,310. ELECTRICAL ANNUNCIATOR. NELSON H. RAYMOND, Buffalo, N. Y., assignor to Charles M. Proctor, same place. Filed Sept. 26, 1891. Serial No. 406,916. (No model.)



Claim.—1. The combination, in an electrical annunciator, of the U-shaped sheet metal frame A, provided with the stiffening-wires *s* and *t*, the magnet B, armature C, pivoted on one of the stiffening-wires, and the drop D, pivoted on the wire on the opposite side of the frame, substantially as described.

2. The combination, in an electric annunciator, of the U-shaped sheet-metal frame A, provided with the stiffening-wires *s* and *t* at its edges and supported within a suitable inclosing case on the lugs *a a*, fitting the interior of the trough, the magnet B, armature C, pivoted on one of the stiffening-wires, and the drop D, pivoted on the wire on the opposite edge of the frame, substantially as described.



488,311. PLOW. SYLVESTER REHALT, Johnstown, Nebr. Filed Mar. 16, 1892. Serial No. 425,141. (No model.)

Claim.—1. The herein-described attachment for plow-beams, consisting of the mold-board, the pivoted jaws rising therefrom and having concaved inner faces forming sockets, the binding-bolt passed through the jaws below the sockets and above the pivots, and the shank adapted to be secured to the plow-standard and having its lower end terminating between the jaws in a spherical head or ball, substantially as specified.

2. The herein-described attachment for plows, consisting of the mold-board, oblong in shape and terminating at one end in a beveled point, the opposite pivoted jaws rising from the mold-board and provided at their inner sides with concaved sockets, a clamping-screw passed through the jaws, a shank having a concaved rear side adapted to fit a plow-standard, a bolt for the same, and a roughened head at the lower end of the shank fitting between the jaws, substantially as specified.

483,312. CONTINUOUS FILE OR INDEX. ALEXANDER J. RUDOLPH, San Francisco, Cal. Filed May 20, 1892. Serial No. 433,761. (No model.)

Claim.—1. A file or index consisting of a series of cards or holders linked together at their edges to form a flexible endless belt, rods or hangers projecting from the ends of the cards at certain intervals, and yokes adapted to receive these rods and suspend the cards in successive sheets, substantially as herein described.

2. A file or index consisting of a series of cards or holders linked together at their edges to form a flexible endless belt, rods or hangers projecting from the ends of the cards at certain intervals, yokes adapted to receive these rods and suspend the cards in sheets, and a mechanism by which the cards are transferred singly and successively from one side to the other and exposed for inspection, substantially as herein described.

3. A file or index consisting of a series of cards or holders having their edges flexibly connected together to form a series or endless belt, rods or hangers projecting from the ends of cards at certain intervals, and yokes so fixed as to receive the rods or hangers and suspend the cards therefrom in folded sheets, in combination with a polygonal drum, the faces of which correspond with the shape of the cards, and guides with which the cards engage as they pass over the drum, and a means by which the drum is rotated, substantially as herein described.

483,313. LIBRARY-CATALOGUE. ALEXANDER J. RUDOLPH, San Francisco, Cal. Filed June 9, 1892. Serial No. 436,150. (No model.)

Claim.—1. In a library-catalogue apparatus, a series of rigid slip-

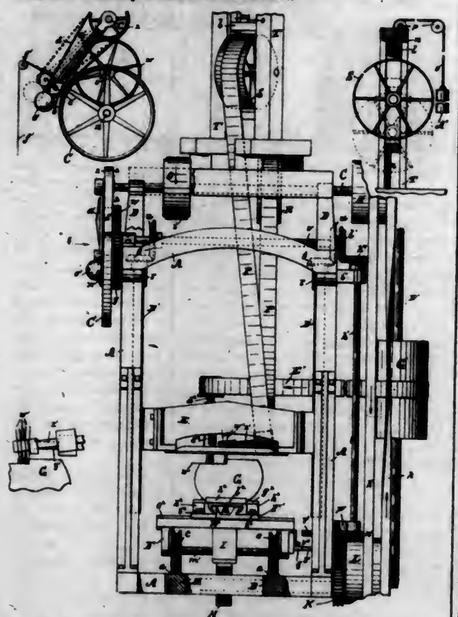
holders having parallel grooves or channels upon their opposite edges, independent flexible slips the ends of which are held within said grooves or channels, said slips having written or printed upon them the subject matter of the work to be indexed and each being movable along the holder, whereby they are capable of rearrangement within the slip-holders and new slips may be introduced between the inserted slips to admit new matter from time to time, whereby an elastic alphabetical and paged index is provided, substantially as herein described.

2. The improvement in library-catalogue apparatus, consisting of a series of rigid slip-holders having grooves or channels formed upon their parallel edges, independent flexible slips separable between meeting sides to admit additional slips containing each one subject-matter and fitted to be held within the grooves of the slip-holders to form one or more alphabetically-arranged columns upon each slip-holder, and a portable tray having vertical partitions at intervals and a stop at the rear end, said tray being adapted to contain the slip-holders standing upon edge and alphabetically arranged with relation to each other, substantially as herein described.

3. The method of cataloguing and indexing the books of a library and providing manuscript copy from which the permanent catalogue may be set up and printed, consisting in entering the title, subject, and other matter of the book upon independent slips, securing said slips in grooved rigid slip-holders, so that their positions therein may be changed to admit additional slips to form complete indexed columns or pages in alphabetical order, whereby said slip-holders may be used as copy from which the permanent catalogue is printed without further writing or manuscript, substantially as herein described.

483,314. TAG-HOLDER. IRVING J. TRUE, Hope Valley, R. I. Filed Oct. 12, 1891. Serial No. 408,525. (No model.)

Claim.—A tag-holder comprising the central outwardly-bent upwardly-extending tongue *a* and the downwardly-depending loops or tongues lying upon each side thereof and projecting outwardly at their lower ends, comprising a single piece of wire bent and formed substantially as shown, the free ends of which are provided with attaching means, substantially as set forth.



483,315. SAWING-MACHINE. ALFRED WADSWORTH, Warsaw, N. Y. Filed Mar. 11, 1892. Serial No. 424,574. (No model.)

Claim.—1. A machine for sawing hoops, having a traveling carriage, in combination with a vertically-movable platen over the carriage, a horizontal saw and a pair of upright saws carried by the platen, the arbor of one of the upright saws being horizontal and the other arbor of the pair being inclined, a driving-shaft over the platen at right angles with the carriage, a driving pulley on said shaft, a vertically movable idle-pulley over the driving pulley, and a circuit-belt for the upright saws, resting upon the driving-pulley and pending at either side thereof, the pendent branches of the belt passing around the respective arbors of the upright saws and thence over the idle-pulley, substantially as shown.

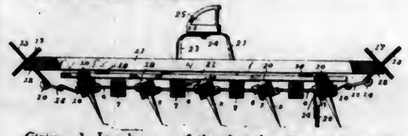
2. A machine for sawing hoops and other strips of wood, having a reciprocating carriage and a vertically-sliding saw-frame or platen over the carriage, and vertical and horizontal saws held by the platen, in combination with automatic means, substantially as shown, for lowering the saws for each cut, substantially as described and shown.

3. A machine for sawing hoops from a log while passing in either

direction, having a rectilinear reciprocating carriage for carrying the log, in combination with a set of independent rotary saws consisting of a horizontal circular saw and a pair of upright circular saws, one of the latter being vertical and the other inclined, and feed mechanism to move the log at each forward and backward motion of the carriage, substantially as shown and described.

4. A machine for sawing strips of wood, having, in combination, a vertically-movable platen or saw-frame, saws held by the platen, vertical screws for holding the platen, gears on the screws, a shaft *v* over the screws, with gears to engage the gear on the screws, a driving-shaft over the shaft *v*, a belt-wheel on the driving-shaft, a gear on shaft *v*, a friction-wheel and a pinion intermediate between said belt-wheel and gear on shaft *v*, a weighted arm on the driving-shaft, and a belt on the belt-wheel, substantially as shown.

5. In a hoop-machine, a carriage, a vertically-movable platen over the carriage, a horizontal and an inclined saw-arbor held by the platen, a driving-shaft over the platen, a driving-wheel on the shaft, a vertically-movable idle-pulley over the driving-shaft, and a driving-belt on the driving-wheel, extending downward to the saw-arbors and thence upward over the idle-pulley, all combined and arranged substantially as shown and described.



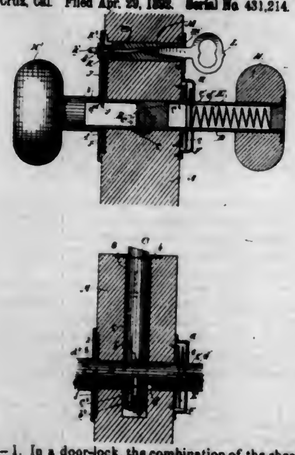
483,316. ELECTRIC SNAP-SWITCH. SETH F. ALDEN, New Bedford, Mass. Filed Feb. 1, 1892. Serial No. 419,855. (No model.)

Claim.—1. A snap-switch for electrical purposes, comprising in its construction the terminals *b*, *c*, *d*, and *e*, a base-support, vertical plates rectangularly arranged, opposite plates being electrically tied or connected, and a rotary shaft provided with a spring-impelled brush adapted to be brought successively into contact with the terminals, certain of the latter of which and the rotary shaft being embraced within an electrical circuit, as set forth.

2. A snap-switch for electrical purposes, comprising in its construction the terminals *b*, *c*, *d*, and *e*, a base-support, vertical plates rectangularly arranged, opposite plates being electrically tied or connected, each terminal plate being provided at or near one end with a locking pin or stud *r*, and a rotary shaft provided with a spring-impelled brush adapted to be brought successively into contact with the terminals, certain of the latter of which and the rotary shaft being embraced within an electrical circuit, as set forth.

483,317. HARROW. CHARLES A. ANDERSON, ALEXANDER W. ENGLAND, and FRANK D. ENGLAND, Pembroke, Ky. Filed Jan. 16, 1892. Serial No. 418,326. (No model.)

Claim.—1. In a harrow of the class described, the combination, with the toothed harrow-bars and the intermediate series of chains connecting the same, of the series of weight-bars having their ends recessed and provided with the L-shaped metal clips having perforations, and the pins passing through the perforations and into the ends of the weight-bars, substantially as specified.



2. In a harrow, the combination, with the series of harrow bars flexibly connected, of the tension-bar extending beyond the front and rear ends of the harrow and provided with openings, screw-eyes mounted in the openings, hand-wheels mounted on the screws, and short chains connecting the eyes with the front and rear bars of the harrow, substantially as specified.

3. In a harrow, the combination, with the series of transverse harrow-bars flexibly connected, the end bars being provided with convexed bearing-blocks, of the tension-bar projecting beyond the front and rear harrow-bars and having its ends provided with inclined perforations, threaded eyebolts located in the perforations, hand-wheels mounted on the eyebolts, and short chains connecting the lower ends of the eyebolts with the front and rear harrow-bars, substantially as specified.

4. In a harrow of the class described, the combination, with the series of harrow-bars flexibly connected, the front and rear bars being provided with the central blocks and each bar being provided at each side of its center with a convexed bearing-block 20, of the longitudinal parallel beams 19, located upon the blocks 20 and at each side of the central blocks, the cleats 18, pivotally connecting the beams 19, the seat-bars pivoted on the beams, the standards secured to the ends of the seat-bars, and the seat mounted upon the standard, substantially as specified.

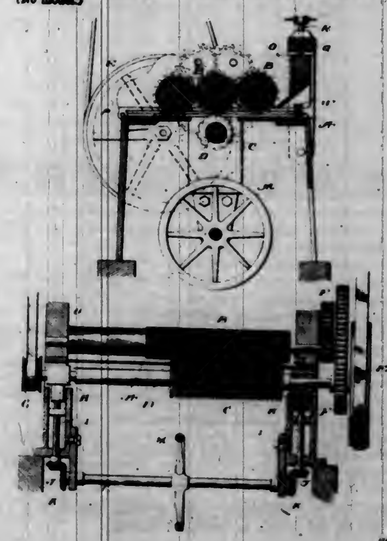
5. In a harrow of the class described, the combination, with the series of harrow-bars, of the series of metal frames embracing the ends of the bars, each frame being provided with inwardly-disposed bar-embracing flanges bolted to position and provided at opposite sides with perforated ears, and short chains connecting each adjacent pair of ears, substantially as specified.

483,318. LATCH AND LOCK COMBINED. JOHN E. ARMSTRONG, Santa Cruz, Cal. Filed Apr. 29, 1892. Serial No. 431,214. (No model.)

Claim.—1. In a door-lock, the combination of the sheath B to be let into the edge of the door, said sheath having a recess and slotted guide on its inner end, the reciprocating latch-bolt mounted in said sheath and having a contact-lug playing in the recess and guide thereof, and the axially-turnable and longitudinally-movable knob-spindle crossing the recess of the sheath and having an inclined plane engaging the lug of the latch-bolt, whereby the bolt is retracted on either movement of the spindle, substantially as herein described.

2. In a door-lock, the combination of the movable knob-spindle for operating the latch-bolt, said spindle having a notch or groove, the spring-controlled catch adapted to engage the notch or groove to lock the spindle, the turnable cam for operating the catch, said cam having a groove to receive the key and the turnable piece with its spiral or twisted keyway or passage, substantially as herein described.

3. In a door-lock, the combination of the movable knob-spindle for operating the latch-bolt, said spindle having a notch or groove, the spring-controlled catch adapted to engage the notch or groove to lock the spindle, the turnable cam for operating the catch, said cam having a groove to receive the key, the turnable piece with its spiral or twisted keyway or passage, and the turn-button on the other side to operate said cam, substantially as herein described.



4. A door-lock comprising a reciprocating latch-bolt provided with a contact-lug, an axially-turnable and longitudinally-movable knob-spindle having an inclined plane engaging the contact-lug of the latch-bolt to retract the latter upon either movement of the spindle, and a locking device engaging the knob-spindle to hold it from moving, consisting of the spring controlled catch engaging a notch or groove in the lock-spindle and a turnable cam to operate said catch, substantially as herein described.

5. A door-lock comprising a reciprocating latch-bolt provided with a contact-lug, an axially-turnable and longitudinally-movable knob-spindle having an inclined plane engaging the contact-lug of the latch-bolt to retract the latter upon either movement of the spindle, and a locking device engaging the knob-spindle to hold it from moving, consisting of the spring-controlled catch engaging a notch or groove in the lock-spindle, a turnable cam to operate said catch, said cam having a groove to receive a key, and the turnable piece with its spiral or twisted keyway or passage, substantially as herein described.

6. A door-lock comprising a reciprocating latch-bolt provided with a contact-lug, an axially-turnable and longitudinally-movable knob-spindle having an inclined plane engaging the contact-lug of the latch-bolt to retract the latter upon either movement of the spindle, and a locking device engaging the knob-spindle to hold it from moving, consisting of the spring-controlled catch engaging a notch or groove in the lock-spindle, a turnable cam to operate said catch, said cam having a groove to receive a key, the turnable piece with its spiral or twisted keyway or passage, substantially as herein described.

7. In a door lock, the reciprocating latch-bolt having the beveled outer end, in combination with the separate shank or stem, on which said bolt is fitted and is adapted to turn, whereby it may be reversed, and the set-screw for holding it in position, substantially as herein described.

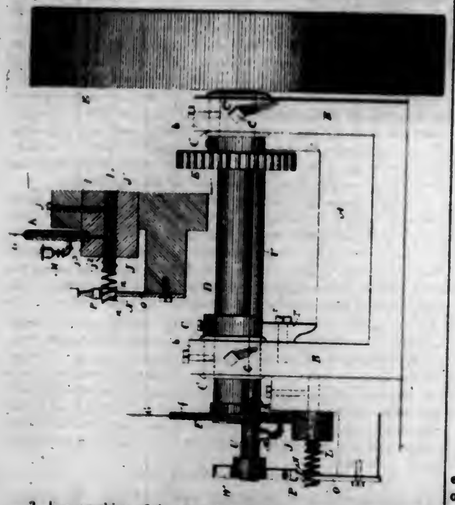
483,319. MACHINE FOR GROOVING SHOE-SOLES. GEORGE BRYANT, San Francisco, Cal. Filed Oct. 30, 1891. Serial No. 410,398. (No model.)

Claim.—1. A leather-grooving apparatus consisting of a table, a series of longitudinally-corrugated feed-rollers situated above the surface of the table, gearing whereby they are caused to rotate in the same direction, an independently-driven cutter-shaft journaled below the surface of the table, a series of disks or cutters having their cutting points or edges arranged spirally around the shaft and projecting through an opening in the surface of the feed-table, and means whereby said cutters may be raised or depressed with relation to the table, substantially as herein described.

2. In a leather-grooving machine, a table, a series of longitudinally-corrugated feed-rollers with driving and direction gears, whereby they are caused to rotate in the same direction above the surface of the table, hinged frames within which said feed-rollers are journaled at each end of the machine, and an adjusting-screw and springs whereby the pressure upon the leather is regulated and the feed-rollers adjusted to the thickness of the leather to be grooved, and a shaft rotating beneath the table, having cutting-disks secured thereto and projecting through an opening in the surface of the table, whereby grooves or channels are cut in the surface of the leather, which is carried across the table by the feed-rollers, substantially as herein described.

3. In a leather-grooving machine, a feed-table, a series of longitudinally-corrugated rollers vertically adjustable with relation to the surface of the table, and gearing whereby they are caused to rotate in the same direction, an independently-driven cutter-shaft with toothed disks or cutters secured to and carried thereby, said disks having the spirally-arranged cutting-points projecting through the surface of the table, so as to form grooves or channels in the lower surface of the leather, which is carried over the cutters by the feed rollers, journal-boxes at each end of the table, in which the cutter-shaft rotates, vertical screw-shafts connected with said journal-boxes, having pinions at their lower ends, and a horizontal hand-wheel shaft extending across the lower part of the table, having pinions engaging those of the vertical screw-shafts, whereby the opposite ends of the cutter-shaft are raised and depressed simultaneously with relation to the feed-table and independently of the adjustment of the feed-rollers, substantially as herein described.

483,320. WIRE STRETCHER AND FASTENER. GEORGE CHAMBERLAIN, San Saba County, near Milburn, Tex. Filed June 20, 1892. Serial No. 437,400. (No model.)

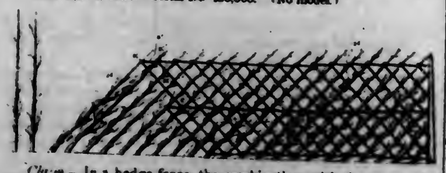


Claim.—The combination of a bar constructed of metal and provided at one end with a claw and having its other end bent at right angles to form an arm provided with a slot or bifurcation forming prongs, one of the prongs being longer than the other, a stud secured to the bar on the side opposite the arm and arranged adjacent to the same and forming a hammer-head, and a handle arranged on the same side of the stud and located adjacent to the claw, substantially as described.

483,321. WIRE COILING AND CUTTING MACHINE. ELISHA J. FULKERSON and LORIN ROBERTS, Traverse City, Mich. Filed Feb. 6, 1892. Serial No. 420,485. (No model.)

Claim.—1. In a machine of the class described, the combination of the frame having a die socket or recess at one end, parallel feeding-shafts laterally adjustable upon said frame, feeding-disks keyed to one end of said shafts, a cylindrical coil die removably fitting the die socket or recess and provided with a central bore and a spiral coil-groove formed in the face of the bore near one end thereof, a solid plug registering with the bore of said die and projecting beyond one end thereof, a single fastening-screw passing through the frame and the die mounted in the same and impinging against the plug within said die to secure the various parts together, and knife members arranged directly opposite the projecting ends of said plug, one of said members being adapted to receive the coil, which spins and winds over the cutting-edge thereof, substantially as set forth.

2. In a machine of the class described, the combination of the frame having a die socket or recess at one end, parallel feeding-shafts journaled in said frame, feeding-disks keyed to said shafts, a removable cylindrical coil die detachably secured within said socket or recess

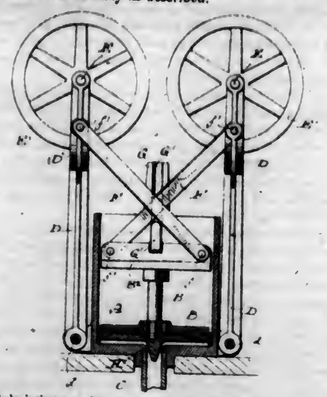


beneath said feeding-wheels and provided with a central bore, a spiral coil-groove formed in the face of the bore and extending from one end to an intermediate point, and a wire-receiving opening passing through the body thereof and forming a continuation of said spiral groove from its intermediate or central terminus, a solid plug snugly fitting said bore and projecting beyond the die to direct the wire around said spiral groove and beyond the die, said plug being removably secured in place within said die, and means for rotating said shafts, substantially as set forth.

3. In a machine of the class described, the combination, with the bed or frame, of the feeding-wheels and means for rotating the same toward each other, a coil-die, a stationary adjustable knife-plate adjustably secured to said bed and provided with a knife edge or blade adapted to receive the coil which spins and winds thereover, a laterally adjustably spring-pressed knife-lever pivoted to said knife-plate and provided with a knife-edge working over said stationary knife-plate, and means for automatically operating said knife-lever at regular intervals, substantially as set forth.

4. In a machine of the class described, the combination, with the frame or bed, of the feeding shafts having feeding-wheels and intermeshing gear-wheels, a coil-die, a stationary knife member located directly opposite said coil-die and receiving the coiled wire, a movable spring-pressed knife member pivoted to said stationary knife member and working over the same, said movable knife member having an upwardly-extending stop, laterally-adjustable bearing-arms, a cutting-shaft journaled in said arms and having a gear-wheel meshing with one of said feeding-shaft gear-wheels, and a strike arm or lug keyed to one end of said cutting-shaft and adapted to engage said movable knife-member stop at every revolution of the shaft, substantially as set forth.

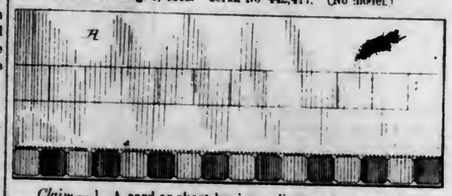
483,322. HEDGE FENCE. MARTIN L. FUNKHOUSER, Carlisle, Pa. Filed Apr. 8, 1892. Serial No. 428,303. (No model.)



Claim.—In a hedge fence, the combination, with the cane, of a tie formed of a continuous piece of wire having horizontal top, central, and bottom portions, and intermediate oblique portions, the free ends of the top and bottom portions being secured to one of the next adjacent ties, and a connection between the ends of the central portion and the corresponding portions of the adjacent ties, substantially as shown and described.

483,323. HOISTING APPARATUS. WILLIAM J. KAYSER, Milwaukee, Wis. Filed Dec. 15, 1891. Serial No. 415,129. (No model.)

Claim.—1. A hoisting apparatus comprising a cylinder and a piston movably engaged therewith, arms or levers pivotally engaged with stationary parts of the apparatus upon opposite sides of said cylinder and each carrying at its free end one or more pulleys or sheaves, and suitable links or arms pivotally connected with said pivoted arms or levers and operatively connected with said piston, substantially as described.



2. A hoisting-machine comprising a cylinder and a piston movably engaged therewith, a standard secured to said piston and carrying a head or table, arms or levers pivotally connected with stationary portions of the machine at opposite sides of the cylinder and each carrying one or more pulleys or sheaves at its free end, and links or arms pivotally connected with said levers and operatively engaged with said head or table, substantially as described.

3. A hoisting-machine comprising a cylinder, a piston movably engaged therewith and provided with a projecting standard, a head or table secured to said standard and movably engaged with guides upon said cylinder, arms or levers pivotally engaged with stationary portions of the machine at opposite sides of the cylinder and each carrying at its free end one or more pulleys or sheaves, and links or arms pivotally connected with said levers and with said head or table, substantially as described.

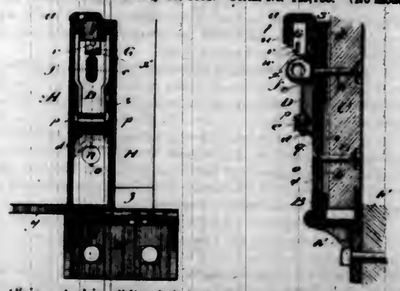
4. A hoisting-machine comprising a cylinder, a piston movably engaged therewith, levers or arms pivotally engaged with stationary portions of the machine at opposite sides of the cylinder and each carrying at its free end one or more pulleys, and diagonally-arranged links pivotally engaged with said levers and each operatively engaged with said piston at the side of the cylinder opposite to its connection with said levers, substantially as described.

483,324. GAME APPARATUS. FRANCIS E. KNIGHT, New York, N. Y. Filed Aug. 8, 1892. Serial No. 442,417. (No model.)

Claim.—1. A card or chart having a diagram for a game printed upon it and pieces suitable for playing the game, also printed upon the card, substantially as described.

2. A card or chart having a diagram for a game printed upon it and pieces suitable for playing the game, also printed upon the card, said pieces being separated from the main body of the card by a line of perforations, substantially as described.

3. A card or chart having a row of squares or inclosures printed upon it and forming a game diagram and having two sets of distinguishable pieces suitable for playing the game, also printed upon the card, substantially as described.



4. A card or chart having a row of squares or inclosures printed upon it and forming a game diagram and having two sets of distinguishable pieces suitable for playing the game, also printed upon the card, said sets of pieces being of contrasting colors, substantially as described.

483,325. HOLDBACK. JOHN H. LOGAN, Overlook, N. Y. Filed May 20, 1892. Serial No. 433,698. (No model.)

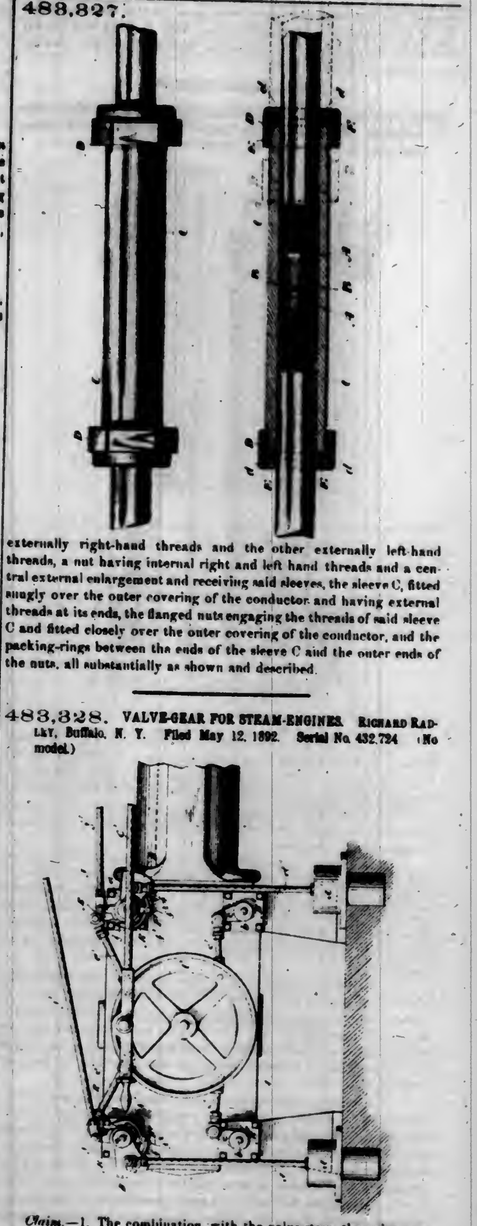
Claim.—In a device of the character described, in combination, a base-plate provided with a forwardly-extending hook, a spring-plate having its free end within the hook and at a point near its end bent at an angle to the body of the plate, and a holdback loop or casting adapted to engage the hook and having an angular recess to engage the angle of the spring-plate, substantially as shown and described, and for the purpose specified.

483,326. SLIDING-DOOR LOCK. ALBERT B. PULLMAN, Chicago, Ill., assignor to the A. B. Pullman Company, same place. Filed June 16, 1891. Renewed Aug. 15, 1892. Serial No. 443,103. (No model.)

Claim.—1. In a sliding-bolt lock, the combination of a guide for the bolt, adapted to be secured in operative position, a bolt sliding within the guide, a lever fulcrumed upon the guide, intermeshing rack-and-pinion mechanism upon the lever and bolt, a vertically-sliding keeper for securing the lever in place when the bolt is advanced into its locking position, and means for securing the keeper in its retaining position by means of a car-seal or other locking device, substantially as described.

2. In a sliding-bolt lock, the combination of the casing for the bolt, provided with a projection *l* at its upper end, having an opening *k* extending vertically through it, a bolt sliding in the casing, a lever D, fulcrumed in bearings upon the casing, intermeshing rack-and-pinion mechanism upon the lever and bolt, and a keeper G, extending loosely through the opening *k* in the projection *l*, substantially as described.

3. In a sliding-bolt lock, the combination, with the casing A, having the opening *q* in its outer plate and bolt-holes *o* above and below the opening *q* and provided with bearings *p* at the sides of the opening *q* and with the projection *l* at its top, having the opening *k* extending through it, of the bolt B, provided with a slot A for the passage of the lower bolt and with a rack *i*, lever D, fulcrumed in the bearings *p* and provided with teeth *d*, meshing with the rack *i*, and a keeper G, extending loosely through the opening *k* in the projection *l* and provided with a stop for preventing its removal therefrom, substantially as described.



4. In a sliding-bolt lock, the combination of a casing for the bolt, adapted to be secured in operative position upon a door, an eye *f* in fixed relation to the outer surface of the casing when the device is secured to the door, a bolt sliding within the casing, a lever D, fulcrumed upon the casing and provided with a slot *e* in position to pass over the eye *f* when the lever is raised, and intermeshing rack-and-pinion mechanism upon the lever and bolt, substantially as described.

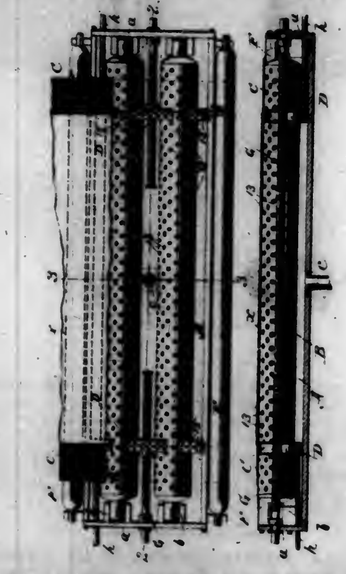
5. In a sliding-bolt lock, the combination of the casing for the bolt, provided with a projection *l* at its upper end, having an opening *k* extending vertically through it, an eye *f*, projecting from the outer face of the casing below the projection *l*, a bolt sliding in the casing, a lever D, fulcrumed in bearings upon the casing and provided with a slot *e* in position to pass over the eye *f* when the lever is raised, intermeshing rack-and-pinion mechanism upon the lever and bolt, and a keeper G, extending loosely through the opening *k* in the projection *l*, substantially as described.

483,327. COUPLING FOR UNDERGROUND WIRES. JOHN J. PURCELL, Washington, D. C., assignor of one-half to William H. Allen, same place. Filed Feb. 16, 1892. Serial No. 421,740. (No model.)

Claim.—The combination, with the two sections of an electrical conductor, of a sleeve upon the end of each section, the one having

483,327.

externally right-hand threads and the other externally left-hand threads, a nut having internal right and left hand threads and a central external enlargement and receiving said sleeves, the sleeve C, fitted snugly over the outer covering of the conductor and having external threads at its ends, the flanged nuts engaging the threads of said sleeve C and fitted closely over the outer covering of the conductor, and the packing-rings between the ends of the sleeve C and the outer ends of the nuts, all substantially as shown and described.



483,328. VALVE-GEAR FOR STEAM-ENGINES. RICHARD RADLEY, Buffalo, N. Y. Filed May 12, 1892. Serial No. 432,724. (No model.)

Claim.—1. The combination, with the valve-stem, the valve-arm provided with a stud, and the rock-lever pivoted concentrically with the valve stem, of a trip-lever pivoted on said rock-lever and provided with a shoulder which engages with the stud for opening the valve and having a convex riding-face which extends from the shoulder toward the pivot of the trip-lever and which supports the latter upon the stud after the trip-lever has been released from the stud, substantially as set forth.

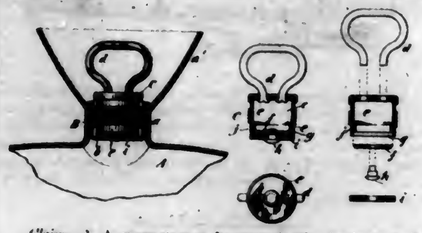
2. The combination, with the valve-stem, the valve-arm provided with a stud, and the rock-lever pivoted concentrically with the valve-stem, of a trip-lever pivoted upon the rock-lever and provided with a shoulder which engages with the stud for opening the valve and having a convex riding face which extends from the shoulder toward the

pivot of the trip-lever and which rides upon the stud after the shoulder of the trip-lever has been disengaged from the stud, said convex face being eccentric with the valve-stem when the face rides upon the stud, substantially as set forth.

483,329. SUCTION MECHANISM FOR PAPER-MACHINES. JAMES REYNOLDS, Fairfield, assignor to Roswell H. Fairfield, Holyoke, Mass. Filed Sept. 9, 1891. Serial No. 405,133. (No model.)

Claim.—1. In suction mechanism for paper-machines, the combination, with the web-carrying apron and suction-chamber having the end walls thereof constituted by chambered section-boxes having perforated curved walls which constitute apertures *d* and a conduit for supplying water into said section-boxes, of one or more rolls having perforations through them and closely fitted within said apertures, substantially as described.

2. In a suction mechanism for paper-machines, the combination, with a main box having bearings in its ends and a suction-conduit leading thereinto, of one or more rolls B B, mounted in said bearings, and having perforations transversely through them, and section-boxes adjustable the one toward and from the other and having apertures *d d*, through which said rolls pass with a close fit, substantially as described.



3. In a suction mechanism for paper-machines, the combination, with a suction-chamber, the end walls thereof constituted by chambered section-boxes having perforated curved walls forming apertures *d*, the perforated lining *f*, and a conduit for supplying water into said section-boxes, of one or more rolls having perforations through them and closely fitted for rotation within said lined apertures, substantially as described.

4. In a suction mechanism for paper-machines, in combination, a box having a suction-chamber, one or more rolls rotatably mounted thereon and provided with perforations or passages which are in communication with said suction-chamber, the web-carrying apron movable upon said rollers, and supporting-rollers for the apron mounted outside of and near said suction-chamber, substantially as described.

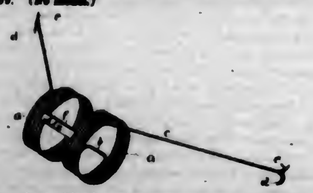
5. In a suction mechanism for paper-machines, a roll consisting of an outer metallic shell and a filling of wood, said roll having a series of perforations or passages through it, and a suction-chamber and web-carrying apron combined for operation, substantially as described.

6. In a suction mechanism for paper-machines, in combination, the box A, having the bearings *b b* in its ends and the suction-pipe *c* leading thereinto, the rolls B B, having perforations, mounted in said bearings, the hollow section-boxes D D, having perforated curved walls forming the apertures *d*, through which said rolls are passed with a close bearing and having dovetail engagements with the sides of the main box, and conduits for supplying water in said section-boxes, the screws G G, and the endless web-carrying apron C, substantially as described.

483,330. SCREW-STOPPER FOR WATER-BAGS, &c. GEORGE H. F. SCHRADER, New York, N. Y. Filed Feb. 17, 1892. Serial No. 421,890. (No model.)

Claim.—1. A screw-stopper for water-bottles, having a hollow body formed as an inverted cup having a handle at its top and having its bottom closed by a disk united to the edges of the cup, said disk formed with a central stud for holding the packing-disk, and a washer sprung over said stud and lying against said disk and extending over the face of the latter and the lower edge of said cup, substantially as and for the purpose set forth.

2. A screw-stopper for water bottles, having a hollow body formed as an inverted cup and its bottom closed by a disk having its periphery united to the edges of the cup by swaging them together to form a water-tight joint.



3. A screw-stopper for water-bottles, having a hollow body formed as an inverted cup and its bottom closed by a disk having its periphery united to the edges of the cup by swaging them together and a packing-disk fastened to the bottom of the disk and overlying the swaged joint to prevent leakage thereinto.

4. A screw-stopper for water-bottles, consisting of an inverted hollow cup having a handle at top, externally screw-threaded, and having an annular lower edge constructed with a rabbet, in combination with a disk carrying a stud seating against and closing the open end of said cup, engaging the rabbet thereof and secured thereto, and a perforated washer adapted to be sprung over said stud and lie against said disk.

5. A screw-stopper for water-bottles, consisting of an inverted hollow cup having a handle at top, externally screw-threaded, and having an annular lower edge constructed with a rabbet, in combination with a substantially-flat disk having a stud riveted to its center and constructed with a beveled outer edge fitting within the rabbet of said cup, closing the open end thereof, and adapted when the edge of said cup is turned against the beveled edge of said disk to be thereby secured to said cup to form a hollow body, and a washer sprung over said stud and lying against said disk and the lower edge of said cup, whereby said washer overlies and protects the joint between said cup and disk.

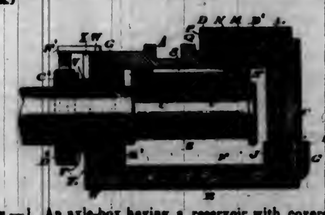
6. A screw-stopper for water-bottles, consisting of a sheet-metal cup E, externally screw-threaded, having a lower cylindrical portion *j*, constituting a guide for introducing the stopper into its thimble, and an annular groove *g* on the inner wall of its lower edge, in combination with the disk *f*, carrying headed stud A, fitting within said annular groove and held therein by the overturned lower edge of the cup, and washer *i*, sprung over said stud A of said disk, extending over the face of the latter and of substantially-uniform diameter with the cylindrical portion *j* of said cup, whereby the joint between said cup and disk is sealed and protected by said washer, substantially as and for the purpose set forth.

483,331. COMBINED NAPKIN RING AND HOLDER. ALPHEUS M. SPAULDING, North Belgrade, Me. Filed Nov. 5, 1891. Serial No. 410,899. (No model.)

Claim.—A combined napkin ring and holder consisting of a wire formed into a ring, the two ends of the wire extending as arms from opposite ends of the ring, each of said arms being provided at its end with hooks for fastening the napkin in place, substantially as described.

483,332. BELL. JOHN C. WELLS, East Hampton, Conn. Filed May 25, 1892. Serial No. 434,262. (No model.)

Claim.—1. The combination of the shaft A, carrying the rotating



seat-plate B, with the rotating and longitudinally-movable striker-plate D, adapted to slide on the surface of said seat-plate B, substantially as described.

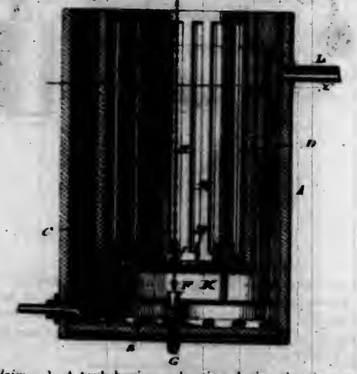
2. The combination of a shaft A, carrying a rotating seat-plate B, with a rotating and longitudinally-movable and slotted plate D, adapted to slide on the surface of said seat-plate B, and retaining-spring F, adapted to hold said striker-plate D to said seat-plate B, substantially as described.

3. The combination, in a bell of the character described, having inward lug G, of the shaft A, rotating seat-plate B, carried thereby, longitudinally-movable and slotted striker-plate D, guiding-ears E E on said seat-plate, and with the spring F, adapted to hold said striker-plate D to said seat-plate B, and with means, substantially as described, for rotating seat-plate B and striker-plate D, whereby the ends of said striker-plate D are brought successively into contact with said projection G, substantially as described.

483,333. AXLE-LUBRICATOR. ISAAC P. WISTAR and HENRY A. WISTAR, Philadelphia, Pa., assignors of one-third to William R. Murphey, same place. Filed Jan. 23, 1892. Serial No. 419,010. (No model.)

Claim.—1. An axle-box having a reservoir with covered top, a front lid with pump therein having upper and lower valves loosely seated in its tube, a top plate with a removable lid, said plate having a chamber with inlet and outlet ducts, and a journal-bearing with a chamber and channels therein, said parts being combined substantially as described.

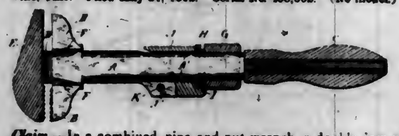
2. An axle-box having a reservoir in its lower part with a covered top, a front lid with a pump therein having rising-and-falling valves loosely fitted in its tube, a top plate with a chamber, a pipe in said chamber leading from said pump, and an overflow-passage leading from said chamber through said front lid to said reservoir, the top wall of said overflow-passage being above the floor of said chamber, said parts being combined substantially as described.



483,334. NUT-CRACKER. DAVID C. WHEELER and WILLIAM W. SPERRY, Bridgeport, Conn.; said Sperry assignor to Dwight Wheeler, same place. Filed Apr. 23, 1892. Serial No. 430,188. (No model.)

Claim.—1. A nut-cracker consisting of a fixed jaw, a fixed handle, and ears cast in a single piece, said fixed handle having a recess 10 in its inner side, a sliding jaw having a recess 11 in its inner side and a recess 6 in its outer side, a spring lying in recesses 10 and 11, by which the sliding jaw is moved to the open position, and a movable handle pivoted between the ears and having a lug 7, which engages recess 6 to move the sliding jaw to the closed position.

2. A nut-cracker consisting of a fixed jaw, a fixed handle, and ears formed in a single piece, a sliding jaw lying between said ears and provided with a recess 6 and bearings 15, and a movable handle pivoted between the ears and having a lug adapted to engage the recess and a rounded end adapted to engage bearings 15.



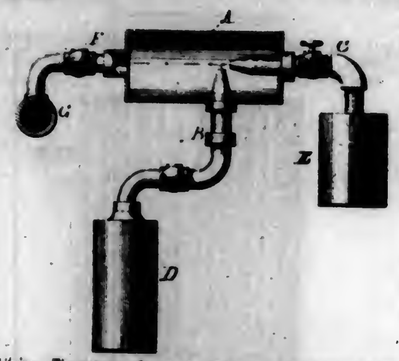
483,335. APPARATUS FOR DRUMMING SILK OR OTHER FIBERS. WILLIAM H. WHITELEY, Darby, Pa. Filed Aug. 22, 1891. Serial No. 403,431. (No model.)

Claim.—1. A tank having a heating device therein, a metallic vessel supported in said tank, and a perforated wooden tank supported in said vessel, said metallic vessel having its top below the top of the said inner tank, said parts being combined substantially as described.

2. A tank having a coil of steam-pipe therein, a vessel supported in said tank, and a perforated wooden tank supported in said vessel, said vessel having its top below the top of said inner tank and said outer tank having an overflow-pipe below said top of the said vessel, said parts being combined substantially as described.

483,336. PIPE AND NUT WRENCH. MILFORD J. WILSON, Painesville, Ohio. Filed May 21, 1892. Serial No. 433,802. (No model.)

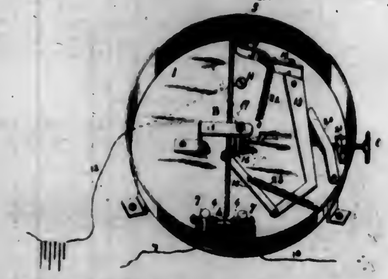
Claim.—In a combined pipe and nut wrench, a double jaw projecting on both sides and forming the inside stationary jaw, an integral part of a threaded shank, springs fastened to the base of said jaw, the free terminals of which extend upward between the projections of the jaws, in combination with a double movable jaw having a bifurcated arm pivoted to one side of a sleeve, said sleeve and movable outside jaw being actuated by an annular grooved and threaded nut upon the shank, in the manner substantially as and for the purpose set forth.



483,337. BEVERAGE OF FERMENTED AND UNFERMENTED WORT AND PROCESS OF MAKING THE SAME. EDWIN ADAM, Philadelphia, Pa. Filed Nov. 5, 1891. Serial No. 410,966. (No specimens.)

Claim.—1. The process of preparing a beverage as herein set forth, consisting in highly drying malt, mashing in and off at a high temperature a quantity of the same and forming a fermented wort therefrom, mashing in and off at a high temperature another portion of said prepared malt, mixing said latter wort with hops, forming an unfermented wort, removing the yeast-cells from the fermented wort, blending said fermented and unfermented worts, and artificially charging the blended worts with alcohol and carbonic-acid gas, substantially as described.

2. The process of preparing the beverage described herein, consisting in treating malt so as to have a high percentage of dextrine and a low percentage of maltose, making hopped unfermented and fermented worts of the malt thus treated, removing the yeast-cells from the fermented wort, blending said worts, and charging the mixture with alcohol and carbonic-acid gas, and then aging the preparation in an air-tight vessel, substantially as described.

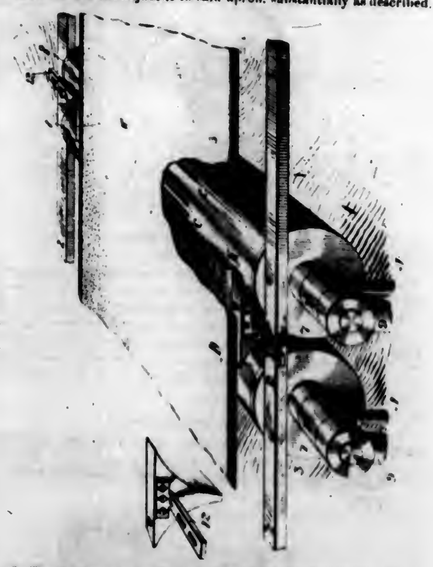


3. The beverage herein described, consisting of a mixture of unfermented and fermented worts, the fermented wort having a high percentage of dextrine and said worts being in the proportions set forth and charged with alcohol and carbonic-acid gas, as described.

483,338. PROCESS OF MAKING MALT BEVERAGES. EDWIN ADAM, Philadelphia, Pa. Filed Dec. 12, 1891. Serial No. 414,839. (No specimens.)

Claim.—The process of preparing a beverage, consisting in making an unfermented wort having a suitable percentage of dextrine, boiling the said wort in hops, fining the said hopped wort, and artificially charging the same with alcohol and carbonic-acid gas, substantially as described.

488,339. THERMOSTAT. IRA F. BURNS and FREDERIC C. BURNS, Elmira, New York. Filed Mar. 17, 1892. Serial No. 425,230. (No model.)



Claim.—1. In a thermostat, the combination, with the bar B, mounted upon the lever 3, of the lever 13, engaging therewith, the lever 15, secured at one end to the lever 13 and at its other end to the arm upon the post 17, and the indicating-hand 19, as set forth.

2. In a thermostat, the combination, with the case, binding-posts therein insulated from the case and from each other, and binding-screws extending inwardly from said posts, of a thermostatic bar, a pivotally mounted lever from one end of which said bar is suspended, an intermediate pivotally-mounted lever in engagement with the first lever and operatively connected to an indicator, and adjusting-screws in engagement with said levers, as set forth.

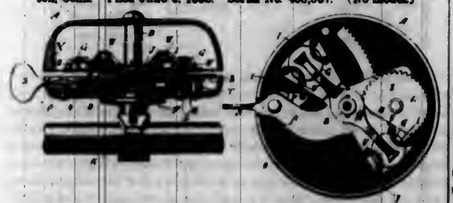
488,340. SUCTION-ROLL FOR PAPER-MACHINES. ELIJAH B. BENHAM, Providence, R. I., assignor to Roswell M. Fairfield, Holyoke, Mass. Filed Sept. 9, 1891. Serial No. 405,159. (No model.)

Claim.—1. A suction-roller for paper-machines, consisting of a tubular center having a series of longitudinal ribs on its exterior surface, a tubular shell covering said ribs, thereby forming a series of exhaust-chambers therebetween having an opening therethrough opposite each of said chambers, a head for one end of said roll, having air-conduits therein corresponding in number to that of said chambers, extending from its outer side to its inner face and communicating with said chambers, a suitable head for the opposite end of said roll, and suitable journals and bearings for each head, combined with an air-valve, substantially as described, co-operating with said conduit-containing head and permitting air communication between a limited number of said exhaust-chambers and conduits during the rotation of said roll, air-cut-off blocks, substantially as described, located between said rolls, and a suitable air-exhaust device connected to said valve, substantially as set forth.

2. In a suction apparatus for paper-machines, a cylinder mounted for rotation and adapted to be peripherally borne upon by the passing apron and provided with a series of separated chambers which terminate in passages having their orifices at different places around the periphery of the cylinder, a common conduit arranged for suction communication with all of said separated chambers, and valve mechanism arranged between and relative to the said common conduit and said separated cylinder-passages, whereby as the cylinder rotates there will be established suction communication through such of said separated peripherally-terminating chambers as are adjacent the passing apron and a cut-off of the suction communication through such of the said chambers as are not adjacent to said apron, substantially as described.

3. The combination, with two chambered suction-rolls for paper-machines, substantially as described, having rotary movements near each other, of two air-cut-off blocks supported between said rolls, having grooves within those portions of their surfaces which adjoin said rolls, said grooves extending from the ends of said blocks to their lower edges, substantially as set forth.

4. The combination, with two parallel separated chambered suction-rolls for paper-machines, provided with series of suction-passages which terminate at different peripheral portions of the roll and which have rotary movements near each other, of two air-cut-off blocks located and ranging longitudinally between and having bearings at their opposite sides lengthwise upon the sides of both of said rolls and having longitudinal sliding engagements the one with the other, said blocks having their portions which are adjacent the ends of the roll in the plane coincident with the upper peripheral portions of the rolls, their upper surfaces intermediate of the so-coinciding end surfaces being below said plane of coincidence, and adjustable supporting devices therefor, whereby said blocks may be moved for adjustment parallel with the axes of the suction-rolls to accord with the width of the paper-stock which may be passing over the rolls, substantially as set forth.



5. The combination, with two chambered suction-rolls for paper-machines, provided with series of suction-passages which terminate at different peripheral portions of the roll and having rotary motions near each other, of two cut-off blocks located between said rolls and having sidewise bearings peripherally thereon, and one thereof having a longitudinal dovetailed way and the other the longitudinal dovetailed rib for engagement therein, and each also having longitudinally-adjustable end supports, substantially as described.

6. The combination, with two chambered suction-rolls for paper-machines, substantially as described, having rotary movements near each other, of two air-cut-off blocks supported between said rolls and preventing air from entering therebetween from beneath and between their ends, each of said blocks having an upper surface near the ends of said rolls substantially in a plane with the upper sides thereof and being downwardly inclined from the inner border of said upper surface to a central point between the outer ends of said blocks, substantially as set forth.

7. The combination, in a paper-machine, of the apron and a parallel pair of suction rolls having separated air-passages therein which terminate at different portions peripherally thereof, and a suction-conduit and valve mechanism for each roll, coacting with said separated passages, whereby a suction may be established as the rolls rotate through such of the said passages as have their orifices toward the upper portion of the roll, and a block or part constituting a longitudinal partition in bearing upon and between the adjacent sides of the rolls, the same having its end portions in a plane substantially coincident with the tops of the rolls, but having its intermediate surface depressed, substantially as described.

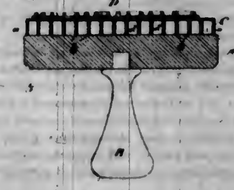
8. The combination, with a suction-roll for a paper-machine, consisting of a tubular cylindrical shell having a series of longitudinal ribs with intervening longitudinal chambers *a* and a surrounding cylindrical shell *b*, having longitudinal slots or perforations *c*, a closing head at one end, and a head at the other, which is provided with a series of passages *e*, that terminate in ports having a circular arrangement, substantially as described, of a suction-pipe mounted relative to the roll and adapted to have at a given instant during the rotation of the roll an air communication with one or more of the said ports, substantially as and for the purpose described.

488,341. BELL. ABNER A. BEVIN and JOHN C. WELLS, East Hampton, Conn. Filed June 6, 1892. Serial No. 435,587. (No model.)

Claim.—1. The combination, with a gong, of a rotating striker-arm H, striker-pieces G G, loosely carried within the staples I I at the extremity of said arm, said pieces G G being operated by centrifugal force to impinge against a lug on the inside of the gong, substantially as described.

2. The combination, in a call-bell, of the gong A, the post B, and base-plate D, adapted to rotate thereon, the arm P, fixed on said post B, and the L-shaped arm N, pivoted to the base-plate D and carrying a segmental toothed rack, said arm N being loosely connected to the fixed arm P, and the pinion M, toothed wheel K, and striker-arm H, connected to the toothed wheel K by pinion J and adapted to be rotated thereby, substantially as described.

3. The combination, in a call-bell, of the gong A, the post B, and base-plate D, adapted to rotate thereon, the arm P, fixed on said post B, and the L-shaped arm N, pivoted to the base-plate D and carrying a segmental toothed rack, said arm N being loosely connected to the fixed arm P, and the pinion M, toothed wheel K, and striker-arm H, connected to the toothed wheel K by pinion J and adapted to be rotated thereby, and the striker-pieces G G, loosely held at the extremities of the arm H, substantially as and for the purpose specified.



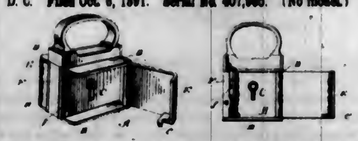
488,342. CRANK-SECURING MEANS. FRANK H. BOLTE, Milwaukee, Wis., assignor to the Sercombe-Bolte Manufacturing Company, same place. Filed June 24, 1892. Serial No. 437,849. (No model.)

Claim.—1. A crank having a split head provided with a split and screw-threaded peripheral lug and a clamping-nut that engages the lug, substantially as set forth.

2. A crank having a split head provided with a split, tapered, and screw-threaded peripheral lug and a nut that is tapered and threaded upon its interior to engage with the lug, substantially as set forth.

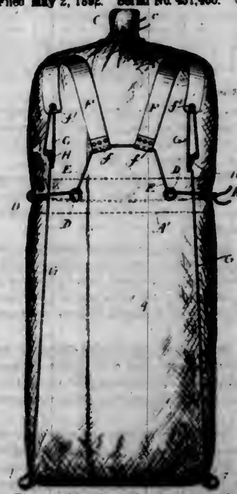
483,343. HAND-STAMP. TAYLOR S. BOOK, Brooklyn, N. Y. Filed Dec. 5, 1891. Serial No. 414,060. (No model.)

Claim.—1. As an improved article of manufacture, a hand-stamp having its letters or characters mounted upon a hollow flexible cushion secured at its edges to the body of the stamp and within which are formed flexible supports for sustaining the letters and cushion, substantially as described.



2. The hand-stamp herein shown and described, comprising the body A, hollow flexible cushion C, having a marginal wall *a* secured at its edges to the said body, rubber type or characters D, mounted on the cushion, and the flexible partitions *b c*, formed within the cushion and secured at their edges to the body of the stamp, substantially as described.

483,344. PNEUMATIC TIRE. JAMES H. BULLARD, Springfield, Mass. Filed Apr. 16, 1892. Serial No. 429,416. (No model.)



Claim.—A protective armor for a pneumatic tire, consisting of the series of thin plates or scales having slits within their borders, and a strip *d* of flexible material connecting said scales by being interlaced through the slits thereof, and said scales having their edge portions overlapping, substantially as described.

483,345. KEYHOLE-GUARD FOR PADLOCKS. JOHN V. CARVELL, Eddyville, Ill., assignor of one-half to Joe W. King, Washington, D. C. Filed Oct. 6, 1891. Serial No. 407,966. (No model.)

Claim.—The combination, with the lock-casing proper, of the extended bottom plate, the ribs or walls D, the hinged door provided with a hook or catch, the supplemental side plate or casing, and the spring-latch, as and for the purpose set forth.

483,346. LUGGAGE-CARRIER. ALPHONSO S. COMSTOCK, Evanston, Ill. Filed May 2, 1892. Serial No. 431,460. (No model.)

Claim.—1. The combination of a bag, a cord extending around the waist thereof, a pair of shoulder-straps connected to said cord, and

cords connected to said shoulder-straps and the bottom of the bag, substantially as set forth.

2. The combination of a bag, a series of rings arranged at the waist of the bag, a cord run through said rings, shoulder-straps connected to said cord, and cords connected to the shoulder-straps and to the bottom of the bag, substantially as set forth.

3. The combination of a bag, a reinforcing-band surrounding it at the waist, a cord encircling it at the waist, shoulder-straps connected to said cord, and cords connecting the shoulder-straps to the bottom of the bag, substantially as set forth.

4. The combination of a bag, a cord encircling it at the waist, shoulder-straps connected to said cord, and adjustable cords connecting the shoulder-straps to the bottom of the bag, substantially as set forth.

5. The combination of a bag, a pair of shoulder-straps, means for connecting the shoulder-straps to the waist of the bag, the cords G, connected to the bottom of the bag and to the shoulder-strap, and the perforated blocks H for adjusting said cords, substantially as set forth.

6. The combination of the bag A, having the knobs at its lower corners and a series of rings D at its waist, the cord E, run through said rings, the shoulder-straps F, having loops f, through which the cord E is passed, and the eyelets f', the cords G, tied around the lower corners of the bag and prevented from slipping off by the knobs aforesaid, said cords being also passed through the eyelets f', and the blocks H, secured to and perforated for the passage of said cords, substantially as set forth.

7. The combination, with the bag and suitable harness for swinging it from the shoulders, of the cap C for closing its mouth and the draw-string c for securing said cap, substantially as set forth.

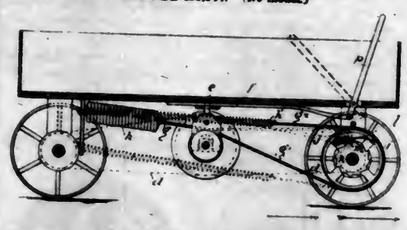
483,347. SHEET-METAL CHAIN. HERBERT M. ELDRIDGE, Niagara, Canada, assignor to the Oneida Community, Limited, Kenwood, N. Y. Filed Mar. 21, 1892. Serial No. 425,804. (No model.)

Claim.—A sheet-metal chain-link composed of two loops secured together at their inner portions and each consisting of a separate strip or blank of sheet metal bent into loop form and provided at one end with an eye or opening, the eyes of the two loop-blanks lying against each other and the opposite plain end portions of said blanks being each interlocked with both of said eyes, substantially as set forth.

483,348. TRUNK-STAND. EDWIN J. PLETCHER, New York, N. Y. Filed Apr. 21, 1892. Serial No. 430,006. (No model.)

Claim.—1. In a stand for jewelers' trunks and analogous uses, a wood shelf B and one or more arms A', of metal, concealed therein and cast or otherwise formed in one piece or integral with the uprights A, all arranged to serve substantially as herein specified.

2. In a stand for jewelers' trunks and analogous uses, a series of shelves B and metal arms A', the latter formed integral with one or more uprights A and weighted at the front, as indicated by A, substantially as herein specified.



3. In a stand for jewelers' trunks and analogous uses, a series of shelves B and contained metal arms A', the latter formed integral with one or more uprights A, in combination with each other and with metal plates G, separately attached to reinforce the thin portions of the shelves and with a filling cement, all arranged to serve substantially as herein specified.

4. In a stand for jewelers' trunks and analogous uses, a series of shelves B and contained metal arms A', the latter formed integral with two or more uprights A, in combination with each other and with the lateral arms A^2 and legs A^3, adapted to stiffen the structure laterally, as herein specified.

5. In a stand for jewelers' trunks and analogous uses, a series of shelves B and contained metal arms A', the latter formed integral with two or more uprights A, in combination with each other and with the lateral arms A^2, corresponding extensions from adjacent uprights, and riveted plates E, engaging them stiffly together, all adapted to serve as herein specified.

6. In a stand for jewelers' trunks and analogous uses, a series of shelves B and contained metal arms A', the latter formed integral with two or more uprights A, in combination with each other and with the lateral arms A^2 and legs A^3 and riveted plates E, each bridging across from the arm A^2 on one upright to the arm A' on the adjacent upright, adapted to jointly stiffen the structure laterally, as herein specified.

483,349. CAR-STARTER. DARIUS FULLER, Chicago, Ill. Filed May 17, 1892. Serial No. 433,311. (No model.)

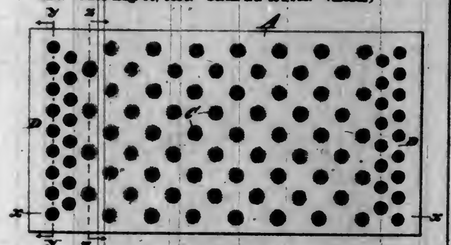
Claim.—1. The combination, with alternately-acting, of different tension, and in the same direction acting springs, whereof one connects to two drums, loose upon their shafts, whereof one of said drums revolves in either and the other in only one direction without and in the other direction with its shaft, of a connection opposite to that already made on one of said drums to one of said springs, connecting mechanism from the drum free to revolve in either direction, and the car-axles, and clutch mechanism to said drum, substantially as specified.

2. The combination, with springs acting in the same direction on opposite sides of a drum and a car-axle upon which said drum is loose and adapted to turn with it in one direction and without it in the opposite direction, of a shaft and drum thereon free to turn in either direction and connection from said last to said first drum, clutch mechanism to said last drum, and connection therefrom to the car-axles, substantially as specified.

3. The combination, with car-axles and a drum releasably connected to one of said axles and to a resisting-spring to actuate said drum oppositely, of a loose drum on a car-axle, having a pawl engaged with a ratchet-wheel fixed to its axle, and a second spring resisting in the same direction as the first spring, said springs being attached and acting on opposite sides of said loose drum to act as a car-starter, substantially as specified.

4. The combination, with alternately-acting, of different tension, and in the same direction acting springs connecting on corresponding sides to two drums loose upon their shafts, whereof one revolves in either and the other in only one direction without and in the other direction with its shaft, which is a car-axle, of a flexible crossed connection from said corresponding to the opposite side of the latter drum and coupling mechanism on said former drum, actuated through intermediate mechanism from revolving car-axles, substantially as specified.

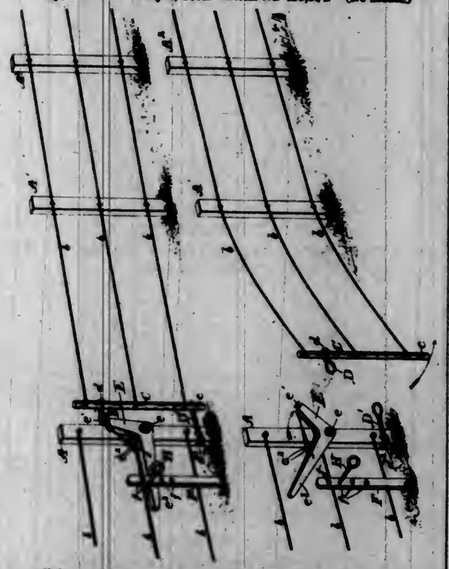
5. The combination, with a drum loose upon its shaft and provided with oppositely-pointing pawls carrying laterally-projecting pins on their ends, of connected and longitudinally-sliding cones splined on and revolving with said shaft, which is a car-axle, and pointing toward said pawls, adapted to engage with said pins, substantially as specified.



6. The combination, with a loose drum on a car-axle and pawl on said drum adapted to engage with a ratchet-wheel fixed to said axle, of springs acting in the same direction alternately on opposite sides of said drum, whereof one of said springs is attached to a second drum actuated by the car-axle, and mechanism to engage, operate, and release said second drum and car-axle, substantially as specified.

7. The combination, with rotary car-axles and pulleys and belts and a clutch actuated by them, of a drum to engage said clutch, ropes to said drum, whereof one winds as the other unwinds from said drum, a second and loose drum with pawl, a ratchet-wheel on the car-axle engaging said pawl, said drums connected on corresponding sides by one of said ropes, and a rope on the opposite side of said second drum and a light spring thereto, a strong spring to the other rope of the first drum, and mechanism to engage and disengage said clutch and drum, substantially as specified.

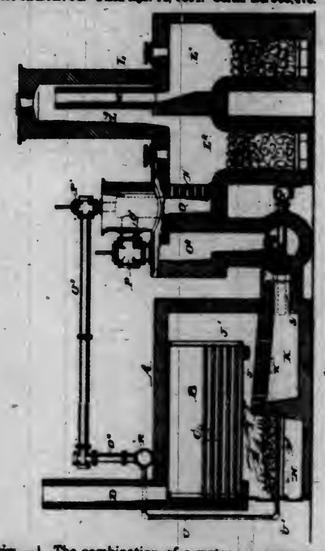
8. The combination, with two springs acting alternately and in the same direction, fixed at one end and secured to ropes at their other ends, whereof one rope is attached to a drum having one part of a coupling mechanism and the other rope attached to a second drum on the car-axle, adapted to revolve with said axle in one direction and to be at rest when the axle revolves, of a pulley with the opposite part of a coupling mechanism and means to engage and disengage the parts of said coupling mechanism, a pulley on the car-axle, and belt from it to said pulley, with coupling mechanism, and a third rope connecting said drums, substantially as specified.



9. The combination, with a drum loose on its shaft and connected to a lever adapted to give it longitudinal motion, of a longitudinally-reciprocating bar moving in a plane transverse to the motion of said lever and connected thereto in a diagonal slot, adapted to operate substantially as specified.

483,350. TANNER'S SIGUE-BRUSH. CHARLES GRAF, Cincinnati, Ohio. Filed Aug. 31, 1891. Serial No. 404,165. (Model.)

Claim.—As a new article of manufacture, a tanner's sigue-brush composed of a stock or back A, tufts C, forming the body or main portion of the rubbing-surface, and each tuft comprising a number of naturally-curved bristles, which are drawn with their ends flaring or disposed outwardly, and a series of tufts D, each projecting from single holes or sockets skirting the opposite ends of said main tufts C and comprising a number of naturally-curved bristles drawn with their ends disposed or turned inwardly toward each other and intimately commingling, whereby a reinforce is provided at said opposite ends of the body-tufts of the brush for uniform wear therewith, and all the parts arranged and constructed substantially as and for the purpose herein set forth.



483,351. GATE FOR WIRE FENCES. PETER HAIR, Michigan City, Ind. Filed July 8, 1892. Serial No. 439,394. (No model.)

Claim.—1. In a gate for wire fences, the combination, with the post A, of the heel lever E, pivoted thereon, the said lever having the stud d' at one end thereof and the handle d^2 at the other, the loop D', secured to said post, the wires b, the head-piece C, connected to said wires and having a foot c, adapted to engage in said loop D', and the loop D, secured to said head-piece and adapted to engage said stud d', and means for holding said heel lever E when the gate is closed, substantially as and for the purposes described.

2. In a gate for wire fences, the combination, with the post A, of the heel lever E, pivoted thereon, the said lever having the stud d' at one end thereof and the handle d^2 at the other, the loop D', secured to said post, the wires b, the head-piece C, connected to said wires and having a foot c, adapted to engage in said loop D', and the loop D, secured to said head-piece and adapted to engage said stud d', and the post F, having holes f, and the pin H for holding said heel lever E when the gate is closed, substantially as and for the purposes described.

483,352. APPARATUS FOR HEATING BOILERS BY GASEOUS FUEL. JAMES I. HASTINGS, Philadelphia, assignor to L. G. McCauley, West Chester, Pa. Filed Apr. 11, 1891. Serial No. 388,473. (No model.)

Claim.—1. The combination of a water-gas generator, a receptacle for water-gas, and a receptacle for producer-gas communicating with the take-off of the generator, valves for closing the connection to either receptacle at will, a boiler, a fire-box extending beneath the boiler and separated into front and rear communicating chambers by a bridge, connections from the water-gas receiver to the front chamber, and connections from the producer-gas to the rear chamber.

2. The combination of a water-gas generator, a receptacle for water-gas, and a receptacle for producer gas communicating with the take-off of the generator, valves for closing the connection to either receptacle at will, a boiler, a fire-box extending beneath the boiler and separated into front and rear communicating chambers by a bridge, a combustion-chamber situated beneath the rear fire-box chamber and communicating therewith through checkered fire-brick or its equivalent, connections from the water-gas receiver to the front chamber, and connections from the producer-gas receiver to the combustion-chamber.

3. The combination of a series of water-gas generators, a common water-gas receptacle and a common producer-gas receptacle, conduits leading from each generator to each receptacle, valves in said conduits, whereby they can be closed at will, one or more boilers, fire-boxes extending beneath said boilers and divided into front and rear communicating chambers by a bridge, conduits leading from the water-gas receptacle to the front fire-chambers, and conduits leading from the producer-gas receptacle to the rear fire-chamber.

483,353. FOLDING IRONING-TABLE. HORTON C. HILL and CHARLES W. FIRST, Clinton, Ill. Filed Dec. 1, 1891. Serial No. 413,714. (No model.)

Claim.—1. In a folding ironing-table, the combination, with a frame fastened to the wall, of a shelf pivotally attached to the top of said frame, guide-brackets attached to said frame and forming a support for said shelf, a roller attached to said guide-brackets and spanning the distance between them, and a sliding board adapted to move freely between said roller and said frame, with a support for the end of said board, substantially as described.

2. In a folding ironing-table, the combination, with a frame fastened to the wall, of two side brackets fastened to said frame, a swinging roller attached by pivoted straps to said brackets, and a sliding board adapted to move freely between said roller and said frame, with means for preventing said board from being drawn off the said roller, and a brace pivotally attached to the outer portion of said board and adapted to engage in said frame, substantially as described.

3. In an ironing-table, the combination, with the frame B, attached to the wall and having cross-piece *b*, holes b^4, and brackets b^3, of the swinging roller D, attached by straps D′ to said brackets, the sliding board A, having cross-piece a^3 and tenons a^2, and the pivoted brace E, with means for engaging the same in said frame, all operating substantially as described.

4. In an ironing-table, the combination, with the frame B, attached to the wall and having cross-piece *b*, holes b^4, and brackets b^3, of the shelf B′, pivotally attached at *b*′ to said frame and adapted to rest on said brackets, the swinging roller D, attached by straps D′ to said brackets, the sliding board A, having cross-piece a^3 and tenons a^2, and the pivoted brace E, with means for engaging the same in said frame, all operating substantially as described.

488,354. LENS-MEASURING INSTRUMENT. MATHIAS J. HINDER, Cleveland, Ohio, assignor to the Julius King Optical Company, same place. Filed Mar. 30, 1892. Serial No. 426,909. (No model.)

Claim.—1. In a lens-measuring instrument, the combination of pivoted plates carrying contact-points, said plates engaging each other, and indicating mechanism, said mechanism consisting of a lever connected to one of said plates and carrying at its inner end a segmental rack and the connections for moving an index-finger over a graduated dial, substantially as set forth.

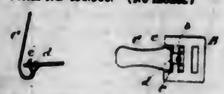
2. The combination of two plates D E, carrying contact-points *d e*, lever F, shaft I, pinion H, pointer K, and a graduated dial N, substantially as and for the purposes described.

3. The combination of two movable plates D E, carrying contact-points *d e*, lever F, shaft I, pinion H, pointer K, and spring L, the parts being constructed, arranged, and operating substantially in the manner and for the purposes specified.

488,355. COMBINED REEL-CARRIER AND WIRE-STRETCHER. WILLIAM H. JOHNSON, Shreveport, La. Filed June 18, 1892. Serial No. 437,131. (No model.)

Claim.—1. In a combined reel-carrier and wire-stretcher, the combination, with a frame mounted on wheels, of a wire-reel journaled across said frame, with means for winding up said reel, a screw set longitudinally in said frame, a wire-holding device attached to said screw, and means for turning said screw, substantially as and for the purposes described.

2. In a combined reel-carrier and wire-stretcher, the combination, with a frame mounted on wheels and a device for holding said frame against backward motion, of a wire-reel journaled across said frame, with means for winding up said reel and a brake for holding the same, a screw set longitudinally in said frame and means for turning said screw, a swivel attached to said screw, and a wire holding device attached to said swivel, substantially as and for the purposes described.



3. In a combined reel-carrier and wire-stretcher, the combination, with a frame mounted upon wheels, a shaft journaled across said frame, a wire-reel on said shaft, a hand-crank at one end of said shaft, and a brake for controlling the motion of said reel, of a second shaft journaled across said frame, a screw passing through said shaft, having a hand-wheel at one end and a swivel at the other, and a device for nipping the wire attached to said swivel, substantially as and for the purposes described.

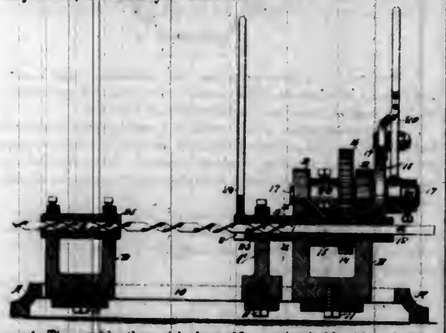
4. In a combined reel-carrier and wire-stretcher, the combination, with a frame mounted upon wheels, a shaft journaled across said frame, a wire-reel on said shaft, a hand-crank at one end of said shaft, and a brake for controlling the motion of said reel, and a guide-frame E, having rollers *e*, *e*′, and e^2 for guiding the wire from said reel, of a second shaft journaled across said frame, a screw passing through said shaft, having a hand-wheel at one end and a swivel at the other, and a device for nipping the wire attached to said swivel, substantially as and for the purposes described.

5. In a combined reel-carrier and wire-stretcher, the combination, with a frame mounted upon wheels, a shaft journaled across said frame, a wire-reel on said shaft, a hand-crank at one end of said shaft, and a brake consisting of a brake-block d^3 and screw d^3, adapted to be screwed down on said shaft for controlling the motion of the said reel, of a second shaft journaled across said frame, screw passing through said shaft, having a hand-wheel at one end and a swivel at the other, and a device for nipping the wire attached to said swivel, substantially as and for the purposes described.

488,356. BUCKLE. EDWIN J. KRAFTSIK, Cambridge, Mass. Filed Apr. 23, 1892. Serial No. 430,360. (No model.)

Claim.—1. A buckle consisting of the combination of a draw-plate, a tongue-plate, and a tongue having spring-arms grasping said tongue-plate, substantially as described.

2. A buckle provided with a tongue plate having a tongue with spring-retaining arms, substantially as described.



3. A buckle provided with a tongue-plate having a tongue with arms *c d c*, whose ends are bent about a bar of the tongue-plate, whereby a bar of the tongue-plate is firmly grasped and the tongue held in position, substantially as described.

488,357. MACHINE FOR TWISTING METAL STRIPS. EDUARD KUSCHLE, New York, N. Y., assignor to the Otis Brothers & Company, same place. Filed Feb. 20, 1892. Serial No. 422,198. (No model.)

Claim.—1. The combination, with a holder constructed to permit the free longitudinal movement of the untwisted portion of the strip to be twisted and means for rotating said holder, of a forked holder adapted to be placed upon and removed from the strip to be twisted while the latter is held by the rotary holder, whereby successive portions of the strip may be twisted without removing it from the rotary holder, substantially as described.

2. The combination, with a holder constructed to permit the free longitudinal movement of the untwisted portion of the strip to be twisted and means for rotating said holder, of a forked holder adapted to be placed upon and removed from the strip to be twisted while the latter is held by the rotary holder and consisting of a bar forming a handle and a fork engaging the strip to be twisted, whereby successive portions of the strip may be twisted without removing it from the rotary holder, substantially as described.

3. The combination, with a holder constructed to permit the free longitudinal movement of the untwisted portion of the strip to be twisted and means for rotating said holder, of a forked holder adapted to be placed upon and removed from the strip to be twisted while the latter is held by the rotary holder and having its holding-surface longitudinally of the strip substantially equal to the width of the strip to be twisted, whereby successive portions of the strip may be twisted with untwisted portions of a length equal to the width of the strip between said twisted portions without removing the strip from the rotary holder, substantially as described.

4. The combination, with sleeve 12, carrying holder 13, and means for rotating said holder, of forked holder 24, adapted to be placed upon and removed from the strip while the latter is held by holder 13, and separator 23 between said holders, substantially as described.

5. The combination, with holder 13 and means for rotating said holder, of forked holder 24, adapted to be placed upon and removed from the strip while the latter is held by holder 13, adjustable frame C, and removable separator 23, mounted in said frame between said holders, substantially as described.

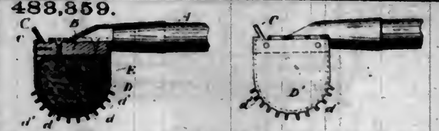
6. The combination, with sleeve 12, mounted to rotate and carrying holder 13, of gear 14 on said sleeve, gear 16, engaging gear 14, shaft 17, carrying said gear 16, and ratchet-wheel 18, rock-arm 20, carrying pawl 19, engaging said ratchet-wheel, and forked holder 24, adapted to be placed upon and removed from the strip while the latter is held by holder 13, substantially as described.

7. The combination of sleeve 12, forming a guide and support for the untwisted strip and carrying holder 13, means for rotating said sleeve, adjustable frame C and removable separator 23 in said frame, and guide 25 for the twisted strip, substantially as described.

488,358. METAL LATTICE-WORK. EDUARD KUSCHLE, New York, N. Y., assignor to the Otis Brothers & Company, same place. Filed May 4, 1892. Serial No. 431,797. (No model.)

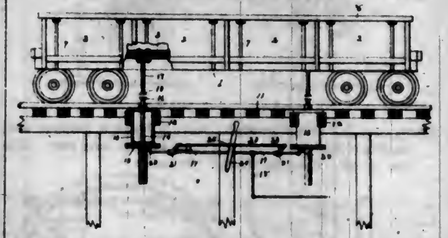
Claim.—1. A metal strip having flat portions of a length substantially equal to the width of the strip and twisted portions between said flat portions, substantially as described.

2. A metal lattice-work formed of strips woven together and having flat engaging portions of a length substantially equal to the width of the strip and twisted portions between said flat portions, substantially as described.



3. A metal strip having flat portions of a length substantially equal to the width of the strip and one or more full twists between said flat portions, substantially as described.

4. A metal lattice-work formed of strips woven together and having flat engaging portions of a length substantially equal to the width of the strip and one or more full twists between said portions, substantially as described.



488,359. WINDOW-CLEANER. ANTHONY L. LEWIS, Evanston, Ill. Filed Sept. 4, 1891. Serial No. 404,787. (No model.)

Claim.—1. A window-cleaner having a handle, a body, a flexible reservoir of impervious material secured thereto and having its working surface perforated, and a mass of bibulous material within said reservoir, substantially as set forth.

2. A window-cleaner having the handle A, the rigid body B, the india-rubber reservoir D, secured thereto and having the longitudinal ribs on its working surface, and having, also, perforations between said ribs, the bibulous material E within said reservoir, and the scraper C, said scraper and reservoir being attached to said body, substantially as set forth.

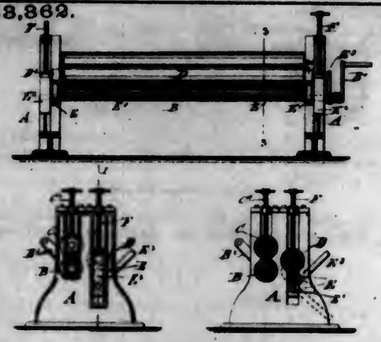
488,360. MEANS FOR DUMPING CARS. WILLIAM E. LUDLOW, Toledo, Ohio. Filed Jan. 12, 1892. Serial No. 417,808. (No model.)

Claim.—1. In a dumping-car, a central longitudinal vertically-movable beam and bottom-sections pivotally secured thereto, in combination with vertically-movable pistons to raise the beam and incline the bottom-sections.

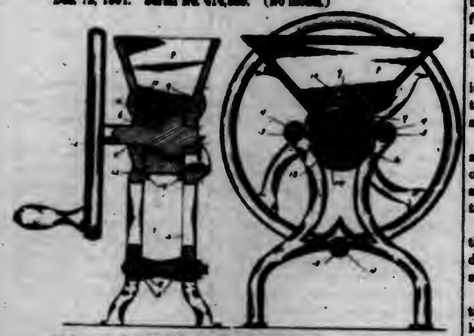
2. In a dumping-car, a central longitudinal vertically-movable portion secured thereto, rods secured to the under side of the central portion, cylinders provided with pistons coincident to the depending rods, a pipe connecting the cylinders and the source of power, and coincidently-acting valves for controlling the pistons simultaneously.

3. In combination with a dumping-car having a central longitudinal beam and side sections pivoted thereto, a trestle provided with tracks to receive the car, and vertically-movable pistons in alignment with the central section, whereby to raise the same and incline the side sections, and means for raising the pistons.

488,361. EXTENSION-TABLE. CHARLES W. MUSS, Detroit, Mich., assignor of one-half to Warren Williams, same place. Filed Sept. 14, 1891. Serial No. 405,573. (No model.)



Claim.—In an extension-table, the combination, with the legs, of stationary rails A, grooved on their opposite sides, cross-bars connecting the rails and extending beyond the same, side rails E, grooved on their upper inner edges and supported by the outer ends of the cross-bars, a top secured in the upper part of the grooves in the rails E, flush with the upper edges thereof, extension-slides engaging in the grooves on the opposite sides of the rails A, end rails corresponding to the side rails E, carried by the outer ends of the extension-slides and of a width to allow the same to rest in the grooves in the rails E beneath the top extension-leaves, having cross-bars O on their under sides, crank-bars passing through the cross-bars O and formed with depending arms Q at their opposite ends, which are pivotally connected with the extension-slides, pins T on the extension-slides, and pivoted locking-lugs on the cross bars, connecting the rails for holding the parts in their adjusted positions, substantially as described.



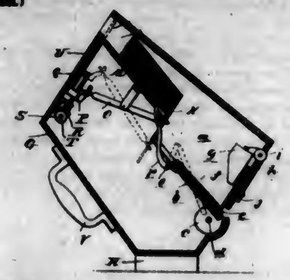
488,362. FORMING-MACHINE FOR SHEET-METAL ARTICLES. STEPHEN O'BRIEN, New York, N. Y. Filed Nov. 6, 1891. Serial No. 411,063. (No model.)

Claim.—The combination of upright supporting-standards, feed-rollers supported by said standards, a forming-roller supported in bearings guided in ways of said standards at the rear of the feed-rollers, a cam-shaft also supported in bearings of the standards, cams on said cam-shaft for raising or lowering the forming-roller, screw-rods from which the bearings of the cam-shaft are suspended, so as to adjust the same higher or lower, and a lever attached to the cam-shaft and adapted to turn the cam-shaft, so as to raise or lower the forming-roller, substantially as set forth.

483,362.

483,363. GRINDING-MILL. ISAAC B. OVERPECK, Overpeck, Ohio, assignor to Edson L. Overpeck and Frank M. Wehr, same place. Filed Dec. 12, 1891. Serial No. 414,888. (No model.)

Claim.—1. In a grinding-mill, the combination of a frame, a grinding-cylinder journaled therein, a hopper above the cylinder, and a segmental concave secured between the sides of the frame and movable laterally relatively to the cylinder, said segment being greater than a semicircle and having its sides extended up to the bottom of the hopper, substantially as described.



2. In a grinding-mill, the combination of a frame, a grinding-cylinder journaled therein, a concave movable laterally relatively thereto, and an adjusting-gate for regulating the size of the discharge-opening, whereby the material may be retained within the mill and caused to be carried up between the side of the cylinder and of the concave or be permitted to escape after only having passed down between the cylinder and concave to the outlet, substantially as set forth.

3. In a grinding-mill, the combination of a frame, one side of which is provided with a discharge-opening and a spout, a grinding-cylinder journaled in the frame, a concave clamped between the sides of the frame, bolts through the frame for holding it together, and a gate pivotally secured at one end to one of the clamping-bolts through the frame and having its free end adapted to regulate the size of the discharge-opening, substantially as set forth.

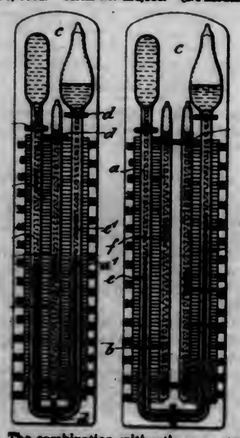
4. In a grinding-mill, the combination of a frame, the sides of which are each provided with inwardly-projecting perforated lugs, the inner ends of each pair of which are adapted to bear against each other, bolts through each pair of lugs, a grinding-cylinder journaled in the upper portion of the frame, a concave and a hopper clamped between said sides, and a gate for regulating the size of the discharge-opening, substantially as set forth.

5. In a grinding-mill, the combination, with a frame, the sides of which are each provided with a bearing and an offset and an inwardly-projecting lug above the bearing and a curved ledge below the bearing and with three inwardly-projecting perforated lugs, of a grinding-cylinder journaled in the bearings, a hopper secured in the offsets and a segmental concave upon the ledges partially surrounding the grinding-cylinder, the exterior surface of said concave being of a less diameter than the curvature of the ledges and laterally adjustable upon said ledges, bolts through the perforations of the lugs, and one of the sides being further provided with a discharge-opening between the bearing and the ledge and with a spout projecting outwardly from the bottom of said opening, substantially as set forth.

483,364. CARD SHUFFLING AND DEALING MECHANISM. WILLIAM H. RAMSEY, Detroit, Mich. Filed Feb. 20, 1892. Serial No. 422,900. (No model.)

Claim.—1. In a game apparatus, the combination, with a rotatable support, of a card-dealing apparatus mounted on the support and a latch for locking the support, substantially as described.

2. The combination, with a casing of a card-receptacle having an inclined bottom, of a movable partition at the lower end thereof, means for lowering that partition, a second receptacle below the first one, and means for dealing the cards from said second receptacle, substantially as described.



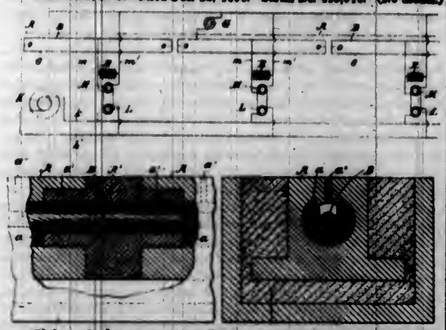
3. The combination, with the casing having a card-receptacle at its upper end and provided with an inclined bottom, of a movable partition at the lower end thereof and means for lowering said partition, substantially as described.

4. The combination, with the casing of a card-receptacle having an inclined bottom, of a movable lower end for said receptacle, a second receptacle below the movable partition, bunching mechanism in said second receptacle, and card-delivery mechanism therein, substantially as described.

5. The combination, with the casing of the receptacle *a*, having the spring-bottom *f* and the exit-aperture *e* at the lower edge, of a delivery-roll and a weight *g*, substantially as and for the purpose described.

6. The combination, with the casing having the receptacle *a* therein, the inclined bottom therefor, and the exit-partition at the lower edge of said receptacle, of the buncher *p*, the delivery roll *c*, and weight *g*, substantially as described.

483,365. INDICATING-THERMOMETER. ALFRED T. RAPKIN and FRANK CORNER, London, England, said Corner assignor to said Rapkin. Filed Feb. 11, 1892. Serial No. 421,062. (No model.)



Claim.—1. The combination, with a thermometer, of an adjacent parallel and independent glass tube having an indicator therein that is not influenced by the changes of temperature, but is set in either direction by a magnet, substantially as specified.

2. The combination, with a thermometer having indicators that are moved by changes of temperature, of an adjacent parallel and independent glass tube having an indicator therein that is not influenced by the changes of temperature, but is set in either direction by a magnet, substantially as specified.

3. The combination, with a thermometer, of an adjacent parallel and independent glass tube having an indicator therein that is not influenced by the changes of temperature, but is set in either direction by a magnet, and a scale the divisions of which are common to both the thermometer-tube and the independent indicating-tube, substantially as specified.

4. The combination, with an indicating-thermometer having two connected parallel limbs *a a'* and having indicators that are moved by changes of temperature, of an independent glass tube between the said limbs and adjacent and parallel thereto and having an indicator therein that is not influenced by changes of temperature, but is set in either direction by a magnet, and a scale the divisions of which are common to both the thermometer-tube and the independent indicating-tube, substantially as specified.

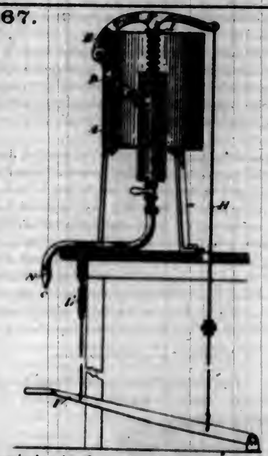
483,366. ELECTRIC-RAILWAY SYSTEM. ANDREW L. RICE, New York, N. Y. Filed Dec. 22, 1891. Serial No. 415,918. (No model.)

Claim.—1. In an electric-railway system, a hollow rail of magnetic material inclosing a conductor, also made, wholly or in part, of magnetic material and resting normally on an insulated portion of the interior of said rail, in combination with a vehicle having magnets adapted to attract said conductor into electrical contact with said rail and with brushes for collecting the current therefrom, substantially as described.

2. The combination of a continuous hollow rail laid in sections magnetically insulated from each other and lined, except at the upper portion, with insulating material, a service-conductor inclosed by said rail and resting normally on said insulating-lining out of contact with the rail proper, and a vehicle provided with magnets adapted to lift the conductor into contact with the rail, substantially as and for the purpose described.

3. In an electric-railway system of the character described, the combination of the hollow magnetic rail laid in sections magnetically insulated, the inclosed service-conductor made wholly or in part of magnetic material and normally resting on the insulating-lining covering the bottom of the interior of said rail, and a vehicle provided with horseshoe magnets whose poles are adapted to move in contact with said rail and to bridge the space between two adjacent sections thereof, substantially as described.

4. In an electric-railway system, the combination of a prime generator of high-potential currents, a main supply-circuit leading to local stations along the line, current-converting devices at said substations, a service-conductor connected at intervals with said main circuit through said converting devices, a hollow rail of magnetic material inclosing said conductor, but normally separated therefrom by a layer of insulating material extending partly around the interior of said rail, and a vehicle having magnets for drawing said conductor against the unlined portion of said rail, substantially as and for the purpose set forth.

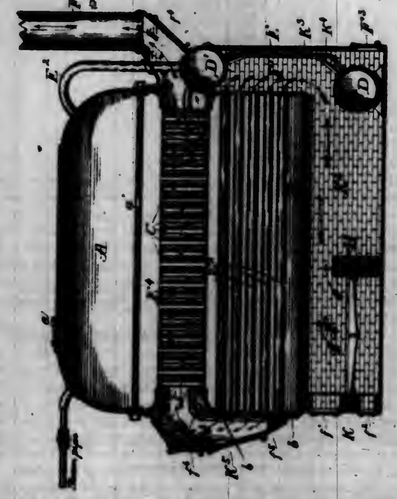


483,367. CEMENTING-MACHINE. WILLIAM ROBERTSON, Hamilton, Canada, assignor to James A. McPherson, same place, and Elbert D. Weyburn, Chicago, Ill. Filed Apr. 30, 1892. Serial No. 430,950. (No model.)

Claim.—1. An apparatus for storing and delivering fluids, comprising a storage-receptacle, a cylinder extending below the same, a passage on a line with the bottom of the storage-receptacle, leading directly into said cylinder, and a piston reciprocating in said cylinder and adapted to close communication between the said receptacle and said cylinder, substantially as described.

2. An apparatus for storing and delivering fluids, comprising a storage-receptacle, a cylinder communicating therewith, said cylinder being provided with an outlet, and a porous mass of material adapted to spray the fluid, located in said outlet, substantially as described.

3. In combination with the cylinder A, the cylinder B, the solid piston C, the spiral spring L, the bracket D, the lever E, the screw-cap G on the cylinder-head F, the treadle-rod H, the presser-foot I, the stop-cock J in the cylinder B, the flexible tube K, and porous mass of material located in the outlet N, substantially as described.



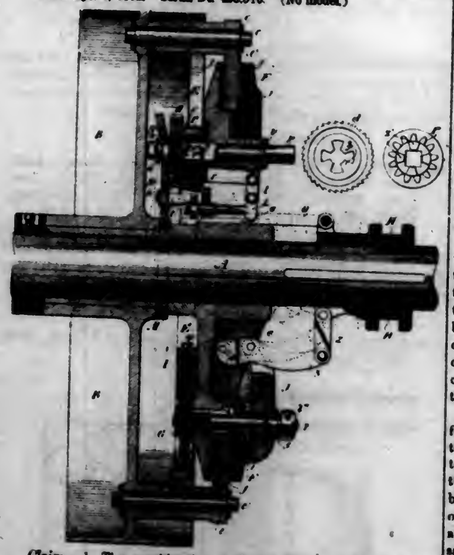
483,367.

483,368. PROCESS OF MAKING AZO COLORS. DANIEL A. ROSENSTIEHL, Paris, France. Filed Mar. 2, 1892. Serial No. 423,606. (Specimens.) Patented in France Dec. 17, 1888, No. 202,675; in Germany Dec. 20, 1889, No. 56,456, and in England Apr. 15, 1890, No. 5,726.

Claim.—The process of producing coloring-matters, consisting in coupling a nitramine with a phenol, amine, or the specified derivative thereof and subjecting the product thus obtained to the action of a reducing agent in an alkaline medium, substantially as described.

483,369. BOILER. EDWARD H. SCRIBNER, U. S. Navy. Filed June 29, 1892. Serial No. 438,458. (No model.)

Claim.—1. An apparatus for generating steam, comprising a boiler composed of two sections joined together by vertical water-tubes and having fire-tubes in the lower section and a fire-space around the said water-tubes, a mud-drum situated in the lower part of the fire-box, water-tubes leading from this drum to a heating-drum in rear of the boiler, and downcast or water pipes leading from said heating-drum through the fire-space around said water-tubes to the lower front portion of the lower section of the boiler, substantially as described.



2. An apparatus for generating steam, comprising a boiler composed of two sections joined together by vertical water-tubes and hav-

ing fire-tubes in the lower section and a fire-space around the said water-tubes, a mud-drum situated in the lower part of the fire-box, water-pipes leading from this drum to a heating-drum in rear of the boiler, and water-pipes leading from said heating-drum through the fire-space around said water-tubes to the lower front portion or lower section of the boiler, and equilibrium-pipes leading from said heating-drum to the upper section of the boiler, substantially as and for the purposes described.

3. An apparatus for generating steam, comprising a furnace F, a boiler composed of two semicylindrical sections connected together by water-tubes set over said furnace, fire-tubes in the lower section of said boiler, and a fire-space around said water-legs for the passage of the products of combustion, a front connection connecting said flues and said fire-space, a mud-drum situated in the lower portion of the fire-box, heating-pipes leading upward from said mud-drum inside of the back connection, a heating-drum inside of the back connection, a heating-drum connected to said heating-pipes at the rear of the boiler, and downcast pipes leading from said drum to the lower section of the boiler, substantially as and for the purposes described.

483,370. FRICTION-CLUTCH. Peter Weber, Schenectady, N. Y.

Filed Apr. 8, 1892. Serial No. 428,316. (No model.)

Claim.—1. The combination, with the driving and driven members of a friction-clutch and mechanism for clamping said two members, of tightening mechanism upon one member and operative from the other member in both directions of movement of the driving member of the clutch when the speed of the driven member is less than that of the driving member, and connections engaging said clamping mechanism and operated by said tightening mechanism for operating said clamping mechanism to increase the friction between the two members of the clutch, substantially as described.

2. The combination, with the driving and driven members of a friction-clutch and mechanism for clamping said two members, of tightening mechanism upon one member, one or more cams or projections upon the other member, between the axis thereof and said tightening mechanism, for operating the latter when the speed of the driven member is less than that of the driving member, and connections engaging said clamping mechanism and operated by said tightening mechanism for operating said clamping mechanism to increase the friction between the two members of the clutch, substantially as described.

3. The combination, with the driving and driven members of a friction-clutch and mechanism for clamping said two members, of a lever upon one member, one or more cams or projections upon the hub of the other member for rocking said lever when the speed of the driven member is less than that of the driving member, and connections engaging said clamping mechanism and operated by said lever for operating said clamping mechanism to increase the friction between the two members of the clutch, substantially as described.

4. The combination, with the driving and driven members of a friction-clutch and mechanism for clamping said two members, of a lever pivoted to one member, one or more cams or projections upon the hub of the other member for rocking said lever when the speed of the driven member is less than that of the driving member, a spring for retaining said lever in the line of rotation of said cams or projections, and connections engaging said clamping mechanism and operated by said lever for operating said clamping mechanism to increase the friction between the two members of the clutch, substantially as described.

5. The combination, with the driving and driven members of a friction-clutch and mechanism for clamping said two members, of a lever pivoted to one member, one or more cams or projections upon the other member, between the axis thereof and the pivotal point of said lever, for rocking the latter when the speed of the driven member is less than that of the driving member, a spring for retaining said lever in the line of rotation of said cams or projections, mechanism for adjusting said lever out of their line of rotation, and connections engaging said clamping mechanism and operated by said lever for operating said clamping mechanism to increase the friction between the two members of the clutch, substantially as described.

6. The combination, with the driving and driven members of a friction-clutch and mechanism for clamping said two members, of tightening mechanism upon one member, one or more cams or projections upon the hub of the other member for operating said tightening mechanism when the speed of the driven member is less than that of the driving member, and connections engaging said clamping mechanism and operated by said tightening mechanism for operating said clamping mechanism to increase the friction between the two members of the clutch, substantially as described.

7. The combination, with the driving and driven members of a friction-clutch and mechanism for clamping said two members, of a lever upon one member, one or more cams or projections upon the hub of the other member for rocking said lever when the speed of the driven member is less than that of the driving member, and connections engaging said clamping mechanism and operated by said lever for operating said clamping mechanism to increase the friction between the two members of the clutch, substantially as described.

8. The combination, with the driving and driven members of a friction-clutch and mechanism for clamping said two members, of a tightening-lever pivoted to one member, one or more cams or projections upon the hub of the other member for rocking said lever when the speed of the driven member is less than that of the driving member, a spring for retaining said lever in the line of rotation of said cams or projections, and connections engaging said clamping mechanism and operated by said lever for operating said clamping mechanism to increase the friction between the two members of the clutch, substantially as described.

9. The combination, with the driving and driven members of a friction-clutch and mechanism for clamping said two members, of a tightening-lever pivoted to one member, one or more cams or projections upon the hub of the other member for rocking said lever when the speed of the driven member is less than that of the driving member, a spring for retaining said lever in the line of rotation of said cams or projections, mechanism for adjusting it out of their line of rotation, and connections engaging said clamping mechanism and operated by said lever for operating said clamping mechanism to increase the friction between the two members of the clutch, substantially as described.

10. The combination, with the driving and driven members of a friction-clutch and mechanism for clamping said two members, of tightening mechanism upon one member, one or more cams or projections upon the other member, between the axis thereof and said tightening mechanism, for operating said tightening mechanism when the speed of the driven member is less than that of the driving member, mechanism for adjusting said tightening mechanism to and out of the line of rotation of said cams or projections, and connections engaging said clamping mechanism and operated by said tightening mechanism for operating said clamping mechanism to increase the friction between the two members of the clutch, substantially as described.

11. The combination, with the driving and driven members of a friction-clutch and mechanism for clamping said two members, of a lever pivoted to one member, one or more cams or projections upon the other member, between the axis thereof and the pivotal point of said lever, for operating the latter when the speed of the driven member is less than that of the driving member, mechanism for adjusting said lever to and out of the line of rotation of said cams or projections, and connections engaging said clamping mechanism and operated by said tightening-lever for operating said clamping mechanism to increase the friction between the two members of the clutch, substantially as described.

12. The combination, with the clamping mechanism of a friction-clutch, of lever S upon one member, extending inwardly toward the axis of the other member, cam or projection *m* upon the other member of the clutch, engaging the inwardly-extending end of and operating said lever when the speed of the driven member is less than that of the driving member, and connections engaging said clamping mechanism and operated by said lever, substantially as described.

13. The combination, with the clamping mechanism of a friction-clutch, of lever S upon one member, extending inwardly toward the axis of the other member, cam or projection *m* upon the hub of the other member of the clutch, engaging the inwardly-extending end of and operating said lever when the speed of the driven member is less than that of the driving member, and connections engaging said clamping mechanism and operated by said lever, substantially as described.

14. The combination, with the clamping mechanism of a friction-clutch, of lever S upon one member, extending inwardly toward the axis of the other member and provided at its inner end with curved portion *m'*, cam or projection *m* upon the other member of the clutch, engaging said curved portion and operating said lever when the speed of the driven member is less than that of the driving member, and connections engaging said clamping mechanism and operated by said lever, substantially as described.

15. The combination, with the clamping mechanism of a friction-clutch, of lever S upon one member, extending inwardly toward the other member, a spring for holding it to the hub of the other member, cam or projection *m* upon the latter member, engaging the inner end of and operating said lever when the speed of the driven member is less than that of the driving member, and connections engaging said clamping mechanism and operated by said lever, substantially as described.

16. The combination, with the driving and driven members of a friction-clutch and a plurality of clamping devices for clamping said two members, of a pinion for each of said clamping devices for operating the latter to adjust the friction between the two members of the clutch, tightening mechanism upon one member and operated from the other member when the speed of the driven member is less than that of the driving member, and connections engaging said pinions and operated by said tightening mechanism for rotating said pinions to increase the friction between the two members of the clutch, substantially as described.

17. The combination, with the driving and driven members of a friction-clutch and a plurality of clamping devices for clamping said two members, of a pinion for each of said clamping devices for operating the latter to adjust the friction between the two members of the clutch, gearing connecting all of said pinions, tightening mechanism upon one member and operated from the other member when the speed of the driven member is less than that of the driving member, and connections engaging said gearing and operated by said tightening mechanism for rotating said gearing and pinions to increase the friction between the two members of the clutch, substantially as described.

18. The combination, with the driving and driven members of a friction-clutch and a plurality of clamping devices for clamping said two members, of a pinion for each of said clamping devices for operating the latter to adjust the friction between the two members of the clutch, an intermediate connecting all of said pinions, tightening mechanism upon one member and operated from the other member when the speed of the driven member is less than that of the driving member, and connections engaging said intermediate and operated by said tightening mechanism for rotating said intermediate and pinions to increase the friction between the two members of the clutch, substantially as described.

19. The combination, with the driving and driven members of a friction-clutch and a plurality of clamping devices for clamping said two members, of a pinion for each of said clamping devices for operating the latter to adjust the friction between the two members of the clutch, gearing connecting all of said pinions, a pinion for rotating said gearing, tightening mechanism upon one member and operated from the other member when the speed of the driven member is less than that of the driving member, and connections engaging said pinion and operated by said tightening mechanism for rotating said pinion, and gearing and pinions connected with the latter to increase the friction between the two members of the clutch, substantially as described.

20. The combination, with ratchet *d* and pinion P and their clutching-faces, of shaft *p*, journaled in disk E and movable longitudinally in said disk and through pinion P and shoulder *p''* upon said shaft for unclutching said ratchet and pinion, substantially as described.

21. The combination, with the driving and driven members of a friction-clutch, of clamping-bolts 6, splined to one member, toggle-levers connected to said bolts and engaging the other member, a pinion G for each bolt and threaded thereon, and intermediate I, gearing with and for rotating said pinions, substantially as described.

22. The combination, with the driving and driven members of a friction-clutch, of clamping-bolts 6, splined to one member, toggle-levers connected to said bolts and engaging the other member, a pinion G for each bolt and threaded thereon, and intermediate I, gearing with and for rotating said pinions, and pinion P for rotating said intermediate, substantially as described.

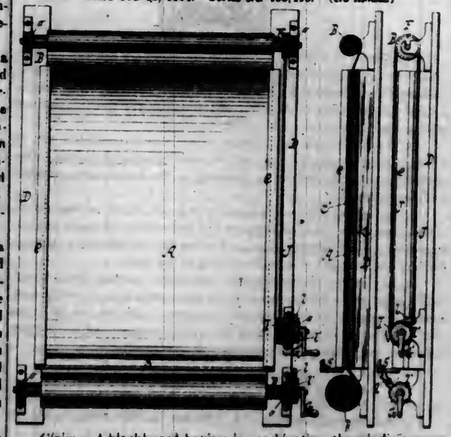
23. The combination, with intermediate I, pinion P, and its shaft *p*, movable longitudinally through said pinion, of flange *r* upon said pinion, engaging the inner face of said intermediate, substantially as described.

24. In a friction-clutch, the combination of disk E, sleeve H, lever S, mounted on and movable to and from said disk, latch L, linked to disk E and connected to lever S, and rod O, connected to sleeve H and engaging latch L, substantially as described.

25. In a friction-clutch the combination of disk E, sleeve H, lever S, mounted on and movable to and from said disk, rod *t*, connected to said lever, latch L, linked to disk E and connected to rod *t*, and rod O, connected to sleeve H and engaging latch L, substantially as described.

26. In a friction-clutch, the combination of disk E, sleeve H, lever S, mounted on and movable to and from said disk, rod *t*, connected to said lever, latch L, linked to disk E and connected to rod *t*, spring *z*, connected to said rod and disk E, and rod O, connected to sleeve H and engaging latch L, substantially as described.

27. In a friction-clutch, the combination of disk E, sleeve H, lever S, mounted on and movable to and from said disk, rod *t*, connected to said lever, latch L, linked to disk E and connected to rod *t*, spring *z*, connected to said rod and to disk E, and rod O, connected to sleeve H and provided with cam *o*, engaging latch L, substantially as described.



28. The combination, with pulley B and plate C, detachably connected thereto, of disk E, engaging one side of said plate, ring F, carried by said disk and engaging the opposite side of said plate, and rings *f*, of fibrous material, disconnected from and loose between said plate, disk, and ring, substantially as described.

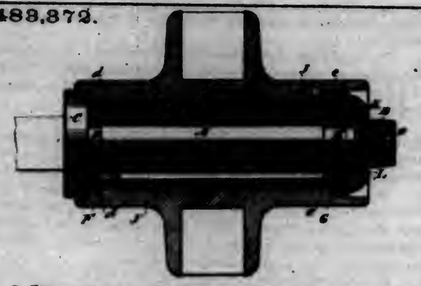
29. The combination, with pinion P, pawl A and ratchet *d*, means for clutching said pinion and pawl and ratchet, and lever S for operating said pawl and ratchet, of shafts *p*, movable longitudinally through said pinion and provided with polygonal portion *p'*, receiving said pinion, and with shoulder *p''* for unclutching said pinion and pawl A and ratchet *d*, substantially as described.

30. The combination, with pinion P, pawl A and ratchet *d*, jaws *a d'* for clutching said pinion and pawl and ratchet, and lever S for operating said pawl and ratchet, of shaft *p*, movable longitudinally through said pinion and provided with polygonal portion *p'*, receiving said pinion, and with shoulder *p''* for unclutching said pinion and pawl A and ratchet *d*, substantially as described.

483,371. BLACKBOARD. Oscar A. Weissenborn, Jersey City, N. J.

Filed Oct. 12, 1891. Serial No. 408,415. (No model.)

Claim.—A blackboard having, in combination, the winding apron of slated cloth, the apron-supporting rollers, a means for operating the rollers independently of each other, and the frame having a backing with a convex surface presented to the apron, and cleats forming guides for the edges of the apron, substantially as shown and described.



483,372. AXLE-BOX. Ernest N. Wood, Lanesborough, Mass.

Filed Apr. 26, 1892. Serial No. 430,744. (No model.)

Claim.—1. The combination of the journal-bearing with its circumferential grooves, the annular rings revolving in said grooves, the rollers mounted between said rings and turning upon bearings fixed therein, and the hub embracing said rollers and provided with internal grooves for accommodating said rings, as set forth.

2. The combination of the annular rings and the rods having their ends secured therein and serving the double purpose of supporting axles for a part of the rollers and as a means of securing the remaining rollers in position, as set forth.

483,372.

3. The combination, with the annular rings, of the intermediate rollers journaled thereon and the rods having their ends permanently secured therein for securing the same in position and the additional rollers revolving upon said rods, as set forth.

4. The combination, with the annular rings and the rollers mounted thereon, of the circumferential grooves formed in the axle and in the interior surface of the hub for accommodating said rings, as set forth.

5. The combination, with the annular rings and the rollers mounted thereon, of the circumferential grooves for accommodating said rings formed in the axle and in the interior surface of the hub, and the stationary bearing-ring secured upon the axle, as set forth.

6. The combination, with the nut B for securing the hub upon the axle, of the recess L, formed thereon, and the stationary bearing-ring K upon the axle, as set forth.

483,373. CYCLE-WHEEL. CHARLES H. W. WOODWARD, Chicopee Falls, Mass., assignor to the Overman Wheel Company, same place. Filed Apr. 11, 1892. Serial No. 428,686. (No model.)

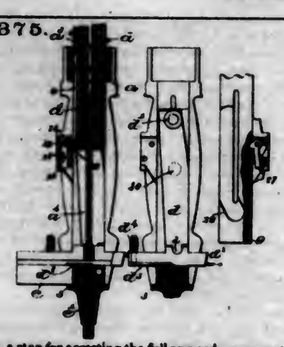
Claim.—1. In a wheel, the combination, with a rim and a hollow rubber tire, of elastic pads or supports approximately triangular in cross-section interposed between the same on opposite sides of their centers, substantially as set forth, and whereby the tire is supported laterally and prevented from rolling.

2. In a wheel, the combination, with a rim and a hollow tire, of elastic pads or supports interposed between the same on opposite sides of their centers and narrowing gradually at their outer ends, substantially as set forth.

3. In a wheel, the combination, with a rim having outwardly-inclined seats at its opposite edges and a hollow tire, of elastic pads or supports approximately triangular in cross-section interposed between the tire and the said seats, substantially as set forth.

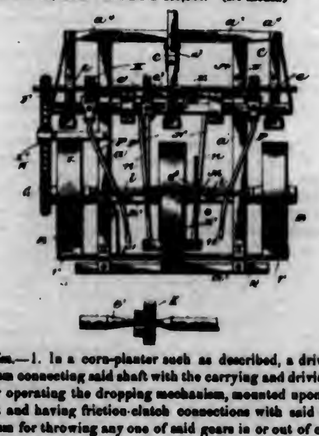
4. In a wheel, the combination, with a rim having outwardly-inclined seats and a hollow tube, of elastic pads or supports approximately triangular in cross-section interposed between the said seats and the tube on opposite sides of the center thereof, and a wrapping inclosing the tube and pads, substantially as described.

483,374. DEVICE FOR HOLDING METALLIC STAPLES. WILLIAM J. BROWN, Philadelphia, Pa. Filed Apr. 12, 1892. Serial No. 428,949. (No model.)



Claim.—As an improved article of manufacture, the rectangular holder for stringing metallic staples, longitudinally recessed or grooved and loaded with staples, and a plug or wedge adapted to enter said recess or groove and slightly spread the sides thereof against the staple-legs, substantially as described.

483,375. TACK-DRIVING MECHANISM. FRANK CRANE, Malden, Mass. Filed June 20, 1891. Serial No. 397,208. (No model.)



Claim.—A tack or nail driver containing the following instrumentalities, viz: a shell or case, a cone, a driver, a driver-bar, a feeding

483,375.

mechanism, a stop for arresting the full upward movement of the driver-bar, and a locking or controlling device connecting with and positively arresting said driver intermediate the full length of movement thereof and controlling thereby the operation of the feed mechanism.

483,376. CORN-PLANTER. OTIS P. CRANMER, Summitville, Ind. Filed Dec. 19, 1891. Serial No. 415,577. (No model.)

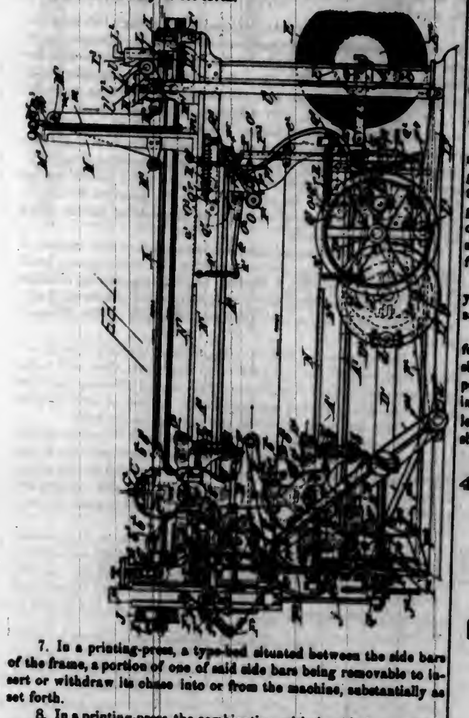
Claim.—1. In a corn-planter such as described, a driving-shaft, mechanism connecting said shaft with the carrying and driving wheels, gears for operating the dropping mechanism, mounted upon the driving-shaft and having friction-clutch connections with said shaft, and mechanism for throwing any one of said gears in or out of connection with the shaft independent of the other gears, substantially as shown and described.

2. In a corn-planter such as described, the combination of a main frame, the driving-shaft E, mounted in suitable bearings, mechanism for operating the shaft, the gears K for operating the dropping mechanism, mounted on said shaft E and having friction-clutch connections therewith, and the levers L, engaging the gears K, all constructed, arranged, and operating substantially as shown and described, whereby any one of said operating-gears may be thrown in or out of connection with the driving-shaft.

483,377. PRINTING-PRESS. DAVID I. ROBERSON, Worcester, N. Y. Filed July 23, 1890. Serial No. 360,132. (No model.)

Claim.—1. In a cylinder printing-press, the combination of an upper and a lower printing form and tracks, as A^3 A^4, a double reciprocating carriage provided with an upper and a lower cylinder, respectively, and guide-rollers for embracing the tracks, substantially as and for the purpose specified.

2. In a regulating device, the combination of a rotary shaft provided with arms carrying stretching-rollers and a worm-wheel and means for turning the worm in one or the other direction, substantially as and for the purpose set forth.



3. In a printing-press, the combination of a reciprocating cutter provided with racks and an oscillating shaft provided with pinions meshing with the racks, substantially as specified.

4. In an inking device for a printing press, the combination, with a doctor-roll, a transfer-roller, and a yieldingly-held tilting arm in which it is journaled and provided with a tail having an inclined end, of a reciprocating impression-roller carriage provided with roller for engaging with the tail of the tilting lever, substantially as described.

5. In an inking mechanism for printing-presses, the combination,

with a doctor-roller having a ratchet-wheel, of an oscillating lever having a pawl and a thumb-bolt mounted on the oscillating lever for throwing the pawl out of engagement with the ratchet-wheel, substantially as set forth.

6. In an inking mechanism for printing-presses, the combination of a doctor-roller provided with a pin on its shaft, with a removable crank having a socket and slot for engaging the end of the shaft and the pin, substantially as set forth.

7. In a printing-press, a type-bed situated between the side bars of the frame, a portion of one of said side bars being removable to insert or withdraw its chase into or from the machine, substantially as set forth.

8. In a printing-press, the combination, with the side bars and the type-bed located between the side bars, of a removable strip provided with V-shaped grooves, one of the side bars being provided with an opening, and guides corresponding to the V-shaped grooves, substantially as set forth.

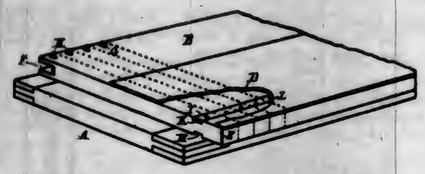
9. In a cylinder printing press, the combination of an upper and a lower printing form and tracks, as A^3 A^4, a reciprocating carriage consisting of the yoke b b, the impression trucks or frames secured to the double yoke, the guide-rollers for embracing the tracks, and the vertically-adjustable impression-cylinders mounted in the said impression trucks or frames, substantially as and for the purpose specified.

10. In a cylinder printing-press, the combination of the two printing-forms, the double reciprocating carriage, the impression trucks or frames mounted in the said carriage, the impression-cylinders mounted in the said trucks or frames, and the means for reciprocating the said carriage, consisting of the oscillating lever D, connected at its upper end to an intermediate arm of the carriage by the link b^3 and secured at its lower end to the shaft d^{10}, the pitman D', attached to the said lever D at one end and at the other end to the crank d of the crank-disk D^2, the crank-disk being secured to the shaft d', and the gearing d^8 d^9 for conveying motion to the said shaft d' from the driving-shaft D^3, substantially as and for the purpose specified.

11. In a printing-press, the combination of a reciprocating cutter provided with racks, the oscillating shaft provided with pinions meshing with the racks, the oscillating lever L^4, pivoted to the frame at l^3 and having a friction roller or stud l^5 engaging the cam-groove l^6 of the disk L^5, secured to the shaft d', the crank l^7, secured to the said vibratory shaft, and the link l^8, connecting the said lever L^4 with the crank l^7, substantially as and for the purpose specified.

12. In a cylinder printing-press, the combination of the two printing-forms, the inking-tables located at both sides of the forms, the double reciprocating carriage consisting of the double yoke b b, the impression trucks or frames carried by said yoke, the impression-cylinders, and the inking-rolls mounted in the said impression trucks or frames, substantially as and for the purpose specified.

13. In a printing-press, the combination of the distributing-rolls, the transfer-rolls, the ink-fountain, and the doctor-roll carried in the said fountain, the oscillating lever P, loosely pivoted on the shaft of the doctor-roll, the pawl p, pivoted on the said lever and engaging with a ratchet-wheel p', fixed to the doctor-roll, the oscillating shaft d^{10}, the link p^3, connecting with an ear on the shaft d^{10} and with the bell-crank p^4, the reciprocating rod P^2, and the links p^5, connecting the lever P with the rod P^2, substantially as and for the purpose specified.



14. In an inking mechanism for printing-presses, the combination of the tilting arms O^3, pivoted at o^3 to the frame, the transfer-roll removably journaled in bearings in the said arms, the tails o^3, attached to the inner ends of the arms O^3 and having an inclined portion o^5, the springs o^4, connecting the ends of the tails with the frame, the reciprocating carriage provided with rollers for depressing the arms O^3, the doctor-roll, and the distributing-roll, substantially as specified.

15. In a printing-press, the combination of the bracket M, the screws m m, journaled in ears of the said bracket and having bevel-gears on their upper ends, the blocks m^2 m^2, carried on the said screws, the roller M', journaled in the said blocks, the shaft M^3, having bevel-gears on each end meshing with the similar gears on the upper ends of the screws m m, the guide-rollers M^5 and M^6, mounted one on each side of the roller M', and the cutting mechanism, substantially as and for the purpose specified.

16. In a cylinder printing-press, a carriage consisting of the double yoke b b and the impression-trucks B^2 B^3, carried by the said yoke, substantially as and for the purpose specified.

17. In a cylinder printing-press, the combination of two printing-forms, one located above the other, the inking-tables located at both sides of the forms, the reciprocating carriage provided with two impression-cylinders and with inking-rolls mounted at both sides of the impression-cylinders, and the intermittent feed for supplying the proper length of paper between the strokes of the carriage, substantially as shown and described.

483,378. KEY FOR MUSICAL INSTRUMENTS. LEVI K. FULLER, Brattleborough, Vt., assignor to the Estey Organ Company, same place. Filed May 2, 1891. Serial No. 391,417. (No model.)

Claim.—1. A key for a musical instrument, having a front pin-hole extending upwardly from the bottom thereof, said pin-hole not extending through the top of the key, whereby its presence does not affect the ivory or celluloid covering of the key, and said key having bushing-felts for guiding the front pin, which enters said pin-hole, said bushing-felts being applied to a strip or strips secured to the key at its bottom, substantially as set forth.

2. A key for a musical instrument, having a front pin-hole extending upwardly from the bottom thereof, said pin-hole not extending through the top of the key, whereby its presence does not affect the ivory or celluloid covering of the key, and said key having at its bottom a strip or strips applied thereto, and bushing-felts secured to said strip or strips on either side of said pin-hole, substantially as set forth.

3. A key for a musical instrument, having a front pin-hole, a recess in the bottom of said key communicating with said pin-hole, filling strip or strips inserted in said recess, said strip or strips being formed so as to leave a space in line with said pin-hole, and bushing guide felts applied to said filling strip or strips, substantially as set forth.

4. A key for a musical instrument, having a front pin-hole, a recess extending crosswise of the bottom of said key communicating with said pin-hole, a filling-strip inserted in said recess, said filling-strip having a mortise across the same in line with said pin-hole, and bushing-felts attached to said strip on opposite sides of said mortise, substantially as set forth.

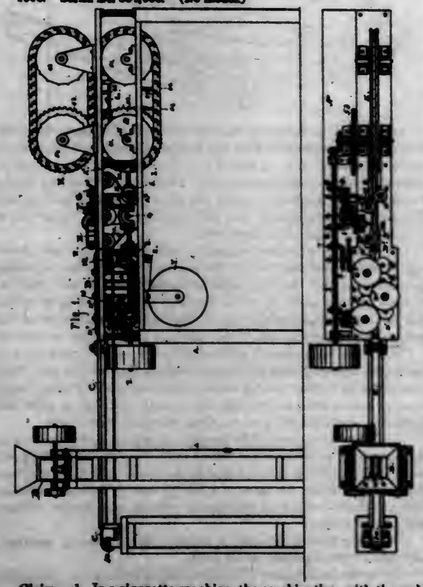
5. A key having pin-hole a, recess b, strip c, having mortise d, and felts e e, substantially as set forth.

6. In the manufacture of keys for musical instruments, the method of forming the front ends thereof, which consists in forming a front pin-hole, attaching a separate strip or piece to the key at its bottom, and applying a bushing-felt to said strip or piece, substantially as set forth.

7. In the manufacture of keys for musical instruments, the method of forming the front ends thereof, which consists in forming a front pin-hole from the bottom of the key so that it does not extend through or to the upper surface of the key, applying a separate strip or strips

to the bottom of the key, and applying bushing-felts to each strip or strips, substantially as set forth.

6. In the manufacture of keys for musical instruments, the method of forming the front ends thereof, which consists in forming a front pin-hole from the bottom of the key so as not to extend to the upper surface of the key, forming a groove or recess extending crosswise of the bottom of the key, intersecting said pin-hole, inserting a filling-strip in said groove or recess, cutting a mortise in said strip in line with said pin-hole, and applying bushing-felts to said filling-strip at the sides of said mortise, substantially as set forth.



488,379. SPOON. PERRY G. GOODWIN, Boston, Mass. Filed Apr. 30, 1891. Serial No. 390,857. (No model.)

Claim.—1. In combination with a spoon, a convex cap extending from the rear to the point of the spoon and so shaped as to form therewith an opening through which the spoon-bowl may be filled and on the other side an opening through which the contents may be emptied, said cap being attached to the handle by a spring-hinge that holds the cap in close contact with the spoon-bowl or in a vertical raised position, substantially as set forth.

2. In a mustache-spoon, a convex cap extending from the rear to the point of the spoon-bowl and so shaped as to form therewith an opening through which the spoon-bowl may be filled and on the other side an opening through which the contents may be emptied, said cap having a block *h* attached at its rear, in combination with a forked block *g*, secured to the handle of the spoon, the two blocks *h g* being pivoted together, and a spring *j*, secured at one end to the block *g* and having its free end resting upon the block *h*, whereby the cap is held in close contact with the spoon-bowl or at right angles thereto, substantially as and for the purposes set forth.

488,380. CIGARETTE-MACHINE. HENRY S. GRACE, San Francisco, Cal., assignor to Jacob A. Fischer, same place. Filed June 2, 1890. Serial No. 354,068. (No model.)

Claim.—1. In a cigarette-machine, the combination, with the endless traveling feed-belt, of the grooved wheels D' D', having continuous rotation at a regular speed, stationary plates, and the top disks D', forming with the feed-belt a converging passage, substantially as described.

2. In a cigarette-machine, the combination, with a feeding device forming the bottom of a channel, of horizontal grooved wheels and intermediate stationary plates forming the sides of said channel and flat rotatory disks forming the top thereof, as set forth.

3. The combination, with means for supporting the wrapper in U shape, of two folding-disks F and G, set to act upon the opposite sides or edges and fold them upon each other, the disk F, having a hub or collar F^x, the paste-trough H, and a paste-delivering belt T, running through the trough and around the collar of the disk and in contact with the bottom face of said disk F from the collar outward to the periphery and adapted to spread the paste upon the surface of the disk, as set forth.

4. In combination with the folding-disk F, having a hub or collar F^x, the paste-trough H, and a paste-delivering belt T, running through the trough and around the collar of the disk and in contact with the bottom face of the disk from the collar outward to the periphery and adapted to spread the paste upon the surface of the disk, as set forth.

5. The combination, with mechanism adapted to produce and wrap a continuous filler of tobacco, of the endless carriers I K, formed of hinged links with grooved faces and set together to form a continuously-traveling passage of cylindrical shape in cross-section or approximately the shape of a cigarette, and spring-controlled cutters carried in the links, and means for operating them to sever the continuous cigarette into lengths while it is confined in and being carried along by the carrier, as set forth.

6. The combination, with the grooved endless carrier formed of jointed links, of a cutting device consisting of a reciprocating knife mounted in a slot in a link, a slide pin or plunger projecting from the back of the link and adapted by its movement to operate the knife, and a fixed incline or stop located in the path of said pin, for operation as set forth.

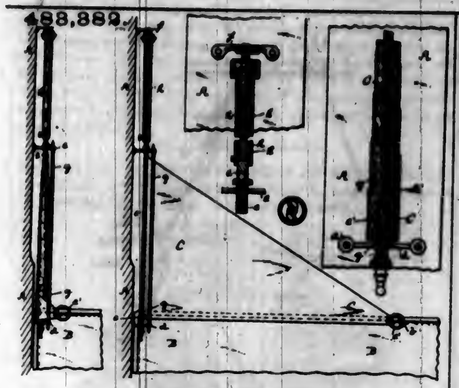
7. The combination, with the endless traveling feed-belt, of the tobacco receptacle B^x, having a fixed center bar B^2, with alternate notches or recesses and teeth or projections, and the curved vibrating jaws having corresponding recesses and projections adapted to work in close relation with said fixed bar across the chamber, as set forth.

8. In a cigarette-machine, the combination, with the carrying-belt forming the bottom of a filler-forming channel, of grooved converging sides for said channel having grooved wheels adapted to rotate and forming a portion of each side thereof and revolubie disks forming the top of said channel arranged on opposite sides of said channel to overlap the same, as set forth.

9. In a cigarette-machine, a filler forming channel having grooved converging sides provided with wheels adapted to rotate and forming a portion of each grooved side, a feeding device under said channel, horizontally-arranged rotary disks forming the top of said channel, and a closed cylindrical passage or portion at the discharge end thereof, as set forth.

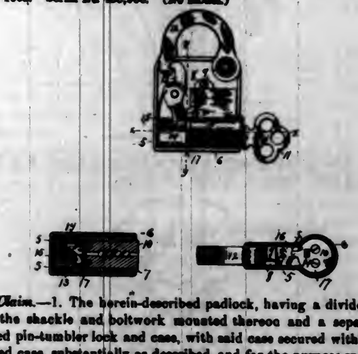
483,381. VEHICLE-GEAR. CHARLES H. HOLDRIDGE, Westerly, R. I. Filed Feb. 1, 1892. Serial No. 419,902. (No model.)

Claim.—In combination with the body and gears of a vehicle, a pair of springs at each side of the body, each pair having the meeting ends of the springs jointedly secured to the body, and a coil-spring secured at one end to each of the vehicle-springs and having the opposite end secured to the body of the vehicle, substantially as set forth.



483,382. DRAFT AND DUST GUARD FOR CARS. EDWARD R. JONES, Lootdale, Pa. Filed Mar. 25, 1892. Serial No. 426,451. (No model.)

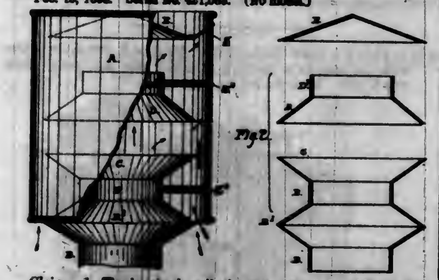
Claim.—1. In combination with the car body and seat, a movable draft-guard formed of a vertical roller mounted in brackets in the car-body, a curtain mounted on such roller, a guide-bar extending between said brackets, and a guide-bar extending up from the lower bracket and free at its upper end, substantially as and for the purposes set forth.



2. In combination with the car body and seat, a movable draft-guard formed of a roller mounted in brackets secured to the car-body, a curtain mounted on said roller, a tube secured to the upper end of such roller and supported at its upper end in a bracket, and a spring for rotating said tube inclosed therein, substantially as and for the purposes set forth.

3. In combination with a car body and seat, a movable draft-guard formed of a vertical spring-operated roller mounted on the car-body and a triangular-shaped curtain mounted on said roller and having a catch at its outer end and a button or catch upon the car-seat to receive the same, substantially as and for the purposes set forth.

488,382.

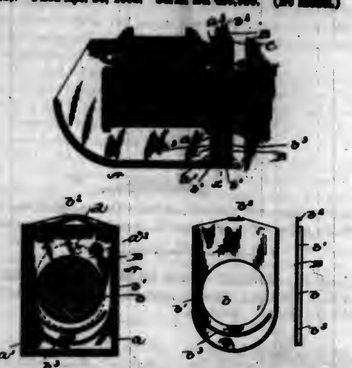


488,383. PADLOCK. EDWARD A. JUDD, New Britain, Conn., assignor to the Corbin Cabinet Lock Company, same place. Filed June 6, 1892. Serial No. 435,966. (No model.)

Claim.—1. The herein-described padlock, having a divided case with the shackle and boltwork mounted thereon and a separately-formed pin-tumbler lock and case, with said case secured within said divided case, substantially as described, and for the purpose specified.

2. In a pin-tumbler lock, the combination of the spring-actuated bolt 13, the cylinder provided with the wing 14, arranged to act upon said bolt and also to be acted upon by said bolt, and stopping devices for limiting the rotation of the cylinder under the influence of said spring-actuated bolt and stopping it in the proper position for the insertion of the key, substantially as specified.

483,384. CHIMNEY-CAP. JOHN KRAUS, San Francisco, Cal. Filed Feb. 15, 1892. Serial No. 421,532. (No model.)

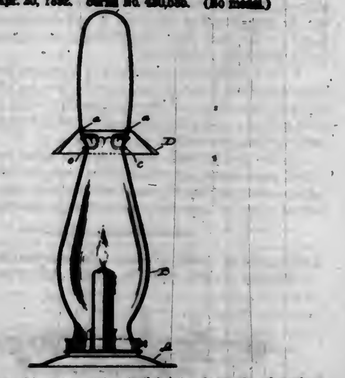


Claim.—1. The herein-described cap or guard for chimney-flues and smoke-pipes, consisting of the casing or body A, the central smoke-conductor B, inclined deflectors B' C, the top cap E, and the intermediate deflector D, having the perpendicular rim D', the said parts being supported within the casing clear of the sides thereof, substantially as set forth.

2. In a cap or guard for chimney-flues, the combination, with a central smoke-conducting flue or passage, of the surrounding casing A, standing clear of the sides all around, the inclined deflectors B' B D, and the cap or top plate E over the center of the casing at the top, substantially as set forth.

3. In a cap or guard for chimneys, the combination, with the casing or body A and a central conductor B, of two upwardly-inclined deflecting-plates and two downwardly-inclined deflecting-plates, constructed and arranged to operate in the manner set forth and specified.

488,385. CAR-AXLE DUST-GUARD. RICHARD M. LAWLESS, Omaha, Nebr. Filed Apr. 20, 1892. Serial No. 429,999. (No model.)



Claim.—1. The herein-described improved dust-guard, comprising a journal-box having a chamber in its rear and an opening extending therethrough for the axle or journal, two corresponding guard-plates located in said chamber and having slots therein, and interposed packing encircling the axle or journal and projecting through said slots in contact with the walls of said chamber, substantially as set forth.

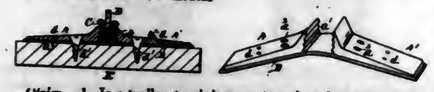
2. The herein-described improved dust-guard, comprising the journal-box having two rear walls forming an intermediate chamber, coincident openings being formed in said walls, the guard-plates having abutting flanges along their edges, packing being interposed between said guard-plates, and a spring-pressed block bearing on said packing, substantially as set forth.

3. The combination, with a journal-box having two rear walls with openings for the axle or journal, of two corresponding guard-plates having abutting flanges and slots and upper inwardly-projecting flanges, and a block bearing on packing between said guard-plates and having a spring connected thereto in contact with said flanges, substantially as set forth.

483,386. LAMP OR LANTERN. JOHN W. OSBORN, Milwaukee, Wis. Filed Apr. 26, 1892. Serial No. 430,686. (No model.)

Claim.—The combination, with a bail having loops for clamping the top of a lamp-chimney, of a cap adapted to slide on the arms of the bail and wedge their loops toward each other, as set forth.

483,387. GATE. FREDERICK K. PLUMLEY, Buffalo, N. Y. Filed Mar. 14, 1892. Serial No. 424,926. (No model.)



Claim.—A gate for voting-booths, consisting, essentially, of a rod D, secured to a floor-plate A within the bow B, a revolubie knob E at the upper end of said rod, having a transverse opening h, fitted with an arm F, and a downward projection F', engaging said rod, and a spiral

483,387.

spring surrounding said rod and affixed with one end to the screw *g* and with the other end to the knob E, as and for the object stated.

483,388. TROLLEY-TRACK HANGER FOR ELECTRIC RAILWAYS. WILLIAM G. PREWITT, Lexington, Ky. Filed Oct. 17, 1891. Serial No. 408,968. (No model.)

Claim.—1. In a trolley-track hanger, two clamping members provided with an underlying flexible support, said members having a channel between their adjacent edges to receive the track, substantially as described.

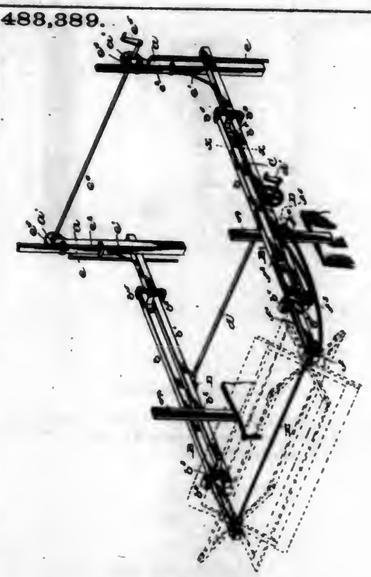
2. In a trolley-track hanger, two clamping members channeled between their adjacent edges to receive the track and provided with an underlying flexible support, said members having laterally-extended securing-flanges, substantially as described.

3. In a trolley-track hanger, two clamping members having a channel to receive the track between their adjacent edges, said edges being milled or serrated, substantially as described.

4. In a trolley-track hanger, the combination, with a base, of a series of track-hangers engaged thereupon, said hangers each constructed with two clamping members provided with a channel to receive the track between their meeting edges and provided with an underlying flexible support, substantially as described.

5. In a trolley-track hanger, the combination, with a base, of two clamping members secured thereupon provided with an underlying flexible support and having a channel to engage a track between their adjacent edges, the members being supported in an open position before the engagement of the track in said channel and arranged to close upon the track when brought firmly into engagement with said base, substantially as described.

6. In a trolley-track hanger, two clamping members having a channel between their meeting edges to receive a track, one member provided with a loop and the other member with a recessed lip to receive said loop, and a flexible support located beneath and engaging both members, substantially as described.

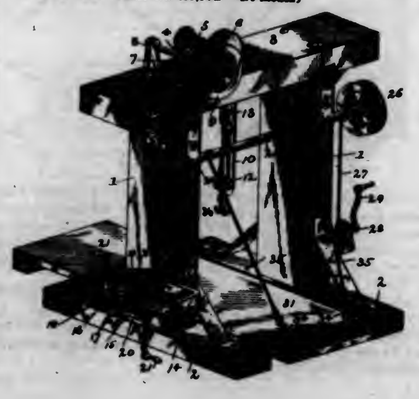


7. In a trolley-track hanger, two clamping members having a jointed engagement one with the other and provided with a channel between their meeting edges to receive a track, and a flexible support located below said members, substantially as described.

483,389. REEL-SUPPORT. FRANK S. REAGER, Germantown, Cal. Filed Jan. 18, 1892. Serial No. 418,496. (No model.)

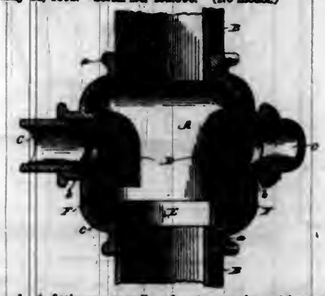
Claim.—The herein-described improved reel-support, comprising the post A, the supporting-arms embracing two arms or members, the lower arms or members being pivoted on said post, the rack-bars secured to the upper arms or members; the gear-wheels engaging therewith, the reel-shaft mounted on the outer ends of said upper arms or members and having a sprocket-wheel on one end, the sprocket-wheel f^3, mounted on said upper arm or member, the two sprocket-wheels mounted on said lower arm or member, and the chain engaging or encompassing said sprocket-wheels, substantially as set forth.

488,389.



483,390. HOSE-REEL. SAMUEL F. REYNOLDS, Auburn, N. Y. Filed Dec. 8, 1891. Serial No. 414,379. (No model.)

Claim.—1. In a hose-reel, the combination, with the shaft and the reel secured thereon, of a friction-plate, a friction-bar, and a spring operating against said bar to hold said plate against the shaft.



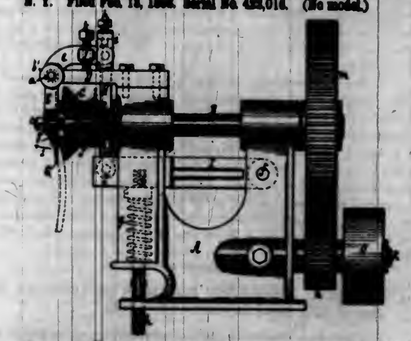
2. In a hose-reel, the combination, with the shaft, the reel secured thereon, and the bearing for said shaft, of a removable box-section provided with a top extension recessed vertically to receive a friction-bar and a pressure-spring and recessed longitudinally to fit over the shaft and receive a friction-plate upon the shaft, a friction-bar, a pressure-spring, and a friction-plate, as set forth

488,391. HOISTING-MACHINE. WILLIAM H. RICKABACH, Mishawaka, Ind., assignor of one-half to William A. Fore, same place. Filed June 3, 1892. Serial No. 435,274. (No model.)

Claim.—In a hoisting-machine, the combination, with the uprights, the base-pieces, the cross-beam, the gearing connected therewith, and the elevating-rope and sheaves, of the transverse shaft journaled to the uprights near their upper ends and means for rotating the same, and the vertically-movable platform, one end of which is adapted to rest upon a wagon or other object and the other end removably connected with ropes or chains secured to said shaft, substantially as and for the purpose specified.

483,392. FITTING OR CONNECTION FOR SUPPLY-PIPES AND BRANCH PIPES OF RADIATORS. JUSTIN E. RUSSELL, Chicago, Ill. Filed May 11, 1892. Serial No. 432,590. (No model.)

Claim.—1. A fitting or coupling for the supply and branch pipes of radiators, having a steam passage or channel formed in said coupling, which communicates with the upper portion of the branch-pipe opening or socket, and a channel for the escape of the water of condensation leading from the lower portion of said opening, substantially as described.



2. A fitting or coupling for the supply and branch pipes of radiators, having a steam passage or channel communicating with the upper portion of the branch-pipe opening and a passage or channel for the escape of the water of condensation from said branch into the coupling independent of said steam-passage, substantially as described.

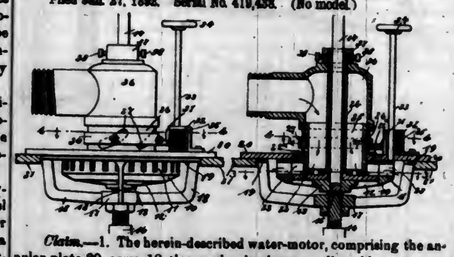
3. A coupling for the supply and branch pipes of radiators, having a lateral opening for the branch pipe, a steam passage or channel communicating with the upper portion of said opening, a passage or channel communicating with the lower portion of said opening, and a channel forming a water seal in said coupling, into which said last-named passage discharges, substantially as described.

4. A fitting or connection for the supply-pipe and the branch pipes of radiators, having an opening for the supply-pipe and a lateral opening for the branch pipe, a partition covering one-half of said last-named opening, and a vertical flange projecting from the inner edge of said supply-pipe opening, substantially as described.

5. A steam fitting or connection having supply-pipe openings, a vertical flange surrounding the interior end or edge of one of said openings, a lateral opening for a branch pipe, a downwardly-projecting shield covering said opening, and a downwardly-projecting partition covering the lower half of said lateral opening, said partition extending downwardly intermediate said shield and the wall of the fitting and terminating below the upper edge of said flange, substantially as described.

483,393. SOLE-TRIMMING MACHINE. JACOB R. SCOTT, New York, N. Y. Filed Feb. 18, 1892. Serial No. 422,016. (No model.)

Claim.—1. The combination of a rotary feed-wheel C, a bevel-faced gage J, extending round and rotating with the feed-wheel, and a knife F, supported independent of the feed-wheel and located in front of the latter for beveling the edge of a sole while such sole is advanced by the feed-wheel, said knife standing stationary, while the feed-wheel rotates, substantially as described.



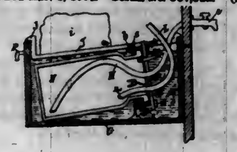
2. The combination of a shaft B, a feed-wheel C, mounted on the shaft, a bevel-faced inside gage J, extending round and rotating with the feed-wheel, a knife F, supported independent of the feed-wheel and located in front of the latter for beveling the edge of a sole while the feed-wheel advances the sole, said knife standing stationary, while the feed-wheel rotates, and an outside gage G, carried by the knife-support and arranged in alignment with the knife in front of the feed-wheel, substantially as described.

3. The combination, with the shaft B, the feed-wheel C, mounted thereon, and the inside gage J, of the plate E, mounted on the pin *a*, the outside gage G, the knife F, secured to said plate, the arm *c*, the rod H, connecting said arm with the lever I, and the spring *g*, acting on this lever, substantially as described.

4. The combination, with the shaft B, the feed-wheel C, mounted thereon, and the inside gage J, of the plate E, mounted on the pin *a*, the outside gage G, the knife F, secured to said plate, the arm *c*, the rod H, connecting said arm with the lever I, the spring *g*, acting on this lever, and the adjusting-screw *k*, substantially as described.

5. The combination, with the shaft B, the feed-wheel C, mounted thereon, and the inside gage J, of the plate E, mounted on the pin *a*, the outside gage G, the knife F, secured to said plate, the arm *c*, the adjusting-screw *k*, and the locking-screw *k*, substantially as described.

483,394. WATER-MOTOR. WILLIAM E. SEELYE, Brainerd, Minn. Filed Jan. 27, 1892. Serial No. 419,438. (No model.)

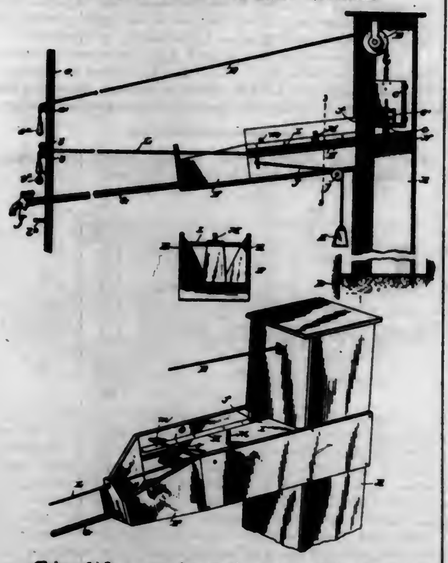


Claim.—1. The herein-described water-motor, comprising the annular plate 20, arms 18 thereunder having an adjustable center, an outer slotted cylindrical casing 26 upon the upper side of the slotted plate, an elbow secured to the upper end of said casing, a main shaft extending down through said elbow and stepped on said center, a water-wheel mounted on the lower end of the shaft and provided with an annular series of buckets open at their inner and outer ends, the water-chest 22, secured to the lower side of the plate 20 within the series of buckets and having an annular series of ports registering with said buckets, the vertically-sliding open-ended cylindrical gate closing the inner ends of said ports and resting at its lower edge on the upper face of the water-chest, and operating mechanism connected with the gate through the slotted casing, substantially as set forth.

2. The combination, with the base-plate having a central open-ended cylinder thereon with diagonal slots in the wall thereof, of the horizontally-rotating water-wheel mounted beneath the base-plate, the water-chest held centrally within the water-wheel and having an open top and side ports opening into the water-wheel buckets, the sliding gate held within the base-plate cylinder and adapted to enter the water-chest, the collar embracing the base-plate cylinder, screws extending through the cylinder-slots and connecting the collar and gate, and a gear mechanism for moving the collar, substantially as described.

3. The combination of the open-top water-chest having side ports, the base-plate held above the water-chest and provided with a diagonal slotted open-top cylinder, the gate held to slide in said cylinder and in the water-chest, the collar embracing the base-plate cylinder and having a gear thereon, screws or their equivalents extending through the cylinder-slots and connecting the collar and gate, and a shaft and pinion for turning the collar, substantially as described.

483,395. APPARATUS FOR COOLING BEER. EDWARD SEITZ, Peoria, Ill. Filed Apr. 1, 1891. Serial No. 387,332. (No model.)

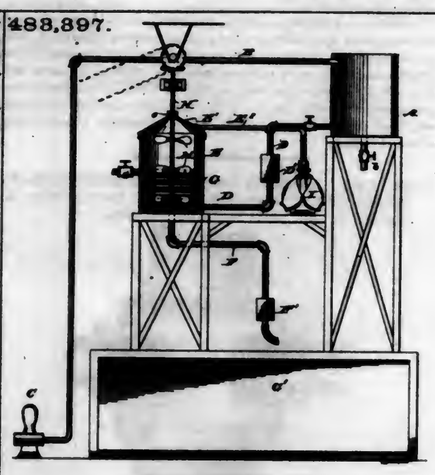


Claim.—1. In a beer-cooler, the combination of the cooling-vessel provided with a beer-inlet and the beer-discharge pipe in communication with the upper part of the interior of the cooling-vessel, where the gas accumulates, whereby the gas is drawn from the vessel and discharged through said pipe with the beer, substantially as described.

2. In combination, the beer-cooling vessel provided with a beer-inlet, the beer discharge pipe from the lower portion of said vessel, and the gas-exit pipe from the upper portion of the interior of the vessel to said beer-exit pipe at a point exterior of the vessel, substantially as described.

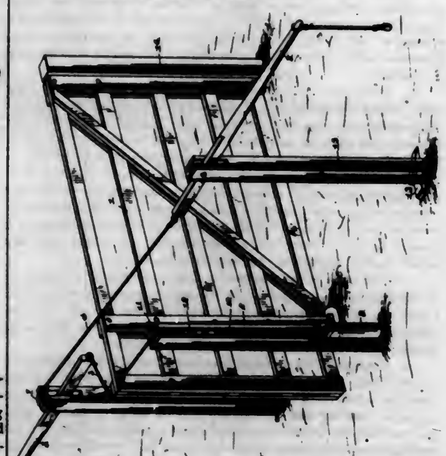
3. In combination, a cooling-chamber, the cooling-jar therein, a stand beneath the front end of the jar, elevating the same, the beer-inlet pipe in the jar, and the beer-discharge pipe from the lower portion of the cooling-jar, and provided with a gas-exit communication with the upper portion of the interior of the jar.

488,896. WATER-ELEVATOR. WILLIAM R. SIMPSON, Benton, La. Filed May 20, 1892. Serial No. 433,734. (No model.)



Claim.—1. In a water-elevator, the vertical well-box having a lateral discharge-opening, an inclined closed spout having its bottom arranged in a plane below said opening, the valved water-bucket working in said box, a weight-controlled sliding false floor arranged within said spout and adapted to automatically return through said discharge opening and the well-box under the bucket when the latter is raised, a conducting-pipe leading from the outer closed end of said spout to the point of use, and separate operating-ropes connected to said bucket and the sliding floor, respectively, and extending to a point adjacent to the end of said conducting-pipe, substantially as set forth.

2. In a water-elevator, the tubular well-box having a side discharge-opening, an inclined closed distributing-spout arranged below said opening and provided with opposite side grooves in a line with said opening, a well-bucket provided with an inwardly-opening valve, a weight-controlled sliding floor working in said guide-grooves and through said discharge-opening into the well-box and provided with an upwardly-projecting valve-pin upon which the raised bucket is lowered, a conducting-pipe leading from said spout to the point of use, a securing-pin located at such point of use, and an operating-cord connected with the outer end of said sliding floor and provided at its other end with a ring adapted to engage said pin to hold said floor in its outdrawn position, substantially as set forth.

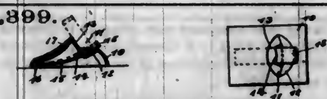


488,897. APPARATUS FOR COOLING WATER IN THE MANUFACTURE OF ICE. ALBERT SMITH, Colorado Springs, Colo. Filed Mar. 10, 1892. Serial No. 424,407. (No model.)

Claim.—In an ice-making apparatus, the combination, with the water-cooling tank E, of the agitator consisting of the vertical rotatable shaft H, having radial blades H', the brine-conducting coil G, surrounding said agitator, and the vacuum-pump connected with the top of the cooling-tank, as shown and described.

488,897.

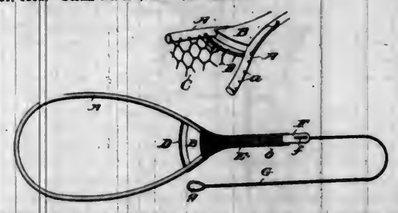
488,898. GATE. THOMAS M. SMITH, Bend, Tex. Filed Apr. 30, 1892. Serial No. 431,287. (No model.)



Claim.—1. The combination of a swinging gate pivoted intermediate of its ends, uprights 6 and 15, arranged on opposite sides of the gate, the former being provided with a pulley 7, operating-levers 5 and 8, fulcrumed on the uprights, a rope 3, connecting the gate with the lever 5, a rope 4, extending from the gate to the upright 6 and passing around the pulley 7 and connected with the lever 8, and a weight connected with the gate and adapted to close the same, substantially as described.

2. The combination of a swinging gate pivoted intermediate of its ends, uprights 6 and 15, arranged on opposite sides of the gate, the former being provided with a pulley 7, operating-levers 5 and 8, fulcrumed on the uprights, a rope 3, connecting the gate with the lever 5, a rope 4, extending from the gate to the upright 6 and passing around the pulley 7 and connected with the lever 8, a post arranged near the inner end of the gate, a pulley arranged on the post, a rope connected with the inner end of the gate and passing over the pulley of the post, a weight attached to the rope, and a catch arranged to hold the gate open against the action of the weight, substantially as described.

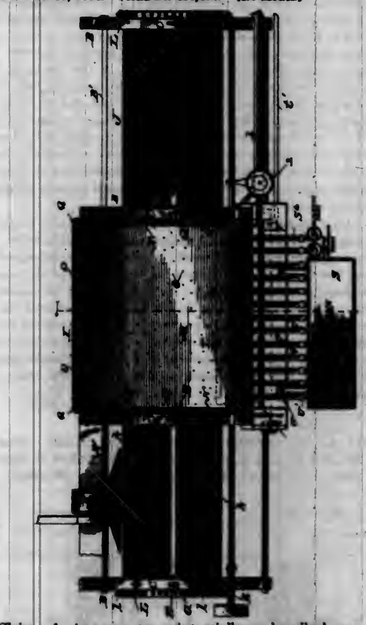
488,899. RING-HOLDER. JULIUS SMITH, Tom's River, N. J. Filed May 11, 1892. Serial No. 432,959. (No model.)



Claim.—As an improved article of manufacture, a ring-holder consisting in the raised or hollow base 10, having a recess 11 in the upper side at one end, the recess having a bottom wall 12 and a back wall

488,899.

13, provided with a slot 14, and the spring 15 within the base and projecting at one end through the slot 14 and across the bottom wall 12 of the recess 11, substantially as set forth.



488,400. FISH-NET. HENRY F. SMITH, Neenah, Wis. Filed May 21, 1892. Serial No. 433,847. (No model.)

Claim.—1. In a fish-net, the combination, with the bow, of a fan-shaped head provided with an extension forming a handle and a brace passing through the bow in advance of the head and extending rearwardly and embedded in the handle, substantially as and for the purposes described.

2. In a fish-net, the combination, with the bow, of a fan-shaped head provided with an extension forming a handle, a brace located in advance of the head, passing through the bow, extending rearwardly, and suitably secured to the handle, and an elastic cord attached to the latter, having a loop formed therein, substantially as described.

488,401. MACHINE FOR TREATING LEAF-TOBACCO. CHARLES A. SNYDER, Danville, Va., assignor of one-hundred-and-seven two-hundred-and-fortieths to William W. Brown and Robert T. Bass, same place. Filed Dec. 29, 1891. Serial No. 416,433. (No model.)

Claim.—1. An apparatus, substantially as described, comprising an agitator consisting of an endless apron and supports therefor and having its inlet end open and unobstructed, whereby the tobacco may be introduced directly in said end in a longitudinal direction, said having an outlet at its opposite end and a lateral opening for the insertion of the treating solutions, &c., substantially as set forth.

2. A machine, substantially as described, comprising an agitator-apron having a lateral opening and open at one end for the introduction of the material and a receiving-chamber connected with the inlet end of the agitator and arranged to introduce the material longitudinally into the end of said agitator, substantially as set forth.

3. In an apparatus, substantially as described, an agitator comprising open end rings having sprocket-teeth, the framing having bearings for the said rings, the apron having at its edges sprocket-chains engaging the teeth of the rings, and the guide and drive rollers for said apron, substantially as set forth.

4. In an apparatus, substantially as described, an agitator consisting of an endless apron provided on its outer side with projecting teeth and arranged with a space between its ends for the insertion of the treating solutions, &c., and end supports for said apron, consisting of open rings, substantially as and for the purposes set forth.

5. An apparatus, substantially as described, consisting of an apron, means for supporting the apron, and open end rings in the hollow of said apron at its inlet and discharge ends, all substantially as described, whereby there is provided a lateral opening for the insertion of the treating solutions or materials, substantially as set forth.

6. In an apparatus, substantially as described, an agitator comprising an endless apron and end supports therefor, consisting of open rings through which the tobacco may be supplied to and discharged from the apron, substantially as set forth.

7. The improved agitator, substantially as described, consisting of the apron having sprocket-chains at its edges, the end guide-rings therefor having on their outer sides sprocket-teeth to mesh the chains of the apron and open at the center for the introduction and discharge of the tobacco, and the drive-roller having sprocket-gears meshing the chains of the apron, whereby the roller drives the apron and the apron drives its guide-rings, all substantially as and for the purposes set forth.

8. An apparatus, substantially as described, comprising a frame having bearing-rings provided with bearings for the drive and guide rollers, the drive and guide rollers, the endless apron passed around said rollers, and the end guide-rings open centrally for the inlet and discharge of the tobacco and journaled in the frame-rings, all substantially as and for the purposes set forth.

9. In an apparatus, substantially as described, an agitator comprising an endless apron, guides within said apron, and circular end guides fitted in the hollow of said apron, whereby the apron may be formed into almost a complete cylinder, the circular end guides preserving the hollow of the apron in proper shape, all substantially as and for the purposes set forth.

10. An apparatus, substantially as described, comprising the framing, the endless apron, the end guide-rings fitted within the hollow of and arranged to be turned by the said apron, means for driving the apron, and the receiving-chamber united at one end to one of the end guide-rings, whereby the said chamber will be turned by the power applied to the apron, all substantially as and for the purposes set forth.

11. A machine for treating tobacco, substantially as described, comprising an agitator formed of an endless apron, means for supporting the apron, and circular end guides fitted in the hollow of said apron, whereby there is provided a contracted lateral opening for the introduction of solutions, &c., and a sprayer, substantially as set forth.

12. An apparatus, substantially as described, comprising the frame-rings provided in their inner faces with notches or openings, the boxes fitted movably in said notches or openings and provided with rollers, the screws for adjusting said boxes, the guide-rings having portions fitting in the frame-rings and grooved to receive the said screw-adjusted rollers, the endless apron carried by the guide-rings, and the rollers fitted within said apron, all substantially as set forth.

13. An apparatus, substantially as described, comprising the frame-rings having outwardly-projected brackets having bearings, the drive and guide rolls journaled in such bearings, the apron passed around said rollers, and the end guide-rings fitted in the hollow of said apron and journaled within the frame-rings, substantially as set forth.

14. In an apparatus, substantially as described, a powder or dry-flavoring distributer comprising a vessel having a discharge-opening in its bottom, a cylindrical sieve in said vessel and open at its bottom and arranged with said open bottom over the opening in the bottom of the vessel, said sieve being provided with a shaft and adapted to be revolved, and a cylindrical shut-off arranged and adapted to be adjusted over said sieve to wholly or partially shut off the same, substantially as set forth.

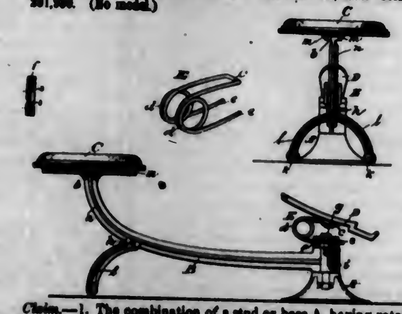
15. An apparatus, substantially as described, comprising the liquid reservoir and distributer and the connection-pipes, the intermediate pipe, the blower arranged to discharge its blast into said intermediate pipe, the powder or dry-flavoring distributer having a vessel or reservoir, and a conducting-pipe arranged to receive the powder therefrom, said conducting-pipe being connected with the intermediate pipe of the sprayer, whereby it will also receive the blast from the blower, substantially as set forth.

16. An improved apparatus, substantially as described, consisting of the framing having frame-rings, the receiving-chamber having end rings fitted in the framing, and a covering of wire-gauze or its equiva-

lent, the agitator consisting of the end guide-rings open for the admission and discharge of the tobacco, the sprayer having an elongated flaring distributer, a reservoir connected with said distributer and a blower, and the flavoring-reservoir having its discharge-pipe arranged to open into the said distributer, substantially as set forth.

17. An apparatus, substantially as described, comprising the agitator, the spraying device, the powder-distributer, the blower, and connections whereby parts of the blast of the blower are directed to the sprayer and to the powder-distributer, substantially as set forth.

18. An apparatus for treating tobacco, consisting of an agitator, a sprayer, a powder-distributer, a blower, and valve devices whereby the spray or the powder may be shut off at will, substantially as set forth



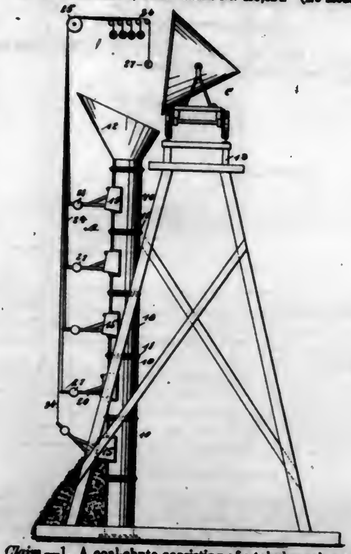
---

488,402. SACK. HARRY V. W. STIVERS and JAMES HOAGLAND, Camden, N. J. Filed Mar. 2, 1892. Serial No. 423,463. (No model.)

Claim.—As a new article of manufacture, a bag provided on one side near its mouth with a transverse band having fastening devices at or near its ends and transverse horizontally-aligned handles 15, embracing the opposite edges of the bag, parallel with and below the fastening-band, whereby when the mouth of the bag is drawn together and secured by the band the handles will be brought into proper inclined position over the upper corners or shoulders of the bag, substantially as set forth.

488,403. FOOT-REST AND SHOE-STOOL. FREDERICK V. STONE and MYRON A. CAMPBELL, Elyria, Ohio. Filed Nov. 26, 1888. Serial No. 291,990. (No model.)

Claim.—1. The combination of a stud or base A, having rotating disks *f f* secured to its top, a spring E, adjustably secured between said disks, a foot-rest D, mounted on said spring, with a rotating radial arm B, pivoted centrally on said base and having at its outer end a seat C, substantially as set forth.



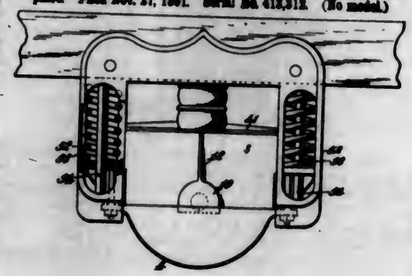
2. The combination of a base or stud A, having rotating disks *f f* secured to its top, a spring E, adjustably secured between said disks, a foot rest D, mounted on said spring, a rotating radial arm B, pivoted on said base and having downwardly-projecting branches forming legs *l l*, and an upward projection *n*, supporting a seat C, substantially as set forth.

3. The combination of a base A, supporting an adjustable rotatably-mounted spring E, a foot-rest D, mounted on said spring, and a rotating radial arm B, pivoted on said base and carrying at its outer end a seat C, substantially as described.

4. The combination of the base or stud A, the revolving disks *f f*, secured by a screw or bolt *g* to its top, the spring E, clamped between said disks, and a foot-rest D, mounted on said spring, substantially as described.

5. The combination of the base A, the revolving disks *f f*, secured thereto, having their contiguous sides concaved or otherwise recessed and provided with notches *s s* to receive a spring E, adjustably secured between said disks, and a foot-rest D, mounted on said spring, substantially as described.

488,404. COAL-CHUTE. GUSTAVUS I. STURGESS, Long Island City, N. Y. Filed June 7, 1892. Serial No. 435,894. (No model.)



Claim.—1. A coal-chute consisting of a tubular column provided with a series of openings at intervals in its length and having a hopper formed at its upper end, doors hinged to swing over and from the openings, shields located at the sides of the openings between which the doors move, sills formed at the bottom of the openings, flanges formed upon the lower edges of the doors and engaging with the sills, and hoisting devices, substantially as described, connected with the doors and operating independently, as and for the purpose set forth.

2. A coal-chute consisting of a column provided with a series of openings at intervals in its length, doors hinged to normally close and swing from the openings, weighted arms projected from the doors, and lift cables or chains connected with the arms and capable of independent action, as and for the purpose specified.

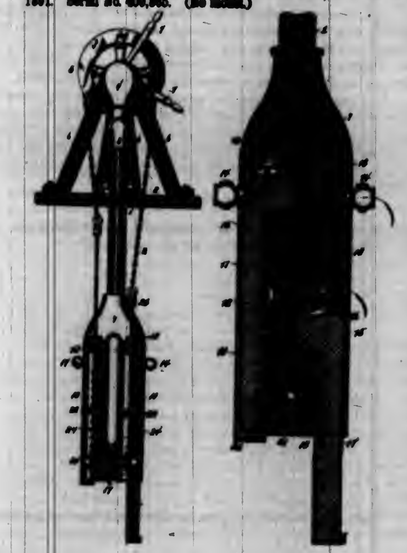
3. In a coal-chute, the combination, with a tubular column having a hopper formed at its upper end and provided with a series of openings arranged at intervals throughout its length, shields located at the sides of the openings, a sill formed at the bottom of the openings, doors hinged at their upper edges, normally covering the openings and having movement between the shields, flanges formed upon the lower edges of the doors and engaging with the sills, and weighted arms connected with the doors, of hoist cables or chains connected with the arms of the doors and guide devices over which the cables pass, each cable being capable of operation independently of the other, as and for the purpose specified.

488,405. JOURNAL-BEARING FOR CAR-AXLES. PETER SWENSEY, New York, N. Y., assignor of one-half to Charles H. Beyer, same place. Filed Nov. 27, 1891. Serial No. 413,312. (No model.)

488,405.

Claim.—1. In a journal-bearing, a housing formed in two parts divided horizontally, the upper part having a hood upon its outer face to receive one journal of an inner antifriction-pulley and the lower part being provided with a projecting plate to lie beneath and close the lower open side of the hood, said parts being united by a rabbet-joint and held by bolts, substantially as described.

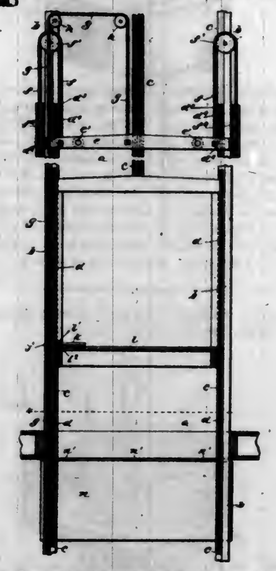
2. In a journal-bearing, a horizontally-divided housing, the upper part having an outwardly-projecting hood, in combination with an antifriction-pulley arranged in said housing, its outer journal received by a pillow-block lying in the hood and its other journal by a similar block lying in a seat in the rear of the upper part, and a plate supporting the latter block and fastened by bolts, the lower member of the casing being provided with a plate projecting from its outer face and lying beneath and closing the hood, substantially as described.



3. In a journal-bearing, the combination, with a housing, of an interiorly-arranged flanged antifriction-pulley, a car-axle journal on which the flange of said pulley rests, a two-part dust-plate surrounding the axle and lying in a recess in the rear of the housing, and an independent thrust-plate formed in two parts lying in a circumferential channel in the axle and in a recess in the rear of the housing, substantially as described.

4. In a journal-bearing, the combination, with a housing, of a car-axle entering the same, a dust-plate surrounding the exterior of the axle and having play in a recess in said housing surrounding the axle-opening, and a thrust-plate lying in a similar recess and in a circumferential slot or channel in said axle, substantially as described.

5. In a journal-bearing, the combination, with a housing having an axle-opening and a recess surrounding the same, of a plate lying in said recess, springs connected to end lugs on the lower ends of said plate, and a movable covering-plate resting on the housing, to which the other ends of said springs are connected.



6. In a journal-bearing, the combination, with a housing, of an axle entering the same, a dust-plate and a thrust-plate lying in parallel recesses surrounding the axle-openings, springs connected to end lugs on the lower members of said plates, and a movable covering-plate resting on the housing, to which the other ends of said springs are connected, substantially as described.

488,406. PUMP. JOSEPH C. TOM, Pontotoc, Tex. Filed Oct. 26, 1891. Serial No. 409,865. (No model.)

Claim.—In a double-cylinder pump, the combination, with the cylinders open at their lower ends, of the plungers arranged to reciprocate therein, the valved openings at the upper ends of the cylinders, leading to the shell connected with the delivery-pipe, the water-ingress openings leading into the cylinders above the lower limit of the movement of said plungers, and the inwardly-opening check-valves whereby water or air may be admitted above the plungers on their downstroke, substantially as specified.

488,407. APPARATUS FOR OPERATING ELEVATOR-DOORS. DAVID TUFTS, Pittsburg, Pa. Filed June 3, 1892. Serial No. 435,433. (No model.)

Claim.—1. In combination with an elevator-car and its shaft, doors mounted within said shaft, vertical rods, connections between said doors and rods, and a vertically-movable support from which said rods depend, substantially as and for the purposes set forth.

2. In combination with an elevator-car and its shaft, doors mounted within said shaft, vertical rods, connections between said doors and said vertical rods, and a yielding support from which said rods depend, said yielding support being in the path of said car, whereby said yielding support is raised by the movement of said car, substantially as and for the purposes set forth.

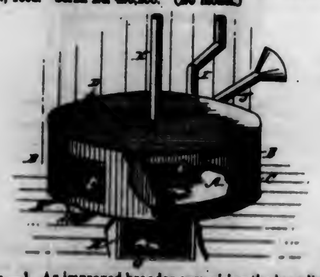
3. In combination with an elevator-car and its shaft, doors mounted within said shaft, vertical rods, connections between said doors and said vertical rods, a yielding support at the upper end of said shaft, from which said vertical rods depend, a rope secured to said support and passing down said shaft, and mechanism on said car for lowering said rope, substantially as and for the purposes set forth.

4. In combination with an elevator-car and its shaft, doors mounted within said shaft, vertical rods, connections between said doors and said vertical rods, a yielding support at the upper end of said shaft, from which said vertical rods depend, a rope secured to said support and passing down said shaft, lugs on said rope, and a lever on said car to be thrown into engagement with said lugs, substantially as and for the purposes set forth.

5. In combination with an elevator-car and its shaft, doors mounted within said shaft, links connecting said doors to vertical rods, a yielding support counterbalanced at the upper end of said shaft, from which said rods depend, a rope secured to said yielding support and passing down said shaft, lugs on said rope, and a lever having a forked end on said car, adapted to be thrown into engagement with said lugs, substantially as and for the purposes set forth.

488,408. LID-HOLDER FOR PANS OR VESSELS. ELMER E. WARD, Colorado Springs, Colo. Filed Feb. 17, 1892. Serial No. 421,973. (No model.)

Claim.—1. A lid-holder for pans or vessels, having two forward hooks for engaging the bead and edge of a vessel and cover therefor and two rearward divergent spring-arms having hooks, as set forth.



2. The herein-described lid-holder, composed of two parts or members, one of which has divergent spring-arms provided with hooked portions and the other is adjustably secured to the former, and also provided with hooked portions, as set forth.

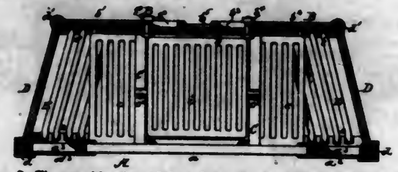
3. The herein-described lid holder, composed of two parts or members, one of which has divergent spring-arms provided with hooked portions and finger-pulls and the other is adjustably secured to the former, and also provided with hooked portions, as set forth.

4. The herein-described lid-holder, consisting of the part or member *a*, formed from one continuous wire rod bent to form guide-rods, divergent spring-arms extending therefrom and provided with hooked portions near their outer ends, and also with finger-pulls, and the part or member *a'*, formed from one continuous wire rod and having outer hooked ends, and the two-part clamp fitting said guide-rods and holding said part or member *a'*, substantially as set forth.

488,409. BROODER. CHARLES R. WATKINS, Harvard, Mass. Filed Apr. 7, 1892. Serial No. 428,253. (No model.)

Claim.—1. An improved brooder comprising the brooding-chamber, the surrounding casing forming an intermediate water-space, the lamp-chamber below the casing, the offtake-pipe leading from said lamp-chamber, and the pipes for supplying air to and discharging it from the brooding-chamber, substantially as set forth.

2. In a brooder, the combination of the brooding-chamber, the outer casing, the lamp-chamber, the pipe I, leading from said chamber, the pipe J, having a branch *j* within the brooding-chamber, and the pipe K, all substantially as set forth.

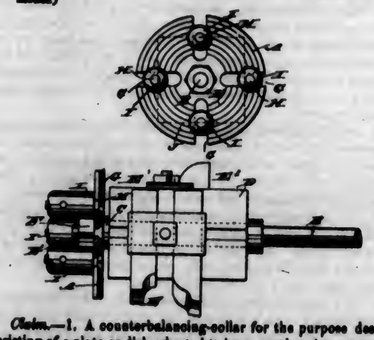


3. The improved brooder, substantially as herein described and shown, consisting of the circular concentric brooding-chamber and casing, the chamber being arranged within and separated from the casing, forming a water-space, and both chamber and casing being water-tight, whereby water may be contained in the said intermediate space, means for heating the water in said space, an air-supply pipe leading to the brooding-chamber, and an air-discharge pipe leading from each chamber, substantially as set forth.

4. A brooder, substantially as described, comprising a water-tight inner or brooding chamber A, a water-tight casing B, surrounding the chamber A and separated therefrom, forming a communicating water-space above, below, and alongside the said chamber, a passage-way E, extended across said water-space and opening at its inner end into the brooding-chamber, the air-outlet pipe K, leading from the brooding-chamber, the air-inlet pipe leading to the brooding-chamber, the lamp-compartment below the casing, and the offtake-pipe leading from the said compartment, all substantially as and for the purposes set forth.

488,410. PORTABLE GRATE. DAVID H. WAITE, Philadelphia, Pa. Filed Jan. 14, 1892. Serial No. 418,061. (No model.)

Claim.—1. The combination, in a portable grate, of the longitudinal plates forming the front and back of the grate and grate-bars with side plates hinged to the longitudinal plates, one of said longitudinal plates being adjustable, substantially as set forth.



2. The combination of the adjustable front section, the adjustable back section, and adjustable grates with side plates hinged to the front and back sections, substantially as described.

3. The combination of the telescoping front section, the telescoping back section, side plates hinged to the front and back sections, a central fixed grate, pockets on the front and back sections, with grate-bars adapted to the said pockets, substantially as described.

4. The combination, in a portable grate, of the front plate made up of three sections, the back plate made up of three sections, a central grate-section secured to the central sections of the front and back plates, side plates hinged to the end sections of the front and back plates, and grate-bars supported by said end sections, said end sections being adapted to slide upon the central sections, substantially as described.

488,411. COUNTERBALANCING-COLLAR. WATSON T. WEBB, Salt Lake City, Utah. Filed Apr. 27, 1892. Serial No. 430,575. (No model.)

Claim.—1. A counterbalancing-collar for the purpose described, consisting of a plate or disk adapted to be secured to the cutter-spindle and weights held adjustably on the said disk or plate, substantially as shown and described.

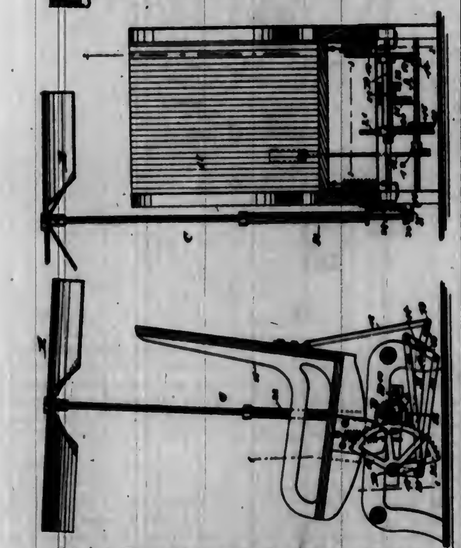
2. A counterbalancing-collar consisting of a disk or plate adapted to be secured to the cutter-spindle and formed with slots, bolts held adjustably in the said slots, and weights held on the said bolts, substantially as shown and described.

3. A counterbalancing-collar consisting of a disk or plate adapted to be secured to the cutter-spindle and formed with slots, bolts held adjustably in the said slots, and weights held on the said bolts, the said weights serving as nuts for the said bolts to secure the latter in place on the disk or plate, substantially as shown and described.

4. A counterbalancing-collar comprising a disk or plate adapted to be secured to the cutter-spindle and provided with radially-extending slots and with indicating-circles on its face, bolts held adjustably in the said slots, and weights forming nuts screwing on the said bolts to lock the latter in place on the said disk or plate, substantially as shown and described.

488,412. BILL-HOLDER. EDWARD M. WILEY, Shelbyville, Ind. Filed July 14, 1892. Serial No. 440,043. (No model.)

Claim.—1. In a bill-book, the combination, with a book, a frame, and a guard-spring formed of a single piece of wire, of a pivoted guard operatively connected with the spring and movably carried on the frame, substantially as and for the purposes specified.

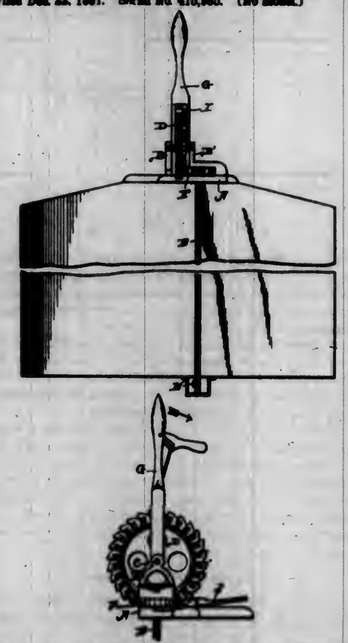


2. In a bill-holder, the combination, with the hook and a frame, of a guard pivotally movable upon the frame and a coiled spring carried in the same plane with the hook, substantially as and for the purposes specified.

3. In a bill-holder, the combination, with a hook, frame, and spring, of a guard pivoted upon the frame and a yoke connected at one end to the spring and at the other to the guard to one side of its axis, substantially as described.

4. In a bill-holder, the combination, with a hook, guard-hinges, a suspending-loop, and a spring formed substantially as described, of a single piece of wire, of a guard pivotally carried in the guard-hinges and operatively connected with the spring, substantially as and for the purpose specified.

5. In a bill-holder, the combination, with a hook provided with guard-hinges and a spring terminating between the guard-hinges, of a guard pivoted to the guard-hinges and connecting mechanism uniting the end of the spring to the rear of the guard, whereby the guard is held yieldingly in the elevated or in the depressed position, substantially as and for the purpose specified.



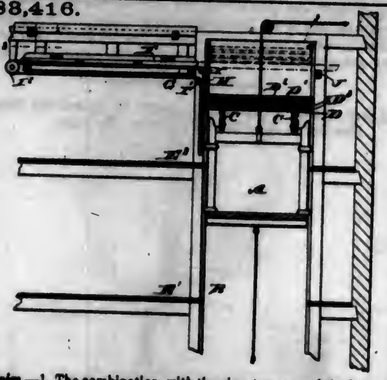
488,413. FAN ATTACHMENT FOR ROCKING-CHAIRS. HORACE M. BAKER, Carthage, Mo. Filed May 11, 1892. Serial No. 432,601. (No model.)

Claim.—1. The combination, with the platform and the body of a platform-rocker and a fan-shaft located at one side thereof and provided with a fan, of a drive-shaft having a crank connected with the body of the rocker, the drive-shaft being journaled in the platform thereof, segmental gears held to turn loosely upon a fixed shaft secured upon the platform of the rocker, a crank and pitman connection between the drive-shaft and the segmental gears, the cranks standing in opposite directions, whereby the segmental gears are oppositely and intermittently moved, a driven shaft connected with the fan-shaft and provided with an attached ratchet-wheel, sleeves mounted loosely upon the driven shaft, each sleeve carrying a pinion meshing with one of the segmental gears, and a crank-arm provided with a spring-controlled dog, both dogs engaging with the ratchet-wheel of the driven shaft, as and for the purpose set forth.

2. The combination, with the platform and the body of a platform-rocker, a fan-shaft carrying a fan journaled vertically at one side of the chair free of the body, and a horizontal shaft journaled beneath the platform, engaging with the fan-shaft and actuating it, the horizontal or driven shaft being provided with an attached ratchet-wheel, of a drive-shaft journaled at the rear of the platform, provided with a crank-arm having a pitman connection with the back of the chair, crank-arms attached to the drive-shaft and extending in opposite directions, which crank-arms have pitman connections with mutilated gears loosely mounted upon a fixed shaft secured in the rocker-platform, sleeves loosely mounted upon the driven shaft, connected with the fan-shaft one at each side of its ratchet-wheel, the said sleeves being provided with pinions engaging with the mutilated gears, crank-arms attached to the inner ends of said sleeves, and spring-actuated dogs carried by said crank-arms engaging with said ratchet-wheels and acting alternately thereon, as and for the purpose set forth.

488,414. CAR-BRAKE. JOSEPH W. BAKER, Van Buren, Ark. Filed Dec. 22, 1891. Serial No. 415,985. (No model.)

Claim.—In a car-brake, as described, the combination, with a brake-chain, a vertical rotative shaft connected to said chain, and a horizontal pinion fixed on the upper end of said shaft and having peripheral teeth, of the vertically-disposed wheel having cog-teeth on its side adjacent to its periphery, meshing with the teeth of the horizontal pinion of the vertical shaft and also having the peripheral beveled ratchet-teeth, the bifurcated lever straddling the said vertically-disposed wheel and fulcrumed on the shaft thereof, a spring-pressed pawl carried by said lever and engaging the ratchet-teeth of the vertically-disposed wheel, and a pawl engaging the ratchet-teeth of the vertically-disposed wheel and adapted to prevent backward rotation thereof, substantially as specified.

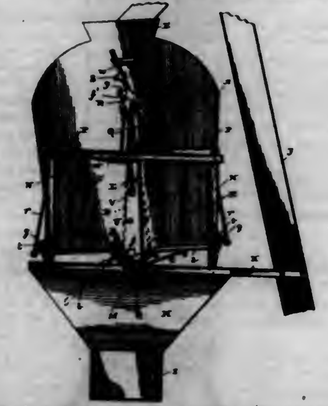


488,415. FRUIT CAN OR JAR. JOHN M. BARNHART, Marshfield, Pa. Filed May 31, 1892. Serial No. 435,080. (No model.)

Claim.—A fruit can or jar having the usual shoulder *a* and provided with a corrugated seat, as shown, and the upwardly-extending flange *c*, in combination with the cover C, provided with flange *c*, and corresponding corrugations to those of the seat and having the groove *f* and depressions *g*, the clamp D, and screw A, said clamp having claws *l* and spurs *m*, substantially as and for the purpose set forth.

488,416. DEVICE FOR CLOSING ELEVATOR-SHAFTS. NIMA J. BLAKER, Portland, Oreg. Filed July 6, 1892. Serial No. 439,104. (No model.)

488,416.

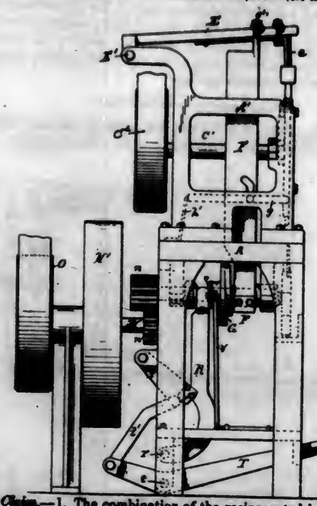


Claim.—1. The combination, with the elevator-car and the hinged supports C on its top, of a series of platforms adapted to be supported within the shaft at the different floors and a carriage mounted to slide in the upper end of the shaft to support the platforms during the time the elevator is running, substantially as set forth.

2. A device for closing elevator-shafts, comprising a series of platforms adapted to be supported within the shaft at the different floors and a carriage mounted to slide in the upper end of the shaft and adapted to support the said platforms during the time the elevator is running, substantially as shown and described.

3. A device for closing elevator-shafts, comprising a series of platforms adapted to be supported within the shaft at the different floors, and a carriage mounted to slide in the upper end of the shaft and adapted to support the said platforms during the time the elevator is running, and means, substantially as described, for imparting a sliding motion to the said carriage to move the latter under the said platforms and away from the same to support the platforms on the running cage of the elevator, as set forth.

488,417. OSCILLATING GRAIN-METER. HENRY H. BOEHKER, St. Charles, Mo. Filed Feb. 10, 1892. Serial No. 421,010. (No model.)



Claim.—1. A pivoted hopper having a chamber at each side of its pivotal point, a weighing mechanism connected with the said hopper, doors for the lower ends of the chambers, a valve pivoted between its ends between the upper ends of the chambers, a rod passing under the hopper, a brace connecting the doors, a connection between the rod and the brace, and a connection between the rod and the valve, whereby the valve is operated by the movement of the doors, the parts combined substantially as set forth.

2. A weighing-machine comprising a pivoted hopper having a chamber at each side thereof, a weighing mechanism connected with the hopper, a shaft extending through the upper end of the hopper between the said chambers, a valve connected between its ends to the said rod, a crank at one end of the said valve-rod, doors for the lower ends of the chambers, a brace connecting the doors, a shaft journaled above the said brace, carrying a depending arm which has its lower end connected with the brace and whereby more leverage is obtained, a crank at one end of the rod, and a connection between this crank and the crank of the said valve-rods, substantially as specified.

3. A weighing-machine comprising a pivoted hopper having a chamber at each side thereof, doors for the lower ends of the chambers, a tilting valve at the upper ends of the chambers, a connection between the doors and the valve for operating the latter, a holding and tripping mechanism for the doors, a scale-lever pivoted at its lower end and carrying an adjustable weight at its upper end, bars pivotally supported at their outer ends, connections between the inner ends of the bars and opposite sides of the pivotal point of the scale-lever, and a connection connected with the said bars between their ends and at their opposite ends to the hopper at opposite sides of its pivotal point, substantially as described.

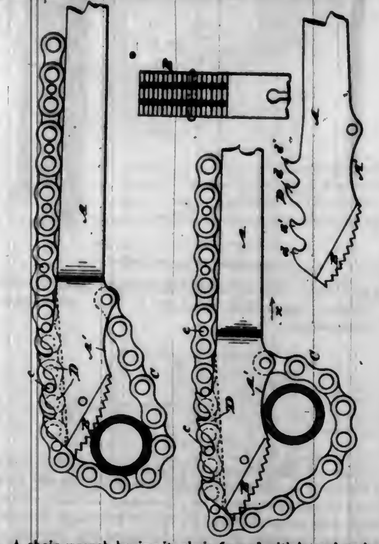
488,418. LINK-WELDING MACHINE. JAMES W. BOSTA, WAYNE, Pa. Filed Feb. 23, 1892. Serial No. 422,556. (No model.)

Claim.—1. The combination of the reciprocated hammer, an anvil, a frame E above said hammer and pivoted to the side frames of the machine, springs between said frame and the edge of the hammer, a holding-pin adapted to pass through the anvil and engage with the inner surface of the link, a rotated power-shaft, and screw-cams thereon adapted to act simultaneously to depress the frame E and raise the holding-pin, substantially as specified.

2. The combination of the hammer, an anvil, frame E, pivoted to the main frame of the machine, springs between said frame E and the hammer, a cam for raising said hammer against the action of the spring, side bars F, extending from said frame E, a cross-bar F', and a screw-cam adapted to act upon said cross-bar F', substantially as specified.

3. The combination of the hammer, the anvil, a cam for raising said hammer, a frame E, springs *c* between the frame E and the hammer, the side bars F, and hammer-locking bars guided in the frame of the machine and adapted to pass under a shoulder on the hammer, and a pin carried by said locking-bars engaging with a cam-slot in said side bars F, substantially as specified.

4. The combination of the reciprocated hammer, an anvil, a pin *h*, projecting through said anvil, a block *i*, carrying said pin, a frame E, springs between the hammer and the frame E, side bars F, a cross-bar F', uniting said side bars F, a longitudinally-movable shaft G', and screw-cams on said shaft G', adapted to engage, respectively, with the cross-bar F' and the recess in the block *i*, substantially as specified.



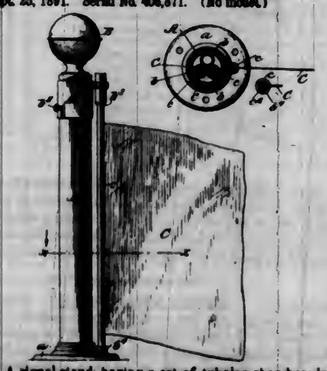
5. The combination of the frame E, the side bars F, cross-bar F', the hammer, springs between said hammer and the frame E, a screw-cam G, a longitudinally-movable shaft G', carrying the said cam G, a sleeve H on said shaft, a lever R, engaging with said sleeve, and means for operating said lever R to effect the longitudinal movement of said shaft, substantially as specified.

488,419. CHAIN WRENCH. WILLIAM H. BROWN, Brooklyn, N. Y. Filed Mar. 19, 1892. Serial No. 425,830. (No model.)

Claim.—1. As a new article of manufacture, a chain wrench having a recessed shoe and a concave pipe-receiving depression in the rear of and adjacent to the shoe, and a chain pivotally connected with the wrench-body at the rear end of such depression, the latter extending transversely of the wrench completely from side to side and of a length to accommodate the pipe and cause the latter to tighten the chain when the pipe is brought from the concaved depression to the forward position on the convexed shoe, substantially as described.

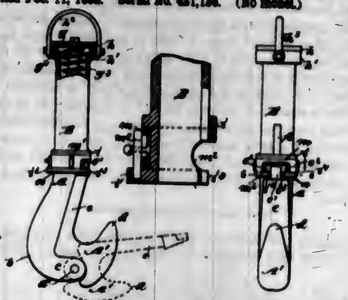
2. A chain wrench comprising a suitable handle and head, the latter being provided with a shoe, a chain secured to the wrench in the rear of the shoe and provided with lateral projections, and claws on the wrench-head at the upper side for engaging the free end of the chain, said claws being varied distances apart, substantially as described.

3. A chain wrench having claws for engaging suitable projections on the chain, said claws being spaced varied distances apart, substantially as described.



4. A chain wrench having its chain formed with lateral studs and having its head provided with two claws spaced less than half the distance between adjacent chain studs, substantially as described.

5. A chain wrench having a concavity or recess in the rear of its shoe and having its chain formed with lateral studs, and the head of the wrench having two claws separated less than half the distance between adjacent chain studs, substantially as described.



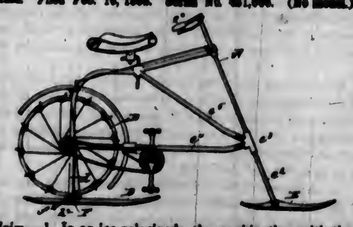
6. A chain wrench having lateral studs on the chain and two claws on the wrench-head spaced apart less than half the distance between the chain studs, and companion claws for the first-named ones spaced therefrom a distance equal to the distance between two adjacent studs, substantially as described.

488,420. SIGNAL AND STAND. GEORGE T. BROWN, Sedalia, Mo. Filed Sept. 25, 1891. Serial No. 406,871. (No model.)

Claim.—A signal-stand having a set of tubular chambers in the same and a socket on its base, in combination with a protecting-cap having a socket and a set of flags adapted to be retained in the stand and displayed from the sockets, substantially as shown and described.

488,421. DAVIT-HOOK. SAMUEL B. BUTLER, New York, N. Y. Filed Feb. 11, 1892. Serial No. 421,136. (No model.)

Claim.—1. In a davit-hook, the combination, with a cylindrical hook-body, an enveloping sleeve wherein the body slides, a washer-plate above within the sleeve, secured to the body and adapted to rest on a shoulder within the sleeve, and a spiral spring on the hook-body, engaging a projection on the sleeve and also with the washer-plate, of a tripping-nose piece pivoted below on a lateral limb of the hook-body, and a locking device for the hook-nose piece, which prevents it from vibration when it is loaded, substantially as described.



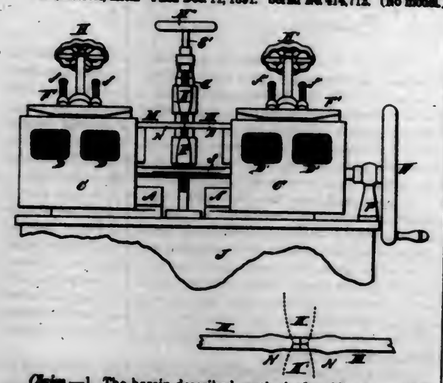
2. In a davit-hook, the combination, with a hook-body that is cylindrical and provided with a bolt extension above and a curved portion below that is flattened forwardly and projected on the forward side to provide a limb below, of a supporting-sleeve having two spaced collars below, apertured between the collars and slotted from the aperture through the lower collar, leaving wings, and a tripping-hook pivoted on the limb of the hook-body, having a weighted nose, and a limb projected upwardly from the hook, having a head above furnished with ears that will interlock with the wings when the hook is loaded, substantially as described.

3. In a davit-hook, the combination, with a sleeve, a locking-ring between collars below, and a slide-bolt that will enter a hole in the lower collar and retain a notch in the ring over an aperture in the sleeve, of a hook-body adapted to slide in the sleeve, a spiral spring thereon which will raise the hook-body to impinge a shoulder thereon against the sleeve below, a swivel-loop above on the sleeve, and a tripping-hook piece pivoted below on the body and provided with a limb having lateral ears above that will lock with wings on the sleeve below its aperture when the hook is loaded, substantially as described.

4. In a davit-hook, the combination, with a supporting-sleeve, a swivel-loop thereon above, a hook-body within passing through a perforated cross-wall of the sleeve, a spring thereon within the sleeve, and a washer-plate above on the hook-body, adapted to rest on a shoulder within the sleeve and limit the depression of the hook-body, of a tripping-hook piece secured pivotally on the bent forwardly-extended limb of the body below, weighted below its nose, and adapted to be detachably locked to the sleeve above, substantially as described.

5. In a davit-hook, the combination, with a hook-body supported to slide in a sleeve and held normally elevated by a spring that engages the sleeve and a plate on the hook-body above, of a weighted hook-nose piece pivoted on a projecting limb of the hook-body near its lower end, a locking device on the sleeve and upper end of the hook-nose piece that will lock the nose-piece from vibration when it is loaded, and a device encircling the sleeve at its lower end, which is adapted to retain the nose-piece in locked connection with the sleeve by its rotatable adjustment, substantially as described.

488,422. ICE-VELOCIPEDE. PHILIP H. GLASS, Northampton, Mass. Filed Feb. 16, 1892. Serial No. 421,666. (No model.)



Claim.—1. In an ice-velocipede, the combination, with the frame

and the steering-rod provided at its lower end with a pivoted runner, of the vertical brace-rods provided at their lower ends with a pivoted runner, the wheel provided with a series of pivoted spring-actuated pawls or catches upon each side, and the connection between said wheel and the treadles, substantially as described.

2. The combination, in an ice-velocipede, of the propelling-wheel provided with a series of pawls pivoted to each side thereof and pivoted together intermediate of their ends and the series of flat springs secured at one end of the said wheel and their free ends bearing against the intermediate pivots of the pawls, substantially as described.

3. The combination, with the fork of a velocipede, of the rod G, bifurcated at its upper end, forming two arms g g, provided with straps g^6 g^6, by which it may be secured to said fork, the arm g^6, adapted to engage with the wheel-shaft journaled in the lower ends of said fork, and the runner E, pivoted to the lower end of said rod, substantially as described.

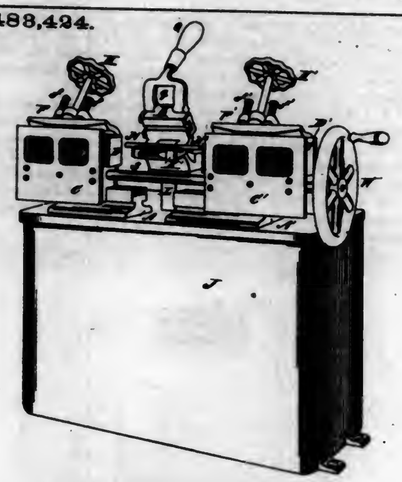
488,423. PROCESS OF ELECTRIC WELDING. CHARLES L. COFFIN, Detroit, Mich. Filed Dec. 11, 1891. Serial No. 414,712. (No model.)

Claim.—1. The herein-described method of welding or working metals electrically, consisting in heating the metal by passing an electric current therethrough, upsetting each of said articles an appreciable distance back from the point of welding and not at the plane of junction, then bringing said articles in contact and passing a heating current therethrough, and then pressing the two articles to be welded together.

2. The herein-described process of welding metals electrically, consisting in first heating the articles to be welded by passing an electric current therethrough, then upsetting each of said articles an appreciable distance back of the place of welding and not at the plane of junction, then pressing said articles together to form a weld, and finally completing the weld by swaging, hammering, &c.

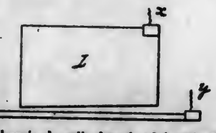
488,424. ELECTRIC METAL-WORKING DEVICE. CHARLES L. COFFIN, Detroit, Mich. Filed Dec. 11, 1891. Serial No. 414,713. (No model.)

Claim.—1. In an apparatus for working metal electrically, a clamp for holding the article to be worked and carrying a die, a movable conductor for applying pressure to the article to be worked when heated, and means for passing a heating-current through said article, substantially as shown and described.



2. In an apparatus for electrically working metal, the combination of two movable conductors, means for forcing said conductors together or apart, a clamp and die located between said conductors, and means for passing an electric current through said conductors and an article held in said clamp, substantially as shown and described.

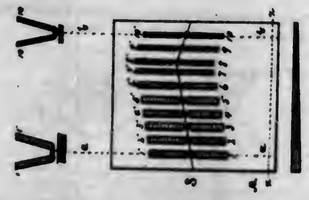
3. In an apparatus for electrically heating metal by passing heating-currents therethrough, a conductor for making electrical contact with the article to be heated, provided with straight air-draft passages, whereby the conductor is kept cool, substantially as shown and described.



4. In an apparatus for electrically working metal, the combination of the movable blocks C C', the screw-shaft S, perforated conductors D D', secured in said blocks C C', clamp K, K', held in line between said conductors D D', and means for passing an electrical current through said conductors D D' and the work held in clamp K K', substantially as shown and described.

5. In an apparatus for electrically working metal, the combination of movable block C, perforated block D, clamp K K', carrying the die P, and means for passing an electric current through block D, clamp K K', and the article to be heated, substantially as shown and described.

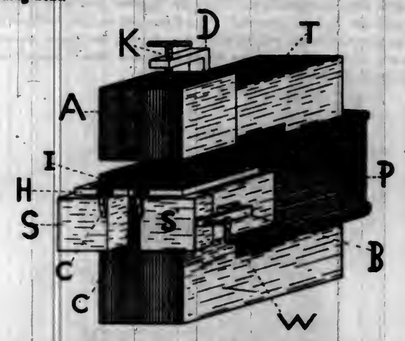
488,424.



488,425. PROCESS OF ELECTRIC METAL-WELDING. CHARLES L. COFFIN, Detroit, Mich. Filed Jan. 21, 1892. Serial No. 418,811. (No specimens.)

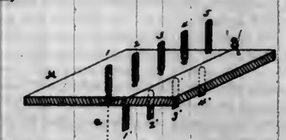
Claim.—1. The herein-described mode of electrically filling a seam in a plate with molten metal, consisting in connecting said plate with one pole of a source of electricity, supporting over said seam a plate of metal with which said seam is to be filled at an angle with said first-named plate, connecting said last-named plate with the other pole of the electric generator, and forming a voltaic arc between said plates.

2. The herein-described process of electrically welding sheets or plates of metal, consisting in connecting said plate with one pole of a source of electricity, supporting over said plate in line with the joint a plate of metal at an angle with said first-named plate, connecting said last-named plate with the other pole of the generator, and forming a voltaic arc between said plates, whereby the joint is progressively heated and supplied with molten metal from the last-named electrode-plate.



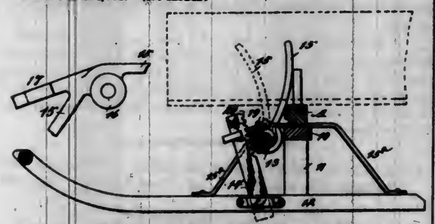
488,426. PROCESS OF ELECTRIC METAL-HEATING. CHARLES L. COFFIN, Detroit, Mich. Filed Jan. 26, 1892. Serial No. 419,336. (No specimens.)

Claim.—The herein-described process of electrically heating metal of varying cross-section, consisting in simultaneously subjecting the metal at different points to the action of separate voltaic arcs, whose heating power varies in approximate proportion to the respective cross-sections of the material at the points to which the arcs are applied.



488,427. ELECTRIC METAL-WORKING. CHARLES L. COFFIN, Detroit, Mich. Filed Feb. 6, 1892. Serial No. 420,487. (No specimens.)

Claim.—1. The herein-described process of electrically welding the ends of a continuous piece of metal, consisting in closing a gap in the secondary of a transformer or converter by the ends of the piece to be welded, the said piece of metal lying parallel at all points to said secondary, passing suitable currents through the primary of the transformer, and pressing the ends of the piece together when raised to a welding heat.

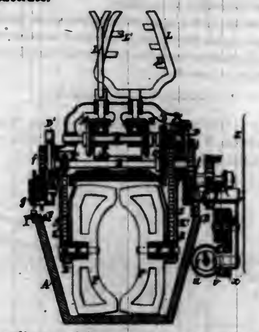


2. An apparatus for electrically welding continuous metal bands, consisting of a converter having a broken secondary and means for inserting the piece to be welded within the core of the transformer, so as to complete said secondary, substantially as shown and described.

488,428. PROCESS OF ELECTRIC METAL-WORKING. CHARLES L. COFFIN, Detroit, Mich. Filed Feb. 8, 1892. Serial No. 420,753. (No specimens.)

Claim.—The herein-described process of heating metal, consisting in subjecting the opposite sides of the metal simultaneously to the action of voltaic arcs alternated in position.

488,429. SLEIGH-BRAKE. DAVID COLLARD, Hope, Idaho, assignor to himself and Joseph M. Jrannot, same place. Filed Mar. 12, 1892. Serial No. 424,672. (No model.)

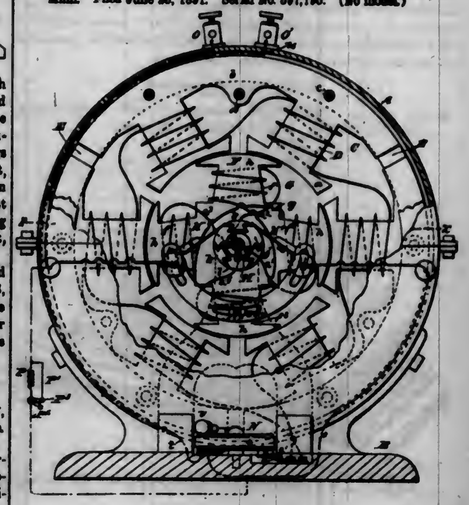


Claim.—1. The combination, with a sleigh the runners of which are provided with sockets upon their inner faces, the walls of said sockets having a rearward inclination, and bearings located upon the runners and brackets, projected forward from the bearings, said brackets being provided with recesses, of a shaft journaled in the bearings and having pinions attached thereto, a lever connected with the shaft, whereby it is rotated, and brake-shoes having a rearward inclination and guided at their upper ends in the recesses of the brackets and at their lower ends in the sockets of the runners, the said shoes being provided with teeth to engage the teeth of the pinions upon the shaft, as and for the purpose specified.

2. The combination, with a sleigh, of the truss-braces 15', provided with the bearings 16 and the recessed brackets 17, the shaft 13, mounted in the bearings and provided with a handle at one end, the pinion 19 on the shaft, and the brake-shoes 14, formed with toothed or rack surfaces 20 and fitted to slide in the said brackets, and brackets 21 on the runners, substantially as described.

488,430. DOUGH KNEADER OR MIXER. ALPHONSE DAGRY, Paris, France, assignor to La Société Dagry & Armand, same place. Filed Sept. 30, 1891. Serial No. 407,205. (No model.)

Claim.—1. In a kneading or mixing apparatus, a movable carriage on the surface of a fixed baker's trough, which carries two devices, one a kneader and the other a puller, mounted in opposite directions on a common frame, capable of oscillating round a shaft serving to transmit the movement to the whole apparatus, and which may be fixed in its two opposite positions in order to allow of these two parts working the paste successively in the whole length of the trough, substantially as described.

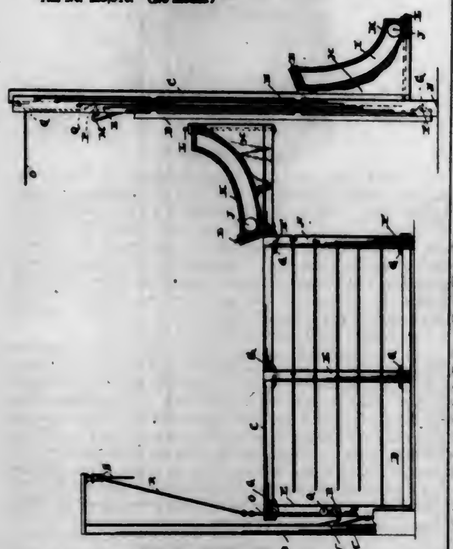


2. In a kneading or mixing apparatus, a kneading device composed of two similar branches, each formed of two shanks or blades twisted in opposite directions in the form of helicoidal spirals, these two branches being mounted parallel on shafts revolving in an opposite direction for the purpose of constantly turning over the dough into which they penetrate.

3. In a kneading or mixing apparatus mounted on a movable carriage on a fixed baker's trough, mechanism for automatically regulating the course of the carriage in accordance with the dimensions of the kneading and pulling devices, and which consists in the combination, with the slide-piece p, regulating the position of the drawing-catches, of a bar b, attached to this slide-piece and having buttressed projections c, separated at irregular distances and placed at different heights, the height of the said bar b above the projections F being regulated by a frame c, which raises more or less a cam a, fixed to the oscillating frame K, as described above and shown.

4. In a kneading or mixing apparatus mounted on a movable carriage on a fixed trough, the combination of a frame, such as K, carrying the kneading and pulling devices and having an arm V, serving to cause it to oscillate around the main shaft E and to hold it in its two opposite positions by means of spring-catches X X, with an intermediate shaft N, revolving in the opposite direction to the shaft E and actuating on the one hand the two branches of the kneader L by means of opposed pinions M and on the other hand one of the branches of the puller P by means of an endless chain, the other branch of this device being actuated by the shaft E, also by means of an endless chain, as described above and shown.

488,431. ELECTRIC MOTOR. WILLIAM M. DENSMORE, Brainerd, Minn. Filed June 23, 1891. Serial No. 397,195. (No model.)

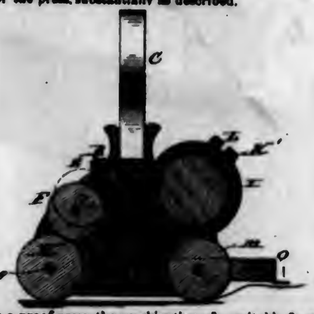


Claim.—1. In an electric motor, the combination of a cylindrical casing, a field-magnet formed of circular segments having the cores and pole-pieces with enlarged extremities formed integrally with the segments, the said segments being provided with inwardly-projecting ears for receiving one of the clamping-bolts, a clamping-ring for holding the circular segments in the position of use, and insulation interposed between the clamping-rings and the cylindrical casing, substantially as specified.

2. In an electric motor, a commutator formed of series of disks or contact-pieces insulated from each other and a series of conductors provided with contact-springs for forming electric contacts with the several disks, substantially as specified.

3. In an electric motor, a current-reversing switch formed of two curved bars, two contact-springs in constant contact with the bars, and two pairs of electric contacts arranged in the path of the curved bars, substantially as specified.

483,482. TILTING GATE. ANDREW J. DOOK, WINFIELD S. SAVIDGE, and GEORGE W. WOLFE, Lewisburg, Pa. Filed Mar. 17, 1892. Serial No. 425,316. (No model.)



Claim.—In combination, a post, a vertically-tilting gate hinged to said post, and the box H, secured to the upper portion of the gate and located on the opposite side of the post, and provided with the rearwardly and upwardly curved inclosed way T, and the ball-weight in said way, whereby when the gate is raised or lowered the movement of the ball is gradual, substantially as described.

483,488. PROOF-PRESS. NICHOLAS G. DUFFY, Charleston, S. C. Filed May 12, 1892. Serial No. 432,773. (No model.)

Claim.—1. In a proof-press, the combination, with the carriage or frame, of the ink-fount D, mounted on the frame, the ink-distributing roller F, journaled in the frame below the ink-fount, the paper-reel shaft K, also journaled in the frame, the impression-roller M, and the inking-roller H, both journaled in the frame and in such position that the peripheries thereof project below the bottom of the frame, whereby the said inking and impression rollers constitute the sole support and bearing of the press, substantially as described.

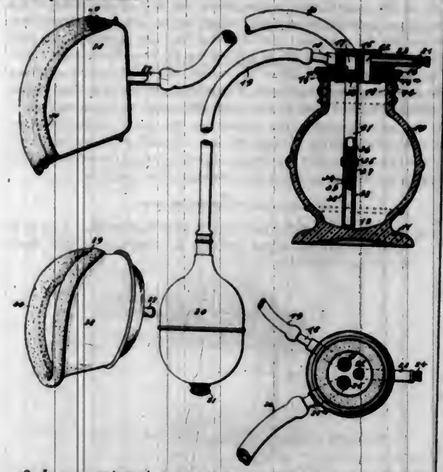
2. In a proof-press, the combination of a suitable frame, an ink-distributing roller, and a paper-reel shaft, both journaled in the said frame, with an inking-roller and an impression-roller journaled, respectively, at the front and rear of the frame and at such points that the peripheries of both project below the lowest part of said frame, substantially as described.

3. In a proof-press, the combination, with a frame or carriage mounted on, and supported by an inking-roller and an impression-roller, of an ink-fount arranged above the inking-roller, and an ink-distributing roller journaled in elongated bearing-slots between the ink-fount and the inking-roller, whereby when proof is being taken the distributing-roller will bear on the inking-roller out of contact with the ink-fount and when the carriage is turned over said distributing-roller will rest against the ink-fount out of contact with the printing-roller, substantially as described.

4. In a proof-press, the combination, with a frame or carriage mounted on an inking and an impression roller journaled in the frame at such positions that the peripheries of both project below the bottom of the frame and having a distributing-roller above and normally in contact with the inking-roller, of an ink-fount located above the distributing-roller and consisting of a transversely-arranged trough provided with a sliding gate on its lower and open side, whereby the flow of ink to the distributing-roller may be regulated, substantially as described.

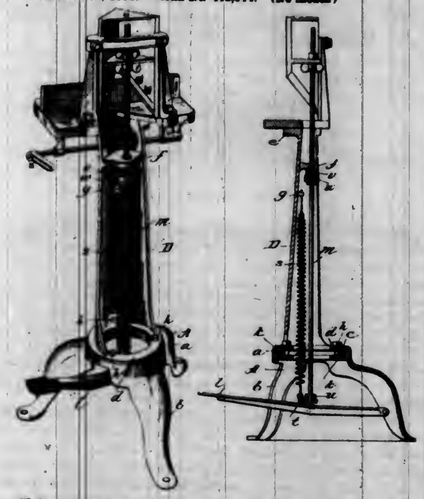
5. In a proof-press consisting of a frame or carriage mounted on and supported solely by an inking-roller and an impression-roller and capable of being tilted upon the fulcrum formed by the impression-roller, and a rectangular frame projecting rearwardly from the proof-press and having a sharpened lip or flange on its lower edge, substantially as described.

483,484. SELF-LOCKING JOB-GALLEY. NICHOLAS G. DUFFY, Charleston, S. C. Filed May 12, 1892. Serial No. 432,780. (No model.)



Claim.—1. A self-locking job-galley consisting of the base-plate A, the stationary side ledge B, the stationary head-ledge C, the slotted adjustable side-stick D, the tenoned adjustable foot-stick E, and means, substantially as described, for adjusting and locking up the galley, as set forth.

2. In a printer's galley, the combination, with the base-plate A and the stationary ledges B and C, having the vertical holes *b* and *c* arranged at intervals corresponding to a standard measurement of type, of the adjustable sticks D and E, adapted to intersect each other and provided with holes for the reception of a pin-key and with toe-pieces carrying pins adapted to enter the holes in the stationary ledges, substantially as described.



483,485. ATOMIZER. HARLEY M. DUNLAP, Battle Creek, Mich. Filed Dec. 12, 1891. Serial No. 414,709. (No model.)

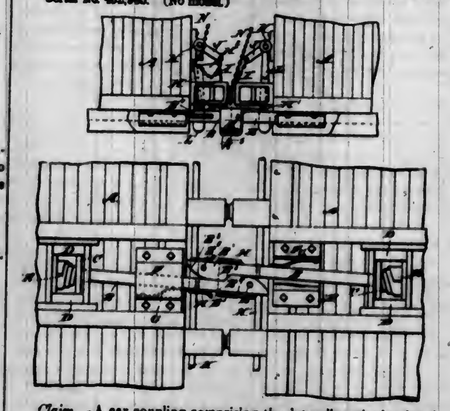
Claim.—1. In an atomizer, the combination with a bottle, of a head secured in the top thereof, the head having ports opening from the bottle through its sides and adapted to connect with an air-supply bulb, a reservoir of air or other gas, and an inhaler-mask, and a spraying-tube secured in the supply-port and extending downward into the bottle, substantially as described.

2. In an atomizer, the two-part spraying tube having a side opening in the lower member and a hollow coupling connecting the two members, said coupling having a side opening to register with the side opening in the tube, substantially as described.

483,436. MITER-CUTTER. WILLIAM R. FOX, Grand Rapids, Mich. Filed Nov. 18, 1891. Serial No. 412,311. (No model.)

Claim.—1. In a miter-cutting machine having a base, the means for reciprocating the knife-carriage connected with said base and a rotary top supporting the carriage and capable of being rotated upon the base, the said carriage rotating with the said top, whereby it may be adjusted to different positions about the axis of the top, substantially as described.

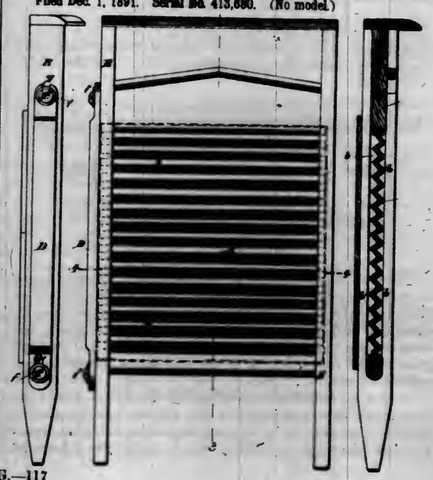
2. In combination, a base, a column capable of being turned on said base, a cutter-carriage mounted on said column and adjustable therewith, a rod connecting the carriage to the device for operating said carriage, a lug on said column, and an adjustable stop on the connecting-rod, arranged to bear on the lug, substantially as described.



3. In combination with the base having a treadle, the rotatable column and the top having the cutter-carriage, a rod connecting said carriage with the treadle, a swivel on the said rod, and connections between said swivel and the column, arranged to raise the treadle, substantially as described.

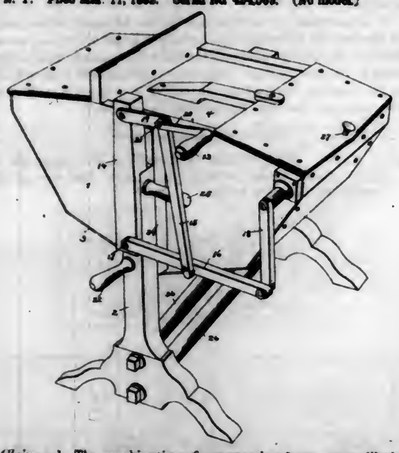
4. The gage consisting of the body portion and the face-plate, said body portion having a shoulder 2 at or near its center and the reduced part 4, extending to the end of the gage to form a recess back of the face-plate, which is secured at one end to the shoulder 2 and extends across the reduced part 4, and the adjusting-screws to hold the outer end of the face-plate, substantially as described.

5. In combination with the base having a treadle, a column carrying a cutter, and connections between said treadle and cutter, the said column having an annular lower end bearing upon an annular flange on the base, and means for clamping the two together adjustably, whereby the column with the cutter may be adjusted to different axial positions, substantially as described.



6. In combination, the base, the column arranged to turn on the base, the top, the guideways for the cutter, carried by the top and adjustable axially with the column, the axial rod connected to the treadle, pivoted to the base, and the cutter-carriage connected on its rear side with the axial rod, the said top extending from the column forward of the cutter and carriage, substantially as described.

483,487. CAR-COUPLING. EUGENE GRAFF, Fort Logan, Colo., assignor to himself and Samuel Sutton, same place. Filed May 14, 1892. Serial No. 432,995. (No model.)



Claim.—A car-coupling comprising the laterally-swinging longitudinally-yielding draw-head, springs G E therefor, the clasp H, pivoted on the draw-head and provided with an eye H^4 and depending sides H^3, flared outwardly, as at H^3, the transverse shaft K, having arms L L and an intermediate arm J, a chain I, connected with eye H^4 and arm J, the lever O for the top of the car, and a chain N, connecting the lever with the clasp, substantially as set forth.

483,438. WASH-BOARD. JOHN C. GEARHART, Williamsport, Pa. Filed Dec. 1, 1891. Serial No. 413,680. (No model.)

Claim.—In wash-boards, the combination of the removable and reversible rubbing-plate A, grooved or corrugated on its opposite sides or faces, the main frame B, adapted to receive laterally through or within it the marginal portions of said plate and having either of its side uprights provided with a through-slot *e* for entry and removal of the plate and the adjustable slide D, opening and closing said slot and provided with a closed slot *g* at its one end and an open slot *f* at its other end, and the pins or screws *f f*, substantially as shown and described.

483,439. WASHING-MACHINE. MARIAN R. GIBBS, Cherry Creek, N. Y. Filed Mar. 11, 1892. Serial No. 424,569. (No model.)

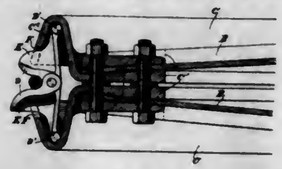
Claim.—1. The combination of a supporting-frame, an oscillating washing-machine body mounted in the same and provided at one end with a laterally-extending journal, a crank-handle pivoted to one side of the frame and having a bar composed of the sections 19 and 20 and a pivot connecting the adjacent ends of the sections, a horizontally-extending lever arranged below the crank-handle and having its inner end fulcrumed on the frame, a connecting-bar 18, extending from the outer end of the lever to the laterally-extending journal, and an upwardly-extending rod 15, having its lower end pivotally connected to the lever at a point between the ends of the latter and having its upper end connected to the pivot of the crank-handle, substantially as described.

2. In a washing-machine, the combination of a frame, an oscillating body journaled on the frame, the steam and water compartments arranged at the ends of the body and at the top of the same, the upper portions having the perforations 6, a series of recesses or buckets arranged beneath each of the upper portions of the compartments and communicating by means of the perforations 6 with the same, and a series of valves arranged on the lower portions of the compartments, substantially as described.

483,440. THILL-COUPLING. HAMILTON GREENLAND and JAMES C. CARRICK, Spivey, Kans. Filed Dec. 31, 1891. Serial No. 416,719. (No model.)

Claim.—1. In a thill-coupling, the combination, with the axle-section having the lateral branch on one of its sides and the laterally-extending stud upon its opposite side, of the coupling-section having the depending branch grooved on its inside to seat the stud of the axle-section and the depending branch adapted to take into the recess formed by the lateral branch of the axle-section, substantially as specified.

2. In a thill-coupling, the combination, with the axle-section having the lateral branch on one of its sides and the laterally-extending stud upon its opposite side, and the coupling-section having the depending branch grooved on its inside to seat the stud of the axle-section, and the depending branch adapted to take into the recess formed by the lateral branch of the axle-section, of the spring fixedly connected at one end and taking through the recess formed by the lateral branch of the axle-section, substantially as specified.

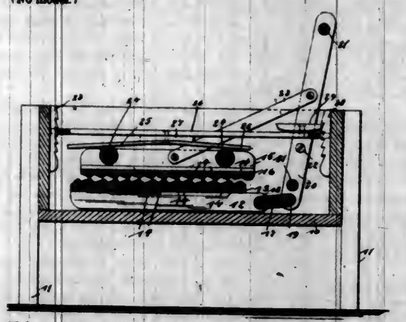


3. The combination, with a vehicle-axle and a pair of thills, of the couplings described respectively comprising the axle-section fixedly connected to the axle, the laterally-extending and rearwardly-pitched branch formed on one side of said section, the laterally-extending stud formed on the opposite side of the section, the coupling-section having the depending branch grooved on its inside, and the depending branch of dovetail form in cross-section adapted to take into the recess formed by the lateral branch of the axle-section, the spring fixedly connected at one end and taking through the recess formed by the lateral branch of the axle-section, and the spring connected to the axle-section and engaging the thill or pole branch, substantially as specified.

483,441. STOVEPIPE COLLAR AND FASTENER. ARTHUR D. GRUBB and CHARLES J. GRUBB, Hamilton, Ill. Filed May 10, 1892. Serial No. 432,438. (No model.)

Claim.—The combination, with a split collar for stovepipes and means for drawing said collar tightly around the pipe, of extended arms provided with suitable brackets at or near their ends and grip-cams pivoted thereto, and clamp-rods bodily movable and held in their adjusted position by said cams, substantially as and for the purpose described.

483,442. GRIP-PULLEY. ANDREW S. HALLIDIE, San Francisco, Cal. Filed Feb. 10, 1892. Serial No. 421,015. (No model.)



Claim.—1. A pulley consisting of a two-part hub having disks or flanges formed integral therewith and having their outer faces provided with radially-arranged recesses, arms arranged in pairs having their inner ends seated in said recesses and thence converging outwardly toward the pulley-rim, bolts passing through the inner ends of both arms of each pair and through the flanges of the two parts of the hub, an outer rim composed of overlapping segmental plates and having a circumferential groove or channel in its periphery, said rim having the radially-disposed recessed lugs C projecting from its inner face, adapted to receive the outer ends of the arms, and bolts passing through said ends and the lugs, substantially as herein described.

2. A grip-pulley consisting of a two-part hub portion having disks or flanges formed integral therewith, with their outer faces provided with radially-disposed recesses, arms having their inner ends seated in said recesses, and bolts passing through said ends and the disks or flanges of the two-part hub, thereby securing the arms in pairs and the two parts of the hub to each other, an exterior rim composed of opposed overlapping segments bolted together and having a circumferential groove or channel in its periphery, said segments having transverse slots formed in them, the gripping-jaws mounted in pairs within the peripheral groove or channel of the rim and projecting through the same and having arms located within the rim, and webs E, working in said transverse slots and retained against side movement thereby, substantially as herein described.

3. A grip-pulley consisting of a two-part hub having the radially-disposed recessed disks or flanges, arms seated in the recesses of the disks or flanges and converging toward the rim of the pulley, bolts passing through the inner ends of the arms and the disks or flanges of the hub, thereby securing said arms and clamping the two parts of the hub together, an exterior rim composed of opposed overlapping segments bolted together and forming the groove or channel C^9 between

their adjoining outer edges, said edges having slots made transversely in them, the gripping-jaws located within said groove or channel and hinged together in pairs at their meeting angles and provided with arms D', projecting at right angles with the jaws and lying loosely within the channel in the rim, said jaws having webs passing through said transverse slots and connecting the jaws with the arms, substantially as herein described.

483,443. WASHING-MACHINE. JOHN P. HALLSTEN and CHARLES J. ANDERSON, Rock Island, Ill. Filed Apr. 22, 1892. Serial No. 430,194. (No model.)

Claim.—1. A washing-machine comprising the tub having transversely-toothed ends and the reciprocating upper rubber, a lower rubbing-surface, the bar engaging at one end one set of teeth, provided with a locking-button at its other end to engage the other set of teeth, and a spring-plate on the under side of the bar and bearing down on the upper rubber, substantially as set forth.

2. The combination, with the tub and its reciprocating upper rubber provided at opposite sides of its center with transverse rollers, of a vertically-adjustable bar and a longitudinally-extending spring secured at its middle to the under side of said bar and bearing at opposite sides of its center upon said rollers, substantially as set forth.

3. The combination, with a tub having toothed cleats therein and reciprocating rubbing-boards the upper of which has rollers on its upper side, of a bar held between the toothed cleats and a spring plate secured to the under side of the bar and held to press upon the rollers, substantially as described.

483,444. AXLE. JOHN HERBY, Jamestown, N. Y. Filed Jan. 2, 1892. Serial No. 416,829. (No model.)

Claim.—1. The combination of an axle having grooves formed in its body near the ends and extending from points near the bases of the spindles toward the outer ends of said spindles, but terminating short of said ends, and independent plates secured to the axle and having vertical flanges fitting said grooves, whereby the axle is strengthened, substantially as herein described.

2. The combination of an axle having deep narrow grooves formed in its under sides between the bases of the spindles and points inside of the outer ends of said spindles and independent plates having horizontal flanges by which they are secured to the axle and vertical flanges adapted to enter said grooves edgewise, thereby strengthening said axle, substantially as herein described.

3. An axle having grooves formed therein and extending from points near the bases of the spindles toward the outer ends thereof but terminating short of said ends, in combination with independent plates secured to the axle near said bases, having outwardly-extending flanges adapted to enter said grooves edgewise, substantially as and for the purpose herein described.

4. An axle having grooves formed therein and extending from points near the bases of the spindles to points near the outer ends thereof and having their upper end walls curved, in combination with independent plates having horizontal portions by which they are fitted to the axle and vertical flanges adapted to enter said grooves and provided with rounded or curved ends, substantially as herein described.

483,445. GUARD-GATE FOR DRAWBRIDGES. WILLIAM HENRICK, Russell, Minn. Filed Oct. 31, 1891. Serial No. 410,457. (No model.)

Claim.—1. In a bridge-guard, the combination of the draw provided with a cam edge at its end, the horizontally-swinging gate, a gate-post, gearing whereby the gate is automatically operated by the movements of said draw, an automatic vertically-movable gravity-lock for said gate at said gate-post, and a system of levers, one of which is weighted, operated by said edge of the draw to control said lock, as set forth.

2. In a bridge-guard, the combination of the draw having projections and the cam edge, the vertical shaft carrying the swinging gate, the sprocket-wheel on said shaft, the two vertical shafts on opposite sides of the end of the bridge, provided with sprocket-wheels, a sprocket-chain connecting all of said shafts, substantially as described, so that the gate can be operated from either shaft, the double fingers on each of said shafts at the end of the bridge to respectively engage a projection of the draw, a lock for said gate, and the levers controlling said lock and operated by said edge of the draw, substantially as described.

3. In a bridge-guard, the combination of a vertical shaft carrying the swinging gate, a sprocket-wheel on said shaft, two shafts at opposite sides of the edge of the approach, carrying sprocket-wheels, a sprocket-chain uniting said sprocket-wheels, substantially as described, the double fingers on said last-mentioned shafts, and the draw having means to engage and swing said projections, in the manner substantially as described.

4. In a drawbridge-guard, the operating-shafts on opposite sides of the end of the approach, the gate-shaft carrying the horizontally-swinging gate, gearing connecting said shafts, so that the gate-shaft will be swung by either of said operating-shafts, as described, the double fingers rigid with said operating-shafts, the fingers on each shaft located in different planes, and the draw provided with vertical projections in different planes projecting into the path of said fingers, substantially as described.

5. In a bridge-guard, the swinging gate, operating mechanism therefor controlled by the draw, the draw having a cam edge, a gate-post, the vertically-movable vertical rod having the lock in its upper end to hold the gate closed, a swinging lever and counterweight mechanism for said lock, and a controlling-lever therefor having one arm held in engagement with said edge to operate the lock, as described.

483,446. INK. CHARLES M. HIGGINS, Brooklyn, N. Y. Filed Jan. 23, 1892. Serial No. 418,966. (No specimens.) Patented in England Jan. 2, 1892, No. 93; in France Jan. 6, 1892, No. 218,495, and in Belgium Jan. 7, 1892, No. 97,830.

Claim.—1. A fluid oily ink for stamping, printing, or other purpose, formed of a color-solvent, a coloring-matter dissolved thereby, and castor-oil combined therewith, substantially as herein set forth.

2. An oily ink composed of oil of cassia, a coloring-matter dissolved thereby, and castor-oil combined therewith, substantially as and for the purpose set forth.

3. An oily ink composed of an aniline color, oil of cassia, and castor-oil, combined substantially as herein set forth.

483,447. INK. CHARLES M. HIGGINS, Brooklyn, N. Y. Filed Feb. 19, 1892. Serial No. 422,119. (No specimens.) Patented in England Jan. 2, 1892, No. 93; in France Jan. 6, 1892, No. 218,495, and in Belgium Jan. 7, 1892, No. 97,830.

Claim.—1. A printing or stamping ink composed of a substantially-fixed oil or fat combined with pure carbolic acid and a coloring-matter, substantially as herein set forth.

2. A printing or stamping ink composed of pure carbolic acid combined with a fixed or nearly fixed oil and an aniline color dissolved therein, substantially as herein set forth.

3. A printing or stamping ink composed of carbolic acid, castor-oil, and a coloring-matter, substantially as herein specified.

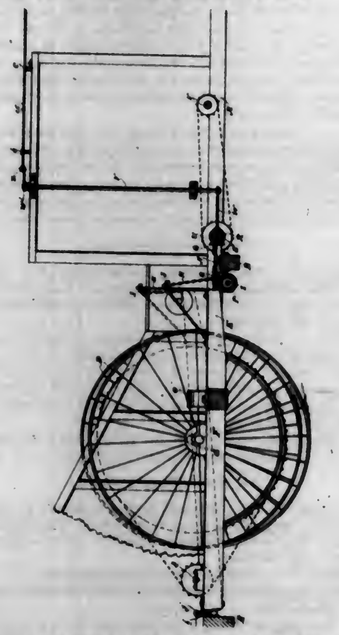
4. A vehicle for oily inks, consisting of castor-oil, an essential oil, and carbolic acid, substantially as herein set forth.

5. A vehicle for oily inks, consisting of castor-oil, oil of cassia and carbolic acid, substantially as herein specified.

6. A printing or stamping ink composed of castor-oil, oil of cassia, carbolic acid, and an aniline color dissolved therein, substantially as herein set forth.

483,448. LAMP-HANGER. CHARLES R. HILLIARD, Big Run, Pa. Filed Apr. 23, 1892. Serial No. 430,393. (No model.)

Claim.—1. In a lamp-hanger, the combination, with the shield, of a shank pivoted thereto and extending in a vertical line with the shield and having at its lower end a horizontal circular body portion,



the lamp mounted on the body, and means attached to the body to secure the lamp thereon, whereby the bracket, with the lamp, is adapted to hang vertically, substantially as and for the purposes specified.

2. In a lamp-hanger, substantially as described, the combination, with the shield, of the swinging bracket comprising the shank pivotally connected to the shield, the body, the spring-ears extending upwardly from the body and adapted to clasp the lower ends of a lamp, and the ear extending up from the body and adapted to embrace the spout of a lamp, substantially as specified.

3. In a lamp hanger, substantially as described, the combination, with the shield adapted to be attached to a hat or cap and having a segmental guard upon its inner side, of the swinging bracket comprising the shank pivotally connected to the shield, the body, the spring-ears extending upwardly from the body and adapted to clasp the lower end of a lamp, and the ear extending up from the body and adapted to embrace the spout of a lamp, substantially as specified.

483,449. TRAVELING HARVESTER. BENJAMIN HOLT, Stockton, Cal. Filed Apr. 25, 1892. Serial No. 430,606. (No model.)

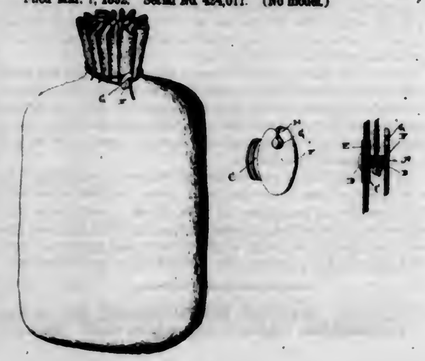
Claim.—1. The hinged frames within the main frame of the machine and carrying the main supporting-wheels, and mechanism connecting said frames to move one of them simultaneously with and in a vertical direction opposite to the other wheel-frame, whereby the said hinged frames may be adjusted to the surface of the ground without affecting the normal horizontal position of the main frame.

2. In a traveling harvester and in combination with its main frame for supporting the thrashing and cleaning mechanisms, the wheel-frames located within opposite sides of the main frame and carrying the main supporting-wheels, said wheel-frames being movable simultaneously in opposite vertical directions without changing the normal horizontal position of the main frame, substantially as herein described.

3. In a traveling harvester, a main frame adapted to support the thrashing and cleaning mechanisms, the wheel-frames adjustably connected with the main frame and having the main wheels upon opposite sides journaled in them, and mechanism connecting said wheel-frames with each other, whereby said frames may be simultaneously moved in opposite vertical directions without changing the normal horizontal position of the main frame, substantially as herein described.

4. In a traveling harvester and in combination with its main frame, vertically-adjustable frames carrying the main supporting-wheels and means connecting with the wheel-frames and moving them simultaneously in opposite vertical directions, whereby the main frame is maintained in an approximately horizontal position.

5. In a traveling harvester, a main frame upon which the thrashing and cleaning machinery are supported, supplemental side frames hinged at one end to the main frame, so that the opposite ends swing in vertical planes with relation to the main frame, bearing-wheels journaled in the supplemental movable frames independently of each other, chains connected with the movable ends of the wheel-frames, and a transverse shaft having winding-drums fixed upon it about which the chains are reversely coiled and uncoiled, whereby the wheel-frames are elevated or depressed simultaneously and in opposite directions, substantially as herein described.



6. In a traveling harvester, the main frame, the supplemental wheel-frames hinged to the main frame so as to move in vertical planes with relation thereto, chains connected with the free ends of the hinged frames, a shaft or shafts extending transversely across the main frame and journaled thereon, and winding-drums fixed to said shafts upon which the chains connecting with the wheel-frame upon one side are coiled, while those upon the other side are simultaneously uncoiled, whereby one wheel-frame is raised and the other depressed with relation to the main frame, substantially as herein described.

7. In a traveling harvester, a main frame, supplemental wheel-frames independently hinged to the main frame, a horizontal shaft extending transversely across the main frame, having winding-drums upon its outer ends, chains connected with the wheel-frames and winding upon the drums upon opposite sides of the shaft, so that one wheel-frame will be raised and the other simultaneously depressed by the rotation of the pinion-shaft, mechanism whereby said shaft is rotated, consisting of a transverse shaft, a worm-wheel upon the pinion-shaft, a bevel-gear Q upon a worm-shaft, and bevel-pinions upon a supplemental shaft R, engaging opposite sides of the gear-wheel, and a clutch T, sliding upon a feather upon said shaft intermediate between the pinions and movable so as to engage either of the pinions and cause the worm-shaft to be revolved in either direction, substantially as herein described.

8. In a traveling harvester, the main frame, the independent wheel-frames, hinged thereto upon opposite sides of the machine, chains connected with said wheel-frames, a shaft extending across the main frame, and winding-drums thereon upon which the chains coil and uncoil, so that the rotation of the shaft will simultaneously raise one of the wheel-frames and depress the other, a worm-gear, the counter-shaft R, the bevel-wheel Q, pinions S and S', and clutch T, levers W' *a*, and connecting-link Z, whereby the mechanism is moved so as to engage the clutch with either of the pinions to reverse the pinion-shaft, substantially as herein described.

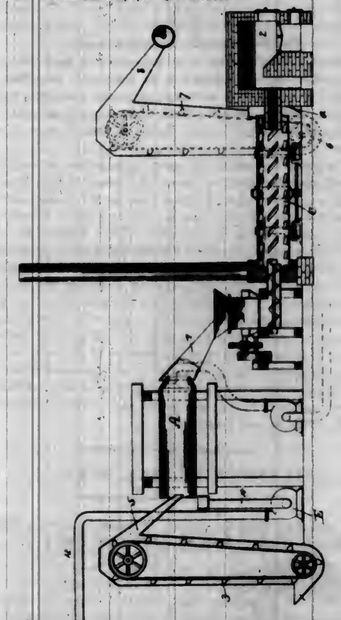
9. In a traveling harvester, the main frame having the thrashing and cleaning machinery supported thereon, independent wheel-frames hinged thereto upon opposite sides so as to move in vertical planes with relation to the main frame, and mechanism whereby said wheel-frames are moved in opposite directions and the main frame maintained in a horizontal position, in combination with the header-frame, the outer end of which is supported upon an independent bearing-wheel, the front timber *o* of said frame being connected with the movable wheel-frame near the wheel-axle and the rear timber hinged to the main frame, substantially as herein described.

488,450. BAG-FASTENER. BRADFORD L. HUBBET, Parma, Mich. Filed Mar. 7, 1892. Serial No. 424,011. (No model.)

Claim.—1. The combination of a perforated shank, a string which is extended through the perforation of the shank, a stop on the portion of the string thus extended to prevent its withdrawal, and a head secured to the shank, to which the free end of the string is adapted to be secured, substantially as shown and described.

2. The combination of a perforated shank, a string which is extended through the perforation and knotted, and a slotted head on the outer end of the shank, to which the free end of the string is adapted to be secured, substantially as shown and described.

3. In a bag-tie, the combination of a shank having a tie-string secured thereto, a shoulder at the lower end of the shank, and a slotted head at its upper end, a rivet projecting from said shoulder, which secures the shank in place, substantially as shown and described.



4. In a bag-tie, the combination of a shank having a tie-string secured thereto and a head made integral with the shank, having an opening, and also a slot leading from said opening to the edge of the head, substantially as shown and described.

5. In a bag-tie, the combination of a shank having a tie-string secured thereto, a slotted head at the outer end of the shank, a rivet at its opposite end, which projects through the bag side, and caps on said rivet on opposite sides of the bag, substantially as shown and described.

488,451. WATERPROOF COMPOSITION. SYLVESTER HUFF, Wabash, Ind. Filed June 11, 1891. Serial No. 396,846. (No specimens.)

Claim.—The herein-described waterproofing compound, composed of raw linseed-oil, one gallon; resin, eight ounces; sugar of lead, four ounces, and lamp-black two ounces, mixed in about these proportions, substantially as described.

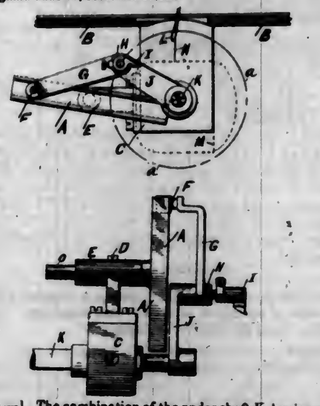
488,452. APPARATUS FOR TREATING PHOSPHATE ROCK. SAMUEL HOGUES and WILLIAM R. CHISOLM, Charleston, S. C. Filed Apr. 4, 1891. Serial No. 387,684. (No model.)

Claim.—1. The combination, with a washer so constructed and arranged that it will receive the material to be washed and the washing material, of a drier forming the body of a furnace, the heating portion being located at one end and the flue at the opposite end, said drier adapted to conduct the material from one end to the other in direct contact with the drying-blast, substantially as set forth.

2. The combination, with a washer, means for supplying water thereto, and a pump into which the water and débris are emptied, of a drier into which the washed material is fed in direct contact with a drying-blast, substantially as set forth.

3. The combination, with a washer so constructed and arranged that it will receive the material to be washed and the washing material, of a crusher into which the washed material is discharged and a drier forming the body of a furnace, the heating portion being located at one end and the flue at the opposite end, this drier adapted to conduct material from one end to the other in direct contact with the drying-blast, substantially as set forth.

488,453. PACKAGE OF MARKING MATERIAL. ELLWOOD C. HUFF, New York, N. Y. Filed Dec. 31, 1891. Serial No. 416,068. (No model.)



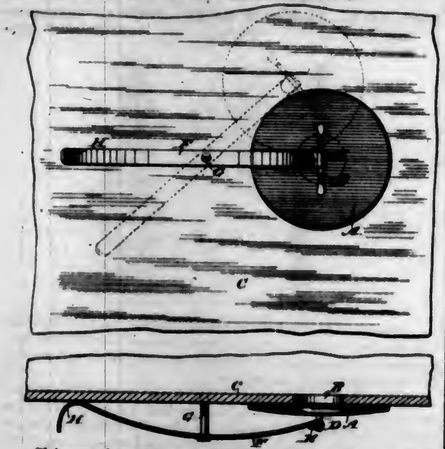
Claim.—1. In a package of marking material, the combination, with the case formed in two parts, of the independent type-block having seats in both sections and carrying type or characters on its opposite faces, substantially as described.

2. In a package of marking material, the combination, with the case formed in two parts, of the independent type-block having the tapered plug fitting in one section and the screw-threaded extension fitting in the other section and the type on opposite faces of said block, substantially as described.

3. In a package of marking material, the combination, with the case formed in two parts, each having a concavity in its abutting face, of the type-block seating in both concavities, the seat in one being screw-threaded, and the bottle for marking material in one concavity retained in place by the block, substantially as described.

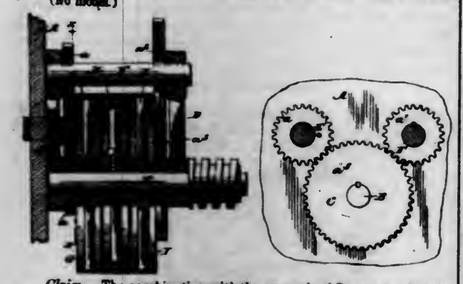
4. In a package of marking material, the combination, with the bottle-shaped case formed in two parts, the upper section having a concavity in each end and the bottom section a concavity in the top, of the plug carrying a brush fitting in the top of the upper section, the type-block fitting in the concavities of both sections at the center, the type on said blocks, and the bottle of marking substance in the lower section, substantially as described.

488,454. SEWING-MACHINE. CHARLES R. HUNT, London, England. Filed July 25, 1892. Serial No. 441,196. (No model.) Patented in England June 11, 1892. No. 11,089.



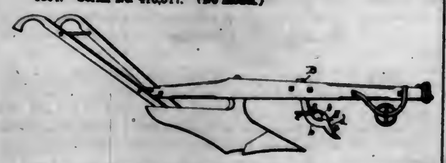
Claim.—1. The combination of the under shaft K, having a crank-arm J, the inclined guide-bar A, the looper I, having a stem axially rotatable in the crank-arm, and a link G, connected at one end with the looper-stem and having at its opposite end a sliding engagement with the inclined guide-bar for rocking the looper, substantially as described.

2. The combination of a bed-plate B, having a pendent bracket C, provided with a socket or bearing E, an under shaft K, having a crank-arm J and journaled in the bracket, an inclined guide-bar A, supported by the socket or bearing, a looper I, having a stem axially rotatable in the crank-arm, and a link G, connected at one end with the looper-stem



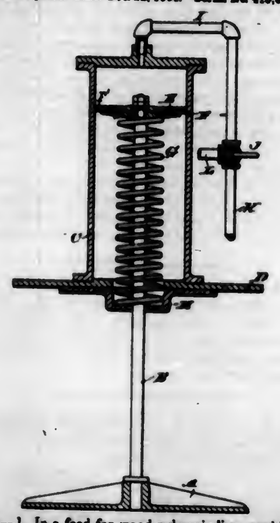
and having at its opposite end a stud or roller adapted to traverse the guide-bar for rocking the looper, substantially as described.

483,455. FLUME-GATE. STEPHEN M. IRVIN, San Bernardino, Cal. Filed Dec. 26, 1891. Serial No. 416,188. (No model.)



Claim.—A flume-gate comprising a cap adapted to close an opening in the flume and a lever pivotally connected with the said cap and pivoted on the flume, the said lever being made in the form of a spring, one end of which is connected with the cap and the other end pressing on the flume, substantially as shown and described.

483,456. REVERSING MECHANISM FOR ROTARY MACHINES. JOHN G. JOHNSON, Chester, Pa. Filed May 18, 1892. Serial No. 433,452. (No model.)

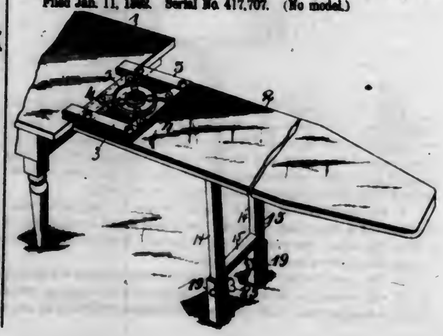


Claim.—The combination, with the gear-wheel C, connected to the rotating shaft to be reversed, of the shaft E, having a tight pulley H in the middle and loose pulleys G and I upon opposite sides thereof, the pulley G having a rigid pinion a in gear with wheel C and the pulley I having a rigid gear-wheel a^2, and the shaft F, having at one end the rigid pinion a' in gear with the wheel C and at the other end the rigid gear-wheel a^3, meshing with the gear a^2, substantially as shown and described.

483,457. PLOW-COLTER. GEORGE A. LAMBERT, Orrington, Me., assignor of one-half to Arthur A. Young, same place. Filed Oct. 30, 1891. Serial No. 410,317. (No model.)

Claim.—A plow-colter consisting of a shank portion attached to the rear of the cutting-blade, said blade having a downwardly and forwardly projecting cutting-point and being deflected laterally and rearwardly above its connection with the shank, its extreme rear portion being twisted to form a spiral and extending toward the rear of the shank in a substantially-horizontal direction and having a sharp front edge, substantially as and for the purpose specified.

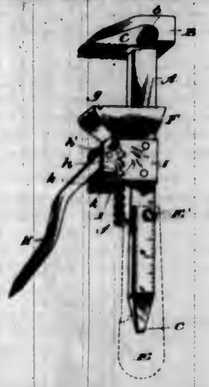
483,458. FEED FOR PULP-GRINDING MACHINES. ALBERT H. LEFEBVRE, Watertown, N. Y., assignor to the Harmon Machine Company, same place. Filed Dec. 23, 1891. Serial No. 415,866. (No model.)



Claim.—1. In a feed for wood pulp-grinding machines, the combination, with a cylinder adapted to be alternately connected with a supply and an overflow or discharge, of a piston carrying a follower and fitted to slide in the said cylinder and a spring pressing on the said piston opposite the inlet in the cylinder, substantially as shown and described.

2. In a feed for wood-pulp-grinding machines, the combination, with a cylinder adapted to be alternately connected with a supply and an overflow or discharge, of a piston fitted to slide in the said cylinder and provided with a flexible packing having a flange extending along the wall of the cylinder in opposition to the pressure of the water entering the cylinder at one end thereof and a spring pressing on the said piston opposite the inlet in the cylinder, substantially as described.

3. In a feed for wood-pulp-grinding machines, the combination, with a cylinder, of a pipe leading into one end thereof, a three-way valve for alternately connecting the said pipe with a water-supply and a discharge, a piston fitted to slide in the said cylinder and adapted to be forced in one direction by the pressure of the water-supply, and a spring pressing on the said piston in an opposite direction to the water-supply, so as to return the piston to a normal position, and a piston-rod attached to the said piston and carrying a follower, substantially as shown and described.



483,459. WITHDRAWN.

483,460. IRONING-TABLE. WILLIAM G. LINDSAY, Antigo, Wis. Filed Jan. 11, 1892. Serial No. 417,707. (No model.)

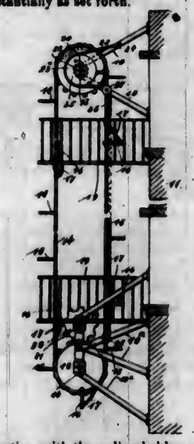
Claim.—As an improvement in ironing-tables of the class described, the combination, with the ironing-board, of longitudinal pieces 3, secured to the top thereof at one end and projecting beyond the latter, transverse pieces 4, connecting said pieces 3, an iron-stand 5, secured to the pieces 4 and bracing the same, and means for binding the projecting ends of the pieces 3 upon a table or other support, substantially as and for the purpose set forth.

483,461. WRENCH. JOHN A. LUTZ, Ham's Prairie, Mo. Filed June 4, 1892. Serial No. 435,483. (No model.)

Claim.—1. A combination-tool embodying in the one device a nut-wrench, a pipe wrench, a hammer formed by the fixed jaw of the wrench, a nail-puller formed on the movable jaw, a screw-driver, and a rule formed on the shank of the fixed jaw of the wrench, a wire-cutter, calipers, a nut-cracker, and a try-square, all constructed and arranged relatively to each other as set forth.

2. The combination, with the shank and its fixed jaw, of the movable jaw sleeved on said shank and provided with a rack-bar, the plates fixed on the shank and provided with notches to serve as a wire-cutter, and a lever pivoted between said plates and having a toothed cam-head engaging said rack-bar and acting, in conjunction with the said notches, to form the wire-cutter, as set forth.

483,462. VEST AND DRAWERS HOLDER. ALBERT LOETTE, Corsicana, Tex. Filed June 4, 1892. Serial No. 435,574. (No model.)



Claim.—1. As an improved article of manufacture, the vest and drawers holder herein described, consisting of the main bar A, having the arm B bent downward from its upper end and provided with a clasp C for connecting with the drawers, the main bar being also provided near its upper and lower ends with safety-pins for connection with the vest, all substantially as and for the purpose set forth.

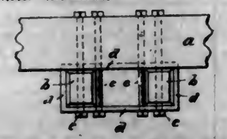
2. The vest and drawers holder herein described, consisting of the main bar A, provided near its upper and lower ends with fastening devices and having an arm B bent downward from the upper end of and deflected to one side of the said main bar and provided at the extremity of said arm B with a clasp, as C, all substantially as and for the purposes set forth.

483,463. FIRE-ESCAPE. PATRICK LYNCH, Jr., Superior, Wis. Filed Apr. 9, 1892. Serial No. 428,590. (No model.)

Claim.—1. A fire-escape comprising the upper and lower brackets 10 10^a, the shaft 12, journaled in the upper brackets and provided with two sprocket-wheels 13, a brake-pulley 23^a at one end, and a ratchet-wheel 29 at the opposite end, the pawl 30, engaging said ratchet, the brake-strap passing around said pulley, a rope leading therefrom over a guide-pulley down to one of the lower brackets, a shaft 28, on which the lower end of the rope is wound, the two lower sprockets mounted on a shaft journaled on the lower brackets, the endless ladder mounted on the upper and lower sprockets, and the two gear-wheels meshing with the lower sprockets and having an operating-shaft, substantially as set forth.

2. The combination, with the endless ladder and the steps thereon, of the bail shaped and outwardly-extending guards secured to the ladder above the steps, substantially as described.

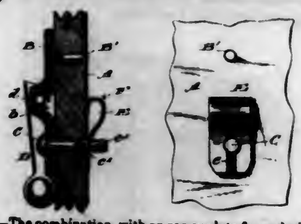
483,464. CIGAR-LIGHTER. FRANK MICHL, New York, N. Y. Filed Oct. 4, 1888. Serial No. 287,232. (No model.)



Claim.—1. A lighter comprising two connected parallel tubes or cylinders open at their ends, a bottle within one cylinder, provided with a stopper having a needle, and a cord or wick passing into the other tube, and means for withdrawing the said cord or wick, substantially as set forth.

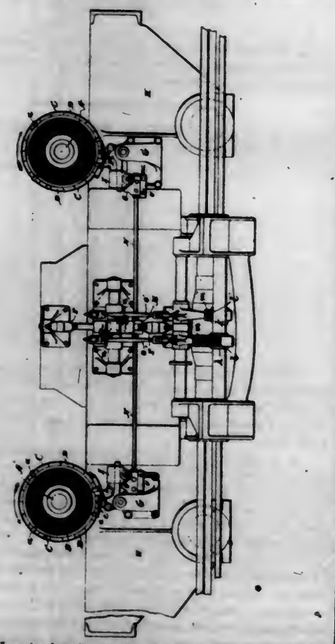
2. A lighter comprising two tubes or cylinders open at their ends and an intervening plate connecting the same and integral therewith, a cord or wick movable through one of the tubes, a head or stopper for said cylinder provided with a chain connected to the cord or wick, and a bottle in the other tube or cylinder, having a stopper provided with a needle, substantially as set forth.

3. A lighter comprising two connected parallel open-ended tubes or cylinders, a cord or wick in one tube, a head or stopper connected with the cord or wick to close said tube, a bottle in the other cylinder, containing a finely-comminuted igniting-paste, and a stopper for the bottle, having a needle for withdrawing a portion of said paste and rubbing it on the cord or wick to ignite the same, substantially as set forth.



483,465. CARRIER-IRON FOR DRAW-BARS. WILLIAM D. MINTON and ALEXANDER S. DOUGLAS, Marshall, Tex. Filed June 22, 1892. Serial No. 437,616. (No model.)

Claim.—The combination, in a car, of the draft-timbers, the draw-bar between the same, and the loop-shaped carrier-iron in one piece embracing said timbers and passing above and below and supporting the



draw-bar and secured to said timbers by bolts, whereby said iron is reversible, substantially as described, and prevents the timbers spreading.

483,466. HANDLE. DAVID A. MOORE, Guthrieville, and HARRY C. MOORE, Berwyn, Pa. Filed Mar. 21, 1892. Serial No. 425,839. (No model.)

Claim.—The combination, with an ear or plate formed with socket for the handle-pintles and dowel-pin, of a pin having a notched inner end and a spring-plate bent upon itself and having slotted end to embrace the notched end of the pin and having a notch at its bend and a pin engaging said notch, substantially as specified.

483,467. BRAKE FOR DRUMS OF OVERHEAD TRAVELING CRANES. JOHN R. MORGAN, Alliance, Ohio, assignor of three-fourths to Thomas R. Morgan, Sr., Thomas R. Morgan, Jr., and William H. Morgan, all of same place. Filed July 6, 1891. Serial No. 398,633. (No model.)

Claim.—1. In a brake, the combination, with a brake-wheel and a strap or band embracing the same, of a bell-crank lever provided at its elbow with a bore greater in diameter than the axis on which said lever is mounted, a cylindrical axle for said bore, a weight on one arm of said lever, and means connecting the two ends of the brake-strap to the other arm, substantially as set forth.

2. In a brake, the combination, with a brake-wheel and a strap or band embracing the same, of a bell-crank lever, means connecting the two ends of the strap or band to one arm of the bell-crank lever, a weight secured to the other arm of said lever, and a movable incline for elevating and lowering the weight.

3. In a brake, the combination, with a brake wheel, a brake-strap embracing the same, and shoes attached to the inner faces of the strap or band and resting against the periphery of the wheel, of a bell-crank lever one arm of which is attached to both ends of the strap or band, a weight carried by the other arm of said bell-crank lever, and a movable incline elevating and lowering said weight, substantially as set forth.

4. In a brake, the combination, with a wheel and a band or strap surrounding the same, of a bell-crank lever one arm of which is connected to both ends of the strap or band, a weight on the other arm of said lever, a movable incline for elevating and lowering the weighted arm, and means actuated by the devices which actuate the reversing-clutches for moving or actuating the said incline and thereby elevating or lowering the weighted arm, substantially as set forth.

5. The combination, with two wheels and a band or strap surrounding each wheel, of a bell-crank lever for each strap, one arm of each lever being connected to both ends of its respective strap, a weight on the opposite end of each lever, and means common to both levers, whereby they are caused to act simultaneously, substantially as set forth.

6. The combination, with two wheels and a band or strap surrounding each wheel, of a bell-crank lever for each strap, one arm of each lever being connected to both ends of its respective strap, a weight on the other arm of each lever, inclines for elevating said weighted arm, and means connecting said inclines, whereby they are caused to move simultaneously, substantially as set forth.

483,468. HAND-BINDER. ARTHUR MORRIS, Rockefeller, Ill. Filed Jan. 21, 1892. Serial No. 418,756. (No model.)

Claim.—1. In a hand-binder, the combination, with a guide-plate adapted to be held in the left hand, said plate being provided with a recess at its forward end and a clamping device, of a gripping implement adapted to be carried in the right hand, the said implement being of a pincher-like pattern, comprising spring-pressed handles pivotally connected and concentrically-curved beaks at one end of the handles, substantially as and for the purpose specified.

2. In a hand-binder, the combination, with a guide-plate adapted to be held in one hand, the said guide-plate being provided with a loop for the reception of the hand, a guide recess at one end, and a clamping device intermediate of its ends, of a gripping implement of pincher-like pattern, comprising spring-pressed handles pivotally connected, concentrically-curved beaks at one end of the handles, and a cutting device attached to the pincher-like implement, the latter being adapted to be operated in conjunction with the guide implement, substantially as and for the purpose set forth.

3. In a hand-binder, the combination, with a guide-plate provided at one end with a guide-recess and having a clamping device attached intermediate of its length, of an implement comprising spring-pressed handles terminating at one end in concentrically-curved beaks, this latter implement being provided with a guide through which the tying band or cord is to be passed, substantially as and for the purpose specified.

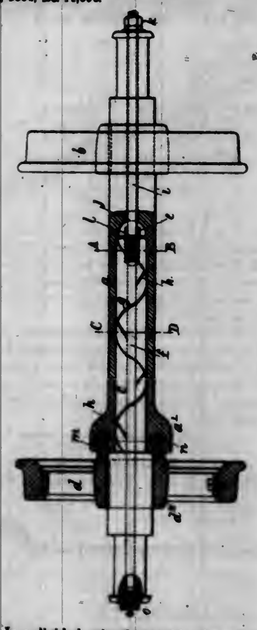
4. In a hand-binder, the combination, with a guide-plate provided with a clamping device, of a pincher-like implement comprising handles pivotally connected, concentrically-curved beaks located at one end of the handles, and a guide-aperture for the reception of the cord or other material employed in tying, substantially as and for the purpose set forth.

5. In a hand-binder, an implement adapted to be carried in the right hand and to be used in connection with a guide-plate, consisting of handles pivotally connected and terminating at one end in concentrically-curved beaks, the handles being spring pressed, a guide ring or eye connected with one of the handles, and a knife also connected with the handles, substantially as and for the purpose set forth.

483,469. BUTTON-EXHIBITOR. SAMUEL T. MOSHER, Abingdon, Ill. Filed Apr. 2, 1892. Serial No. 428,240. (No model.)

Claim.—1. In a button-exhibitor, the combination, with a revolubie cylinder, of button-carrying brackets detachably secured to the cylinder, substantially as described.

2. In a button-exhibitor, the combination, with a revoluble perforated cylinder, of button-carrying brackets provided with hooks engaging the perforations of the cylinder to hold the brackets thereto, substantially as described.

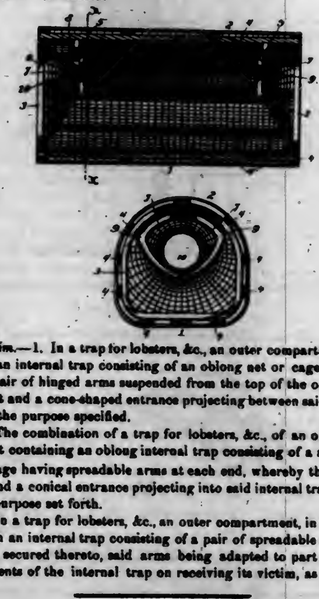


3. A button-exhibitor comprising a case, a screen-covered cylinder mounted to revolve in the case, and a series of button-carrying brackets provided with hooks engaging the meshes of the cylinder to hold the brackets thereto, substantially as described.

4. A button-exhibitor comprising a transparent case, a screen-covered cylinder mounted to revolve in the case, and a series of button-carrying brackets provided with hooks engaging the meshes of the screen of the cylinder and with depending portions bearing against the said screen, substantially as herein shown and described.

5. In a button-exhibitor, the combination, with a screen-covered cylinder mounted to revolve, of button-carrying brackets, each consisting of an outwardly-extending arm having a hooked end, an upwardly-extending hook engaging the screen, and a triangular depending portion bearing against the screen, substantially as described.

483,470. CAR-AXLE. RAYNER L. MCLAREN, Blackheath, England. Filed Apr. 9, 1892. Serial No. 428,802. (No model.) Patented in England July 9, 1891, No. 11,090.



Claim.—1. In a divided axle, the combination of a tubular part *a*, a part *c*, fitting into the part *a* with turned cylindrical bearing-surfaces of the same diameter throughout and extending through the greater part of said part *a*, and a rod *j*, passing freely through a central boring of the outer end of part *a*, such rod being screwed into the part *c* and secured at the outer end of part *a* by a screw-nut *k*, so as to secure the parts *a* and *c* together, substantially as described.

2. In a divided axle, the combination of a tubular part *a*, a part *c*, fitting into *a* with turned cylindrical surfaces, a rod *j*, fixed to part *c* and passing through a central boring of *a* and secured externally by a screw-nut *k*, and a packing-ring *m*, fitting a circular groove in the end face of the part *a* and pressed by springs against the inner face of the wheel fixed on the part *c*, substantially as described.

3. In a divided axle, the combination of a tubular part *a*, a part *c*, fitting into *a* with turned cylindrical surfaces, a central longitudinal passage *f*, formed in the part *c* for the reception of lubricant and communicating at the inner end with a chamber *e* in the part *a*, a helical channel *g* on the part *c*, radial channels *h*, connecting the passage *f* with the passage *g* and with a chamber *e*, and a rod *j*, extending from the part *c* and passing through a central bore in the part *a* and secured beyond the same by a screw-nut, substantially as described.

4. In a divided axle, the combination of a tubular part *a*, a part *c*, fitting with a turned cylindrical surface the bored hollow of the part *a*, means for securing the parts *a* and *c* together so that they can revolve independently of each other, but cannot separate, and a packing-ring fitting a circular groove in the enlarged end of the tubular part *a* and pressed by springs against the turned inner face of the boss of the wheel fixed on the part *c*, substantially as described.

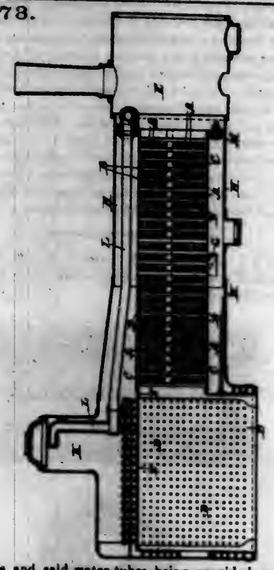
483,471. LOBSTER-TRAP. JOHN S. PALMER, Stonington, and CHARLES R. WATROUS, Ledyard, Conn. Filed Apr. 1, 1892. Serial No. 427,394. (No model.)

Claim.—1. In a trap for lobsters, &c., an outer compartment containing an internal trap consisting of an oblong net or cage provided with a pair of hinged arms suspended from the top of the outer compartment and a cone-shaped entrance projecting between said arms, as and for the purpose specified.

2. The combination of a trap for lobsters, &c., of an outer compartment containing an oblong internal trap consisting of a suspended net or cage having spreadable arms at each end, whereby the bottom opens, and a conical entrance projecting into said internal trap, as and for the purpose set forth.

3. In a trap for lobsters, &c., an outer compartment, in combination with an internal trap consisting of a pair of spreadable arms and network secured thereto, said arms being adapted to part and drop the contents of the internal trap on receiving its victim, as set forth.

483,472. BRIDLE ATTACHMENT. JOSEPH W. PEACE, Rhea Springs, Tenn. Filed Apr. 13, 1892. Serial No. 429,040. (No model.)



Claim.—1. The combination, with a bridle, of a removable blind and an attaching-thong extending in and out through perforations in the blind and the cheek-piece of the bridle, substantially as described.

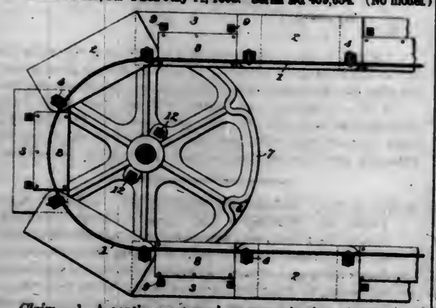
2. In a bridle, the combination, with the cheek-pieces having snap-hooks at their ends, of a brace-band secured to the cheek-pieces below the brow-band, and a nose-band provided with rings at opposite sides with which the snap-hooks engage, substantially as described.

483,473. LOCOMOTIVE STEAM-BOILER. GEORGE J. PERKINS, Truckee, Cal. Filed May 19, 1892. Serial No. 433,503. (No model.)

Claim.—In a locomotive steam-engine, the combination, with the fire-box, of a tube-sheet made of two overlapping sheets of metal, said tube-sheets being approximately square in cross-section, with rounded corners, having its upper surface a continuation of the crown-sheet of said fire-box, and therefore on a level with same, and communicating at one end with the fire-box and at the other end with the smoke-arch, water-tubes arranged transversely thereto, and an end wall or sheet at the forward end of the boiler, said end sheet being provided

483,473.

with manholes and said water-tubes being provided near their extremities with heads, substantially as and for the purpose set forth.



483,474. SECTIONAL VEHICLE-SHAFT. WILLIAM J. POHRER, St. Louis, Mo. Filed May 2, 1892. Serial No. 431,447. (No model.)

Claim.—1. As an improvement in sectional vehicle-shafts, the combination, with rear sections, of forward members detachable therefrom and comprising each two hinged sections, substantially as and for the purpose set forth.

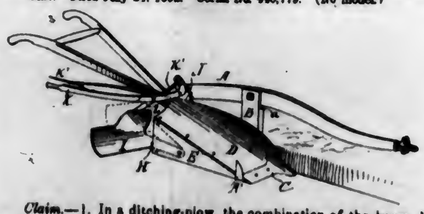
2. As an improvement in sectional vehicle-shafts, the combination, with the rear sections A, of forward members detachably connected therewith and comprising each two sections B and C hinged together, the sections B being adapted to be folded forwardly over the sections C, substantially as and for the purpose set forth.

483,475. CONTINUOUS-TROUGH CONVEYER. JAMES POLLOCK, Wilkes-Barré, Pa. Filed July 11, 1892. Serial No. 439,634. (No model.)

Claim.—1. A continuous-trough conveyer having a bottom composed of a continuous band and sides composed of plate-sections pivotally connected to each other, substantially as described.

2. In a continuous-trough conveyer, the combination, with the end pulleys and the continuous bottom strip, of side sections pivotally connected with the bottom strip at points exterior to said strip, whereby the bottom is permitted to curve in passing round the pulleys, substantially as described.

3. In a continuous-trough conveyer, the combination, with the bottom strip and the end pulleys, of cross-bars attached to the exterior side of the strip and overlapping side pieces pivotally mounted upon said cross-bars, substantially as described.

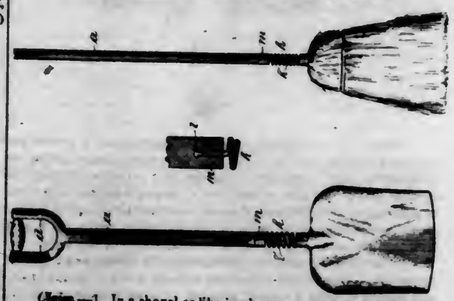


4. In a continuous-trough conveyer, the combination, with the continuous bottom strip and the end pulleys, of the overlapping side sections pivotally connected to the bottom strip and means for preventing the upper half of the trough from sagging between its supports, substantially as described.

5. In a continuous-trough conveyer, the combination, with the bottom strip and the end pulleys, of the overlapping inner and outer side sections 2 3 and the plates 8, connected to the outer sections 3, between the inner sections, whereby the sides of the upper portion of the trough are converted into rigid supporting-girders, substantially as described.

6. In a continuous-trough conveyer, the combination, with the bottom strip and the end pulleys, of the overlapping side sections pivotally connected to the bottom and the roller-supports 10, arranged between the end pulleys, substantially as described.

7. In a continuous-trough conveyer, the combination, with the end pulleys 7, arranged in pairs and provided with peripheral sockets 6, of the endless bottom strip, the cross-bars 4, connected to the bottom strip, the side pieces 2 3, having their overlapping portions pivoted upon the rounded ends of the cross-bars, and the inner plates 8 and tie-bars 9, connected to the outer plates 3, substantially as described.

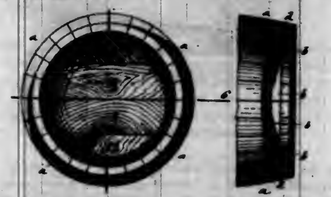


483,476. DITCHING-PLOW. BENCHER H. RINEHART, Alliance, Ohio. Filed July 21, 1892. Serial No. 440,779. (No model.)

Claim.—1. In a ditching-plow, the combination of the beam A, the post or standard B, having attached thereto the mold-board, share, and landside, the vertical plate E, the supplemental mold-board I, pivotally connected to the vertical plate E by arm H, and a lever for adjusting said supplemental mold-board or scraper, substantially as and for the purpose specified.

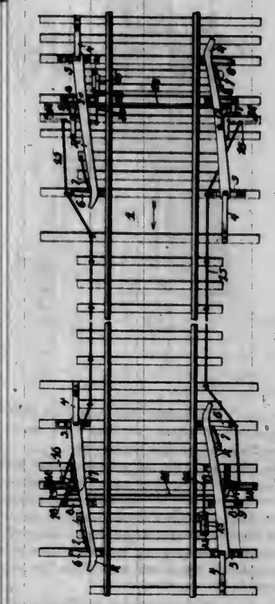
2. The combination of the beam A, pivotally attached to the post or standard B, the mold-board D, having attached thereto the vertical plate E, the pivoted supplemental mold board or scraper I, the operating-lever K, the spring-bar K', the post or bar G, provided with the toothed segment J, and the connecting-link L, substantially as and for the purpose specified.

483,477. HAND IMPLEMENT. MATTHEW RYAN, Washington, D. C. Filed Jan. 22, 1892. Serial No. 418,915. (No model.)



Claim.—1. In a shovel or like implement, a scoop or head portion attached to the handle by means of an unrestricted or unconfined coil-spring having a universal movement, in the manner and for the purpose substantially as described.

2. A shovel or like implement having a handle provided with a coil-spring having free endwise and lateral movement, said spring being interposed between the gripping portion of the handle and the head of the implement, as and for the purpose specified.

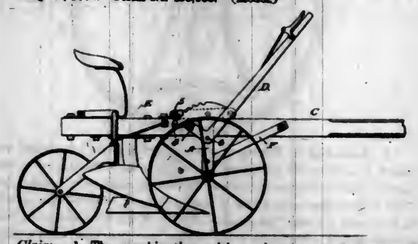


3. In a shovel or like implement, a handle having a spiral spring interposed between its upper end and the implement scoop or head portion, in combination with a grip provided with cushioning-springs, substantially as described.

483,478. CONSTRUCTION OF HOGSHEADS OR BARRELS. AUGUST SCHMIDT, New York, N. Y. Filed Nov. 19, 1891. Serial No. 412,375. (No model.)

Claim.—A hogshead or barrel composed of annular concave heads, which are made rectangular or nearly rectangular at the circumference and trimmed off at the inner edge, and staves the croze of which is located in one plane with the circumference of each head and corresponding in shape to the circumference of the heads, substantially as set forth.

483,479. AUTOMATIC BLOCK SYSTEM FOR RAILROADS. BYRON SHOEMAKER and JUDSON SHOEMAKER, St. Louis, Mo. Filed Mar. 28, 1892. Serial No. 426,903. (No model.) Patented in Canada Feb. 12, 1892, No. 38,262.



Claim.—1. In an automatic signal device for railroads, the combination, with a laterally-yielding lever, of a casing provided with a hinged section, a wedge-shaped slide working in said casing and adapted to elevate said hinged section, and devices for connecting the lever and slide, substantially as and for the purpose set forth.

2. In an automatic signal device for railroads, the combination, with a laterally-yielding lever, of an angle-lever provided with an upwardly-projecting arm adapted to be engaged by said yielding lever, a second angle-lever having one of it members connected with the first angle-lever and another of its members connected with a signal-operating device, substantially as and for the purpose set forth.

3. An automatic signal device for railroads, consisting of levers 2 and adapted to be operated by the passing locomotive, a roller fixed to the under surface of the same and adapted to move upon a suitable plate provided with stops for controlling the movement of said levers, a guide for the free ends of said levers, a spring or other device for causing the said levers to resume their normal positions, levers, such as 13 and 17, also movably attached to one side of the track and adapted to be operated by said levers 2, a rope or wire, such as 15, for connecting the said levers 13 and 17, a rod, such as 20, attached to one arm of the said lever 13 and carrying a wedge-shaped block 21, and a plate, such as 25, having a lift 26 formed thereon and adapted to be elevated by the said block, substantially as described.

483,480. SULKY-PLOW. JOHN WOLPERT, Louisville, Ky. Filed May 21, 1892. Serial No. 433,805. (Model.)

Claim.—1. The combination, with a plow-beam, of the bars B, hinged thereto, and the divided axle journaled in said bars, the land-wheel section being journaled farthest from the turning axis of the bars, whereby a differential motion may be given to the axle-sections and the land-wheel be raised by the act of lowering the plow into the ground.

2. The combination, with the divided axles and plow-beam, of the bars B, the lever D, link G, and braces F, substantially as shown and described.

3. The hinged parallel bars B and the sectional axle journaled in said bars to produce a differential motion of the axle and wheels, in combination with the plow-beam, the pivoted braces, the elbow-lever, and the link connecting it to the parallel bars, substantially as shown and described.

4. The combination, with the plow-beam and pivoted braces, of the pivoted bars or crank, the sectional axle pivoted in said bars or crank at different distances from its axis, the operating-lever and its link, the caster-wheel swiveled in a hinged socket, and the rod connecting said socket to the axle and the pivoted bars, substantially as shown and described.

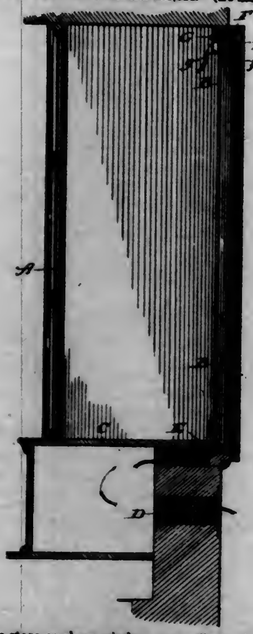
483,481. PRINTER'S GALLEY. NICHOLAS G. DUFFY, Charleston, S. C. Filed May 12, 1892. Serial No. 432,779. (No model.)

Claim.—1. The improved galley consisting of the bed-plate A, the stationary side ledge B, having holes *c c*, the stationary head-ledge C, having the hole *d*, the removable side ledge D, having vertical holes *f*, corresponding to the vertical holes *c c* in the stationary ledge B, and the adjustable foot-piece consisting of the flat bar E' and the supplementary adjustable bar F, the side ledge D being provided with a pin *k* to enter the hole *d* and the plate E' being provided with pins *k k* to enter the holes in the side ledges, substantially as described.

2. A printer's galley having a stationary side ledge B, a stationary head-ledge C, a detachable side ledge D, and an adjustable foot-ledge, said foot-ledge comprising the flat bar E', supplementary adjustable bar F, and adjusting-screw F', substantially as described.

3. The combination, with the side ledges B and D, having vertical holes for the reception of pins on a foot-piece, of an adjustable foot-piece consisting of a flat bar E', having toes *i i* and pins *k k*, a supplementary bar F, and an adjusting-screw F', substantially as described.

483,482. MAGNIFYING-GLOBE FOR THE DIFFUSION OF ARTIFICIAL LIGHT. HILLIARY ELDRIDGE, Purvis, Miss., assignor of one-half to P. C. Gagna, Houston, Tex. Filed Nov. 2, 1891. Serial No. 410,556. (No model.)

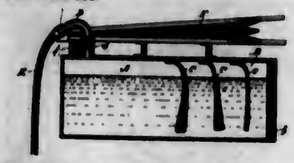


Claim.—1. A show-globe having an outer spherical globe 1 and an inner receptacle or globe 9, being double concave in longitudinal section, circular in cross-section, and provided with an open upper end and a plano-concave lower closed end, substantially as set forth.

488,482.

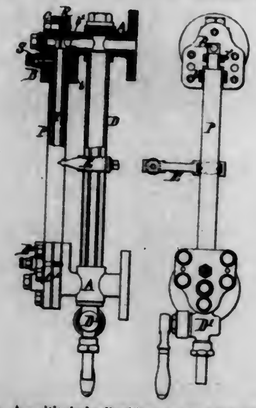
2. A show-globe having an outer spherical globe 1, provided with a neck 2, an external peripheral flange 3, formed thereon or secured thereto, external screw-threads 4, formed on said neck, a cap 5, provided with an internally-screw-threaded flange 6, adapted to be screwed on said neck, an inner receptacle or globe 9, double concave in longitudinal section, circular in cross-section, and provided with a plano-concave lower closed end 10 and an open upper end, and a flange 12, formed on or secured to said upper end, substantially as set forth.

488,483. WINDOW-VENTILATOR. GEORGE W. GERIS, Chicago, Ill. Filed Feb. 19, 1892. Serial No. 422,122. (No model.)



Claim.—In a store or show window, a ventilating-board having air-openings in its edge arranged immediately adjacent the surface and above the lower edge of the glass, and a cap for holding the upper edge of the glass, provided with air-openings allowing the passage of air from the surface of the glass over and in contact with its edge, whereby a movement of the admitted external air along and immediately in contact with the surface of the glass is permitted, substantially as and for the purpose explained.

488,484. FUMIGATOR. FERDINAND A. HOFFMAN, Byron, Cal.; Clara H. Hoffman administratrix of said Ferdinand A. Hoffman, deceased. Filed May 4, 1892. Serial No. 431,882. (No model.)



Claim.—1. In an animal-exterminator, the combination of the casing having a vertical partition dividing the casing into separate channels, said partition terminating short of one end of the casing to form a communicating passage between the channels, an outlet-pipe leading from the closed end of one channel, and an air-blast apparatus connected with the adjacent end of the other channel, whereby an air-current is forced through both channels, substantially as herein described.

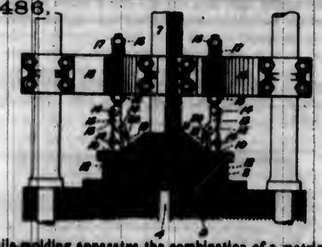
2. An animal-exterminator consisting of a casing having the internal partition open at one end and dividing said casing into separate communicating channels, the absorbent strips in said channels, an outlet-pipe from the closed end of one channel, and a bellows having a connection with the adjacent end of the other channel, substantially as herein described.

3. An animal-exterminator consisting of the casing having the internal partition open at one end and dividing said casing into separate communicating channels, the absorbent strips in said channels, an outlet-pipe from the closed end of one channel, the valve in said pipe, the conveyer-pipe attached to said outlet-pipe, and a bellows having a connection with the adjacent end of the other channel, substantially as herein described.

488,485. LIQUID-GAGE. CHARLES PIHL, Rouen, France. Filed July 25, 1891. Serial No. 400,722. (No model.) Patented in France May 5, 1890, No. 205,446; in Germany July 29, 1890, No. 55,136; in Belgium Apr. 13, 1891, No. 94,500, and in England Apr. 15, 1891, No. 6,482.

Claim.—1. A multitubular liquid-gage with supports for the tubes, having removable cover-plates enabling the tubes to be inserted into the supports from the front or horizontally.

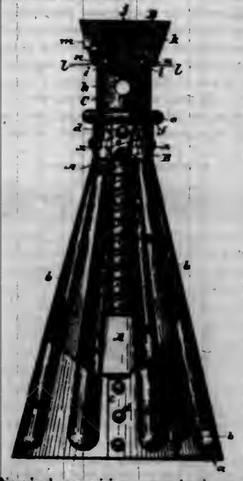
2. The tubes and tube supports or carriers with packing-plates and rings or washers *b b'*, in combination with retaining or compressing caps or cover-plates C and C', enabling the tubes to be inserted into the supports from the front or horizontally, as described.



3. The combination of inner and outer tubes with two valve-boxes having automatic valves serving in case of failure of the internal tube to prevent escape of steam and water from the outer tube, substantially as hereinbefore described.

488,486. APPARATUS FOR MOLDING TILES. MONTEZUMA SCOTT, New Brighton, Pa., assignor to the Scott Tile Company, Chicago, Ill. Filed Dec. 4, 1891. Serial No. 414,065. (No model.)

Claim.—1. In apparatus for molding tiles, the combination of a matrix, a perforated plate or die having upwardly-extending hinged arms, and a plate or die having projecting spurs extending through the perforated die, whereby the perforated die is retained in position during a portion of the backward stroke of the die having spurs, substantially as and for the purposes described.



2. In tile-molding apparatus, the combination of a matrix having a movable bottom, a perforated plate or die having upwardly-projecting hinged arms, and a plate or die having projecting spurs extending through the perforated die and provided with means for operating the hinged arms, substantially as and for the purposes described.

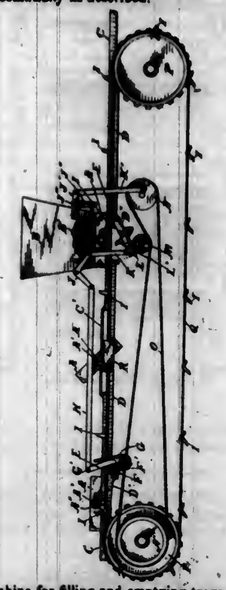
488,486.

3. In tile-molding apparatus, the combination of a matrix having a movable bottom, a perforated plate or die having upwardly-projecting jointed arms, a plate or die provided with projecting spurs extending through the perforated die and having arms arranged to press against and unlock the jointed arms upon upward movement of the plate, substantially as and for the purposes described.

488,487. JACK-SCREW. WILLIAM H. WILD, Valatie, N. Y., assignor to the Wild Engineering Company, same place. Filed Sept. 13, 1890. Serial No. 364,756. (No model.)

Claim.—A lifting-jack comprising a screw having an enlarged head provided with a groove in its upper end, balls in said groove, a jam-cap on said head, a stamped-up metal base provided with an inwardly-turned flange at its lower edge, and a flanged and grooved nut, the groove in the nut being adapted to receive and hold in place the upper end of the sheet-metal base, substantially as set forth.

488,488. MACHINE FOR FILLING AND EMPTYING TRAYS. ROBERT A. BAUER, Grand Rapids, Mich., assignor of two-thirds to Henry G. Krekel and Edward G. Krekel, same place. Filed Oct. 31, 1891. Serial No. 409,357. (No model.)



Claim.—1. In a machine for filling and emptying trays, the combination, with parallel sprocket-chains, dogs pivoted to said chains, and tracks having movable sections engaging said dogs, of trays engaged by said dogs and tracks upon which said trays move, substantially as described.

2. In a machine for filling and emptying trays, in combination with trays having journals at opposite sides and pinions on said journals and mechanism for propelling said trays, tracks upon which said trays move, having gaps, rods opposite said gaps engaging said journals, and a rack to engage said pinions, substantially as described.

3. In a machine for filling and emptying trays, the combination, with trays having journals at each end and pinions on said journals, of parallel sprocket-chains, and tracks and dogs having arms at right angles, said arms engaging said journals and tracks, respectively, tracks upon which said trays slide, said tracks having gaps or openings, rods opposite said openings engaging said journals, and a rack engaging said pinions, substantially as described.

4. In a machine for filling and emptying trays, the combination of a sprocket-chain, dogs each having a vertical and horizontal arm and pivoted to said chain, a track engaging one arm of said dogs, pivoted sections in said track connected by levers and rods, trays moved by said dogs, and levers engaging said trays and operating said pivoted sections of track, substantially as described.

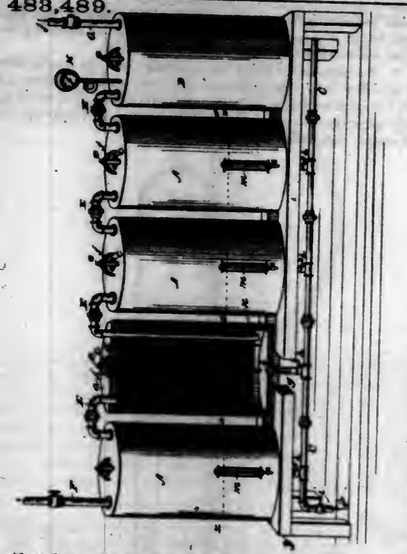
5. In a machine for filling and emptying trays, the combination of a sprocket-chain, dogs pivoted to said chain, a track engaging said dogs, a pivoted section, as D', in said track, a tray moved by said dogs, a lever engaging said tray, and gearing connecting said lever and pivoted section, substantially as described.

6. In a machine for filling and emptying trays, the combination of a sprocket-chain, dogs pivoted to said chain, a track engaging said dogs, a pivoted section, as D'', in said track, a latch securing said section when closed, a lever connected to said latch, and a tray moved by said dogs and engaging said lever and releasing said latch, substantially as described.

7. In a machine for filling and emptying trays, the combination of a hopper, a vibrating sieve in the same, mechanism to vibrate said sieve, a belt to operate said mechanism, a track having a pivoted section, a tightener on said section engaging said belt when said pivoted section is released, a latch to secure said pivoted section, having a lever engaging a tray beneath said sieve, and mechanism to deposit said tray beneath said hopper, substantially as described.

8. In a machine for filling and emptying trays, the combination of parallel socket chains, dogs each having arms at right angles and pivoted at intervals to said chain, tracks each having two pivoted sections connected to each other by levers and rods, so that each alternately opens and closes, said tracks engaging said dogs, and trays engaged and moved by said dogs and engaging levers to operate said sections, substantially as described.

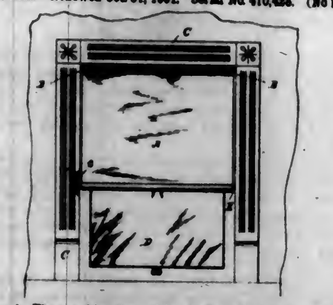
488,489. MANUFACTURE OF GAS. ROBERT M. BIDELMAN, Adrian, Mich., assignor to the Petroleum Light and Heat Company, same place. Filed May 26, 1891. Serial No. 394,203. (No specimens.)



Claim.—1. The method of generating a fixed gas, which consists in first substantially removing from a liquid hydrocarbon the constituent parts which would furnish condensible vapors, and subsequently taking up and removing the fixed gases by passing through the residue an aeriform fluid under pressure, substantially as described.

2. The method of generating a fixed gas, which consists in first substantially removing from a liquid hydrocarbon the constituent parts which would furnish condensible vapors, submerging a body of absorbent porous solid material within the residue, and subsequently taking up and removing the fixed gases by passing through said porous material and residue an aeriform fluid under pressure, substantially as described.

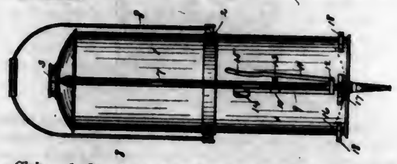
3. The method of generating a fixed gas, which consists in forcing an aeriform fluid under pressure through a petroleum hydrocarbon which has been deprived of those vapors which condense at the ordinary temperatures of a gas-main, substantially as described.



4. The method of generating a fixed gas, which consists in forcing

483,489.

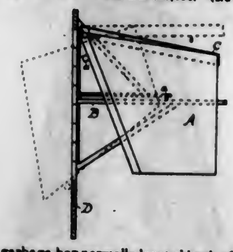
an aeriform fluid under pressure through a Lima-oil distillate of substantially 0.698 specific gravity, substantially as described.



483,490. ATTACHMENT FOR WINDOW-SHADES. HORACE L. HALL, Manchester, N. H., assignor to R. T. Burrowes, Portland, Me. Filed July 8, 1890. Renewed Oct. 31, 1891. Serial No. 410,428. (No model.)

Claim.—1. The combination, with a hollow shade-stick provided with two slots substantially midway from its ends, of two levers secured within the stick independently of each other, each lever being pivotally secured at its upper end and having its lower end projecting through one of the slots, whereby it may be grasped and forced inward, the portion of the stick between the slot forming an abutment for limiting the movement of the levers toward each other, and a spring-actuated rod in each end of the stick, the outer end of each of which is provided with retaining devices and the inner end is loosely secured upon one of the levers below the pivotal point, and means for preventing the inner end of the rod from moving toward the pivotal point of the lever, substantially as set forth.

2. The combination, with a hollow tubular shade-stick the walls of which are substantially of the same thickness throughout its length, said stick being provided with two slots about midway of its length, of two levers secured within the stick independently of each other, each lever being pivotally secured at its upper end within the stick and having its lower end projecting through one of the slots in the stick, the portion of the stick between the slots being adapted to limit the movement of the levers toward each other, a flat perforated guide secured within the stick between each lever and the adjacent end of the stick, a pin through the stick between each guide and the lever and adjacent to the inner side of the guide, whereby the guide is prevented from moving toward the lever, a rod in each end of the stick, the outer end of which is shouldered and fits within the outer end of the stick and the inner end passes through the guide and is provided with a slot which fits loosely upon the lever adjacent to that end and below its pivotal point, and a spring upon each rod, one end of which bears against the shoulder of the rod and the opposite end bears against the guide, substantially as set forth.



483,491. AUTOMATIC GRAVITY FIRE-EXTINGUISHER. THOMAS F. HANDLY, Allegheny, Pa. Filed Jan. 11, 1892. Serial No. 417,773. (No model.)

Claim.—1. In a fire-extinguisher, the combination, with the receptacle 1, designed to be inverted for use, and a hose connected with said receptacle, of an acid-receptacle supported within said receptacle 1 near the top thereof and a loose stopper for said acid-receptacle, said stopper having a projection extending within said acid-receptacle and of greater length than the distance between the top of said acid-receptacle and the adjacent wall of the receptacle 1, as and for the purposes specified.

2. In an apparatus for the purpose described, the combination consisting of the receptacle 1, having a bail pivoted below the center of gravity of the same, an acid-bottle attached in the interior of the apparatus, having a heavy elongated stopper capable of being removed partly from the mouth of the bottle by gravity, a means for making the bail rigid with the body of the apparatus when the same has been reversed, a hose connected with the extinguisher, and a means for closing the same by compression, substantially as and for the purpose described.

488,492. GARBAGE-BOX. JOHN HARSOLSHEIMER, Philadelphia, Pa. Filed Apr. 13, 1892. Serial No. 429,050. (No model.)

Claim.—A garbage-box normally located back of the discharging-aperture, supported by trunnions at or near its center of weight, and resting on rails, so as to permit it to be drawn into said aperture and then inverted.

483,498. PNEUMATIC TIRE FOR CYCLES. THOMAS H. HIGGS, Detroit, Mich., assignor of one-half to George F. Case, same place. Filed Apr. 23, 1892. Serial No. 430,209. (No model.)

Claim.—1. In a cycling-wheel, the combination, with a metal tire dished upon its periphery and having two annular marginal edges, of a tire-band stretched over the outer edges of said tire and across the dished face thereof, forming a flattened tread, and an inner annular air-chamber between said metal tire and the tire-band, said chamber bounded outwardly by said tire-band and inwardly by the metal tire, substantially as described.

2. In a cycling-wheel, the combination, with a metal tire dished upon its periphery and having two annular marginal edges, of an elastic tire-band stretched over the outer edges of said tire and across the dished face thereof, forming a flattened tread, said tire-band extended about the outer surface of said tire and forming an inner annular air-chamber therebetween, said chamber bounded outwardly by said tire-band and inwardly by the metal tire, substantially as described.

3. In a cycling-wheel, the combination, with a metal tire dished upon its periphery and having two annular marginal edges, of an elastic tire band stretched over the outer edges of the tire and across the dished face thereof, forming the tread of the wheel, and an inner annular air-chamber therebetween, said chamber bounded outwardly by said tire-band and inwardly by the metal tire, said tire-band strengthened at the lateral edges of the tread, substantially as described.

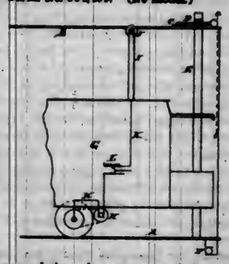
4. In a cycling-wheel, the combination, with a metal tire dished upon its periphery and having two annular marginal edges, of a tire-band stretched across the outer edges of the tire, forming the tread of the wheel, and an inner annular air-chamber bounded outwardly by said tire-band and inwardly by the metal tire, and an inflatable tube located in said air-chamber, substantially as described.

5. In a cycling-wheel, the combination, with a metal tire dished upon its periphery and having two annular marginal edges, of a tire-band stretched across the outer edges of said tire, forming the tread of the wheel, and an inner air-chamber bounded outwardly by said tire-band and inwardly by the metal tire, said tire-band stretched about the tire, and a binding-strip located over the adjacent edges of said band, substantially as described.

6. In a cycling-wheel, the combination, with a metal tire dished upon its periphery and having two annular marginal edges, of a tire-band stretched across the outer edges of said tire, forming the tread of the wheel, and an inner air-chamber bounded outwardly by said tire-band and inwardly by the metal tire, and an inflatable tube located in said air-chamber, said tube recessed at its upper edge to receive the ends of the spokes of the wheel, substantially as described.

7. In a cycling-wheel, the combination, with a metal tire dished upon its periphery and having two annular marginal edges, of a tire-band engaged with the outer edges of the tire, forming the tread of the wheel, and an inner annular air-chamber bounded outwardly by said tire-band and inwardly by the metal tire, and an inflatable tube located in said air-chamber, said tube thickened at top and bottom and made thinner at the sides thereof, substantially as described.

8. In a cycling-wheel, the combination, with a metal tire dished upon its periphery and having two annular marginal edges, of a tire-band engaged with the outer edges of the tire, forming the tread of the wheel, and an inner annular air-chamber bounded outwardly by said tire-band and inwardly by the metal tire, and an inflatable tube located within said air-chamber, said tube having an air-space on either side thereof, substantially as described.



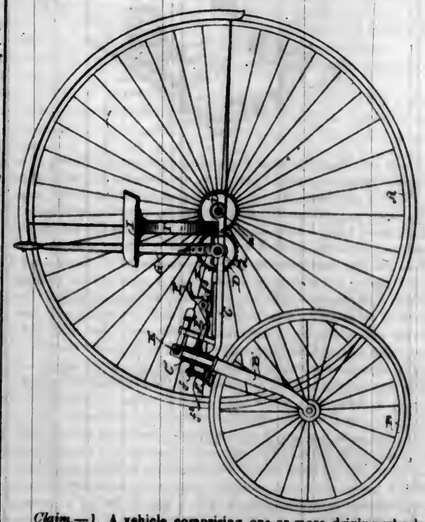
9. In a cycling-wheel, the combination, with a metal tire, of a tire-band stretched across the outer portion of the tire, forming the tread of the wheel, and an air-chamber and an inflatable tube located in said air-chamber, the edges of said tire extended into proximity to said inflatable tube to protect the tube, substantially as described.

10. In a cycling-wheel, the combination, with a metal tire, of a tire-band stretched across the outer edges of the tire, forming the tread of the wheel, and an air-chamber and a covering located about the tire and tire-band, substantially as described.

11. In a cycling-wheel, the combination of a metal tire dished upon its periphery and having two annular marginal edges, a tire-band forming an inner annular air-chamber bounded outwardly by said tire and inwardly by the metal tire, and an inflatable tube located in said chamber, said tube supported in said chamber by a thickened column, substantially as described.

12. In a cycling-wheel, the combination of a metal tire, a tire-band stretched across the outer edges of the tire, forming an inner air-chamber and the tread of the wheel, and an outer elastic band J, located upon the outer face of the tread, substantially as described.

488,494. ELECTRIC-RAILWAY CONDUCTOR. RUDOLPH M. HUNTER, Philadelphia, Pa., assignor, by mesne assignments, to the Thomson-Houston Electric Company, Boston, Mass. Original application filed Sept. 23, 1889, Serial No. 324,908. Divided and this application filed Mar. 23, 1892. Serial No. 426,499. (No model.)



Claim.—1. A suspended conductor arranged above a railway-track and supported wholly from above, a railway-track, a source of electric energy supplying electricity to said conductor and railway-track, a traveling car, a motor on said car to propel it, an upwardly-extending arm projecting above the roof of the car, a grooved wheel journaled on the free end of said arm and running against the under side of the conductor, and a motor-circuit, including the motor, for conveying current from the conductor and returning it to the rails.

2. The combination of a suspended working conductor having a smooth or practically-smooth under surface with a series of supports for the conductor connecting with it on the upper part thereof, a traveling vehicle, an electric motor on the vehicle, and a collecting device making a traveling contact upon the under side of the conductor for supplying electric current to the motor, a motor-circuit on the car, and a hand-regulator to control the motor in the motor-circuit.

3. A railway-track, a suspended conductor arranged above the railway-track and supported wholly from above, a source of electric energy supplying electricity to said conductor and railway-track, a traveling car, a motor on said car to propel it, an upwardly-extending arm projecting above the roof of the car, a contact device carried on the free end of said arm and running against the under side of the conductor, and a motor-circuit, including the motor for conveying current from the conductor and returning it to the rails.

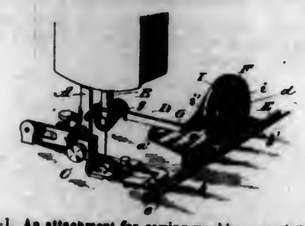
483,495. TRICYCLE. ANDREW HUNTER, Chicago, Ill., assignor of one-half to John W. Ward, Postville, Iowa. Filed Nov. 23, 1891. Serial No. 412,778. (No model.)

Claim.—1. A vehicle comprising one or more driving wheels, a steering-wheel journaled in a revolubie bifurcated support provided at its upper end with a cross arm or bar, and bars or rods slidingly engaged with the frame and having their forward ends engaged with the extremities of said cross arm or bar, substantially as and for the purpose described.

2. The combination, with the frame and wheels of a vehicle, of a brake mechanism comprising a brake shoe adapted to engage with one of said wheels, a rod extending from said shoe and engaged with a lever pivotally secured upon the frame, and a second lever pivotally engaged with the frame of the machine and adapted to be operated by the foot of the rider to apply the brake, substantially as described.

3. The combination, with the frame and wheels of a vehicle, of a brake mechanism comprising a brake-shoe adapted to engage with one of said wheels, a rod extending from said shoe and engaged with a lever pivotally secured upon the frame, a second lever pivotally engaged with the frame of the machine and adapted to be operated by the foot of the rider to apply the brake, and a stop for limiting the movement of the last-mentioned lever, substantially as described.

4. The combination, with the frame and wheels of a vehicle, of a seat provided with elastic supports curved inwardly below their points of engagement with said seat and curved outwardly at their lower ends and engaged with the frame, substantially as described.



5. In a tricycle, the combination, with a suitable frame, of a transverse axle engaged with suitable supports in said frame, drive-wheels removably secured upon the axle outside of said supports, gear-wheels secured upon the inner ends of the hubs of said drive-wheels, shafts extending parallel with said axle and journaled in bearings on the frame, driving-gears removably secured upon said shafts outside of said bearings, and levers carrying clutch mechanism for giving a rotary motion to said shafts, substantially as described.

6. The combination, with the frame, the drive-wheels, and the steering-wheel of a tricycle, of one or more gear-wheels engaged with the drive-wheels, driving-gears located upon shafts extending parallel with said axle, lever-and-clutch mechanism for giving a rotary motion to said shafts and driving-gears, a crown arm or bar engaged with the steering-wheel support, and sliding bars or rods engaged with the extremities of said crown arm or bar and adapted to be operated by the feet of the rider to guide the vehicle, substantially as described.

7. In a tricycle, the combination, with the frame and drive-wheels, of a seat provided with elastic supports curved inwardly below their points of attachment to said seat and curved outwardly at their lower ends and engaged with the frame immediately in front of the axis of said drive-wheels, substantially as described.

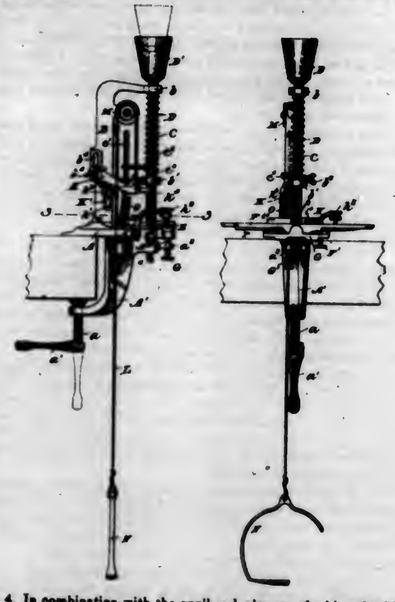
488,496. SCALLOPING ATTACHMENT FOR SEWING-MACHINES.

Owsen W. Kemp, Montgomery, Ala., assignor of one-half to Alexander G. Forbes, same place. Filed Apr. 7, 1892. Serial No. 428,204. (No model.)

Claim.—1. An attachment for sewing-machines, consisting of a supporting-frame comprising a base-plate, an upwardly-projecting portion which is apertured for the reception of a pivot-bolt, and outwardly-extending portions *b'*, through which passes a reciprocating bar having a slotted end, a disk provided centrally with an aperture countersunk to receive the head of the pivot-bolt, a friction-disk located between the disk and upwardly-projecting portion of the frame, a vertical bar having a slot through which passes a set-screw for holding the same in engagement with the disk, and an actuating-arm upon the bolt which connects the disk to the frame, said arm being bent and provided with means for engagement with the needle bar of the sewing-machine, said arm carrying a pawl which engages with the face of the disk, whereby the vertical reciprocating motion of the needle-bar horizontally reciprocates the bar E, said attachment being in combination with a ruffler, the ruffler being carried by the presser-bar, the parts being combined and organized substantially as shown.

2. In a scalloping attachment for sewing-machines, the combination, with a ruffling-blade and means for operating it, of the frame made up of a single piece and provided with an upwardly-projecting portion *b*, apertured for the reception of a pivot-bolt, said frame also having outwardly-projecting portions *b'*, a disk F, having a recessed aperture with which the head of the bolt engages, and a friction-disk *m*, a slotted bar I, connected to the disk by a set-screw *i'*, the lower end of said bar being attached to a reciprocating bar E, having a slotted end, and an actuating-arm pivoted upon the bolt *d*, said arm being bent and adapted to engage with the needle-bar, the parts being organized substantially as shown, and for the purpose set forth.

3. In a ruffling attachment for sewing-machines, the combination of a base-plate having an upwardly-projecting portion with a rectangular aperture, a bolt adapted to engage with said aperture and retain upon the upwardly-projecting portion a rotary disk F, a bent arm mounted upon the pivot-bolt, said arm carrying a spring-pawl which is adapted to engage with the disk F, washers *m* and *c*, interposed between the upwardly-projecting portion of the frame and the disk F and actuating-arm, means for adjusting the tension of the parts, and a slotted bar I and set-screw for holding the same in engagement with the plane face of the disk F, said slotted bar being connected to the reciprocating bar E, said bar having at one end a slot *e'*, through which the fabric to be ruffled passes, the parts being organized substantially as shown, and for the purpose set forth.



488,497. SAW-TOOTH-SETTING MACHINE.

John R. Little, West Stewartstown, N. H., assignor of one-half to Henry R. Ballentine, same place. Filed Feb. 10, 1892. Serial No. 420,993. (No model.)

Claim.—1. In a saw-set, the combination, with the base-plate, of the anvil, the reciprocating plunger, the longitudinally-rocking table, the transversely-rocking support on which said table is mounted, and means for actuating said plunger, substantially as described.

2. In combination with the hinged table-support, the table pivotally mounted upon said support, and means for rocking said support and table upon their respective pivots for the purpose of canting the one longitudinally and the other sidewise, substantially as described.

3. In combination with the base-plate having the projecting head with extension or arm thereon, the anvil, the plunger, the table-support hinged to said head, the adjusting-screw seated in said arm, the table pivotally mounted on said support, and the adjusting-screw arranged at one side of the pivotal center of the table, whereby said table-support and table may be rocked upon their respective pivots, so as to cant the saw-blade both lengthwise and sidewise, substantially as described.

4. In combination with the anvil and plunger, the hinged table-support, the table mounted upon said support and pivoted thereto, means for rocking said support and table upon their respective pivots in planes crossing each other, and means for actuating the plunger, substantially as described.

5. In a saw-set, the combination of the reciprocating spring-pressed plunger, the anvil, the trip-lever pivoted at one end and having a pivoted gravity-pawl at its free end adapted to engage a lug on said plunger, so as to raise the latter on the upstroke of the lever and to yield to said lug on the downward stroke, means for raising said trip-lever, and the spring for restoring the lever to normal position, substantially as described.

6. In combination with the reciprocating spring-pressed plunger, the trip-lever, the actuating-cord, and the adjustable stop for limiting the downward throw of the lever, substantially as described.

7. In combination with the hinged table-support, the longitudinally-rocking table mounted on said support, the anvil, the interchangeably-weighted reciprocating plunger and the power-storing spring, and means for actuating said plunger, substantially as described.

8. A saw-tooth-setting machine comprising the hinged table-support, the longitudinally-rocking table mounted on said support, means for adjusting and retaining said parts in the desired position, the anvil, the reciprocating spring-pressed plunger, the trip-lever, and means for actuating said lever and plunger, substantially as described.

9. In combination with the hinged table-support, the table pivotally mounted upon said support, and the laterally swinging presser-foot adjustably secured to the base, substantially as described.

10. In combination with the saw rest or table, the hinged table-support on which said table is mounted, the vertically-adjustable anvil, the sliding gage having the bifurcated portion fitting astride said anvil and provided with the laterally-projecting wings or guide-plates, the reciprocating plunger, and means for actuating said plunger, substantially as described.

11. In a saw-set, the base-plate having the standard with laterally-extending apertured arms mounted thereon, the vertically-reciprocating plunger fitted to slide in said arms, the spring fitted on said plunger between said arms, the sliding arm fixed to said plunger, the guide-rod engaging an aperture in said arm, the trip-lever pivoted at one end to said standard and provided at its free end with a pivoted pawl adapted to engage a lug or pin on said plunger, so as to move the latter on the upward movement of the lever and to yield thereto on the reverse movement, and means for actuating said trip-lever, substantially as described.

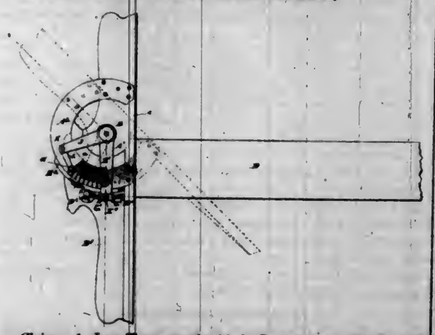
12. A saw-set comprising the base-plate having the standard thereon provided with laterally-extending apertured arms in which is fitted a reciprocating plunger, the anvil secured to said base-plate in line with said plunger, the saw rest or table, the pivoted trip-lever carrying a gravity-pawl at its free end, adapted to engage and raise the plunger on the upstroke of the lever and to yield on the downward stroke, the fixed pulley or friction-roll, and the pulley-cord fitted over said pulley with one end attached to the free end of said trip-lever and provided with a treadle at the other end thereof, substantially as described.

13. In a saw-set, the base-plate provided with the anvil-socket, the integral standard having laterally-extending apertured arms adapted to receive the reciprocating plunger, and the depending clamping-arm having the screw-threaded aperture therein, in combination with the anvil, the plunger, the plunger-actuating mechanism, and the adjusting-screw engaging the aperture in said clamping-arm for securing and adjusting the machine upon a bench or other suitable support, substantially as described.

14. In a saw-set, the base-plate having the standard thereon provided with laterally-extending arms, the reciprocating plunger fitted in apertures of said arms, and means for actuating said plunger, in combination with the table-support pivoted to said base-plate and the table pivoted to said table support, the pivots of said table and table-support being arranged at right angles to each other, and means for adjusting and securing said parts in the desired position, substantially as described.

15. In a saw-set, the combination, with the base-plate, of the table-support pivoted thereto, the adjusting-screw on which said support rests, the table mounted on said support and secured thereto by pivots arranged at right angles to the pivots of the table support, and the adjusting-screw engaging a screw-threaded opening in said support and having a swiveled connection with said table, so as to adjust and retain said parts in fixed positions relatively to each other, substantially as described

488,498. SURFACE-PRINTING PLATE.



John Mullaly and Lothrop L. Bullock, New York, N. Y. Filed Feb. 20, 1892. Serial No. 422,306. (No model.)

Claim.—The herein-described plate for use in surface-printing, consisting of not less than ninety per cent. of aluminium alloyed with denser metal and having any suitable design imposed upon its surface, substantially as described.

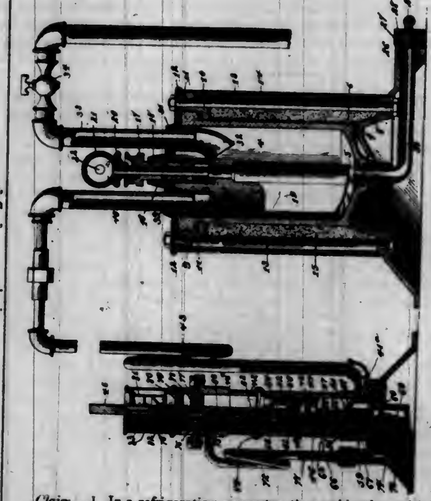
488,499. ADJUSTABLE T-SQUARE.

Reuben McChesney, Philadelphia, Pa., assignor to himself and Sylvester McChesney, Troy, N. Y. Filed July 28, 1891. Serial No. 400,964. (No model.)

Claim.—1. In a T-square, the blade D, provided with dovetail cheeks D^3, in combination with an L-piece D', having corresponding dovetail grooves and with the swiveling T-piece A and the attached bar A^4, allowing the device to be used for right and left bevels by inverting, all substantially as herein specified.

2. In an adjustable T-square, the blade D, having the arm or L-piece D', in combination with a swiveling T-piece A, turning on a center B and having an additional circular bearing A' and an annular protractor A^2, arranged to serve as herein specified.

3. In an adjustable T-square, the blade D, having the arm or L-piece D', in combination with a swiveling T-piece A, turning on a center B and having an additional circular bearing A' and an annular protractor A^2, and back plate E, with a series of holes *c* in one part and a number of series of holes *a* in the other part, adapted to be secured in predetermined positions by the pin M, as herein specified.



4. In an adjustable T-square, the blade D, having the arm or L-piece D', in combination with a swiveling T-piece A, turning on a center B and having an additional circular bearing A' and an annular protractor A^2, and back plate E, with a series of holes *c* in one part and a number of series of holes *a* in the other part, adapted to be secured in predetermined positions by the pin M, and the front arm E', adapted to form an additional bearing for the pin M, and a stop in rapidly setting the device, as herein specified.

5. In an adjustable T-square, the blade D, having the arm or L-piece D', in combination with a swiveling T-piece A, turning on a center B and having an additional circular bearing A' and an annular protractor A^2, the protractor having a number of series of equal holes *a*, and the plate E, having one series of corresponding holes *c*, and an arm J, joint K, link L, and pin M, arranged for joint operation as herein specified.

6. In an adjustable T-square, the blade D, having the arm or L-piece D', in combination with a swiveling T-piece A, turning on a center B and having an additional circular bearing A', and an annular protractor A^2, and back plate E, with a series of holes *c* in one part and a number of series of holes *a* in the other part, adapted to be secured in predetermined positions by the pin M, the front arm E', adapted to form an additional bearing for the pin M, and provisions, as the threaded rod D^4 and nuts G' G^3, for adjusting the plate E and bearing E' relatively to the blade D, as herein specified.

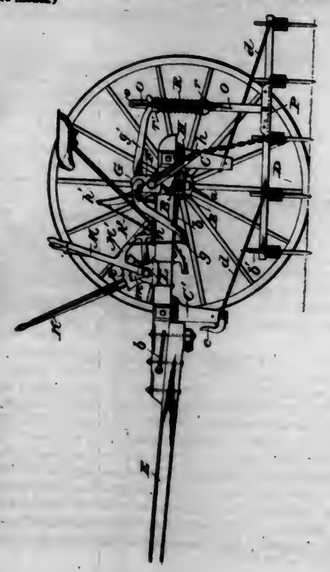
488,500. REFRIGERATING APPARATUS.

Charles E. Peirce, Altamonte Springs, Fla. Filed Dec. 15, 1891. Serial No. 415,172. (No model.)

Claim.—1. In a refrigerating apparatus, the combination, with a receiver, of an air-pump having a supplemental vacuum-cylinder, a valve block or disk located above said cylinder, a valve working upon said block and provided with a plunger working within said supplemental cylinder, a valved piston connected with said valve, and a pipe connecting the pump with the receiver, substantially as set forth.

2. In an apparatus of the class described, an air-pump having a supplemental vacuum-cylinder, a valve block or disk located above said cylinder, a valve working upon said block and provided with a plunger within said supplemental cylinder, a valved piston working above said block, a split piston-rod connected with said piston, and a valve-rod connected with said valve and clamped within said split piston-rod, substantially as set forth.

3. In an apparatus of the class described, an air-pump having a supplemental vacuum-cylinder connected with the bottom thereof and communicating with the top of the same by suitable piping, a hollow conical valve block or disk located above said supplemental cylinder within the pump cylinder, a vacuum-valve working over and fitting upon said block and provided with a depending stem, a plunger-block or piston loosely connected with said stem and working within said supplemental cylinder, and a valved piston connected with said vacuum-valve, substantially as set forth.



4. In an apparatus of the class described, an air-pump having a supplemental vacuum-cylinder, a hollow valve-block located directly above said supplemental cylinder within the pump-cylinder and provided with an upper valve-seat and lower annular stop within the same, a vacuum-valve fitting said valve-seat and provided with a depending stem, a plunger-block loosely connected with said stem and working within said supplemental cylinder, a valved piston working above said valve-block, a split spring piston-rod, and a valve-rod loosely connected with said vacuum-valve and clamped within said split piston-rod, substantially as set forth.

5. In an apparatus of the class described, an air-pump having a lower supplemental vacuum-cylinder connected with the bottom of the pump-cylinder, a hollow valve-block located above said supplemental cylinder and provided with an upper valve-seat and lower annular stop, a vacuum-valve fitting said valve-seat and provided with a depending stem, a plunger-block loosely connected with said stem within said supplemental cylinder, a split spring piston-rod, a valved piston carried upon the lower end of said rod above said valve-block, a valve rod loosely connected with said vacuum valve and clamped within said split piston-rod, and an upper combined oil-reservoir and an air-exhauster, substantially as set forth.

6. In an apparatus of the class described, the herein-described plunger or piston, having a lower valved disk fitting the pump-cylinder, a valved sleeve or tube seated within said disk and receiving the lower end of the piston-rod, a cage secured to the piston-rod and to the outside of said sleeve or tube, and packing extending the full height of the plunger or piston and clamped between the lower end of the cage upon the outside of said tube and the top of the disk, substantially as set forth.

7. In an apparatus of the class described, the combination, with the air-pump, of the combined oil-reservoir and air exhaust cylinder located above said pump and provided with a lower valved plate through which works the piston-rod of the pump, a valved pan or disk located above said valved plate, and an upper inclosed chamber projecting within said cylinder above said pan and provided with a bottom valve, and a series of horizontal and inclined stop-plates, substantially as set forth.

488,501. HARROW. WILLIAM RICHARDS, WILLIE GARWOOD, and HARRY H. ROSEBROOK, Big Springs, Ohio; said Richards assignor to said Garwood and said Rosebrook. Filed Mar. 3, 1892. Serial No. 423,612. (No model.)

Claim.—1. In a sulky-harrow, a frame provided with rock-levers G and H, journaled to the frame one above the other and connected to means for moving the same in unison or independently, the rearwardly-projecting portions of the rock-levers engaging with a depression-bar and with flexible connections for elevating the harrow-section, substantially as shown.

2. In a sulky-harrow, a beam or frame provided with rock-levers G and H, journaled to the beam or frame one above the other, said levers having forwardly and rearwardly projecting members, the rear members being connected to the harrow-section, levers K and M, attached to the same rock-shaft, the lever K, having a toothed segment *k*, over which a chain passes for engagement with the forwardly-projecting end of the lever H, and a bar connecting the lever M to the lever G, substantially as shown, and for the purpose set forth.

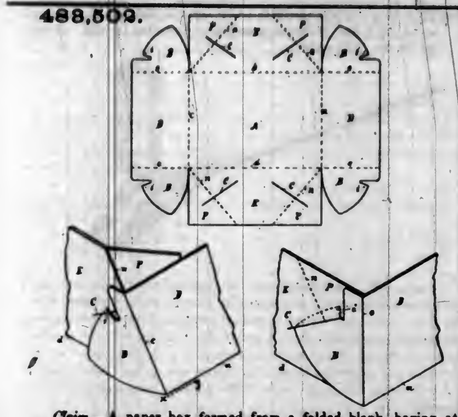
3. In a sulky-harrow, the combination, with a harrow-section and main beam or frame, of levers G and H, having portions which extend on each side of their journals, the rear portion of one of said levers engaging with a depression-bar, flexible connections attached to the harrow-section and to the rearwardly-projecting member of the lever H, a shaft *l*, journaled to the frame and provided with a toothed segment, a lever M, pivoted to the shaft *l* and provided with a pawl for engagement with the segment of said shaft, and a lever K, keyed to the shaft *l* and provided with a pawl for engagement with a fixed segment, the levers K and M being connected to the forward members of the levers G and H, substantially as shown, and for the purpose set forth.

4. The combination, in a harrow constructed substantially as shown, of a two-part bearing-box F, having bearings *f f'*, one above the other, and levers G and H, journaled therein, said levers having front and rear extending members which project above and below the bearings, the rear ends being connected to the harrow and the front ends to adjusting-levers K and M, for the purpose set forth.

5. A lever-support for the purpose set forth, consisting of a casting L, having bearings, and a segmental projecting portion *k'*, adapted to sustain a shaft *l*, having toothed segment *m* and levers K and M, one of said levers being loosely mounted on the shaft *l* and the other held in rigid engagement therewith, said levers carrying pawls, substantially as shown.

6. The combination, in a sulky-harrow, of a beam or frame B, carrying a two-part fixture F, having bearings *f* and *f'*, rock-levers G and H, journaled in said bearings, the rear members of said levers being connected to the harrow-frame, a lever K, rigidly attached to a shaft *l*, carried by the beam and provided with a pawl for engaging with a rack, and a lever M, loosely mounted on the shaft *l* and provided with a pawl which engages with the toothed segment formed on or attached to said shaft, said lever being connected to the rock-lever G, substantially as shown, whereby when the lever K is swung upon its pivot it will move in unison therewith, substantially as shown, and for the purpose set forth.

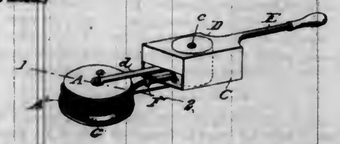
7. In a sulky-harrow provided with means for elevating the harrow-section and holding the same depressed, a lever, as K, rigidly attached to a shaft *l*, said shaft being mounted in bearings, the fixture having the bearings being provided with a toothed segment *k'*, the shaft having a rounded end and toothed segment *m*, and a lever M, mounted on the rounded end of the shaft and provided with a pawl for engagement with the toothed segment, substantially as shown, and for the purpose set forth.



8. The combination, in a sulky-harrow, of a two-part bearing F, having apertures one above the other, rock-levers G and H, having portions located in said apertures and members which extend forward and rear of the bearing, flexible connections attached to the rear ends of the lever H, and a spring encircled bar O, to which the rear end of the lever G is attached, the forward ends of the rock-levers being connected with means for manipulating the same in unison or independently, substantially as shown, and for the purpose set forth.

9. The combination, in a sulky-harrow having levers for elevating or depressing the harrow-section, substantially as shown, of a bar O, having a block *r* and a sliding block *r'*, between which is interposed a helical spring, said bar having a slotted upper end to receive a bolt which connects the same to the lever G, substantially as shown, and for the purpose set forth.

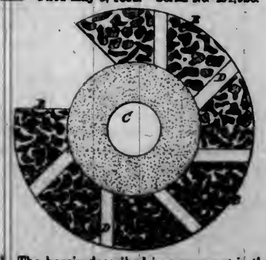
10. The combination, with a sulky-harrow constructed substantially as shown, of a tubular axle A, having a central bearing to which is clamped the beam B of the harrow-frame, the ends of said tubular axle being swaged to be rectangular in cross-section and provided with clips *a'*, rods *b b*, attached to said clips and connected at their forward ends to the beam B, and a truss-rod *a*, also connected to the clips and adapted to engage with a depending portion on the two-part bearing by which the beam is connected to the axle, substantially as shown, and for the purpose set forth.



488,502. PAPER BOX. THEODORE F. W. SCHMIDT, Dayton, Ohio, assignor of one-half to the Dayton Paper Novelty Company, same place. Filed Apr. 7, 1892. Serial No. 428,165. (No model.)

488,502.

Claim.—A paper box formed from a folded blank, having at each end of two opposite sides the notched tongues B, and the slits C, projecting across the folding lines *n* of the corners P, whereby each tongue B can readily engage with a slit C, substantially as specified.



488,503. MACHINE FOR PAINTING BARBED-WIRE FENCES. JOHN R. SMITH, Necsho, Mo. Filed Jan. 25, 1892. Serial No. 419,239. (No model.)

Claim.—1. The brush composed of two disks having bristles on the side projecting toward each other and obliquely outward from the periphery of said disks, in combination with a supporting-frame and paint-reservoir, substantially as and for the purpose set forth.

2. The combination of a grooved wheel brush having the brushes inclined obliquely from the periphery of said wheel and mounted to turn in a portable frame, a paint-reservoir, and a drip-pan located on a plane vertical to the axis of the brush, substantially as and for the purpose set forth.

488,504. MILLSTONE AND THE METHOD OF MAKING THE SAME. THOMAS L. STURTEVANT, Framingham, and WILLIAM H. ELLIS, Boston, Mass. Filed May 5, 1892. Serial No. 431,923. (No model.)

Claim.—1. The herein-described improvement in the art of making millstones, which consists in forming the skirt of the stone by binding together small irregular lumps or blocks of emery with molten metal melting at a comparatively-low temperature and then securing the skirt to a suitable eye.

2. The herein-described improvement in the art of making millstones, which consists in forming a number of segments for the skirt of small irregular lumps of emery and molten metal—such as zinc—melting at a comparatively-low temperature, arranging the segments around an eye, and securing them thereto, substantially as set forth.

3. The herein-described improvement in the art of making millstones, which consists in forming a number of segments by binding together small irregular lumps of emery with zinc, arranging the segments with furrow-strips around an eye, and securing them thereto.

4. The millstone herein described, comprising a skirt having a working surface composed of small irregular lumps or blocks of emery embedded in, firmly grasped, and held apart by molten metal which melts at a comparatively-low temperature, as set forth.

5. The herein-described millstone, comprising a skirt having a working face composed of small irregular lumps of emery embedded in a molten metal which melts at a comparatively-low temperature, as described, an eye of a different material, and furrow-strips interposed between the skirt-segments.

6. A millstone having a skirt with its working face composed of small irregular lumps or blocks of emery having the spaces or interstices between them filled with a comparatively-soft metal melting at a comparatively-low temperature, substantially as described.

7. A millstone comprising a skirt with its working face composed of small irregular lumps of emery having the interstices between them filled with a malleable metal which can be consolidated when cold about the blocks or lumps and melting at a comparatively-low temperature.

8. The herein-described improvement in the art of repairing millstones, comprising small irregular lumps of emery embedded in a metal melting at a comparatively-low temperature, which consists in inserting a new block of emery into the cavity from which a block has been removed, melting the metal about the block, and adding new metal to firmly secure the new lump to the stone, substantially as described.

488,505. VEHICLE-SPRING. WILLIAM ATKINSON, Granby, Canada, assignor of one-half to Cyrus R. Tower, same place. Filed Dec. 16, 1891. Serial No. 415,308. (No model.)

Claim.—1. In a vehicle-spring, the knuckle-pieces D, rigidly secured to the slide-plates of the spring and having the lugs E, the said knuckle-piece prolonged into a loop to inclose the end of the spring and to act with its stop T, the bolt G, passing through the said lugs and pivoting them to the blocks F, and the clips K, binder L, and nuts M, substantially as herein shown and described.

2. The combination, in the vehicle-spring, of the cylindrical terminals of the tension-plate O, suitably secured to the spring and the bottom plate Q, said terminals being bushed, substantially as shown and described, and acting through the shackle-arms with the bushings of the cylindrical terminals of the rub-plates B, with the stop or protuberance T of the lowest leaf of the spring, and the loop-terminal of the knuckle-piece D, forming a chair-rest with the said spring-leaf and the rub-plate by passing across the top and down the sides of the said spring-leaf and rub-plate, as set forth.

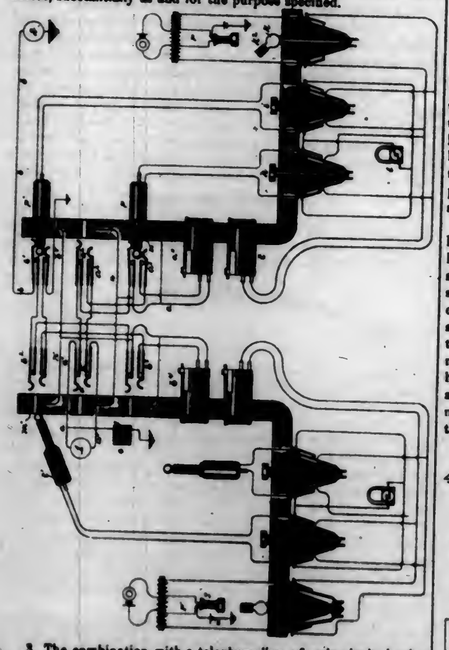
3. In a vehicle-spring, the combination, with the knuckle-piece D, suitably secured to the relatively-adjacent parts of the vehicles, having its looped terminal N to clasp the rub-plate B and the lowest leaf of the spring bearing the protuberance T and to produce with said protuberance of the spring an effectual stop, substantially as and for the purpose set forth.

4. The combination, in a vehicle-spring, of the stop T of the spring-leaf with the looped terminal N of the knuckle-piece, as set forth.

5. In a vehicle-spring, the combination of the loop N of the knuckle-piece D with the stop T of the lowest spring-leaf and the plate Q, as set forth.

6. In a vehicle-spring, the combination, with the stop T of the spring-leaf resting upon the rub-plate B and into the loop N of the knuckle-piece D, of the plate O, acted upon by said stop T and loop N through the shackle R and preventing the body of the vehicle from shifting forward, substantially as set forth.

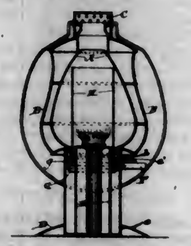
7. In a vehicle-spring, the combination of the loop N of the knuckle-piece with the stop T, the shackle N, the top plate O, and the bottom plate Q, arranged to act functionally together, as set forth.



8. In a carriage-spring, the combination of the bushing, substantially as hereinbefore shown and described, with the cylindrical terminals of the top tension-plate O, the bottom tension-plate Q, and the arms of the shackle N, and the bolt G, whereby a more delicate and exact functional action of the spring is produced, as set forth.

488,506. TEST SYSTEM FOR MULTIPLE SWITCHBOARDS. ONO A. BELL, New York, N. Y., assignor to the Western Electric Company, of Chicago, Ill. Filed Sept. 30, 1891. Serial No. 407,262. (No model.)

Claim.—1. The combination, with spring-jacks, each having two line-springs, two contact-anvils, one for each line-spring, and a test-ring insulated from the line-spring, of two telephone-lines *a a'*, each of which includes one of the line-springs and its contact-anvil upon each of the jacks, a conductor joining all of said test-rings, a branch from said conductor to one of the lines after it has included all its respective line springs and contacts, and an earth connection to that line



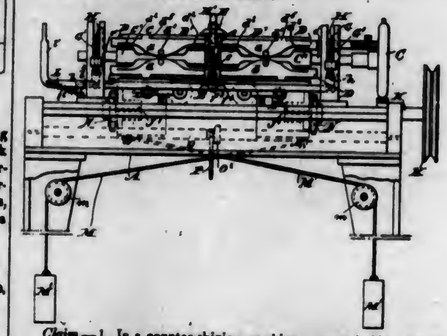
to which the said branch extends, substantially in the manner and for the purpose specified.

2. The combination, with spring-jacks, each having two line-springs, two contact-anvils, one for each line spring, and a test-ring insulated from the line-spring, of two telephone-lines a a^2, extending from a telephone-station, each including one line-spring and its contact-anvil of each spring-jack, a conductor joining all the test-rings, an earth connection to one of the lines between the telephone-station and the first spring-jack, a branch connecting said conductor with the grounded line at the last jack, and a branch connection from one of said test-rings to earth, including a source of electricity and a responsive device, substantially as and for the purpose specified.

3. The combination, with a telephone-line, of spring-jacks having two line-springs and two back contacts, one line-spring and its back contact of each spring-jack being included in each side of the line-circuit, and test-pieces upon each spring-jack, connected to the line-circuit between the different back contacts of the last jack of the series, whereby said test-pieces are disconnected from the line-circuit when a plug is inserted into any jack, substantially as specified.

488,507. SIGNAL-LANTERN. GUSTAVUS A. BRENDOFF, Chicago, Ill. Filed Dec. 20, 1889. Serial No. 334,461. (No model.)

Claim.—In a signal-lantern, the combination of the globe A with the frame, the base D, having the oil-receptacle E, the slot d, having the enlargements d' e, the interior globe H, having the screw-threads g, the spring-holder G, having screw-threads h, and the spring F, having the thumb-pieces F, all constructed, arranged, and operating substantially as and for the purpose set forth.



488,508. ANIMAL-POKE. ARCH BOLDING, Sumner, Ill., assignor of one-half to Geo. F. French, same place. Filed Feb. 15, 1892. Serial No. 421,651. (No model.)

Claim.—1. In an animal-poke, the combination, with the stale and the pins carried thereby, of the parallel bars pivotally connected with the stale upon opposite sides thereof, the metallic piece connecting the lower ends of said bars, the yoke pivotally connected with the parallel bars, and the coiled spring arranged parallel with the upper face of the stale and connected at one end thereto and at the other end to a pin connecting the upper ends of the parallel bars, substantially as specified.

2. The animal-poke described, consisting of the stale having enlarged end with angular portion and depression below the said angular portion and below its pivot, the pins rigidly held in the end of the stale at the lower portion of the said depression, the pin held in the stale, the parallel bars pivoted upon the said pin upon opposite sides of the stale, the metallic piece connecting the lower ends of the parallel bars, the pin held in the said bars above their pivot and adapted to engage the upper face of the stale and form a stop to limit the movement of the bars, the yoke pivoted on the last-mentioned pin, the pin held in the bars above the last-mentioned pin, and the coiled spring arranged parallel with the upper face of the stale and at one end connected thereto and at the other end connected with the upper pin in the parallel bars, all substantially as shown and described.

488,509. COUNTER-SKIVING MACHINE. MICHAEL C. BOWMAN, ALBERT F. ROSS, and CYRUS R. MORSE, New York, N. Y. Filed Oct. 17, 1891. Serial No. 409,065. (No model.)

Claim.—1. In a counter-skiving machine, a work-holder having seats for the counters at different points around the same, in combination with movable cutters toward and from which the work-holder is movable and means for holding the latter against rotary movement when presented to the cutters, substantially as described.

2. The combination, with the cutting-knives, of a rotary work-holder arranged above such knives and provided with seats for the work at different points thereabout and clamps for securing the work to such seats, said work-holder being vertically movable toward and from the knives, the lowermost work-holding seat being presented to the knives when the work-holder is in the lowered position and the upper seat exposed for permitting access thereto, and means for maintaining the work-holder against rotary movement when in such lowered position, substantially as described.

3. In a skiving-machine, the combination, with the knives, of a swinging frame and a work-holder carried thereby and journaled therein for rotary movement, the frame being mounted to permit a free intermittent rocking movement for alternately carrying the work-holder toward the knives and withdrawing it therefrom, and means for holding the work-holder against rotary movement when the frame is moved toward the knives, substantially as described.

4. In a skiving-machine, the combination, with the knives, of a work-holder movable toward and from said knives and having a seat

for the counters and a clamp for the same, springs normally tending to throw said work-holder away from the knives, and means for locking said work-holder against the action of the springs, substantially as described.

5. In a skiving-machine, the combination, with the movable knives, of a work-holder having seats for the counters, said seats having depressions, pressure devices for pressing the counters into said depressions, the knives serving to skive the projecting edges of the counters, and means for moving the knives and pressure devices, substantially as described.

6. In a skiving-machine, a work-holder having seats for the counters, said seats being pivotally and adjustably held to said holder, substantially as described.

7. In a skiving-machine, the combination, with a work-holder, of a clamp-plate thereon for clamping the counters and movable supports for such plate, a rock-shaft and a lever thereon, and connections, substantially as described, between the shaft and the clamp-supports for throwing said supports and the clamp-plate thereon by the rocking of the shaft, substantially as described.

8. In a skiving-machine, the combination, with work-holding devices, of rotary knives, slides in which said knives are mounted, and a feed-screw for causing both slides to traverse the work-holder, substantially as described.

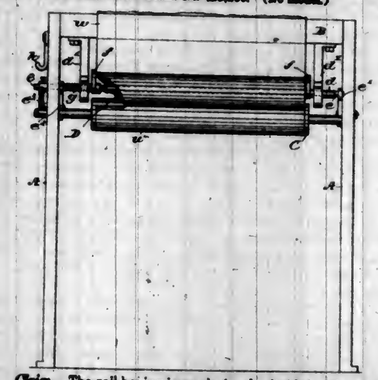
9. In a skiving-machine, the combination of a work-holder mounted to rotate, rotary knives, and slides in which said knives are mounted, the slides being movable across the face of the said holder for presenting the knives to the counters held thereon, substantially as described.

10. In a skiving-machine, the combination of rotary cutters, slides in which said cutters are mounted, a frame pivoted to be swung toward and from such cutters, and a work-holder journaled in said frame, the slides being movable across the face of the said holder for presenting the knives to the counters held thereon, substantially as described.

11. In a skiving-machine, the combination, with work-holding devices, of knives reversely actuated, slides in which said knives are mounted, and means, substantially as described, for actuating said slides in opposite directions, substantially as described.

12. In a skiving-machine, knives or cutters reversely actuated, slides in which said knives are mounted, and means, substantially as described, for actuating said slides in opposite directions and for returning them, as set forth.

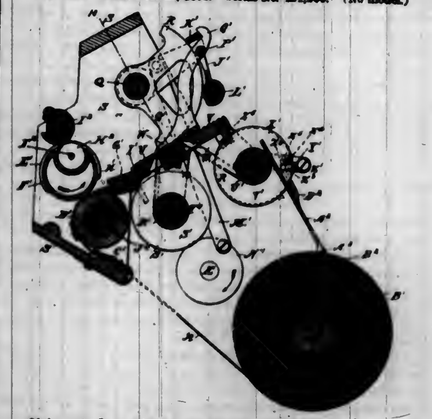
13. In a skiving-machine, the combination of a work-holder and knives or cutters, the said work-holder having a movement toward and from the knives, and means for giving the latter a sliding movement relatively to the work-holder, locking devices for the said work-holder, and means, substantially as described, for releasing such locking devices by the slides, as set forth.



14. In a skiving-machine, the combination of a work-holder and knives, the former being carried by a frame which is movable toward and from the knives, slides in which said knives are mounted, split nuts on said slides, a feed-screw with which said split nuts engage, and connections between said split nuts and movable frame, substantially as described.

15. In a skiving-machine, the combination of knives or cutters, slides in which said knives are mounted, a work-holder mounted in a frame which is capable of movement toward and from said knives, split nuts carried by said slides, a feed-screw engaged by said split nuts, weights connected with the slides and tending to move the same contrary to the direction in which they are actuated by the feed-screw, and connections between the split nuts and the frame carrying the work-holder, substantially as described.

16. In a skiving-machine, the combination of knives or cutters, slides in which said knives are mounted, a work-holder mounted in a frame which is capable of movement toward and from the said knives, hooks for locking said frame, a releasing-bar for said hooks adapted to be shifted by the slides, split nuts on said slides, a feed-screw engaged by said split nuts, weights connecting with the slides and tending to move the same contrary to the direction in which they are moved by the feed-screw, and connections between the split nuts and the frame carrying the work-holder, substantially as described.



17. In a skiving-machine, the combination of knives or cutters, slides in which said knives are mounted, a work-holder mounted in a frame which is capable of movement toward and from the knives, hooks for locking said frame, a releasing-bar for said hooks adapted to be shifted by the slides, split nuts on said slides, a feed-screw engaged by said split nuts, weights connected with the slides and tending to move the same contrary to the direction in which they are moved by the feed-screw, a rock-shaft connected with the swinging frame, and connections between the said rock-shaft and split nuts, substantially as described.

488,510. CLOTH-WINDING MECHANISM. JOSEPH CORR, Fall River, assignor of one-half to George Draper & Sons, Hopedale, Mass. Filed Feb. 29, 1892. Serial No. 423,209. (No model.)

Claim.—The roll having journals d and suitable bearings therefor, combined with a rock-shaft having attached guide-plates notched to embrace the journals of the roll, and a spring normally to keep the said plates in position to act as guides, and a projection c^2 from the rock-shaft, and a hook or device to engage the said projection and keep the plates elevated from the journals, substantially as described.

488,511. CASH REGISTER AND INDICATOR. HUGO COOK, Dayton, Ohio. Filed Feb. 12, 1892. Serial No. 421,289. (No model.)

Claim.—1. In a printing attachment for cash-registers, the combination of a type-carrier and an impression-platen adapted to have both a check and a record-strip passed between them, means for moving the record-strip between the type-carrier and platen, and two cams co-operating with the platen to produce two distinct impressing movements thereof at each operation of the machine, one for the check and the other for the record-strip.

2. In a printing attachment for cash-registers, the combination of a type-carrier and an impression-platen adapted to have a check and a record-strip passed between them, means for moving the record-strip between the type-carrier and platen, and two revolable cams co-operating with the platen, one near the beginning of its revolution to produce an impression upon the record-strip and the other near the end of its revolution to produce an impression upon the check.

3. In a printing attachment for cash-registers, the combination of a type-carrier and an impression-platen adapted to have a check and a record-strip passed between them, means for moving the record-strip between the type-carrier and platen, a revolable disk having a cam-groove therein, provided with two impressing points or cams Y^3 Y^4 with a depression Y^5 between them, and a stud upon the platen-support, fitting in said cam-groove, whereby at each revolution of the disk the platen is given two distinct impressing movements, one by one cam for the record-strip and one by the other cam for the check.

4. In a cash register and indicator, the combination of a driving

mechanism having a defined movement at each operation of the machine, a gear-toothed sector mounted to oscillate back and forth, means for connecting the driving mechanism with and disconnecting it from the sector to impart to the latter different portions of the movement of the driving mechanism, a type-carrier geared to the sector, an impression-platen arranged to permit a check and a record-strip to be passed between it and the type-carrier, means for moving the record-strip between the type-carrier and platen, and two cams actuated by the driving mechanism of the machine and co-operating with the platen to produce two distinct impressing movements thereof at each complete movement of the driving mechanism.

5. In a printing attachment for cash-registers, the combination of a revoluble cylinder bearing a series of types and an impression-roller co-operating therewith and adapted to have a check-strip fed between them, a type-carrier and a platen adapted to have the same strip passed between them, means for moving the check-strip between the cylinder and impression-roller and type-carrier and platen, a knife interposed between the printing-cylinder and the type-carrier for severing the strip to form a detached check, and an operating-cam for the platen and knife.

6. In a printing attachment for cash-registers, a revoluble cylinder having a series of consecutive numbering and dating type-wheels eccentrically journaled therein, the former being actuated by the revolutions of the cylinder, fixed type-matter upon the surface of said cylinder adjacent to the said wheels, an impression-roller co-operating with the printing-cylinder and arranged to have a check-strip fed between them, a type-carrier and an impression-platen adapted to have said check strip passed between them, means for advancing the check-strip, a knife interposed between the printing-cylinder and the type-carrier for cutting the check-strip into detached checks, and an actuating-cam for the knife and impression-platen.

7. In a cash register and indicator, the combination of the type-carrier and the impression-platen adapted to have both a check strip and a record-strip fed between them, feeding mechanism for the record-strip, actuated at each operation of the machine, separate feeding mechanism for the check-strip, and means for throwing it out of and into operation at will, whereby the feeding of the check-strip may be discontinued when desired and the types caused to print upon the record-strip alone.

8. In a cash register and indicator, the combination of the type-carriers and the impression-platen adapted to have both a check-strip and a record-strip fed between them, two cams co-operating with the platen to produce two distinct impressing movements thereof, one for the record-strip and the other for the check-strip, feeding mechanism for the record-strip, actuated at each operation of the machine, and separate feeding mechanism for the check-strip and means for throwing it out of and into operation at will, whereby the feeding of the check-strip may be discontinued when desired and the types caused to print upon the record-strip alone.

9. In a printing attachment for cash-registers, the combination, with the type-carriers and the impression-platen, of two feed-rollers for feeding the check-strip between the carriers and platen, one of said rollers being movable out of and into co-operative relation with the other roller, whereby the feeding of the check-strip may be discontinued and resumed at will.

10. In a printing attachment for cash-registers, the combination, with the type-carriers and the impression-platen, of two feed-rollers for feeding the check-strip between the carriers and platen and an eccentrically-journaled shaft upon which one of said rollers is journaled, whereby upon turning said shaft said roller may be moved away from the other and the feeding of the check-strip discontinued.

11. In a printing attachment for cash-registers, the combination, with the type-carriers and the impression-platen, of two feeding-rollers for feeding the check-strip between the carriers and platen, an eccentrically-journaled shaft upon which one of said rollers is journaled, a thumb-piece splined on the outer end of said shaft and provided with two notches, a stop upon the frame, co-operating with said notches, and a spring applied to the thumb-piece to yieldingly hold the notches in engagement with the stop, whereby upon sliding the thumb-piece upon the shaft until its engaged notch is disengaged from the stop and then turning it until the other notch engages the stop the feed-roller carried by said shaft will be moved out of co-operative relation to the other roller, and vice versa.

12. In a printing attachment for cash-registers, the combination of the type-carriers, a reciprocating platen co-operating therewith, a supply-reel and a storage-reel for the record-strip, both carried by the platen-support and moving with the platen, and means actuated by the reciprocations of the platen to turn the storage-reel and wind up the record-strip.

13. In a printing attachment for cash-registers, the combination of the type-carriers, a reciprocating platen co-operating therewith, a supply-reel and a storage-reel for the record-strip, both carried by the platen-support, and means for turning the storage-reel, actuated by the reciprocations of the platen-support and controlled by the increasing size of the roll upon the reel to gradually decrease the extent of movement given the latter at each operation of the machine.

14. In a printing attachment for cash-registers, the combination of the type-carriers, a reciprocating platen co-operating therewith, a supply-reel and a storage-reel for the record-strip, both carried by the platen-support, an actuating-pawl for the storage-reel, operated by the reciprocations of the platen-support, and means controlled by the increasing size of the roll upon the storage-reel for gradually decreasing the throw of the pawl.

15. In a printing attachment for cash-registers, the combination, with the storage-reel, a swinging arm hung on the axis of the reel, a pawl carried by said arm and co-operating with the reel to turn the same, a movable stop for the pawl-arm, co-operating with the roll of paper on the storage-reel and gradually moved away from the axis of the reel as the size of the roll increases to cause the stop to engage the pawl-arm farther and farther from its pivotal support, and thereby decrease the throw of the pawl.

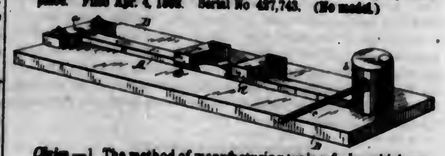
16. The combination of the type-carriers R, the platen W, co-operating therewith, the swinging frame K', and the arm Q', hung therein and co-operating with the platen W, substantially as described.

17. The combination of the type-carriers R, the sliding bar U, having the stud Z, the revoluble disk X, having the cam-groove Y, co-operating with the stud Z, the plate V, carried by the bar U, the platen W, and the record-strip reels S' and U', carried by the plate V, substantially as described.

18. The combination of the type-carriers R, the revoluble disk X, having the cam-groove Y, the sliding bar U, having the stud Z fitting in the cam-groove Y, the plate V, carried by the bar U, the platen W, and the knife I', carried by the plate V, and the fixed plate G', co-operating with the knife I', substantially as described.

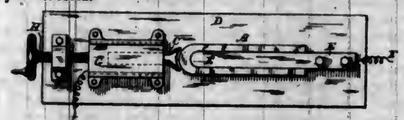
19. The combination of the type-carriers R, the revoluble disk X, having the cam-groove Y, the sliding bar U, having the stud Z fitting in the groove Y, the plate V, carried by the bar U, the platen W, and the knife I', carried by the plate V, the fixed plates G' and H', the supply-reel B' for the check-strip, and the roller D', and flanged cylinder F', between which and beneath the plate G' the check-strip is led from the reel B' to the plate V, substantially as described.

20. The combination of the roller D', the cylinder F', having the type-wheels G^3 H^3 eccentrically journaled therein, the type-carriers R, the revoluble disk X, having the cam-groove Y, the sliding bar U, having the stud Z fitting in the groove Y, the plate V, carried by the bar U, the platen W, and the knife I', carried by the plate V, and the fixed plate G', co-operating with the knife I', substantially as described.



21. The combination of the type-carriers R, the reciprocating plate V, carrying the platen W and the record-strip rollers S' and U', the arm Z', hung on the axial support of the roller U', the pawl Y', carried by the arm Z' and co-operating with the disk X' of the reel U', and the plate A^3, bearing against the roll of paper on the reel U' and having an arm D^3 engaging the pawl-arm Z', substantially as described.

488,512. SEALING-WAX MOLD. JOHN C. BOBERT, Dayton, Ohio, assignor to the firm of Dicks & Wiggins, same place. Filed Oct. 14, 1889. Serial No. 326,979. (No model.)



Claim.—The combination, in a hollow mold, with parts B and C, the closing-plates *s*, with counter weights *w* to hold said plates from the sides of the molds, and the wire cam, of parts 1 and 2, held on shaft 3 to hold said plates against the sides of said mold while the melted wax is hardening, substantially as set forth.

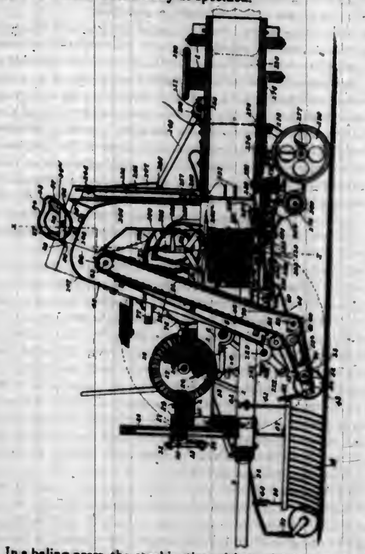
488,513. METHOD OF MAKING TUNING-FORKS. LEVI K. FULLER, Brattleborough, Vt., assignor to the Estey Organ Company, same place. Filed Apr. 4, 1888. Serial No. 427,743. (No model.)

Claim.—1. The method of manufacturing tuning-forks, which consists in upsetting a blank of steel of the proper dimensions for forming the prongs of a tuning-fork, whereby said blank is enlarged at its center, and then bending said blank to form the prongs with the enlarged central part of the blank at the bend connecting the prongs, upsetting one end of a handle-blank, thereby enlarging the same, uniting the enlarged end of the handle-blank to the bend of the fork-prongs by welding, and then removing the surplus metal at the welded joint, substantially as set forth.

2. The method of manufacturing tuning-forks, which consists in making the fork-prongs and handle separately, uniting them by welding, and prior to the welding operation enlarging the meeting portions of the handle and fork-prongs, convexing the meeting face of the fork-prongs in the arc of a circle, and concaving the meeting face of the handle in a corresponding arc, substantially as set forth.

3. The method of manufacturing tuning-forks, which consists in heating the central portion of a blank of steel of the proper dimensions forming the prongs of a tuning-fork, upsetting said blank, whereby said blank is enlarged at its center, bending said blank at the center to form the fork-prongs with the enlarged central part of the blank at the bend connecting the prongs, and convexing the outer face of the bend of the fork-prongs to the arc of a circle, heating and upsetting one end of a handle-blank, thereby enlarging the same, concaving the enlarged end of said handle-blank to the arc of a circle corresponding to the arc of the convexed bend of the fork-prongs, uniting the curved portions of the fork-prongs and handle-blank by welding, and removing the surplus metal at the welded joint, substantially as set forth.

483,514. HORSE-HITCHING DEVICE. JOHN H. QUINTON, Portland, Oreg. Filed June 4, 1891. Serial No. 395,276. (No model.)



Claim.—1. A rein-holding device consisting, substantially, of a rod *b*, horizontally supported on one side of the wagon or vehicle in suitable bearings, enabling said rod to be moved lengthwise, and said rod *b*, having an arm *k* pivoted on it, adapted to engage the spokes of one of the wheels, substantially as described, a lever *i*, pivotally secured on the side of the wagon and provided with a handle *j*, the lower end of which lever has a vertical slot and is loosely held on said rod *b* between collars *h h'*, a rod *f*, the lower end of which is pivotally fastened to a suitable crank fixed on said rod *b* and affording means for turning the latter, so as to project the said arm *k* between the spokes of the wheel coacting therewith, as described, the upper end of said lever *i* and rod *f* being pivotally connected with each other by a lever *g*, and the wagon being provided with a suitable rail *m* for holding such lever and rod in place, all in combination, as and for the purposes set forth.

2. The combination, with a wagon or vehicle one of the wheels of which is provided with a number of false spokes secured to the true spokes by suitable means, for the purposes specified, of a rein-holding device consisting, substantially, of a rod *b*, horizontally supported on one side of the wagon in suitable bearings, enabling said rod to be moved lengthwise, and said rod *b*, having an arm *k* pivoted on it, adapted to engage the spokes of one of the wheels, substantially as described, a lever *i*, pivotally secured on the side of the wagon and provided with a handle *j*, the lower end of which lever has a vertical slot and is loosely held on the said rod *b* between collars *h h'*, a rod *f*, the lower end of which is pivotally fastened to a suitable crank fixed on said rod *b* and affording means for turning the latter, so as to project the said arm *k* between the spokes of the wheel coacting therewith, as described, the upper ends of said lever *i* and rod *f* being pivotally connected with each other by a lever *g*, and the wagon being provided with a suitable rail *m* for holding such lever and rod in place, substantially as set forth.

483,515. COMBINED RAKE AND PORTABLE BALING-PRESS. CHRISTOPHER C. SEERO, Sherman, Tex., assignor of one-half to Isaac Shero, same place. Filed Oct. 24, 1890. Serial No. 369,230. (No model.)

Claim.—1. In a baling-press, the combination, with the driving mechanism, the baling-chamber, its plunger, and mechanism for operating the latter and normally out of connection with the driving mechanism, of a trip located in the chamber and adapted to be operated by the weight of deposited material in the chamber and adapted to throw the plunger-operating mechanism into engagement with the driving mechanism, substantially as specified.

2. In a baling-press, the combination, with the driving mechanism, the baling-chamber, its plunger, and mechanism for operating the latter, of a spring for throwing the driving mechanism into connection with the plunger-operating mechanism, devices for retracting the spring so as to withdraw the drive mechanism from the plunger-operating mechanism, and a trip located in the chamber, adapted to be operated by the deposit thereon and when so operated to operate the spring-retracting device, substantially as specified.

3. In a baling-press, the combination, with the framework, an arm pivoted to one side of the same and terminating at its outer end in a caster, and a rake loosely suspended from the arm, of the oppositely-cranked shaft journaled in the framework and having its lower crank terminating in the socket of the rake, a fly-wheel, a shaft therefor, means for operating the same, and a pitman connected to the upper end of the crank, and a crank connecting the opposite end of the pitman to the fly-wheel shaft, substantially as specified.

4. In a baling-press, the combination, with the framework, the driving mechanism, a shaft journaled in the framework, geared with the drive mechanism and conical at its outer end and provided with a threaded bore, a fly-wheel on said end and having a conically-bored hub slightly smaller than the conical end, the crank-arm, and the screw passed therethrough and into the bore of the shaft and having its head clamping the same against the end of the shaft, of a vertical rake-operating shaft journaled in the framework and having a cranked upper end, a rake connected to the lower end of said vertical shaft, and a pitman connecting the upper crank end with the crank-arm of the shaft, substantially as specified.

5. In a baling-press, the elevator, the pairs of arms pivoted to and depending from the inner faces of the lower ends thereof, the endless apron, the supports thereof, and operating means, combined with the pair of arms pivoted to the outer lower ends of the elevator, the stops depending therefrom and taking under the inner arms, the rollers at the lower ends of the outer arms, the bail connecting the outer arms, and the perforated lever connected to the bail, substantially as specified.

6. In a baling-press, the combination, with the opposite sides of the elevator, provided near their lower ends with an inclined slot, and a pair of arms hinged to the lower ends of the sides, of a shaft passed through the upper end of the elevator, a pair of shafts in the lower end of the same, one of which is mounted in the slot, springs for depressing the said shaft in the slot, and a shaft passed through the ends of the arms, a bail connecting the arms, a lever pivoted on the framework, a chain connecting the same with the lever, a pair of opposite endless chains passing over the sprockets, around the lower pulleys, and in rear of the intermediate pulleys, bars connecting the chains and provided with spurs or teeth, and an endless apron connected to the bars, substantially as specified.

7. In a baling-press, the combination, with a baling-chamber, of

a packing-chamber located above the same and provided with a reduced spring-wall at one side of its mouth or lower end and means for reciprocating the packer within the chamber and for discharging from the packing-chamber into the baling-chamber deposits at each reciprocation of the packer, substantially as specified.

8. In a baling-press, the combination, with a train of gearing, a plunger mechanism operated thereby, said train including a loose gear provided with a toothed hub, a clutch mounted on the shaft of the gear, a spring-yoke for normally withdrawing the clutch from engagement with said gear, and a rock-shaft having a rock-arm connected with the clutch and having its opposite end laterally bent, of a baling-chamber, a shaft located below the chamber, a rocking bail mounted on the shaft, a trip-plate mounted on the bail in the bottom of the chamber, a spring for elevating the trip-plate, and a loop on the rocking bail, engaging the laterally-bent end of the rock-shaft and adapted to draw the same downward at each depression of the bail, whereby the clutch is thrown against the tendency of the spring into engagement with the toothed hub of the before-mentioned gear, substantially as specified.

9. In a baling-press, the combination, with a baling-chamber, the rock-shaft located thereunder, and the bail mounted on the rock-shaft and having depending brackets, of the trip-plate mounted upon the bail, the catch located in front of the same, the bolt mounted for reciprocation in brackets upon the under side of the bail, a spring coiled upon the bolt and bearing at one end against a depending bracket, said bolt being adapted for engagement with the catch and being provided at the rear side with an enlarged head or end, a collar located on the bolt at the rear end of the spring, a packer mounted for reciprocation in the chamber, an arm pivoted to the packer and adapted to actuate the bolt against the spring, and a spring-track mounted on the ball, extending above the same, and terminating in advance of the head of the bolt, substantially as specified.

10. In a baling-press, the combination, with a baling-chamber provided upon its under side or bottom with openings, shutters spring-pressed and provided upon their upper sides with lugs having eyes and hinged to one side of and adapted to cover the openings, a pair of wire-drawing plungers mounted for movement through the openings, and means for lowering and raising said plungers, of a wire-spool-carrying support located below the chamber and guide-eyes located in the openings in the chamber, substantially as specified.

11. In a baling-press, the combination, with a baling-chamber the bottom of which is provided with openings, spring-pressed shutters provided with guide-eyes, hinged to the edges of and adapted to cover the openings, wire-carrying plungers mounted for reciprocation in the openings, and devices for operating the same, of a wire-support, a pivoted bail for drawing off the wire, and means for operating the same at each downstroke of the plungers, substantially as specified.

12. In a baling-press, the combination, with a baling-chamber, guides located at the sides of the chamber, blocks mounted for reciprocation in the guides, a packer connected with the blocks, and a lug mounted on one of said blocks, of means for reciprocating the blocks, a ratchet-wheel provided with a stop mounted for rotation at the side of the chamber, a double-ended spring located at the side of the wheel and adapted to be operated by the stop, a rock-shaft journaled upon the chamber, rock-arms connected to the shafts, a lever connected with one of the rock-arms and provided with a notch for engagement with the lug upon the guide-block, said lever extending into the path of and adapted to be actuated by the double-ended spring, a pair of guides located above the chamber, a bar mounted in the guides, rods connecting the same with the rock-arm, and wire-loop-forming plungers connected to the bar, substantially as specified.

13. In a baling-press, the combination, with the baling-chamber having the opposite guides, the packer mounted in the chamber, and opposite pitmen for operating the packer, of a shaft, an eccentrically-pivoted elliptical gear mounted thereon, a shaft located below the first-mentioned shaft, and an eccentrically-mounted elliptical gear in one end of the same, engaged and driven by the first-mentioned gear and at its free end connected to one of the pitmen, the opposite end of the shaft being bent to form a crank and connected to the opposite pitman, substantially as specified.

14. In a baling-press, the combination, with a conveyer and a packing-chamber, the two communicating at their upper ends and covered by a slotted plate, of a shaft and means for rotating the same located above the plate, opposite transverse bars mounted on the shaft, rods connecting the bars and pivoted to the ends of the latter and provided with teeth, said rods having their outer ends bent to form cranks, and cams located at the ends of the shaft and provided with grooves for the reception of the cranks, substantially as specified.

15. In a baling-press, the combination, with a baling-chamber the roof of which is provided with longitudinal slots, a packer mounted for reciprocation therein, wire-loop-forming plungers mounted for reciprocation in the front ends of the slots, and suitable mechanism for operating the packer and the plungers, of a plate located at the rear ends of the slots and provided with cam-shoulders and a pair of pivoted levers mounted opposite the slots and provided with beveled ends for binding on the shoulders, substantially as specified.

16. In a baling-press, the combination, with the baling-chamber, opposite guides, blocks mounted in the guides, a packer mounted in the chamber and connected with the guides, and mechanism for reciprocating the blocks, of a packing-chamber located above the packer, a shaft journaled in rear of the box and provided with teeth for feeding from the chamber to the baling-chamber, a sprocket loosely mounted on the shaft, gearing connecting the same with the ground-wheel, a clutch mounted upon the shaft and adapted to engage the hub of the sprocket, a bracket located at the side of the sprocket, a crank-shaped yoke engaging the clutch, a spring for throwing the clutch into engagement with the sprocket, and a track mounted upon one of the sliding blocks and adapted to come in contact with and operate the yoke against the tendency of the spring and so as to disengage the clutch from the sprocket at each forward movement of the block and packer, substantially as specified.

17. In a baling-press, the combination, with the baling-chamber, its reciprocating packer, means for operating the same, a feed mechanism, gearing for operating the same, and a clutch located between the feed mechanism and gearing, said clutch normally connecting the same, of devices actuated by the packer for throwing the clutch out of operative position at each forward movement of the plunger, substantially as specified.

18. In a baling-press, the combination, with the baling-chamber, its packer, and the superimposed feed-chamber and its feeders, of devices for operating the packer, devices for operating the feeders, and devices mounted on the packer for throwing the feeders out of operation at each forward movement of the packer, substantially as specified.

19. In a baling-press, the combination, with a baling-chamber, a packer, and mechanism for operating the packer when connected thereto, but normally out of such connection, of a trip located in the chamber, adapted to be depressed by the deposits of hay thereon, and connections between the packer operating mechanism and packer, whereby when said trip is depressed said mechanism and packer are thrown into connection, substantially as specified.

20. In a baling-press, the combination of a baling-chamber, means for compressing material therein, a feed-chute located above and communicating with said baling chamber, a packer operating to intermittently feed the material through said feed-chute into said baling-chamber, and a spring in said feed-chute for preventing the material being baled from entering the baling-chamber without the aid of the packer, substantially as specified.

488,516. PRESSURE-REGULATOR. VAN H. HIGGINS and WILLIAM D. SMITH, Chicago, Ill. Filed June 29, 1891. Serial No. 397,774. (No model.)

Claim.—1. In a mercurial gas-governor, the pressure distributing chamber provided with an inlet-port valved at its supply side and arranged to establish direct communication between the pressure-distributing chamber and the main-service supply, an open-delivery-passage leading from the pressure-distributing chamber and permitting the uninterrupted flow of gas from said chamber to the point of service, the two concentric mercury-holding compartments separated by a partition-wall and each containing a body of mercury, the open-bottom float constructed with concentric side walls which dip into the mercury within the two mercury-holding compartments and providing a pressure-chamber which is in open communication with the pressure-distributing-chamber by a passage formed through the partition-wall between the two mercury-holding compartments, and the valve arranged to open at the supply side of the inlet-port for the pressure-distributing chamber and having its stem extended upwardly within a passage through the partition-wall between the two mercury-holding compartments and connected with the float, substantially as described.

2. In a mercurial gas-governor, the governor shell or body provided with a centrally and horizontally arranged pressure-distributing chamber D, an inlet-port formed through the bottom wall of the pressure distributing chamber and arranged to establish direct communication between said chamber and the main-service supply, an open delivery-passage 12, leading directly upward from the central portion of the pressure-distributing chamber and arranged to permit the uninterrupted flow of gas from said chamber to a burner, and an annular mercury-holding chamber surrounding the delivery-passage, combined with an annular inverted cup-float E, positioned for operation around said delivery-passage and arranged to dip into the mercury in the annular mercury-holding chamber, and a valve arranged to open at the supply side of the pressure-distributing chamber and having its stem extended upwardly and connected with the float, the pressure-chamber provided by the space within the float being in open communication with the pressure-distributing chamber by a passage leading directly upward from the latter, substantially as described.

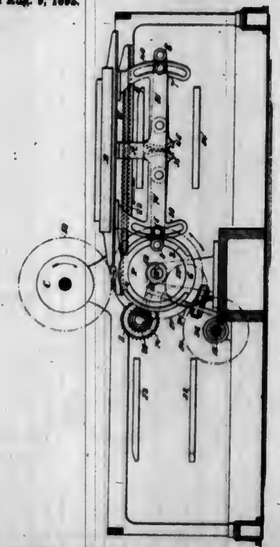
3. In a mercurial gas-governor, the governor shell or body A, provided with a centrally-arranged pressure-distributing chamber D, having an inlet-port, a receiving-chamber C, arranged below the pressure-distributing chamber and communicating therewith through the said port, a neck 13, arranged at the center of the bottom portion of the shell or body and providing a passage 14, which opens into the receiving-chamber C, and which, together with said chamber, constitutes a portion of the main-service-supply passage, an open passage 12, leading directly upward from the center of the pressure-distributing chamber and in alignment with passage 14, and an annular mercury-holding chamber arranged over the pressure-distributing chamber and divided by an annular partition-wall into two compartments, each containing a body of mercury, combined with an annular cup-float E, arranged to dip into the mercury in said mercury-holding compartments, and a valve B, arranged to open at the supply side of port 1 and having its stem extended upwardly through a passage in the annular partition-wall and connected with the float, the pressure-chamber which is provided by the space within the float being in open communication with the pressure-distributing chamber, substantially as described.

4. In a mercurial gas-governor, the governor shell or body provided with the pressure-distributing chamber D, having a supply-port 1, and the annular mercury holding chamber divided by an annular partition-wall 9 into two compartments, combined with the annular inverted cup-float E, having its concentric walls arranged to dip into mercury within the two compartments of the mercury-holding chamber, said float forming a pressure-chamber which is in open communication with the pressure-distributing chamber through a passage in the annular wall 9, a valve B, arranged at the supply side of port 1 and having its stem 2 extended up through both the pressure-distributing chamber D and a passage 10 in the annular partition-wall 9 and connected with the float between the two annular concentric walls of the same, and a steady-pin connected with the float and also working within a vertical passage through said annular wall 9, the governor shell or body being provided with an opening temporarily closed by means substantially as set forth, and extending up from its lower side, so as to permit access to be had to the steady-pin, substantially as described.

5. In a mercurial gas-governor, the governor shell or body provided with an inlet and outlet and a partition having a port which the governing-valve is adapted to close, and further provided with an annular mercury-holding chamber subdivided by an annular partition-wall 9 into two concentric compartments, each containing a body of mercury, combined with the annular inverted cup-float having its concentric walls arranged to dip into the mercury in the mercury-holding compartments and a governing-valve having its stem extended up through a passage in the annular partition-wall 9 and connected with the float, substantially as described.

6. In a mercurial gas-governor, the governor shell or body provided with an inlet and an outlet and a port which the governor-valve is adapted to close, and further provided with an annular mercury-holding chamber divided by an annular wall 9 into two mercury-holding compartments, in combination with a float E, provided with a downwardly-projecting bearing 29, and the governing-valve having its stem connected with the float, said bearing being arranged at a point over the annular wall 9, and said wall being provided with a passage having its upper end adapted to receive the said bearing, substantially as and for the purpose described.

488,517. MERCURIAL GAS-GOVERNOR. VAN H. HIGGINS and WILLIAM D. SMITH, Chicago, Ill. Original application filed June 29, 1891, Serial No. 397,774. Divided and this application filed Nov. 24, 1891. Serial No. 412,968. (No model.)



Claim.—1. A mercurial gas-governor comprising a shell or body provided with the receiving-chamber 1, the centrally-located pressure-distributing chamber 2, arranged over the said receiving chamber and separated therefrom by a partition having a port which the governor-valve is adapted to close, and one or more open outlets leading from the said centrally-arranged pressure-distributing chamber so as to supply therefrom a burner or burners, a centrally-arranged supply-passage extending downwardly through the pressure-distributing chamber and opening at its lower end into and serving to supply the receiving-chamber, and an annular mercury-holding chamber arranged around the supply-passage and over the pressure-distributing chamber, combined with the open-bottom float arranged to dip into the mercury within the mercury-holding chamber and providing a pressure-chamber which is in open communication with the pressure-distributing chamber, and the governor-valve arranged to open within the receiving-chamber and having its stem extended upwardly through the port between the receiving-chamber and pressure-distributing chamber and connected with the float, substantially as described.

2. A mercurial gas-governor comprising a shell or body provided with the receiving-chamber 1, the pressure-distributing chamber 2, arranged over the receiving-chamber and separated therefrom by a partition having a port which the governor-valve is adapted to close, the centrally-arranged supply-passage extending downwardly and centrally through the pressure-distributing chamber and opening into and serving to supply the receiving-chamber, an open delivery passage 15, leading downwardly from the pressure-distributing chamber into the neck 11^a, and an annular mercury-holding chamber surrounding the supply-passage and arranged over the pressure-distributing chamber, combined with the open-bottom float arranged to dip into the mercury within the mercury-holding chamber and providing a pressure-chamber which is in open communication with the pressure-distributing chamber, and the governor-valve arranged to open and close the port between the receiving-chamber and pressure-distributing chamber and having an upwardly-extending stem connected with the float, substantially as described.

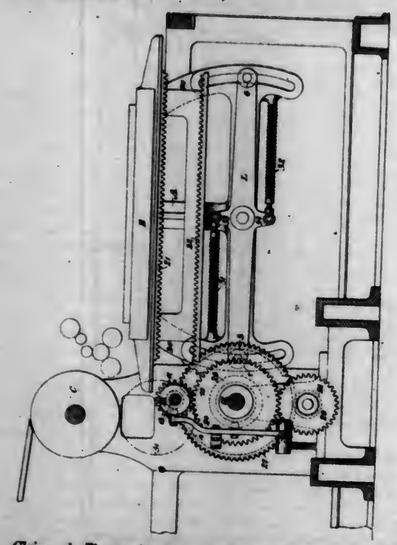
REISSUES.

11,272. BED-MOTION FOR CYLINDER PRINTING-MACHINES. LUTHER G. CROWELL, Brooklyn, assignor to Robert Hoe, Stephen D. Tucker, Theodore H. Mead, and Charles W. Carpenter, all of New York, N. Y. Filed Aug. 30, 1892. Serial No. 444,594. Original No. 480,454, dated Aug. 9, 1892.

Claim.—1. The combination, with the reciprocating bed, of two levers pivoted to the bed and geared together so as to swing concertedly, a revolving disk having a pocket, and a revolving guard cooperating with said pocket to alternately engage the outer ends of said levers and reverse the movement of the bed at each end of its run by retarding, stopping, starting, and accelerating the same, substantially as described.

2. The combination, with the reciprocating bed, of two levers pivoted to the bed and geared together so as to swing concertedly, a revolving disk having a pocket, a revolving guard co-operating with said pocket to alternately engage the outer ends of said levers, and a curved guide at each end of the bed, in which the outer ends of said levers travel, whereby the motion of the bed is reversed at each end of its run, substantially as described.

3. The combination, with the bed and a rack-and-pinion mechanism for driving it during the major part of its reciprocation, of two levers pivoted to the bed and geared together so as to swing concertedly, a revolving disk having a pocket, and a revolving guard co-operating with said pocket to alternately engage the outer ends of said levers and reverse the movement of the bed at each end of its run by retarding, stopping, starting, and accelerating the same, substantially as described.



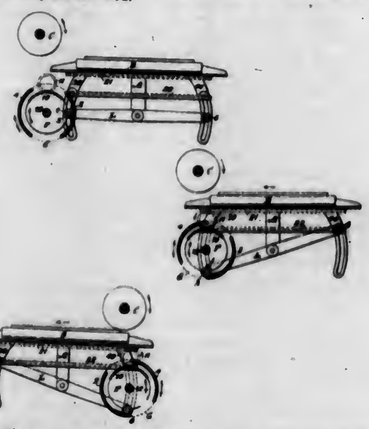
4. The combination, with the bed and a rack-and-pinion mechanism for driving it during the major part of its reciprocation, of two levers pivoted to the bed and geared together so as to swing concertedly, a revolving disk having a pocket, a revolving guard co-operating with said pocket to alternately engage the outer ends of said levers, and a curved guide at each end of the bed, in which the outer ends of said levers travel, whereby the motion of the bed is reversed at each end of its run, substantially as described.

5. The combination, with the moving bed, the two levers pivoted thereto and connected so as to conjointly swing in opposite directions, a revolving pocket, and a revolving guard co-operating therewith, of guide-rails, as 31 32 or 33 34, for supporting said levers in the upper or lower positions to which they are moved by the pocket and guard, substantially as described.

6. The combination, with the reciprocating bed, two levers pivoted thereto and connected so as to conjointly swing in opposite directions, a revolving pocket, and a revolving guard co-operating therewith, of guide-rails 31, 32, 33, and 34 for supporting said levers in the upper and lower positions to which they are moved by the pocket and guards, substantially as described.

7. The combination of the pocket-disk, shaft 12, pinions 10 11, shaft 13, pinion 28, and movable guard-disk, substantially as described.

11,273. BED-MOTION FOR CYLINDER PRINTING-MACHINES. LUTHER C. CROWELL, Brooklyn, assignor to Robert Hoe, Stephen D. Tucker, Theodore H. Mead, and Charles W. Carpenter, all of New York, N. Y. Filed Aug. 30, 1892. Serial No. 444,596. Original No. 480,381 dated Aug. 9, 1892.



Claim.—1. The combination, with the moving bed, of a swinging lever hung to the bed, a revolving disk having a pocket, and a revolving guard co-operating with said pocket to engage the end of said lever and reverse the movement of the bed by retarding, stopping, starting, and accelerating the same by a crank-like motion, substantially as described.

2. The combination, with the reciprocating bed, of a swinging lever hung to the bed, a revolving disk having a pocket, and a revolving guard co-operating with said pocket to alternately engage opposite ends of said lever and reverse the movement of the bed at each end of its run by retarding, stopping, starting, and accelerating the same by a crank like motion, substantially as described.

3. The combination, with the moving bed, of a swinging lever hung to the bed, a revolving disk having a pocket, a revolving guard co-acting with said pocket to engage the end of said lever, and a curved guide in which said lever end travels, whereby the travel of the bed is reversed by retarding, stopping, starting, and accelerating the same through a compound movement, substantially as described.

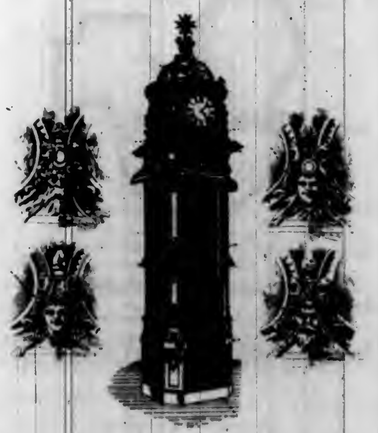
4. The combination, with the reciprocating bed, of a swinging lever hung to the bed, a revolving disk having a pocket, a revolving guard coacting with said pocket to alternately engage opposite ends of said lever, and a curved guide at each end of the bed, in which the opposite ends of the lever travel, whereby the motion of the bed is reversed at each end of its run by retarding, stopping, starting, and accelerating the same through compound movements, substantially as described.

5. The combination, with the bed and a rack-and-pinion mechanism for driving it during the major part of its run in either direction, of a swinging lever hung to the bed, a revolving disk having a pocket, and a revolving guard co-operating with said pocket to engage the end of said lever and reverse the movement of the bed by retarding, stopping, starting, and accelerating the same by a crank-like motion, substantially as described.

6. The combination, with the bed and a rack-and-pinion mechanism for driving it during the major part of its reciprocation, of a swinging lever hung to the bed, a revolving disk having a pocket, and a revolving guard co-operating with said pocket to alternately engage opposite ends of said lever and reverse the movement of the bed at each end of its run by retarding, stopping, starting, and accelerating the same by a crank like motion, substantially as described.

7. The combination, with the bed and a rack-and-pinion mechanism for driving it in either direction, of a swinging lever hung to the bed, a revolving disk having a pocket, a revolving guard coacting with said pocket to engage the end of said lever, and a curved guide in which said lever end travels, whereby the travel of the bed is reversed by retarding, stopping, starting, and accelerating the same through a compound movement, substantially as described.

8. The combination, with the bed and a rack-and-pinion mechanism for driving it during the major part of its reciprocation, of a swinging lever hung to the bed, a revolving disk having a pocket, a revolving guard coacting with said pocket to alternately engage opposite ends of said lever, and a curved guide at each end of the bed, in which the opposite ends of the lever travel, whereby the travel of the bed is reversed at each end of its run by retarding, stopping, starting, and accelerating the same through compound movements, substantially as described.



9. The combination, with the revolving pocket-disk P and revolving guard 2, of the bed B, rocking lever L, and spring-rods 31 32, substantially as described.

10. The combination, with the pinion-racks 21 22, pinion 11, revolving pocket-disk P, and cam 26, of means coupling said cam and pinion and gearing connecting the said pinion and disk, whereby timely relative co-operation is accomplished, substantially as described.

11. The combination, with the pocket-disk, guard-disk, pinion 10, and shaft 12, of gearing connecting the two and proportioned to impart to said disks differential rotative movements, substantially as described.

DESIGNS.

21,865. CASING FOR URANIA COLUMNS. LUDWIG SCHUMANN, Aix-la-Chapelle, assignor to the Urania-Uhren und Säulen-Commandit-Ges. Breslauer & Dr. Von Orth, Berlin, Germany. Filed June 8, 1892. Serial No. 436,030. Term of patent 14 years.

Claim.—The design for the casing of a urania column, as herein described and shown.

21,866. BADGE. GUSTAVUS A. SCHLICHTER, Reading, Pa. Filed June 29, 1892. Serial No. 438,449. Term of patent 3½ years.

Claim.—The design for a badge or similar article, substantially as herein shown and described.

21,867. KNIFE-HANDLE. GEORGE W. KOHN, Chicago, Ill. Filed Feb. 26, 1891. Serial No. 383,019. Term of patent 7 years. Patented in Germany Oct. 13, 1890, No. 907.

Claim.—1. The design for a knife case or handle, substantially as herein described and shown.

2. In a design for a knife case or handle, the side A, having an outline in the similitude of a mug and ornamented, substantially as herein described and shown.

3. In a design for a knife case or handle, the side B, having an outline in the similitude of a mug and ornamented, substantially as herein described and shown.

21,868. SPOON. EDMUND I. RICHARDS, Brooklyn, N. Y. Filed Mar. 26, 1892. Serial No. 426,607. Term of patent 7 years.

Claim.—The design for a spoon herein shown and described.

21,869. BUTTON, &c. ALBERT A. BOMER, Attleborough, Mass. Filed June 20, 1892. Serial No. 437,380. Term of patent 7 years.

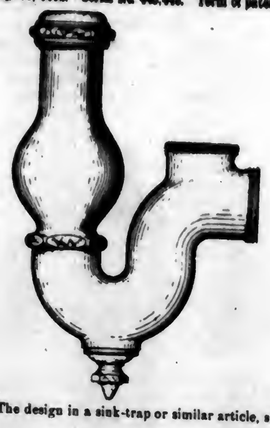
Claim.—The design for buttons and studs, substantially as shown and described.

21,870. PICTURE-HOOK. GEORGE W. TUCKER, Waterbury, Conn. Filed July 23, 1892. Serial No. 441,056. Term of patent 7 years.

Claim.—The design for a picture-hook herein shown and described, the same comprising a flattened upper curve having its sides tapered downward and inward and a rounded lower curve having its outer face flattened and its sides tapered downward and inward to correspond substantially with the taper of the upper curve.

21,871. LAMP. FRANK YOKEL, Meriden, Conn., assignor to the Meriden Bronze Company, same place. Filed Aug. 1, 1892. Serial No. 441,877. Term of patent 3½ years.

21,871.



Claim.—The design for a piano-lamp, as herein described and shown.

21,872. FRAME FOR BRIDLE-BITS. WRIGHT W. HALL, New Windsor, Colo. Filed Apr. 9, 1890. Serial No. 347,274. Term of patent 7 years.

Claim.—The design for the frame of a bridle-bit, as shown and described.

21,873. SINK-TRAP. HARRY C. MONTGOMERY, Cleveland, Ohio. Filed Aug. 16, 1892. Serial No. 443,443. Term of patent 3½ years.

Claim.—The design in a sink-trap or similar article, substantially as described.

21,874. BALLOON. THOMAS R. DIXON, East Orange, N. J. Filed July 15, 1892. Serial No. 440,162. Term of patent 3½ years.

Claim.—The design for a ballon herein shown and described, having the shape of a hat body *a* and brim *b*, with downwardly-projecting conical perforated bottom *c*, substantially as herein set forth.

TRADE-MARKS

REGISTERED SEPTEMBER 27, 1892.

21,776. LAGER-BEER. THE EICHBAUM BREWING COMPANY, Baltimore, Md. Filed Mar. 17, 1892.

Adonis

Essential feature.—The word "ADONIS." Used since March 20, 1891.

21,777. PACKAGES OF PRINTED LABELS. THE JERSEY CITY PRINTING COMPANY, Jersey City, N. J. Filed Aug. 20, 1892.

FAIR AND SQUARE

Essential feature.—The words "FAIR AND SQUARE." Used since May 15, 1892.

21,778. OUTER GARMENTS FOR MEN AND CHILDREN. A. KIRSCHBAUM & Co., Philadelphia, Pa. Filed July 28, 1892.

N.R.S.

Essential feature.—The letters "N. R. S." Used since June 20, 1892.

21,779. TOILET CREAM, LOTIONS, AND POWDER DEODORANTS. EDITH LEWIS, Hot Springs, Ark. Filed Aug. 6, 1892.

Essential feature.—The representation of a watch-case bearing the portrait of the registrant. Used since June 10, 1892.

21,780. TABLETS FOR USE IN DYSPEPSIA AND STOMACH TROUBLES. LUTTIES HOMŒOPATHIC PHARMACY COMPANY, St. Louis, Mo. Filed Aug. 23, 1892.

11

Essential feature.—The figures "11." Used since December 1, 1891.

21,781. HARNESS-LEATHER. W. W. MOONEY & SONS, Columbus, Ind. Filed Aug. 20, 1892.

W. W. Mooney & Sons

Essential feature.—The fac-simile signature of the firm "W. W. MOONEY & SONS." Used since April 21, 1890.

21,782. PRESERVATIVE FOR BEER. A. BOAKE, ROBERTS & Co., London, England. Filed Sept. 6, 1890.

KMS

Essential feature.—The letters "K M S." Used since January 1, 1886.

21,783. COVERED DRESS-STAYS. DETROIT STAY COMPANY, Detroit, Mich. Filed Aug. 13, 1892.

Essential feature.—The representation of a dress-stay or one end thereof having the covering at one end shown as removed, showing the steel and the end tab, and the word "PERFECTION" thereon. Used since March 15, 1890.

21,784. MEDICINAL COMPOUNDS FOR EXTERNAL USE. JOHN LAUFFER, Toledo, Ohio. Filed Oct. 25, 1888.

Diamond

Essential feature.—The words "SPARKLING DIAMOND" in connection with the representations of two human faces, one of which is blotched and the other clear. Used since January, 1877.

21,785. TONICS. MCAVOY BREWING COMPANY, Chicago, Ill. Filed Aug. 22, 1892.

Malt Marrow

Essential feature.—The words "MALT MARROW." Used since April 9, 1892.

21,786. BEER. MCAVOY BREWING COMPANY, Chicago, Ill. Filed Aug. 22, 1892.

Essential feature.—A circular disk bearing the representation of three hop-buds placed with their bases contiguous to each other and superimposed upon a pair of barley-heads obliquely crossing each other. Used since April 2, 1892.

21,787. PHOTOGRAPHIC PRINTS. GEORGE FRANK R. PEARSALL, Brooklyn, N. Y. Filed July 19, 1892.

KNARLOGRAPH

Essential feature.—The word "KNARLOGRAPH." Used since January 1, 1891.

21,788. FRANGIBLE BOXES CONTAINING POSTAGE-STAMPS. UNITED STATES POSTAGE STAMP DELIVERY COMPANY, Portland, Me., and Boston, Mass. Filed Aug. 22, 1892.

Essential feature.—Two adjoining rectangular panels of contrasting color and having serrated edges. Used since July 1, 1892.

21,789. LAGER-BEER. THE LONG ISLAND BREWERY, Brooklyn, N. Y. Filed Oct. 26, 1891.

Essential feature.—A lozenge-shaped figure with the words "LONG" and "ISLAND" above and "BREWERY" and "BROOKLYN" below the same, all in white upon a black ground. Used since March 1, 1891.

21,790. MATCHES. WILLIAM L. ANDERSON, Alloway, N. J. Filed Aug. 29, 1892.

EAGLE

Essential feature.—The word "EAGLE." Used since June 1, 1892.

21,791. REMEDY FOR NEURALGIA, RHEUMATISM, HEADACHE, AND FEVERS. HENRY BRINKERHOFF, New York, N. Y. Filed Aug. 25, 1892.

PHENALGERCINE

Essential feature.—The word "PHENALGERCINE." Used since January 1, 1891.

21,792. BAKING-POWDER. CALUMET BAKING POWDER COMPANY, Chicago, Ill. Filed June 6, 1892.

CALUMET

Essential feature.—The word "CALUMET." Used since August 15, 1889.

21,793. TOMATO CATSUP. DODSON, HILS MANUFACTURING COMPANY, St. Louis, Mo. Filed Aug. 25, 1892.

Essential feature.—The representation of a dish of oysters on the half-shell. Used since August 16, 1892.

21,794. TOMATO CATSUP. DODSON, HILS MANUFACTURING COMPANY, St. Louis, Mo. Filed Aug. 25, 1892.

OYSTER

Essential feature.—The word "OYSTER." Used since August 16, 1892.

21,795. TOMATO CATSUP. DODSON, HILS MANUFACTURING COMPANY, St. Louis, Mo. Filed Aug. 25, 1892.

BLUE POINT

Essential feature.—The words "BLUE POINT." Used since August 16, 1892.

21,796. COTTON YARNS. MCCONNEL & COMPANY, LIMITED, Ardcosta, Manchester, England. Filed June 30, 1892.

Essential feature.—The representation of a stag's head with a bale or package between the antlers. Used since January, 1884.

21,797. CURE FOR NERVOUS DISEASES AND THE LIQUOR HABIT. ROYAL MEDICINE COMPANY, Peru, Ind. Filed Aug. 23, 1892.

ALKORENA

Essential feature.—The word "ALKORENA." Used since July 1, 1892.

21,798. REMEDY FOR DISEASES OF WOMEN. FRANK A WHITNEY, Athena, Oreg. Filed June 24, 1892.

Essential feature.—The representation of a homestead surrounded by trees and the words "HOME TREATMENT." Used since January, 1892.

21,799. CORSETS. JOHN M. VAN ORDEN, New York, N. Y. Filed Aug. 26, 1892.

MONELITE.

Essential feature.—The word "MONELITE." Used since August 1, 1892.

21,800. CANNED FRUITS, FISH, MEATS, AND VEGETABLES. A. J. WENHAM'S SONS, Cleveland, Ohio. Filed Sept. 12, 1891.

Essential feature.—The word "EUCLID" and the representation of Garfield's monument. Used since September 1, 1888.

21,801. WATCHES. ELGIN NATIONAL WATCH COMPANY, Chicago, Ill. Filed Aug. 25, 1892.

NATIONAL WATCH CO

Essential feature.—The words and abbreviation "NATIONAL WATCH CO." Used since 1867.

21,802. INSECT AND VERMIN EXTERMINATORS. WILLIAM GOTTLIEB, Philadelphia, Pa. Filed Aug. 29, 1892.

Dead Stuck

Essential feature.—The words "DEAD STUCK." Used since March 1, 1892.

21,803. FOOD FOR ANIMALS. GEORGE MAGFADDEN, Philadelphia, Pa. Filed Aug. 29, 1892.

UNIVERSAL

Essential feature.—The word "UNIVERSAL." Used since August 15, 1889.

21,804. CANNED FISH, FRUITS, VEGETABLES, SOUPS, AND MILK. WALTER R. TIBBE, New York, N. Y. Filed Aug. 31, 1892.

BIJOU

Essential feature.—The word "BIJOU." Used since July 1, 1892.

21,805. CANNED AND PRESERVED FISH. CUSTIS P. UPHAM, Astoria, Oreg. Filed Aug. 25, 1892.

CHESTNUT

Essential feature.—The word "CHESTNUT." Used since May 1, 1892.

THE NORRIS PETERS CO., PHOTO-LITHO., WASHINGTON, D. C.

DECISIONS

OF THE

COMMISSIONER OF PATENTS

AND OF

UNITED STATES COURTS IN PATENT CASES.

COMMISSIONER'S DECISIONS.

SMITH *v.* ELEY.

Decided September 22, 1892.

PRACTICE—INTERFERENCE—DILIGENCE IN REDUCTION TO PRACTICE.

In an interference between a patent and an application, where it appeared that E the patentee, delayed more than three years after his conception before reduction to practice, and that meanwhile S, the junior party, had disclosed his invention and made an actual reduction to practice in public, *Held* that E was non-diligent and priority awarded to S.

APPEAL from Examiners-in-Chief.

APPARATUS FOR TAPPING MAINS.

Application of Anthony P. Smith filed December 13, 1890, No. 374,634. Patent granted Philip Eley October 21, 1890, No. 355,823.

Messrs. Drake & Co. and *Mr. W. N. Moore* for Smith.
Messrs. Duncan & Page for Eley.

SIMONDS, *Commissioner:*

This is an appeal from the decision of the Examiners-in-Chief awarding priority of invention to Eley with regard to the improvement specified in the following interference issue:

In an apparatus for connecting branches to mains for water, gas, etc., the combination of a shaft, an annular milling tool mounted thereon, a drill also mounted on said shaft and centrally located in relation to the milling-tool, and a spring catch arranged to enter the hole made by the drill and to engage with the inner surface of the disk severed by the milling-tool, and thus insure the removal of the disk with the withdrawal of the drill.

Eley's patent was applied for June 18, 1890, and granted October 21, 1890. Smith's application for patent was filed December 13, 1890. In a prior application for patent made by Smith he filed, on the 9th day of March, 1889, a drawing fully illustrating the improvement in controversy and an appropriate description thereof, which was excluded from that application as new matter. Later in the same year, 1889, he reduced the invention to practice in a full-sized operative machine known to others not under the obligation of secrecy. These facts are established beyond any reasonable doubt; indeed, they are conceded.

Eley had in his possession on the 1st of April, 1887, a working drawing showing the improvement in controversy perfectly and in detail, and at the same date he put a spring-catch upon a flat drill and tried it upon a plate of iron. It is held that in April, 1887, Eley had a conception of the improvement in controversy, but that his trial of the drill does not amount to a reduction to practice. He made a drill of another and better form with spring-catch thereon in the year 1888, but did not actually reduce to practice until after his application for patent. It thus appears that he had a complete conception of the invention in controversy on or about the 1st day of April, 1887, but did not file an application for a patent therefor until the 18th day of June, 1890, a period of more than three years, and meanwhile Smith made actual reduction to practice of the improvement in controversy in public. Eley gives no explanation why he waited more than three years to develop the invention, and his reasons for filing his application for patent when he did are stated by him as follows:

Question 56 What were the immediate reasons for your filing an application for this invention?

Answer. It was to carry out my former intentions, and also to introduce a machine which I thought was needed for that purpose.

Ques. 57. Were you encouraged to do this by any expectations of having the invention adopted? If yes, state what the circumstances were.

Ans I had talked of the invention and explained it to two or three parties, notably to a gentleman of the name of Gilbertson, assistant water-surveyor of the city of Bayonne. He thoroughly understood it and thought it would be a valuable invention and would be appreciated in the city of Bayonne; also, to the mayor, Mr. John Newman. I explained it to him, and he said if it would accomplish what I claimed it would be of great value to the city, and he recommended me to explain it to the engineer. He also explained that they were using a machine invented by one Mr Smith, of Newark; but he considered that my invention, as represented, would be far superior to Mr. Smith's and he would favor its adoption. I was so encouraged by this, and having full confidence in my invention, I immediately constructed a machine or caused it to be constructed. After its completion I arranged or provided a public test of the same; also, invited the mayor, city officials, and others to be present to witness the operation. The machine was used at that time for the purpose of removing a plug situated in the branch of the water-main. This was an operation never before attempted and had hitherto been considered impracticable. The test was eminently successful and the city council, many of whom were present, were very favorably impressed and subsequently adopted the invention. This, notwithstanding the city of Bayonne had already purchased a Smith machine, but were now taking steps to abandon, as they considered my machine far superior.

Eley is held not to have been duly diligent. The decision of the Examiners-in-Chief is reversed and priority of invention is awarded to Smith.

SWEENEY *v.* JAROS.

Decided August 13, 1892.

INTERFERENCE—MOTIONS FOR DISSOLUTION.

A question involving the right of an applicant to make the claim in interference will not be passed upon by the Commissioner on appeal from the decision of the Primary Examiner upon a motion to dissolve the interference.

APPEAL on motion.

GARMENT.

Application of Dennis Sweeney filed September 27, 1890, No. 366,311. Application of Samuel Jaros filed October 29, 1888, No. 289,461.

Mr. R. M. Hunter for Sweeney.
Messrs. Simonds & Burdett and *Mr. W. P. Preble, Jr.*, for Jaros.

FROTHINGHAM, *Acting Commissioner:*

This is an appeal taken from the decision of the

Primary Examiner refusing to grant a motion presented on behalf of Sweeney to dissolve the above-entitled interference.

A dissolution of the said interference was asked by Sweeney upon three grounds, as follows:

First. Because no interference in fact exists between the respective applications.
Second. Because the party Jaros has no right to make the claims in interference.
Third. Because such irregularity has occurred in declaring the interference as will preclude a proper determination of the question of priority of invention.

It is stated in the brief filed on behalf of Sweeney as follows:

It is not meant that the application of Jaros does not *now* contain claims which conflict with the claims of Sweeney, as Jaros now has in his case the identical claims of the Sweeney application, word for word; but it is submitted that the applicant Jaros is not making those claims, but that they have been injected into the case by reason of information given to Jaros's attorney by the Examiner of Room 122, and that they are for an invention not contemplated or claimed by Jaros and cannot be supported by his specification.

The record shows that Sweeney took an appeal to the Examiners-in-Chief after the Examiner had rejected his claims now involved in the interference. The Examiners-in-Chief reversed the decision of the Examiner and held that the said claims were patentable. It appears that prior thereto Jaros made certain claims in his application which stood rejected, and after the said decision by the Examiners-in-Chief the Primary Examiner informed him (Jaros) that the claims appealed had been held patentable by the board. Thereupon Jaros presented an amendment containing the said claims, which were incorporated into his case. Thereafter the interference was declared.

It is contended on behalf of Sweeney that the Examiner had no authority to inform Jaros's attorney of the claims of Sweeney's application; that the Examiner's action has allowed Jaros to entirely change the character of the invention disclosed in his application; that the present claims of Jaros's application having been "improperly inserted by information improperly given by the Examiner they cannot be considered and the application must stand in the condition in which it was before the claims were inserted," and that when thus considered no interference exists between the parties.

It is clear that the question whether or not Jaros has any right to make the claims in interference is one which cannot properly be considered by the Commissioner on appeal from the decision of the Primary Examiner. (See Rule 124.) This would involve a decision upon the merits of the case and would be in effect a decision by the Commissioner upon the question whether or not the specification of Jaros affords a basis for the said claims. Obviously such a decision would be improper at this stage of the proceedings.

Even assuming, but without deciding, that it was improper for the Examiner to have communicated the claims of Sweeney to Jaros's attorney, it is not clear how this fact could be held to be a ground for dissolution of the interference. The fact remains that Jaros has made the claims and that they are admitted on behalf of Sweeney to conflict with those of Sweeney's application. Such being the case, I see no good reason for dissolving the interference.

The decision of the Primary Examiner is affirmed.

TODD *v.* CAMPBELL.

Decided August 13, 1892.

PRELIMINARY STATEMENT.

Omissions and inaccuracies in a preliminary statement directly chargeable to carelessness, indifference, or want of attention on the part of an applicant may not be removed by an amended preliminary statement.

APPEAL on motion.

PICKER-FINGER.

Application of George N. Todd filed September 17, 1889, No. 324,174. Application of Angus Campbell filed December 7, 1889, No. 332,935.

Messrs. Elliott & Omohundro for Todd.
Messrs. Lotz & Kennedy for Campbell.

FROTHINGHAM, *Acting Commissioner:*

This is an appeal taken from the decision of the Examiner of Interferences denying a motion brought on behalf of Todd to be permitted to file an amended preliminary statement.

The Examiner of Interferences held in his decision that the matters which were omitted from the original preliminary statement and are now sought to be introduced were so omitted because of carelessness, indifference, or want of attention on the part of Todd and that such omission is directly chargeable to the same. It is contended that the Examiner of Interferences erred in so holding, because one of the errors sought to be corrected is the statement that no model was made, whereas a model had been made, which fact had been forgotten and was not recalled at the time the original statement was prepared.

The other points concerning which amendment is asked were clearly due to carelessness, indifference, or want of attention, since they consisted in what is alleged to have been an incorrect name and date and in view of the fact that Todd states in his affidavit that his preliminary statement was hurriedly dictated to his stenographer and that he signed the same without due attention to the reading thereof. It must also be held that had Todd made such reasonable efforts as might properly be expected of him in preparing his preliminary statement he might have recalled the fact concerning the model, which is now sought to be introduced.

Under all the facts in the case it would not be in accordance with the present practice of the Office to permit the filing of the amended preliminary statement upon the showing made.

The decision of the Examiner of Interferences is affirmed.

DECISIONS OF THE U. S. COURTS.

U. S. Circuit Court of Appeals—First Circuit.

WATSON *v.* STEVENS *et al.*

Decided September 6, 1892.

1. PATENT—INVENTION, FACTS WHICH MAY BE CONSIDERED IN DETERMINING THE QUESTION OF—PUBLIC FAVOR.

In determining what constitutes invention and what is a "new and useful result," a "new function," or a "new sphere of action" the court will give weight to facts showing (1) that the improvement, though desired for years, was not secured until

brought out by the patentee; (2) that the product of the improved machine or process displaced wholly or in a great degree prior products; (3) that while the prior products had been unsuitable from lack of cheapness or adaptation the new product answered all reasonable requirements.

2. SAME—PRESUMPTION OF PATENTABLE INVENTION ARISING FROM A GRANT OF LETTERS PATENT.

Where the question of invention is closely balanced, the presumption in favor of the patentee arising from his recognition as an inventor by the Patent Office will incline the court to sustain his patent.

APPEAL from the Circuit Court for the District of Massachusetts.

Mr. Frederick P. Fish and *Mr. William K. Richardson* for the appellant.
Mr. William A. Macleod for the appellees.

Before GRAY, COLT, and PUTNAM, Judges.

PUTNAM, *J.:*

This suit relates to the first and sixth claims of complainant's patent. The first is for a combination constituting a machine for compressing shank-stiffeners, and the other is for the "method" of that machine. Two defenses are set up—anticipation by certain patents put in evidence and lack of invention.

None of the devices in use for forming shank-stiffeners shown in the case anticipated the complainant's invention. This is plainly apparent as to all, unless it be the calendering-process machine originating with the American Shoe Shank Company, the Blake or Tripp machines, or those with reciprocating dies. The calendering process was devised before shanks were made from leather-board for finishing up shanks molded from wet substances. This machine in no way contemplated the use of the power required to effectually mold dry and compact substances like leather-board. The purpose of the original Blake machine was to form shanks by skiving. Although possibly it might have been strengthened and its forms then used as stamping-dies, yet it contained no suggestion of any such purpose. The Tripp machine was designed originally for shaping and smoothing soles of boots and shoes. By changing its molds it was, in fact, adapted to shanks, yet this was subsequent to the complainant's alleged invention; and its complicated parts, with its slow production, contained no suggestion of his simple and rapid mechanism. The prior use of reciprocating dies is clearly proved.

That portion of the first claim which relates to the lifting-plate clearly does not require the attention of the court, and the case therefore comes down to the question of a patentable difference between machines operated for forming shank-stiffeners from leather-board and perhaps from like substances by the use of direct pressure and those using reciprocating dies.

If it can be doubted that prior to the complainant's alleged invention reciprocating and rotating dies were for very many purposes substitutes for each other, well known in the mechanical arts, so that ordinarily no substantial novelty could be involved in interposing one for the other, this is sufficiently proven by the testimony of Joseph P. Livermore, as follows:

Both of these modes of operation of dies intended to compress, mold, or shape materials or articles similar in their nature to shank-stiffeners [that is, using rolling-dies and using reciprocating dies] were employed in machines long prior to the time of the Watson patent, and are in my opinion well-known substitutes, the one for the other.

The result is that if the court finds any patentable invention in the complainant's machine or "method" it must be in the face of the fact that the like had been in prior use for making shank-stiffeners, except only the substitution for this specific purpose of rotating for reciprocating dies, each being ordinarily equivalents for the other.

The following are among the latest expressions of the Supreme Court on this topic:

The elements combined to form the alleged invention, merely constituted an aggregation of old devices, each working out its own effect, without producing anything novel, and such an assemblage or bringing together of old devices, without securing some new and useful result as the joint product of the combination—something more than a mere aggregation of old results—does not constitute a patentable invention. (*Adams* v. *Bellaire Stamping Co.*, 141 U. S., 539, 542.)

While the promotion of an old device—such, for instance, as a torsional spring—to a new sphere of action, in which it performs a new function, involves invention, the transfer or adaptation of the same device to a similar sphere of action, where it performs substantially the same function, does not involve invention. (*Western Electric Co.* v. *La Rue*, 139 U. S., 601, 606.)

Ansonia Co. v. *Electrical Supply Co.* (144 U. S., 11) cites and approves, page 18, the language of the *Locomotive Truck Co.* Case, (110 U. S., 490,) now a leading one, as follows:

The application of an old process or machine to a similar or analogous subject, with no change in the manner of application and no result substantially distinct in its nature, will not sustain a patent, even if the new form of result had not before been contemplated.

The Supreme Court, however, has given a caution that no general statement of rules relating to this topic can be followed with safety, unless its limitations and practical application are tested by the special facts of the cases in which used, and also of those into which it is to be imported:

The truth is the word [meaning "invention"] cannot be defined in such manner as to afford any substantial aid in determining whether a particular device involves an exercise of the inventive faculty or not. In a given case we may be able to say that there is present invention of a very high order. In another we can see that there is lacking that impalpable something which distinguishes invention from simple mechanical skill. Courts, adopting fixed principles as a guide, have by a process of exclusion determined that certain variations in old devices do or do not involve invention; but whether the variation relied upon in a particular case is anything more than ordinary mechanical skill is a question which cannot be answered by applying the test of any general definition. (*McClain* v. *Ortmayer*, 141 U. S., 419, 427.)

In *Loom Co.* v. *Higgins* (105 U. S., 580) the Supreme Court determined in favor of a certain "new and useful result" arising from an aggregation of old elements as sufficient to sustain patentability, although there was in that case no "new function," no "new sphere of action," and no "substantially-distinct result," as each of these expressions might sometimes well be understood. The Court said, page 591, as follows:

It was certainly a new and useful result to make a loom produce fifty yards a day when it never before had produced more than forty; and we think that the combination of elements by which this was effected, even if those elements were separately known before, was invention sufficient to form the basis of a patent.

In this case the conclusion was aided by the line of reasoning on page 591, as follows:

It is further argued, however, that, supposing the devices to be sufficiently described, they do not show any invention; and that the combination set forth in the fifth claim is a mere aggregation of old devices, already well known; and therefore it is not patentable. This argument would be sound if the combination claimed by Webster was an obvious one for attaining the advantages proposed, one which would occur to any mechanic skilled in the art. But it is plain from the evidence, and from the very fact that it was not sooner adopted and used, that it did not, for years, occur in this light to even the most skillful persons. It may have been under their very eyes, they may almost be said to have stumbled over it; but they certainly failed to see it, to estimate its value, and to bring it into notice.

This last citation and the determination in *Loom Co.* v. *Higgins* are repeated and approved as late as in *The Barbed Wire Patent*, (143 U. S. 275, 288.)

While the Supreme Court gives to the fact of the mere salability of a product very little weight, if any, on the question of invention, (*Magowan* v. *New York Belting Co.*, 141 U. S. 332; *McClain* v. *Ortmayer*, *supra*; *Adams* v. *Bellaire Stamping Co.*, *supra*,) yet in *Smith* v. *Goodyear Dental Vulcanite Co.* (93 U. S. 486, 495) it used with other expressions in the same direction the following:

> We do not say the single fact that a device has gone into general use, and has displaced other devices which had previously been employed for analogous uses, establishes in all cases that the latter device involves a patentable invention. It may, however, always be considered; and, when the other facts in the case leave the question in doubt, it is sufficient to turn the scale.

This was repeated in *The Barbed Wire Patent*, *supra*, page 284, and is therefore the latest expression of the Supreme Court on this particular topic.

The same class of facts which received attention in *Loom Co.* v. *Higgins*, *supra*, and *Smith* v. *Goodyear Dental Vulcanite Co.*, *supra*, had recognized weight in *The Barbed Wire Patent*, *supra*, and also in *Gandy* v. *Main Belting Company*, (143 U. S., 587.)

We conclude, therefore, that in applying to cases of doubt the primary rules touching what constitutes invention and the secondary rules touching what is a "new and useful result," a "new function," or a "new sphere of action" we may be influenced by the facts that the improvement in question, although desired for years, was not secured until brought out by the patentee; that the product of the improved machine or process went into general use by the manufacturers for whom it was intended, and displaced wholly or in a very large degree prior products, and that while all prior products had been unsuitable, either through lack of cheapness or adaptation, the new product answered all reasonable requirements.

Prior to the first use of leather-board (about 1869) S. P. Rogers & Co. had made shanks from the wet stock of that substance as it came from the paper-machines, running it through the calendering process of the American Shoe Shank Company already referred to. This operation required several different steps—namely, cutting the wet stock into blanks, molding them into form by the "hammer-machine," drying, during which they shrank and curled, and calendering them in the molds of the machine of the American Shoe Shank Company.

This was a complicated, slow, and expensive process, and there is evidence that the product lacked uniformity. Certain it is that after 1878 this was abandoned and was succeeded by the working of leather-board first with skiving-machines and then with reciprocating dies. The evidence is that these later products were not satisfactory to the trade, and the processes were slow.

The complainant testified, and his testimony on this point is in harmony with the entire record, that he continued the reciprocating dies until 1886 only because he knew of no better method. He further testified, and on this point he was not contradicted, that in 1885 the demand for better and more uniform shanks led him to experiment with rotary molds, and that this resulted in a complete success. On this he based his patent, built at first one machine and then others, and at the time of giving his testimony was producing several hundred thousand shanks weekly, mainly from these machines, although to some extent for special reasons he was still using reciprocating dies. He further testified that he knew of no method of producing shanks demanded by the trade except this, and the record sustains him.

It appears that the respondents since this bill was filed commenced again using reciprocating dies; but, without accepting certain refinements and theories interpolated by the witnesses for the complainant, the case is clear that his machines are the only ones so far discovered operating with efficiency, rapidity, and economy.

It is evident the case is closely balanced; but we have weighed the circumstances preceding and attending the production of the complainant's machine and the results which have followed it in the light of *Loom Co.* v. *Higgins*, *supra*, and of other cases in which its line of reasoning has been recognized or approved, and we have concluded that the circumstances and results referred to prohibit us from depriving the patentee of the presumption arising from the fact that the Patent Office recognized him as an inventor and issued him a patent.

Standing by themselves the complainant's claims are too broad to be sustained; but by reading into them his specifications they are limited to producing shank-stiffeners from leather-board, leather, or like material. The only question raised in this case, or, indeed, by the present state of the art, relates to leather-board, and we therefore limit our conclusions to this substance without inquiring concerning leather or other material like leather-board or leather.

The decree of the circuit court is reversed, the first and sixth claims of complainant's patent are sustained for use in producing shank-stiffeners from leather-board, and the case is remanded to the circuit court, with instructions to enter a decree for the complainant for an accounting and for a perpetual injunction against making, vending, or using, for producing shank-stiffeners from leather-board, any machine or method infringing the first or sixth claim, and for other proceedings in conformity with this opinion, the complainant to recover his costs in this and the circuit court.

U. S. Circuit Court—District of Massachusetts.

MASTEN *v.* HUNT *et al.*

Decided June 29, 1892.

PATENTS—INFRINGEMENT—CONSTRUCTION OF COMBINATION CLAIM.

In Letters Patent No. 321,833, to Cornelius E. Masten, July 7, 1885, for a fire-cracker, claim 1 is for "the match B and fuse C, in combination with the solid plug D and body A, substantially as set forth." *Held*, in the absence of any description of the prior state of the art in the specification, and since applicant merely states that his invention produces a more desirable article than is now in general use the court cannot hold that the match B was not an essential element, since the presumption of novelty applies to the combination as a whole.

SUIT by Cornelius E. Masten against Edmund S. Hunt *et al.* for infringement of Letters Patent No. 321,833, issued July 7, 1885, to complainant for a fire-cracker. Bill dismissed.

The specification and claim of the patent are as follows:

Be it known that I, CORNELIUS E. MASTEN, of Boston, in the county of Suffolk, State of Massachusetts, have invented a certain new and useful Improvement in Fire-Crackers, of which the following is a description sufficiently full, clear, and exact to enable any person skilled in the art or science to which said invention appertains to make and use the same, reference being had to the accompanying drawing, forming a part of this specification, in which the figure is a vertical longitudinal section.

My invention relates more especially to large fire crackers, or the class known as "cannon-crackers;" and it consists in a novel construction and arrangement of the parts, as hereinafter more fully set forth and claimed, by which a more desirable article of this character is produced than is now in ordinary use. The nature and operation of the improvement will be readily understood by all conversant with such matters from the following explanation, its extreme simplicity rendering an elaborate description unnecessary: In the drawing, A represents the body of the cracker, B the match, and C the fuse. The body is cylindrical in form, and is composed of layers of strong tough paper overlapping each other, and cemented together in the usual manner. The match is composed of cotton, powder, and gum, the cotton being saturated with a solution of the gum, and then rolled in powder, or the powder rubbed into it and dried. The fuse is composed of a short cord or twist of ordinary touch-paper, into the inner end of which the outer end of the match is inserted and secured, as seen at *x*. The breech-plug D of the cracker consists of fire clay, and is inserted in the body around the fuse and match as follows: The fuse and match having been first united, as shown and described, the fuse is inserted in a vertically-arranged hole in the center of an anvil or stake, which fits closely into the lower end, *d*, of the body. This stake is provided with a rabbet or shoulder on which the end *r* of the body rests, the body standing vertically with the match in its center when the stake is inserted. Powdered fire clay, or similar material, of proper temperament, is then introduced around the match through the open upper end of the body, and rammed down to form the solid plug D by means of a hollow ramrod, which is adapted to pass freely over the match. The body is then filled with the charge of explosive compound E and the wad of the muzzle-plug inserted. This plug consists of a cylindrical shell, H, open at both ends, and adapted to fit closely into the body, the shell being provided with a centrally-disposed plug, M, composed of fire-clay, or similar material, which is rammed in solid before the shell is inserted. The shell H is composed of layers of paper overlapping each other, and properly cemented together, and is secured in the body A by means of glue or cement. In fire-crackers of this character the muzzle-plug or wad is usually rammed down onto the charge or filling with sufficient force to secure the wad firmly in the body of the cracker, thereby, on account of the nature of the filling, greatly reducing the force of the explosion, and causing it to produce far less noise than when the plug is loosely inserted and cemented into the body, as described.

Having thus explained my invention, what I claim is: 1. In a fire-cracker, the match B and fuse C, in combination with the solid plug D and body A, substantially as set forth. 2. The improved fire-cracker herein described, the same consisting of the body A, fuse C, match B, plug D, shell H, plug M, and filling or charge E, constructed, combined, and arranged to operate substantially as described.

Mr. J. S. Richardson and *Mr. Charles C. Morgan* for the complainant.

Messrs. Maynadier & Beach for the defendants.

PUTNAM, *J.*:

This case arises on the first claim in complainant's patent, and the only defense alleged at the argument was non-infringement. This defense, however, involves the construction of the claim in question, as the defendants are manufacturing the article described by it, except only that they use a continuous safety-fuse instead of the "match B" and the "fuse C."

It seems to me that to restrain respondents in this cause would give complainant a monopoly of all so-called "cannon-crackers," in the manufacture of which a clay plug is forced into the body of the cracker after the body has been—

> cemented together in the usual manner.

If he was entitled to ask from the Patent Office so much as this, his specifications and claims fail to show it.

The specifications make no reference to the state of the art and do not particularize in what respects complainant's combination was an improvement, using in reference to this only the general language that by the invention a more—

> desirable article [is produced] than is now in ordinary use.

Therefore there is nothing on the face of the patent from which the court can infer that any element in the combination is more or less essential or important than any other.

Complainant claims that the conjunction between the words "match B" and "fuse C" shows that the match and fuse make but one element, and that, therefore, by the terms of the patent they are the equivalent of a continuous fuse; but the presumption raised by this collocation is too weak to safely guide the court.

The presumption of novelty in this case applies only to the combination as a whole and does not apply to any of its elements. Neither party has shown to the court by proper proof the state of the art prior to complainant's invention.

I am satisfied that Exhibits Perigo and Perigo 2—that is, the Chinese crackers—were constructed by rolling in the clay plug, and not in the method described in complainant's specifications; but this fact is merely negative in its effect, as it is limited to these particular exhibits and does not inform the court whether or not other crackers of different construction were on the market.

James Shepard, page 31, answer 10, and page 34, answer 19, concludes that certain elements in complainant's cracker are new; but he does not qualify himself as one having historical knowledge or information about this particular trade, and his method of reaching his conclusion as to the construction of Exhibits Perigo and Perigo 2 indicates that he could not.

In *McDonald* v. *Whitney* (32 O. G., 1465; 24 Fed. Rep., 600) the combination was expressly described in the claim as embracing four rolls; but either from the face of the patent or from other matters in the record the court was able to conclude that the gist of the invention in issue was—

> the separation and adjustment of the rolls, held together by spring-pressure, by means of a treadle and levers,

and the court therefore enjoined a machine with only three rolls.

There may also be other conditions under which a patentee may be enabled to meet the effect of an unnecessary subdivision in his claim of the elements of his combination; but in the absence of the matters stated in this opinion as not appearing in this case it seems to me I have no power to pronounce any element more or less essential than others, or to declare that any division or subdivision appearing on the face of the claim is unimportant, or that the gist of the invention is in a new method of combining the clay plug with the body of the cracker, or for that or for any other reason to decide that any manufacture is an infringement unless it combines with the rest the "match B" or the equivalent of that precise element.

In applying the law to the facts in this record I am guided by the results in *Vance* v. *Campbell*, (1 Black, 427;) *McClain* v. *Ortmayer*, (57 O. G., 1129; 141 U. S., 419,) and *Dryfoos* v. *Wiese* (42 O. G., 490; 124 U. S., 32) more than by that in *Morley Sewing Machine Co.* v. *Lancaster*, (47 O. G., 276; 129 U. S., 263.)

The latter case, however, cites (p. 280) the ruling of Vice-Chancellor Wood, as follows:

> When the thing is wholly novel, and one which has never been achieved before, the machine itself which is invented necessarily contains a great amount of novelty in all its parts; and one looks

very narrowly and very jealously upon any other machines for effecting the same object to see whether or not they are merely colorable contrivances for evading that which has been before done. When the object itself is one which is not new, but the means only are new, one is not inclined to say that a person who invents a particular means of doing something that has been known to all the world long before, has a right to extend very largely the interpretation of those means which he has adopted for carrying it into effect.

The difficulty in the present case is that, as already pointed out, the complainant does not show by his specifications or the proofs whether the "object itself" is new in any essential particular—as, for example, whether a body constructed like this with a clay plug pressed into it is novel. To paraphrase the Supreme Court in the same case, (p. 273,) the complainant does not show whether or not the invention is one of a "primary character," to which the doctrine of equivalents applies to its full extent, or whether or not the inventor was a "mere improver" upon something "capable of accomplishing the same general result." In which latter case the Court said—

his claims would properly receive a narrower interpretation.

Again, in *McClain* v. *Ortmayer*, *supra*, the Supreme Court, on page 425, laid down the following rule:

The principle announced by this Court in *Vance* v. *Campbell*, (1 Black, 427,) that, where a patentee declares upon a combination of elements which he asserts constitute the novelty of his invention, he cannot in his proofs abandon a part of such combination and maintain his claim to the rest, is applicable to a case of this kind where a patentee has claimed more than is necessary to the successful working of his device.

This does not strictly govern the case at bar; but it illustrates clearly that it does not follow that the complainant can abandon "match B" as a distinct element and claim a continuous fuse as the equivalent of his fuse and match merely because he has made a subdivision which it may prove was not—

necessary to the successful working of his device.

Although in this opinion I have not only pointed out the negative nature of the complainant's specifications, but have also referred to the lack in the record of any proof of the state of the art prior to the invention in question, yet I do not mean to be understood as now holding that any such proof would have enabled me to reach a different conclusion. In view of what appears or, rather, fails to appear on the face of the patent I have not considered whether any line of proofs would relieve the complainant; and I have referred to the lack of them merely because it strengthens the case as presented to me.

Let respondents draw a decree of dismissal with costs and submit it to the court with proof that it has been served on the complainant.

U. S. Circuit Court—District of Massachusetts.

WAITE *v.* ROBINSON *et al.*

Decided September 15, 1892.

PATENT—FACTS WHICH TEND TO NEGATIVE UTILITY.

Where a complainant was an extensive manufacturer, engaged in the special trade to which the patent sued upon relates, yet testified that he had held the patent for seven years but had never put upon the market a chair constructed to conform to it, *Held* of great weight in determining the question of "invention" from the standpoint of utility.

Messrs. Maynadier & Beach for the complainant.
Messrs. Hey & Wilkinson and *Mr. William A. Morse* for the defendants.

PUTNAM, *J.*:

That the complainant had difficulty when he applied for his patent in understanding the spirit and essence of his alleged invention is inferable from the fact that on an improvement of so low a grade as his must be admitted to be he stated his claim in eight different ways. This inference is strengthened because he does not now inform the court whether he relies on all his claims, which is hardly possible, or on which of them he relies; but he leaves the court to look through them all, compare their phraseology, and endeavor thus to ascertain what he has failed to point out.

In his direct examination his expert testified as follows:

The main novelty is that the seat slides up and down on the frame and has feet of its own, which when it is held in its lowest position extend below the adjacent part of the frame and hold them up from the floor.

At that stage of his testimony the expert apparently thought that there was a double novelty—one in the sliding up and down of the seat and the other in the capability of extending the feet below the adjacent part of the frame. The former he properly abandoned at the close of his cross-examination in connection with what he had to say as to the Cross patent, under which the defendants claim to be manufacturing. The court is unable to appreciate that what is thus left, whether in combination or otherwise, is sufficient to put in operation the power vested in Congress by the Constitution to promote the progress of science and useful arts by securing to inventors the exclusive rights to their discoveries.

We refer to the topic of the utility of complainant's chair only as it bears on the point of invention. One of the defendants testified that a chair made in accordance with the patent in suit would not be a practical commercial article; and it appears by the evidence of the plaintiff that, although at the time he testified he had owned this patent for seven years, he never had put on the market a chair constructed to conform to it. To fill an order he had commenced some fifteen dozen, which were not completed at the date of his deposition.

This is not an instance where a valuable invention lies dormant for want of means of developing it, because the complainant also testified that he manufactures nothing but patent chairs of various kinds, and sells these to the extent of 70,000 (more or less) annually. A novelty which remains unused so many years in the hands of an extensive manufacturer exclusively engaged in the special trade to which it relates must be presumed to involve at the best a very low degree of that useful invention which the patent code of the United States requires. Indeed, the entire field of nursery-chairs shown by the exhibits in this case seems a dreary one, nowhere enlivened by a single exhibition of the genius of invention or of the "happy thought" which under the patent laws frequently answers in the place of the former.

We think the sum of all that can be said is that the complainant's novelty shows somewhat more mechanical skill, experience, and aptitude than those which preceded it, but not enough to rise above the conditions described in *Hollister* v. *Benedict & Burnham Manufacturing Co.*, (113 U. S., 59, 73.)

Bill dismissed, with costs for the defendants.

INDEX TO DECISIONS

OF THE

COMMISSIONER OF PATENTS

AND OF

UNITED STATES COURTS

IN THE MATTER OF

PATENTS, TRADE-MARKS, &c.

OFFICIAL GAZETTE—July–September, 1892.

INDEX TO DECISIONS.

[Decisions of the United States courts are indicated by an asterisk (*); of the Secretary of the Interior by a dagger (†); and the opinion of the Attorney General by a section-mark (§).]

	Page.
*American Box Machine Company *v.* Crossman *et al*	1750
*American Electric Construction Company, Limited. Consumers' Gas Company of Danville *v.*	738
*American Solid Leather Button Company *v.* Empire State Nail Company	1609
*Anderson *v.* Eller *et al*	740
*Bailey. Remington Standard Type-Writer Manufacturing Company *et al. v.*	440
*Baltimore County Hedge and Wire Fence Company. Young *et al. v*	1613
*Boyd *v.* Cherry	160
Campbell. Todd *v.*	1884
*Campbell Printing-Press & Manufacturing Company *v.* Manhattan Railway Company	894
Carpenter. Morford *v.*	437
Challoner *v.* Perkins	296
Champney. *Ex parte*	1051
*Cherry. Boyd *v*	160
*Commissioner of Patents. Odell, administrator, *v*	580
*Consumers' Gas Company of Danville *v.* American Electric Construction Company, Limited	738
Cox. Eckerson *v*	437
*Crossman *et al.* American Box Machine Company *v*	1750
*Cuervo *v.* Jacob Henkell Company *et al*	440
*Dederick *v.* Seigmund	1193
De Ferranti. Raffard *v*	439
Eckerson *v.* Cox	437
Edison *v.* Swan	158
*Edison Lamp Company. United States Electric Lighting Company *v*	1610
Edwards. Garford *v*	893
*Eller *et al.* Anderson *v*	740
*Electrical Accumulator Company *v.* New York & Harlem Railroad Company	297
Electrolibration Company. Sanche *v.*	1189
Eley. Smith *v*	1883
*Elliott Hickory Cycle Company. Overman Wheel Company *v*	1478
*Elson Glass Company. Ripley *v*	298
*Empire State Nail Company. American Solid Leather Button Company *v*	1609
Finck. *Ex parte*	157
Foglesong. Hutt and Phillips *v.*	1477
*Funk *et al.* Pasteur Chamberland Filter Company *et al. v.*	1479
Garford *v.* Edwards	893
*Grace *et al.* Indurated Fibre Industries Company *et al. v.*	896
*Gregory *et al.* Tatum *et al. v*	1753
Haggenmacher. *Ex parte*	438
Hall *v.* Latta	736
*Head *v.* Porter	1052
Hines. *Ex parte*	576
Houston. *Ex parte*	1609
*Hunt *et al.* Masten *v*	1886
Hunter. *Ex parte*	295
Hunter *et al.* *Ex parte*	1477
Hutt and Phillips *v.* Foglesong	1477
*Indurated Fibre Industries Company *et al. v.* Grace *et al.*	896
*Iron-Clad Manufacturing Company, Incorporated, *v.* Jacob J. Vollrath Manufacturing Company, Limited, *et al*	1480
*Jacob Henkell Company *et al.* Cuervo *v*	440
*Jacob J. Vollrath Manufacturing Company, Limited, *et al.* Iron-Clad Manufacturing Company, Incorporated, *v.*	1480
Jaros. Sweeney *v*	1883
*Jensen *et al.* Norton *et al. v*	1326
Johnston. *Ex parte*	295
*Kilbourne *et al. v.* W. Bingham Company	577
Kinney. *Ex parte*	737
Kuppenheimer Brothers. *Ex parte*	439
Latta. Hall *v*	736
*Lee *v.* Pillsbury *et al*	1752
Leeson & Company. *Ex parte*	297
*Manhattan Railway Company. Campbell Printing-Press & Manufacturing Company *v*	894
*Marsh *v.* Quick Meal Stove Company	1056
*Masten *v.* Hunt *et al*	1886
McGowan. *Ex parte*	735
*Mellon. Smith & Davis Manufacturing Company *v.*	1480
Morford *v.* Carpenter	437
Nash. *Ex parte*	159
National United States Stamp Delivery Company. *Ex parte*	893
*New York & Harlem Railroad Company. Electrical Accumulator Company *v*	297
†Noakes *Ex parte*	575

Parkhurst and Ham. Webster *v.*	1325
*Pasteur Chamberland Filter Company *et al. v.* Funk *et al.*	1479
Perkins. Challoner *v*	296
*Pillsbury *et al.* Lee *v*	1752
*Pope Manufacturing Company *v.* Warwick Cycle Manufacturing Company *et al*	1478
*Porter. Head *v*	1052
*Quick Meal Stove Company. Marsh *v*	1056
Raeymaeckus. *Ex parte*	1749
Raffard *v.* de Ferranti	439
*Remington Standard Type-Writer Manufacturing Company *et al. v.* Bailey	440
Requa. *Ex parte*	295
*Ripley *v.* Elson Glass Company	298
*Robinson *et al* Waite *v*	1888
*S. N. Brown & Co. Stilwell & Bierce Manufacturing Company *v*	1191
Sanche *v.* Electrolibration Company	1189
Schilling. *Ex parte*	160
Schotten & Co. *Ex parte*	576
*Seigmund. Dederick *v*	1193
Shepard. *Ex parte*	575
Shettler. *Ex parte*	158
Shettler. Vanness *v*	157
Smith *v.* Eley	1883
*Smith & Davis Manufacturing Company *v.* Mellon	1480
*Snowden. Paine *v*	737
Stanley. *Ex parte*	735
*Stevens *et al.* Watson *v*	1884
*Stilwell & Bierce Manufacturing Company *v.* S. N. Brown & Co	1191
Swan. Edison *v*	158
Sweeney *v.* Jaros	1883
*Tatum *et al. v.* Gregory *et al*	1753
Todd *v.* Campbell	1884
*United States Electric Lighting Company *v.* Edison Lamp Company	1610
Vanness *v.* Shettler	157
Van Slyke. *Ex parte*	893
*Vintschger *et al*	441
*W. Bingham Company. Kilbourne *et al. v.*	577
*Waite *v.* Robinson *et al*	1888
*Warwick Cycle Manufacturing Company *et al.* Pope Manufacturing Company *v.*	1478
*Watson *v.* Stevens *et al*	1884
Webster *v.* Parkhurst and Ham	1325
Weeden. *Ex parte*	1191
Woodward. *Ex parte*	1052
*Young *et al. v.* Baltimore County Hedge and Wire Fence Company	1613

SUBJECT-MATTER.

[Decisions of the United States courts are indicated by an asterisk (*); of the Secretary of the Interior by a dagger (†), and the opinion of the Attorney-General by a section-mark (§).]

	Page.
Abandoned applications, *ex parte* Raeymaeckus	1749
*Accounting, Campbell Printing-Press & Manufacturing Company *v.* Manhattan Railway Company	894
*Action at law, Marsh *v.* Quick Meal Stove Company	1056
*Affidavits, Campbell Printing-Press & Manufacturing Company *v.* Manhattan Railway Company	894
Hall *v.* Latta	736
Ex parte Shettler	158
*Agent, preliminary injunction against, Remington Standard Type-Writer Manufacturing Company *et al. v.* Bailey	440
Amendments, *ex parte* Houston	1609
Todd *v.* Campbell	1884
Ex parte Woodward	1052
Analogous devices, Garford *v.* Edwards	893
*Kilbourne *et al. v.* W. Bingham Company	577
*Anticipation, Boyd *v.* Cherry	110
*Ripley *v.* Elson Glass Company	298
*United States Electric Lighting Company *v.* Edison Lamp Company	1610
Apparatus for registering car-fares, *ex parte* Hunter *et al.*	1477
Apparatus for tapping mains, Smith *v.* Eley	1883
Appeal from Examiner, *ex parte* Weeden	1191
Appeal to the Commissioner, Sweeney *v.* Jaros	1883
Appeal to Examiners-in-Chief, *ex parte* Woodward	1052
†Appeal to the Secretary of the Interior, *ex parte* Noakes	575
Art of grinding cutlery and other tempered-steel articles, *ex parte* Johnston	295
Art of making dies, *ex parte* Champney	1051
Assignment of Trade-Marks, Sanche *v.* Electrolibration Company	1189
Attorneys, *ex parte* Raeymaeckus	1749
Badge, *ex parte* Requa	295
*Baling presses, Dederick *v.* Seigmund	1193
*Bed-bottoms, Smith & Davis Manufacturing Company *v.* Mellon	1480
*Bicycles, Pope Manufacturing Company *v.* Warwick Cycle Manufacturing Company	1478
Bicycle saddle, Garford *v.* Edwards	893
*Bill for infringement, American Box Machine Company *v.* Crossman *et al.*	1750
*Bill for specific performance of a contract, American Box Machine Company *v.* Crossman *et al.*	1750
*Bill in equity, American Solid Leather Button Company *v.* Empire State Nail Company	1609
*Indurated Fibre Industries Company *et al. v.* Grace *et al*	896
*Overman Wheel Company *v.* Elliott Hickory Cycle Company	1478
*Bond, Pasteur Chamberland Filter Company *et al. v.* Fink *et al*	1479
*Burden of proof, Marsh *v.* Quick Meal Stove Company	1056
*Cartridge retractors for breech-loading firearms, Head *v.* Porter	1052
Cash-register, Webster *v.* Parkhurst and Ham	1325
*Chair-backs, Paine *v.* Snowden	737
*Change of form, Smith & Davis Manufacturing Company *v.* Mellon	1480
*Change of material, Kilbourne *et al. v.* W. Bingham Company	577
*Change of structure, Electrical Accumulator Company *v.* New York & Harlem Railroad Company	297
*Odell *v.* Commissioner of Patents	580
Claims, *ex parte* Houston	1609
*Lee *v.* Pillsbury *et al*	1752
*Norton *et al. v.* Jensen *et al*	1326
Ex parte Weeden	1191

	Page.
Claims, enlargement of, *ex parte* Stanley	735
Claims, scope of determined by the courts, *ex parte* Finck	157
*Combinations, Marsh *v.* Quick Meal Stove Company	1056
*Norton *et al. v.* Jensen *et al*	1326
†Commissioner of Patents, *ex parte* Noakes	575
Ex parte Woodward	1052
Conception, early sketches to establish date of, Morford *v.* Carpenter	437
Conception of invention, Edison *v.* Swan	158
*Construction of claims, Dederick *v.* Seigmund	1193
*Marsh *v.* Quick Meal Stove Company	1056
Construction of Rule 56, *ex parte* Hunter *et al*	1477
Construction of Rule 68, *ex parte* Houston	1609
Construction of Rule 139, *ex parte* McGowan	735
Construction of Rule 158, Hall *v.* Latta	736
Raffard *v.* de Ferranti	439
Construction of Rules 122 and 124, Hutt and Phillips *v.* Foglesong	1477
*Construction of section 4886, Revised Statutes, Overman Wheel Company *v.* Elliott Hickory Cycle Company	1478
§Construction of section 4892, Revised Statutes, Opinion of the Attorney-General	1481
*Construction of section 7, tariff act of October 1, 1890, Vintschger *et al*	441
*Construction of specifications and patents, Pope Manufacturing Company *v.* Warwick Cycle Manufacturing Company	1478
Contestants, rule when one is a patentee and the other an applicant, Edison *v.* Swan	158
Continuous application, *ex parte* Nash	159
Ex parte Schilling	160
*Contract, American Box Machine Company *v.* Crossman *et al*	1750
*Damages and profits, Campbell Printing-Press & Manufacturing Company *v.* Manhattan Railway Company	894
*Consumers' Gas Company of Danville *v.* American Electric Construction Company, Limited	738
*Lee *v.* Pillsbury	1752
*Tatum *et al. v.* Gregory *et al*	1753
Date of filing application, Challoner *v.* Perkins	296
*Defense, Consumers' Gas Company of Danville *v.* American Electric Construction Company, Limited	738
*Stilwell & Bierce Manufacturing Company *v.* S. N. Brown & Co	1191
Delay, Smith *v.* Eley	1883
Delay, explanation of, Morford *v.* Carpenter	437
*Delay in working a patented invention, Waite *v.* Robinson *et al*	1888
*Demurrer, American Solid Leather Button Company *v.* Empire State Nail Company	1609
*Indurated Fibre Industries Company *et al. v.* Grace *et al*	896
*Overman Wheel Company *v.* Elliott Hickory Cycle Company	1478
Description, *ex parte* Johnston	295
Ex parte Kinney	737
*Design, Anderson *v.* Eiler *et al*	740
Ex parte Finck	157
*Paine *v.* Snowden	737
Ex parte Requa	295
*Ripley *v.* Elson Glass Company	298
Ex parte Van Slyke	893
Diligence, Edison *v.* Swan	158
Smith *v.* Eley	1883
Divisional application, *ex parte* Hunter	295
Division of application, *ex parte* Hines	576

Drawings, *ex parte* Kinney ... 737
Morford *v.* Carpenter ... 437
*Norton *et al. v.* Jensen *et al.* ... 1326
Ex parte Shettler ... 158
Ex parte Van Slyke ... 893
Drawings, cancellation of, *ex parte* Shepard ... 575
*Edgers, Tatum *et al. v.* Gregory *et al.* ... 1753
Electric lamp, Edison *v.* Swan ... 158
*Electric-light machinery, Consumers' Gas Company of Danville *v.* American Electric Construction Company, Limited ... 738
Electric locomotive, Raffard *v.* de Ferranti ... 439
Electric railway, *ex parte* Hunter ... 295
Electro-heating apparatus, Morford *v.* Carpenter ... 437
*Employé of the Government, Head *v.* Porter ... 1052
Employé, suggestions by, Webster *v.* Parkhurst and Ham ... 1325
*Equivalents, Dederick *v.* Seigmund ... 1193
*Norton *et al. v.* Jensen *et al.* ... 1326
*Evidence as to damages, Lee *v.* Pillsbury *et al.* ... 1752
Evidence, early sketches, their weight as, Morford *v.* Carpenter ... 437
Evidence of invention, *ex parte* Champney ... 1051
*Watson *v.* Stevens *et al* ... 1884
Examiners, *ex parte* Hines ... 576
Hutt and Phillips *v.* Foglesong ... 1477

*Peppered enameled iron-ware, Iron-Clad Manufacturing Company, Incorporated, *v.* Jacob J. Vollrath Manufacturing Company, Limited, *et al* ... 1480
Petition to the Commissioner, *ex parte* McGowan ... 735
Picker-fingers, Todd *v.* Campbell ... 1884
*Pioneer inventors, Dederick *v.* Seigmund ... 1193
*Plashed hedges, Young *et al. v.* Baltimore County Hedge and Wire Fence Company ... 1613
*Pleading, American Box Machine Company *v.* Crossman *et al* ... 1750
†Preliminary statement, *ex parte* Noakes ... 575
Todd *v.* Campbell ... 1884
Printing plate or block formed by photographic means, *ex parte* Hines ... 576
Printing-press, Eckerson *v.* Cox ... 437
Priority of invention, Challoner *v.* Perkins ... 296
Edison *v.* Swan ... 158
Smith *v.* Eley ... 1883
*United States Electric Lighting Company *v.* Edison Lamp Company ... 1610
Vanness *v.* Shettler ... 157
*Watson *v.* Stevens *et al* ... 1884
Prior patent, *ex parte* Nash ... 159
*Prior use, Boyd *v.* Cherry ... 160
*Process and apparatus, Boyd *v.* Cherry ... 160
Process and product, *ex parte* Hines ... 576
*Kilbourne *et al v.* W. Bingham Company ... 577
Process of and apparatus for the treatment of saccharine solutions, *ex parte* Raeymaeckus ... 1749
*Process of manufacturing carbon conductors for incandescent electric lamps, United States Electric Lighting Company *v.* Edison Lamp Company ... 1610
*Property rights, Lee *v.* Pillsbury *et al* ... 1752
*Public appreciation as evidence of invention, Watson *v.* Stevens *et al* ... 1884
Public use or sale, *ex parte* Schilling ... 160
Ex parte Shettler ... 158
*Smith & Davis Manufacturing Company *v.* Mellon ... 1480
*United States Electric Lighting Company *v.* Edison Lamp Company ... 1610
Reduction to practice, Eckerson *v.* Cox ... 437
Morford *v.* Carpenter ... 437
Smith *v.* Eley ... 1883
Vanness *v.* Shettler ... 157
Refundment of fees, *ex parte* Leeson & Co ... 297
*Reissues, Electrical Accumulator Company *v.* New York & Harlem Railroad Company ... 297
Ex parte Stanley ... 735
Renewal of applications, *ex parte* Raeymaeckus ... 1749
Reservation clause, *ex parte* Nash ... 159
Roll-holding photographic apparatus, *ex parte* Houston ... 1609
*Rubber tires for wheels, Overman Wheel Company *v.* Elliott Hickory Cycle Company ... 1478
Scope of patent, Challoner *v.* Perkins ... 296
*Secondary batteries, Electrical Accumulator Company *v.* New Yrok & Harlem Railroad Company ... 297
†Secretary of the Interior, *ex parte* Noakes ... 575
*Seed separators, Lee *v.* Pillsbury *et al* ... 1752
Shingle-sawing machine, Challoner *v.* Perkins ... 296
Society-badge, *ex parte* Finck ... 157
Specifications, what they may contain, *ex parte* Johnston ... 295
*State of the art, Masten *v.* Hunt *et al* ... 1886
Stipulation as to manner of taking testimony, Raffard *v.* de Ferranti ... 439
Stove-polishing mitten and dauber, *ex parte* Shepard ... 575
*Suits for infringement, Consumers' Gas Company of Danville *v.* American Electric Construction Company, Limited ... 738
*Stilwell & Bierce Manufacturing Company *v.* S. N. Brown & Co ... 1191
*Technical terms, Lee *v.* Pillsbury *et al* ... 1752
*Pope Manufacturing Company *v.* Warwick Cycle Manufacturing Company ... 1478
*Ripley *v.* Elson Glass Company ... 298
*Watson *v.* Stevens *et al* ... 1884
Testimony in foreign countries, how taken, Raffard *v.* de Ferranti ... 439
Testimony taken abroad, Hall *v.* Latta ... 736
Trade-mark registration, *ex parte* Leeson & Company ... 297
*Trade-marks, Cuervo *v.* Jacob Henkell Company *et al* ... 440
Ex parte National United States Stamp Delivery Company ... 893
Ex parte Schotten & Co ... 576
Sanche *v.* Electrolibration Company ... 1189
*Vintschger *et al* ... 441
Trade-marks, foreign applicant, *ex parte* Haggenmacher ... 438
Trade-marks, what is not registrable, *ex parte* Kuppenheimer Brothers ... 439
Tunneling-machines, *ex parte* Stanley ... 735
Two years' limit, *ex parte* Raeymaeckus ... 1749
*Type-writing machine, Remington Standard Type-Writer Manufacturing Company *et al. v.* Bailey ... 440
*Utility, Electrical Accumulator Company *v.* New York & Harlem Railroad Company ... 297
*Valid patent, Boyd *v.* Cherry ... 160
Valve-seat, *ex parte* McGowan ... 735
*Valves for pneumatic pipes or tubes, Campbell Printing-Press & Manufacturing Company *v.* Manhattan Railway Company ... 894
*Vapor-stoves, Marsh *v.* Quick Meal Stove Company ... 1056
Velocipede, Hall *v.* Latta ... 736
*Void patent, Smith & Davis Manufacturing Company *v.* Mellon ... 1480
*Young *et al. v.* Baltimore County Hedge and Wire Fence Company ... 1613
Water-meter, *ex parte* Nash ... 159
Withdrawal of case from issue, *ex parte* Nash ... 159
Ex parte Schilling ... 160
Wrapping-machine, *ex parte* Schilling ... 160

DIGEST OF DECISIONS

OF THE

COMMISSIONER OF PATENTS

AND OF

UNITED STATES COURTS

IN THE MATTER OF

PATENTS, TRADE-MARKS, &c.

OFFICIAL GAZETTE—July-September, 1892.

DIGEST OF DECISIONS.

[Decisions of the United States courts are indicated by an asterisk (*); of the Secretary of the Interior by a dagger (†), and the opinion of the Attorney-General by a section-mark (§).]

ABANDONMENT.

ABANDONED APPLICATION—REVIVAL OF.

The abandoned application of a foreign applicant will not be revived upon a showing that the two years' limit was allowed to expire without action solely through the inadvertence of the associate attorney's clerk.

[*Ex parte* Raeymaeckus, 1749.

AMENDMENTS TO PRELIMINARY STATEMENT.

(See Preliminary Statement.)

ANALOGOUS USE.

(See Invention, 1.)

ANSWER TO BILL.

(See Injunction, 2.)

ANTICIPATION.

(See Particular Patents, 1, 2, 15.)

APPEAL TO THE COMMISSIONER.

(See Interference, 8.)

APPEAL TO THE EXAMINERS-IN-CHIEF.

PRACTICE—COURSE OF APPEALS.

Where an applicant who has been in interference seeks, after a decision of priority in his favor, to amend his claims, and the Examiner rejects his amendment as covering matter which applicant has claimed too late, *Held* that the question thus raised is one which should be decided by the Examiners-in-Chief on appeal before it comes to the Commissioner.

[*Ex parte* Woodward, 1052.

APPLICATIONS.

(See Division of Application; Drawings; Specifications.)

ASSIGNMENT OF TRADE-MARKS.

(See Trade-Marks, 7.)

ATTORNEY.

(See Abandonment.)

BILL IN EQUITY.

(See Suits for Infringement, 5.)

INFRINGEMENT—PLEADING—DEMURRER.

A bill which sets forth a patent for a "process" of making furniture-nails and then alleges that defendant, "in infringement of the aforesaid Letters Patent," did wrongfully "make, use, and vend to others to be used furniture-nails embracing the improvement set forth and claimed" in said patent, *Held* bad on demurrer as not alleging an infringement of the process.

[*American Solid Leather Button Company v. Empire State Nail Company, 1609.

BOND.

INFRINGEMENT—WHEN BOND WILL NOT BE REQUIRED OF COMPLAINANT AS A CONDITION OF PRELIMINARY INJUNCTION.

Where a defendant has been guilty of bad faith toward a complainant in an infringement suit, he is not equitably entitled to ask a bond from complainant as a condition to the granting of a preliminary injunction, and the court will waive the requirement of bond where the record discloses proof of such a state of facts.

[*Pasteur Chamberland Filter Company *et al.* v. Funk *et al.*, 1479.

CONSTRUCTION OF RULES.

(See Interference, 2, 6; Petition to Commissioner; Rejected Claims; Testimony Taken in Foreign Countries.)

CONSTRUCTION OF SPECIFICATIONS AND PATENTS.

(See Designs, 1, 2; Infringement, 1, 5, 6; Interference, 7; Invention, 5, 6; Particular Patents; Scope of Patents.)

1. INFRINGEMENT—ACTIONS AT LAW—JURY TRIALS.
The question of the construction of the claims of a patent is the province of the court and does not rest with the jury.
[*Marsh *v.* Quick Meal Stove Company, 1056.

2. CONSTRUCTION OF CLAIMS.
Where a claim of a patent reads "In a gasoline-stove, etc.," and then enumerates a number of other elements, the words "In a gasoline-stove" will be understood as including the well-known essential elements of such stoves, and to enable the plaintiff to recover the other elements of the claim or their substantial equivalents must be all found in the defendant's stove.
[*Id.

3. SAME.
Where the claim of a patent contains as an element a commingling-chamber capable of accomplishing two purposes, which are fully set forth in the patent (such chamber being in addition to the commingling chambers common to all gasoline-stoves,) and the defendant's stoves have only the ordinary commingling-chambers, *Held* that the combination of the claim is not present in defendant's stove.
[*Id.

4. GENERIC INVENTIONS.
A patent for a primary invention will not receive a liberal or broad construction where the invention is of a very low order.
[*Dederick *v.* Seigmund, 1193.

5. SAME.
It is true that when the invention is of a primary character a larger latitude is given to the equivalents which the patent includes than if the invention was a modification of a well-explored art; but this doctrine cannot be applied to primary invention of low order.
[*Id.

6. PIONEER INVENTORS.
The patentee conceived the idea of gradually stopping the backward movement of the plunger in a rebound baling-press by applying a friction-brake. *Held* that as friction-brakes are very old it was a low order of invention to apply such a brake to a baling-press, and a patent which with difficulty maintains its right to patentability must receive a narrow construction.
[*Id.

7. CONSTRUCTION OF PATENTS.
It is the duty of courts to construe a patent by a reference to the language of its claims and an examination of the specifications and drawings accompanying the same.
[*Norton *et al. v* Jensen *et al*, 1326.

8. ORIGINAL INVENTORS—INFRINGEMENT.
Where an invention is of a primary character and stands at the head of an art, it is entitled to a liberal construction of its claims and all persons who make devices or machines operating on the same principle and performing the same functions by analogous means or equivalent combinations, even though the machine may be an improvement of the original and patentable as such, are to be treated as infringers.
[*Id.

9. COMBINATION CLAIM—EQUIVALENTS.
When a combination patent covers a new arrangement of old elements, producing a new and useful result, the same may be protected by invoking the doctrine of equivalents, as against the substitution for any particular element of a different device known at the date of the patent as a means of performing similar work; and the fact that the substitute performs some additional functions does not prevent it from being an infringement.
[*Id.

10. A CHANGE MADE WITHIN THE TWO YEARS, WHICH IS ONLY A "PREFERABLE FORM," WILL NOT SAVE A PATENT OTHERWISE VOID FOR PUBLIC USE.
A change made in the bet bottoms within the two years prior to the application for the patent, but which is described only as a preferable form, will not save the patent.
[*Smith & Davis Manufacturing Company *v.* Mellon, 1480.

11. CONSTRUCTION OF CLAIM—INOPERATIVE CLAIM.
The words "substantially as specified" in the claim of a patent are to be given effect, and where the claim read literally would be inoperative their effect is to include in the claim elements or devices contained in the specification that are wanting in the claim.
[*Lee *v.* Pillsbury *et al.*, 1752.

12. FACTS WHICH TEND TO NEGATIVE UTILITY.
Where a complainant was an extensive manufacturer, engaged in the special trade to which the patent sued upon relates, yet testified that he had held the patent for seven years but had never put upon the market a chair constructed to conform to it, *Held* of great weight in determining the question of "invention" from the standpoint of utility.
[*Waite *v.* Robinson *et al.*, 1888.

CONSTRUCTION OF STATUTES.

(See Notaries Public in Foreign Countries; Suits for Infringement, 4; Trade-Marks, 4.)

CONTRACTS.

(See Suits for Infringement, 1, 5.)

DAMAGES AND PROFITS.

(See Infringement, 7; Suits for Infringement, 1, 2.)

1. LICENSEE—COVENANT.
A licensee who covenants not to dispute the validity of a patent under which he is licensed will not be permitted to do so; but the burden is nevertheless on the licensor to show that the licensee has operated under his license, and in the absence of such proof the licensor cannot recover.
[*Marsh *v.* Quick Meal Stove Company, 1056.

2. SAME—DAMAGES—GENERAL EVIDENCE.
Where there is no license-fee and nothing to show that the patentee puts his machine upon the market, he must furnish other evidence to enable the jury to come to a proximate amount of the damage which he has sustained by the infringement, and for this purpose general evidence may be resorted to.
[*Lee *v.* Pillsbury *et al.*, 1752.

3. SAME.
The actual damages suffered by plaintiff may be arrived at by evidence showing the value of that which defendants have used, the utility and advantage of the invention of the plaintiff over the old modes or devices that have been used for working out similar results, and the saving effected thereby.
[*Id.

4. NOMINAL DAMAGES.
Plaintiff can recover only nominal damages for the infringement of an impracticable machine or if he fails to show actual advantage to defendants by the use of his machine.
[*Id.

5. PROOF OF DAMAGES—MERE OPINION.
Plaintiff must prove the actual damages directly or show such facts as will enable the jury to ascertain the amount, and mere opinion as to the amount of that damage cannot be considered.
[*Id.

6. MEASURE OF DAMAGES.
The proper measure of damages for infringement of a patent is an indemnity to the plaintiff for the loss sustained by the infringement.
[*Id.

7. MEASURE OF DAMAGES—WHEN CALCULATED ON WHOLE MACHINE.
When a patent covers only certain features of a machine and not the entire machine, if the patented features constitute the essential features of the machine and give it its merit, without which the machine would be valueless and unsalable, the damages and profits for infringement must be calculated on the basis of the entire machine and not merely on the patented features alone.
[*Tatum *et al v.* Gregory *et al.*, 1753.

8. SAME—SAME.
To entitle a patentee to recover as damages for infringement the profits he would have realized if he had made the sales which were made by the infringer, he must show that he had the ability to make and that he would have made said sales but for the infringement.
[*Id.

DATE OF FILING APPLICATIONS.

(See Priority of Invention, 3.)

DEFENSE.

(See Infringement, 4; Infringement by a Government Official; Suits for Infringement, 1.)

DELAY.

(See Priority of Invention, 5.)

DEMURRER.

(See Bill in Equity; Suits for Infringement, 4.)

DEMURRERS TO THE VALIDITY OF PATENTS.
The practice of permitting demurrers on the merits of the invention involved discussed and discouraged.
[*Indurated Fibre Industries Company *et al. v.* Grace *et al.*, 896.

DESCRIPTION.

(See Specifications.)

DESIGNS.

(See Infringement, 1, 2, 3; Particular Patents, 8, 9.)

1. DESIGN PATENTS—RANGE OR SCOPE OF CLAIM DETERMINED BY THE COURTS.
The range or scope of a design patent is to be determined by the courts and not by the Patent Office. It is therefore not proper for the Office to issue a design patent which on its face purports to cover an indefinite variety of modifications which may or may not be within the proper scope of the claim, as that matter shall be determined by the courts.
[*Ex parte* Finck, 157.

2. SAME—ILLUSTRATION OF NON ESSENTIAL FEATURES.
Where it appeared from the specification that certain words and figures shown on the face of the design in the drawing did not constitute an essential feature of the design, *Held* that the patent should not be permitted to seem to make them so, and that they should be erased.
[*Ex parte* Requa, 295.

3. SAME—EVIDENCE—METHOD OF PRODUCING.
Although the suit does not involve the method of producing the result, yet in considering the question of anticipation the court may properly take into consideration the fact that the patentee invented the method of making articles of glassware having a "blown" body and a "pressed" neck thereby rendering possible the raised ornamentation of the neck in the patent.
[*Ripley *v.* Elson Glass Company, 298.

4. SAME—LICENSE—WHAT CONSTITUTES.
Where a manufacturer of mantels purchased two mantels of a design not then patented, for the usual price and for the avowed purpose of using them as copies in his business, *Held* equivalent to the consent on the part of the inventor that the manufacturer might use the design and that, having subsequently obtained a patent therefor, he could not maintain a suit for infringement against the manufacturer.
[*Anderson *v.* Eller *et al.*, 740.

5. DESIGNS—WORDS AND FIGURES (NUMERALS) APPEARING THEREON.
Where certain words and figures (numerals) appeared on the illustration of a design, *Held* that they should be erased if they form no part of the design. *Held*, further, that the Examiner should reject if such words, etc., are a part of the design, provided he is of the opinion that words and figures (numerals) may not form part of the subject-matter of a design patent.
[*Ex parte* Van Slyke, 893.

DILIGENCE.

(See Construction of Specifications and Patents, 12; Priority of Invention, 1, 2, 5, 6.)

DIVISION OF APPLICATION.

1. PRACTICE—DIVISION.
On appeal from Examiner's decision requiring division between claims for a printing block or plate and the process of making it, *Held* that no wider range of search being required under the present practice of the Office for both groups of claims than for one of them division should not be required.
[*Ex parte* Hines, 576.

2. SAME.
Where on a question of division applicant alleges that his article cannot be produced except by his process, and the Examiner says it can, without pointing out the mode, the Examiner's position is not tenable.
[Id.

DIVISIONAL APPLICATIONS.

DIVISIONAL APPLICATIONS—SUBJECT-MATTER OF.
Where an alleged divisional application describes and claims something different from what was disclosed in the original application, it is not properly a division of such original application.
[*Ex parte* Hunter, 295.

DRAWINGS.

(See Construction of Specifications and Patents, 7; Designs, 2, 5; Priority of Invention, 4; Public Use or Sale; Specifications, 2.)

SUBSTITUTE DRAWINGS—CANCELLATION REQUIRED WHEN SUPERFLUOUS AND UNCALLED FOR.
An applicant of his own motion filed a substitute sheet of drawings, which was entered as a part of the application. The Examiner subsequently held it to be unwarranted by the specification, and required cancellation. On appeal, *Held* that while the better course would have been to refuse to enter the new drawing until after the final determination of the question as to its admissibility, yet, it being clear that the drawing was uncalled for and superfluous, the requirement of cancellation must be sustained.
[*Ex parte* Shepard, 575.

(See Petition to Commissioner.)

EXPERTS.

EXPERT EVIDENCE.
The opinions of experts are admissible in evidence in patent cases; but they are not conclusive upon the courts.
[*Norton *et al. v.* Jensen *et al.*, 1326.

FEES IN TRADE-MARK CASES.

FEES PAID BY MISTAKE—PAYMENT UNDER EXISTING LAW AND RULES NOT A MISTAKE.
A filing fee of ten dollars having been paid on an application for registration of a Trade-Mark in 1879, under the law and rules in force at that time, *Held* that it was not paid under a mistake and that it could not properly be refunded.
[*Ex parte* Leeson & Company, 297.

FIRST AND ORIGINAL INVENTOR.

SUGGESTIONS BY EMPLOYÉ.
Where one has conceived of an invention and discloses the essence of it to another whom he employs to develop and perfect it, suggestions from the employé in the course of experiments and dependent upon the main idea will not ordinarily give the employé any rights as an inventor. (Citing *O'Reilly v. Morse*, 15 How., 62 and *Agawam Co. v. Jordan*, 7 Wall., 583.)
[Webster *v.* Parkhurst and Ham, 1325.

GRANT OF LETTERS PATENT EVIDENCE OF INVENTION.

(See Invention, 6.)

GOVERNMENT USE OF PATENTED INVENTION.

(See Infringement by Government Officials; Rights of Patentees.)

INADVERTENCE.

(See Reissues.)

INFRINGEMENT.

(See Bill in Equity; Bond; Construction of Specifications and Patents, 1, 2, 3, 8, 9; Damages and Profits; Injunction; Interference, 7; Particular Patents, 1, 3, 7; Rights of Patentees; Suits for Infringement; Trade-Marks, 7.)

1. DESIGN PATENT — INFRINGEMENT OF — INTERPRETATION OF WORDS.
The words of the claim and specification which refer to the body of the vessel as "globe-shaped" or "spherical" must be taken in their ordinary rather than their mathematical signification, and infringement cannot be avoided by merely elongating the body so as to render it an ovoid rather than a sphere or globe.
[*Ripley v. Elson Glass Company, 298.

2. SAME—TEST OF INFRINGEMENT—GENERAL RESEMBLANCE.
In determining whether a design patent is infringed the test is whether there is a substantial similarity in appearance not to the eye of the expert, but to that of the ordinary observer giving such attention as would ordinarily be given by a purchaser of the article bearing the design. [*Id.

3. SAME—PENALTY.
Where the infringement of a design patent is deliberate and intentional, the court will impose upon the defendant the penalty of $250 provided for by act of February 4 1887.
[*Id.

4. FACTS RATHER THAN THEORIES CONTROL IN THE CONSTRUCTION OF PATENTS.
In an action for infringing a patent demonstrable facts are the decisive factor in determining the actual bearing upon each other of the patents under consideration, and a defense which rests upon a mere theory as to the philosophy of operation of the complainant's device will not be considered by the court when this theory is negatived by the history of the art and by the practical working of the device in question.
[*Stilwell & Bierce Manufacturing Company v. S. N. Brown & Co., 1191.

5. WHAT IS AN INFRINGEMENT.
An infringement takes place whenever a party avails himself of the invention of the patentee without such a variation as constitutes a new discovery
[*Norton *et al.* v. Jensen *et al*, 1336.

6. INFRINGEMENT OF COMBINATION CLAIM.
There cannot be any infringement of a combination claim unless every element of the combination or a mechanical equivalent of an omitted element is used. [*Id.

7. PROPERTY RIGHT IN PATENT—DAMAGES FOR INFRINGEMENT
The exclusive use granted by a patent is a property right, and a plaintiff in an action at law for infringement may recover actual damages therefor.
[*Lee v. Pillsbury, 1752.

INFRINGEMENT BY GOVERNMENT OFFICIALS.

INFRINGEMENT BY A PUBLIC OFFICER IN COURSE OF OFFICIAL DUTY.
Where an officer of the Government, having been sued for the infringement of patents in his official employment, pleads to the jurisdiction and alleges that the Government, being the real defendant, is a necessary party, *Held* that the plea must be overruled and that public employment is not a sufficient defense.
[*Head v. Porter, 1052.

INJUNCTION.

(See Bond; Trade-Marks, 3.)

1. PRELIMINARY INJUNCTION AGAINST A SELLING AGENT.
A complainant may have a preliminary injunction against an infringing defendant who is a mere selling agent where the patent having nearly expired the court might refuse it against a manufacturer giving proper security.
[*Remington Standard Type-Writer Manufacturing Company *et al.* v Bailey, 440.

2. INJUNCTION.
Where in a suit against a railroad company for infringement the answer admits the validity of the patent, complainant's title thereto, and the infringement, the company cannot avoid an absolute injunction by averring that the invention is of trifling value and offering to submit to a decree for nominal past damages and to an injunction against the adoption of any more of the patented articles on condition of the undisturbed use of those already upon its trains.
[*Campbell Printing-Press & Manufacturing Company v. Manhattan Railway Company, 894.

3. SAME.
On the question as to whether an injunction should issue it is immaterial that the owner of the patent has never made, used, or sold any of the patented articles or licensed any one to do so, especially when it appears that he has not done so because defendant and other railroad companies, being unwilling to pay the price asked by him, adopted his invention without leave, expecting to pay a less sum by way of damages for infringement. [*Id.

4. SAME—HARDSHIP.
Defendant cannot escape the injunction on the ground of hardship to itself or to the public, since the decree may provide for a gradual removal from its cars of the patented article, so as not to cause the withdrawal from service of a large amount of rolling-stock at any one time, and for that purpose the amount of rolling-stock required and available for its business may be proved by affidavits or the oral examination of its superintendent or master mechanic. [*Id.

5. PRELIMINARY INJUNCTION—RULE.
A motion for a preliminary injunction in advance of any adjudication by the courts or an adjudication by the Patent Office as to priority will not be allowed unless the case is entirely clear and unless irrevocable injury is to result from withholding the injunction
[*Iron-Clad Manufacturing Company, Incorporated, *v.* Jacob J. Vollrath Manufacturing Company, Limited, *et al*, 1480.

INTERFERENCE.

(See Appeal to the Examiners-in-Chief; Preliminary Statements; Priority of Invention, 1, 2, 3, 6; Testimony Taken in Foreign Countries.)

1. PRACTICE—INTERFERENCE—REDUCTION TO PRACTICE.
As between interference contestants, he who was last to conceive of an improvement is not entitled to take a patent therefor over him who was first to conceive, unless by reason of the latter's delay his opponent becomes the first to reduce to practice.
[Eckerson *v.* Cox, 437.

2 INTERFERENCE—TESTIMONY IN FOREIGN COUNTRIES—HOW TAKEN.
Testimony cannot properly be taken in foreign countries otherwise than as prescribed by Rule 158, (3) unless this procedure be waived *by stipulation of the parties* [Rule 158 (5).]
[Raffard *v.* de Ferranti, 430.

3. NO APPEAL LIES TO THE SECRETARY OF THE INTERIOR FROM THE COMMISSIONER'S REFUSAL TO PERMIT THE AMENDMENT OF A PRELIMINARY STATEMENT.
A decision of the Commissioner of Patents denying an interfering party's motion to amend his preliminary statement is a judicial rather than a ministerial act, and consequently one over which the Secretary of the Interior has no appellate jurisdiction. (Citing *Petithomme v. Bedbury*, 52 O. G. 605.)
[*Ex parte* Noakes, 575

4. PRACTICE—INTERFERENCE—ISSUE.
In an interference where the senior party claimed "a curved-spring seat-support" and his application disclosed a spring support curved at both ends, *Held* that the junior party, showing a spring-support curved at one end only, was properly within the issue and satisfied its requirements.
[Garford *v.* Edwards, 803.

5. PRACTICE—INTERFERENCE
Where an applicant appealed from the refusal of an Examiner to inform him of the subject-matter of the issue in a proposed interference in order that he might amend so as to include the issue in his claims, *Held* that it is not the practice of the Office to suggest claims to an applicant in order to create possible interferences
[*Ex parte* Weeden, 1191.

6. PRACTICE—RULES 122 AND 124.
Upon a motion to dissolve an interference upon the ground of irregularity in declaring the same the Primary Examiner is not at liberty to decide the question of patentability
[Hutt and Phillips *v.* Foglesong, 1477.

7. FUNCTION OF THE PATENT OFFICE AND COURTS IN CERTAIN CASES.
The province of the Patent Office in interference cases is to determine the issue of priority, the construction of patents being for the courts to determine when the occasion arises upon infringement proceedings
[*Iron-Clad Manufacturing Company, Incorporated, *v.* Jacob J. Vollrath Manufacturing Company, Limited, *et al.*, 1480.

8. INTERFERENCE—MOTIONS FOR DISSOLUTION.
A question involving the right of an applicant to make the claim in interference will not be passed upon by the Commissioner on appeal from the decision of the Primary Examiner upon a motion to dissolve the interference.
[Sweeney *v.* Jaros, 1883.

INVENTION.

(See Particular Patents, 7, 13.)

1. CERTAIN FEATURES NOT SHOWING INVENTION.
The use of a single sheet of metal and the absence of "joint, seam, or interior angle" do not confer patentability, since these features are old in analogous devices.
[*Kilbourne *et al.* v. W. Bingham Company, 577.

2. SAME SUBSTITUTION OF MATERIALS.
The use of wrought iron or steel in lieu of cast metal is a mere substitution of materials and is not patentable, notwithstanding the superior results obtained. [*Id.

3. PATENTABLE NOVELTY—INDEXED LETTER FILES.
An applicant for a patent for an improvement in letter-files already held a patent for an indexed letter-file consisting of a series of perforated index-sheets arranged at one end to hinge and slide upon an upright rod and being free at the other end to permit of their being lifted from their position. The perforations in the sheets were circular and little larger than the rod itself. *Held* that an improvement which consisted merely in making these perforations elliptical to admit of freer action upon the rod does not constitute patentable invention.
[*Odell, administrator, *v.* Commissioner of Patents, 580.

4. PATENTABLE IMPROVEMENT—WHAT IS.
Whenever in an art, machine, manufacture, or composition of matter a change, however apparently minute, is made which is not obvious and results in marked advantages, a patentable invention has been produced; and when such a change has remained unmade for a considerable time, in spite of inducements to make it by reason of its value, that is evidence approaching the conclusive that change was not obvious.
[*Ex parte* Champney, 1051.

5. INVENTION, FACTS WHICH MAY BE CONSIDERED IN DETERMINING THE QUESTION OF—PUBLIC FAVOR
In determining what constitutes invention and what is a "new and useful result," a "new function," or a "new sphere of action" the court will give weight to facts showing (1) that the improvement, though desired for years, was not secured until brought out by the patentee; (2) that the product of the improved machine or process displaced wholly or in a great degree prior products; (3) that while the prior products had been unsuitable from lack of cheapness or adaptation the new product answered all reasonable requirements.
[*Watson *v.* Stevens *et al.*, 1884.

6. SAME—PRESUMPTION OF PATENTABLE INVENTION ARISING FROM A GRANT OF LETTERS PATENT.
Where the question of invention is closely balanced, the presumption in favor of the patentee arising from his recognition as an inventor by the Patent Office will incline the court to sustain his patent. [*Id.

NEW MATTER.

(See Divisional Applications.)

NOTARIES PUBLIC IN FOREIGN COUNTRIES.

OATHS—WHO MAY ADMINISTER.
A notary who is not authorized by the laws of his country to administer oaths or take affidavits lacks the requisite authority to administer the oath required by Revised Statutes, section 4892.
[§Opinion of Attorney-General, 1481.

OATH.

(See Notaries Public in Foreign Countries.)

OATHS IN TRADE-MARK CASES.

(See Trade-Marks, 5.)

OLD DEVICES.

(See Invention, 1; Particular Patents, 17.)

PARTICULAR PATENTS.

1. CHERRY—MILK-CANS—INFRINGEMENT.
The patent is infringed by a milk-can manufactured under the Cherry patent of September 23, 1879, for an improvement in milk-pans, which describes a substantially similar apparatus and purports to accomplish the same ends in substantially the same way, and infringement cannot be avoided on the theory that the Cherry patent is for a device while the Cooley patent is for a process, especially when it appears that the Cherry apparatus was sold with directions for using it according to the Cooley process.
[*Boyd *v.* Cherry, 160.

2. COOLEY—MILK-CANS—ANTICIPATION—PRIOR USE.
The Cooley patent of February 20, 1877, covers "a new process of obtaining cream from milk," and, as stated by the specification, "consists, mainly, in water-sealing the milk within the vessel containing it, and also in submerging such vessel in water, and in apparatus hereinafter described," the object being not only to exclude dust and dirt, but also to prevent the absorption of deleterious gases or odors from the air and the exposure to sudden changes—electric, thermal, and otherwise—of the atmosphere. *Held* that the patent is valid, although other persons had been in the habit of occasionally submerging vessels containing milk, as they never proceeded so far as to discover the importance of the method or the valuable results achieved by the patentee. [*Id.

3. GEHRT—BALING-PRESSES—INFRINGEMENT.
The second claim of the Gehrt patent, No. 232,400, September 21, 1880, for improvement in baling-presses, covers, broadly, the application of a friction-brake to retard the backward movement of the plunger of the press. *Held* that the claim must be limited to the means shown and described in the patent—to wit, a set-screw for adjusting one side of the baling-chamber—and is not infringed by an eccentric upon the top of the press and upright rods which are connected to the eccentric and which bear against small hinged brakes.
[*Dederick *v.* Seigmund 1193.

4. ILLSTON - BICYCLES—INFRINGEMENT.
The claims of Letters Patent No. 245,071, to George Illston, August 2, 1881, for improvements in bicycles, must, in view of the prior state of the art, be limited to the specific forms of devices therein described, and, the claim being for a dovetail grooved seat, the words of the specification "the slide carrying the handle-bar and the seat on the head may have a figure other than the dovetail figure represented" cannot be construed to include other and different forms of adjustable mechanism and must be held to include at most a modification of the dovetail form.
[*Pope Manufacturing Company *v.* Warwick Cycle Manufacturing Company *et al.*, 1478.

5. KILBOURNE—PROCESS AND ARTICLE OF MANUFACTURE—METAL SINKS.
Claim 1 of Letters Patent No. 240,146, issued April 12, 1881, to James Kilbourne, is for "the herein-described sink, made of a single sheet of wrought steel or iron, without joint, seam, or interior angle, substantially as set forth," and the specification sets forth that the invention consists of a "sink swaged or struck up from a single sheet of wrought iron or steel, without joint, seam, or interior angle." The method of construction not being further referred to in the patent, *Held* that the patent does not cover a process.
[*Kilbourne *et al.* *v.* W. Bingham Company, 577.

6. MASTEN FIRE-CRACKERS — INFRINGEMENT — CONSTRUCTION OF COMBINATION CLAIM.
In Letters Patent No. 321,833, to Cornelius E. Masten, July 7, 1885, for a fire-cracker, claim 1 is for "the match B and fuse C, in combination with the solid plug D and body A, substantially as set forth." *Held*, in the absence of any description of the prior state of the art in the specification, and since applicant merely states that his invention produces a more desirable article than is now in general use, the court cannot hold that the match B was not an essential element, since the presumption of novelty applies to the combination as a whole.
[*Masten *v.* Hunt *et al.*, 1886.

7. NORTON—CAN ENDING AND HEADING MACHINES—INFRINGEMENT.
Claims 1 and 2 of Letters Patent No. 267,014, to Edwin Norton, November 7, 1882, for a machine for putting on the ends of fruit and other cans, and claims 6 and 7 of Letters Patent No. 274,363, to Norton and Hodgson, March 20, 1883, for a can-ending machine, and claim 14 of Letters Patent No 294,065, to Norton and Hodgson, February 26, 1884, for a can ending and seaming machine, and Letters Patent No. 322,060, to Edmund Jordan, July 14, 1885, being an improvement on the original Norton machine, sustained and *Held* infringed by the "Jensen machine" made under Letters Patent No. 376,804, to Mathias Jensen, January 24, 1888, for a can crimper and capper. Letters Patent No. 307,197, to Edmund Jordan, October 28, 1884, and No. 307,491, to Norton and Hodgson, November 4, 1884, for machines of the same class, *Held* not infringed.
[*Norton *et al.* *v.* Jensen *et al.*, 1326.

8. PAINE—DESIGN FOR CHAIR-BACKS—NOVELTY.
Design Patent No. 13,405, issued November 14, 1882, to Henry H. Paine, for a design for common round bow-back chairs, consisting in the upper part of the bow and rounds provided with a sheet of suitable material, as wood, bent to conform to the curvature of the bow-back and rounds, leaving the rounds between the sheet and seat exposed, is void for want of novelty. (Affirming 46 Fed. Rep., 189.)
[*Paine *v.* Snowden, 737.

9. RIPLEY—DESIGN—ANTICIPATION—BOTTLES.
Design Patent No. 17,243, issued April 5, 1887, to Daniel C. Ripley, for footed bottles and jars consisting of a spherical body, a figured ring-neck covering a zone of the body and having a raised pattern on its entire surface, was not anticipated by certain designs having a general resemblance thereto in shape, but lacking the raised ornamentation of the neck.
[*Ripley *v.* Elson Glass Company, 298.

10. ROBB—EDGERS—ESSENTIAL FEATURES.
Claim 1 of Letters Patent No. 227,926, dated May 25, 1880, and claim 1 of Letters Patent No. 290,358, dated December 18, 1883, both granted to J. A. Robb for improvements in edgers, embrace and cover the essential features of the patented machine and give it its merit, without which features it would be valueless and unsalable.
[*Tatum *et al.* *v.* Gregory *et al.*, 1753.

11. SMITH—BED-BOTTOMS—PUBLIC USE.
Letters Patent No. 269,242, issued December 19, 1882, to John G. Smith, is void for the reason that the bed-bottoms were on sale more than two years before the application for the patent.
[*Smith & Davis Manufacturing Company *v.* Mellon, 1480.

12. STILWELL—FEED-WATER HEATERS AND PURIFIERS—INFRINGEMENT.
Letters Patent No. 274,048, to Edwin R. Stilwell, dated March 18, 1883, for a feed-water heater and purifier, sustained and *Held* infringed by purifiers made under Letters Patent No. 318,112, to John J. Hoppes, dated May 19, 1885.
[Stilwell & Bierce Manufacturing Company *v.* S. N. Brown & Co., 1191.

13. SWAN—ELECTRIC ACCUMULATORS.
Reissued Letters Patent No. 11,047, granted to the Electrical Accumulator Company, as assignee of Joseph Wilson Swan, December 17, 1889, claiming a perforated plate for secondary batteries, having the perforations extending through the plate and the active material packed in the perforations only, cover a patentable invention.
[*Electrical Accumulator Company *v.* New York & Harlem Railroad Company, 297.

14. SAME—UTILITY.
The fact that before the date of this invention Professor Eaton had packed active material in perforations extending through the plate, at the same time covering the surfaces thereof, and that Mr. Brush had packed it into grooves in the plate without covering the surfaces, does not show a want of invention in the idea of confining it entirely to perforations extending through the plate, since this apparently slight change avoided the difficulties before encountered and produced an electrode which has to a great extent superseded all others and has become the electrode of commerce. [*Id.

15. WESTON—CARBON CONDUCTORS FOR INCANDESCENT ELECTRIC LAMPS.
Letters Patent No. 306,980, October 21, 1884, to Edward Weston, for an improvement in the process of manufacturing carbon conductors for incandescent electric lamps, *Held* anticipated by Letters Patent No. 211,262, issued January 7, 1879, to William E. Sawyer and Albon Man, for the same invention.
[*United States Electric Lighting Company *v.* Edison Lamp Company, 1610.

16. SAME—PRIOR PUBLIC USE.
Independently of the question as to priority of invention, the Weston patent is invalid because of two years' public use, prior to his application, by Sawyer and Man in their workshop in New York city. [*Id.

17. YOUNG—LIMITATION OF CLAIM—HEDGE FENCES.
Letters Patent No 254,085, to Wesley Young, February 21, 1882, for an improvement in planked hedges, *Held* to be for a wire extending along the base of a hedge to prevent the passage of small animals, and further *Held* that the patent is void for want of patentability, it being old to use such a wire to keep the plants in position and to give the hedge increased lateral strength, and it being old to use a wire along the base of an ordinary fence to prevent the passage of small animals.
[*Young *et al.* *v.* Baltimore County Hedge and Wire Fence Company, 1613

PARTIES TO SUIT.

(See Suits for Infringement, 5.)

PATENTABILITY.

(See Invention.)

PATENTS.

(See Infringement, 7; Rights of Patentees; Scope of Patent.)

PETITION TO COMMISSIONER.

PRACTICE UNDER RULE 139 (a).
A decision by the Examiners-in-Chief affirming a rejection by an Examiner, subject to certain recommendations made by them, is such an affirmance of the Examiner's decision that a petition to the Commissioner asking "that a record decision affirming the patentability of the invention in issue may be entered" will not lie.
[*Ex parte* McGowan, 735.

PRACTICE IN THE COURTS.

(See Bill in Equity; Bond; Construction of Specifications and Patents, 1; Damages and Profits, 1; Demurrer; Experts; Infringement, 4; Infringement by Government Officials; Injunction; Suits for Infringement.)

PRACTICE IN THE PATENT OFFICE.

(See Appeal to the Examiners-in-Chief; Designs, 2; Division of Application; Interference; Model; Petition to Commissioner; Public Use or Sale; Withdrawal of Case from Issue, 1.)

PRELIMINARY STATEMENT.

(See Interference, 3.)

PRELIMINARY STATEMENT.
Omissions and inaccuracies in a preliminary statement directly chargeable to carelessness, indifference, or want of attention on the part of an applicant may not be removed by an amended preliminary statement. [Todd *v.* Campbell, 1884.

PRIORITY OF INVENTION.

(See First and Original Inventor; Interference, 1, 7.)

1. INTERFERENCE—PRIORITY OF INVENTION.
Where it is found that the senior party conceived of the invention in the latter part of 1888, then made a model exhibiting the substance of it, and then disclosed the improvement to others, and that he used reasonable diligence in reducing to practice, *Held* that he is entitled to prevail over the junior party, who relies upon a conception and a reduction to practice in August or September, 1889.
[Vanness *v.* Shettler, 157.

2. SAME—RULE AS BETWEEN CONTESTANTS WHEN ONE IS A PATENTEE AND THE OTHER AN APPLICANT.
When one of the contestants for priority has a patent for the invention in dispute and the other is an applicant for a patent, the latter, in order to prevail, must present a case both as to conception and as to reasonable diligence which does not admit of a reasonable doubt.
[Edison *v.* Swan, 158.

3. PRIORITY OF INVENTION—CLAIMS IN ISSUE—WHEN MADE AND BASIS THEREFOR.
P's date of filing being earlier than the date of conception proved by C, *Held* that P is the prior inventor, though the claims of the issue were not made by him until after the patent to C issued. *Held*, further, that P's application as originally filed contained sufficient basis for the claims in issue.
[Challoner *v.* Perkins, 296.

4. PRACTICE—EARLY SKETCHES AS EVIDENCE TO ESTABLISH DATE OF CONCEPTION—THEIR WEIGHT AS SUCH.
The fact that an applicant's rough sketch, introduced to corroborate him upon his alleged date of conception, shows a variation from the true proportions of the actual perfected invention will not necessarily impair its weight as evidence even though these proportions are an important feature of the patent.
[Morford *v.* Carpenter, 487.

5. DELAY IN REDUCTION TO PRACTICE—HOW ACCOUNTED FOR.
A delay of five months between conception and reduction to practice is satisfactorily explained by proof of applicant's limited means during that period. [Id.

6. INTERFERENCE—DILIGENCE IN REDUCTION TO PRACTICE.
In an interference between a patent and an application, where it appeared that E the patentee, delayed more than three years after his conception before reduction to practice, and that meanwhile S, the junior party, had disclosed his invention and made an actual reduction to practice in public, *Held* that E was non-diligent and priority awarded to S.
[Smith *v.* Eley, 1883.

PROCESS.

(See Particular Patents, 1, 2, 5.)

PATENTABLE PROCESS.
By "process" is meant the application or operation of some element or power of nature, or of one subject to another—as, for example, the art of tanning, dyeing, smelting ores, and the like. In such cases the invention consists in the application of old and well-known principles to new and useful purposes.
[*Ex parte* Boyd, 160.

PROPERTY RIGHTS.

(See Infringement, 7.)

PUBLIC APPRECIATION EVIDENCE OF INVENTION.

(See Construction of Specifications and Patents, 12; Invention, 5.)

PUBLIC USE OR SALE.

(See Construction of Specifications and Patents, 10; Particular Patents, 11, 16.)

PUBLIC USE OR SALE—PROPER SHOWING BY AFFIDAVITS.
Affidavits alleging public use or sale of an invention should by machine, model or drawing clearly show what the thing alleged to be in public use or on sale was, and the allegations should be as to specific acts, leaving the Office to determine the question whether they establish a public use or sale under the statute.
[*Ex parte* Shettler, 158.

REDUCTION TO PRACTICE.

(See Interference, 1; Priority of Invention, 1, 5, 6.)

REFUNDMENT OF FEES.

(See Fees in Trade-Mark Cases.)

REISSUES.

(See Particular Patents, 13.)

PRACTICE—ENLARGED CLAIM.
Where an applicant has by "inadvertence" claimed less than he was entitled to claim, he may have a reissue with enlarged claims. (Citing and quoting *Topliff* *v.* *Topliff et al.*, 59 O. G., 1257.)
[*Ex parte* Stanley, 735.

REJECTED CLAIMS.

PRACTICE—RULE 68.
After final rejection claims substantially different from those finally rejected cannot be admitted without the showing required by Rule 68.
[*Ex parte* Houston, 1609.

RENEWAL OF FORFEITED CASES.

(See Abandonment.)

RESULTS.

(See Construction of Specifications and Patents, 9; Invention, 2, 5.)

RIGHTS OF PATENTEES.

NATURE OF A PATENT-RIGHT.
The rights secured to a patentee under his grant from the Government are a form of property in the enjoyment of which he is entitled to protection against all trespassers, including the Government.
[*Head *v.* Porter, 1052.

SCOPE OF PATENT.

CAPABILITY OF USE OF INVENTION—KNOWLEDGE OF CAPABILITY.
The inventor of a machine is entitled to the benefit of all the uses to which it can be put, no matter whether he had conceived the idea of the use or not. (*Roberts* *v.* *Ryer*, 91 U. S., 150.)
[Chaloner *v.* Perkins, 296.

SECRETARY OF THE INTERIOR.

(See Interference, 8.)

SPECIFICATIONS.

1. ARGUMENTATIVE SPECIFICATION.
An applicant is entitled to state as specifically and categorically as he chooses the difficulties and troubles which are cured or ameliorated by his improvement, but he is not entitled to state such matters in a way that amounts to a recital of the history of the art as he understands it, combined with an argument as to the importance of the improvement.
[*Ex parte* Johnston, 295.

2. SPECIFICATION—PROLIXITY OF DESCRIPTIVE MATTER.
A specification comprising two separate descriptions of the same subject-matter of invention that are substantially alike, except that one contains references to the drawings, is unnecessarily prolix.
[*Ex parte* Kinney, 737.

STIPULATION.

(See Interference, 2.)

SUITS FOR INFRINGEMENT.

(See Bill in Equity; Bond; Construction of Specifications and Patents, 1; Damages and Profits, 1; Demurrer; Designs, 4; Experts; Infringement; Infringement by Government Officials; Injunction, 2.

1. DAMAGES FOR INFRINGEMENT.
In an action to recover a balance alleged to be due on written contract whereby plaintiff agreed to furnish and set up certain machinery for defendant the latter sets up, among other defenses, that he had been served with notice by a certain patentee of a claim for damages for infringing Letters Patent by the use of the machinery furnished by plaintiff. *Held* that a purchaser of machinery who has had the full use and enjoyment and undisturbed possession of it cannot, in the absence of fraud, withhold the purchase-price because of an alleged liability on his part to a patentee for infringement in the use of the property.
[*Consumer's Gas Company of Danville v. American Electric Construction Company, Limited, 738.

2. INFRINGEMENT—ACCOUNTING.
Where infringement is admitted, damage is presumed, and the owner of the patent is entitled to a reference for accounting without giving specific evidence of damage.
[*Campbe.l Printing-Press & Manufacturing Company v. Manhattan Railway Company, 894.

3. SAME—PLEADING.
Where there are joint defendants to a bill for infringement, it is sufficient if the bill contains a general allegation of infringement, and it need not in terms allege a joint infringement.
[*Indurated Fibre Industries Company *et al. v.* Grace *et al.*, 896.

4. SAME—SAME.
Under Revised Statutes, section 4886, providing for the issuing of a patent where, *inter alia*, the invention has not been patented or described in any foreign country before the date of the invention, a bill for infringement of a patent is demurrable which does not allege such facts.
[*Overman Wheel Company *v.* Elliott Hickory Cycle Company, 1478.

5. SAME—SAME—BILL WITH DOUBLE ASPECT.
Where a complainant's bill asks for the specific performance of a contract set out, and also contains expressions looking to relief, as on a bill for infringement, *Held* impossible to sustain the bill as one for a double aspect, because in a bill for infringement the determination who are necessary parties must be made from a standpoint different from that in a bill for specific performance, and the title to relief is not the same in each event.
[*American Box Machine Company *v.* Crossman *et al.*, 1750.

TECHNICAL TERMS.

(See Construction of Specifications and Patents, 2, 11; Infringement, 1; Particular Patents, 4; Process.)

TESTIMONY TAKEN IN FOREIGN COUNTRIES.

(See Interference, 2.)

PRACTICE—TESTIMONY TAKEN ABROAD—RULE 158.
Where a party seeks to take testimony abroad under the provisions of Rule 158, a mere formal allegation in his affidavit that the testimony cannot be taken in this country without "injury to the moving party greatly exceeding that to which the opposite party will be exposed by the taking of such testimony abroad" is not sufficient to satisfy the requirements of the rule in that particular.
[Hall *v.* Latta, 736.

TRADE-MARKS.

(See Fees in Trade-Mark Cases.)

1. FOREIGN APPLICANT—RULE WHERE "LOCATION" AND "CITIZENSHIP" ARE AT VARIANCE.
Where an applicant for a Trade-Mark appears on the record as "located" in a foreign country other than that of which he is a citizen, his application will be governed by the existing treaty, convention, or law of the country of location rather than that of citizenship.
[*Ex parte* Haggenmacher, 498.

2. WHAT IS NOT REGISTRABLE AS.
A fac-simile of the certificate issued by a State Board of Pharmacy to registered pharmacists is not registrable as a Trade-Mark.
[*Ex parte* Kuppenheimer Brothers, 439.

3. INFRINGEMENT—INJUNCTION—LABELS ON CIGARS.
A manufacturer of cigars whose goods are protected by Trade-Mark is entitled to an injunction against a manufacturer of cigar-boxes who, although he does not make cigars, furnishes the trade with boxes supplied with labels confessedly counterfeits of the complainant's registered mark.
[*Cuervo *v.* Jacob Henkell Company *et al.*, 440.

4. SIMULATED OR FOREIGN IMPORTS—SECTION 7 OF THE TARIFF ACT OF OCTOBER 1, 1890.
In an application for mandamus to compel the collector of customs to examine into the validity of a certain registered Trade-Mark which he had declared simulated on certain imported goods which he had declined to admit to entry under the provisions of section 7 of the tariff act of October 1, 1890, *Held* that the circuit court had no jurisdiction to grant a mandamus, and that whether the decision of such officer that any particular import is within the statute's prohibition is reviewable in the courts was not before the court in this proceeding.
[Vintschger *et al.*, 441.

5. PRACTICE—WHAT THE OATH MUST EMBRACE.
An applicant for Trade-Mark registration, relying upon commerce with Indian tribes to bring him within the statute, will be required in his oath to specify by name the tribe or tribes with which such commerce is carried on.
[*Ex parte* Schotten & Co., 576.

6. PRACTICE—TRADE-MARK AND LABEL.
"The arrangement of two panels, one in red and one in blue, each bearing a shield, "etc., is proper subject-matter for a Trade-Mark rather than a Label.
[*Ex parte* National United States Stamp Delivery Company, 898.

7. WHERE TITLE VESTS IN CERTAIN CASES.
Where one who claims to have invented or discovered a new means for treating disease transfers for a consideration all his rights therein to a corporation and afterward acquiesces in the use of a certain Trade-Mark thereon by the corporation, *Held* in a subsequent contest between himself and the corporation over title to the Trade-Mark that an absolute right is vested in the corporation.
[Sanche *v.* Electrolibration Company, 1189.

TWO YEARS' PUBLIC USE.

(See Withdrawal of Case from Issue, 2.)

UNADJUDICATED PATENTS.

(See Injunction, 5.)

USE AND SALE OF PATENTED ARTICLES.

(See Designs, 4; Infringement, 7; Rights of Patentees; Scope of Patent.)

UTILITY.

(See Construction of Specifications and Patents, 12.)

VALID PATENTS.

(See Particular Patents, 2, 3, 4, 7, 9, 10, 12, 13, 14.)

VOID PATENTS.

(See Construction of Specifications and Patents, 10, 12; Particular Patents, 8, 11, 15, 16, 17.)

WITHDRAWAL OF CASE FROM ISSUE.

1. WITHDRAWAL OF APPLICATIONS FROM ISSUE—MORE THAN TWO YEARS' DISCLOSURE IN A PRIOR PATENT TO SAME INVENTOR—NEW APPLICATION FOR SAME INVENTION.
An application will not be withdrawn from issue for the purpose of adding claims to a feature described and reserved but not claimed in a prior patent to the same inventor, because of the fact that more than two years have elapsed since said prior patent was issued, when it appears that a new application can be filed in such a manner that the two applications may be considered continuous.
[*Ex parte* Nash, 159.

2. WITHDRAWAL OF APPLICATIONS FROM ISSUE—MORE THAN TWO YEARS' PUBLIC USE—NEW APPLICATION FOR SAME INVENTION.
An application will not be withdrawn from issue because of more than two years' public use of the invention when it appears that a second application for the same invention may be filed as a continuation of the first application, such first application having been filed before the expiration of the two years.
[*Ex parte* Schilling, 160.

ALPHABETICAL LIST OF PATENTEES

FOR

THE QUARTER ENDING SEPTEMBER 30, 1892.

[Claims and drawings of Designs do not appear in the Monthly Volumes. Separate indexes for Designs, Trade-Marks, and Disclaimers follow this.]

Akron Tool Company. (See Morey, Albert E., assignor.)	478,496	July 5	662	162	60	131
Aktiebolaget Separator. (See Jönsson, Johan L., assignor.)						
Alapaw, Charles H., assignor of one-half to A. M. Baker, St. Louis, Mo. Pipe-holder	479,384	July 19	2051	512	60	427
Albany Venetian Blind Company. (See Benway, James K., assignor.)						
Albin, Jacob, Seymour, Ind. Carpet-stretcher	482,821	Sept. 20	1469	366	60	1649
Albright, Henry. (See Noblet, Charles H., assignor.)						
Alcock, Alfred U., Melbourne, Victoria. Electrostatic switch and phase-indicator	482,032	Sept. 6	160	43	60	1370
Alden, Oliver R., Nicholson, assignor of one-half to H. W. Lord, Lathrop, Pa. Bit-stock	478,248	July 5	303	74	60	61
Alden, Seth F., New Bedford, Mass. Electric snap-switch	483,316	Sept. 27	2288	575	60	1820
Alderfer, Jeremiah B. (See Price, Edwin H., assignor.)						
Aldrich, Wales, Dayton, Ohio. Cash register and indicator and check-machine	481,459	Aug. 23	2775	683, 684, 685	60	1153
Alexander, Cornelius C. and I. Z.; said I. Z. Alexander assignor to W. J. Alexander, Hartford City, Ind. Swing	482,217	Sept. 6	485	116	60	1430
Alexander, Frederick B., Brooklyn, N. Y. Cane-cutter	479,611	July 26	2428	605	60	513
Alexander, Isaac Z. (See Alexander, Cornelius C. and I. Z.)						
Alexander, William J. (See Alexander, Cornelius C. and I. Z., assignors.)						
Allan, Robert W., Fairfield, assignor of one-half to R. M. Fairfield, Holyoke, Mass. Means for preventing spots in paper	480,446	Aug. 9	1123	280	60	806
Allen, Albert W., *et al.* (See Cooper, Leslie A., assignor.)						
Allen, Charles H., Strondsburg, Pa. Car-brake	479,236	July 19	1804	452	60	378
Allen, George, Franklin, Pa. Pump for oil-wells	480,701	Aug. 16	1537	383	60	901
Allen, George H., Brockport, N. Y. Thill-coupling	478,678	July 12	936	232	60	201
Allen, George L., Worcester, Mass. Steam-boiler	478,677	July 12	934	232	60	200
Allen, Herod W., Latta, S. C. Stalk-cutter	478,676	July 12	933	232	60	200
Allen, Howard D., assignor to Russell & Erwin Manufacturing Company, New Britain, Conn. Sheet-metal latch-bolt	479,582	July 26	2361	594	60	504
Allen, John A., Philadelphia, Pa. Toy	482,957	Sept. 20	1694	426	60	1692
Allen, John E., administrator. (See Johnston, James J.)						
Allen, Lewellyn J. (See Warner and Allen.)						
Allen, William H. (See Purcell, John J., assignor.)						
Allert, Rudolf, New York, N. Y. Separating yeast-cells	479,130	July 19	1641	410	60	347
Allgood, Charles B., Peterburg, Va. Dripper for barrels	478,303	July 5	383	92	60	77
Allis, Thomas V., New York, N. Y. Die for use in machines for making metallic fencing	481,918	Aug. 30	3533	865	60	1316
Alpert, Wilhelm, Brandenburg-on-the-Havel, Germany. Thrashing-machine	480,484	Aug. 9	1187	298	60	819
Alteneder, Ferdinand A., Philadelphia, Pa. Drawing-pen	480,541	Aug. 9	1260	318	60	836
Altorfer, Gustav G., *et al.* (See Payne, William H., assignor.)						
Alvord, Irwin T., North Ogden, Utah Ter. Commercial coin	478,304	July 5	384	93	60	77
Ambruster, William, St. Louis, Mo. Pocket cash-register	480,057	Aug. 2	481	122	60	674
Amend, Otto P., New York, and J. H. Macy, Harrison, N. Y. Desulphurizing oils	480,311	Aug. 9	912	230	60	768
Amend, Otto P., New York, and J. H. Macy, Harrison, N. Y. Desulphurizing oils	480,312	Aug. 9	914	231	60	768
American Bell Telephone Company. (See Dyer, Richard N., assignor.)						
American Carrier Rocket Company. (See Cunningham, Patrick, assignor.)						
American Electrical Works. (See Sawyer, William H., assignor.)						
American Forcite Powder Manufacturing Company. (See Brown, Lewis, assignor.)						
American Lead Pencil Company. (See Weissenborn, Albert G., assignor.)						
American Oil Projectile Company. (See Moore, Everett D., assignor.)						
American Optical Company. (See Currin, John, assignor.)						
American Ring Traveler Company. (See Bentley, Albert F., assignor.)						
American Scale Manufacturing Company. (See Judd, Edward C., assignor.)						
American Screw Company. (See Rogers, Charles D., assignor.)						
American Shoe Tip Company. (See Merrill, Hollis W., assignor.)						
American Soda Fountain Company. (See Maguire, Patrick J., assignor.)						
American Spring Company. (See Purdy, Fred, assignor.)						
American Telephone and Telegraph Company. (See Hubbard, Angus S., assignor.)						
American Telephone and Telegraph Company. (See Pickernell, Frank A., assignor.)						
American Writing Machine Company. (See Clemons, Henry D., assignor.)						
American Writing Machine Company. (See Fairfield, John M., assignor.)						
American Zinc Lead Company. (See Bartlett, Frank L., assignor.)						
Ames, Azel, Jr., Chelsea, assignor to S. K. Hamilton, Wakefield, Mass. Box	478,947	July 12	1344	333	60	281
Ames, Clarence F., Akron, Ohio. Recording-balance	481,543	Aug. 30	2916	717	60	1197
Amiea, William T., assignor to Seth Thomas Clock Company, New York, N. Y. Clock-case	478,546	July 12	755	185	60	165
Andersen, Peter, assignor to H. G. Olds, Fort Wayne, Ind. Fifth-wheel	480,901	Aug. 16	1837	457	60	963
Anderson, Andreas P., Oriental, Nev. Quartz-crusher	480,647	Aug. 9	1443	359	60	870
Anderson, Charles A., A. W. and F. D. England, Pembroke, Ky. Harrow	483,317	Sept. 27	2289	575, 576	60	1820
Anderson, Charles J. (See Hallsten and Anderson.)						
Anderson, George, Madras, India. Tip-wagon	483,200	Sept. 27	2079	525, 526, 527, 528	60	1782
Anderson, Hans J., Lake Mills, Wis. Butter-worker	483,201	Sept. 27	2085	528	60	1783
Anderson, John, Hickson, N. D. Window frame and sash	481,091	Aug. 16	2149	533	60	1022
Anderson, John B., assignor to Lane Manufacturing Company, Montpelier, Vt. Derrick-crane	479,730	July 26	2635	653	60	551
Anderson, Martin, Henderson Station, Ill. Swinging gate	482,218	Sept. 6	487	116	60	1430
Anderson, Oliver, assignor of one-half to H. F. Herrick, Racine, Wis. Thrashing-machine	482,494	Sept. 13	968	234, 235	60	1538
Anderson, Peter W., Roanoke, Va. Puzzle	483,276	Sept. 27	2228	560	60	1809
Anderson, William N., San Rafael, Cal. Elevator	480,542	Aug. 9	1270	318, 319	60	836
Andersson, Johannes, Christiania, Norway. Mud-guard for carriages	480,485	Aug. 9	1188	298	60	819
Andre, Emil. (See Rempen and Andre.)						
Andrews, Brainard A., *et al.* (See Parks, Dana, assignor.)						
Andrews, David H. (See Worcester, Joseph R., assignor.)						
Andrews, Horace S., West Orange, N. J. Coal-scuttle screen	482,431	Sept. 13	860	206	60	1517
Andrews, James M. and M. A., Syracuse, N. Y. Journal-bearing	478,533	July 5	733	178, 179	60	145

Alphabetical list of patentees, July to September, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Andrews, Marion A. (See Andrews, James M. and M. A.)						
Andrews, Sidney F. (See Brown, Frederick H., assignor.)						
Andrews, W. S. (See Carpenter, Charles E., assignor.)						
Andrews, William S., New York, N. Y., and T. Spencer, Philadelphia, Pa., assignors to H. C. Wirt, Boston, Mass. Dynamo-electric machine. (Reissue)	11,266	Aug. 30	3552	869	60	1319
Andrus, Duane P., St. Louis, Mo. Electric belt	479,147	July 19	1667	417	60	352
Andrus, Grosvenor S., Walla Walla, Wash. Weed-cutter	479,612	July 26	2429	605	60	513
Anger, John E., Green Island, N. Y. Car-truck	479,237	July 19	1805	452	60	378
Ansonia Brass and Copper Company. (See Cowles and Gilpin, assignors.)						
Ansted, Edward W., Connersville, Ind. Machine for bending and forming springs	483,094	Sept. 20	1907	482	60	1736
Anthistle, William J., London, Canada. Coffin-shell mold	480,926	Aug. 16	1974	493	60	989
Anthony, Mark. (See Secor, Jerome B., assignor.)						
Anthony, Mark, Berkeley, and W. C. Savage, Oakland, Cal. Bung	483,035	Sept. 20	1820	462	60	1719
Apfel, Jacob. (See Page and Apfel.)						
Appleby, John F., assignor to William Deering & Company, Chicago, Ill. Harvester-reel support	481,218	Aug. 23	2371	583	60	1079
Applegath, William, Hamilton, Canada. Hat-supporter	481,156	Aug. 23	2275	561	60	1039
Appleton, Charles J., New York, N. Y., assignor of two-thirds to H. S. Mack and E. A. Whittelsey. Knitting-machine	482,608	Sept. 13	1143	276, 277, 278	60	1572
Arbegust, Thomas O. (See Mesker and Arbegust.)						
Arey, Clarence O., Cleveland, Ohio. Boiler and furnace setting	482,147	Sept. 6	368	87	60	1408
Arlington Manufacturing Company. (See Colburn, Frederick C., assignor.)						
Armbruster, Hermann, New Haven, Conn. Tug-loop	480,003	Aug. 2	376	93	60	652
Armstrong & Co., R. G. (See Armstrong, Robert G., assignor.)						
Armstrong & Co., William H. (See Willibrandt, Emil, assignor.)						
Armstrong, Harry, Fidelity, Ill. Toe-weight for horses	481,611	Aug. 30	3025	739	60	1217
Armstrong, James P., assignor to I. P. Primrose, J. M. Hyde, and W. G. Crook, Nelsonville, Ohio. Registering pendulum-scale	478,534	July 5	735	179	60	146
Armstrong, John B., Guelph, Canada. Sulky	482,114	Sept. 6	312	74	60	1306
Armstrong, Lewis D., deceased, Lock Haven, Pa.; M. M. Armstrong, administrator and assignor to New York and Pennsylvania Company, of Pennsylvania. Apparatus for reclaiming soda-ash	483,318	Sept. 27	2290	576	60	1920
Armstrong, Meyler M., administrator. (See Armstrong, Lewis D.)	480,702	Aug. 16	1538	383	60	901
Armstrong, Miller F., *et al.* (See Davis, William H., assignor.)						
Armstrong, Robert G., assignor to R. G. Armstrong & Co., Wichita, Kans. Hanger for swinging harness	481,627	Aug. 30	3018	744	60	1222
Armstrong, Robert G., assignor to R. G. Armstrong & Co., Wichita, Kans. Hame-fastener	481,725	Aug. 30	3210	784	60	1253
Armstrong, Samuel H. (See Wages and Armstrong.)						
Armstrong, William L., Bellport, N. Y. Sieve	478,976	July 19	1399	347	60	303
Armstrong, William T., *et al.* (See Davis, William H., assignor.)						
Arnett, William J. (See Simpson, Peter P., assignor.)						
Arnold, Alonzo B., Marshalltown, Iowa. Harness-saddle	478,535	July 5	738	180	60	146
Arnold, Lyndon, St. Johnsbury, Vt. Railway-car gate	481,540	Aug. 23	2910	714	60	1180
Arnold, Oscar M., assignor of one-third to A. T. Sherrod, Searcy, Ark. Meat-tenderer	478,547	July 12	756	185	60	165
Arnold, Rawdon, Sacramento, Cal. Ice-pitcher	481,544	Aug. 30	2918	718	60	1197
Arnold, Samuel S., Toronto, Canada. Axle-bearing	481,545	Aug. 30	2919	718	60	1198
Arrick, Everton J., MacConnellsville, Ohio. Watch-case pendant	479,030	Aug. 2	241	59	60	628
Arthur, Charles, East Orange, assignor to Newark Watch Case Material Company, Newark, N. J. Watchcase-pendant	482,971	Sept. 20	1716	433	60	1697
Arthur, John E., Clinton, Ill. Nut and bolt lock	479,131	July 19	1642	411	60	347
Arundale, John, *et al.* (See Terrell, Nathaniel A., assignor.)						
Ashbaugh, Charles C., assignor to W. Bull & Co., Detroit, Mich. Muff	482,432	Sept. 13	861	207	60	1517
Ashberry, Phillip, and W. Barnes, Sheffield, England. Animal-shears	479,109	July 19	1611	403	60	349
Ashberry, Phillip, and W. Barnes, Sheffield, England. Animal-shears	479,110	July 19	1613	403	60	349
Ashley, William A. G., assignor of two-thirds to J. M. Lawton, Jr., and A. T. Howland, New Bedford, Mass. Knob attachment	481,460	Aug. 23	2787	685	60	1155
Ashlin, Henry C., London, England. Steam-boiler furnace	481,519	Aug. 23	2800	705	60	1171
Ashworth, Elijah, Manchester, England. Stopping mechanism for carding-engines	480,864	Aug. 16	1778	445	60	951
Ashworth, Robert, St. Cloud, Minn. Hawser-clamp	480,987	Aug. 16	1974	494	60	989
Askins, Joseph, Lima, Ohio. Apparatus for the manufacture of water-gas	479,777	Aug. 2	6	2	60	583
Askins, Joseph, Lima, Ohio. Apparatus for the manufacture of gas	478,305	July 5	385	93	60	77
Assorati, Antenor, and A. Cuyás, assignors to Columbus Egg Company, New York, N. Y. Puzzle	480,161	Aug. 2	642	163	60	704
Asten, Josephine, Washington, D. C. Skirt-elevator	478,407	July 5	664	162	60	132
Atherton, James. (See Bartholomew, Cassius M., assignor.)	478,076	July 5	1	1	60	3
Atkinson, Claude W. (See Atkinson, Llewelyn B. and C. W.)						
Atkinson, Claude W. and L. B., London, England. Cutter or drill for coal	482,033	Sept. 6	181	43	60	1371
Atkinson, Francis F., assignor of one-third to H. Ogden, New York, N. Y. Metallic edge-protector	480,241	Aug. 9	787	201	60	743
Atkinson, Llewelyn B. (See Atkinson, Claude W. and L. B.)						
Atkinson, Llewelyn B. (See Renold, Goolden, Atkinson, and Gold.)						
Atkinson, Llewelyn B., London, England. Safety device for electric circuits	482,853	Sept. 13	862	207	60	1517
Atkinson, Llewelyn B. and C. W., London, England. Electrically-driven machinery for cutting coal	481,775	Aug. 30	3299	804, 805	60	1271
Atkinson, Llewelyn B., H. W. Ravenshaw, London, and F. Mori, Leeds, England. Apparatus for cutting minerals						
Atkinson, William, assignor of one-half to C. R. Tower, Granby, Canada. Vehicle-spring	481,921	Sept. 6	1	1	60	1335
Atkinson, William H. (See Somers and Atkinson.)	483,505	Sept. 27	2546	639	60	1871
Atlas Tack Corporation. (See Fraser, Peter, assignor.)						
Atwater, Henry W., East Orange, N. J. Ice-cream freezer	479,931	Aug. 2	242	60	60	628
Atwood, George F., assignor to G. M. French, Malden, Mass. Bottle-stopper	479,045	July 19	1508	376	60	323
Atwood, Leonard. (See Harrington, Walter E., assignor.)						
Auchman, Ferdinand, assignor to A. Moschek and A. Brunner, Graz, Austria-Hungary. Blasting-powder	483,125	Sept. 27	1954	495	60	1757
Aultman & Taylor Machinery Company. (See Galland, Joseph, assignor.)						
Austin, Anna B. (See Chapman and Hunt, assignors.)						
Austin, Emmet R., Norwalk, Conn. Tea or coffee filter	478,548	July 12	757	185	60	165
Austin, Frederick C. (See Bunnell, Morton G., assignor.)						
Austin, Frederick C. (See Gardner, John, assignor.)						
Austin, Fredrick W. (See York and Austin.)						
Austin, Henry J., and R. T. Lewis, Jr., Waterbury, Conn. Machine for making sheet-metal chains	481,776	Aug. 30	3301	805, 806	60	1271

INDEX OF PATENTS ISSUED FROM THE

Alphabetical list of patentees, July to September, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drgs.	Official Gazette. Vol.	Official Gazette. Page.
Anto Machinery Company. (See Hillman, William, assignor.)						
Automatic Manufacturing Company. (See Pope, William R., assignor.)						
Auzat, Joseph E., Clermont-Ferrand, France. Chopper	482,838	Sept. 20	1498	372	60	1654
Avery, Russell F., assignor to J. Goetz, trustee, Spokane Falls, Wash. Coin-chute	480,360	Aug. 9	981	247 / 248	60	780
Avery, Russell F., assignor to J. Goetz, trustee, Spokane Falls, Wash. Coin-operated automatic hydraulic air-compressor	482,775	Sept. 20	1414	350	60	1636
Avery, Russell F., assignor to J. Goetz, trustee, Spokane Falls, Wash. Air pump or compressor	482,776	Sept. 20	1416	350	60	1637
Avery, Russell F., assignor to J. Goetz, trustee, Spokane Falls, Wash. Device for operating pumps by means of treadles	482,777	Sept. 20	1417	350	60	1637
Avis, Walter H. (See Hunter and Avis.)						
Aylsworth, Jonas W., Orange, and A. C. Payne, Elizabeth, N. J. Method of and apparatus for extracting gold and silver from their ores	481,683	Aug. 30	3133	764 / 765	60	1238
Ayer, Harry L. (See Shattuck, Charles A., assignor.)						
Ayres, Edward F., and T. H. Foster, Danbury, Conn. Heel-plate	481,324	Aug. 23	2564	629	60	1112
B. F. Avery & Sons. (See Flatau, Louis S., assignor.)						
Baackee, John M. E., and C. Richards, Cleveland, Ohio. Nail-machine	481,997	Sept. 6	114	28, 29	60	1357
Babcock, E. H. (See Babcock, Samuel W., assignor.)						
Babcock, Henry D. (See Durr and Babcock.)						
Babcock, Milton S. (See Kindleberger, Jefferson, assignor.)						
Babcock, Samuel W., assignor of one-half to E. H. Babcock, Avon, N. Y. Compensator for signal-wires	481,922	Sept. 6	3	1	60	1335
Bach, Christoph, Jr. (See Quirk and Bach.)						
Bachelder, Edward J., Boston, Mass. Hydrant	480,313	Aug. 9	916	231	60	768
Bachmann, Ulrich, Mission San José, Cal. Impregnating liquids with gases	481,838	Aug. 30	3402	835	60	1290
Bacon, John W., Enderley, Canada. Shingle-gage	478,306	July 5	387	93	60	76
Bacorn, Frederick W., Marysville, Mont. Electric signal for mine-shafts	479,046	July 19	1509	376	60	323
Badger, Argulas A., assignor of one-half to S. J. Cotton, Windsor, Mo. Fire-escape	481,923	Sept. 6	4	2	60	1335
Badger, George L., West Quincy, Mass. Device for polishing granite, &c	481,341	Aug. 23	2588	636	60	1117
Badlam, Edgar B., San Francisco, Cal. Air-supplying device for gas-machines	479,238	July 19	1807	452 / 453	60	379
Badt, Francis B., assignor of two-fifths to L. S. Hills and A. M. Searles, Chicago, Ill. Electric railway	480,543	Aug. 9	1272	319 / 320	60	837
Badt, Francis B., assignor of two-thirds to L. S. Hills and A. M. Searles, Chicago, Ill. Telltale for electrolytic refineries	482,148	Sept. 6	370	88	60	1408
Baer, Hermine, San Francisco, Cal. Dress-form	480,703	Aug. 16	1540	383	60	902
Baeumle, John, assignor of one-fourth to M. Poetzel, Milwaukee, Wis. Bung	482,713	Sept. 20	1311	321	60	1617
Baeumle, John, assignor of one-fourth to M. Poetzel, Milwaukee, Wis. Bung	482,714	Sept. 20	1313	321	60	1617
Bagdasarian, Ignatius D., Cambridge, Mass. Dulcimer	479,323	July 19	1928	482	60	403
Baggesen, Frederick F., Brooklyn, N. Y. Bedbug-trap	481,270	Aug. 23	2466	608	60	1096
Baier, Frederick A., assignor to Brownell Car Company, St. Louis, Mo. Car-brake	478,902	July 12	1276	316 / 317	60	267
Bailey, Alfred J. (See Bailey, William H. and A. J.)						
Bailey, Ella E., Baltimore, Md. Cake-box	482,434	Sept. 13	863	207	60	1517
Bailey Farrel Manufacturing Company. (See Bailey and Grace, assignors.)						
Bailey, George H., and T. Grace, assignors to Bailey Farrel Manufacturing Company, Pittsburg, Pa. Waste and stop cock	479,544	July 26	2330	582	60	495
Bailey, John C., Ford City, Pa. Thill-coupling	480,648	Aug. 9	1444	360	60	870
Bailey, John M., Bristol, Va. Fuel-gas apparatus	478,549	July 12	758	185	60	165
Bailey, Joseph R., and L. C. Lincoln, assignors to Woonsocket Edge Tool Company, Woonsocket, R. I. Arm-rest for telephones	481,293	Aug. 23	2515	618	60	1103
Bailey, Mahlon G., and H. T. Welch, San José, assignors to J. G. Spaulding, San Francisco, Cal. Book-indicator	480,649	Aug. 9	1446	360	60	870
Bailey, William H. and A. J., Salford, England. Oil-cup	478,977	July 19	1400	347	60	303
Bailey, William W. (See Boice, Joseph C. W., assignor.)						
Baird, Thomas F., Gasburg, Va. Combined stirrup-lantern and foot-warmer	482,219	Sept. 6	488	117	60	1430
Baker, Alfred M. (See Alapaw, Charles H., assignor.)						
Baker, Arthur D., Brooklyn, N. Y. Open-toed horseshoe	479,111	July 19	1615	404	60	342
Baker, Charles H., Lake Geneva, Wis. Electric railway	480,004	Aug. 2	377	94	60	652
Baker, Charles H., Portland, Me. Fire-escape	480,759	Aug. 16	1615	406	60	919
Baker, Clark, Greenville, Ohio. Saw-set	479,239	July 19	1809	453	60	379
Baker Gun and Forging Company. (See Hollenbeck, Frank A., assignor.)

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Bernstein, Joseph, Philadelphia, Pa. Trousers	480,060	Aug. 2	484	123	60	675
Berry, John, assignor to National Needle Company, Springfield, Mass. Swaging-machine	480,228	Aug. 2	759	192	60	736
Berry, John S., Tyler, Tex. Surface cattle-guard	483,039	Sept. 20	1825	464	60	1720
Berry, Joseph N., Boston, Mass. Thill coupling	480,244	Aug. 9	789	201	60	743
Berry, William R. (See Wright and Berry.)						
Berryman, Crayton, Sioux City, Iowa. Wire gate	479,394	July 26	2071	520	60	446
Berst, Henry L. (See Berst, Jesse H. and H. L.)						
Berst, Jesse H., Kokomo, and H. L. Berst, Leesburg, Ind. Skewer-pointing machine	483,205	Sept. 27	2089	530	60	1784
Berthélémy, Charles, Paris, France. Lamp-shade support	480,989	Aug. 16	1977	494, 495	60	990
Berthelet, Joseph R., Milwaukee, Wis. Separator for crushed cement, &c.	479,617	July 26	2436	607	60	514
Bertrand, Joseph. (See Fleischel and Bertrand.)						
Bessemer Steel Company. (See Reese, Jacob.)						
Bessey, Merton W., Waterville, Me. Electric door-alarm	481,711	Aug. 30	3177	776	60	1247
Best, Daniel, San Leandro, Cal. Traveling harvester	480,006	Aug. 2	380	94	60	653
Best, Julious A. (See Wheat, Edmond C., assignor.)						
Bestgen, John G., Somerville, Mass. Razor-pivot	482,992	Sept. 20	1749	442	60	1703
Betten, Hermann, Hegensdorf, Germany. Rotary engine	481,096	Aug. 16	2156	535	60	1023
Bettendorf, William P., Davenport, Iowa. Metallic frame for wagons	479,618	July 26	2437	607	60	515
Bettendorf, William P., Davenport, Iowa. Metallic frame for wagons	479,619	July 26	2438	607, 608	60	515
Bettendorf, William P., Davenport, Iowa. Metallic frame for wagons. Wagon-bolster	479,620	July 26	2439	608	60	515
Bettendorf, William P., Davenport, Iowa. Metallic wagon-tongue	479,621	July 26	2440	608	60	516
Bettmann, Charles F., Jr., New Albany, Ind. Gate-latch	479,622	July 26	2441	608	60	516
Beugler, John B., assignor of one-half to C. Wilber, Dayton, Tenn. Burial apparatus	478,556	July 12	767	187	60	167
Bevin, Abner A., and J. C. Wells, East Hampton, Conn. Bell	481,840	Aug. 30	3406	836	60	1291
Bevin, William D., Syracuse, N. Y. Index attachment for books	483,341	Sept. 27	2321	583	60	1827
Bex, Frederick, Washington, D. C. Means for operating heavy ordnance	482,612	Sept. 13	1153	279	60	1573
Beyer, Augustus, assignor to himself and A. W. Brown, New Philadelphia, Ohio. Annealing-box	483,130	Sept. 27	1960	497	60	1758
Beyer, Charles, Brooklyn, N. Y., and D. M. Lester, assignors to Lester & Wasley, Norwich, Conn. Feeding device for envelope-machines	479,345	July 19	1962	496	60	414
Bidelman, Robert M., assignor to Petroleum Light and Heat Company, Adrian, Mich. Manufacture of gas	478,779	July 12	1095	271	60	233
Bierley, Henry A., Lexington, Ky. Cash-register. (Reissue)	483,489	Sept. 27	2517	634	60	1865
Bigelow, Alfred, *et al.* (See Cartwright, Edward, assignor.)	11,956	Aug. 2	782	198, 199	60	729
Bigelow, Austin W., Everett, Mass., assignor to Goodyear Shoe Machinery Company, Hartford, Conn. Sewing-machine						
Bigelow, John, Minneapolis, Minn. Grain-sampling machine	480,229	Aug. 9	761	192	60	796
Bigelow, William P., Natick, Mass. Corset	480,654	Aug. 9	1453	362	60	879
Biggs, Charles H., and F. H. Fairchild, Detroit, Mich. Adjustable seat	481,294	Aug. 23	2516	618	60	1104
Bigland, Hubert H., and J. Burns, Newcastle-on-Tyne, England. Electric-arc lamp	478,840	July 12	1198	297	60	252
Bigley, Richard, Toronto, Canada. Heater	482,568	Sept. 13	1068	264	60	1501
Bigley, Richard, Toronto, Canada. Gas attachment for cooking-stoves	478,557	July 12	768	187	60	167
Bina, Julius, Fürth, Germany. Package for pulverized substances	478,558	July 12	770	188	60	168
Binet, Eward C., Clipper Mills, Cal. Barbed strap for bunching lumber	481,521	Aug. 23	2870	705	60	1172
Bingham, Herbert M., Avondale, N. J., and G. Runge, Cleveland, Ohio. Inclosure for packing and carrying printers' rollers	483,040	Sept. 20	1826	464	60	1720
Bingham, John H., Chicago, Ill. Tire for vehicle-wheels	481,465	Aug. 23	2701	686	60	1156
Bingham, L. W., *et al.* (See Cook, Herbert F., assignor.)	483,131	Sept. 27	1962	497	60	1759
Bingham, Robert O., assignor to Wagner Manufacturing Company, Sidney, Ohio. Combined ball-journal and hinge	479,731	July 26	2636	654	60	551
Binkard, Alfred, Des Moines, Iowa. Paper-straightener for printing-presses	478,079	July 5	7	2	60	4
Birch, John T., Pittsburg, assignor of one-half to W. B. Henderson, Ingram, Pa. Electric-arc lamp	482,157	Sept. 6	387	91, 92	60	1411
Birchard, Francis H., Milwaukee, Wis. Bicycle-support	480,061	Aug. 2	485	124	60	675
Bird, Henry J., Hoboken, N. J. Disintegrating vegetable substances	482,537	Sept. 13	1040		60	1552
Birge, George K., Buffalo, N. Y. Apparatus for printing wall-paper	479,346	July 19	1983	496, 497	60	414
Birkery, Cornelius, assignor to Birkery Manufacturing Company, Hartford, Conn. Tank-valve	483,296	Sept. 27	2258	568	60	1815
Birkery Manufacturing Company. (See Birkery, Cornelius, assignor.)						
Birkinshaw, William K. (See Heard and Birkinshaw.)						
Birney, Charles O., assignor of nine-sixteenths to J. Birney and F. M. Bressler, Kansas City, Mo. Sash-fastener	481,546	Aug. 30	2920	718	60	1198
Birney, John, *et al.* (See Birney, Charles O., assignor.)						
Bischoff, Gustavus A., Chicago, Ill. Signal-lantern	483,507	Sept. 27	2551	640	60	1872
Bishop, George W., *et al.* (See Thomas, George W., assignor.)						
Bishop, Ira, and A. F. L. Bell, San Francisco, Cal. Automatic trap for cable-conduits	478,910	July 12	1289	320	60	270
Bishop, Ira, and A. F. L. Bell, San Francisco, Cal. Lifting mechanism for cable-grips	478,911	July 12	1291	321	60	270
Bissell, Thelus M., and J. B. Huber, South Bend, Ind. Reversible plow-point	479,696	July 26	2564	638	60	538
Bissell, Thomas A., Buffalo, N. Y. Car-buffer	482,538	Sept. 13	1041	251, 252	60	1552
Bitner, Harry, *et al.* (See Fordham, Arthur, assignor.)						
Bitner, Reuben, Lebanon, Pa. Washing-machine	481,659	Aug. 30	3096	754	60	1231
Bittner, Adam, Custer, Ill. Car-coupling	479,623	July 26	2443	609	60	516
Bixby, Arthur, Philadelphia, Pa. Operating mechanism for railway-switches	479,584	July 26	2384	594	60	505
Bixler, Henry D., and G. C. Ferguson, Odell, Nebr. Windmill attachment	483,206	Sept. 27	2091	530	60	1785
Black, Albert B., Concord, Mass. Snow-plow	482,720	Sept. 20	1320	322	60	1618
Black & Clawson Company. (See Black, Frank X., assignor.)						
Black & Clawson Company. (See Clawson and Keller, assignors.)						
Black, Frank X., assignor to Black & Clawson Company, Hamilton, Ohio. Mold for closed cylinders	481,295	Aug. 23	2517	619	60	1104
Black, William D., Port Perry, Pa. Pencil-sharpener for school-slates	481,097	Aug. 16	2158	535	60	1024
Blackburh, William T. (See Carse, Blackburn, and Owens.)						
Blackman, Henry, New York, N. Y. Apparatus for recovering alkali	478,980	July 19	1402	348	60	303
Blackman, Henry, New York, N. Y. Apparatus for and process of recovering alkali	478,981	July 19	1405	348, 349	60	304
Blackmer Bros. & Co. (See McDonough, James W., assignor.)						
Blackmore, Henry S., Mount Vernon, N. Y. Reducing metals	478,907	July 12	1282	319	60	269
Blackmore, Henry S., Mount Vernon, N. Y. Furnace for reducing metals	478,908	July 12	1285	319, 320	60	269

Alphabetical list of patentees, July to September, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.

Blagen, Nicles J., Portland, Oreg. Device for closing elevator-shafts	483,416	Sept. 27	2498	611	60	1847
Blair Camera Company. (See Blair and Kelley, assignors.)						
Blair, James, Worcester, Mass. Support for spinning-spindles	482,860	Sept. 20	1529	380	60	1661
Blair, Thomas R., and F. H. Kelley, assignors to Blair Camera Company, Boston, Mass. Camera-shutter	478,909	July 12	1288	320	60	270
Blake, Charles E., Sr., San Francisco, Cal. Dental forceps	478,217	July 5	231	58	60	47
Blake, Isaac E., G. E. Smith, and E. M. Doig, Denver, Colo. Lamp	482,290	Sept. 6	602	143, 144	60	1452
Blake, Theodore A., *et al.* (See Cribb, Ira P., assignor.)						
Blake, William H., Warren, Mass. Steam-actuated valve	480,167	Aug. 2	651	165, 166, 167	60	706
Blalock, William B., and J. A. Muir, Huntsville, Tex. Penholder	481,158	Aug. 23	2277	561	60	1059
Blanchard, Allen I., Chicago, Ill., assignor to National Cash Register Company, Dayton, Ohio. Cash-register	482,514	Sept. 13	993	240, 241	60	1543
Blanchard, Edward R., *et al.* (See Moss, Julian, assignor.)						
Blandy Machine Company. (See Dietz, Frederick C., assignor.)						
Blaney, William H., assignor to himself and E. B. Bullock, Attleborough, Mass. Lock	481,889	Aug. 30	3483	853	60	1306
Blankenburg, Henry, Lohrville, Iowa. Wire-fence gate	482,334	Sept. 13	697	166	60	1486
Blankenship, Bennett, Belleville, Kans. Listing-plow	479,779	Aug. 2	10	3	60	564
Blass, Talmadge, Brewster, N. Y. Dust-guard for attrition-mills	479,547	July 26	2336	583	60	497
Bláthy, Otto T., Buda-Pesth, Austria-Hungary. Electric fuse	480,802	Aug. 16	1686	420	60	932
Bláthy, Otto T., Buda-Pesth, Austria-Hungary. Alternating-current motor	482,974	Sept. 20	1721	434	60	1697
Blauss, Ferdinand, New York, N. Y. Blind-stop	481,096	Sept. 20	1910	483	60	1737
Blay, Charles W., Janesville, Wis. Mason's hawk	483,132	Sept. 27	1963	498	60	1759
Blein, Tony, and E. Beraud, Lyons, France. Piston meter	483,278	Sept. 27	2231	560	60	1810
Blessing, James H., Albany, assignor to New York Filter Company, New York, N. Y. Apparatus for purifying water	482,515	Sept. 13	998	241, 242	60	1544
Blessing, John L., Chicago, Ill. Draw-bar for cars	479,048	July 19	1511	377	60	324
Bliss, James F., Boston, Mass. Downward-draft furnace	479,697	July 26	2565	638	60	539
Blizzard, Jennie, Fort Recovery, Ohio. Dress-chart	479,548	July 26	2337	583	60	497
Bledgett, Edward G., *et al.* (See Keene, Samuel D., assignor.)						
Bloeser, Rudolph, Scranton, Pa. Bottle-closure	480,168	Aug. 2	655	167	60	707
Blood, Clarence C. (See Blood, Maurice E. and C. C.)						
Blood, Erastus R. (See Wenstrau and Blood.)						
Blood, Erastus R., assignor to M. P. Blood, Kane, Pa. Lampblack-machine	480,990	Aug. 16	1679	495	60	992
Blood, Martha P. (See Blood, Erastus R., assignor.)						
Blood, Martha P. (See Wenstrand and Blood, assignors.)						
Blood, Maurice E., assignor to Kalamazoo Cycle Company, Kalamazoo, Mich. Seat attachment for bicycles	480,766	Aug. 16	1616	406	60	919
Blood, Maurice E., assignor to Kalamazoo Cycle Company, Kalamazoo, Mich. Carrier attachment for bicycles	481,890	Aug. 30	3483	853	60	1306
Blood, Maurice E., assignor to Kalamazoo Cycle Company, Kalamazoo, Mich. Child's seat or parcel-carrier for bicycles	482,938	Sept. 20	1655	417	60	1685
Blood, Maurice E., Kalamazoo, and C. C. Blood, assignors of one-half to O. T. Blood, Petoskey, and Fuller Brothers Manufacturing Company, Kalamazoo, Mich. Cut-off sawing-machine	479,049	July 19	1512	377	60	324
Blood, Orville T., *et al.* (See Blood, Maurice E. and C. C., assignors.)						
Bloomer, John. (See Stehling and Bloomer.)						
Blount, Ambrose A., Springfield, and F. K. Way, Dayton, Ohio, assignors, by mesne assignments, to Boston Filter Company, Boston, Mass. Machine for making hollow articles	479,347	July 19	1986	497	60	414
Blubm, Charles A., Michigan City, Ind. Refrigerator	478,080	July 5	8	2, 3	60	4
Bly, James F., assignor to C. R. Cipperly, Mayville, N. Y. Butter-package	482,613	Sept. 13	1155	279	60	1573
Blydenburgh, Charles M., Riverhead, N. Y. Running-gear for vehicles	482,839	Sept. 20	1499	372	60	1685
Boatwright, Valentine, Adel, Iowa. Apparatus for elevating and conveying water	481,099	Aug. 16	2160	536	60	1024
Boaz, George R., Tampa, Fla. Phosphate-separator and screen-washer	480,549	Aug. 9	1280	321, 322	60	838
Boden, August J., Litchfield, Ill. Fire-escape ladder	478,559	July 12	770	188, 189	60	168
Bodette, George H., assignor to F. H. Lincoln, Toledo, Ohio. Vertically-extensible platform for wagons	478,841	July 12	1200	298	60	253
Bodfish, William H., Everett, assignor of one-half to R. Carleton, Boston, Mass. Metallic packing	480,943	Aug. 16	1892	474	60	974
Boegner, Franz F., New York, N. Y. Alarm	478,982	July 19	1410	349	60	304
Boehringer, Joseph A., and F. X. Müller, Buffalo, N. Y. Printer's press-guide	478,679	July 12	937	233	60	201
Boeklen, Reinhart. (See Elkins and Boeklen.)						
Boenker, Henry H., St Charles, Mo. Oscillating grain-meter	483,417	Sept. 27	2430	611	60	1848
Boettcher, Adolph, South Stillwater, Minn. Window-chair	480,991	Aug. 16	1980	496	60	990
Boettler, Robert, Cleveland, Ohio. Spring draft attachment	482,504	Sept. 13	982	238	60	1541
Bofinger, W. H., *et al.* (See Wilson, Robert R., assignor.)						
Bogle, Walter S. (See Teft, Henry B., assignor.)						
Bohannan, Jenetta V., Baltimore, Md. Meat-slicer	481,159	Aug. 23	2277	561	60	1059
Böhm Brothers. (See Sternoff-Bever, Otto, assignor.)						
Bohner, Joseph E., assignor to Wallace & Sons, Ansonia, Conn. Lamp-shade support	481,154	Aug. 16	2262	558	60	1042
Bohner, Joseph E., assignor to Wallace & Sons, Ansonia, Conn. Extension-chandelier	482,712	Sept. 13	1303	318	60	1603
Boice, Joseph C. W., assignor of one-third to W. W. Bailey, Bates City, Mo. Sediment-gatherer for coffee-pots, &c	481,547	Aug. 30	2921	718	60	1198
Bolding, Arch, assignor of one-half to G. F. French, Sumner, Ill. Animal-poke	483,508	Sept. 27	2552	640	60	1872
Bolinger, Andrew, Speedwell, Tenn. Gage for determining the age of horses	478,560	July 12	773	189	60	168
Bolinger, William. (See Summers and Bolinger.)						
Bollermann, Arthur. (See Bollermann, Dominik L., assignor.)						
Bollermann, Dominik L., assignor to A. Bollermann, New York, N. Y. Stringing pianofortes	478,912	July 12	1293	322	60	271
Bolles, William P. (See Henry, Bolles, and McKee.)						
Bolte, Frank H., assignor to Sercombe-Bolte Manufacturing Company, Milwaukee, Wis. Bicycle-frame	478,391	July 5	510	124	60	101
Bolte, Frank H., assignor to Sercombe-Bolte Manufacturing Company, Milwaukee, Wis. Crank-securing means	483,342	Sept. 27	2323	584	60	1827
Bolte, Frank H., assignor of one-half to P. H. Sercombe, Milwaukee, Wis. Velocipede-wheel tire	479,201	July 19	1752	439	60	368
Bolte, Frank H., assignor of one-half to P. H. Sercombe, Milwaukee, Wis. Pneumatic tire	479,202	July 19	1754	439, 440	60	368
Bolte, Frank H., assignor of one-half to P. H. Sercombe, Milwaukee, Wis. Pneumatic tire	479,203	July 19	1757	440	60	368

Boman, Claes W., assignor to Eagle Pencil Company, New York, N. Y. Pencil	481,100	Aug. 16	2162	536	60	1024
Bomar, Thomas B., Wolfe City, Tex. Sash-fastener	478,272	July 5	338	81	60	66
Bond, Edward S., Birmingham, England. Wire-netting machine	478,561	July 12	773	149	60	168
Bond, Elijah J., *et al.* (See Plunkett, Michael H., assignor.)						
Bond, Frederick W., Springfield, Mo. Railway-joint	478,983	July 19	1410	349	60	305
Bond, Nathan O., Fairfax Court-House, Va., assignor to W. F. Phinney, Standish, Me. Wash-stand	479,148	July 19	1669	417	60	352
Bonham, Walter R., St. Paul, Minn. Propeller	482,225	Sept. 6	496	118	60	1432
Bonnaffon, Albert L., assignor of one-half to J. G. Lindsay, Philadelphia, Pa. Fence	479,050	July 19	1515	377	60	324
Bonta, James W., Wayne, Pa. Link-welding machine	483,418	Sept. 27	2432	611, 612	60	1848
Bonta, James W., Wayne, assignor to J. H. Shakespeare, trustee, Philadelphia, Pa. Leer or annealing-furnace for sheet or plate glass	480,230	Aug. 2	762	192	60	726
Booker, Isaac N. (See Whallon, Clement V., assignor.)						
Bookwalter, Francis M., and W. W. Tyler, Springfield, Ohio; said Tyler assignor to said Bookwalter. Water-wheel	483,133	Sept. 27	1964	498, 499	60	1759
Boone, James H., *et al.* (See Campbell, George W., assignor.)						
Booth, Alvin. (See Beach and Booth.)						
Booth, Caleb H., Dubuque, Iowa. Hydraulic dredge	479,486	July 26	2250	564, 565	60	480
Booth, Caleb H., Dubuque, Iowa. Steam-pump	482,840	Sept. 20	1500	373	60	1655
Booth, Edgar H., San Francisco, Cal., assignor to Risdon Iron and Locomotive Works, of California. Stone and ore crushing machine	480,761	Aug. 16	1618	406, 407	60	920
Booth, Isaac J., Birmingham, Conn. Box for bits	479,180	July 19	1721	432	60	362
Booth, John, Central Falls, R. I. Spinning-ring	483,297	Sept. 27	2360	569	60	1815
Booth, Richard A., assignor to Ives, Blakeslee & Williams Company, Bridgeport, Conn. Toy extension-ladder	482,402	Sept. 13	812	195	60	1508
Booz, Thomas J., assignor of one-half to J. N. Vieweg, Baltimore, Md. Car-coupling	481,891	Aug. 30	3485	854	60	1306
Borchardt, John, Jersey City, N. J. Fishing-reel	481,743	Aug. 30	3245	790	60	1260
Borgel, François, Geneva, Switzerland. Watch-case	478,734	July 12	1027	252	60	219
Born, F. W., deceased; M. Born, Cleveland, Ohio, administratrix. Oven and closet door for ranges	481,924	Sept. 6	6	2	60	1336
Born, Mary, administratrix. (See Born, F. W.)						
Bornemann, Frederick, New York, N. Y. Child's carriage	482,779	Sept. 20	1419	351	60	1638
Bornemann, Frederick, New York, N. Y. Combined stool and coal-receptacle	482,912	Sept. 20	1625	407	60	1678
Bornstein, Henry, Boston, assignor of one-half to J. A. W. Seabery, Malden, Mass. Wrench	479,698	July 26	2566	638	60	539
Bosch, Carl G., Davenport, Iowa. Malt-drying kiln	481,687	Aug. 30	3139	765	60	1239
Bossard, Anselm C., *et al.* (See Newell, James L., assignor.)						
Bosse, Friedrich, Berlin, Germany. Apparatus for polishing and sharpening knives, forks, &c.	479,114	July 19	1610	405	60	343
Bossert, William F., Utica, and J. H. Findlay, Ogdensburg, assignors to Utica Electrical Manufacturing and Supply Company, Utica, N. Y. Securing device for cables	482,939	Sept. 20	1659	418	60	1686
Bossert, William F., Utica, and J. H. Findlay, Ogdensburg, assignors to Utica Electrical Manufacturing and Supply Company, Utica, N. Y. Frame for electric-arc lamps	482,940	Sept. 20	1661	418	60	1686
Boston Cash Register Company. (See Foote and Range, assignors.)						
Boston Cash Register Company. (See Knapp and Little, assignors.)						
Boston Cash Register Company. (See Range, John J., assignor.)						
Boston Cash Register Company. (See Saunders, Range, and Foote, assignors.)						
Boston Cash Register Company. (See Webster and Saunders, assignors.)						
Boston Filter Company. (See Blount and Way, assignors.)						
Boswell, George G. F., assignor of one-fifth to J. E. Boswell, Indianapolis, Ind. Bicycle-wheel	478,735	July 12	1028	252	60	220
Boswell, Joseph E. (See Boswell, George G. F., assignor.)						
Botsford, Alban B., Grand Rapids, Mich. Syringe-case	478,081	July 5	12	3	60	5
Botsford, Frederick G., Cleveland, assignor of one-half to J. H. Werner, Canton, Ohio. Drinking-fountain for fowls	479,549	July 26	2340	584	60	497
Bottlers' and Brewers' Machine Manufacturing Company. (See Mueller, David, assignor.)						
Bottlers' Specialty Company. (See Wile and La Casse, assignors.)						
Bouchard, Adolphe, St. Elmo, Ala. Waist	480,062	Aug. 2	487	124	60	675
Boucher, Frank, assignor of one-half to P. T. Corbeille, Fond du Lac, Wis. Draw-bridge guard	482,291	Sept. 6	608	144	60	1453
Bouchet, Peter A., Merced, Cal. Mechanical movement	483,041	Sept. 20	1827	464	60	1720
Boughton, Clandius V., Buffalo, N. Y. Signal-telegraph	482,780	Sept. 20	1422	352	60	1638
Boulanger, Emil, St. Louis, Mo. Waterproof woven snare-string for drums	480,063	Aug. 2	488	124	60	675
Boulanger, Emil, St. Louis, Mo. Device for adjusting drum-snares	480,064	Aug. 2	489	124	60	675
Boulard, Joseph, Newport, R. I. Match and toothpick machine	481,522	Aug. 23	2871	706	60	1173
Bound, Henry. (See O'Donnell, Smith, and Bound.)						
Bourgin, Pierre, Oakland, Cal. Bean-thrasher	481,841	Aug. 30	3408	836	60	1291
Bourne, Henry H., Trinidad, Colo. Combined cement mill and furnace	480,381	Aug. 9	1021	257	60	788
Bouton, Arthur A., Brooklyn, assignor to J. Kayser, New York, N. Y. Attachment for sewing-machines	483,097	Sept. 20	1910	483	60	1737
Bouvier, Louis P., Toronto, assignor of one-half to W. Harty, Kingston, Canada. Envelope-machine	481,779	Aug. 30	3309	808	60	1273
Bovet, Armand de, Paris, France. Magnetic brake	481,842	Aug 30	3409	837	60	1292
Bowe, Wallace F., Meriden, Conn. Spoke-extractor	481,342	Aug. 23	2589	636	60	1117
Bowen, William J., Norwalk, Ohio, assignor to W. Hubbard, Elgin, Ill. Insulator	481,132	Aug. 16	2210	546	60	1034
Bowen, William J., Norwalk, Ohio, assignor to W. Hubbard, Elgin, Ill. Mechanical telephone	481,133	Aug. 16	2211	547	60	1034
Bowers, William H. H., assignor of one-half to Colorado Iron Works, Denver, Colo. Ore-concentrator	481,101	Aug. 16	2164	536	60	1021
Bowie, Washington, *et al.* (See Plunkett, Michael H., assignor.)						
Bowie, William S., Boston, Mass. Lounge	482,673	Sept. 13	1233	301	60	1589
Bowler, Harry S. (See Bowler, William H. and H. S.)						
Bowler, William H. and H. S., O'Fallon, Ill. Dumping-cart	481,843	Aug. 30	3411	837	60	1292
Bowman, Charles, Hanover, Pa. Machine for stripping and booking leaf-tobacco	479,550	July 26	2341	584	60	497
Bowman, Frank, Brooklyn, N. Y. Temporary binder	480,992	Aug. 16	1981	496	60	991
Bowman, James D. (See Miller and Bowman.)						
Bowman, Michael C., A. F. Rose, and C. B. Morse, New York, N. Y. Counter-skiving machine	483,509	Sept. 27	2553	640, 641	60	1872
Bowman, William M., and E. F. Shaw, assignors to Plymouth Foundry Company, Plymouth, Mass. Oil-stove	482,539	Sept. 13	1042	252	60	1552
Bowne Pneumatic Signal Company. (See Bowne, Robert T., assignor.)						
Bowne, Robert T., Benson, Md., assignor to Bowne Pneumatic Signal Company, of West Virginia. Railway-signal	479,395	July 26	2073	520, 521	60	446

Alphabetical list of patentees, July to September, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Bowne, Robert T., Benson, Md., assignor to Bowne Pneumatic Signal Company, of West Virginia. Signaling device	479,396	July 26	2076	521	60	446
Bowring, Henry E., East Molesey, England. Boat-lowering apparatus	479,387	July 19	2054	513	60	428
Bowser, Asbury E. (See Bowser, Lafayette E. and A. E.)						
Bowser, Augustus. (See Bowser, Sylvanus F. and A.)						
Bowser, Lafayette E. and A. E., San Francisco, Cal. Step-ladder	479,051	July 19	1516	377	60	325
Bowser, Sylvanus F. and A., Fort Wayne, Ind. Measuring-pump	480,550	Aug. 9	1291	322	60	808
Bowser, Sylvanus F. and A., Fort Wayne, Ind. Measuring-pump	480,551	Aug. 9	1293	322	60	839
Bowser, Sylvanus F. and A., Fort Wayne, Ind. Measuring-pump	480,552	Aug. 9	1295	322	60	839
Boyd, Frederick C., and R. Martin, New Haven, Conn. Fare-register	479,388	July 19	2055	513, 514	60	428
Boyd, Henry P., Southampton, England. Die for swaging screws	478,219	July 5	237	58	60	49
Boyd, James M., Jr. (See Brewer, Andrew T., assignor.)						
Boyd, Robert L., New York, N. Y. Cover and adjustable ink-well	479,132	July 19	1643	411	60	347
Boyd, Samuel M., Middletown, N. Y. Toy	480,065	Aug. 2	490	125	60	676
Boyden Brake Company of Baltimore City. (See Boyden, George A., assignor.)						
Boyden, George A., Baltimore, Md., assignor to Boyden Brake Company of Baltimore City, of Maryland. Valve for air-brakes	481,134	Aug. 16	2212	547	60	1034
Boyden, George A., Baltimore, Md., assignor to Boyden Brake Company of Baltimore City, of Maryland. Fluid-pressure brake	481,135	Aug. 16	2218	548	60	1035
Boyden, George A., Baltimore, Md., assignor to Boyden Brake Company of Baltimore City, of Maryland. Valve for automatic air-brakes	481,136	Aug. 16	2223	548, 549	60	1035
Boyer, Charles H. (See Sweeney, Peter, assignor.)						
Boyer, Israel D., Dayton, Ohio. Instrument for facilitating the use of tabulated data	480,245	Aug. 9	790	201	60	743
Boynton & Plummer. (See Kindred, James, assignor.)						
Bozza, Carlo, London, England. Musical instrument	480,315	Aug. 9	918	232	60	769
Brachhausen, Gustav A., and P. Riesaner, Entritzsch, near Leipsic, Germany. Damping device for music-boxes	480,993	Aug. 16	1982	496	60	991
Bradbury, Ed. L., *et al.* (See Lawrence, Lester G., assignor.)						
Braden, Samuel M., Ligonier, Ind. Steaming attachment for wheat-heaters	478,151	July 5	119	30	60	26
Bradford, Charles W., assignor of one-half to F. J. Martin, Clinton, Me. Automatic circuit-closer for telegraph-keys	480,689	Aug. 9	1512	376	60	882
Bradley, Charles S., Avon, N. Y., and J. J. Wood, Fort Wayne, Ind. Electric motor and generator	481,220	Aug. 23	2376	585	60	1080
Bradley & Hubbard Manufacturing Company. (See Jauch, Joseph, assignor.)						
Bradley & Hubbard Manufacturing Company. (See Upson, Waldo L., assignor.)						
Bradley, Stephen R., Nyack, N. Y. Cord-carrier for underground conduits	479,397	July 26	2077	521	60	447
Bradley, William E., Frankfort, Ky. Making whisky	481,925	Sept. 6	7	.....	60	1336
Bradshaw, George, assignor of one-half to G. W. Hoyt, Chicago, Ill. Garment-fastener	479,163	July 19	1689	422	60	357
Brady, Charles N., *et al.* (See Huggins, Ulysses S., assignor.)						
Brady, Edward, *et al.* (See Calcutt, Marvin Y., assignor.)						
Brady, James. (See Smith and Brady.)						
Brady, James W., Bartow, Fla. Broiler	480,316	Aug. 9	919	232	60	769
Brafford, William H., *et al.* (See Foster, Washington H., assignor.)						
Bragdon, William B., Cumberland Mills, Me. Electric-wire support	479,052	July 19	1517	378	60	325
Braid, James W. (See Wharton and Braid.)						
Brainard, Adelbert M., Chicago, Ill. Wardrobe-bedstead	479,624	July 26	2444	609	60	516
Brainard, Adelbert M., Chicago, Ill. Wardrobe-bed	482,158	Sept. 6	390	92	60	1411
Brainard, Adelbert M., Chicago, Ill. Wardrobe-bedstead	482,159	Sept. 6	391	92, 93	60	1412
Brainard, Curtis B., Joliet, Ill. Wire straightening and cutting machine	482,000	Sept. 6	121	30	60	1358
Brainard, Julius D., St. Paul, Minn. Fire-escape	481,252	Aug. 23	2441	601	60	1091
Brainard, Julius D., St. Paul, Minn. Earth-scraper	482,711	Sept. 13	1301	318	60	1603
Brambach, Carl, New York, N. Y. Sounding-board for pianofortes	480,488	Aug. 9	1191	299	60	820
Brandenburg, George G., *et al.* (See O'Donnell, Michael J., assignor.)						
Brandley, Al. E., *et al.* (See Beers, Franklin H., assignor.)						
Brandt, Carl, Cedar Falls, Iowa. Combined stove and furnace	482,466	Sept. 13	911	222	60	1526
Brandt, Franz, Philadelphia, Pa. Thermometer-scale	478,984	July 19	1411	349	60	305
Branner, Bernard, New York, N. Y. Awning	480,553	Aug. 9	1287	323	60	840
Brant, Charles W. (See Brant, John W., assignor.)						
Brant, John W., assignor of one-third to C. W. Brant, York, Pa. Spring-tooth harrow	480,705	Aug. 16	1541	384	60	902
Brayney, James C., Sparta, Ill. Sack-holder	478,913	July 12	1294	322	60	271
Braun, John N., Roslyn, Wash. Car-coupling	482,614	Sept. 13	1156	280	60	1574
Brav, Hugo, Berlin, Germany. Till-lock	478,392	July 5	512	124, 125	60	101
Bray, Isabella, New York, N. Y. Dress-stay	480,994	Aug. 16	1983	496	60	991
Bray, Joseph F. (See Gillette, Charles F., assignor.)						
Brazelle, Benjamin, St. Louis, Mo. Process of and apparatus for purifying, refining, and carburizing metals	482,001	Sept. 6	123	31	60	1359
Breed, De Witt C., Medina, N. Y. Parlor sleeping-car	479,240	July 19	1610	453, 454, 455	60	379
Brégier, Eugène, Terrebonne, Minn. Wind-wheel	483,098	Sept. 20	1912	484	60	1737
Brendlinger, Joseph E., Denver, Colo. Ratchet-wrench	478,680	July 12	937	233	60	201
Brennan, John A. (See Croom, Wiley G., assignor.)						
Bresnahan, Maurice V., and J. J. Heys, Lynn, Mass. Sole-machine	479,053	July 19	1518	378	60	325
Bressler, Frank M., *et al.* (See Bitney, Charles O., assignor.)						
Brett, Edward S., Corentry, England. Steam-stamp	478,393	July 5	513	125	60	101
Brett, Henry W., Boston, Mass. Cementing-machine	479,699	July 26	2567	639	60	539
Bretz, Jacob S., Philadelphia, Pa. Bicycle-wheel	478,394	July 5	514	126	60	102
Brewer, Andrew T., assignor of one-half to J. M. Boyd, Jr., Minneapolis, Minn. Combination feed-water heater and boiler	478,395	July 5	516	126	60	102
Brewer, David, Emporia, Kans. Car-coupling	482,615	Sept. 13	1158	280	60	1574
Brewing Improvement Company. (See Frings, Charles H. and B. O., assignors.)						
Brewster, Tomlinson F. (See Dennis, Joseph L., assignor.)						
Bridgeport Brass Company. (See Morton, Augustus, assignor.)						
Bridger, Henry C., Wood Ridge, N. J., assignor to United States Autograph Telegraph Company, New York, N. Y. Device for reproducing characters	478,152	July 5	120	30	60	27
Bridges, Charles W., Independence, Ind. Ornamental fence-wire	478,985	July 19	1413	350	60	305
Bridges, Hiram A., *et al.* (See Cochran, John J., assignor.)						
Briggs, George E., Pittsburg, Pa. Building-block	479,054	July 19	1519	378	60	325
Briggs, Ira J., assignor of one-half to A. W. Sanborn, San Francisco, Cal. Lubricating-cup	482,674	Sept. 13	1235	301	60	1589
Briggs, Orlando P., and F. L. Bryant, Chicago, Ill. Machine for weaving coiled-wire fabric	480,007	Aug. 2	381	94, 95, 96	60	653
Briggs, Otis, Jr., Nevada, Iowa. Time-damper-operating mechanism	478,562	July 12	775	189	60	169

Briggs, Robert. (See Johnson, Lafayette M., assignor.)						
Briggs, Thomas A., Arlington, Mass. Paper-feeding machine	480,447	Aug. 9	1125	280, 281, 282, 283	60	806
Briggs, Thomas A., Arlington, Mass. Feed-machine attachment for printing-presses	480,448	Aug. 9	1135	283	60	808
Briggs, Thomas A., Arlington, Mass. Device for converting oscillatory into reciprocating motion	480,449	Aug. 9	1136	284	60	809
Briggs, Thomas A., Arlington, Mass. Compound lever	480,450	Aug. 9	1138	284	60	809
Brigham, Martin E., Philadelphia, Pa. Wrapping-machine	478,396	July 5	518	127, 128	60	102
Brill, George M., Philadelphia, Pa. Car-truck	478,218	July 5	232	58	60	48
Brill, John A., Philadelphia, Pa. Motor-truck	480,362	Aug. 9	985	248, 249	60	780
Brillié, Lucien V., Paris, France, assignor to Compagnie Anonyme Continentale pour la Fabrication des Compteurs à Gaz et Autres Appareils. Electric meter	479,932	Aug. 2	245	60, 61	60	629
Brind, Ivor L., *et al.* (See Gunn, John A., assignor.)						
Brinkmann, Augustus H. (See Jones, Harry W., assignor.)						
Brintnall, Thomas M., Chicago, Ill. Safe	481,137	Aug. 16	2229	549, 550	60	1036
Bristol Brass and Clock Company. (See Brown, George S., assignor.)						
Bristol, William H., Hoboken, N. J. Photographic camera	478,780	July 12	1097	272	60	233
Bristol, William H., Hoboken, N. J. Camera-shutter	480,095	Aug. 16	1984	497	60	991
Bristol, William H., Hoboken, N. J. Camera-shutter	481,343	Aug. 23	2591	636, 637	60	1117
Brittingham, William B., New York, N. Y. Bleaching compound	480,554	Aug. 9	1289		60	840
Britton, Joseph W., Cleveland, Ohio. Scaling sheet metal	479,780	Aug. 2	10	3	60	584
Broadbridge, Edward, Jr. (See Jordan and Broadbridge.)						
Broadhead, Ernest W., Dolores, Colo. Vehicle-brake	481,466	Aug. 23	2762	687	60	1156
Broadley, Joseph, Elkhorn, Canada. Nut-lock	481,344	Aug. 23	2592	637	60	1117
Brock, William H., Brooklyn, N. Y. Chain-wrench	483,419	Sept. 27	2433	612	60	1848
Brockley, Jacob. (See Hymas, Alfred, assignor.)						
Brocksieper, Fredrick W., New Haven, Conn. Earth-auger	481,345	Aug. 23	2593	637	60	1117
Brockway, Edward, Separ, N. Mex. Ter. Car-coupling	481,660	Aug. 30	3097	755	60	1231
Brodesser, Peter H., Milwaukee, Wis. Elevator and carrier	481,926	Sept. 6	7	2, 3	60	1336
Broggelwirth, Emil, Brooklyn, N. Y. Sash-holder	480,394	Aug. 9	1042	262	60	791
Bronson, Benjamin, Rockford, Ill. Swinging saw	479,324	July 19	1930	482	60	403
Bronson, Levi, assignor of one-half to Pitts Agricultural Works, Buffalo, N. Y. Grain-measure	481,744	Aug. 30	3246	790	60	1260
Brooks, Bartholomew, assignor of one-half to J. R. C. McAllister, Philadelphia, Pa. Awning	479,551	July 26	2342	584	60	498
Brooks, Byron A., Brooklyn, N. Y. Type-writing machine	478,842	July 12	1201	298	60	253
Brooks, Edward J., East Orange, N. J., assignor to E. J. Brooks & Company, New York, N. Y. Post-office hand-stamp	482,781	Sept. 20	1423	352	60	1638
Brooks, Edward J., East Orange, N. J., assignor to E. J. Brooks & Company, New York, N. Y. Seal	481,296	Aug. 23	2519	619	60	1104
Brooks, Franklin W., assignor of one-half to W. C. Rogers, New York, N. Y. Car-seal	481,892	Aug. 30	3486	854	60	1307
Brooks, Herbert H., Cambridge, assignor of one-half to A. T. Clark, Boston, Mass. Insulator	481,388	Aug. 23	2659	652	60	1130
Brooks, James M., Molena, Ga. Road-scraper	482,913	Sept. 20	1626	407	60	1678
Brooks, James W., trustee. (See Webster, Harold A., assignor.)	481,160	Aug. 23	2279	562	60	1060
Brooks, John, *et al.* (See Oliver, John S., assignor.)						
Brooks Locomotive Works. (See Player, John, assignor.)						
Brooks, Samuel H. (See Edge, James, assignor.)						
Brooks, Samuel H. (See Shaw, George, assignor.)						
Brooks, Sidney R., Uniontown, Pa., assignor of one-half to P. C. Sheldon, Allegany, N. Y. Checkrein	480,865	Aug. 16	1779	445	60	956
Brosius, Alva C., Cochranville, Pa. Dehorning implement	480,946	Aug. 9	791	202	60	743
Brown, A. W. (See Beyer, Augustus, assignor.)						
Brown, Albert F. (See Dougherty, Harvy H., assignor.)						
Brown, Alexander F. G., Swindridge Muir, Dairy, Scotland. Rotary engine	478,843	July 12	1202	298	60	253
Brown, Arthur F., and W. R. Knaub, assignors to Stoddard Manufacturing Company, Dayton, Ohio. Horse hay-rake	478,083	July 5	13	4	60	5
Brown, Arthur F., and W. R. Knaub, assignors to Stoddard Manufacturing Company, Dayton, Ohio. Horse hay-rake	478,084	July 5	15	5	60	6
Brown, Benjamin F., Blackstone, Kans. Lamp-stove	480,395	Aug. 9	1043	262	60	792
Brown, Callum H., Nashville, Tenn. Shirt	478,082	July 5	12	3	60	5
Brown, Charles D., assignor of two-thirds to H. L. Munn and J. L. Stevens, Ames, Iowa. Alarm-clock	478,950	July 12	1347	334	60	282
Brown, Charles F., assignor to Royal Machine Company, Yonkers, N. Y. Cash register, indicator, and recorder	481,524	Aug. 23	2874	706, 707, 708	60	1173
Brown, Charles M., Chicago, Ill. Mowing-machine	480,706	Aug. 16	1543	384, 385	60	902
Brown, Charles M., and E. P. Holden, Chicago, Ill. Method of and machine for treating the margins of sheet-metal vessels	479,181	July 19	1722	432	60	362
Brown, Cyrus E., Homestead, Pa. Multiple-punch and laying-out machine	480,557	Aug. 9	1292	323, 324	60	840
Brown, Darwin L., Detroit City, Minn. Tool-rest for grinding-machines	483,042	Sept. 20	1828	464, 465	60	1720
Brown, Frank, Jr., *et al.* (See Campbell, George W., assignor.)						
Brown, Fred. H., assignor of one-half to S. F. Andrews, Chicago, Ill. Pocket coin-receptacle	481,523	Aug. 23	2873	706	60	1173
Brown, Frederick H., Chicago, Ill., assignor of one-half to S. F. Andrews. Telephone	481,138	Aug. 16	2233	550	60	1037
Brown, George A., Bristol, Penn. Boot	480,363	Aug. 9	992	249	60	792
Brown, George F., Philadelphia, Pa. Siphon water-closet	479,182	July 19	1726	432	60	363
Brown, George H., assignor to J. H. Tibbits, Long Island City, N. Y. Ribbon-holder	480,556	Aug. 9	1290	323	60	840
Brown, George S., Forrestville, Conn., assignor to Bristol Brass and Clock Company, New York, N. Y. Wick-raiser	483,979	Sept. 27	2232	561	60	1810
Brown, George T., Sedalia, Mo. Signal and stand	483,420	Sept. 27	2434	612	60	1849
Brown, Harold A., Lawrence, Kans. Dress-waist form	478,308	July 5	389	94	60	78
Brown, Isaac T., Columbus, Ind. Napkin-holder	481,161	Aug. 23	2282	562	60	1060
Brown, James A., Sublette, Ill. Automatic watering-trough	478,397	July 5	523	128	60	103
Brown, John S., Jersey City, N. J. Locking-bar for chases	482,160	Sept. 6	393	93	60	1412

Alphabetical list of patentees, July to September, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Brown, Lewis, Landing, N. J., assignor to American Forcite Powder Manufacturing Company, New York, N. Y. Nitro-glycerine blasting-powder	478,844	July 12	1203	.....	60	254
Brown, Martin A., Seattle, Wash. Toilet-paper holder	481,612	Aug. 30	3026	740	60	1217
Brown, Martin L. (See Gilstrap and Brown.)						
Brown, Oscar E., Buffalo, N. Y. Horseshoe	481,271	Aug. 23	2467	608	60	1096
Brown, Otis E., and P. Stetson, Brockton, Mass. Cut-off valve for engines	482,516	Sept. 13	1001	242	60	1545
Brown, Philip C., Washington, D. C. House letter-box	482,292	Sept. 6	609	144	60	1454
Brown, Robert G., Kansas City, Kans. Coffee-pot	480,066	Aug. 2	492	125	60	676
Brown, Robert S., assignor of one-half to F. G. Platt, New Britain, Conn. Universal coupling	481,780	Aug. 30	3311	809	60	1273
Brown & Sharpe Manufacturing Company. (See Carleton, Cyrus, assignor.)						
Brown, Tristram D., Clifton Springs, N. Y. Pail, pan, wash-boiler, &c	480,555	Aug. 9	1290	323	60	840
Brown, Vories P., San Antonio, Tex. Padlock	482,070	Sept. 6	239	58	60	1362
Brown, William J., Philadelphia, Pa. Hand nailing implement	482,540	Sept. 13	1044	252	60	1553
Brown, William J., Philadelphia, Pa. Device for holding metallic staples	483,374	Sept. 27	2368	593	60	1836
Brown, William T., assignor of three-fourths to B. B. Fannin, R. T. Parsons, and J. M. Duvall, Sandy Hook, Ky. Churn-power	483,134	Sept. 27	1970	499	60	1760
Brown, William W., *et al.* (See Snyder, Charles A., assignor.)						
Brown, William Z., Hannibal, Mo. Window-blind	478,563	July 12	776	190	60	169
Brown, William Z., Atlas, Ill., assignor of one-half to G. Manewal, Bucklin, Mo. Post-hole digger	481,688	Aug. 30	3140	766	60	1239
Browne, Josiah H., Salem, Mass. Car-coupling	480,803	Aug. 16	1687	420, 421	60	932
Brownell Car Company. (See Baler, Frederick A., assignor.)						
Brownell, Frederick B., St. Louis, Mo. Street-car	481,467	Aug. 23	2793	687	60	1156
Brownell, Frederick B., St. Louis, Mo. Street-car	481,468	Aug. 23	2794	687	60	1156
Brownfield, William H. (See Martin and Brownfield.)						
Bruce, Robert. (See Foster, Joseph M., assignor.)						
Bruggeman, Herman. (See Bruggeman, John G. and H.)						
Bruggeman, John G. and H., Clyde, Ohio. Harness-saddle	480,996	Aug. 16	1985	497	60	991
Bruner, Absalom, Arkoe, Mo. Spoke-tenon cutter	481,469	Aug. 23	2795	687	60	1156
Bruner, Preston M., St. Louis, Mo. Fireproof floor-arch	478,914	July 12	1295	322	60	272
Brunkhorst, August. A. Wieden, and C. T. Richards, assignors to Mesker & Bro., St. Louis, Mo. Building-front	478,974	July 12	1392	343, 344	60	280
Brünler, Oscar, Eilenburg, assignor to I. M. Grob & Co., Entritzsch-Leipzig, Germany. Pump	480,707	Aug. 16	1546	385	60	903
Brunner, August, *et al.* (See Auchman, Ferdinand, assignor.)						
Bruno Nordberg Company. (See Nordberg, Bruno V., assignor.)						
Bruns, Hinrich, Bremerhaven, Germany. Lock	483,298	Sept. 27	2261	569	60	1815
Brunsman, Anthony G., and H. H. Uckotter, Cincinnati, Ohio. Lazy-back for vehicle-seats	481,745	Aug. 30	3247	790, 791	60	1260
Brunson, Courtland W., Hamilton, Ohio. Purifying liquids	479,781	Aug. 2	11	3	60	584
Brunswick-Balke-Collender Company. (See Bensinger, Moses, assignor.)						
Brush Electric Company. (See Pfannkuche, Gustav, assignor.)						
Brusie, James. (See Jennings, Byron, assignor.)						
Bruso, Charles, Worcester, Mass. Sweeping-machine	480,231	Aug. 2	763	193	60	727
Bryan, William J. (See Smith and Bryan.)						
Bryant, Charles A., Wakefield, Mass. Button	482,959	Sept. 20	1696	426	60	1692
Bryant, Fred L. (See Briggs and Bryant.)						
Bryant, Fred L., Chicago, Ill. Machine for making coiled-wire fabric for bed-bottoms	482,071	Sept. 6	240	58, 59	60	1382
Bryant, George, San Francisco, Cal. Machine for grooving shoe-soles	483,319	Sept. 27	2292	576	60	1821
Bryce, John, and A. Knox, assignors to Glass and Metal Engraving Company, Limited, Glasgow, Scotland. Pantograph tracing and engraving machine	481,893	Aug. 30	3487	854, 855	60	1307
Bryson, Andrew. (See Pendleton and Bryson.)						
Bryson, Andrew, Jr., New York, N. Y. Electric dispatch system	480,804	Aug. 16	1689	421	60	933
Bryson, Andrew, Jr., New York, N. Y. Automatic receiver for pneumatic or other dispatch systems	480,805	Aug. 16	1690	422	60	933
Buchanan, John, *et al.* (See Stuart, James A., assignor.)						
Buchwald, Elmer E., Erie, Pa. Railway-track gage	479,572	July 26	2345	585	60	498
Bupk, Elijah, Marshall, Mich. Printer's rule-bender	478,085	July 5	17	6	60	6
Buck, Fredrick A., Urbana, Ohio. Hollow-mandrel chuck	482,616	Sept. 13	1159	280	60	1574
Buck, Julius W., assignor of one-half to W. R. Field, Greenville, Pa. Game apparatus	481,548	Aug. 30	2992	719	60	1198
Buck, Taylor S., Brooklyn, N. Y. Hand-stamp	483,343	Sept. 27	2323	584	60	1827
Buckingham, John L., Hermosa, S. D. Wire-tightener	482,035	Sept. 6	181	44	60	1371
Buckley, Fred L., Annin Creek, Pa. Washing-machine	482,036	Sept. 6	185	44	60	1371
Buckley, John, Eureka, Cal. Cable logging-machine	481,927	Sept. 6	9	3	60	1336
Buckley, John W., *et al.* (See Whitworth, Charles E., assignor.)						
Buckley, Timothy. (See Doyle, William J. C., assignor.)						
Buckner, James, Boston, Mass. Apparatus for covering wire with fibrous material	483,043	Sept. 20	1830	465	60	1721
Buckner, Thomas B. (See Hall, James F., assignor.)						
Budde, Otto. (See Gerstenkorn, Paul, assignor.)						
Budington, Albert G., Austin, Tex. Railway-tie	479,625	July 26	2445	610	60	516
Buence, Samuel W., Argentine, and A. Bash, Turner; said Buence assignor to G. A. Taylor, Argentine, Kans. Saw-set	481,221	Aug. 23	2377	585	60	1080
Buffinton, Elisha W., assignor of one-half to A. F. Dow, Fall River, Mass. Rosette for electric lighting	480,915	Aug. 16	1853	462	60	967
Bugbee, Fred A., Auburn, N. Y. Sole-machine	480,317	Aug. 9	920	232, 233	60	769
Bugbee, George W., Delhi, and F. Danner, Home City, assignors to Egan Company, Cincinnati, Ohio. Tonoing-machine	479,389	July 19	2059	514, 515	60	429
Bugbee, George W., Delhi, and F. Danner, Home City, assignors to Egan Company, Cincinnati, Ohio. Fence for wood-working machines	480,902	Aug. 16	1839	457	60	961
Buhl & Co., Walter. (See Ashbaugh, Charles C., assignor.)						
Buhmeier, Henry T., Elgin, Ill. Window-blind	479,398	July 26	2080	521, 522	60	447
Buhoup, Harry C., Chicago, Ill. Car-coupling	480,839	Aug. 16	1737	434	60	943
Buker, Alpha, Hueneme, Cal. Carriage-curtain fastener	480,067	Aug. 2	493	125	60	676
Bulasky, Louis, New York, N. Y. Hat-trimming machine	482,541	Sept. 13	1045	252	60	1553
Bullard, Edgar K., Wheeling, W. Va. Diaphragm for photographic lenses	483,135	Sept. 27	1971	499	60	1760
Bullard, Frederick H., and F. Harrington, Chicopee, Mass. Elastic tire for vehicle-wheels	478,564	July 12	777	190	60	169
Bullard, James H., Springfield, Mass. Combined liquid receptacle and pump	480,068	Aug. 2	494	126	60	676
Bullard, James H., Springfield, Mass. Pneumatic tire	483,344	Sept. 27	2324	584	60	1827
Bullard, James H., assignor to Aerated Fuel Company, Springfield, Mass. Hydrocarbon-burning apparatus	483,099	Sept. 20	1913	484	60	1738

Name, residence, and invention	No.	Date.	Monthly volume. Spec.	Monthly volume. Drgs.	Official Gazette. Vol.	Official Gazette. Page.
Bullard, James H., assignor to Aerated Fuel Company, Springfield, Mass. Hydrocarbon-burning apparatus	483,100	Sept. 20	1914	484	60	1738
Bullock, Edward A., Bellefonte, Pa. Floor-jack	481,470	Aug. 23	2796	686	60	1157
Bullock, Edwin B. (See Blaney, William H., assignor.)						
Bullock Lothrop L. (See Mullaly and Bullock.)						
Bunce, Levi P., assignor of one-eighth to W. Heggum, Minneapolis, Minn. Closed conduit for electric railways	482,993	Sept. 20	1750	442	60	1703
Bundy Manufacturing Company. (See Bundy, Willard L., assignor.)						
Bundy, Willard L., assignor to Bundy Manufacturing Company, Binghamton, N. Y. Workmen's time-recorder	482,293	Sept. 6	611	144, 145, 146	60	1454
Bunnell, Morton G., assignor to F. C. Austin, Chicago, Ill. Road-working machine	479,700	July 26	2569	639, 640	60	539
Bunnell, Sadie A. (See Vanderbilt, Henry V., assignor.)						
Burbank, Arthur, *et al.* (See Wilson, Robert R., assignor.)						
Burch, Theodore W. (See Tanner and Burch.)						
Burchinal, Thomas L., Morgantown, W. Va. Spirit-level	478,309	July 5	390	94	60	78
Burdett, J. B. (See Rowntree, Harold, assignor.)						
Burdon, David P., assignor of one-half to P. Sattelkan, Jacksonville, Fla. Steam vacuum-pump	482,072	Sept. 6	244	59, 60	60	1383
Burgess, Andrew, Owego, N. Y. Magazine-firearm	478,220	July 5	218	59	60	49
Burgess, Andrew, Owego, N. Y. Magazine-firearm	478,221	July 5	243	59, 60	60	50
Burgess, Edward A., New Haven, Conn. Pin-sticking machine	478,222	July 5	215	60	60	50
Burgess, Melancthon, St. George, Utah Ter. Washing-machine	481,746	Aug. 30	3250	791	60	1261
Burgon, Charles and H., Malin Bridge, near Sheffield, England. Animal-shears	481,102	Aug. 16	2167	537	60	1025
Burgon, Charles and H., Malin Bridge, England. Animal-shears	480,997	Aug. 16	1946	497	60	991
Burgon, Harry. (See Burgon, Charles and H.)	481,844	Aug. 30	3411	837	60	1292
Burke, Ashbel C., Gypsum, assignor to D. A. Scott, Catawba Island, Ohio. Fruit-sizer	482,294	Sept. 6	614	146	60	1455
Burkhard, Theodore F., San Francisco, Cal. Whip-socket and rein-holder	478,310	July 5	391	94	60	79
Burkhardt, John, assignor to W. H. Jackson & Co., New York, N. Y. Forming hollow balls, &c., from sheet metal	480,708	Aug. 16	1547	385	60	903
Burkhardt, Richard P., Dayton, Ohio. Process of and machine for bending and drying wood	482,782	Sept. 20	1425	353	60	1639
Burkhead, Henry C., Summit, assignor of one-half to M. S. Van Meter, Meeting Creek, Ky. Crate	483,101	Sept. 20	1916	485	60	1738
Burkman, Walfrid, San Francisco, Cal. Brick-machine	478,915	July 12	1297	322, 323	60	272
Burnet Machine Company. (See Burnet, Robert, assignor.)						
Burnet, Robert, East Orange, N. J. Machine for stitching with staples	481,747	Aug. 30	3252	792	60	1261
Burnet, Robert, assignor, by mesne assignments, to Burnet Machine Company, East Orange, N. J. Bookbinding-machine	481,894	Aug. 30	3491	855, 856	60	1307
Burnette, Eugene T., Haywards, Cal. Preserving eggs	479,970	Aug. 2	312	.....	60	641
Burns, Charles F., *et al.* (See Kirby, James A., assignor.)						
Burns, James A., Homestead, Pa. Mill appliance	482,861	Sept. 20	1530	380, 381	60	1661
Burns, James H., Spokane, Wash. Device for preventing railway-rails from spreading	480,998	Aug. 16	1987	497	60	992
Burns, John. (See Bigland and Burns.)						
Burns, Thomas. (See Parryer and Burns.)						
Burns, Thomas, Edinburgh, Scotland. Apparatus for scouring and washing skins, &c	478,499	July 5	667	163	60	132
Burrell & Co., D. H. (See Womersley, William, assignor.)						
Burrell, David H. (See Frederiksen, Johan D., assignor.)						
Burrell, David H., Little Falls, N. Y. System of heating	480,903	Aug. 16	1840	457, 458	60	964
Burrowes, E. T. (See Hall, Horace L., assignor.)						
Burrows, Arba G., assignor of one-half to L. Gay, Dunmore, W. Va. Vehicle-hub	480,690	Aug. 9	1513	376	60	883
Burrows, Taylor. (See Donisthorpe and Burrows.)						
Burt, Merritt, and J. W. Skilton, Jacksonville, Fla. Tank-feeder	482,617	Sept. 13	1160	280, 281	60	1575

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Cook, Frank. (See Hankenhof, Julius, assignor.)						
Cook, Herbert F., assignor to L. W. Bingham, C. L. Douglas, and C. B. Squire, Cleveland, Ohio. Steam-boiler	478,690	July 12	950	216	60	204
Cook, Hugo, Dayton, Ohio. Cash register, indicator, and recorder	482,165	Sept. 6	400	95, 96	60	1414
Cook, Hugo, Dayton, Ohio. Cash-register	482,505	Sept. 13	982	238	60	1541
Cook, Hugo, Dayton, Ohio. Advertising apparatus for cash-registers	482,722	Sept. 20	1393	323	60	1619
Cook, Hugo, Dayton, Ohio. Cash register and indicator	483,511	Sept. 27	2557	641, 642	60	1873
Cook, John R., and C. S. Hinchman, Rushville, Ind. Steam-engine valve	479,401	July 26	2085	523	60	448
Cook, John W., assignor of one-half to J. R. Medley, Harrisburg, Oreg. Clothes-pin	480,072	Aug. 2	500	127	60	678
Cook, John W. B., Camden, Ark. Fire-kindler	478,249	July 5	304	74	60	61
Cook, Lucian F., Tacoma, Wash. Transportation system	482,469	Sept. 13	916	224, 225	60	1527
Cook, Sheldon E., Chicago, Ill. Buckle	482,915	Sept. 20	1629	408	60	1678
Cook, Theodore A., Callicoon Depot, assignor to J. and W. Mathison, Brooklyn, N. Y. Crozing-machine	480,711	Aug. 16	1551	386	60	904
Cook, Theodore A., Callicoon Depot, assignor to J. and W. Mathison, Brooklyn, N. Y. Machine for hooping and heading kegs	482,079	Sept. 6	257	62	60	1386
Cook, Theodore A., Callicoon Depot, assignor to J. and W. Mathison, Brooklyn, N. Y. Hoop-flaring machine	482,300	Sept. 6	622	148	60	1456
Cooke, Edward T., and W. H. Mackay, St. Louis, Mo. Electric-lighting system	478,186	July 5	181	47	60	38
Cooke, Howard E., Woonsocket, R. I. Seat for velocipedes	479,056	July 19	1521	379	60	326
Cooke, Sarah A., Chicago, Ill. Machine for cutting and marking garments	478,988	July 19	1415	350, 351	60	305
Cooper, A. O., *et al.* (See Lawrence, Lester G., assignor.)						
Cooper, Charles W., New York, N. Y. Apparatus for evaporating liquids	482,340	Sept. 13	703	168	60	1487
Cooper & Hampton. (See Grotz, Charles, assignor.)						
Cooper, James R., Sugar Grove, Ill. Straw-stacker	482,080	Sept. 6	258	62, 63	60	1386
Cooper, John A., Nashville, Tenn. Door-spring	481,475	Aug. 23	2801	689	60	1158
Cooper, John W., New York, N. Y. Window	480,806	Aug. 16	1692	422	60	934
Cooper, Leslie A., Springfield, Mass. Lamp	482,994	Sept. 20	1752	443	60	1704
Cooper, Leslie A., assignor of one-half to A. A. Warner and A. W. Allen, Springfield, Mass. Lamp	479,350	July 19	1989	498	60	415
Cope, Thomas J., Philadelphia, Pa. Grip for ropes	482,975	Sept. 20	1722	435	60	1698
Copeland, Henry, Chattanooga, Tenn. Hay-press	480,917	Aug. 16	1855	463	60	967
Coppage, Marcellus C., Terre Haute, Ind. Tube-cutter	482,496	Sept. 13	972	236	60	1538
Corano, Crescengo. (See Green, John, assignor.)						
Corbeille, Peter T. (See Boucher, Frank, assignor.)						
Corbin Cabinet Lock Company. (See Judd, Edward A., assignor.)						
Corbin, Elbert A., *et al.* (See Marsden, Mark W., assignor.)						
Cordesman, Henry J., Cincinnati, Ohio, and E. Cheshire, Covington, Ky., assignors to Cordesman Machine Company, Cincinnati, Ohio. Dovetailing-machine	478,544	July 5	750	183	60	149
Cordesman Machine Company. (See Cordesman and Cheshire, assignors.)						
Cordrey, Henry L., Mount Union, Iowa. Shaft-support for vehicles	479,631	July 26	2457	612	60	519
Corda, Albert B. W. H., Hamburg, Germany. Ship's telegraph	481,223	Aug. 23	2381	586, 587	60	1020
Corey, John A., Hope Valley, R. I. Carriage-wrench	481,749	Aug. 30	3256	793	60	1262
Corliss, William, Providence, R. I. Safe	478,989	July 19	1421	351, 352	60	306
Cornelison, Jesse, Oakland, Indian Ter. Pneumatic feeder for cotton-gins	482,916	Sept. 20	1630	408	60	1679
Cornelius, John, Oakland, Md. Ditching-machine	478,408	July 5	538	131	60	106
Cornell, Oliver H. P., Albany, assignor, by mesne assignments, to Caloric Cone Company, New York, N. Y. Combined gas heating and lighting device	481,139	Aug. 16	2234	550, 551	60	1037
Cornely, Emil and R., Paris, France. Embroidering-machine	479,057	July 19	1523	379, 380	60	326
Cornely, Robert. (See Cornely, Emil and R.)						
Corner, Robert J. G., assignor of one-half to C. B. Vastine, Chicago, Ill. Gas or lamp lighter	478,953	July 12	1350	334	60	282
Corning, Frederick G., New York, N. Y. Fluid-support for ore-concentrating belts	478,502	July 5	675	165	60	133
Cornyn, James M. (See Winternight, Henry A., assignor.)						
Corrigan, Francis W., Luzerne, Pa. Coal-auger	483,210	Sept. 27	2095	531	60	1785
Corscaden, Thomas, assignor to Stanley Works, New Britain, Conn. Hat-hook	479,058	July 19	1526	381	60	327
Corscaden, Thomas, assignor to Stanley Works, New Britain, Conn. Drive-chain	482,723	Sept. 20	1325	324	60	1620
Corser, Harrington. (See Stone and Corser.)						
Corson, Samuel H., Cape May, N. J. Railway-switch fastening	480,320	Aug. 9	925	234	60	770
Cory, Charles, New York, N. Y. Rudder-indicator	482,421	Sept. 13	844	202, 203	60	1514
Cosgrove, Thomas W., *et al.* (See Christy, James A., assignor.)						
Cosman, Nathan, assignor of one-half to O. F. Wegener, Seattle, Wash. Kettle-cover	479,490	July 26	2255	566	60	481
Cossette, Pitre, assignor of one-third to C. Terrian, Crystal Falls, Mich. Ratchet-wrench	481,690	Aug. 30	3145	767	60	1240
Cossor, Frank. (See Rapkin and Cossor.)						
Cotter, Charles A., assignor to Randolph & Clowes, Waterbury, Conn. Tube for beer-coolers	479,305	July 19	1759	441	60	369
Cotton, James M., Ashland, N. H. Locker for apparel, &c	483,282	Sept. 27	2235	562	60	1811
Cotton, James M., Ashland, N. H. Bundle-rack for cars	483,283	Sept. 27	2236	562	60	1811
Cotton, Silvester J. (See Badger, Argulas A., assignor.)						
Cottrell, Charles P., Stonington, Conn., assignor to C. B. Cottrell & Sons, Westerly, R. I. Workman's checking and recording apparatus	481,274	Aug. 23	2475	609	60	1098
Cottrell & Sons, C. B. (See Cottrell, Charles P., assignor.)						
Couch, Daniel R., Canandaigua, N. Y. Vehicle-box	480,764	Aug. 16	1625	407	60	921
Couch, Louis B., Nyack, N. Y. Umbrella-runner	478,250	July 5	305	74	60	61
Couillard, Hubert, Jacksonville, Fla. Combined bureau and wash-stand	481,848	Aug. 30	3419	839	60	1293
Coulter, William B., Waterbury, Conn. Rotary steam-engine	482,166	Sept. 6	405	96, 97	60	1414
Coulter, William S., Stockwell, Ind. Gate	482,301	Sept. 6	623	148	60	1456
Coursen, Robert L. (See Barrow, Thomas, assignor.)						
Coville, Orson, *et al.* (See June, Marcus M., assignor.)						
Covington, John I., Brooklyn, N. Y. Perpetual train time-table	483,138	Sept. 27	1974	500	60	1761
Covode, H. L. (See Spidel, George W., assignor.)						
Cowdery, Warren H., Ashtabula, Ohio. Making rakes	481,663	Aug. 30	3102	756	60	1232
Cowell, Rensselaer A., Cleveland, Ohio. Car-coupling	480,807	Aug. 16	1693	422	60	934
Cowell, William H., Logan, Ohio. Railway-rail bender	479,491	July 26	2257	566	60	482
Cowles, Alfred A., New York, N. Y., and J. F. Gilpin, assignors to Ansonia Brass and Copper Company, Ansonia, Conn. Annealing-furnace	479,115	July 19	1620	405	60	343
Cowles, Henry S., assignor of one-half to W. Duffy, East Hartford Meadow, Conn. Chafe-iron	480,172	Aug. 2	660	168	60	708

Cummings, Adelbert W., Dunkirk, N. Y. Machine for forming collars	483,139	Sept. 27	1976	501	60	1761
Cummings, George W. (See Winsor and Cummings.)						
Cummings, Uriah, New Haven, Conn. Pulverizing-machine	478,253	July 5	309	75	60	62
Cumnock, Robert L., Henderson, Ky. Trunk for use with cotton-pickers, &c	478,990	July 19	1423	352	60	306
Cunningham, Christopher, Jr., Brooklyn, N. Y. Circular-roofed structure	481,347	Aug. 23	2597	638	60	1118
Cunningham, Horace E., Brockton, Mass. Attachment for stapling-machines	481,786	Aug. 30	3318	810	60	1275
Cunningham, James F. (See Gennert and Cunningham.)						
Cunningham, Patrick, assignor to American Carrier Rocket Company, New Bedford, Mass. Dynamite rocket	479,738	July 26	2646	656	60	553
Cunningham, Thomas M., Nashville, Tenn. Excess-baggage stamp or check for railway-tickets	478,923	July 12	1309	326	60	274
Cupples, Samuel. (See West, James, assignor.)						
Curley, Thomas, Troy, N. Y. Steam-pipe coupling for railway-cars	478,991	July 19	1424	{352 353}	60	307
Curran, John J., Toledo, Ohio. Filter	479,403	July 26	2067	521	60	448
Currey, George H., Evant, Tex. Bedstead	482,725	Sept. 20	1327	324	60	1620
Currie, Jesse W. (See Currie, John A., Jr., and J. W.)						
Currie, John A., Jr., and J. W., Pipe Creek, Tex. Pickle-lifter	481,691	Aug. 30	3146	767	60	1240
Currier, Anna W., and G. Clark, Malden, Mass. Button-fastener	482,621	Sept. 13	1166	282	60	1576
Currin, John, assignor to American Optical Company, Southbridge, Mass. Eyeglasses	479,907	Aug. 2	196	49	60	621
Curtis, Charles R., Fairland, Mich. Hook for checkreins	480,715	Aug. 16	1557	388	60	906
Curtis, George W., assignor to Unique Table Company, New York, N. Y. Wall-table	481,608	Aug. 16	2002	500	60	994
Curtis, Lewis E., Chicago, assignor to E. Norton, Maywood, and O. W. Norton, Chicago, Ill. Can-heading machine	479,135	July 19	1646	412	60	348
Curtis, Nelson. (See Webb, Edward, assignor.)						
Cushman, Joseph W., New York, N. Y. Oil-can holder for bicycles	478,092	July 5	28	9	60	8
Cushman, Modestus J., Waterloo, Iowa. Apparatus for testing milk	478,737	July 12	1030	253	60	220
Cuthbert, Arthur, London, England. Nozzle-holder	479,249	July 19	1427	{458 459}	60	383
Cutler, Alexander M., *et al.* (See Cutler, William R., assignor.)						
Cutler, Henry H., Waltham, Mass. Electric-arc lamp	482,435	Sept. 13	864	{207 208}	60	1518
Cutler, William P., *et al.* (See Cutler, William R., assignor.)						
Cutler, William R., assignor of two-thirds to A. M. Cutler, Bath, Me., and W. P. Cutler, Baltimore, Md. Cringle for sails	479,404	July 26	2089	523	60	449
Cutten, Elisha B., New York, N. Y. Electrolytically producing potassium chlorate	480,492	Aug. 9	1196	300	60	821
Cutten, Elisha B., New York, N. Y., assignor, by mesne assignments, to Union Chemical Company, of New Jersey. Electrolytic cell	480,493	Aug. 9	1197	.....	60	821
Cutter Electrical and Manufacturing Company. (See Stanley, Lucius T., assignor.)	480,491	Aug. 9	1194	300	60	821
Cutter, William T., assignor of two-thirds to C. J. Luce, East Lynne, Conn. Extracting fat from wool	482,995	Sept. 20	1754	443	60	1704
Cuyás, Arturo. (See Assorati and Cuyás.)						
D'Heureuse, Rudolph, New York, N. Y. Safety device for window-cleaners	482,865	Sept. 20	1538	383	60	1663
D'Unger Long Distance Telephone Company. (See D'Unger, Paul H., assignor.)						
D'Unger, Paul H., assignor to D'Unger Long-Distance Telephone Company, Chicago, Ill. Telephone	478,092	July 12	951	236	60	205
Daens, Robert H., assignor to himself and R. E. Cole, Dardanelle, Ark. Stirrup	482,996	Sept. 20	1757	443	60	1705
Daggett, John C., Boston, Mass. Shoe-upper	481,299	Aug. 23	2324	620	60	1105
Dagry, Alphonse, assignor to La Société Dagry & Arnault, Paris, France. Dough kneader or mixer	483,430	Sept. 27	2446	{615 616}	60	1851
Dahlstrom, Charles A., Chicago, Ill. Car-brake	481,163	Aug. 23	2284	563	60	1061
Dailey, Ambrose, *et al.* (See Spielman, William, assignor.)						
Dailey, Joseph L., *et al.* (See Spielman, William, assignor.)						
Daily, Ethan W., Kansas City, Kans. Door-closer	483,140	Sept. 27	1976	501	60	1761
Dain, Albert E., Pittsburg, Pa. Newspaper-vender	482,824	Sept. 20	1473	{306 307}	60	1649
Dain, Joseph, Jr., Carrollton, Mo. Rake-tooth	479,789	Aug. 2	23	6	60	586
Dalbey, William H., Indianapolis, assignor of one-half to E. D. Kingsbury, Irvington, Ind. Sash-holder	482,710	Sept. 13	1299	318	60	1603
Dale, Charles H., New York, N. Y., assignor to Empire Car Coupler Company, Weehawken, N. J. Car-coupling	481,930	Sept. 6	15	4, 5	60	1337
Dale, Robert G., and W. S. Weightman, Durango, Colo. Egg-carrying package	478,924	July 12	1310	326	60	274
Daleiden, John P., Chicago, Ill. Candlestick	481,225	Aug. 23	2381	588	60	1081
Dalenberg, William, and C. Verduin, South Holland, Ill. Car-step extension	481,009	Aug. 16	2003	501	60	994
Daly, John E., Glendora, and A. A. Nell, Covina, Cal. Orchard-cultivator	482,081	Sept. 6	261	63	60	1387
Dam, Charles A., Lowell, Mass. Cotton-spinning mule	478,738	July 12	1031	253	60	220
Dam, Charles A., Lowell, Mass. Cotton-spinning mule	483,301	Sept. 27	2265	570	60	1816
Damon, Frank A., Fitchburg, Mass. Dental engine	478,902	July 19	1425	353	60	307
Damon, Frank A., Fitchburg, Mass. Dental engine	481,164	Aug. 23	2286	563	60	1061
Dana, Arthur L., Colorado Springs, Colo. Ore washer and concentrator	481,550	Aug. 30	2925	{719 720}	60	1199
Dangler Stove and Manufacturing Company. (See Ruppel, Henry, assignor.)						
Daniel, Joseph S., Kansas City, Mo. Automatic valve-operator for water closets	480,494	Aug. 9	1197	301	60	821
Daniel Pratt Gin Company *et al.* (See Beckwith, William G., assignor.)						
Daniels, Henry H., Cincinnati, Ohio. Combination-padlock	481,551	Aug. 30	2926	720	60	1199
Daniels, Robert E., Youngstown, Ohio. Metal railway-tie	482,997	Sept. 20	1757	444	60	1705
Danley, Robert J. M., Columbus, Ohio. Railway-crossing protector	482,422	Sept. 13	847	203	60	1514
Danley, Robert J. M., Columbus, Ohio. Railway-crossing protector	482,423	Sept. 13	848	203	60	1514
Danner, Frederick. (See Bugbee and Danner.)						
Danner, Friedrich, Tarentum, assignor of one-half to Pittsburgh Plate Glass Company, Creighton, Pa. Regenerative gas-furnace	482,117	Sept. 6	318	75, 76	60	1397
Darche, George C., Chicago, Ill. Electric alarm-clock	478,155	July 5	124	32	60	27
Darrow, Samuel C., Traverse City, Mich. Deep-water fishing-tackle	481,165	Aug. 23	2288	564	60	1062
Daugherty, James D., Kittanning, Pa. Type-writing machine	478,925	July 12	1311	{326 327}	60	275

Alphabetical list of patentees, July to September, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume.		Official Gazette.	
			Spec.	Dr'g.	Vol.	Page.

Eckert, Jacob E., Marengo, Iowa. Balance-wheel pliers and calipers	481,936	Sept. 6	26	6	60	1339
Eckert, John C., assignor to Dicks & Wiggins, Dayton, Ohio. Sealing-wax mold	483,512	Sept. 27	2563	643	60	1874
Eckert, Otto C., and L. Cohen, Providence, R. I. Mother-of-pearl articles and making the same	482,548	Sept. 13	1058	257	60	1556
Eckert, Thomas T., New York, N. Y. Galvanic battery	482,425	Sept. 13	852	204	60	1515
Eckhardt, Jacob, St. Louis, Mo. Apparatus for consumption of sewer-gas	481,108	Aug. 16	2174	538	60	1027
Economic Advertising Company. (See Webb, Alfred E., assignor.)						
Economic Feed Bag Company. (See Ehrhardt, William, assignor.)						
Eddy, Oscar H., assignor to W. Eddy & Sons, Greenwich, N. Y. Foot-latch for reversible plows	480,077	Aug. 2	509	129	60	679
Eddy & Sons, W. (See Eddy, Oscar H., assignor.)						
Eddy, William W. (See Connors and Eddy.)						
Edelmann, Bernhard. (See Roessler, Heinrich, assignor.)						
Edenborn, William, St. Louis, Mo. Machine for coiling wire	480,564	Aug. 9	1300	326	60	842
Edenborn, William, St. Louis, Mo. Machine for coiling wire	480,565	Aug. 9	1301	326	60	843
Edgar, Charles H., trustee. (See Hawes, Herbert E., assignor.)						
Edgar, Charles H., trustee. (See Young, Josiah L., assignor.)						
Edgar, Ellis F., Woodbridge, N. J. Furnace	478,319	July 5	405	98	60	81
Edgar, Ellis F., Woodbridge, N. J. Steam-boiler	478,320	July 5	407	98	60	82
Edgar, William, assignor to Sanford Foundry and Machine Works, Sanford, Fla. Moiding-machine	480,566	Aug. 9	1302	326	60	843
Edge, James, assignor of one-half to S. H. Brooks, Gorton, England. Carding-engine for grinding revolving flats when in situ	481,228	Aug. 23	2389	{589 590}	60	1082
Edgerly, Sylvester A., *et al.* (See Morrill, George W., assignor.)						
Edie, James P. (See Mars, Charles P., assignor.)						
Edison Electric Light Company. (See Edison, Thomas A., assignor.)						
Edison General Electric Company. (See Ball, Henry P., assignor.)						
Edison General Electric Company. (See Dobbie, Robert S., assignor.)						
Edison General Electric Company. (See Goold, Frederick D., assignor.)						
Edison General Electric Company. (See Henderson and Phelps, assignors.)						
Edison General Electric Company. (See Howell, John W., assignor.)						
Edison General Electric Company. (See Hutchinson, Joseph, assignor.)						
Edison General Electric Company. (See Kennelly, Arthur E., assignor.)						
Edison General Electric Company. (See Kennelly and Ott, assignors.)						
Edison General Electric Company. (See Kolben, Emil, assignor.)						
Edison General Electric Company. (See Melick, George F., assignor.)						
Edison General Electric Company. (See Ott and Kennelly, assignors.)						
Edison General Electric Company. (See Parshall, Horace F., assignor.)						
Edison General Electric Company. (See Robb, James T., assignor.)						
Edison General Electric Company. (See Schefbauer, Rupert, assignor.)						
Edison General Electric Company. (See Weber, August, assignor.)						
Edison, Thomas A. (See Ott, John F., assignor.)						
Edison, Thomas A., Menlo Park, N. J. Telephone-repeater	478,743	July 12	1037	255	60	221
Edison, Thomas A., Menlo Park, N. J., and P. Kenny, New York, N. Y. Fac-simile telegraph	479,184	July 19	1728	{433 434}	60	363
Edison, Thomas A., Menlo Park, N. J., assignor to Edison Electric Light Company, New York, N. Y. Means for controlling electric generation	482,549	Sept. 13	1059	257	60	1556
Edison, Thomas A., Newark, N. J., assignor, by mesne assignments, to Western Union Telegraph Company. Duplex telegraph	480,567	Aug. 9	1305	326	60	844
Edmiston, James B., Liverpool, England. Filtering or purifying feed-water	481,109	Aug. 16	2175	539	60	1027
Edmond, William J., and T. J. Keon, Philadelphia, Pa. Shade for incandescent electric lamps	479,207	July 19	1761	{441 442}	60	369
Edward Miller & Company. (See Baldwin, George W., assignor.)						
Edward Miller & Company. (See Rhind, Frank, assignor.)						
Edwards, Archer and R. J., London, England. Machine for straightening and winding cloth, &c	478,255	July 5	312	76	60	63
Edwards, Frederick. (See Wilkes and Edwards.)						
Edwards, Harry. (See Smallfield and Edwards.)						
Edwards, Oliver M., Syracuse, N. Y. Window	482,344	Sept. 13	711	170	60	1489
Edwards, Richard J. (See Edwards, Archer and R. J.)						
Edwards, Samuel H., Bayonne, N. J. Box-nailing machine	482,866	Sept. 20	1539	{383 384 385}	60	1663
Edwards, William J., and F. R. Barclay, Youngstown, Ohio. Hook and eye	482,867	Sept. 20	1548	386	60	1664
Edwards, William S., Charleston, W. Va. Type-writing machine	482,510	Sept. 13	1010	245	60	1546
Effront, Jean, assignor to Société Générale de Maltose, Brussels, Belgium. Fermenting	478,418	July 5	551	.....	60	108
Egan Company. (See Bugbee and Danner, assignors.)						
Egelston, Edgar A., Easton, Md. Washing-machine	478,926	July 12	1316	327	60	276
Egge, Frederick, Bridgeport, Conn. Machine for setting lacing-hooks	480,185	Aug. 2	680	{172 173}	60	711
Egge, Frederick, assignor of two-thirds to C. E. and O. C. Smith, Bridgeport, Conn. Bicycle-lock	481,300	Aug. 23	2662	{652 653}	60	1130
Eglin, William, assignor of one-half to J. L. Hill, Philadelphia, Pa. Urinal and patrol-box	478,505	July 5	683	166	60	135
Egry, William L., Hamilton, Ohio. Autographic register	481,927	Sept. 6	27	7	60	1339
Ehenger, Smith, Park City, Utah Ter. Can-opener	479,256	July 19	1835	460	60	384
Ehrhardt, William, assignor, by mesne assignments, to Economic Feed Bag Company, New York, N. Y. Nose-bag	482,736	Sept. 20	1332	326	60	1621
Eichhorn, Andreas, assignor of one-half to A. Frans, St. Louis, Mo. Combined spool-holder and thread-cutter	480,455	Aug. 9	1147	287	60	810
Eichstaedt, Roman, Michigan City, Ind. Drawer-pull	481,853	Aug. 30	2496	641	60	1295
Eickemeyer Field Company. (See Eickemeyer, Rudolf, assignor.)						
Eickemeyer, Rudolf, Yonkers, N. Y. Dynamo-electric machine	479,118	July 19	1625	406	60	344
Eickemeyer, Rudolf, Yonkers, N. Y. Armature-winding for dynamo-electric machines	482,825	Sept. 20	1475	367	60	1650

Alphabetical list of patentees, July to September, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Eickemeyer, Rudolf, Yonkers, N. Y., assignor to Eickemeyer Field Company, of New York. Electric locomotive	480,918	Aug. 16	1857	463	60	967
Einig, John, Jacksonville, Fla. Steam-whistle	480,078	Aug. 2	510	130	60	680
Eisenhardt, George F., assignor to Dienelt & Eisenhardt, Philadelphia, Pa. Machine for printing oil-cloth	478,927	July 12	1317	327	60	276
Eisenhart, Henry W. (See Farquhar, Eisenhart, and Morton.)						
Eisner, Theodor D., Boston, Mass. Fabric-holder for embroidering-machines	481,553	Aug. 30	2935	721	60	1200
Eklund, Andrew M., Minneapolis, Minn. Electric belt	479,410	July 26	2098	525	60	450
Ekman, Carl F., Marshalltown, Iowa. Fire-escape	479,257	July 19	1837	461	60	384
Eldred, Zenas C., *et al.*, receivers. (See Fuller, Clark S., assignor.)						
Eldredge, Daniel, Boston, Mass. Speaking attachment for telephones	479,062	July 19	1531	382	60	327
Eldridge, Edward E., assignor of one-half to A. W. Stone, North East, Pa. Folding chair	479,355	July 19	1997	500	60	417
Eldridge, Herbert M., Niagara, Canada, assignor to Oneida Community, Limited, Kenwood, N. Y. Sheet-metal chain	483,347	Sept. 27	2326	585	60	1698
Eldridge, Hilliary, Purvis, Miss., assignor of one-half to P. C. Gagne, Houston, Tex. Magnifying-globe for the diffusion of artificial light	483,482	Sept. 27	2508	631	60	1863
Electric Brand Company. (See Fitzmaurice, James S., assignor.)						
Electric Construction Corporation. (See Parker, Thomas, assignor.)						
Electric Gas Lighting Company. (See Lane, Thomas W., assignor.)						
Electric Secret Service Company. (See Vinoing, Henry E., assignor.)						
Elevator Supply and Repair Company. (See Heermans, Thaddeus W., assignor.)						
Elevator Supply and Repair Company. (See Wylde, Edward, assignor.)						
Elias, Leopold, Kosten, Germany. Paper-holder	481,167	Aug. 23	2290	564	60	1062
Elkins, Ira S., New York, and R. Boeklen, Brooklyn, N. Y. Apparatus for making gas	483,107	Sept. 20	1924	487, 488	60	1740
Ellacott, Joseph P. (See Dickerman and Ellacott.)	479,793	Aug. 2	28	7	60	587
Ellery, Robert L., assignor of one-half to F. E. Fuller, Taunton, Mass. Car-truck	483,211	Sept. 27	2096	532	60	1786
Elliott, Irvin H., Allapaha, Ga. Bed-lock	482,626	Sept. 13	1173	283	60	1577
Elliott, James M., Jr., Gadsden, Ala. Car-coupling	483,047	Sept. 20	1835	467	60	1722
Elliott, James M., Jr., Gadsden, Ala. Car-coupling	483,048	Sept. 20	1837	467	60	1722
Elliott, Oscar A., assignor of one-half to C. Fishbaugh, York, Nebr. Pencil-holder	478,537	July 5	739	180	60	146
Elliott, Richard P. (See Garland, Charles F., assignor.)						
Elliott, Walter P., New York, N. Y. Apparatus for manufacturing gas	480,919	Aug. 16	1859	463, 464, 465	60	968
Ellis, Aaron D., Rutland, Vt. Angle-finish for rooms	478,928	July 12	1319	328	60	276
Ellis, Augustin, Bedford, Ind. Cultivator	478,790	July 12	1118	276	60	237
Ellis, Edward E., assignor of one-half to B. L. Wheeler, Washington, D. C. Setting mechanism for timepieces	478,321	July 5	408	98	60	82
Ellis, Elisha A., and W. C. S. Wood, Grassy Pond, S. C. Cotton-chopper	478,158	July 5	131	33	60	29
Ellis, John, Stockton, Cal. Combined vise, pipe-tongs, and cutter	481,168	Aug. 23	2291	564	60	1062
Ellis, Lucien W., Anamosa, Iowa, assignor to W. Deering, Chicago, Ill. Bundle-carrier for harvesters	480,944	Aug. 16	1894	474	60	975
Ellis, Washington L., Sr., *et al.* (See Beckwith, William G., assignor.)						
Ellison, William H. (See Sturtevant and Ellis.)						
Ellis, Wilson R., Woodland, Cal. Meat and vegetable cutter	480,560	Aug. 9	1307	327	60	844
Ellison, Byron A., Kansas City, Mo. Sectional grate-bar	480,568	Aug. 9	1306	327	60	844
Ellsworth, Charles W., assignor to Chicago Stamping Company, Chicago, Ill. Machine for seaming cans	478,580	July 12	799	197	60	174
Ellsworth, Erastus W., East Windsor Hill, assignor of one-half to C. W. Vibert, South Windsor, Conn. Blowpipe-lamp	480,717	Aug. 16	1550	388	60	906
Ellsworth, Walter. (See Draper and Ellsworth.)						
Elmore, Alexander S. (See Elmore, Francis E. and A. S.)						
Elmore, Francis E. and A. S., Leeds, assignors to Elmore's American and Canadian Patent Copper Depositing Company, Limited, London, England. Manufacturing tubes	480,186	Aug. 2	683	173	60	711
Elmore, William A., New York, N. Y. Seat-support for bicycles	478,581	July 12	802	198	60	174
Elmore's American and Canadian Patent Copper Depositing Company. (See Elmore, Francis E. and A. S., assignors.)						
Elton, Henry F., and J. W. Cadwell, New York, N. Y. Paper-bag holder	482,056	Sept. 6	218	52	60	1378
Elwood, Jonathan, Sanger, Cal. Ant or insect guard	479,976	Aug. 2	317	78	60	642
Ely, Thomas T., West Paris, Me. Tobacco-pipe	480,570	Aug. 9	1309	327	60	845
Emerson, James E., and T. Midgley, Beaver Falls, Pa., assignors of one-third to J. Lynch, Washington, D. C. Shield for gunners	478,506	July 5	684	166	60	135
Emerson, Rufus H., *et al.*, receivers. (See Fuller, Clark S., assignor.)						
Emery, George D. (See Skanks, George W., assignor.)						
Emery, L., Jr. (See Geary, James, assignor.)						
Emmer, Isaac, St. Louis, Mo. Interchangeable sign-board	480,255	Aug. 9	809	208	60	748
Emmitt, John V., *et al.* (See Wilson, William H., assignor.)						
Empire Car Coupler Company. (See Dale, Charles H., assignor.)						
Empire Car Coupler Company. (See Tower, Clinton A., assignor.)						
Empire Cash Register Company. (See Rosenfield, William W., assignor.)						
Empie, Joseph L., Orlando, Fla. Crate-head	479,794	Aug. 2	30	7	60	588
Emrich, Samuel, Reno, Nev. Railway-signal	479,258	July 19	1838	461	60	385
England, Alexander W. (See Anderson and England.)						
England, Frank D. (See Anderson and England.)						
Engle, Jacob P., San Francisco, Cal. Recovering waste products of petroleum	481,391	Aug. 23	2663	653	60	1130
Engle, Jacob P., San Francisco, Cal. Separation of waste products of petroleum distillation	481,392	Aug. 23	2664	653	60	1130
Engledue, William J., Byfleet, England. Galvanic battery	481,664	Aug. 30	3103	757	60	1232
Engler, Richard A., Columbus, Ohio. Bicycle-supporting frame	481,751	Aug. 30	3260	793	60	1263
Engler, William, Brooklyn, N. Y. Window-seat	481,854	Aug. 30	3427	841	60	1295
English, Analdo M., New York, assignor to P. Becker, Brooklyn, N. Y. Type-writing machine	481,855	Aug. 30	3428	841, 842	60	1295
Ennis, George H., assignor to J. D. Ennis, Troy, N. Y. Cake or bread box	480,718	Aug. 16	1560	389	60	907
Ennis, Jessie D. (See Ennis, George H., assignor.)						
Enos, Alanson T., New York, N. Y. Combined gas and electric-light fixture	480,813	Aug. 16	1701	424	60	936
Enos, Helen M., Millersburg, Ohio. Book-cover protector	481,015	Aug. 16	2010	502	60	996
Enschedé, James M., Crete, Nebr. Clevis	479,208	July 19	1763	442	60	370
Enterprise Manufacturing Company. (See Woodruff, Oliver D., assignor.)						
Erb, Emil A., Appleton, Wis. Total combustion	478,693	July 12	952	236	60	205
Erhard, Ursinus. (See Lillard and Erhard.)						
Erhart, Andrew J. (See Zalud, Albert, assignor.)						
Ermeling, Richard W., Bath, Ill. Corn-harvester	478,849	July 12	1207	300	60	254

Alphabetical list of patentees, July to September, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Ermold, George, New York, N. Y. Larynx-tube	478,582	July 12	803	198	60	175
Ernst, Richard P. (See Orr, John E., assignor.)						
Erren, Frank, and O. Lohner, St. Paul, Minn. Dough-kneader	478,507	July 5	685	167	60	135
Essex, George B. (See Marvin and Essex.)						
Esterly, George, Whitewater, Wis., assignor to Esterly Harvesting Machine Company. Grain-binder	480,079	Aug. 2	512	130	60	680
Esterly Harvesting Machine Company. (See Esterly, George, assignor.)						
Estey Organ Company. (See Fuller, Levi K., assignor.)						
Estrayer, Augustin, Marseilles, France. Oil-press	480,867	Aug. 16	1781	445	60	952
Etève, Eugène, and J. Lemichel, Paris, France. Elevating-siphon	479,411	July 26	2099	526	60	450
Ethridge, Martin R., Portsmouth, N. H. Clothes-line holder	479,136	July 19	1651	412, 413	60	340
Ette, Charles G., St. Louis, Mo. Hydrant	479,250	July 19	1840	461	60	385
Ette, Charles G., and B. H. Sanders, St. Louis, Mo., assignors to said Ette. Sad-iron	478,920	July 12	1320	328	60	276
Euker, Louis, *et al.* (See Jenkins, Wilton F., assignor.)						
Euler, Hans, Lehe, near Bremerhaven, Germany. Shallow-water alarm	482,550	Sept. 13	1061	258	60	1556
Eureka Cash Register Company. (See Beck, Warren F., assignor.)						
Eureka Coat Pad Company. (See Goldman, Edward, assignor.)						
Eureka Wood Pulley Company. (See Reitz, Daniel G., assignor.)						
Eva, Addison H., Austin, Tex. Canopy for folding beds	479,063	July 19	1532	382	60	328
Evans, John, Providence, R. I. Coin-actuated mechanism	482,119	Sept. 6	322	77	60	1398
Evans, John T., and J. H. Douglass, Adamsville, Utah Ter. Machine for cutting hay-stacks	481,393	Aug. 23	2665	653, 654	60	1131
Evans, Mabel A. (See Newton, Andrew L., assignor.)						
Evans, Samuel W., Jr. (See Gaskill, William H., assignor.)						
Evans, Thomas S., St. Louis, Mo. Stovepipe	481,856	Aug. 30	3431	849	60	1296
Evans, William, Philadelphia, Pa. Molding-machine	479,755	July 26	2672	663	60	558
Evans, William H., Baltimore, Md. Stone-molding machine	478,226	July 5	256	62, 63	60	52
Evans, William H., Baltimore, Md. Machine for molding stone slabs	478,227	July 5	257	63, 64	60	52
Evans, William J., assignor to McKesson & Robbins, New York, N. Y. Powder-blower	478,744	July 12	1039	255	60	222
Eveleth, James E., Salix, Iowa. Portable wagon-loader	482,169	Sept. 6	411	98	60	1416
Everett, John A., and J. Finn, Jr., Natick, Mass. Sandpapering-roll	481,938	Sept. 6	29	7	60	1340
Everett, Samuel H., Macedon, N. Y. Fertilizer-distributer	479,637	July 26	2465	613	60	520
Evershed, Sydney, London, England. Electric measuring-instrument	478,097	July 5	32	10	60	9
Evershed, Sydney, London, England. Apparatus for the measurement of electric resistances	478,098	July 5	34	11	60	10
Evert, John F., Meudon, Mich. Adjustable-number device	480,841	Aug. 16	1740	435	60	943
Ewart, William D., Chicago, Ill., and J. M. Dodge, assignors to Link-Belt Engineering Company, Philadelphia, Pa. Elevator	480,659	Aug. 9	1462	364	60	874
Ewers, Ammon M., Edison, Ohio. Weather-strip	481,220	Aug. 23	2392	590	60	1092
Excelsior Specialty Company. (See Taylor, Cyrus, assignor.)	478,930	July 12	1322	328	60	277
Eyle, Fred, New Orleans, La. Apparatus for repelling boarders and distributing oil	481,615	Aug. 30	3031	741	60	1218
Eyman, Henry H. (See Cook and Eyman.)						
Eymer, Andrew, Saginaw, Mich. Machine for pasting labels on bottles	479,209	July 19	1764	442	60	370
Faber, Carl, Nuremberg, Germany. Pencil-sharpener	482,826	Sept. 20	1478	367	60	1650
Fagg, Volentine F., Avilla, Mo. Steamer	481,939	Sept. 6	31	7	60	1340
Fahlberg, Nicolaus. (See Prokhoroff, Nicolaus, assignor.)	481,940	Sept. 6	32	7	60	1340
Fairchild, Frank H. (See Biggs and Fairchild.)						
Fairfield, Roswell M. (See Allan, Robert W., assignor.)						
Fairfield, Roswell M. (See Benham, Elijah B., assignor.)						
Fairfield, Roswell M. (See Reynolds, James, assignor.)						
Fairfield, John M., assignor to American Writing Machine Company, Hartford, Conn. Type-writing machine	478,228	July 5	259	64	60	53
Fairman, James W. (See Wankey, Lewis F., assignor.)						
Falardeau, Dennis L., Cohoes, N. Y. Game apparatus	479,638	July 26	2467	614	60	521
Falvey, Jeremiah, New York, N. Y. Holder for fishing-line reels	481,941	Sept. 6	33	8	60	1340
Fannin, Bryant B., *et al.* (See Brown, William T., assignor.)						
Farbenfabriken, vormals Fr. Bayer & Co. (See Duisberg, Carl, assignor.)						
Farbenfabriken, vormals Fr. Bayer & Co. (See Lauch, Richard, assignor.)						
Farbenfabriken, vormals Fr. Bayer & Co. (See Ulrich and Bammann, assignors.)						
Farbenfabriken, vormals Fr. Bayer & Co. (See Volkmann, Paul, assignor.)						
Fargo, Frank B., Lake Mills, Wis. Milk-tester	478,099	July 5	35	11	60	10
Faris, Lafayette, Pricetown, Ohio. Vehicle-hub-attaching collar	482,627	Sept. 13	1174	284	60	1577
Farnham, John S. (See Hanson and Farnham.)						
Farnum, William C., Chicago, Ill. Apparatus for casting cylindrical bodies	482,405	Sept. 13	814	196	60	1509
Faron, Samuel, Paha'a, Kau, Hawaii. Diffusion apparatus	480,571	Aug. 9	1310	328	60	845
Farquhar, Arthur B., H. W. Eisenhart, and S. S. Morton, York, Pa. Machine for thrashing and separating grain	480,660	Aug. 9	1465	364, 365	60	874
Farrall, George A., assignor to Johnston Harvester Company, Batavia, N. Y. Corn-harvester	482,551	Sept. 13	1062	258, 259	60	1556
Farrel, John H., Camden, N. J., assignor to J. W. Douglass, Philadelphia, Pa. Pocket-lamp	479,741	July 26	2652	657	60	554
Farrell, George W., Au Sable Forks, assignor to I. Wiley, Albany, N. Y. Vehicle-spring	481,394	Aug. 23	2668	654	60	1131
Farrell, Philip H. (See Foster and Farrell.)						
Farrell, Thomas F., Paterson, N. J. Air-compressor	479,360	July 19	1841	462	60	385
Farrell, Thomas F., Paterson, N. J. Rock-drill	479,356	July 19	1908	500	60	417
Farwell, Fay O., Dubuque, Iowa. Cash-carrier	479,261	July 19	1843	462	60	386
Fasoldt, Ernest C., assignor of one-half to J. B. Thacher, Albany, N. Y. Speed-regulator for air-compressor pistons	481,527	Aug. 23	2886	708	60	1175
Faubion, John, Sr., Leander, Tex. Car-coupling	479,262	July 19	1845	462	60	386
Faulkner, Percy S., London, England. Game apparatus	478,100	July 5	36	12	60	10
Faure, Charles, Neufchâtel, Switzerland. Apparatus for rolling up strips or webs	479,875	Aug. 2	152	37, 38	60	612
Fawell, Joseph. (See Hemphill and Fawell.)						
Fay, Stephen C., and H. Willis, Rochester, N. Y. Magazine-camera	479,587	July 26	2388	595	60	506
Fechheimer, Isaac, *et al.* (See Coates, John F., assignor.)						
Federroll, Rudolph, New York, N. Y. Wood and coal box	478,931	July 12	1323	328	60	277
Felcker, Fredrick C., assignor to Northampton Cutlery Company, Northampton, Mass. Machine for grinding cutlery and other handles	481,259	Aug. 23	2451	603, 604	60	1093
Feldmann, Alfred, Bremen, Germany. Distilling apparatus	480,842	Aug. 16	1741	435	60	943
Felker, Melancthon O., Springfield, Ohio. Whip-cane	482,895	Sept. 20	1603	402	60	1674
Fell, Charles, Southport, England. Velocipede	479,064	July 19	1533	382	60	328

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Felton, Charles E. (See Mack, Albert G., assignor.)						
Felton, Tommas W., San Gabriel, Tex. Car-coupling	480,456	Aug. 9	1148	287	60	811
Fenner, Herbert, *et al.* (See Keene, Samuel D., assignor.)						
Fenton, Alfred, and J. Barnes, London, England. Can-opener	480,868	Aug. 16	1782	446	60	953
Fenton Metallic Manufacturing Company. (See Foster and Hine, assignors.)						
Ferguson, Alexander, Lewiston, Me. Fire-escape	482,345	Sept. 13	715	170	60	1489
Ferguson, Drew, *et al.* (See Williams, Robert E., assignor.)						
Ferguson, George C. (See Bixler and Ferguson.)						
Ferguson, Ralph E., Akron, Ohio. Revolving paper-file	481,857	Aug. 30	3432	842	60	1296
Ferguson, Robert W., *et al.*, trustees. (See Hill, Charles, assignor.)						
Ferguson, William E., Montclair, N. J. Device for illuminating railway-tracks	481,016	Aug. 16	2011	503	60	996
Ferris, Henry L., assignor to Hunt, Helm & Ferris, Harvard, Ill. Hay-carrier track	481,349	Aug. 23	2600	639	60	1119
Ferris, Will H., Franklinville, N. Y. Gun-cleaner	481,858	Aug. 30	3433	843	60	1296
Ferris, William J., Louisville, Ky. Bottle-stopper	481,616	Aug. 30	3032	741	60	1219
Fetters, Joseph F., Dayton, Ohio. Steam-condenser	480,572	Aug. 9	1311	328	60	845
Fiedler, Frederick W., Scranton, Pa. Vehicle-hub	478,977	July 5	345	83	60	69
Field, Albert D., assignor to Metal Goods Manufacturing Company, Bridgeport, Conn. Shoe-fastening	483,144	Sept. 27	1980	501	60	1762
Field, Charles H. (See Field, Frank H. and C. H.)						
Field, Edward, London, England. Apparatus for producing mixtures of steam and hot air	479,707	July 26	2587	644	60	542
Field, Emil J., *et al.* (See Stearns, Collins M., assignor.)						
Field, Frank H., New Orleans, La., and C. H. Field, Dalton, Ga. Portable dental chair	482,520	Sept. 13	1011	245	60	1547
Field, Jesse A., Buffalo, N. Y. Molding-machine	481,017	Aug. 16	2012	503 504	60	996
Field, John S., and W. J. Shedd, Chicago, Ill. Dumping-wagon	482,731	Sept. 20	1332	326 327	60	1621
Field, Thomas, *et al.* (See Stearns, Collins M., assignor.)						
Field, Walter D., Millburn, N. J. Compound of sulphureted oils	478,955	July 12	1353	.....	60	283
Field, William R. (See Buck, Julius W., assignor.)						
Finch, John Q., assignor of one-third to A. W. Sauborn, San Francisco, Cal. Axle-lubricator	482,918	Sept. 20	1633	410	60	1680
Findlay, John H. (See Bossert and Findlay.)						
Fine, Mahlon H., Alden Station, Pa. Lubricator	482,346	Sept. 13	716	171	60	1489
Finegan, John W., Lowell, Mass. Wringing-machine	480,437	Aug. 9	1149	288	60	811
Fink, Joseph H., New York, N. Y. Interchangeable-initial finger-ring	480,080	Aug. 2	513	130	60	680
Finkbiner, W. S. G., *et al.* (See Manderfield, George J., assignor.)						
Finn, Edwin, Elkhart, Ind., assignor to S. D. Kimbark, Chicago, Ill. Corner-iron for wagon bodies or seats	480,187	Aug. 2	685	173	60	712
Finn, John, Jr. (See Everett and Finn.)						
Finney, John, Portland, Oreg. Link-lifter	478,932	July 12	1324	329	60	277
Firme, Christian W. (See Thillman and Firme.)						
Fischer, Engelbert, Chicago, Ill. Box-board matcher and jointer	481,752	Aug. 30	3262	794	60	1263
Fischer, Frank X., Oakland, Cal. Boiler	480,081	Aug. 2	514	130	60	680
Fischer, Jacob A. (See Grace, Henry S., assignor.)						
Fischer, John, and E. Preiser, Milwaukee, Wis. Stove	479,210	July 19	1766	443	60	370
Fischer, Joseph, Cleveland, Ohio. Underground trolley	482,506	Sept. 13	985	238	60	1542
Fish, Charles H., *et al.* (See West, Derrick S., assignor.)						
Fish, Henry C., Worcester, Mass. Steam-generator	480,365	Aug. 9	994	250	60	783
Fishbaugh, Charles. (See Elliott, Oscar A., assignor.)						
Fisher, Alvan B., Rutland, Mass. Roving-can	481,554	Aug. 30	2937	722	60	1201
Fisher, Ebenezer. (See McBride and Fisher.)						
Fisher, Ina M. (See Fisher, Isaac M. and I. M.)						
Fisher, Isaac M. and I. M., Burrows, Mo. Jar filler and holder	483,040	Sept. 20	1838	467	60	1723
Fisher, John, Havana, Cuba. Cane-mill	482,064	Sept. 6	265	64	60	1387
Fisher, John, Havana, Cuba. Feed-chute for sugar-mills	482,065	Sept. 6	267	64	60	1388
Fisher, William Y., and C. Perry, Big Timber, Mont. Lifting-jack	482,628	Sept. 13	1176	281	60	1577
Fitch, William E., Louisville, Ky. Back or lining for fireplaces	479,103	July 19	1504	309	60	339
Fitch, William E., Louisville, Ky. Back or lining for fireplaces	480,322	Aug. 9	929	236	60	771
Fithian, Jonathan, Bridgeton, N. J. Bottle-snap	480,458	Aug. 9	1150	288	60	811
Fitzmaurice, James S., assignor to Electric Brand Company, Limited, Sydney, New South Wales. Branding-stamp	483,050	Sept. 20	1839	467	60	1723
Flagg, Frank E., assignor of one-half to A. Dow, New York, N. Y. Pencil-pointer	481,018	Aug. 16	2016	504	60	997
Flagg, Samuel H., Providence, R. I. Conduit for electric wires	480,573	Aug. 9	1313	328	60	845
Flanagen, James I., Philadelphia, Pa. Handle for wash-boilers	479,588	July 26	2390	596	60	506
Flanders, William G., New York, N. Y. Dental-tool sterilizer	482,552	Sept. 13	1069	259	60	1557
Flanigan, Thomas A., Pittsburg, Pa. Nut and bolt lock	482,472	Sept. 13	926	226	60	1529
Flavau, Louis S., Pittsburg, Tex., assignor to B. F. Avery & Sons, Louisville, Ky. Sulky-plow	482,943	Sept. 20	1667	419	60	1687
Fleckenstein, Valentin, Oshkosh, Wis. Machine for sewing straw covers for bottles	480,092	Aug. 2	515	131 132	60	680
Fleischel, George, and J. Bertrand, San Francisco, Cal. Lock	479,104	July 19	1505	399	60	339
Fletcher, Augustus, Minersville, Pa. Steam-blower	482,236	Sept. 6	510	121 122	60	1434
Fletcher, Edwin J., New York, N. Y. Trunk-stand	483,348	Sept. 27	2327	585	60	1828
Fleuss, Henry A., London, England. Umbrella or parasol	483,212	Sept. 27	2097	532	60	1786
Flexner, Jacob A., Louisville, Ky. Syringe	478,563	July 12	804	198	60	175
Flick, Rudolph, Cleveland, Ohio. Vapor-stove	483,051	Sept. 20	1840	468	60	1723
Flinn, Sydney, Caddoa, Colo. Automatic flood-gate	482,868	Sept. 20	1549	386	60	1664
Flower, Francis S. (See Beauregard and Flower.)						
Flügge, Adolf, Frankfort-on-the-Main, Germany. Solution of myrrh-resin and making the same	479,935	Aug. 2	251	.....	60	630
Flynn, John, Vail, Iowa. Washing-machine	480,063	Aug. 2	518	132	60	681
Flynn, Peter H., Syracuse, N. Y. Garter attachment	482,629	Sept. 13	1177	281	60	1578
Fogerty, George. (See Fogerty, George F., assignor.)						
Fogerty, George F., assignor of one-half to G. Fogerty, Cambridge, Mass. Gun	482,305	Sept. 6	629	150	60	1458
Foley, John E. (See Foley, Thomas F. and J. E.)						
Foley, John P. (See Rockliff and Foley.)						
Foley, Thomas F. and J. E., Jackson, Mich. Vehicle-wheel	479,495	July 26	2262	567	60	482
Fellenius, Reinhold H., St. Louis, Mo. Name-plate for monuments, signs, &c	482,237	Sept. 6	511	122	60	1435

Ford, Bruce, Gloucester, N. J. Incandescent electric lamp and lamp-socket	481,019	Aug. 16	2018	504	60	997
Ford, Charles, Lowell, Mass. Pile-wire	479,211	July 19	1767	443	60	371
Ford, George, New Harmony, Ind. Gate	480,085	Aug. 2	520	132	60	681
Ford, Summerfield, Chicago, Ill. Cleaning attachment for type-writing machines	480,257	Aug. 9	814	208	60	749
Ford, William H., assignor of one-half to W. A. Stickney, St. Louis, Mo. Conduit system for electric railways	478,956	July 12	1354	335	60	283
Fordham, Arthur, Chicago, assignor of one-half to R. H. Wiles, Freeport, and H. Bitner, Chicago, Ill. Car-vestibule	482,006	Sept. 6	135	33	60	1361
Fordham, Leonie. (See Stoner, John B., assignor.)						
Fore, William A. (See Rickabach, William H., assignor.)						
Fornander, Alfred, New York, N. Y. Pencil	480,188	Aug. 2	686	174	60	712
Forney, Matthias N., New York, N. Y. Reversible back for car or other seats	482,447	Sept. 13	886	213 214	60	1521
Forsgard, Samuel J., Waco, Tex. Dumping-wagon	482,496	Sept. 13	975	236	60	1539
Forsman, Leonard, Albina, Oreg. Drag-sawing machine	481,555	Aug. 30	2928	722	60	1201
Forster, Frank, Etiwanda, Cal. Movable step	482,573	Sept. 13	1004	266	60	1563
Forster, George H., Baltimore, Md. Barrel	481,350	Aug. 23	2601	639	60	1119
Forster, William E., Lynn, Mass. Sole-pressing machine	478,420	July 5	556	135	60	109
Forter, Samuel, Allegheny, Pa. Hydraulic motor	482,732	Sept. 20	1334	327 328 329	60	1622
Fortier, Charles L., Milwaukee, Wis. Valve-controller	479,795	Aug. 2	30	8	60	588
Fortin, Charles, Florisant, Mo. Guide for replacing electric trolleys	480,766	Aug. 16	1628	408	60	922
Foskett, William A., *et al.* (See Garland, Frank. M., assignor.)						
Foss, Lewis T., Boston, Mass. Tooth-brush	479,796	Aug. 2	33	8	60	588
Foster, Charles E., Washington, D. C., and J. W. Hine, assignors to Fenton Metallic Manufacturing Company, Jamestown, N. Y. Case for books	480,693	Aug. 9	1516	377	60	883
Foster, Ephriam A., Port Clinton, Ohio. Rack for displaying goods	481,942	Sept. 6	34	8	60	1341
Foster, Fred D. (See Hastings and Foster.)						
Foster, George H., and P. H. Farrell, Brooklyn, N. Y. Inkstand	481,649	Aug. 30	3080	752	60	1228
Foster, James C. (See Luther, Arcous B., assignor.)						
Foster, John F., Marceline, Mo. Combination-lock	479,412	July 26	2100	526	60	451
Foster, Joseph M., assignor of one-half to R. Bruce, Boston, Mass. Kerf-spreader	482,507	Sept. 13	986	239	60	1542
Foster, Lebbeus H., Adrian, Mich. Hinge	479,936	Aug. 2	251	62	60	630
Foster, Parks, *et al.* (See Weller, George L., assignor.)						
Foster, Robert F., New York, N. Y., assignor to C. Goodall & Son, London, England. Game-marker	478,694	July 12	953	237	60	205
Foster, Samuel L., assignor to J. T. Ahrens, Wilmington, Del. Electric stop-motion for textile machinery	479,358	July 19	2003	501	60	418
Foster, Timothy H. (See Ayres and Foster.)						
Foster, Washington H., assignor of one-half to H. C. Howell and W. H. Brafford, Concord, N. C. Car-coupling	480,459	Aug. 9	1151	288	60	811
Fowler, Anderson. (See Duechting, William, assignor.)						
Fowler, Arthur H., Buffalo, N. Y. Semi-direct radiator	479,413	July 26	2104	527	60	451
Fowler, Benjamin F., assignor of one-half to C. R. Waterman, Minneapolis, Minn. Fume-drainer for cooking-vessels	481,901	Aug. 30	3504	858	60	1309
Fowler, Benjamin F., assignor of one-half to C. R. Waterman, Minneapolis, Minn. Frying-pan or skillet	482,630	Sept. 13	1177	284	60	1578
Fowler, Charles M., Salem, Mass. Fire-escape	481,693	Aug. 30	3148	718	60	1241
Fowler, Elizabeth R., Chetopa, Kans. Ironing-board	482,348	Sept. 13	718	171	60	1490
Fowler, George A., Kansas City, Mo. Refrigerator-car	478,995	July 19	1432	354 355	60	308
Fowler, Joseph C., assignor of one-half to L. G. Hine, Washington, D. C. Machine for producing type-bars	481,920	Aug. 30	3536	866 867 868 869	60	1317
Fowler, Lewis H., Vallejo, Cal. Fire-ladder	478,278	July 5	346	83, 84	60	70
Fowler, Samuel S., Elizabeth City, N. C. Traveler for ring-spinning frames	478,256	July 5	315	76	60	63
Fowler, Walter E., assignor of one-half to L. Saunders, Lawrence, Mass. Boiler	482,999	Sept. 20	1760	444	60	1706
Fowler, Walter B., assignor of one-half to L. Saunders, Lawrence, Mass. Boiler for marine engines	483,000	Sept. 20	1761	444	60	1706
Fox, Clarence W., Saugus, Mass. Spatula	479,937	Aug. 2	252	62	60	631
Fox, James T., assignor to W. H. Torian, Sherman, Tex. Gate-latch	480,189	Aug. 2	687	174	60	712
Fox, John, New York, N. Y. Double-blade bevel-gage	482,888	Sept. 20	1587	399	60	1670
Fox, Samuel S., Marion, Ohio. Tooth-brush case and pencil-holder combined	482,631	Sept. 13	1178	285	60	1578
Fox, William R., Grand Rapids, Mich. Miter-cutter	483,436	Sept. 27	2455	618	60	1853
Fraas, Gustav A., Dresden, Germany. Vehicle-shaft	480,869	Aug. 16	1783	446	60	953
Fraim, Edward T., Lancaster, Pa. Padlock	478,950	July 12	1207	300	60	255
Fraim, Edward T., Lancaster, Pa. Padlock	479,414	July 26	2107	527	60	452
Fraizer, Perry, New Castle, Ind. Filing and supply case	478,584	July 12	805	198	60	175
France, Albert L., Millsdale, assignor to Kenton Can Company, Covington, Ky. Supplementary lens for bicycle and carriage lamps	480,661	Aug. 9	1469	366	60	874
France, Joseph R., New York, N. Y. Toilet or other article of plastic material	478,851	July 12	1209	300	60	255
France, Joseph R., New York, N. Y. Waterproof fabric	481,485	Aug. 23	2818	692	60	1162
Frank, Henry C., New York, N. Y. Hook and eye	482,473	Sept. 13	927	226	60	1529
Frank, Jerome W., New York, assignor of three-fifths to L. S. Langville, Troy, N. Y. Adhesive	478,229	July 5, 1861	.....		60	53
Franke, Adolf, assignor to Urania-Uhren-und-Säulen-Commandit-Ges. Breslauer & Dr. Von Orth, Berlin, Germany. Electrical stop-valve	483,106	Sept. 20	1927	488	60	1741
Franklin, James, Montverde, Fla. Apparatus for irrigating and sprinkling land	479,105	July 19	1507	400	60	339
Franklin, John J., *et al.* (See Ripson, John D., assignor.)						
Fransmann, John, New York, N. Y. Wheel-shoe	479,708	July 26	2590	645	60	543

Giesberg, John G., and E. Schenitz, Jr., Houston, Tex. Box-fastener	479,416	July 26	2112	529	60	453
Giese, James A. (See Richards and Giese.)						
Giese, James A., assignor to Adams & Westlake Company, Chicago, Ill. Latch and lock combined	481,261	Aug. 23	2454	604	60	1094
Giesler, Franklin B., Milwaukee, Wis. Grain-treating apparatus	482,790	Sept. 20	1435	355	60	1641
Giesecnbier, Henry. (See Freese, Claus, assignor.)						
Giffard, Paul, Paris, France. Compressed-air motor	480,089	Aug. 2	526	133, 134	60	682
Gilbert, Edmund D. (See Gordon and Gilbert.)						
Gilbert, Frederick A., Boston, Mass. Game-counter	482,961	Sept. 20	1700	429	60	1633
Gilbert, William H., assignor to S. S. White Dental Manufacturing Company, Philadelphia, Pa. Dental chair	478,589	July 12	811	200	60	176
Gilbreth, Frank B., Boston, Mass. Scaffold	479,591	July 26	2394	596	60	507
Gilchriest, Robert, Louisville, Ky. Fire-grate	479,089	July 19	1575	394, 395	60	335
Gilchrist, Raymond B., assignor to R. Whitehead, Chicago, Ill. Cork-extractor	478,545	July 5	751	183	60	149
Gildard, Henry. (See Scrimgeour and Gildard.)						
Giles, Frederick, South Yarrow, near Melbourne, Victoria. Elevator	483,145	Sept. 27	1982	502	60	1762
Giles, Harry S., Philadelphia, Pa. Vapor-burner	482,920	Sept. 20	1635	410	60	1680
Giles, Joseph S., assignor to M. J. Whittall, Worcester, Mass. Oiling device for looms	481,558	Aug. 30	2943	723	60	1202
Giles, Joseph S., assignor to M. J. Whittall, Worcester, Mass. Oiling device for looms	481,559	Aug. 30	2944	723	60	1202
Gilham, Charles D. (See Hamer, James A., assignor.)						
Gilkey, Albert S., Burlington, Kans. Cultivator attachment	481,667	Aug. 30	3108	758	60	1233
Gill, John M. (See Shirreff, Charles J., assignor.)						
Gill, Thomas, Waltham, Mass. Piano-string	478,746	July 12	1041	256	60	222
Gill, William E., assignor to J. F. Wollensak, Chicago, Ill. Connector for electric circuits	479,325	July 19	1930	483	60	404
Gillen, Albert L., Bradford, Mass. Bed-lounge	480,190	Aug. 2	688	174	60	712
Gillespie, Richard S., and H. James, New York, N. Y. Wrench	481,110	Aug. 16	2177	539	60	1027
Gillette, Charles F., assignor to J. F. Bray, New York, N. Y. Indicator for electrical signaling systems	478,324	July 5	412	99	60	83

Alphabetical list of patentees, July to September, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Gilman, Myron A., Westfield, Mass. Toy	479,119	July 19	1626	407	60	344
Gilmore, John A., Boston, Mass. Cutting-off machine	480,461	Aug. 9	1153	289	60	812
Gilmore, William M., Boggstown, Ind. Valve for air-brakes	479,978	Aug. 2	320	78	60	643
Gilmour, James M., East Orange, N. J. Faucet	480,090	Aug. 2	527	134	60	682
Gilpin, Joseph F. (See Cowles and Gilpin.)						
Gilstrap, John, and M. L. Brown, Moscow, Idaho. Switch-shifter	483,053	Sept. 20	1844	468	60	1724
Gimson, John E., *et al.* (See Newton, John M., assignor.)						
Ginther, Augustus J., Buffalo, N. Y. Self-acting windproof-damper	479,801	Aug. 2	42	10	60	590
Gipe, Emanuel C., assignor of one-half to O. J. Ziegler, Freeport, Ill. Cash-carrier	479,417	July 26	2113	529	60	453
Girard, Charles L. (See Krouse, Myers, and Girard.)						
Gisvold, Erik J., Eagle Mills, Mich. Mortising-machine	482,242	Sept. 6	522	125	60	1436
Githens, George M., Brooklyn, N. Y. Channeling-tool for rocks	479,499	July 26	2267	568	60	483
Githens, George M., Brooklyn, N. Y. Blasting stone	479,500	July 26	2268	568	60	483
Givens, John W. (See Hicks, Shelby, assignor.)						
Glad, Gorge H., Boston, Mass. Shutter-fastener	481,111	Aug. 16	2179	539, 540	60	1098
Glass and Metal Engraving Company. (See Bryce and Knox, assignors.)						
Gleason, Francis, Philadelphia, Pa. Bicycle-support	483,146	Sept. 27	1984	502	60	1762
Gleason, John K. (See Gleason, Martin H., assignor.)						
Gleason, Martin H., assignor to J. K. Gleason, Fitchburg, Mass. Game apparatus	480,602	Aug. 9	1469	366	60	875
Glen Cove Machine Company. (See Hutchinson, Alfred B., assignor.)						
Glenn, George S., Nashville, Tenn. Sprinkling apparatus	479,979	Aug. 2	322	79	60	643
Gloeckner, Ludwig. (See Kircher, Frederick, assignor.)						
Glover, George T., Chicago, Ill. Vehicle-spring	481,695	Aug. 30	3150	768, 769	60	1941
Glover, John V., Springfield, Mass. Slow-closing valve for tanks	478,793	July 12	1125	277	60	238
Glynn, Michael, Otterbein, Ind. Sulky-plow	482,734	Sept. 20	1549	339	60	1623
Goddard, Calvin L., New York, N. Y. Cloth-stretching machine	479,501	July 26	2269	568	60	484
Goddard, William, Oshkosh, Wis. Safety-gate for drawbridges	482,499	Sept. 13	976	236	60	1539
Godfrey, Charles B., Milford, assignor to Library Bureau, Boston, Mass. Adjustable shelving	478,509	July 5	687	167	60	136
Godshalk, Edward H. (See Gee, Joseph F., assignor.)						
Goehring, Charles L. (See Van Houten, Frank H., assignor.)						
Goehring, Charles L., Allegheny, Pa. Means for ornamenting wood	480,402	Aug. 9	1154	289, 290	60	812
Goehring, Charles L., Allegheny, Pa. Cutter-head	480,463	Aug. 9	1157	290	60	813
Goering, Hermann, Birkenfeld-on-the-Nahe, Germany. Steam-generator	480,719	Aug. 16	1561	389	60	907
Göetsche, John H., San Francisco, Cal. Grinding-wheel attachment	478,854	July 12	1212	301	60	256
Goetz, Jacob, trustee. (See Avery, Russell F., assignor.)						
Goetz, Victor J., assignor of one-half to W. C. Kidd and J. B. Sufforn, Hillburn, N. Y. Switch-stand	479,268	July 19	1852	464	60	388
Goetze, Max, Fort Meade, S. D. Railway-coach	482,634	Sept. 13	1181	285	60	1578
Goff, Darius L., Pawtucket, R. I. Mechanism for delivering and cutting roll-paper	478,231	July 5	263	65, 66	60	54
Gohl, Christian H., assignor of one-half to E. Rust, Saginaw, Mich. Car-coupling	482,353	Sept. 13	735	176, 177	60	1494
Goins, William P., Paragould, Ark. Corn-planting attachment	479,269	July 19	1854	465	60	388
Gold, Edward E., New York, N. Y. Drainage-trap	481,727	Aug. 30	3214	784, 785	60	1253
Gold, Sidney C. G. (See Renold, Goolden, Atkinson, and Gold.)						
Goldberg, Harris, *et al.* (See Parks, Dana, assignor.)						
Golden Gate Safety Fancet Company. (See Savage, Granville L., assignor.)						
Goldenberg, Benjamin, New York, N. Y. Lock	483,147	Sept. 27	1985	503	60	1763
Golding, John H., Bay Shore, N. Y. Can-opener	482,057	Sept. 6	220	52	60	1378
Goldkind, Isaac, assignor to L. Stirn and J. Somborn, New York, N. Y. Incandescent-lamp socket	479,359	July 19	2008	502	60	419
Goldman, Edward, Baltimore, Md., assignor to Eureka Coat Pad Company, of Maryland. Dress-pad	481,788	Aug. 30	3320	811	60	1275
Goldsberry, William H., Chicago, Ill. Folding square	482,900	Sept. 20	1609	403	60	1675
Goldschmid, Theodore J., Philadelphia, Pa. Shipping-flask for anhydrous ammonia	479,592	July 26	2396	597	60	507
Goldsmith, Byron B., New York, N. Y. Lead-pencil or other article of fibrous material. (Reissue)	11,259	Aug. 16	2265	559	60	1043
Goldsmith, John S., New York, N. Y. Combined corset and dress-shield	480,496	Aug. 9	1095	273, 274	60	800
Goldstein, Albert, assignor of one-half to A. A. Lehmann, Baltimore, Md. Fire-alarm apparatus	479,709	July 26	2591	645	60	543
Goldstein, Harry, *et al.* (See Rosenthal, Adolph, assignor.)						
Goldsworthy, Orlando A., Chicago, Ill. Bending vehicle-shafts	482,475	Sept. 13	929	227	60	1529
Goltstein, Ewald. (See Guilleaume and Goltstein.)	481,277	Aug. 23	2485	611	60	1099
Good, David H., Canada, Kans. Corn-shock loader	480,767	Aug. 16	1630	408, 409	60	922
Good, William E., assignor to Southwark Foundry and Machine Company, Philadelphia, Pa. Steam-engine	482,038	Sept. 6	187	45	60	1372
Goodall & Son, Charles. (See Foster, Robert F., assignor.)						
Goodfellow, John H., Lansingburg, N. Y., assignor, by mesne assignments, to Lamson Consolidated Store Service Company, of New Jersey. Store-service apparatus	479,502	July 26	2270	569	60	484
Goodfellow, John H., Lansingburg, N. Y., assignor, by mesne assignments, to Lamson Consolidated Store Service Company, of New Jersey. Store-service apparatus	479,503	July 26	2275	569	60	485
Goodfellow, John H., Lansingburg, N. Y., assignor, by mesne assignments, to Lamson Consolidated Store Service Company, of New Jersey. Store-service apparatus	479,504	July 26	2277	569, 570	60	485
Goodfellow, John H., Lansingburg, N. Y., assignor, by mesne assignments, to Lamson Consolidated Store Service Company, of New Jersey. Store-service apparatus	479,505	July 26	2279	570	60	485
Goodlue, William F., assignor of one-half to C. Paulus, Milwaukee, Wis. Sewage separating and purifying apparatus	478,539	July 5	741	181	60	147
Goodson, George A., Minneapolis, Minn. Matrix-making machine	478,257	July 5	316	77	60	63
Goodson, George A., Minneapolis, Minn. Matrix-making machine	478,258	July 5	317	77	60	63
Goodson, George A., Minneapolis, Minn., assignor, by mesne assignments, to T. S. Bassford, New York, N. Y., receiver of the Minneapolis Electro-Matrix Company. Matrix-making machine	479,773	July 26	2715	675, 676	60	568
Goodson, George A., and A. S. Capehart, Minneapolis, Minn., assignors, by mesne assignments, to T. S. Bassford, New York, N. Y., receiver of the Minneapolis Electro-Matrix Company. Matrix-making machine	479,772	July 26	2706	674, 675	60	565
Goodwin, Phebe C., Boston, Mass. Spoon	483,379	Sept. 27	2381	597	60	1838

Hill, John L. (See Eglin, William, assignor.)						
Hill, Roland F., *et al.* (See Willis, William H., assignor.)						
Hill, Thomas, *et al.* (See Whitworth, Charles E., assignor.)						
Hillard, Paul H., Westerly, R. I. Game-counter	481,947	Sept. 6	42	9, 10	60	1342
Hillard, Paul H., Stonington, Conn. Toy	481,948	Sept. 6	43	10	60	1342
Hille, Gustav L., London, England. Process of and apparatus for the manufacture of hollow caoutchouc balls	482,088	Sept. 6	271	65, 66	60	1389
Hilles & Jones Company. (See Jones, Henry C., assignor.)						
Hilliard, Charles E., Big Run, Pa. Lamp-hanger	483,448	Sept. 27	2469	621	60	1855
Hillman, William, assignor to Auto Machinery Company, Limited, Coventry, England. Means or apparatus for gaging and sorting spherical rollers or balls	482,636	Sept. 13	1183	286	60	1579
Hills, Edwin A., Wethersfield, Conn. Horseshoe	480,924	Aug. 16	1868	466	60	969
Hills, Lester S., *et al.* (See Badt, Francis B., assignor.)						
Himmelstein, John, Milwaukee, Wis. Horse-collar fastener	478,603	July 12	834	205	60	181
Hinchman, Carey S. (See Cook and Hinchman.)						
Hinckley, Sylvester B. (See Dix, Henry S, assignor.)						
Hinden, Mathias J., assignor to Julius King Optical Company, Cleveland, Ohio. Lens-measuring instrument	483,354	Sept. 27	2336	587	60	1830
Hinderer, Gustav L., Philadelphia, Pa. Heater for food, &c	481,759	Aug. 30	3269	796	60	1264
Hine, James W. (See Foster and Hine.)						
Hine, L. G. (See Fowler, Joseph C., assignor.)						
Hinesley, Daniel, Beard, Ind. Fence-post	482,637	Sept. 13	1184	287	60	1579
Hinkley, Aaron F., Lakeville, and J. S. Welch, Lynn, Mass. Voter's compartment and shelf	480,925	Aug. 16	1870	466	60	970
Hinsdale, William R., Newark, N. J. Preventing segregation in large ingots	479,120	July 19	1627	407	60	344
Hinshillwood, Thomas K., assignor of one-half to H. Popp, Philadelphia, Pa. Type-casting machine	481,760	Aug. 30	3270	796, 797	60	1265
Hinson, James A., Chicago, Ill. Car-coupling	482,358	Sept. 13	742	179	60	1495
Hipwell, Thomas, Long Island City, assignor to Manhattan Brass Company, New York, N. Y. Supporting-ring for lamps	479,880	Aug. 2	160	40	60	613
Hipwell, Thomas, Long Island City, assignor to Manhattan Brass Company, New York, N. Y. Lamp-burner	480,404	Aug. 9	1055	264	60	793
Hirsch, Isaac, Chicago, Ill. Rolling-machine for cutlery	480,325	Aug. 9	932	236	60	771
Hirst, John F., Sabattus, Me. Hinge	481,492	Aug. 23	2827	695	60	1163
Hisey, Charles S., Aurora, Ind., assignor to Standard Cartridge Company, of New Jersey. Cartridge-loading machine	480,015	Aug. 2	401	99, 100, 101	60	658
Hisley, Stephen T., Syracuse, N. Y. Buckle	479,003	July 19	1443	358	60	310
Hitzeroth, Lorenz D. (See Macdonald, Williams, and Hitzeroth.)						
Hoadley, David, Naugatuck, Conn. Bevel	480,016	Aug. 2	405	101	60	658
Hoadley, Isaac N., assignor to Monitor Packer Company, Bradford, Pa. Well-packer	480,926	Aug. 16	1871	466	60	970
Hoadley, Miles S. (See Ziegler, William R., assignor.)						
Hoagland, James. (See Stivers and Hoagland.)						
Hoar, John, Brookline, Mass. Horse-boot	481,790	Aug. 30	3326	811	60	1276
Hobbs, Alfred C., and C. R. Richards, assignors to Union Metallic Cartridge Company, Bridgeport, Conn. Machine for sizing and polishing paper tubes	480,017	Aug. 2	407	101, 102, 103, 104	60	659
Hodge, Albert S., assignor of one-half to J. H. Hodge, Boston, Mass. Automatic relief-valve for radiators	479,806	Aug. 2	48	12	60	591
Hodge, J. Henry. (See Hodge, Albert S., assignor.)						
Hodgson, William. (See Froehlich, Amadeus A., assignor.)						
Hodsdon, Charles F., New York, N. Y. Ballot-box	478,283	July 5	353	85	60	71
Hoe, Robert, *et al.* (See Crowell, Luther C., assignor.)						
Hoe, Robert, *et al.* (See Crowell, Luther C., assignor.) (Reissue.)						
Hoefer, Henry, Philadelphia, Pa. Butcher's or bow saw	480,697	Aug. 9	1520	378	60	884
Hoffend, Nickolaus, Rochester, N. Y. Means for hanging moldings	482,742	Sept. 20	1359	336	60	1026
Hoffman, Andrew E., Fort Wayne, Ind. Veneer-saw	480,428	Aug. 9	1097	274	60	800
Hoffman, Clara E., administratrix. (See Hoffman, Ferdinand A.)						
Hoffman, Ferdinand A., deceased, Byron, Cal.; C. E. Hoffman, administratrix. Fumigator	483,484	Sept. 27	2510	632	60	1864
Hoffman, Joseph L., Longtown, Mo. Hay-carrier	479,423	July 26	2126	532	60	456
Hoffmann, Meinhard, assignor to L. Cassella & Co., Frankfort-on-the-Main, Germany. Diazo dye	480,326	Aug. 9	933	.....	60	772
Hoffmann, Meinhard, Mainkur, near Frankfort-on-the-Main, assignor to L. Cassella & Co., Frankfort-on-the-Main, Germany. Manufacture of yellow dyes. (Reissue)	11,267	Sept. 6	686	.....	60	1470
Hoffmann, Paul W. (See Quinn and Hoffmann.)						
Hoffmann, Solomon D., Moscow, Russia. Composition for and method of making heads and limbs of dolls	480,094	Aug. 2	532	.....	60	684
Hogan, Silas J. (See Hawley and Hogan.)						
Hogan, Thomas J., assignor to Westinghouse Air Brake Company, Pittsburg, Pa. Air-brake	482,058	Sept. 6	221	53	60	1378
Hoggson, Samuel H., assignor to Stevenson-Hoggson Electric Company, St. Louis, Mo. Time-stamp	483,151	Sept. 27	1992	505, 506	60	1764
Holbrook, Charles W., Windsor Locks, assignor, by mesne assignments, to Gray Automatic Telephone Pay Station Company, Hartford, Conn. Coin signal-sounding device	481,903	Aug. 30	3506	859	60	1310

Holsten, John B., New York, N. Y. Floating pot	482,638	Sept. 13	1186	287	60	1580
Holt, Benjamin, Stockton, Cal. Traveling harvester	483,449	Sept. 27	2470	621, 622	60	1856
Holt, Frederic W., St. George, Canada. Fluid-meter	479,277	July 19	1864	467	60	390
Holt, Herbert L., Trivoli, Ill. Traction-wheel	483,220	Sept. 27	2109	535	60	1788
Holyoke Machine Company *et al.* (See Keene, Samuel D., assignor.)						
Honiss, William H. (See Mildrum, Ernest W., assignor.)						
Hood, Otis, Onset, Mass. Car-coupling	479,881	Aug. 2	162	40	60	613
Hooper, Judson V. (See Opsion and Hooper.)						
Hoover, Jeremiah L., Fishertown, Pa. Draft-equalizer	480,262	Aug. 9	831	212	60	753
Hope Electric Appliance Company. (See Wright, Augustus, assignor.)						
Hope, John, Providence, R. I. Ruling-machine	480,498	Aug. 9	1206	302	60	823
Hope, John, assignor to John Hope & Sons Engraving and Manufacturing Company, Providence, R. I. Grounding-machine	482,947	Sept. 20	1682	423	60	1689
Hopedale Electric Company. (See Usher, Edward P., assignor.)						
Hopedale Electric Company. (See Usher and Draper, assignors.)						
Hopedale Machine Company. (See Bancroft and Rhoades, assignors.)						
Hopedale Machine Company. (See Rhoades, Alonzo E., assignor.)						
Hopkins, Floyd, Belvidere, Ill. Gate	482,792	Sept. 20	1438	356	60	1641
Hopkins, George G., Brooklyn, N. Y. Sash-fastener	479,595	July 26	2400	598	60	508
Hopkins, Willie E. (See Spencer, Gaston N., assignor.)						
Hopkinson, John A. and J., Huddersfield, England. Water-gage	481,493	Aug. 23	2828	695	60	1164
Hopkinson, Joseph. (See Hopkinson, John A. and J.)						
Horcheler, William. (See Spencer, Charles F., assignor.)						
Horgan, Stephen H., Jersey City, N. J. Printing plate and block	478,749	July 12	1044	256	60	223
Horgan, Stephen H., Jersey City, N. J. Printing-block	478,750	July 12	1045	257	60	223
Hormel, August. (See Tilton and Hormel.)						
Horn, George W. and J. L., Farmington, assignors to W. W. Norman, Delta, Mo. Purifying-pump	480,096	Aug. 2	533	135	60	684
Horn, Josiah L. (See Horn, George W. and J. L.)						
Horn, Norbert, New York, N. Y. Gaseous-fuel generator and burner	481,494	Aug. 23	2831	695, 696	60	1164
Horne, James. (See Whinfield and Horne.)						
Horovitz, Bernhard, Stillwater, Minn. Rubber shoe	480,097	Aug. 2	534	135	60	684
Horton, James W., Madison, Ind. Mail-bag catcher	478,604	July 12	835	206	60	181
Horton, John T., Lowville, N. Y. Hydraulic feed for wood-pulp machines	481,174	Aug. 23	2398	566	60	1064
Hosea, Lewis M., Cincinnati, Ohio. Elevator	479,943	Aug. 2	261	64	60	632
Hosea, Raphael M., Denver, Colo. Coal-chute	482,009	Sept. 6	138	33, 34	60	1362
Hoskins, Adeline E. (See Payne, William H., assignor.)						
Hoskins, Clanmer P., *et al.* (See Payne, William H., assignor.)						
Hostetler, Joseph W. (See Robberson, Alexander J., assignor.)						
Hotchkiss, Francis A., Cedar Falls, Iowa. Car-coupling	480,584	Aug. 9	1335	333	60	849
Hotchkiss Ordnance Company. (See Paine, Frederick H., assignor.)						
Hougen, Ole T., and G. W. Paulns, Grand Rapids, Wis. Implement-holder for tablets, &c	478,784	July 12	1127	278	60	238
Hough, John C., Pittsburg, Pa. Trolley-stand for electric railways	483,061	Sept. 20	1853	470	60	1726
Houghtlin, Alfred A., Brooklyn, N. Y. Attachment to roll-carrying spindles for web-printing presses	480,499	Aug. 9	1207	302	60	823
Houghton, Arthur A., and R. D. Haines, assignors to Clay Glass Tile Company, Corning, N. Y. Plating clay with glass and in articles made accordingly	479,365	July 19	2017	504	60	421
Houghton, Thomas J., Lancaster, Pa. Vehicle-pole tip	481,791	Aug. 30	3327	812	60	1276
Houlihan, Dennis. (See Wright, George E., assignor.)						
Housh, Frank E., Brattleborough, Vt. Graphoscope	482,793	Sept. 20	1439	356	60	1642
Houston, James F., Lewisburg, Tenn. Gate-actuating mechanism	479,278	July 19	1867	467	60	391
Houston, Levi, Montgomery Station, Pa. Mortising-machine	478,431	July 5	571	138	60	112
Houston, Robert C. (See Tiner, John F., assignor.)						
Hoval, John, Stafford, Tex. Nut and bolt wrench	481,230	Aug. 23	2394	590	60	1063
Hove, John J., assignor of two-thirds to W. E. Lawrence, Minneapolis, Minn. Cash register, indicator, and automatic change-maker	479,711	July 26	2594	646	60	544
Hovland, Anton I., Faribault, Minn. Furnace	480,769	Aug. 16	1636	409	60	923
How, Fred. B. (See Thurston and How.)						
Howard, Charles D., Syracuse, N. Y., assignor to Howard Thermostat Company. Automatic damper	480,263	Aug. 9	832	212	60	753
Howard, Henry. (See Unwin and Howard.)						
Howard, Henry, Halesowen, near Birmingham, England. Electric welding	481,030	Aug. 16	2032	507	60	1001
Howard, James S., New Bedford, Mass. Drinking attachment for cups, mugs, &c	478,861	July 12	1220	303	60	257
Howard, John Farnworth, near Bolton, assignor to Concave Paddle Wheel Company, Limited, Liverpool, England. Paddle-wheel for steamers	481,668	Aug. 30	3109	759	60	1233
Howard Manufacturing Company. (See Howard, William C., assignor.)						
Howard Manufacturing Company. (See Witherell, Alonzo E., assignor.)						
Howard, William C., Brooklyn, N. Y., assignor to Howard Manufacturing Company, Boston, Mass. Razor-strop	478,934	July 12	1326	329	60	278
Howard, William H., Lowell, Mass., assignor to Waukenhose Company, Portland, Me. Assortment of stockings	478,751	July 12	1046	257	60	223
Howard Thermostat Company. (See Howard, Charles D., assignor.)						
Howe, Eugene L., Cleveland, Ohio. Separating apparatus	478,159	July 5	132	33	60	29
Howe, George. (See Waters, Frank J., assignor.)						
Howe, George M., Fulton, N. Y. Cash register and indicator	481,495	Aug. 23	2834	696, 697	60	1165
Howe, John B., Danbury, Conn. Machine for pouncing hats	480,098	Aug. 2	535	136	60	684
Howe, Samuel, Chicago, Ill. Farm-wagon	478,432	July 5	572	138	60	1.2
Howe, Warren B., Chicago, Ill. Paper box	482,480	Sept. 13	936	228	60	1530

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drgs.	Official Gazette. Vol.	Official Gazette. Page.
King, Joe W. (See Carvell, John V., assignor.)						
King, Joseph F., Montalvo, Cal., and S. B. Stokely, Kansas City, Mo., assignors to Eagle Manufacturing Company, Davenport, Iowa. Bean-harvester	479,600	July 26	2406	599	60	509
King, Robert W., Montreal, Canada. Knitting-machine	479,986	Aug. 2	334	82, 83, 84, 85, 86, 87	60	645
King, Warren M. (See Park, Francis, assignor.)						
Kingsbury, Edward D. (See Dalbey, William H., assignor.)						
Kingsford, Thomson. (See Gunston, Byron M., assignor.)						
Kinipple, Walter R., London, England. Overland ship conveyance	481,405	Aug. 23	2088	660	60	1135
Kinnear, William R., Columbus, Ohio. Railway-tie	483,154	Sept. 27	2002	506, 507	60	1767
Kinney, Jesse, Detroit, Mich. Disinfecting and deodorizing cover for commodes, water-closets, &c.	482,966	Sept. 20	1708	431	60	1695
Kinsey, Oliver, trustee. (See Patterson and Kirby, assignors.)						
Kinsley, William B., Melrose, Mass. Gore-marker	481,305	Aug. 23	2031	021	60	1106
Kipp, John, Sr., Piqua, Kans. Corn cutter or harvester	479,815	Aug. 2	61	14	60	594
Kirby, James A., assignor of two-thirds to G. R. Jenkins and C. F. Burns, Chicago, Ill. Thill-coupling	480,772	Aug. 16	1639	410	60	924
Kirby, John, Jr. (See Patterson and Kirby.)						
Kirby, John, Jr., assignor to Dayton Manufacturing Company, Dayton, Ohio. Lamp	483,155	Sept. 27	2003	507	60	1767
Kirby, William A., Auburn, N. Y. Sheaf-carrier	481,144	Aug. 16	2245	552, 553	60	1049
Kircher, Frederick, assignor of one-half to L. Gloeckner, New York, N. Y. Rotary-blade cutting-machine	480,387	Aug. 9	1032	259	60	799
Kirk, Alva H., Fergus Falls, Minn. Wheat-separator	479,816	Aug. 2	62	14, 15	60	594
Kirkham, John J., Terre Haute, Ind. Gas-generator	479,647	July 26	2480	017	60	523
Kirkpatrick, Robert S., assignor of two-thirds to A. P. Chamberlin and E. Chavannes, Des Moines, Iowa. Car-coupling	482,010	Sept. 6	139	31	60	1363
Kirkwood, Jay W., *et al.* (See Kirkwood, John D., assignor.)						
Kirkwood, John D., Pullman, Wash., assignor to E. Bartsch, San Francisco, Cal., and J. W. Kirkwood, Ham's Fork, Wyo. Vaginal syringe	478,872	July 12	1231	305	60	259
Kirshner, Michael, Philadelphia, Pa. Knitting-machine	479,601	July 26	2408	600, 601	60	510
Kissling, Otto, Stuttgart, Germany. Writing-desk	478,336	July 5	427	104	60	86
Kittel, Julius, Cranford, N. J. Felting-machine	480,592	Aug. 9	1347	335	60	851
Kittleson, Even E., Albany, Wis. Reel-carrier	481,328	Aug. 23	2569	630, 631	60	1114
Klank, Albert L., Champaign, Ill. Device for holding open grain and other sacks for filling same	481,957	Sept. 6	53	12	60	1345
Kleinert, Robert, assignor to Körner & Schulte, Breslau, Germany. Car-coupling	481,179	Aug. 23	2303	568	60	1065
Kling, Edgar, assignor to I. Kling, Louisville, Ky. Car-coupling	482,904	Sept. 20	1614	404	60	1676
Kling, Isaac. (See Kling, Edgar, assignor.)	479,371	July 19	2025	506	60	422
Klockau, William, Rock Island, Ill. Vehicle sand-band	481,795	Aug. 30	3333	813	60	1277
Knapp, Charles H., *et al.* (See Wright, Napoleon B., assignor.)						
Knapp, Gardner, Somerville, and C. H. Little, Chelsea, Mass., assignors, by mesne assignments, to Boston Cash Register Company, Portland, Me. Cash indicator and register	481,037	Aug. 16	2047	511	60	1004
Knapp, Isaac N. (See Colline and Knapp.)						
Knappe, Paul A., *et al.* (See Perkins, Duane T., assignor.)						
Knaub, William R. (See Brown and Knaub.)						
Knauss, Frank V., assignor to Portsmouth Stove and Range Company, Portsmouth, Ohio. Oven-door for cooking stoves or ranges	483,117	Sept. 20	1939	491	60	1743
Knecht, Charles W. (See Knecht, Edwin R. and C. W.)						
Knecht, Edwin R. and C. W., Shelbyville, Ill. Animal-trap	480,593	Aug. 9	1348	336	60	851
Knefelkamp, Charles H. (See Stoeppelwerth and Knefelkamp.)						
Knight, Ebenezer R., St. Johns, Canada. Seed-planter	483,066	Sept. 20	1861	472	60	1728
Knight, Francis E., New York, N. Y. Game apparatus	483,324	Sept. 27	2299	578	60	1822
Knight, George F., Canton, Ohio. Sawmill-dog	483,323	Sept. 27	2113	536	60	1780
Knight, George F., Canton, Ohio. Sawmill-dog	483,324	Sept. 27	2115	536	60	1789
Knittel, John, assignor of one-half to G. T. Kollas, St. Louis, Mo. Drum	478,611	July 12	242	207	60	183
Knowles, Edward R., Brooklyn, N. Y. Secondary-battery plate	480,266	Aug. 9	836	213	60	754
Knowles, Edward R., Brooklyn, N. Y. Battery-connector	482,012	Sept. 6	143	35	60	1363
Knowles, Edward R., Brooklyn, N. Y. Storage-battery	482,979	Sept. 20	1726	436, 437	60	1699
Knowles Loom Works. (See Hutchins, George F., assignor.)						
Knox, Adam. (See Bryce and Knox.)						
Knox, George A., Lynn, Mass. Sole-edge-burnishing machine	480,021	Aug. 2	420	105, 106, 107	60	661
Knox, Orrin A., Bradford, Pa. Oil-well pumping mechanism	482,011	Sept. 6	142	34	60	1363
Knudtson, Thurston L., and J. Uhri, Chicago, Ill. Staple forming and driving machine	483,254	Sept. 27	2186	550, 551	60	1802
Koch, John C., Berlin, Germany. Workman's time-recorder	478,224	July 5	354	86	60	71
Koch, John C., Berlin, Germany. Watch-chain attachment	480,430	Aug. 9	1099	275	60	801
Koch, John C., Berlin, Germany. Album-clasp	480,950	Aug. 16	1915	478, 479	60	977
Koch, Julius J., St. Louis, Mo. Hydraulic brick-press	480,818	Aug. 16	1707	426, 427, 428	60	937
Koch, Louis C. (See Woessner, Charles F., assignor.)						
Koehler, Jean, Freiburg, Germany. Combustible pocket-spittoon	478,873	July 12	1232	306	60	259
Koeller, Herman A., New York, N. Y. Folding stand	479,073	July 19	1549	387	60	330
Koeller, Hermann H., Quincy, Ill. Cash-register	480,594	Aug. 9	1350	336, 337	60	852
Koepp & Co., Rudolph. (See Wachendorff, Carl, assignor.)						
Kolben, Emil, Schenectady, assignor to Edison General Electric Company, New York, N. Y. Armature-conductor and means for insulating the same	480,727	Aug. 16	1570	393	60	909
Kolben, Emil, Schenectady, assignor to Edison General Electric Company, New York, N. Y. Ring-armature	480,728	Aug. 16	1572	393	60	909
Kolesch, Adolph, Brooklyn, N. Y. Compasses	479,329	July 19	1936	424	60	405

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drgs.	Official Gazette. Vol.	Official Gazette. Page.
Kollas, George T. (See Knittel, John, assignor.)						
Kondakoff, Wladimir, Gatchina, near St. Petersburg, Russia. Horseshoe	482,845	Sept. 20	1507	375	60	1656
Konz, Sebastian, assignor of one-half to S. F. Harlan, Louisville, Ky. Machine for making wire springs and couplings	482,427	Sept. 13	855	205	60	1516
Koppenhöfer, Philipp, Speyer, Germany. Fastening for shoes, gloves, &c., and lace therefor	479,218	July 19	1778	446	60	373
Körner & Schulte. (See Kleinert, Robert, assignor.)						
Koskul, Frederick, Williamsport, Pa. Transfer-sheet	482,451	Sept. 13	894	217	60	1522
Köster, Ernst J. (See Mehrtens, John H., assignor.)						
Kosure, Thomas H., Farmersville, Tex. Bridge	478,438	July 5	580	140, 141	60	114
Kovsky, Louise E. A., Denver, Colo. Spring-scale	478,099	July 12	959	238	60	206
Kraetzer, Edwin J., Cambridge, Mass. Buckle	483,356	Sept. 27	2339	588	60	1830
Krafft, Ernst F., St. Blasien, Germany. Spindle for spinning machinery	482,091	Sept. 6	276	67	60	1300
Kramer, George W. (See Weary and Kramer.)						
Kramer, William, assignor of one-half to C. Opits, Chicago, Ill. Wire-fence stretcher	479,817	Aug. 2	63	15	60	594
Kranse, Gustave A., assignor of one-fourth to G. C. H. Guettler and G. Krauslach, Milwaukee, Wis. Malting apparatus	481,958	Sept. 6	54	13	60	1345
Krauslach, George, *et al.* (See Kranse, Gustave A., assignor.)						
Krehbiel, John, Cleveland, Ohio. Vestibule-car	482,744	Sept. 20	1361	337	60	1696
Krekel, Edward G., *et al.* (See Bauer, Robert A., assignor.)						
Krekel, Henry G., *et al.* (See Bauer, Robert A., assignor.)						
Kremelberg, Gertrude J., New York, N. Y. Water-closet	481,498	Aug. 23	2339	608	60	1106
Krepps, Virgil A., Kensico, N. Y., assignor, by mesne assignments, to D. L. Caldwell, Lynn, and R. Mills, trustees, and H. W. Mason, Newton, Mass. Vending-machine	479,005	July 19	1445	359	60	311
Kretschmer, Emil A., Horicon, Wis. Bow for stringed musical instruments	482,235	Sept. 6	547	130	60	1441
Kroemke, Charles. (See Smith, Andrew J., assignor.)						
Kronenberg, Edward, Philadelphia, Pa. Pocket-lamp or lighting device	480,267	Aug. 9	836	213, 214	60	754
Kronenberg, Edward, Philadelphia, Pa. Lighting device	480,500	Aug. 9	1209	303	60	823
Kropacek, Joseph J., Irving, Kans. Riveter	478,114	July 5	56	15	60	13
Krotz, Alvaro S., assignor of one-half to A. Sauer, Defiance, Ohio. Electric-current regulator	479,886	Aug. 2	169	42	60	615
Krouse, Charles C., H. E. Myers, and C. L. Girard, Williamsport, Pa. Suspender-end	478,337	July 5	428	104	60	86
Krouse, Charles C., H. E. Myers, and C. L. Girard, Williamsport, Pa. Supenders	478,338	July 5	429	105	60	86
Kruck, Ernest R., Sioux City, Iowa. Pointing mechanism for masonry	478,339	July 5	430	105	60	86
Krueger, Adele S., Hannahfield Lenzie, near Glasgow, Scotland. Preparation for beverages	482,369	Sept. 13	757	183	60	1498
Kruse Cash Register Company. (See Weiss, Carl W., assignor.)	483,067	Sept. 20	1863	.....	60	1728
Kuechle, Eduard, assignor to Otis Brothers & Company, New York, N. Y. Machine for twisting metal strips	483,357	Sept. 27	2339	588	60	1830
Kuechle, Eduard, assignor to Otis Brothers & Company, New York, N. Y. Metal lattice-work	483,358	Sept. 27	2342	589	60	1831
Kuechler, Charles F., assignor of one-half to F. Rahn, Chicago, Ill. Lamp-post sign	479,006	July 19	1446	359	60	311
Kuett, George F., and C. Slingland, Paterson, N. J. Warping-machine	478,162	July 5	138	35, 36	60	30
Kuhns, Arthur E., Chicago, Ill. Can for oil, &c	481,233	Aug. 23	2396	591	60	1083
Kune, Julian. (See McElwain, George, assignor.)						
Kupfer, Arthur A. and H. C., Providence, R. I. Bicycle-tire	481,038	Aug. 16	2048	511	60	1004
Kupfer, Herman C. (See Kupfer, Arthur A. and H. C.)						
Kurtz, Charles M., Allegheny, Pa. Machine for forming shapes of candy	481,234	Aug. 23	2397	592	60	1084
Kynett, William H., Battle Creek, Mich. Warp or line measuring machine	478,115	July 5	57	15	60	13
L. Wolff Manufacturing Company. (See Clifford and Gavin, assignors.)						
L. Wolff Manufacturing Company. (See Sievert, Henry H., assignor.)						
La Boiteaux, Frank M., Cincinnati, Ohio. Beer apparatus	479,190	July 19	1739	436, 437	60	365
La Casse, Henry. (See Wile and La Casse.)						
La Chapelle, George. (See Devine and La Chapelle.)						
La France, Truckson S., Elmira, N. Y. Fire-engine pump	478,439	July 5	581	141	60	114
La Pierre, Frank H., East Orange, N. J. Buckle	478,285	July 5	356	86	60	72
La Point, Stephen, Derrick City, Pa. Washing-machine	478,440	July 5	583	141	60	115
La Roche, Fredrick A., Philadelphia, Pa. Volt-ammeter	481,573	Aug. 30	2966	728	60	1207
La Société Dagry & Arnault. (See Dagry, Alphonse, assignor.)						
La Société des Générateurs à Vaporisation Instantanée, (Système Serpollet.) (See Serpollet, Leon, assignor.)						
La Subérine. (See Vasson, Raphael G. de, assignor.)						
Labelle, Israel, Holyoke, Mass. Horse-checking device	483,306	Sept. 27	2270	571	60	1817
Lage, Nicholas, assignor of one-half to I. L. Sears, Rock Island, Ill. Collar-fastener	478,116	July 5	60	16	60	14
Lagerman, Alexander, Jönköping, Sweden. Type-justifying apparatus	478,340	July 5	431	105, 106, 107	60	86
Lagerman Typotheter Company. (See Hastings and Foster, assignors.)						
Lahola, Vinzenz, Vienna, assignor to B. Steiner, Buda-Pesth, Austria-Hungary. Phonograph	479,431	July 26	2136	534	60	459
Laird, William H. (See Watson, George A., assignor.)						
Lajoie, Misaël, Montreal, Canada. Lamp-extinguisher	480,773	Aug. 16	1640	410	60	924
Lake, Judson N., assignor to T. C. Northcott, Elmira, N. Y. Sheet-metal air-duct	481,020	Aug. 30	3037	742	60	1220
Lake, Wilmot, Charlton Heights, Md. Ventilated vault-cover	482,013	Sept. 6	144	35	60	1364
Lalande, Felix de, Paris, France. Galvanic battery	479,887	Aug. 2	171	42, 43	60	615
Lambert, George A., assignor of one-half to A. A. Young, Orrington, Me. Plow-colter	482,482	Sept. 13	939	229	60	1531
Lamp, Robert M., Madison, Wis. Crutch	483,457	Sept. 27	2479	624	60	1858
Lampitt, Charles, Southgate, England. Grading-machine	483,118	Sept. 20	1940	491	60	1743
Lamprey, Rufus W., Manchester, N. H. Fireproof paint	483,225	Sept. 27	2116	536, 537	60	1790
Lamson Consolidated Store Service Company. (See Goodfellow, John H., assignor.)	483,307	Sept. 27	2272	.....	60	1817
Lamuth, John, Irvington, Iowa. Draft-equalizer	482,370	Sept. 13	758	183	60	1498
Lance, De Haven, New Cumberland, W. Va. Paving-brick	478,612	July 12	844	208	60	183
Land, Martin R., Norfolk, Va. Match-safe	482,371	Sept. 13	759	183, 184	60	1499
Land Title and Trust Company, administrator. (See Offermann and Ziegler.)						
Lander, John O. (See Olson, Holcom, assignor.)						
Landfear, William R. (See Butler and Landfear.)						
Landin, Peter J., Minneapolis, Minn. Cash indicator, register, and recorder	482,014	Sept. 6	145	35, 36	60	1364
Landin, Peter J., assignor to T. B. Walker and S. E. Wilson, Minneapolis, Minn. Computing-machine	482,312	Sept. 6	650	155	60	1462

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Landis, Abraham B., Waynesborough, Pa. Grinding-machine	483,288	Sept. 27	2242	564, 565, 566	60	1812
Landis, Frank F., Waynesborough, Pa. Fan and regulator for thrashing-machines	482,846	Sept. 20	1508	375	60	1657
Landis, Frank F., Waynesborough, Pa. Plow	482,847	Sept. 20	1509	375	60	1657
Landon, Albert, and L. Martel, Rutland, Vt. Steam-boiler attachment	482,848	Sept. 20	1510	375	60	1657
Landreth, John F., assignor of one-half to S. A. Sellars, Ellaville, Ga. Tool-handle	482,256	Sept. 6	548	130	60	1441
Lane, George H., Worcester, Mass. Spark-arrester	479,283	July 19	1873	469	60	393
Lane, John H., assignor to F. L. Raymond, Cleveland, Ohio. Apparatus for fishing through ice	479,219	July 19	1779	446	60	373
Lane Manufacturing Company. (See Anderson, John B., assignor.)	479,565	July 26	2361	589	60	501
Lane, Rufus A., New York, N. Y. Saddle-girth	481,180	Aug. 23	2305	568	60	1065
Lane, Thomas W., Boston, Mass., assignor to Electric Gas Lighting Company, Portland, Me. Electrical drop-annunciator	480,729	Aug. 16	1573	394	60	910
Lang, John F., Emerson, and J. W. Roper, Cartersville, Ga., assignors to themselves, W. Latham and E. J. Rector, Chattanooga, Tenn. Spring-motor	481,714	Aug. 30	3182	777, 778	60	1248
Langville, Louis S. (See Frank, Jerome W., assignor.)						
Lannert, John A. (See Wilder, Lannert, and Jeavons.)						
Lannert, John A., and W. R. Jeavons, Cleveland, Ohio. Vapor-burner	479,220	July 19	1780	446	60	373
Lannert, John A., W. R. Jeavons, Cleveland, Ohio, and W. H. Wilder, Florence, Mass. Oil and vapor burner	479,747	July 26	2662	661	60	556
Lanphere, Alvin W., Indian Lake, N. Y. Sickle-bar movement for mowers and reapers	480,104	Aug. 2	546	138	60	686
Lansing, John C., Shelbourne, Canada. Turbine wheel	480,929	Aug. 16	1874	467, 468	60	971
Lapham, Frank A., Waterford, Wis. Washing-machine	480,105	Aug. 2	547	138	60	687
Lapin, Jean. (See Croes, Rodenbach-Mergaert, and Lapin.)	482,849	Sept. 20	1511	376	60	1657
Larcher, Pierre H., Paris, France. Blind-stile-mortising machine	481,039	Aug. 16	2049	511, 512	60	1004
Lardner, Charles. (See Smith and Lardner.)	482,257	Sept. 6	549	130	60	1441
Larish, Wilbur F., Oshkosh, Wis. Mortising-machine	480,431	Aug. 9	1101	275	60	801
Larkin, John T., Halifax Canada. Spiral hair or other pin	479,191	July 19	1740	437	60	365
Larsen, August, Syracuse, assignor of one-half to H. C. Nye, Whitehall, N. Y. Coin-operated machine	478,613	July 12	845	208	60	183
Larter, Frederick H., Newark, N. J. Button	481,631	Aug. 30	3052	745	60	1222
Lasher, Frank, assignor to Lasher Stocking Company, Bennington, Vt. Device for transferring stocking-ribs						
Lasher, Frank, assignor to Lasher Stocking Company, Bennington, Vt. Stitch-holding mechanism for knitting-machines						
Lasher Stocking Company. (See Lasher, Frank, assignor.)						
Latham, Woodville, *et al.* (See Lang and Roper, assignor.)						
Lathrop, Frank L., Brooklyn, N. Y. Pocket bagatelle-board	479,432	July 26	2140	534	60	459
Latta, Emmit G., Friendship, N. Y. Vehicle-wheel	479,566	July 26	2362	589	60	501
Latta, Emmit G., Friendship, N. Y. Vehicle-wheel	479,946	Aug. 2	266	65, 66	60	633
Latzko, Rudolf. (See Scharf, Paul, assignor.)	479,515	July 26	2291	.....	60	488
Lauch, Richard, assignor to Farbenfabriken, vormals Fr. Bayer & Co., Elberfeld, Germany, Olive dye	479,284	July 19	1874	469	60	393
Laumann, Josef, Vienna, Austria-Hungary, assignor to Ludw. Loewe & Company Commandit-Gesellschaft auf Actien, Berlin, Germany. Repeating firearm	478,193	July 5	189	48	60	40
Lauth, Bernard C., Philadelphia, Pa. Rolling thin sheet steel or iron	482,092	Sept. 6	277	67	60	1390
Lavelle, Patrick J., assignor to Johnson Company, Johnstown, Pa. Method of and die for making rail-chairs	483,385	Sept. 27	2390	600	60	1839
Lawless, Richard M., Omaha, Nebr. Car-axle dust-guard	482,428	Sept. 13	857	205	60	1516
Lawrence, Edwin F. (See Lawrence, John H., assignor.)	482,093	Sept. 6	278	67	60	1390
Lawrence, Frank W., assignor of one-half to H. H. Lawrence, Saratoga, N. Y. Bag	482,372	Sept. 13	760	.....	60	1499
Lawrence, Harry W., assignor of one-half to H. H. Metcalf, Denver, Colo. Rheostat	480,501	Aug. 9	1212	303	60	824
Lawrence, Henry H. (See Lawrence, Frank W., assignor.)	478,514	July 5	696	168	60	138
Lawrence, James, Paulsborough, N. J. Recovering nitro-glycerine from waste acids	482,829	Sept. 20	1483	369	60	1652
Lawrence, John H., assignor of one-half to E. F. Lawrence, Sterling, Ill. Track for barn-doors	481,959	Sept. 6	56	13, 14	60	1345
Lawrence, Lester G., assignor of two-thirds to A. O. Cooper and E. L. Bradbury, Chicago, Ill. Harmonica	479,888	Aug. 2	173	43	60	616
Lawrence, Meltiah W., Gardiner, Me. Carriage for carrying and operating sewing-machines	479,818	Aug. 2	64	15	60	594
Lawrence, Reuben, St. Joseph, Mo. Conduit system for electric railways	478,614	July 12	847	208	60	183
Lawrence, Wilber E. (See Hove, John J., assignor.)	482,580	Sept. 13	1103	267	60	1564
Lawshe, Jacob R., Newark, N. J. Book-rest	479,372	July 19	2026	506	60	422
Lawton, James M., Jr., *et al.* (See Ashley, William A. G., assignor.)	478,798	July 12	1132	279	60	239
Laycock, William, Chicago, Ill., assignor to Chandler & Taylor Company, Indianapolis, Ind. Cross-head	479,987	Aug. 2	356	88	60	649
Layman, James H., Cincinnati, Ohio. Cartridge-loading machine	483,068	Sept. 20	1803	472	60	1728
Le Neve, Sanford W. (See Parker and Le Neve.)	483,156	Sept. 27	2000	508	60	1768
Le Vesconte, George, Minneapolis, Minn. Gas-burner attachment	482,872	Sept. 20	1553	388	60	1665
Leach, Mark, J. Heaton, and J. Bentley, Bradford, England, assignors to J. and J. Dobson, Philadelphia, Pa. Let-off mechanism for double-pile-fabric looms	483,236	Sept. 27	2121	537	60	1790
Leahy, Matthew, New Haven, Conn., assignor to E. O'Connor and C. Woodruff, Binghamton, N. Y. Cash indicator and recorder	479,433	July 26	2140	535	60	459
Leatherwood, Calvin N., Hutto, Tex. Listing-plow	479,516	July 26	2236	573	60	488
Lebkicher, Colin B., Helena, Mont. Book or portfolio	478,241	July 5	436	107	60	87
Lechner, Jefferson L., Pittsburg, Pa. Mining-machine	479,285	July 19	1877	470	60	393
Lee, Charles T., Boston, Mass., assignor to Johns-Pratt Company, Hartford, Conn. Insulator	479,885	Aug. 2	167	42	60	615
Lee, Frank R., Lead Hill, Ark. Resawing-machine	479,192	July 19	1741	437	60	365
Lee, George B., assignor of two-thirds to G. W. Stafford and T. E. Nudd, Providence, R. I. Window or door sash	481,360	Aug. 23	2012	642	60	1121
Lee, Homer, New York, N. Y. Plate-printing machine						
Lee, John E., Conshohocken, Pa. Spool-carrier for braiding-machines						
Lee, Preston B., Philadelphia, Pa. Glove						
Lee, William A., Winfield, Kans. Car-coupling						
Leedle, George D., assignor to G. S. Foos Company, Springfield, Ohio. Lawn-mower clutch						
Lees, John, Jr., Adrian, Mich. Suspender-end attachment						
Leeson, Joseph R. (See Wardwell, Simon W., Jr., assignor.)						
Lefebvre, Albert H., assignor to Harmon Machine Company, Watertown, N. Y. Feed for pulp-grinding machines	483,458	Sept. 27	2480	624	60	1858

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Lefebvre, Louis. (See Gagnon and Lefebvre.)						
Leffmann, Henry, and W. Beam, assignors of one-third to J. E. Lonergan, Philadelphia, Pa. Testing milk	479,193	July 19	1742	.....	60	366
Legg, Benjamin A., Allegheny, Pa. Mining-machine	482,045	Sept. 6	200	48	60	1374
Legg, Benjamin A., Allegheny, Pa. Mining-machine	482,046	Sept. 6	204	48, 49	60	1375
Lehman, Israel J., Cleveland, Ohio. Wrought-metal hanger for joists	483,069	Sept. 20	1864	472	60	1728
Lehmann, Anthony A. (See Goldstein, Albert, assignor.)	478,163	July 5	140	36	60	30
Lehmann, Herrmann, Berlin, Germany. Cravat-holder	478,342	July 5	437	107	60	87
Lehmann, Karl, Berlin, Germany. Pneumatic wheel-tire	480,595	Aug. 9	1355	337	60	852
Lehr Agricultural Company. (See Lehr, Joseph W., assignor.)						
Lehr, Harry, New York, N. Y. Jewelry	482,483	Sept. 13	940	229	60	1531
Lehr, Joseph W., assignor to Lehr Agricultural Company, Fremont, Ohio. Cotton and corn planter	478,441	July 5	584	142	60	115
Lehucher, Melina A. (See Lehucher and Mathieu.)						
Lehucher, Victor A. and M. A., and A. Mathieu, Paris, France. Cover for boxes	482,258	Sept. 6	550	131	60	1442
Leigh, Lewis E. (See Perkins and Leigh.)						
Lemichel, Jules. (See Etève and Lemichel.)						
Leinert, Charles H. (See Nason and Leinert.)						
Leininger, John, Canton, Ohio. Harness-support	479,947	Aug. 2	268	66	60	633
Leiser, Zacharias C. (See Weaver and Leiser.)						
Lemp, Hermann, Lynn, Mass., assignor to Thomson Electric Welding Company, of Maine. Compound-wound alternating-current dynamo	479,170	July 19	1697	425, 426	60	358
Lencauchez, Alexandre. (See Coze and Lencauchez.)						
Leng, Charles, Pittsburg, Pa., assignor to E. M. Sanger, New York, N. Y. Implement for finishing the necks of bottles	480,774	Aug. 16	1641	411	60	924
Leni, Charles, Acton, England. Cash-register	481,361	Aug. 23	2012	642	60	1121
Lennox, Charles P., Toronto, Canada. Dental tool	478,343	July 5	438	108	60	87
Lentz, David H., Roanoke, Va., and A. W. Thompson, Newark, N. J., assignors to Continuous Rail Joint Company of America, of New Jersey. Rolls for forming connecting-plates for rail-joints	481,697	Aug. 30	3154	770	60	1242
Lentz, Gustav, Dusseldorf, Germany. Steam-boiler	481,796	Aug. 30	3334	813, 814, 815	60	1277
Lentz, Gustav, Dusseldorf, Germany. Apparatus for sanding rails	481,797	Aug. 30	3336	815	60	1278
Lenzen, Theodore W., and L. Heckenroth, San José, Cal. Blacksmith's forge	479,286	July 19	1878	470	60	393
Leonard, Harry W., New York, N. Y. System of electrical distribution	478,344	July 5	439	108, 109	60	87
Leonhard, Gottlob T., Paterson, N. J. Paper drying and cutting apparatus	478,975	July 12	1395	344, 345	60	290
Leonhart, George J., Ashland, Ohio. Billiard-chalk holder	479,889	Aug. 2	175	43	60	616
Lerch, Fredrick W. (See Hunt and Lerch.)						
Leslie, Arthur M., Chicago, Ill. Shuttle for sewing-machines	482,850	Sept. 20	1515	377	60	1658
Leslie, James W., Everett, assignor to Leslie Manufacturing Company, Boston, Mass. Traverse-ring	479,713	July 26	2600	647	60	545
Leslie, James W., Everett, assignor to Leslie Manufacturing Company, Boston, Mass. Traverse-ring	479,714	July 26	2602	647	60	545
Leslie Manufacturing Company. (See Leslie, James W., assignor.)						
Lester, Daniel M. (See Beyer and Lester.)						
Lester, James F. (See Forbes, Walter T., assignor.)						
Lester, Lewis W., Glencoe, Minn. Locomotive-boiler	479,648	July 26	2481	618	60	523
Lester & Wasley. (See Beyer and Lester, assignors.)						
Letteller, John G., Los Angeles, Cal. Machine for making box-binding channel-strips	482,484	Sept. 13	940	229, 230	60	1531
Lettré, Philip H., assignor to T. I. Smith & Company, North Attleborough, Mass. Link for sleeve or cuff buttons	479,649	July 26	2482	618	60	523
Levedahl, Axel, assignor to Gardner Sewing Machine Company, Aurora, Ill. Wheel	480,022	Aug. 2	426	107	60	662
Levett, Louis, New York, N. Y. Sign-letter	480,106	Aug. 2	549	138	60	687
Levi, Ernst. (See Beilmann and Levi.)						
Levi, Hermann. (See Trone, Pierre G., assignor.)						
Levy, Alexander, *et al.* (See Turner, Alonzo G., assignor.)						
Lewelling, S. W. (See Abernathy, Loranzy H., assignor.)						
Lewin, J. M., *et al.* (See Manderfield, George J., assignor.)						
Lewin, Samuel, *et al.* (See Manderfield, George J., assignor.)						
Lewis, Anthony L., Evanston, Ill. Window-cleaner	483,359	Sept. 27	2342	589	60	1831
Lewis, Charles R. (See Hamblin, Joshua J., assignor.)						
Lewis, Charles S., Waterbury, Conn. Cash register and indicator	478,164	July 5	141	36, 37	60	31
Lewis, George T., Philadelphia, Pa., and C. V. Petraeus, Camden, N. J., assignors to Western Patent Company, Denver, Colo. Treating sulphide ores of zinc and lead	481,499	Aug. 23	2841	.....	60	1166
Lewis, George T., Philadelphia, Pa., and C. V. Petraeus, Camden, N. J., assignors to Western Patent Company, Denver, Colo. Treating sulphide ores	481,500	Aug. 23	2842	.....	60	1166
Lewis, Granville R., Lynchburg, Va. Car-coupling	479,106	July 19	1601	400	60	340
Lewis, Isaac N., Fort Schuyler, N. Y. Speed-indicator	480,107	Aug. 2	550	139	60	687
Lewis, Jasper B., *et al.* (See Jewell, Delbert W. and G., assignors.)						
Lewis, John F., Turtle Creek, Pa. Ingot-extractor	480,432	Aug. 9	1102	275, 276	60	801
Lewis, John G. (See Hamilton and Lewis.)						
Lewis, John G., and R. Hamilton, Jefferson City, Mo., said Hamilton assignor to said Lewis. Trousers, &c., and pattern therefor	478,195	July 5	191	49	60	40
Lewis, Josiah P. (See Ward, William H., assignor.)						
Lewis, Orlando E. (See Lombard, Nathaniel, assignor.)						
Lewis, Pearl C., Catskill, N. Y. Chair	482,745	Sept. 20	1363	337, 338	60	1027
Lewis, Robert F., Scranton, Pa. Horseshoe	479,137	July 19	1654	413	60	349
Lewis, Robert T., Jr. (See Austin and Lewis.)						
Lewis, William T., Peoria, Ill. Brake for bicycles	478,194	July 5	190	49	60	40
Library Bureau. (See Godfrey, Charles B., assignor.)						
Liddell, John G., New Haven, Conn. Attachment for cartridge-priming machines	479,819	Aug. 2	65	15, 16	60	594
Liddle, Robert Z., Albany, N. Y. Wick-tube for oil-stoves	480,268	Aug. 9	840	214	60	755
Lidke, Fredrick C., New York, N. Y. Coin-table						
Lidke, Fredrick C., New York, N. Y. Hand-stamp	478,165	July 5	144	37	60	31
Liebeck, Louis H. (See Petterson and Liebeck.)	481,362	Aug. 23	2614	643	60	1121
Lieberthal, Hyman, Bay City, Mich. Suspender-buckle	479,074	July 19	1550	387	60	330

Alphabetical list of patentees, July to September, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Liernur, Charles T., Berlin, Germany. Pneumatic sewerage system	482,439	Sept. 13	873	208, 209	60	1519
Light, George S., Covington, Ky. Mail-box	481,621	Aug. 30	3039	742	60	1220
Light, Lyman T., Covington, Ky. Letter-box	483,070	Sept. 20	1865	473	60	1728
Lightford, James G., Indianapolis, Ind. Motor for street-cars	481,715	Aug. 30	3187	778	60	1248
Lillard, William B. (See Hall, Charles K., assignor.)						
Lillard, Zachary T., and U. Erhard, Kansas City, Mo. Printing or recording telegraph	482,015	Sept. 6	152	37, 38	60	1365
Lilley, Hugh H. V., assignor of one-half to T. Lilley, Milford, Mass. Lasting	482,016	Sept. 6	157	38	60	1366
Lilley, Thomas. (See Lilley, Hugh H. V., assignor.)						
Liming, John, Mount Alverno, Pa. Eyeglasses	478,616	July 12	849	209	60	184
Lincoln, Frederick H. (See Bodette, George H., assignor.)						
Lincoln, Levi C. (See Bailey and Lincoln.)						
Lincoln, Theodore M., Hartford, Conn. Stove for heating ovens for japanning, enameling, and glazing	482,485	Sept. 13	944	230	60	1532
Lindahl, Frank E., Chicago, Ill. Watchmaker's tool	478,615	July 12	848	208	60	184
Lindner, Adolph, Berlin, Germany. Magazine-gun	483,229	Sept. 27	2125	538	60	1791
Lindner, Robert, Chemnitz, Germany. Starting-gear for compound locomotives	481,181	Aug. 23	2306	568, 569	60	1065
Lindsay, James G. (See Bonnaffon, Albert L., assignor.)						
Lindsay, John, Millbury, Mass. Toothed wheel	480,930	Aug. 16	1877	468	60	971
Lindsay, Thomas, Brookville, Ind. Drier for paper-machines	480,407	Aug. 9	1058	265	60	794
Lindsay, William G., Antigo, Wis. Ironing-table	483,460	Sept. 27	2481	625	60	1858
Lindsey, Andrew E. S., Imperial, Pa. End-gate tightener for cars and wagons	480,664	Aug. 9	1471	366	60	875
Lindström, Charles, Altoona, Pa. Center-plate fastening	480,408	Aug. 9	1059	265	60	794
Lindström, Charles, Altoona, Pa. Indicator-lock	481,960	Sept. 6	58	14	60	1346
Lineff, Alexander L., London, England. Closed conduit for electric railways	480,409	Aug. 9	1060	265, 266	60	794
Lines, Thomas D., assignor to C. A. Denison, Syracuse, N. Y. Spring-vehicle	478,937	July 12	1330	330	60	278
Link Belt Engineering Company. (See Cavanagh, Joseph, assignor.)						
Link-Belt Engineering Company. (See Ewart and Dodge, assignors.)						
Linthicum, John F., Sacramento, Cal. Machine for wrapping papers	478,345	July 5	442	109, 110	60	88
Linville, Samuel R., Philadelphia, Pa. Time cut-out for electric-service systems	480,369	Aug. 9	999	251, 252	60	784
Lipman, Hymen L., Philadelphia, Pa. Tank	479,602	July 26	2412	601	60	510
Lipman, John, and C. J. Rinderknecht, assignors of one-fourth to F. X. Beaupere, Indianapolis, Ind. Automatic railway-switch	479,373	July 19	2028	506	60	423
Liquid Carbonic Acid Manufacturing Company. (See Convert, Charles F. A., assignor.)						
Lisk, George W., Clifton Springs, N. Y. Anti-rust vessel	479,517	July 26	2295	573	60	488
List, William A., Wheeling, W. Va. Machine for joining and rolling sheets for roofing	480,665	Aug. 9	1472	367	60	875
Lister, Oliver B. (See Robinson, Joe and R., assignors.)						
Litch, Lemuel W., Swampscott, Mass. Heel-stiffener machine	480,023	Aug. 2	427	107, 108	60	662
Litel, John A., Ham's Prairie, Mo. Wrench	483,461	Sept. 27	2483	625	60	1859
Littell Indicator Lock and Car Seal Company. (See Young and Littell, assignors.)						
Littell, William F. (See Young and Littell.)						
Little, Charles H. (See Knapp and Little.)						
Little Gem Manufacturing Company. (See Mathewson, Nathan F., assignor.)						
Little, John R., assignor of one-half to H. E. Bellerose, West Stewartstown, N. H. Saw-tooth-setting machine	483,497	Sept. 27	2529	636	60	1868
Little, Orton C., assignor of one-half to D. T. H. MacKinnon, Menasha, Wis. Pulley	483,227	Sept. 27	2122	537	60	1790
Little, Orton C., assignor of one-half to D. T. H. MacKinnon, Menasha, Wis. Collar	483,228	Sept. 27	2123	537	60	1791
Little, Robert H., Chicago, Ill., assignor of two-thirds to H. H. Heimerdinger and I. Meyer. Apparatus for delivering cards and other articles for advertising purposes	479,820	Aug. 2	67	16	60	595
Little, Robert H., Chicago, Ill., assignor of two-thirds to H. H. Heimerdinger and I. Meyer. Liquid-dispensing apparatus	481,698	Aug. 30	3156	770, 771	60	1243
Little, Robert H., assignor to J. G. Saxe, Chicago, Ill. Apparatus for dispensing articles of merchandise	481,908	Aug. 30	3515	860, 861	60	1312
Little, Robert H., assignor to E. D. Stiles, Chicago, Ill. Coin-operated vending-machine	483,255	Sept. 27	2194	551, 552	60	1803
Little, Thomas A., Wheeling, W. Va. Natural-gas burner	478,117	July 5	61	16	60	14
Livengood, Winfield S., assignor to E. C. Sooy, Kansas City, Mo. Baling-press	479,287	July 19	1879	470, 471	60	394
Livermore, Charles W., deceased; M. A. B. Livermore, Providence, R. I., executrix, and assignor to Kenney Electrical Cash Carrier Company, Portland, Me. Cash-carrier apparatus	479,762	July 26	2084	666, 667, 668	60	561
Livermore, James H., Port Townsend, Wash. Extension shoe-last	480,596	Aug. 9	1356	337	60	852
Livermore, Mary A. B., executrix. (See Livermore, Charles W.)						
Livingston, David, Thornville, Ohio. Potato-digger	478,442	July 5	586	143	60	115
Lloyd, John, Jr., Red Bank, N. J. Key-coupler for organs	479,434	July 26	2141	535	60	459
Lloyd & Lloyd. (See Unwin and Howard, assignors.)						
Lloyd, Seth and W. R., West New Brighton, N. Y. Steam-actuated rock-drill	481,632	Aug. 30	3054	746	60	1223
Lloyd, William R. (See Lloyd, Seth and W. R.)						
Lobaugh, John, Crenshaw, Pa. Combined fuse and file holder	482,642	Sept. 13	1191	238	60	1581
Loch, Joseph, Brooklyn, N. Y. Slot-protector for money-safes	480,108	Aug. 2	552	139	60	688
Loch, Joseph, Brooklyn, N. Y. Lock	481,235	Aug. 23	2398	592	60	1084
Lochmann, Emil R., St. Louis, Mo. Flying toy	481,182	Aug. 23	2308	569	60	1066
Lockstaedt, Charles C., and J. F. Gubbins, Chicago, Ill. Filter	483,230	Sept. 27	2127	538	60	1791
Lockwood, Charles H., assignor of one-half to J. A. Begy, Rochester, N. Y. Leveling-instrument	479,518	July 26	2296	573	60	489
Lockwood, Rhodes, Boston, Mass. Atomizer	478,118	July 5	62	16	60	14
Lockwood, Samuel T., and S. K. White, Chicago, Ill. Cloth-folding machine	482,373	Sept. 13	761	184, 185	60	1499
Lodge, Addison D., Vandalia, Ohio. Door-closer	481,798	Aug. 30	3337	815	60	1278
Lodwick, William H., Cincinnati, Ohio. Index and mail-assorter	478,617	July 12	850	209	60	184
Loewe, Oscar, Berlin, Germany. Device for opening and closing cocks, &c	478,444	July 5	589	143	60	116
Loewenberg, Joseph. (See Young, Moskowitz, Adler, and Loewenberg.)						
Loewenberg, Joseph, *et al.* (See Young and Moskowitz, assignors.)						
Loftis, Henry, Syracuse, N. Y. Trolling-spoon	481,652	Aug. 30	3085	752	60	1229

Minneapolis Plow Works. (See Johnson, Nils J., assignor.)						
Minor, Alfred A., Egg Harbor, Wis. Vehicle-hub	478,287	July 5	359	87	60	72
Minor, Alfred A., Egg Harbor, Wis. Furniture-caster	481,963	Sept. 6	61	15	60	1346
Minor, Danial B. (See Russell and Minor.)						
Minto, James H., Liverpool, England. Method of and apparatus for aerating liquids	483,259	Sept. 27	2204	553	60	1805
Minton, Nathan W., Lebanon, Ky. Picket fence	480,270	Aug. 9	842	214	60	756
Minton, William D., and A. S. Douglas, Marshall, Tex. Carrier-iron for draw-bars	483,465	Sept. 27	2487	626	60	1859
Miranda, Abraham R., Boston, Mass. Soap-holder attachment for water-faucets	479,330	July 19	1937	484	60	405
Mischler, Gottlieb, Rock Island, Ill. Harvester cutting apparatus	479,568	July 26	2365	590	60	502
Mitchell, Charlie I., Chicago, Ill., assignor to Adams & Westlake Company, of Illinois. Lantern	480,734	Aug. 16	1582	396	60	911
Mitchell, Daniel W. and E. L., Southborough, Mass. Railway time-signal	481,581	Aug. 30	2977	730	60	1209
Mitchell, Elmer L. (See Mitchell, Daniel W. and E. L.)						
Mitchell, Isaac. (See Mitchell, John H. and I.)						
Mitchell, John F., *et al.* (See Walton, James, assignor.)						
Mitchell, John H. and I., Brockholes, near Huddersfield, England. Fulling-stock	479,605	July 26	2414	602	60	511
Mitchell, Joseph, assignor of one-fourth to M. James, Cayuga, Ind. Memorial monument	481,367	Aug. 23	2620	644	60	1123
Mitchell, Thomas, Wimbledon, England. Device for manufacturing linoleum floor-cloth	482,948	Sept. 20	1683	423	60	1690
Mitchell, Willis, Malden, assignor to Butterfield-Mitchell Electric Heating Company, Boston, Mass. Electrical brazing device	478,201	July 5	207	52	60	43
Mix & Genest. (See Oesterreich, Wilhelm, assignor.)						
Moe, Hiram G. (See Trumble, Chauncey B., assignor.)						
Moebius, Bernard, New York, N. Y. Treating base-bullion amalgam	480,956	Aug. 16	1922	481	60	979
Moffitt, John W., Philadelphia, Pa., assignor to P. McGill, Lambertville, N. J. Artificial tooth	482,377	Sept. 13	779	187	60	1501
Möhle, Aloys, Saarbrücken, Germany. Well-curbing	479,010	July 19	1455	361	60	313
Mohr, Benjamin F., Mifflinburg, Pa. Dust collector and conveyer	481,185	Aug. 23	2313	570	60	1067
Mollerup, Carl C. (See Adler, Hattie, assignor.)						
Monjeau, Cleophas, Middletown, Ohio. Sand-screen	482,020	Sept. 6	163	39	60	1367
Monday, Robert, assignor to W. C. Price, Lampasas, and L. J. Wertheimer, Dallas, Tex. Separable button	480,336	Aug. 9	945	239	60	774
Monday, Robert, Lampasas, assignor of one-half to L. J. Samuels and E. Domnau, Dallas, Tex. Sash-holder	480,337	Aug. 9	946	240	60	774
Monfort, D. G. (See Potter, Samuel A., assignor.)						
Monitor Packer Company. (See Hoadley, Isaac N., assignor.)						
Monk, Henry, Elsdon, Ill. Compound locomotive steam-engine	480,068	Aug. 9	1476	368	60	876
Monroe, Charles W., Cleveland, Ohio. Latch	481,910	Aug. 30	3524	862	60	1314
Monroe, Daniel L., Bloomfield, Iowa. Well-boring apparatus	481,636	Aug. 30	3060	747	60	1224
Monroe, David M., assignor to R. T. Smith, Baltimore, Md. Can-soldering machine	483,234	Sept. 27	2133	540 / 541	60	1792
Monroe Manufacturing and Lumber Company. (See Dodge, Henry B., assignor.)						
Montague, John R., and J. A. Pross, Syracuse, N. Y. Journal-bearing	480,025	Aug. 2	430	109	60	663
Montgomery, Thomas J., *et al.* (See Woolf, Albert E., assignor.)						
Moodey, Nathan W., Fresno, Cal. Miner's tool	479,444	July 26	2161	539	60	464
Moon, Edward W., St. Louis, Mo. Elevator	480,202	Aug. 2	708	181	60	716
Moon, Hiram, Red Creek, N. Y. Transplanter	482,314	Sept. 6	655	156	60	1463
Mooney, Herman O., assignor to United States Down Extractor Company, Farmington, N. H. Pneumatic grading and sorting machine	478,516	July 5	697	169 / 170	60	139
Mooney, Nicholas G., New York, N. Y. Horseshoe-pad	479,912	Aug. 2	202	50	60	622
Moore, David A., Guthrieville, and H. C. Moore, Berwyn, Pa. Handle	483,466	Sept. 27	2487	626	60	1860
Moore, Edward C., Detroit, Mich. Dental tool	478,881	July 12	1241	307	60	261
Moore, Edwin, Brooklyn, N. Y. Window-sash	480,203	Aug. 2	709	181	60	716
Moore, Erastus D., New York, N. Y. Electric annunciator	482,263	Sept. 6	550	133	60	1444
Moore, Everett D., assignor to American Oil Projectile Company, Baltimore, Md. Oil-projectile	478,705	July 12	967	240	60	208
Moore, Frank M., Spreckelsville, Hawaii. Globe-valve	481,803	Aug. 30	3346	819	60	1280
Moore, George B., Springfield, Mass. Valve	482,187	Sept. 6	439	105	60	1421
Moore, George M., and G. W. Steen, Commerce, Tex. Quilting-frame for sewing-machines	479,654	July 26	2492	621	60	525
Moore, George W., Jr., Lynchburg, Va. Mail-bag catcher	481,654	Aug. 30	3089	753	60	1230
Moore, Gilpin, assignor to Deere & Company, Moline, Ill. Cultivator	478,624	July 12	858	211	60	186
Moore, Gilpin, assignor to Deere & Company, Moline, Ill. Combined clevis and gage-wheel	481,186	Aug. 23	2316	570	60	1067
Moore, Harry C. (See Moore, David A. and H. C.)						
Moore, Hugh. Mauch Chunk, Pa. Car-coupling	479,717	July 26	2608	648	60	546
Moore, John F., Crowell, Nebr. Hay-rack	479,826	Aug. 2	83	21	60	598
Moore, John R., Louisville, Ky. Bedstead-exhibitor	479,894	Aug. 2	182	45	60	617
Moore, John V., Hiawatha, Kans. Tag for cloth-boards	478,938	July 12	1332	331	60	279
Moore, Thomas R., Walden, N. Y. Knife-blade machine	481,804	Aug. 30	3347	819	60	1280

Alphabetical list of patentees, July to September, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Moors, Newell J., *et al.* (See Abbott, Charles J., assignor.)						
Moran, Robert, Seattle, Wash. Hydraulic lifting-dock	481,411	Aug. 23	2098	663	60	1137
Morden, William J., Chicago, Ill. Railway construction	481,368	Aug. 23	2621	645	60	1123
Moreland, Lavoisier C., Ogilby, Cal. Amalgamator and ore-concentrator	479,140	July 19	1657	414	60	350
Moremen, Marcus S., Switzerland, Fla. Muzzle	478,882	July 12	1242	308	60	261
Morey, Albert E., assignor to Akron Tool Company, Akron, Ohio. Wheel-cultivator	479,913	Aug. 2	203	51	60	622
Morgan, Charles, Latah, Wash. Can-opener	479,011	July 19	1457	361	60	313
Morgan, Charles O., Morton, Minn. Perforating-machine	479,294	July 19	1880	473	60	395
Morgan, David S., Asheville, N. C. Roller-knife for trimming wall-paper	482,830	Sept. 20	1485	370	60	1652
Morgan, Francis H., Manchester, and G. H. Scott, assignors to Morgan Spring Company, Worcester, Mass. Spring-balance	479,718	July 26	2609	648	60	546
Morgan, John R. (See Morgan, Thomas R., Sr., J. R., T. R., Jr., and W. H.)						
Morgan, John R., *et al.* (See Morgan, William H., assignor.)						
Morgan, John R., assignor of three-fourths to T. R. Morgan, Sr. and Jr., and W. H. Morgan, Alliance, Ohio. Overhead traveling crane	478,803	July 12	1139	281 / 282	60	241
Morgan, John R., assignor of three-fourths to T. R. Morgan, Sr. and Jr., and W. H. Morgan, Alliance, Ohio. Overhead traveling crane	478,804	July 12	1141	282	60	242
Morgan, John R., assignor of three-fourths to T. R. Morgan, Sr., T. R. Morgan, Jr., and W. H. Morgan, Alliance, Ohio. Chain-block	483,161	Sept. 27	2018	510 / 511	60	1770
Morgan, John R., assignor of three-fourths to T. R. Morgan, Sr., T. R. Morgan, Jr., and W. H. Morgan, Alliance, Ohio. Brake for drums of overhead traveling cranes	483,467	Sept. 27	2488	626 / 627	60	1860
Morgan, Joseph N., Wallace, Ind. Gate	478,451	July 5	598	146	60	118
Morgan, S. W., *et al.* (See Vandament, George A., assignor.)						
Morgan, Silas J., La Grange, Ill. Milk-receiver	482,264	Sept. 6	560	133	60	1444
Morgan, Simon, Paterson, N. J. Card and Jacquard machine protector	479,895	Aug. 2	183	45	60	618
Morgan Spring Company. (See Morgan and Scott, assignors.)						
Morgan, Thomas R., Sr., *et al.* (See Morgan, John R., assignor.)						
Morgan, Thomas R., Sr., *et al.* (See Morgan, William H., assignor.)						
Morgan, Thomas R., Sr., J. R., T. R., Jr., and W. H., Alliance, Ohio. Mortar-mounting	479,764	July 26	2092	669 / 670	60	562
Morgan, William H. (See Morgan, Thomas R., Sr., J. R., T. R., Jr., and W. H.)						
Morgan, William H., *et al.* (See Morgan, John R., assignor.)						
Morgan, William H., assignor of three-fourths to T. R. Morgan, Sr. and Jr., and J. R. Morgan, Alliance, Ohio. Mortar-mounting	479,445	July 26	2162	539 / 540	60	464
Morgan, William H., assignor of three-fourths to T. R. Morgan, Sr. and Jr., and J. R. Morgan, Alliance, Ohio. Mortar-mounting	479,446	July 26	2164	540 / 541	60	464
Mori, Fredrick. (See Atkinson, Ravenshaw, and Mori.)						
Morley, John. (See Jennings and Morley.)						
Morrell, Lewis E., *et al.* (See Marty, Frank, assignor.)						
Morrill, George W., assignor of one-half to E. H. Rollins, Alton, S. A. Edgerly and C. F. Piper, Wolfborough, N. H. Lasting-pinchers	480,433	Aug. 9	1104	276	60	802
Morrill, Osgood. (See Wells, Harlan P., assignor.)						
Morris, Arthur, Rockefeller, Ill. Hand-binder	483,468	Sept. 27	2491	627	60	1860
Morris, Charles W., *et al.* (See Smith, Wesley, assignor.)						
Morris, Charles W., Jr., trustee, *et al.* (See Smith, Wesley, assignor.)						
Morris, George M., Cincinnati, Ohio. Cloth-holder	479,914	Aug. 2	205	51	60	622
Morrison, George E., and W. A. Dye, Jr., Edgerton, Kans. Device for converting motion	482,584	Sept. 13	1199	268	60	1566
Morrison, Hamon, assignor of one-half to G. W. Campbell and J. H. Vaughn, Morantown, Kans. Corn-harvester	482,186	Sept. 6	438	105	60	1421
Morrison, James. (See Shipe, Walter S., assignor.)						
Morrison, John H., Salida, Colo. Vaginal syringe	478,202	July 5	209	52	60	43
Morrison, Walter G., Willimantic, Conn. Device for driving spindles	479,896	Aug. 2	184	45	60	618
Morrow, Edward A., and J. Wilson, Chester, Ark. Automatic railway-gate	479,295	July 19	1890	473 / 474	60	306
Morrow, Wesley, Millbrook, Canada. Flax-harvester	480,434	Aug. 9	1105	276	60	802
Morse, Cyrus B. (See Bowman, Rose, and Morse.)						
Morse, George D., and M. Chase, Haverhill, Mass. Type-plate and blank for the same	480,933	Aug. 16	1880	469	60	972
Morss, Charles A. (See Vogler, William, assignor.)						
Morss, Stephen B., Rahway, N. J. Sash-holder	481,622	Aug. 30	3040	742	60	1220
Mortimer, John D. D., Stockton, Cal. Shipping receipt-book	482,047	Sept. 6	206	49	60	1375
Morton, Alexander and J., Darvel, Scotland. Figured woven fabric	483,078	Sept. 20	1878	476	60	1731
Morton, Augustus, assignor to Bridgeport Brass Company, Bridgeport, Conn. Bicycle-bell	480,026	Aug. 2	432	109	60	664
Morton, George K., St. Thomas, Canada. Wallet	479,655	July 26	2493	621	60	525
Morton, James. (See Morton, Alexander and J.)						
Morton, Samuel S. (See Farquhar, Eisenhart, and Morton.)						
Moschek, Anton, *et al.* (See Auchman, Ferdinand, assignor.)						
Moses, Frank D., assignor to Universal Gas Construction Company, Chicago, Ill. Manufacturing gas	479,293	July 19	1887	473	60	395
Moskovits, Maximilian H. (See Mason and Moskovits.)						
Moskowitz, Morris. (See Young and Moskowitz.)						
Moskowitz, Morris. (See Young, Moskowitz, Adler, and Loewenberg.)						
Mosler Safe and Lock Company. (See Kaiser, John X., assignor.)						
Moss, John R., Webster, Pa. Elevator	478,263	July 5	325	78, 79	60	65
Moss, Julian, assignor of two-thirds to E. R. Blanchard and H. B. White, Detroit, Mich. Oscillating engine	479,012	July 19	1458	362 / 363	60	313
Mossberg, Frank, assignor to Mossberg Manufacturing Company, Attleborough, Mass. Machine for closing the edges of studs, &c	478,517	July 5	700	170	60	139
Mossberg, Frank, assignor to Mossberg Manufacturing Company, Attleborough, Mass. Wrench	482,021	Sept. 6	164	39	60	1367
Mossberg, Frank, assignor to Mossberg Manufacturing Company, Attleborough, Mass. Wrench	482,749	Sept. 20	1370	339	60	1628
Mossberg Manufacturing Company. (See Mossberg, Frank, assignor.)						
Mosser, Samuel T., Abingdon, Ill. Button-exhibitor	483,469	Sept. 27	2493	628	60	1860
Mothershed, Thomas B., Corsicana, Tex. Stove-flue cleaner	479,447	July 26	2165	541	60	465
Motter, Jacob V., Brooklyn, N. Y. Driving mechanism for cars	479,915	Aug. 2	206	52	60	622
Mottinger, Noah W., Akron, Ohio, assignor of one-half to S. Mottinger, Suffolk, Va. Hinge	481,044	Aug. 16	2050	514	60	1006
Moulton, Alvin D. (See Beardsley, Moulton, and Wurth.)						
Moxham, Arthur J., Johnstown, Pa. Chair for railway-rails	482,801	Sept. 20	1447	359	60	1644
Moxham, Arthur J., Johnstown, Pa. Railway-rail chair	482,802	Sept. 20	1448	359	60	1644

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Moxham, Arthur J., Johnstown, Pa. Channel-rail and chair	482,803	Sept. 20	1449	359	60	1644
Moxham, Arthur J., Johnstown, Pa. Railway-rail chair and making the same	482,804	Sept. 20	1450	360	60	1644
Moxham, Arthur J., Johnstown, Pa. Combined railway-rail and chair and making the same	482,805	Sept. 20	1451	360	60	1645
Muehlmatt, Adolph, Newport, Ky. Engraver's block	481,238	Aug. 23	2402	593	60	1084
Mueller, David, New York, N. Y., assignor to Bottlers' and Brewers' Machine Manufacturing Company. Power bottle-corking machine	482,454	Sept. 13	898	217, 218	60	1523
Mueller, John B., Streator, Ill. Horse-collar	478,452	July 5	599	146	60	118
Muhlfeld, Henry J., and F. J. Spillane, New York, N. Y. Easel attachment for chairs and other supports	481,045	Aug. 16	2060	514	60	1007
Muhlfelder, David, administrator. (See Mayes, Thomas.)						
Muir, James A. (See Blalock and Muir.)						
Muir, James A., Huntsville, Tex. Book-support	481,505	Aug. 23	2847	700	60	1168
Mullaly, John, and L. L. Bullock, New York, N. Y. Surface-printing plate	483,498	Sept. 27	2532	637	60	1869
Mullen, Charles H. (See Derbyshire and Mullen.)						
Mullen, William J., New York, N. Y. Gas-radiator	480,117	Aug. 2	569	144	60	691
Muller, Bernhard, assignor of one-half to B. Strauss, New York, N. Y. Box-nailing machine	480,735	Aug. 16	1582	396, 397	60	912
Müller, Frank X. (See Boehringer and Müller.)						
Müller, Franz, Berlin, Germany. Automatic coin-actuated telephone	483,162	Sept. 27	2019	511	60	1770
Muller, George, Hoboken, N. J. Cable-railway curve	481,412	Aug. 23	2699	663, 664	60	1138
Muller, George, Hoboken, N. J. Cable-traction system	481,413	Aug. 23	2703	664, 665	60	1139
Müller, Johann L., Leipsic, Germany. Action for mechanical musical instruments	480,854	Aug. 16	1763	441	60	949
Müller, Rudolf, Reiherstieg, Hamburg, Germany. Steam-boiler and furnace	483,260	Sept. 27	2206	554	60	1805
Müller, Wilhelm J., Ehrenberg, Germany. Apparatus for kneading dough and shaping it into loaves	479,827	Aug. 2	84	21	60	598
Mumford, Edgar H., Detroit, Mich. Electric steering-gear	479,828	Aug. 2	85	21, 22	60	598
Mundry, Peter. (See Gallant, John W., assignor.)						
Munger, Robert S., Birmingham, Ala. Machine for handling, cleaning, and distributing seed-cotton	478,883	July 12	1244	308, 309	60	261
Munger, Royal L., and T. R. Capwell, assignors to Dunkirk Wagon Company, Dunkirk, N. Y. Vehicle-brake mechanism	478,966	July 12	1379	330	60	287
Munn, H. L., *et al.* (See Brown, Charles D., assignor.)						
Munroe, Paul H., Plainfield, Ill. Potato-harvester	480,776	Aug. 16	1643	411	60	924
Munroe, Robert and Robert, Jr., Allegheny, Pa. Water-tube boiler	478,756	July 12	1053	259	60	225
Munsch, Bernhard H., Hastedt, near Bremen, assignor to W. and A. Osenbrück, Hemelingen, Germany. Gas-compressor for refrigerating-machines	482,876	Sept. 20	1560	389	60	1667
Munson, Corydon W., Toledo, Ohio. Bicycle-exhibiting device	478,805	July 12	1144	283	60	242
Munson, Robert L., Silver City, N. Mex. Ter. Car-coupling	480,118	Aug. 2	570	145	60	691
Munton, James, Maywood, Ill. Mold for casting steel car-couplings	482,687	Sept. 13	1260	307, 308	60	1594
Munton, James, Maywood, Ill. Metallic mold for casting draw-bars	482,688	Sept. 13	1262	308, 309	60	1595
Munz, Charles W., assignor of one-half to W. Williams, Detroit, Mich. Extension-table	483,361	Sept. 27	2314	589	60	1831
Munz, Theodore C., Toledo, Ohio. Wheel	482,806	Sept. 20	1452	360	60	1645
Murch, Alfred, West Fitchburg, Mass. Means for operating the picker-staffs of looms	478,453	July 5	600	146	60	118
Murdock, Edwin H., Cincinnati, Ohio. Cash register and indicator	480,957	Aug. 16	1924	481, 482	60	979
Murdock, Edwin H., Cincinnati, Ohio. Conductor's trip-slip	481,369	Aug. 23	2622	645	60	1123
Murphey, John S., Greensburg, assignor of one-half to W. J. Johnston, Pittsburg, Pa. Shoe-lace fastener	478,122	July 5	66	17	60	15
Murphey, William R. (See Wendell, Isaac P. and H. A., assignors.)						
Murphy, Daniel H., Hartford, Conn. Commode	479,897	Aug. 2	185	45, 46	60	618
Murphy, Daniel W., Marion, Ohio. Annealing-oven	482,048	Sept. 6	207	49	60	1376
Murphy, Junius A., New Orleans, La. Hair-curling machine	480,605	Aug. 9	1369	340	60	855
Murphy, Thomas, Sewickley, Pa. Method of and apparatus for equalizing links	478,454	July 5	601	146	60	119
Murray, George, assignor to Johnson Company, Johnstown, Pa. Brace-chair for railway-rails	478,806	July 12	1145	283	60	242
Murray, George, assignor to Johnson Company, Johnstown, Pa. Brace-chair for railways	482,807	Sept. 20	1452	360, 361	60	1645
Murray, John J. (See Hays, James C., assignor.)						
Murray, Samuel, assignor of one-half to W. F. Murray, San Francisco, Cal. Rope-guiding sheave	479,296	July 19	1893	474	60	396
Murray, William F. (See Murray, Samuel, assignor.)						
Musgrove, Joseph, assignor to Gender & Paeschke Manufacturing Company, Milwaukee, Wis. Cover-holder for tea-kettles, &c.	478,967	July 12	1379	339	60	287
Mussey, Eugene K., *et al.* (See Weller, George L., assignor.)						
Musso, Emma, Vineland, N. J. Skewer or needle for closing fowls, &c	482,969	Sept. 20	1713	432	60	1696
Mutimer, Frederick, assignor of one-half to Rockford Bolt Works, Rockford, Ill. Bolt-threading machine	480,204	Aug. 2	709	181	60	716
Myers, Alvie, Melmore, Ohio. Clutch	481,046	Aug. 16	2062	514	60	1007
Myers, Charles E. (See Jones and Myers.)						
Myers, George F., Pittsburg, Pa. System of electric lighting	480,372	Aug. 9	1004	252, 253	60	785
Myers, George F., Pittsburg, Pa. Mining-machine	481,187	Aug. 23	2317	570	60	1068
Myers, Harry E. (See Krouse, Myers, and Girard.)						
Myers, John A., Louisville, Ky. Piston meter	480,606	Aug. 9	1370	340, 341	60	855

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Niles & Scott Company. (See Scott, Emmet H., assignor.)						
Nilson, Nils, Minneapolis, assignor of one-half to E. F. Quackenbush, Le Sueur, Minn. Steam-trap	483,110	Sept. 20	1942	491	60	1744
Nithack, Gustav, Obernigk, near Breslau, Germany. Label-holder	480,857	Aug. 16	1766	449	60	949
Nittinger, August, Sr., Philadelphia, Pa. Hog-scraper and claw-hook	478,810	July 12	1150	284	60	243
Nivois, Victor, Brooklyn, N. Y. Watch-case	481,809	Aug. 30	3355	891	60	1281
Nixon, William H., Plymouth, Ind. Weather-strip	482,022	Sept. 6	165	40	60	1308
Noblet, Charles H., assignor of one-half to H. Albright, Bucyrus, Ohio. Roller for clod crushers or pulverizers	483,007	Sept. 20	1772	448	60	1709
Nolen, James G. (See Richter and Nolen.)						
Nolen, Stephen A., McCrory, Ark. Harness-saddle	478,205	July 5	213	53	60	44
Noll, Augustus, Mount Vernon, N. Y., assignor to A. J. Tower, trustee, Boston, Mass. Conduit for electric conductors	481,912	Aug. 30	3526	863	60	1314
Noll, Augustus, Mount Vernon, N. Y., assignor to A. J. Tower, trustee, Boston, Mass. Conduit for electric conductors	481,913	Aug. 30	3527	863	60	1315
Noll, Augustus, Mount Vernon, N. Y., assignor to A. J. Tower, trustee, Boston, Mass. Electric-circuit connection	481,914	Aug. 30	3528	863	60	1315
Nonantum Worsted Company. (See Ballantyne, James L., assignor.)						
Norcross, David P., Wilton, N. J. Alarm	480,273	Aug. 9	846	215	60	756
Nordberg, Bruno V., assignor to Bruno Nordberg Company, Milwaukee, Wis. Air-pump for condensers	182 315	Sept. 6	656	157	60	1464
Norfolk, Frederick C., Des Moines, assignor to Norfolk Manufacturing Company, Ottumwa, Iowa. Perfumed starch and making the same	480,669	Aug. 9	1479	.....	60	876
Norfolk Manufacturing Company. (See Norfolk, Frederick C., assignor.)						
Noriega, Eloy, Mexico, Mexico. Microphone	481,048	Aug. 16	2064	515	60	1007
Noriega, Eloy, Mexico, Mexico. Telephone	481,049	Aug. 16	2065	515	60	1007
Noriega, Eloy, Mexico, Mexico. Microphone	481,050	Aug. 16	2066	516	60	1008
Noriega, Eloy, Mexico, Mexico. Telephone	481,051	Aug. 16	2066	516	60	1008
Norman, William W. (See Horn, George W. and J. L., assignors.)						
Norrington, Henry H., West Bay City, Mich. Perforating-punch	481,583	Aug. 30	2979	731	60	1209
Norris, Henry D., *et al.* (See Shaw, Charles H., assignor.)						
Norrman, Godfrey L., Atlanta, Ga. Jail-grating	481,915	Aug. 30	3530	864	60	1315
North, Charles M., Montclair, N. J., assignor to Lidgerwood Manufacturing Company, New York, N. Y. Conveying apparatus	480,029	Aug. 2	436	110	60	664
North, George W., Clarkes, Oreg. Clothes-drier	482,269	Sept. 6	570	135	60	1446
Northam, Edgar R., Raleigh, N. C. Yard-stick holder	481,188	Aug. 23	2318	571	60	1068
Northampton Cutlery Company. (See Feicker, Fredrick C., assignor.)						
Northcott, T. C. (See Lake, Judson N., assignor.)						
Northcott, T. C., *et al.* (See Clark, Jasper, assignor.)						
Northrop, Blancher D., *et al.* (See Huggins, Ulysses S., assignor.)						
Northrup, Blancher D., Washington, Pa. Valve	479,450	July 26	2168	542	60	465
Norton, Arthur O. (See Sleeper, Francis H., assignor.)						
Norton, Edwin, *et al.* (See Curtis, Lewis E., assignor.)						
Norton, Edwin, *et al.* (See Foote, John B., assignor.)						
Norton, Edwin, Maywood, assignor to himself, and O. W. Norton, Chicago, Ill. Die for drawing sheet metal	483,008	Sept. 20	1773	449	60	1709
Norton, Elphalet C., Belvidere, Ill. Windmill-regulator	483,080	Sept. 20	1881	476	60	1731
Norton, Joshua, Jr., Chatham, Canada. Acid-resisting composition for lining tanks	480,934	Aug. 16	1881	.....	60	972
Norton, Oliver W. (See Norton, Edwin, assignor.)						
Norton, Oliver W., *et al.* (See Curtis, Lewis E., assignor.)						
Norton, Oliver W., *et al.* (See Foote, John B., assignor.)						
Norton, Sheldon. (See Ball and Norton.)						
Norwegian Siphon Company. (See Hilditch, Jacob, assignor.)						
Norwood, John E., Sykesville, Md. Ball-bearing for railway-cars	478,351	July 5	457	112	60	92
Noxon, Thomas H., Ingersoll, Canada. Driving-gear for seeding-machines	481,539	Aug. 23	2909	714	60	1180
Noyes, Edward P., Boston, Mass. Plug-calk for horseshoes	480,611	Aug. 9	1377	342	60	857
Nudd, Thomas E., *et al.* (See Lee, George B., assignor.)						
Nugent, John P., Dubuque, Iowa. Planter attachment for plows	481,242	Aug. 23	2408	594, 595	60	1086
Nye, Freeman M., Bellevue, Ohio. Railway-switch signal	480,825	Aug. 16	1723	430, 431	60	940
Nye, Henry C. (See Larsen, August, assignor.)						
O'Brien, Stephen, New York, N. Y. Forming-machine for sheet-metal articles	481,362	Sept. 27	2345	590	60	1831
O'Connor, Daniel J., Columbus, Ga. Automatic grain-weigher	481,810	Aug. 30	3356	821	60	1261
O'Connor, Edmund, *et al.* (See Leahy, Matthew, assignor.)						
O'Connor, James J., assignor of one-half to J. J. McDermott, Oakville, Canada. Sash-balance	478,352	July 5	459	112	60	92
O'Connor, Thomas F., New York, N. Y., and J. W. Marsh, assignors to Standard Underground Cable Company, Pittsburg, Pa. Means for drawing cables into conduits	482,270	Sept. 6	571	135	60	1446
O'Connor, William P., Milwaukee, Wis. Hat-ventilator	482,429	Sept. 13	858	206	60	1516
O'Dell, Stephen E., and C. Van Liew, Cedar Springs, Mich. Buggy spring-gearing	480,274	Aug. 9	847	215	60	757
O'Donnell, David J., Grafton, Nebr. Cab	479,300	July 19	1898	475	60	397
O'Donnell, Martin J., W. C. Smith, and H. Bound, Cleveland, Ohio. Safety attachment for elevators	478,169	July 5	157	40	60	33
O'Donnell, Michael J., assignor of three-fourths to G. G. Brandenburg and G. R. Walker, Chicago, Ill. Velocipede	481,118	Aug. 16	2138	542	60	1030
O'Grady, Gerald de C., and J. R. Collins, Toronto, Canada. Coin-holder	480,960	Aug. 16	1929	483	60	980
O'Hara, William, Middletown, Conn. Pocket-knife	478,812	July 12	1152	285	60	244
O'Malley, John P., Manistee, Mich. Addressing-machine	481,052	Aug. 16	2067	510	60	1008
O'Neill, Henry G., Louisville, Ky., assignor to Standard Register Company, Boston, Mass. Cash register and indicator	480,122	Aug. 2	374	146	60	692
O'Neill, Henry G., Louisville, Ky., assignor to Standard Register Company, Boston, Mass. Cash register and indicator	480,123	Aug. 2	376	146, 147	60	692
O'Neill, Henry G., Louisville, Ky., assignor to Standard Register Company, Boston, Mass. Cash register, indicator, and check-printer	480,124	Aug. 2	378	147, 148	60	692
O'Neill, Henry G., Louisville, Ky., assignor to Standard Register Company, Boston, Mass. Cash register and indicator	480,125	Aug. 2	783	148, 149	60	693
O'Neill, Henry G., Louisville, Ky., assignor to Standard Register Company, Boston, Mass. Cash register and indicator	480,126	Aug. 2	586	149	60	694
O'Neill, Henry G., Louisville, Ky., assignor to Standard Register Company, Boston, Mass. Cash register and indicator	480,612	Aug. 9	1378	342, 343	60	857
O'Neill, Henry G., Louisville, Ky., assignor to Standard Register Company, Boston, Mass. Cash register and indicator	480,613	Aug. 9	1383	343, 344	60	858
O'Neill, Henry G., Louisville, Ky., assignor to Standard Register Company, Boston, Mass. Cash-register	480,614	Aug. 9	1387	344, 345	60	859

O'Neill, Henry G., Louisville, Ky., assignor to Standard Register Company, Boston, Mass. Cash-register	480,616	Aug. 9	1390	346	60	859
O'Neill, Henry G., Louisville, Ky., assignor to Standard Register Company, Boston, Mass. Cash register, indicator, and check-printer	480,617	Aug. 9	1392	347	60	860
O'Neil, William, *et al.* (See Soley and Perkins, assignors.)						
O'Rourke, John F., New York, N. Y. Caisson	480,127	Aug. 2	587	149, 150	60	694
O'Toole, Richard. (See Loy and O'Toole.)						
Oakey, John M., Salem, Va. Truss	481,584	Aug. 30	2981	731	60	1209
Obear, Clarence C., St. Louis, Mo. Tennis-glove	482,647	Sept. 13	1197	290	60	1582
Obetz, H. L. (See Hicks, Thomas H., assignor.)						
Odgers, John B., assignor to A. M. Collins Manufacturing Company, Philadelphia, Pa. Feeding device for card-punching presses	482,981	Sept. 20	1731	437, 438	60	1700
Odorizzi, Joseph, assignor to Forbes Mine Car Appliance Company, Trinidad, Colo. Dump-car	481,811	Aug. 30	3359	822	60	1282
Oehlstrom, William, Cleveland, Ohio. Smoke-consuming furnace	483,237	Sept. 27	2139	542	60	1793
Oehring, August J., Chicago, Ill. Universal joint	478,811	July 12	1151	285	60	244
Oehrle, Emanuel, assignor to J. W. Bedford, Omaha, Nebr. Machine for making cement pipes	479,451	July 26	2169	543, 544	60	466
Oerther, Charles, and J. W. Dillingham, Blue Springs, Mo. Mole-trap	481,585	Aug. 30	2982	732	60	1210
Oerzen, Eleanor E., New York, N. Y. Tin can	479,015	July 19	1461	364	60	314
Oesterreich, Wilhelm, assignor to Mix & Genest, Berlin, Germany. Telephone-switchboard	479,107	July 19	1601	400, 401	60	340
Offermann, Hubert L., Leipsic, and G. Ziegler, deceased, Mulhouse, Germany; Land Title and Trust Company, administrator. Combing-machine	481,812	Aug. 30	3359	822, 823, 824	60	1282
Officer, Alexander V. (See Russell and Minor, assignors.)						
Ogborn, Harrison, Richmond, assignor of one-half to W. J. Shinn, Indianapolis, Ind. Washing-machine	478,707	July 12	970	241	60	208
Ogden, Henry. (See Atkinson, Francis F., assignor.)						
Ogram, Thomas E., Washington, D. C. Atomizer	478,940	July 12	1333	331	60	279
Ohmer, Wilfred I., Dayton, Ohio. Cabinet	479,748	July 26	2664	661	60	556
Ohnstrand, Enoch, Jamestown, N. Y. Lamp-burner	480,826	Aug. 16	1725	431	60	941
Old, Robert H. (See Old, William W. and R. H.)						
Old, William W. and R. H., Leadville, Colo. Metallic ceiling	481,813	Aug. 30	3364	824	60	1282
Oldfield, John, Medford, Mass. Woven fabric for machine-belting	478 941	July 12	1335	331	60	279
Olds, Henry G. (See Andersen, Peter, assignor.)						
Oliver Aluminum Company *et al.* (See Oliver, John S., assignor.)						
Oliver Ames & Sons Corporation. (See Johnson, William H., assignor.)						
Oliver, John S., Brooklyn, N. Y., assignor to J. Brooks, Boston, Mass., and Oliver Aluminum Company, of West Virginia. Smelting-furnace	480,699	Aug. 9	1528	379, 380	60	886
Oliver & Roberts Wire Company. (See Vermeulen, John, assignor.)						
Olivier, Julius von, Munich, Germany. Elastic wheel	480,738	Aug. 16	1589	398	60	913
Olmsted, David, Minneapolis, Minn. Pendulum-scale	482,831	Sept. 20	1485	370	60	1652
Olsen, Henry, Winona, Minn. Fifth-wheel	481,655	Aug. 30	3091	753	60	1230
Olsen, Neil, Portland, Oreg. Wagon-axle	479,918	Aug. 2	209	53	60	623
Olson, Andrew, Quincy, Mass. Hoisting device	482,618	Sept. 13	1197	291	60	1582
Olson, Andrew B., Kansas City, Mo. Portable corn-popper	478,353	July 5	460	112	60	92
Olson, Charles O. (See Olson, Nelson B., assignor.)						
Olson, Holcom, Henderson Grove, assignor of one-half to J. O. Lander, Knoxville, Ill. Horseshoe	481,716	Aug. 30	3189	779	60	1249
Olson, Nelson B., Kansas City, Mo., assignor to C. O. Olson, Savonburg, Kans. Corn-popping apparatus	480,779	Aug. 16	1648	413	60	926
Olson, Otto. (See Johnson and Olson)						
Oneida Community, Limited. (See Eldridge, Herbert M., assignor.)						
Ong, Harlon F., Newberg, Oreg. Electric motor	478,968	July 12	1380	339, 340	60	287
Openshaw, George, and C. A. Carr, Bury, England. Attachment for velocipedes	482,271	Sept. 6	573	136	60	1446
Opitz, Charles. (See Kramer, William, assignor.)						
Opsion, Ole C., and J. V. Hooper, Pittsburg, Pa. Reaming and drilling machine	481,418	Aug. 23	2710	657	60	1140
Ormsby, John W., Milwaukee, Wis. Lamp or lantern	483,386	Sept. 27	2391	600	60	1839
Orr, John E., assignor to R. P. Ernst, Covington, Ky. Bottle-stopper	479,833	Aug. 2	90	23	60	590
Orr, William, Trenton, N. J. Fireproof-floor construction	481,243	Aug. 23	2418	595, 596	60	1086
Orswell, Edmund W., *et al.* (See Keene, Samuel D., assignor.)						
Ortega y Espinosa, José, Mexico, Mexico. Device for indicating washouts in railway-beds	479,834	Aug. 2	91	23	60	600
Orvis, Orland D., Chicago, Ill. Coin-controlled spirometer	481,965	Sept. 6	63	16, 17	60	1347
Osborn, Frank. (See Belt, Perley P., assignor.)						
Osborn, Robert O., Paris, Mo. Hand-cultivator	482,693	Sept. 13	1272	312	60	1597
Osborne, Burns, *et al.* (See Willis, William H., assignor.)						
Osborne, Charles, assignor to Whiting Manufacturing Company, New York, N. Y. Hinge	481,732	Aug. 30	3223	786	60	1255
Osburn, Harry G., Chicago, Ill. Storage-battery plate	479,835	Aug. 2	92	24	60	600
Osenbrück, Adolf, *et al.* (See Munsch, Bernhard H., assignor.)						
Osenbrück, Wilhelm, *et al.* (See Munsch, Bernhard H., assignor.)						
Osmer, William H., St. Louis, Mo. Fly-net	478,708	July 12	971	241	60	209
Osorio, Justo, Brooklyn, N. Y. Appliance for teaching chemistry	480,275	Aug. 9	848	216	60	577
Osterloh, Adolph, Richmond, Va. Tobacco-pipe	480,900	Aug. 2	720	184	60	720
Ostrander, Edward W. (See Snedeker, Charles W., assignor.)						
Ostrander, Willis. (See Abell and Ostrander.)						
Oswalt, John H. (See Miller and Oswalt.)						
Otis Brothers & Company. (See Hall, Milan W., assignor.)						
Otis Brothers & Company. (See Kuechle, Eduard, assignor.)						
Ott, John F. (See Kennelly and Ott.)						
Ott, John F., Orange, assignor to T. A. Edison, Llewellyn Park, N. J. Coin-controlled device for phonographs	478,709	July 12	972	242	60	209
Ott, John F., and A. E. Kennelly, Orange, N. J., assignors to Edison General Electric Company, New York, N. Y. Electric meter	479,171	July 19	1700	426	60	359
Ott, John F. and A. E. Kennelly, Orange, N. J., assignors to Edison General Electric Company, New York, N. Y. Electric-current meter	479,172	July 19	1702	427	60	359
Overcash, Luther J. (See Rogers, Charles S., assignor.)						
Overholt, Frank, Harlan, Iowa. Extension-chandelier	481,814	Aug. 30	3365	825	60	1282

Palson, Magnus J., assignor of two-thirds to W. H. Perkins and L. B. Haskell, Gloucester, Mass. Ice-machine	482,694	Sept. 13	1273	312	60	1597
Pannell, Vincent J., Farmington, Mo. Furnace	482,458	Sept. 13	903	219	60	1524
Paoli, John, Hoboken, N. J. Tripod-head for engineers' transits and analogous instruments	479,196	July 19	1746	438	60	366
Pape, Charles. (See Schneider, Henry J., assignor.)						
Pardridge, William E. (See Underwood, William D., assignor.)						
Parham, Marshall E., Burr Oak, Mich. Barrel-truck	478,710	July 12	974	242	60	210
Park, Francis, Montague City, assignor of one-half to W. M. King, Orange, Mass. Harness-terret	478,632	July 12	871	214	60	188
Park, William R., Philadelphia, Pa. Toy	480,619	Aug. 9	1308	348	60	861
Parke, John H., assignor of one-half to O. D. McClellan, Philadelphia, Pa. Apparatus for drying or cremating garbage and fecal matter	481,147	Aug. 16	2249	554	60	1040
Parke, Robert A., New York, N. Y. Apparatus for heating compressed air	481,623	Aug. 30	3041	743	60	1220
Parke, Robert A., New York, N. Y., assignor of one-half to H. H. Westinghouse, Pittsburg, Pa. Slack-adjuster for car-brakes	480,341	Aug. 9	949	211	60	775
Parker, Edward M., New York, N. Y. Conveyer for grain-driers	481,672	Aug. 30	3115	760	60	1234
Parker, Frank P., Goshen, Ind., S. C. Jones, and N. F. Coffey, Carrollton, assignors to St. Joseph Folding Bed Company, St. Joseph, Mo. Wardrobe-bed	479,719	July 26	2610	648, 649	60	546
Parker, John M., Pawtucket, R. I. Spool-boring mechanism	479,173	July 19	1704	427, 428	60	360
Parker, Lewis C., Indianapolis, Ind. Apparatus for the manufacture of gas	480,211	Aug. 2	732	185	60	720
Parker, Richard. (See Johnston, Abner and W. A., assignors.)						
Parker, Robert, and S. W. Le Neve, Ludlow, Ill. School-desk	480,620	Aug. 9	1309	348	60	861
Parker, Thomas, assignor to Electric Construction Corporation, Limited, Newbridge, England. Electrical furnace	482,586	Sept. 13	1112	269	60	1566
Parkhurst, Edward B., Woburn, assignor to Complete Combustion Company, Boston, Mass. Furnace-boiler	482,188	Sept. 6	440	106	60	1421
Parkhurst, Edward B., and F. Ham, Woburn, Mass., assignors to National Cash Register Company, Dayton, Ohio. Cash indicator and register	483,010	Sept. 20	1781	450, 451	60	1710
Parkinson, John, Philadelphia, Pa. Hammer for forging car-wheels	478,631	July 12	869	214	60	188
Parkinson, Walter. (See Bardsley and Parkinson.)						
Parkison, Allen R., Monongahela City, Pa. Heel	482,561	Sept. 13	1080	262	60	1559
Parks, Charles E., Locke, N. Y. Double mold-board plow	482,380	Sept. 13	782	188	60	1502
Parks, Charles W., Troy, N. Y. Railway-track	479,836	Aug. 2	94	24	60	600
Parks, Dana, assignor of four-fifths to M. Stone, C. H. Schofield, H. Goldberg, and B. A. Andrews, Boston, Mass. Steamer, lawn, or invalid chair	481,119	Aug. 16	2191	542	60	1030
Parmele, Seth, Portland, Oreg. Oiler for hand-saws	480,621	Aug. 9	1401	348	60	862
Parmelee, Wilbur F., Middletown, Conn. Ironing-table	479,301	July 19	1899	475	60	397
Parry, Augustus N., Amesbury, Mass. Carriage	482,189	Sept. 6	442	106, 107	60	1422
Parshall, Horace F., Schenectady, assignor to Edison General Electric Company, New York, N. Y. Commutator for electro-magnetic machines	480,739	Aug. 16	1590	398	60	913
Parshall, Horace F., Schenectady, assignor to Edison General Electric Company, New York, N. Y. Armature for dynamo-electric machines	480,740	Aug. 16	1591	398	60	914
Parsley, Levi, Bengay, Ark. Detonating fire-alarm	479,837	Aug. 2	94	24	60	600

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Parsons, Fred. W. (See Bechtol, George T., assignor.)						
Parsons, Robert T., *et al.* (See Brown, William T., assignor.)						
Partridge, Benjamin S., Jacksonville, Fla. Water-motor	478,457	July 5	604	147	60	119
Partz, August F. W., Philadelphia, Pa. Process of and apparatus for manufacturing wire rope	482,190	Sept. 6	443	107	60	1422
Pass, James, and A. P. Seymour, Syracuse, N. Y. Ceiling-rosette cut-out	481,624	Aug. 30	3043	743	60	1220
Passano, Louis D., *et al.* (See Welch, Rosia W., assignor.)						
Passmore, Edwin, Somerville, Mass. Machine for cutting and polishing precious stones	479,452	July 26	2175	544	60	467
Passmore, Jason, *et al.* (See Shoemaker, Milton, assignor.)						
Patenall, Thomas H., Rahway, N. J. Block-signal apparatus	480,411	Aug. 9	1064	266, 267	60	795
Patenall, Thomas H., Rahway, N. J. Circuit closing and breaking device for railway-tracks	480,507	Aug. 9	1219	305	60	826
Patnoe, George W., assignor to himself, J. H. Shepard, and J. Dolese, Chicago, Ill. Portable derrick	482,528	Sept. 13	1026	248	60	1550
Patroll, Phillip, Dayton, Ohio. Colander for mashing vegetables	482,982	Sept. 20	1734	438	60	1700
Pattee, Henry H., Monmouth, Ill. Time-registering apparatus for electricity	478,237	July 5	277	68, 69	60	56
Patten, Edward K., Whitesborough, N. Y., assignor to Seaman Drawer Fitting Machine Company, Milwaukee, Wis. Combined cutting and scouring device	479,332	July 19	1939	485	60	405
Patten, Enos, assignor to Lynn Lasting Machine Company, Lynn, Mass. Sewing-machine	481,266	Aug. 23	2460	606	60	1095
Patten, Enos, assignor to Lynn Lasting Machine Company, Lynn, Mass. Mechanism	481,508	Aug. 23	2850	700	60	1168
Patten, James S., Baltimore, Md. Axle-lubricator	479,077	July 19	1553	388	60	331
Patten, James S., assignor of three-fourths to J. Holland, Baltimore, Md. Shutter-worker	482,562	Sept. 13	1081	262	60	1560
Patterson, George F., *et al.* (See Wharton, Richard, assignor.)						
Patterson, James B., *et al.* (See Wharton, Richard, assignor.)						
Patterson, John C., and J. Kirby, Jr., Dayton, Ohio, assignors, by mesne assignments, to O. Kinsey, trustee. Lamp	480,412	Aug. 9	1069	267	60	796
Patterson, Will. (See Swenson, Lorens, assignor.)						
Patterson, Will, and L. Swenson, Cresco, Iowa. Vehicle-thill	480,129	Aug. 2	590	150	60	695
Patton, Harry E. (See Fulbright, William D., assignor.)						
Patton, Rufus D., Kansas City, Mo. Thill-coupling	480,622	Aug. 9	1402	349	60	862
Paugh, Benjamin H., Philippi, W. Va. Car-coupling	482,926	Sept. 20	1641	413	60	1682
Paugh, Benjamin H., and G. W. Fridley, Philippi, W. Va. Running-gear for vehicles	478,758	July 12	1056	261	60	225
Paul, George, Cuyahoga Falls, Ohio. Letter-press and cabinet	481,586	Aug. 30	2983	732	60	1210
Paulis, John J., Lyons, Iowa. Writing and drawing device	478,129	July 5	73	19	60	17
Paulus, Christopher. (See Goodhue, William F., assignor.)						
Paulus, George W. (See Hougen and Paulus.)						
Pauly Jail Building and Manufacturing Company. (See Pauly, Peter J., Sr., assignor.)						
Pauly Jail Building and Manufacturing Company. (See Pauly, Peter J., Sr., and Peter J., Jr., assignors.)						
Pauly, Peter J., Sr., assignor to Pauly Jail Building and Manufacturing Company, St. Louis, Mo. Jail-grating	480,700	Aug. 9	1529	380	60	886
Pauly, Peter J., Sr., and Peter J., Jr., assignors to Pauly Jail Building and Manufacturing Company, St. Louis, Mo. Mechanism for opening, closing, and locking jail-doors	480,476	Aug. 9	1175	295, 296	60	817
Pauly, Peter J., Sr., and Peter J., Jr., assignors to Pauly Jail Building and Manufacturing Company, St. Louis, Mo. Mechanism for opening and closing jail-doors	482,316	Sept. 6	658	157	60	1464
Pavyer, Benjamin J., and T. Burns, assignors to J. G. Pavyer, St. Louis, Mo. Paper-cutting machine	479,302	July 19	1900	475	60	397
Pavyer, James G. (See Pavyer and Burns, assignors.)						
Payne, Arthur C. (See Aylsworth and Payne.)						
Payne, Walter S., Fostoria, Ohio. Machine for tapping mains	478,711	July 12	975	242, 243	60	210
Payne, William H., assignor, by mesne assignments, to A. E. Hoskins, Philadelphia, Pa. Pocket powder-puff and inhaler device	478,358	July 5	469	114	60	93
Payne, William H., assignor to C. P. Hoskins and G. G. Altorfer, Philadelphia, Pa. Fluid can or vessel stopper	483,082	Sept. 20	1884	477	60	1732
Payson, Edward, Chicago, Ill. Transom-lifter	482,024	Sept. 6	167	40	60	1368
Peace, Joseph W., Rhea Springs, Tenn. Bridle attachment	483,472	Sept. 27	2496	628	60	1861
Peacock, Edward F., *et al.* (See Reagan, Harry C., Jr., assignor.)						
Peacock, Ernest A., London, England. Stirrup	478,633	July 12	871	214	60	188
Pearce, Frederick, New York, N. Y. Dial-transmitter	482,877	Sept. 20	1561	390, 391	60	1667
Pearce, William A., Houghton, Mich. Chimney-cap	482,851	Sept. 20	1517	377	60	1650
Pearn, Frank. (See Young and Pearn.)						
Pearson, Marshall H., Leicester, England. Eyeleting-machine	478,750	July 12	1057	261, 262	60	226
Pearson, Marshall H., Leicester, England, assignor to John O'Flaherty Company, Montreal, Canada. Sewing-machine	479,838	Aug. 2	96	24, 25	60	601
Pearson, Marshall H., Leicester, England, assignor to John O'Flaherty Company, Montreal, Canada. Waxing device for sewing-machines	483,083	Sept. 20	1880	477	60	1732
Pearson, Paul, assignor of one-half to Z. F. Millhourn, Kearney, Mo. Combined fence post and brace	482,381	Sept. 13	783	188	60	1502
Pease, Edwin O., Jersey City, N. J. Sweeping-machine	478,942	July 12	1336	332	60	279
Pease, Roger S., Rose, Minn. Sporting-trap	480,130	Aug. 2	591	150, 151	60	695
Peck, Cassius C., Warsaw, N. Y. Generation of steam-power	479,454	July 26	2179	545	60	467
Peck Frederic M., Hartford, Conn. Package for butter	479,095	July 19	1585	396	60	337
Peck, Fremont P. (See Sturgis and Peck.)						
Peck, Melinda. (See Peck, Orrin B., assignor.)						
Peck, Orrin B., assignor to M. Peck, Chicago, Ill. Separating particles of different degrees of specific gravity	479,453	July 26	2178	544	60	467
Peck, Orrin B., assignor to M. Peck, Chicago, Ill. Separating powdered or finely-divided particles, &c	479,455	July 26	2182	545, 546	60	468
Peck, Orrin B., assignor to M. Peck, Chicago, Ill. Centrifugal ore-separator	479,456	July 26	2184	546, 547	60	468
Peck, Orrin B., assignor to M. Peck, Chicago, Ill. Separating powdered or finely-divided particles	479,953	Aug. 2	278	68, 69	60	635
Peck, Orrin B., assignor to M. Peck, Chicago, Ill. Centrifugal ore-separator	479,954	Aug. 2	280	69, 70	60	635
Peck, Orrin B., assignor to M. Peck, Chicago, Ill. Centrifugal ore-separator	479,955	Aug. 2	282	70, 71	60	636
Peckham, Edgar, New York, N. Y. Car-truck gear	481,704	Aug. 30	3167	774	60	1244
Peet, Benjamin F., Springfield, Mass. Saddle for velocipedes	479,656	July 26	2494	621	60	525
Peet, Walter B. (See Banks and Peet.)						
Peirce, Charles E., Altamonte Springs, Fla. Refrigerating apparatus	483,500	Sept. 27	2536	637, 638	60	1869

Pelton, Everitt W., *et al.* (See Newell, James L., assignor.)						
Pelton, Phineas, Persia, Iowa. Combined air-brake and car-coupling	482,382	Sept. 13	784	189	60	1502
Pelton, Walter B., *et al.* (See Newell, James L., assignor.)						
Pendleton, Bradford H., Evanston, Ill. Lighting device	482,587	Sept. 13	1113	269	60	1567
Pendleton, John H., *et al.* (See Thomas, Charles W., assignor.)						
Pendleton, John H., Brooklyn, assignor to Rapid Transit Cable Company, New York, N. Y. Cable railway	479,919	Aug. 2	210	53, 54	60	624
Pendleton, John H., Brooklyn, assignor to Rapid Transit Cable Company, New York, N. Y. Cable railway	479,920	Aug. 2	215	54, 55	60	624
Pendleton, John H., Brooklyn, and A. Bryson, assignors to Rapid Transit Cable Company, New York, N. Y. Cable railway	479,921	Aug. 2	224	55, 56, 57	60	626
Penfield, James W., Willoughby, Ohio. Brick-kiln	480,935	Aug. 16	1882	469, 470	60	972
Penfield, James W., Willoughby, Ohio. Brick-kiln	480,936	Aug. 16	1884	470, 471	60	972
Penfield, Raymond C. (See Wallace and Penfield.)						
Penfield, Raymond C., Willoughby, Ohio. Disintegrating-roller	480,937	Aug. 16	1885	471	60	973
Penfield & Son, J. W. (See Wallace and Penfield, assignors.)						
Penn, Richard L., Basham's Gap, Ala. Gang-plow	478,634	July 12	872	215	60	188
Pennock, Willard, Minerva, Ohio. Draw-gear for cars	480,827	Aug. 16	1796	431	60	941
Peoples, Alonzo E. (See Peoples, Henry C. and A. E.)						
Peoples, Henry C. and A. E., Eskridge, Kans. Corn-harvester	482,065	Sept. 6	229	55, 56	60	1380
Peple, Gustavus A. (See Mayo and Peple.)						
Pepper, James W. (See Solatmann and Pepper.)						
Peregrine, Seymour W., Grand Rapids, Mich. Tilting seat	480,961	Aug. 16	1930	483	60	981
Pereira, Alfons, Stuttgart, Germany. Painting with distemper and other colors	481,282	Aug. 23	2493	.....	60	1101
Perkins, Duane T., assignor to himself, F. Zuchtmann, and P. A. Knappe, Springfield, Mass. Fountain-pen	478,635	July 12	873	215	60	189
Perkins Electric Switch and Manufacturing Company. (See Gibbs, Jacob S., assignor.)						
Perkins, Ernest C., Geneva, N. Y. Eyeglass-holder	482,191	Sept. 6	444	107	60	1492
Perkins, George J., Truckee, Cal. Locomotive steam-boiler	483,472	Sept. 27	2497	629	60	1861
Perkins, Judson C., assignor to Meriden Curtain Fixture Company, Meriden, Conn. Window-shade fixture	479,766	July 26	2096	671	60	563
Perkins, Judson C., assignor to Meriden Curtain Fixture Company, Meriden, Conn. Spring shade-roller	481,733	Aug. 30	3224	787	60	1255
Perkins, Judson C., and L. E. Leigh, assignors to Meriden Curtain Fixture Company, Meriden, Conn. Spindle-tip for spring shade-rollers	482,563	Sept. 13	1082	263	60	1560
Perkins, Richard B., Hornellsville, assignor of one-half to C. A. Ball, Wellsville, N. Y. Fence	478,170	July 5	159	40	60	34
Perkins, William H., *et al.* (See Palson, Magnus J., assignor.)						
Perkins, William W. (See Soley and Perkins.)						
Perrenond, Gustave F., *et al.* (See Harvey, George H., assignor.)						
Perrine, Frederic A. C., assignor to John A. Roebling's Sons Company, Trenton, N. J. Electric conductor	479,525	July 26	2303	575	60	490
Perry, Alvy G., Coldwater, Miss. Cotton-harvester	480,131	Aug. 2	593	151, 152	60	695
Perry, Charles. (See Fisher and Perry.)						
Perry, Howard E., Chicago, Ill. Coin-controlled mechanism	481,816	Aug. 30	3366	825	60	1283
Perry, John G., Wakefield, R. I. Nut-lock and bolt-tightener	482,906	Sept. 20	1617	405	60	1676
Perry, John G., Wakefield, R. I. Nut-lock	482,907	Sept. 20	1618	405	60	1676
Peters, George T., assignor to himself and C. Shaw, Jersey City, N. J. Sash-balance	479,657	July 26	2496	621	60	526
Peters, Myron J. (See Carruthers, John, assignor.)						
Peterson, Alfred, Orion, Ill. Gate	479,457	July 26	2186	547, 548	60	469
Peterson, John P., Worthington, Minn. Grain-dump	483,011	Sept. 20	1787	451	60	1712
Peterson, Sivert, and A. Baland, Menominee, Wis. Railway-switch	481,267	Aug. 23	2461	606	60	1095
Peterson, Theodore, Akron, Ohio. Parallel bars	481,509	Aug. 23	2852	701	60	1168
Peterson, William, Genesee, Minn. Pump	482,588	Sept. 13	1115	269	60	1567
Petit, Ademor N., New York, N. Y. Type-writing machine	482,317	Sept. 6	661	158	60	1465
Petraeus, Carl V. (See Lewis and Petraeus.)						
Petroleum Light and Heat Company. (See Beidelman, Robert M., assignor.)						
Pettee, Lyman F., Brooklyn, N. Y. Device for separating the white and yelk of eggs	479,016	July 19	1463	364	60	314
Petterson, Johannes, and L. H. Liebeck, New York, N. Y. Water-still	478,458	July 5	606	148	60	120
Pettet, Charles A., Belleville, Canada. Straw or ensilage cutter	480,508	Aug. 9	1221	305	60	826
Pettibone, John H., Burlington, Iowa. Receipt and collection-report book	480,623	Aug. 9	1403	349	60	862
Pettit, James. Albany, N. Y. Awning-frame	480,437	Aug. 9	1108	277	60	803
Pew, Frederick S. (See Pew, James H. and F. S.)						
Pew, James H. and F. S., Andover, S. D. Spreader for reins	478,712	July 12	977	243	60	210
Pfannkuche, Gustav, assignor to Brush Electric Company, Cleveland, Ohio. Commutator for ring-armatures	480,780	Aug. 16	1650	413	60	926
Pfaudler, John M., Rochester, N. Y. Lamp	478,815	July 12	1163	288	60	246
Pfeifer, Charles A., Wapello, Iowa. Plow	482,751	Sept. 20	1372	340	60	1628
Pfeifer, John, assignor to National Cash Register Company, Dayton, Ohio. Cash register, indicator, and recorder	479,720	July 26	2612	649, 650	60	547
Pfieger, John, Minneapolis, Minn. Velocipede	479,839	Aug. 2	98	25	60	601
Pfineger, Ernest F., Akron, Ohio. Spoon-bait	480,132	Aug. 2	598	152	60	696
Pfinger, Charles A., Chicago, Ill. Line-wire tightening device for electric-lamp supports	482,486	Sept. 13	945	230	60	1532
Pfluger, Charles A., Chicago, Ill., assignor, by mesne assignments, of one-half to Standard Electric Company, of Illinois. Hanger for electric-arc lamps	479,017	July 19	1464	364	60	314
Phelan, John, assignor of two-thirds to W. Trimble and J. H. Jones, Pittsburg, Pa. Galley-lock	479,840	Aug. 2	99	25	60	601
Phelan, John T., Cambridge, Mass. Fumigator	480,624	Aug. 9	1405	349, 350	60	862
Phelps, Frederick A., Jr. (See Henderson and Phelps.)						
Phelps, James R., Sacramento, Cal. Leg-spreader for horses	480,625	Aug. 9	1407	350	60	863
Phelps, Lucius J., Passaic, N. J. Bicycle	481,734	Aug. 30	3226	787	60	1256
Phelps, Lucius J., Passaic, N. J. Pneumatic tire	482,457	Sept. 13	946	231	60	1533
Philadelphia Engineering Works. (See Gordon, Frederick W., assignor.)						
Philion, Achille, New York, N. Y. Steam-carriage	482,649	Sept. 13	1198	291, 292	60	1582
Phillips, Frank C., Healdsburg, Cal. Fruit-pitting machine	482,272	Sept. 6	573	136	60	1446
Phillips, Adelbert M., assignor to H. S. Chapman and C. A. Barnes, Lockport, N. Y. Combined pump and mixer	479,378	July 19	2037	508	60	424

Alphabetical list of patentees, July to September, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Phillips, Arthur J. (See Hutt and Phillips.)						
Phillips, Augustus K., St. Louis, Mo. Boring and shaping mechanism	481,307	Aug. 23	2534	622, 623	60	1107
Phillips, Austin M. (See Johnson and Phillips.)						
Phillips, Francis V., assignor to Smith & Phillips Manufacturing Company, Chicago, Ill. Sash-pulley	481,510	Aug. 23	2853	701	60	1168
Phillips, Thomas J., Ottumwa, Iowa. Car-dumping apparatus	481,968	Sept. 6	69	18, 19	60	1348
Phillips, William, Northville, Mich. Ironing-machine	480,277	Aug. 9	850	216, 217	60	757
Phillips, William A., U. S. Army. Pencil-sharpener	479,658	July 26	2496	622	60	526
Phillips, William H. (See Marvel, Theodore L., assignor.)						
Phillips, William H., assignor to P. Thompson, Philadelphia, Pa. Tie-plate and brace	482,318	Sept. 6	664	158	60	1465
Phinney, William F. (See Bond, Nathan O., assignor.)						
Piat, Albert, Paris, France. Electro-mechanical apparatus for starting or reversing machinery	478,816	July 12	1165	288, 289	60	246
Pickard, Edgar (See Thornton, John E., assignor.)						
Pickard, Edward L., Chelsea, assignor, by mesne assignments, to United States Postage Stamp Delivery Company, Boston, Mass. Coin-controlled vending-machine	481,331	Aug. 23	2573	632, 633	60	1114
Pickering, Barton, Dayton, Ohio. Postal-stamp holder	480,509	Aug. 9	1221	306	60	826
Pickernell, Frank A., Newark, N. J., assignor to American Telephone and Telegraph Company, of New York. Electric annunciator	481,190	Aug. 16	2192	542	60	1030
Pickett, Squire A., Crowley, La. Rice-scourer	482,122	Sept. 6	445	107	60	1422
Pickup, George A., and W. J. Towry, Shelbyville, Tenn. Rotary hand-stamp	481,969	Sept. 6	72	19	60	1349
Pidgin, Charles F., Cambridge, Mass. Tab for music-leaves	481,735	Aug. 30	3229	787	60	1257
Pierce, Charles W., Union City, Ind. Car-mover	482,878	Sept. 20	1566	391	60	1608
Pierce, Jonathan A., Austin, Minn. Electric-arc lamp	479,059	July 26	2497	629	60	526
Pierson, Henry M., Brooklyn, N. Y. Manufacturing gas	478,459	July 5	608	148, 149	60	120
Pifer, Augustus P. (See Harris, William H., assignor.)						
Piguet, William, Sentier, Switzerland Stop-watch	479,900	Aug. 2	188	47	60	619
Pike, Joseph H., Jacksonville, Ill. Knit undergarment	482,097	Sept. 6	282	68	60	1391
Pike, William, and N. McDairmid, Sault de Ste. Marie, Mich. Foot for dredge-anchors	483,012	Sept. 20	1789	451	60	1712
Pike, William L., Groton, N. Y. Vehicle-pole	480,510	Aug. 9	1222	306	60	827
Pike, William L., Groton, N. Y. Vehicle-pole	480,511	Aug. 9	1223	306	60	827
Pike, William L., Groton, N. Y. Clothes-pin	482,383	Sept. 13	787	189	60	1503
Pilkington, Lawrence. (See Prentice, McLeod, Crane, and Pilkington.)						
Pinch, Frank, Sidney, N. Y. Packing for piston or other rods	483,013	Sept. 20	1790	451	60	1712
Pine, Arthur F., assignor of one-half to H. Leibef, Antigo, Wis. Sleigh	479,154	July 19	1677	419	60	354
Pinel, Charles, Rouen, France. Liquid-gage	483,485	Sept. 27	2512	632	60	1864
Pinney, Edwin S. (See Rendell and Pinney.)						
Piper, Charles F., *et al.* (See Morrill, George W., assignor.)						
Piper, Edwin S., assignor of one-half to F. Clayton, Bristol, Conn. Bell	482,983	Sept. 20	1735	438	60	1701
Piper, Edwin S., assignor of one-half to F. Clayton, Bristol, Conn. Bell	482,984	Sept. 20	1736	439	60	1701
Pippenger, Chauncey, Kingsbury, Ind. Feeding device for clover-hullers	482,135	Sept. 6	341	82	60	1402
Pitts Agricultural Works. (See Bronson, Levi, assignor.)						
Pittsburgh Brass Company. (See Adams, Frederick, assignor.)						
Pittsburgh Plate Glass Company. (See Danner, Friedrich, assignor.)						
Pizzey, William J., Bristol, England. Spring-rim for velocipede-wheels	480,030	Aug. 2	439	111	60	665
Plaisted, Harold M., Springfield, Ohio. Filing-cabinet	479,660	July 26	2498	622	60	526
Platt, Clark M., Waterbury, Conn. Button-attaching machine	481,587	Aug. 30	2984	732	60	1210
Platt, Clark M., Waterbury, Conn. Machine for attaching buttons	481,588	Aug. 30	2985	732	60	1210
Platt, F. G. (See Brown, Robert S., assignor.)						
Platt, Irving G., Waterbury, Conn. Button-setting machine	480,031	Aug. 2	440	111	60	665
Platt, Irving G., Waterbury, Conn. Forming button-bars	480,032	Aug. 2	442	111	60	666
Platt, Stephen L., Elgin, Ill. Trolley-carriage for conduits	481,817	Aug. 30	3369	825, 826	60	1283
Player, John, assignor to Brooks Locomotive Works, Dunkirk, N. Y. Compound engine	481,056	Aug. 16	2078	518, 519, 520	60	1010
Player, John, assignor to Brooks Locomotive Works, Dunkirk, N. Y. Valve for compound engines	481,057	Aug. 16	2084	520	60	1011
Player, John, assignor to Brooks Locomotive Works, Dunkirk, N. Y. Combined intercepting and reducing valve	481,148	Aug. 16	2250	555	60	1040
Pletscher, John, Baltimore, Md. Machine for cleaning and polishing knives	479,304	July 19	1903	476	60	398
Plomberg, Sever H., Leland, Iowa. Hay-rack	481,420	Aug. 23	2713	668	60	1141
Plumb, Joseph C. (See Haswell, Alanson M., assignor.)						
Plumbly, Frederic K., Buffalo, N. Y. Ballot-box	478,264	July 5	326	79	60	65
Plumbly, Frederic K., Buffalo, N. Y. Voting-booth	479,458	July 26	2188	548, 549	60	469
Plumbly, Frederick K., Buffalo, N. Y. Gate	483,387	Sept. 27	2392	601	60	1839
Plume & Atwood Manufacturing Company. (See Echols, Frank G., assignor.)						
Plume & Atwood Manufacturing Company. (See Hellstrom, Theodore H., assignor.)						
Plumtree, Charles E., assignor of one-half to A. W. Crittenden, Spokane Falls, Wash. Site reflector	481,055	Aug. 16	2077	518	60	1010
Plunkett, Michael H., assignor of fifty-one one-hundredths to W. Bowie and E. J. Bond, Baltimore, Md. Steam-boiler	482,384	Sept. 13	788	189, 190	60	1504
Plymouth Foundry Company. (See Bowman and Shaw, assignors.)						
Pneumatic and Electric Tool Company. (See Drawbaugh, Daniel, assignor.)						
Pneumatic Gun Carriage and Power Company. (See Spiller, Harry A., assignor.)						
Pneumatic Tyre and Booth's Cycle Agency. (See Sinclair, Finlay, assignor.)						
Poehner, Adolph A. (See Hey, Henry T., assignor.)						
Poetzel, Michael. (See Baeumle, John, assignor.)						
Pohrer, William J., St. Louis, Mo. Sectional vehicle-shaft	483,474	Sept. 27	2498	629	60	1862
Poland, Charles A., Ann Arbor, Mich. Combination step-ladder	480,342	Aug. 9	954	241	60	775
Pollard, Robert. (See Taylor, Horace H., assignor.)						
Pollock, James, Wilkes-Barré, Pa. Continuous-trough conveyer	483,475	Sept. 27	2499	629	60	1862
Pollock, James, assignor, by mesne assignments, to Wyoming Boiler Company, Limited, Wilkes-Barré, Pa. Steam-boiler	482,459	Sept. 13	904	219	60	1524
Pomper, Frank, Chicopee, Mass. Faucet or valve	482,049	Sept. 6	208	50	60	1376
Poole, Fredrick F., Newark, N. J. Trolley	479,608	July 26	2420	604	60	512
Poole, Fredrick F., Newark, N. J. Separable square	481,637	Aug. 30	3061	747	60	1224
Poore, Charles. (See Williams and Poore.)						
Pope, Frederick B., Augusta, Ga. Spark-arrester	478,359	July 5	470	114	60	93

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Propfe, Heinrich, Mannheim, Germany. Distilling apparatus	478,265	July 5	327	79	60	66
Prospective Mining and Machinery Company. (See Wernain and Johnson, assignors.)						

Alphabetical list of patentees, July to September, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Pope, William R., New York, N. Y., assignor to Automatic Manufacturing Company, of New York. Coin-operated game apparatus	479,459	July 26	2190	549	60	469
Popp, Hermann. (See Hinshillwood Thomas K., assignor.)						
Poppowitsch, Edward, Brooklyn, N. Y. Preparing battery solutions	480,033	Aug. 2	443	.....	60	666
Porrett, Christopher. (See Garner, Cockerill, and Porrett.)						
Porter, Daniel R., Chelsea, assignor to Columbian Manufacturing Company, Brockton, Mass. Pipe-wrench	482,527	Sept. 13	1025	247	60	1549
Porter, Elbert B., Penn Yan, N. Y. Fishing-reel	478,713	July 12	978	243	60	210
Porter, Ernest A., Florence, Mass. Staple-driving implement	481,970	Sept. 6	74	19	60	1349
Porter, James A. (See Closser, William, assignor.)						
Porter, Joseph E., Ottawa, Ill. Carrier-track	482,411	Sept. 13	825	198	60	1510
Porter, Joseph E., Ottawa, Ill. Hay-carrier and track	482,412	Sept. 13	826	198	60	1510
Porter, Lemuel, Providence, R. I., assignor to Malden Machine Company, Boston, Mass. Water-motor	482,927	Sept. 20	1642	413	60	1682
Porter, Louis M., Montclair, N. J. Hook and eye	478,360	July 5	471	114	60	94
Porter, Wilson E., assignor to New Haven Clock Company, New Haven, Conn. Clock-regulator	482,985	Sept. 20	1738	439	60	1701
Portsmouth Stove and Range Company. (See Knauss, Frank V., assignor.)						
Potelune, Oscar, Limoges, France. Machine for treating skins, &c	479,460	July 26	2191	{549, 550, 551}	60	470
Potter & Atherton Machine Company. (See Potter, James C., assignor.)						
Potter, George L., Fort Wayne, Ind. Spring	481,971	Sept. 6	75	20	60	1349
Potter, Henry W., assignor of one-half to J. E. Hayes, Wellington, New Zealand. Folding music-rack and telescopic stand therefor	478,460	July 5	612	149	60	121
Potter, James C., assignor to Potter & Atherton Machine Company, Pawtucket, R. I. Feeding mechanism for machinery for opening, cleaning, and preparing cotton	482,193	Sept. 6	446	108	60	1422
Potter, James C., assignor to Potter & Atherton Machine Company, Pawtucket, R. I. Feeding mechanism for machinery for opening and preparing cotton	482,194	Sept. 6	448	108	60	1423
Potter, James C., assignor to Potter & Atherton Machine Company, Pawtucket, R. I. Machine for opening and preparing cotton	482,273	Sept. 6	575	{136, 137}	60	1447
Potter, John A. (See Grace, Robert W., assignor.)						
Potter, Samuel A., assignor of one-half to D. G. Monfort, Cincinnati, Ohio. Adding-machine	478,361	July 5	472	114	60	94
Potter, Wilson L., Hartford, Conn. Sanitary ventilator	479,224	July 19	1786	447	60	374
Potts, Joseph D., trustee. (See McManus, William S., assignor.)						
Poulson, Peter, Somers, Wis. Spade	479,661	July 26	2500	623	60	527
Poulson, Peter, Somers, Wis. Shovel	481,972	Sept. 6	76	20	60	1349
Poulter, John H., Arcola, Ill. Flood-fence	482,460	Sept. 13	905	220	60	1524
Poulter, John H., assignor of one-half to J. H. Sullivan, Arcola, Ill. Shoe-fastening	480,133	Aug. 2	599	152	60	696
Powell, Eleanah, Kokomo, Ind. Clothes-drier	481,189	Aug. 23	2319	571	60	1068
Powell, Guy H. (See Chandler and Powell.)						
Powell, James, Cincinnati, Ohio. Hardening seats and valves	481,332	Aug. 23	2577	633	60	1115
Power & Co., L. (See Pyott, Louis T., assignor.)						
Powers, James J., and R. Van Buren, Brooklyn, N. Y. Clay-conduit machine	478,462	July 5	616	150	60	122
Powers, Jay W., Chicago, Ill. Steam-engine	483 014	Sept. 20	1791	452	60	1712
Praetorius, Herman G., Dayton, Ohio. Guide for umbrella ribs and stretchers	481,283	Aug. 23	2494	614	60	1101
Pratt, Henry C., Canandaigua, N. Y. Wire-distributer for wire fences	479,571	July 26	2370	591	60	503
Pratt, John W. (See Ward, Frederick, assignor.)						
Pratt, William, Montreal, Canada. Tin can or receptacle. (Reissue)	11,264	Aug. 16	2272	560	60	1044
Pray, Hamilton, Clove, N. Y. Ice-plow	483,015	Sept. 20	1793	452	60	1713
Pray, Thomas, Jr., *et al.* (See Reagan, Harry C., Jr., assignor.)						
Preiser, Emil. (See Fischer and Preiser.)						
Prentice, Leon H., Waukegan, P. R. McLeod, R. T. Crane, and L. Pilkington, assignors to Crane Company, Chicago, Ill. Valve mechanism for steam-radiators	480,512	Aug. 9	1224	306	60	827
Prescott, De Witt C., Marinette, Wis. Band-saw mill	478,817	July 12	1166	{289, 290}	60	247
Prescott, Sidney I., Brooklyn, N. Y. Device for distributing oil upon water	481,818	Aug. 30	3370	826	60	1284
Preston, H. C., *et al.* (See Preston, Othniel, assignor.)						
Preston, O., Jr., *et al.* (See Preston, Othniel, assignor.)						
Preston, Othniel, assignor of two-thirds to H. C. and O. Preston, Jr., Hornellsville, N. Y. Machine to plait wire	482,589	Sept. 13	1117	{269, 270}	60	1507
Prewitt, William Q., Lexington, Ky. Trolley-track hanger for electric railways	483,388	Sept. 27	2392	601	60	1840
Price, Edwin H., Lanadale, assignor of one-half to J. B. Alderfer, Souderton, Pa. Shutter-worker	479,155	July 19	1677	419	60	354
Price, Henry W., *et al.* (See Winlund, Nicholas J., assignor.)						
Price, James M., Philadelphia, Pa. Support for street railways or tramways	478,362	July 5	473	115	60	94
Price, Jesse M. (See Maxim and Price.)						
Price, John B., Wollaston, Mass. Lamp-extinguisher	481,968	Aug. 23	2462	607	60	1096
Price, John B., Wollaston, Mass. Cylinder-lock	481.421	Aug. 23	2714	668	60	1141
Price, John B., Wollaston, Mass. Lock	481,422	Aug. 23	2718	668	60	1142
Price, Jonathan D., Chicago, Ill. Chart	480,413	Aug. 9	1071	268	60	796
Price, Samuel B., Jr., C. E. Martin, and B. Purser, Brookwood, Ala. Ore and coal crusher and separator	479 018	July 10	1466	365	60	315
Price, William, Mendota, Ill. Attachment for stoves	480,828	Aug. 16	1727	431	60	941
Price, William C., *et al.* (See Monday, Robert, assignor.)						
Price, William G., New Orleans, La. Pencil-sharpener	479 303	July 19	1901	476	60	3 8
Pride, James, London, England. Fire-escape	482,274	Sept. 6	577	{137, 138}	60	1447
Pridmore, Henry E., Chicago, Ill. Grain-binder	481,530	Aug. 23	2890	{709, 710, 711}	60	1176
Pridmore, Henry E., Chicago, Ill., assignor to McCormick Harvesting Machine Company. Grain-binder	481,244	Aug. 23	2416	{596, 597}	60	1087
Priest, Joseph K., Nashua, N. H. Hair clipper and shears	478,461	July 5	614	149	60	121
Priestley, John H., Meriden, Iowa. Automatic brake	481,190	Aug. 23	2320	571	60	1068
Primrose, Isaac P., *et al.* (See Armstrong, James P., assignor.)						
Prince, Samuel F., Jr., Reading, Pa. Compound engine	480,781	Aug. 16	1652	413	60	926
Prindle, Frederick J. (See Prindle, William E. and F. J.)						
Prindle, William E. and F. J., Aurora, Ill. Lawn-mower	482,752	Sept. 20	1374	{340, 341}	60	1029
Proctor, Abner C., Washington, D. C. Puzzle	481,589	Aug. 30	2987	733	60	1210
Proctor, Charles M. (See Raymond, Nelson H., assignor.)						
Prokhoroff, Nicolaus, assignor of one-half to N. Fahlberg, Kiev, Russia. Electric central clock	481,916	Aug. 30	3531	{864, 865}	60	1315

Pruser, John N., Union Hill, N. J. Burial-casket	481,370	Aug. 23	2624	645	60	1124
Prutzman, John H., Plankinton, S. D. Trousers-shield	483,164	Sept. 27	2023	512	60	1771
Puccini, Regolo, Chicago, Ill. Stopper-extractor	480,414	Aug. 9	1072	268	60	797
Pullman, Albert B., assignor to A. B. Pullman Company, Chicago, Ill. Sliding-door lock	483,326	Sept. 27, 2 01	579	60	1823	
Pullman, Herbert S., Meriden, Conn. Shoe-fastening	481,638	Aug. 30	3062	748	60	1224
Pullman's Palace Car Company. (See Sessions, Henry H., assignor.)						
Purcell, John J., assignor of one-half to W. H. Allen, Washington, D. C. Coupling for underground wires	483,327	Sept. 27	2303	579	60	1823
Purcell, Thomas W., and J. B. Craig, St. Louis, Mo. Wardrobe, chiffonier, &c	479,078	July 19	1555	{388, 389}	60	331
Purdy, Fred, Englewood, assignor to American Spring Company, Chicago, Ill. Method of and apparatus for tempering wire	482,879	Sept. 20	1567	391	60	1668
Purple, Charles W. (See Purple, George E. and C. W.)						
Purple, George E. and C. W., Minneapolis, Minn.; said George E. Purple assignor to said C. W. Purple. Trolley for electric cars	480,240	Aug. 2	781	{197, 198}	60	729
Purser, Benjamin P. (See Price, Martin, and Purser.)						
Pursley, James F., South Pittsburg, Tenn. Car-coupling	482,809	Sept. 20	1454	361	60	1645
Purves, George. (See Johnston, John H., assignor.)						
Pusey, Joshua, Lima, Pa. Friction-match card	483,165	Sept. 27	2024	512	60	1771
Pusey, Joshua, Lima, Pa. Flexible match	483,166	Sept. 27	2026	512	60	1771
Putman, John, Cerro Gordo, Ill. Nut-lock	478,637	July 12	877	216	60	190
Putnam, Theodore A. B., assignor to E. S. Webster, New York, N. Y. Electric railway-signal	479,333	July 19	1940	485	60	406
Pyott, Louis T., assignor to L. Power & Co., Philadelphia, Pa. Planing-machine	481,371	Aug. 23	2625	646	60	1124
Pyrolith Company. (See Keseling and Fuchs, assignors.)						
Quackenbush, Edward F. (See Nilson, Nils, assignor.)						
Quatermass, Reuben, Moline, Kans. Car-coupling	478,463	July 5	617	150	60	122
Quentell, William P., Kansas City, Mo. Can-soldering machine	479,174	July 19	1710	{428, 429}	60	360
Quentell, William P., Kansas City, Mo. Apparatus for forming and soldering sheet-metal cans	480,034	Aug. 2	443	{112, 113}	60	665
Quincy Gas Economizer Company. (See Cabell, Samuel G., assignor.)						
Quinn, David J., Brookline, and P. W. Hoffmann, Boston, Mass., assignors to Iona Manufacturing Company, of Maine. Gas-lighting device	478,522	July 5	708	171	60	140
Quinton, John H., Portland, Oreg. Horse-hitching device	483,514	Sept. 27	2567	643	60	1875
Quirk, Michael J., and C. Bach, Jr., Milwaukee, Wis. Electric-lighting system	480,782	Aug. 16	1653	413	60	926
R. E. Dietz Company *et al.* (See Gall, John S., assignor.)						
Raatz, Julius, Manistee, Mich. Straw-cutter	482,413	Sept. 13	828	{198, 199}	60	1511
Rabbeth, Francis J., Boston, Mass. Sash-fastener	480,343	Aug. 9	956	242	60	776
Radford, William, San Francisco, Cal. Brick-kiln	480,134	Aug. 2	600	{152, 153}	60	697
Radley, Richard, Buffalo, N. Y. Valve-gear for steam-engines	483,328	Sept. 27	2304	{579, 580}	60	1823
Radley, William, and T. W. Beal, assignors to Sandwich Enterprise Company, Sandwich, Ill. Hand-cart	480,670	Aug. 9	1480	368	60	877
Raeuchle, William, Boston, Mass. Overseam	480,783	Aug. 16	1655	414	60	927
Ragsdale, Charles, Purdy, Mo. Scaffold-bracket	479,662	July 26	2501	623	60	527
Rahn, Frederick. (See Knechler, Charles F., assignor.)						
Raidline, Elvin, Bethlehem, Pa. Bottle-washing machine	480,135	Aug. 2	603	153	60	697
Rand, Addison C., New York, N. Y. Explosive compound	478,819	July 12	1171	.....	60	247
Rand, Charles A. A., assignor to William Deering & Company, Chicago, Ill. Harvester-reel support	481,191	Aug. 23	2321	{571, 572}	60	1068
Randall, Edison E., West Winsted, Conn. Knitting-machine	480,938	Aug. 16	1886	471	60	973
Randall, Robert F., assignor to himself, J. P. Ballou, and E. Van Petrson, Newark, N. J. Coffee-pot	481,769	Aug. 30	3292	801	60	1270
Randall, Robert O., Joplin, Mo. Horse-collar pad	483,016	Sept. 20	1795	452	60	1713
Randall, Silas H., Wyoming, Ohio. Leather-splitting machine	479,461	July 26	2194	551	60	470
Randall, Victor E., Burlington, Mich. Culinary and heating oil-stove	581,511	Aug. 23	2834	701	60	1169
Randolph & Clowes. (See Cotter, Charles A., assignor.)						
Randolph, Frederick W., Raynor, Va. Lubricating-hub	482,195	Sept. 6	450	109	60	1423
Rands, George L., London, England. Stand for poison-bottles	478,818	July 12	1170	290	60	247
Range, John J. (See Foote and Range.)						
Range, John J. (See Saunders, Range, and Foote.)						
Range, John J., assignor to Boston Cash Register Company, Northampton, Mass. Cash-register	479,334	July 19	1946	486	60	407
Range, John J., assignor to Boston Cash Register Company, Northampton, Mass. Cash-register	479,335	July 19	1947	486	60	407
Range, John J., assignor to Boston Cash Register Company, Northampton, Mass. Cash-register	479,336	July 19	1949	{486, 487}	60	407
Ranker, Frank X., Pittsburg, Pa. Hinge	480,238	Aug. 2	773	195	60	729
Rankin, Edmund, Jr., Lincoln, Ill. Rein-holder	479,006	July 19	1586	397	60	337
Ranney, Maurice M., Comstock, Mich. Machine for digging celery	481,819	Aug. 30	3372	826	60	1284
Ranney, William H., Detroit, Mich. Card shuffling and dealing mechanism	483,364	Sept. 27	2449	590	60	1832
Ransom, William H., Kirksville, Mo. Bolt-cutter	480,858	Aug. 16	1767	443	60	949
Rapid Transit Cable Company. (See Pendleton, John H., assignor.)						
Rapid Transit Cable Company. (See Pendleton and Bryson, assignors.)						
Rapkin, Alfred T., and F. Cossor, London, England; said Cossor assignor to said Rapkin. Indicating-thermometer	483,365	Sept. 27	2350	591	60	1832
Rapp, Joseph, New Philadelphia, Ohio. Roofing-tile	478,171	July 5	160	41	60	34
Raprager, Robert H., Lakota, N. D. Pump	478,464	July 5	619	150	60	122
Rasey, John D., assignor of one-half to F. M. Hasbrouck, Oshkosh, Wis. Auxiliary base for stoves	480,212	Aug. 2	734	185	60	791

Roanoke Wood Novelty Company. (See Nicholson, Jacob H., assignor.)						
Robare, Louis F., Au Sable Forks, assignor to himself, and R. J. Clark, Champlain, N. Y. Scale attachment	482,138	Sept. 6	345	83	60	1403
Robb, James T., Mount Vernon, assignor to Bergmann & Company, New York, N. Y. Device for supporting fixtures	480,744	Aug. 16	1595	400	60	915
Robb, James T., Mount Vernon, assignor to Edison General Electric Company, New York, N. Y. Electric-light fixture	480,745	Aug.	1596	400	60	915
Robberson, Alexander J., assignor of one-half to J. W. Hostetler, Napa, Cal. Pillow-sham holder	481,424	Aug. 23	2721	669	60	1142
Robberson, John W., Belcherville, Tex. Musical notation	482,442	Sept. 13	880	211, 212	60	1519
Robbins, Andrew B., assignor of one-half to E. W. Loose, Minneapolis, Minn. Horse-power lawn-mower	480,831	Aug. 16	1730	432	60	942
Robbins, Samuel F., Langhorne, Pa. Basket handle or carrier	479,529	July 26	2309	577	60	491
Roberts, Edward F., Columbus, Ohio. Electric valve-controller	482,139	Sept. 6	346	83	60	1403
Roberts, Edward F., Rochester, N. Y., assignor to Roberts Manufacturing Company, of Ohio. Cash register and indicator	481,824	Aug. 30	3382	828, 829, 830	60	1226
Roberts, Edward P., Cleveland, Ohio. Floating figure	479,530	July 26	2310	577	60	492
Roberts, George L., Grand Rapids, Mich. Fire-escape for buildings	480,518	Aug. 9	1230	308	60	828
Roberts, Henry P., Jamestown, N. Y. Boot or shoe creaser	482,529	Sept. 13	1028	249	60	1550
Roberts, Lorin. (See Fulghum and Roberts.)						
Roberts Manufacturing Company. (See Roberts, Edward F., assignor.)						
Roberts, Robert, Brooklyn, N. Y. Wood-cutting tool	479,306	July 19	1906	476	60	398
Roberts, William D. (See Freeman, Thomas R., assignor.)						
Robertson, George. (See Jewell, William M., assignor.)						
Robertson, James, Birmingham, England. Shaping metal tubes	481,060	Aug. 16	2096	522, 523	60	1013
Robertson, James L., New York, N. Y. Exhaust-head	481,373	Aug. 23	2629	647	60	1124
Robertson, Richard S., Castle Gate, Utah Ter. Car-coupling	479,079	July 19	1556	389	60	331
Robertson, Rinaldo S., Artondale, Wash. Adding-machine	479,531	July 26	2311	578	60	492
Robertson, William, assignor to J. A. McPherson, Hamilton, Canada, and E. D. Weyburn, Chicago, Ill. Cementing-machine	483,367	Sept. 27	2354	591	60	1833
Robertson, William J., and J. B. Genin, St. Albans, assignors to themselves and E. L. Ripley, Burlington, Vt. Extension-ladder	478,969	July 12	1382	340	60	287
Robinson, Alba H., Meeker, Colo. Fountain-pen	478,944	July 12	1338	332	60	280
Robinson, Alfred A., Lowell, Mass. Toy	480,279	Aug. 9	854	218	60	758
Robinson, Cyrus R., East Concord, N. H. Hose-nozzle holder	479,811	Aug. 2	100	25	60	601
Robinson, Dighton A., Minneapolis, Minn. Elevator-belt drive	481,150	Aug. 16	2255	556, 557	60	1041
Robinson, Frank L., Hartland, Me. Shirt-collar holder	481,425	Aug. 23	2723	669	60	1143
Robinson, James T., *et al.* (See Dobeck, Frank H., assignor.)						
Robinson, Joe and R., assignors of one-half to O. B. Lister, Dudley Hill, near Bradford, England. Support for whirls of spindle-bobbins	482,695	Sept. 13	1277	313	60	1598
Robinson Rea Manufacturing Company *et al.* (See Cribb, Ira P., assignor.)						
Robinson, Richard. (See Robinson, Joe and R.)						
Robinson, Robert E. (See Dunfee, John C., assignor.)						
Robinson, Stillman W., Columbus, Ohio. Gage for measuring the velocity of fluids	481,310	Aug. 23	2544	625	60	1108
Robinson, Thomas A. (See Teweles and Robinson.)						
Robinson, Thomas H. (See Wigg, Edmund T., assignor.)						
Roche, Edward, Providence, R. I. Waterproof shoe	483,289	Sept. 27	2249	566	60	1813
Roche, James, assignor to Eagle Lock Company, Terryville, Conn. Lock	481,736	Aug. 30	3231	787	60	1257
Rochelle, Henry L., *et al.* (See Calcutt, Marvin Y., assignor.)						
Rochlitz, William, assignor to E. Roos, Chicago, Ill. Rest or bracket for easels	480,280	Aug. 9	855	218	60	758
Rockfellow, Andrew, South Richland, N. Y. Stock-watering apparatus	479,197	July 19	1747	438	60	367
Rockford Bolt Works. (See Mutimer, Frederick, assignor.)						
Rockhill, Robert A., *et al.* (See Marsden, Mark W., assignor.)						
Rockliff, William A., and J. P. Foley, Rumsey, Mont. Hydraulic mining-pump	482,810	Sept. 20	1456	361	60	1646
Rockwell, Edward D., assignor to New Departure Bell Company, Bristol, Conn. Bell	482,696	Sept. 13	1278	313	60	1598
Rockwell, Edward D., assignor to New Departure Bell Company, Bristol, Conn. Bicycle-bell	483,084	Sept. 20	1867	477, 478	60	1732
Rockwell, F. C. (See Green, Henry, assignor.)						
Rockwell, Frederick C., Hartford, Conn. Pedal for velocipedes	483,238	Sept. 27	2140	542	60	1794
Rodecap, George W., Middletown, Ind. Folding bed	478,761	July 12	1065	264, 265	60	227
Rodenbach-Mergaert, Edouard. (See Croes, Rodenbach-Mergaert, and Lapin.)						
Rodes, Tyree T., Paris, Mo. Hand-cultivator	478,468	July 5	624	152	60	123

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Rodgers, Alexander, Sr., assignor to Rodgers Iron Manufacturing Company, Muskegon, Mich. Sawing-machine	482,319	Sept. 6	665	159	60	1465
Rodgers, Alexander, Sr., assignor to Rodgers Iron Manufacturing Company, Muskegon, Mich. Sawing-machine	482,697	Sept. 13	1279	313	60	1599
Rodgers Iron Manufacturing Company. (See Rodgers, Alexander, Sr., assignor.)						
Rodgers, Samuel, assignor to United States Smokeless Powder Company, San Francisco, Cal. Explosive compound	478,366	July 5	477		60	95
Rodman, Rollin L., Kingman, Kans. Device for steaming or tempering grain	482,590	Sept. 13	1119	270	60	1568
Roe, Fayette W., Omaha, Nebr. Calendar for watch-charms	478,888	July 12	1257	311	60	264
Roe, Mary, Dayton, Minn. Heating apparatus	479,463	July 26	2197	551	60	471
Roebuck, Samuel, New York, N. Y. Window-screen	482,811	Sept. 20	1458	362	60	1646
Roehm, Edward R., assignor to Roehm & Son, Detroit, Mich. Program and score-card chatelette	481,195	Aug. 23	2328	574	60	1070
Roehm & Son. (See Roehm, Edward R., assignor.)						
Roessler, Heinrich, assignor of one-half to B. Edelmann, Frankfort-on-the-Main, Germany. Desilvering argentiferous lead	480,416	Aug. 9	1077		60	797
Rogers, Augustus H., North Amherst, Ohio. Wire-and-picket-fence machine	478,173	July 5,	161	42	60	34
Rogers, Charles D., assignor to American Screw Company, Providence, R. I. Wood-screw and making the same	479,175	July 19	1712	429, 430	60	361
Rogers, Charles S., San Antonio, Tex., assignor of one-half to L. J. Overcash, New York, N. Y. Supporter for trousers and similar garments	480,672	Aug. 9	1482	369	60	877
Rogers, Henry E., South Manchester, Conn. Machine for polishing paper	478,762	July 12	1067	265	60	228
Rogers, John F., Belfast, Me. Vamp-marking machine	480,438	Aug. 9	1109	277, 278	60	803
Rogers, William C. (See Brooks, Franklin W., assignor.)						
Rogers, William D., Alameda, and J. D. Van Buren, San Francisco, Cal. Envelope-opener	478,889	July 12	1259	311	60	264
Rogers, Winfield S., Troy, N. Y. Railway-car ventilator	481,196	Aug. 23	2329	574	60	1070
Rohlmann, Joseph, St. Joseph, Mo. Carving-machine	478,640	July 12	880	217, 218	60	190
Rollins, Ellsworth H., *et al.* (See Morrill, George W., assignor.)						
Rollins, George O. (See Rollins, John P., assignor.)						
Rollins, John P., assignor of one-half to G. O. Rollins, Cedar Rapids, Iowa. Car-coupling	479,990	Aug. 2	359	89	60	649
Rollman, Elmer A., Eaton, Ohio. Tobacco-planter	478,289	July 5	361	87	60	73
Rooms, Evo, Nevada, Mo. Machine for making retorts, &c	480,138	Aug. 2	607	154	60	698
Roos, Edward. (See Rochlitz, William, assignor.)						
Roos, Israel, Frankfort-on-the-Main, Germany. Making salicylaldehyde-alphaphenylmethyl hydrazone	483,290	Sept. 27	2250		60	1813
Roos, Jacob, Brooklyn, N. Y. Liquid-measuring device	481,872	Aug. 30	3452	847	60	1300
Root, Albert A., Detroit, Mich. Safe	479,464	July 26	2198	552	60	471
Root, Samuel D., and G. C. Vineyard, Anaconda, Mont. Cable railway	480,519	Aug. 9	1231	308, 309	60	828
Roper, James W. (See Lang and Roper.)						
Rose, Albert F. (See Bowman, Rose, and Morse.)						
Rose, George, Glasgow, Scotland. Liquid-fuel furnace	482,834	Sept. 20	1492	371	60	1653
Rose, Henry. (See Hay, Gilbert, assignor.)						
Rose, William J., Horseheads, assignor of one-half to N. M. Compton, Sullivanville, N. Y. Whiffletree	482,698	Sept. 13	1280	314	60	1599
Rosebrook, Harry N. (See Richards, Garwood, and Rosebrook.)						
Rosenbaum, Henry W., and E. Neubert, New York, N. Y., assignors to said Rosenbaum. Registering-stamp	480,965	Aug. 16	1938	485	60	982
Rosenbaum, Henry W., and E. Neubert, New York, N. Y., assignors to said Rosenbaum. Coin-actuated stamp	480,966	Aug. 16	1940	485	60	982
Rosenfeld, Louis, New York, N. Y. Feeder for coal, ore, &c	482,652	Sept. 13	1202	293	60	1583
Rosenfield, William W., New York, N. Y., assignor to Empire Cash Register Company. Column-printing device	478,524	July 5	710	172	60	141
Rosenstiehl, Daniel A., Paris, France. Making azo colors	483,368	Sept. 27	2352		60	1833
Rosenthal, Adolph, assignor of three-fourths to C. Rosenthal, H. Goldstein, and L. Bash, Boston, Mass. Hat, cap, &c	482,950	Sept. 20	1686	424	60	1690
Rosenthal, Charles, *et al.* (See Rosenthal, Adolph, assignor.)						
Rosenzweig, Max S., New York, N. Y. Tray	479,664	July 26	2512	625	60	529
Ross, William S., Madisonville, Ky. Urinal	482,754	Sept. 20	1378	341, 342	60	1629
Rost, Ernest C., *et al.* (See Schwartz, William, assignor.)						
Röstel, Carl, assignor to Grusonwerk, Magdeburg, Germany. Breech-loading firearm	480,627	Aug. 9	1409	351, 352	60	863
Rotary Engine Syndicate. (See Towlson, Edward, assignor.)						
Roth, Charles F., assignor of one-half to Kelly Nail and Iron Company, Ironton, Ohio. Attachment for cut-nail machines	483,085	Sept. 20	1889	478, 479	60	1733
Roth, Charles H., Cincinnati, Ohio. Pneumatic tire	481,197	Aug. 23	2330	574	60	1070
Rothlisberger, Ernest, Lima, Ohio. Electric low-water alarm	480,673	Aug. 9	1484	369	60	877
Rothrock, Lewis W., Morrisdale Mines, Pa. Neck-yoke	481,925	Aug. 30	3386	830	60	1287
Rounds, George M., Taunton, Mass. Bale-tie cutter	480,878	Aug. 16	1796	449	60	955
Rouse, Seymour A., Indianapolis, Ind. Wind-engine	478,945	July 12	1340	332, 333	60	280
Rover, John and W. A., Lima, Ohio. Draw-timber for cars	482,653	Sept. 13	1203	293	60	1583
Rover, William A. (See Rover, John and W. A.)						
Rowan, John. (See Underwood, Thomas M., assignor.)						
Rowan, John L., Joplin, Mo. Rotary steam-engine	478,240	July 5	287	70	60	58
Rowe, Henry L., New York, N. Y., and G. W. McDonald, Franklin, N. J. Washing-machine attachment	480,037	Aug. 2	448	113, 114	60	667
Rowe, Isaac N., assignor of one-half to D. D. Minis, Wood's, Tex. Conveying apparatus	483,120	Sept. 20	1943	491	60	1744
Rowland, George R., Brooklyn, N. Y. Toy money-safe	478,890	July 12	1259	311	60	264
Rowland, William L., Philadelphia, Pa. Ammonia-distilling apparatus	478,132	July 5	76	20	60	17
Rowlett, Jacob V., Richmond, Ind. Rake	479,842	Aug. 2	101	26	60	602
Rowlett, Jacob V., Richmond, Ind. Lawn-mower	479,843	Aug. 2	102	26	60	602
Rowntree, Harold, assignor of one-half to J. B. Burdett, Kansas City, Mo. Device for operating elevator-doors	479,956	Aug. 2	283	71	60	636
Royal Machine Company. (See Brown, Charles F., assignor.)						
Royce, Charles. (See Miller, Charles W., assignor.)						
Rubel, Joseph S., Le Mars, Iowa. Incubator	482,755	Sept. 20	1379	342	60	1630
Rubin, Jacob. (See Shostak, Joseph, assignor.)						
Rudasill, Jacob, Cherryville, N. C. Machine for cleaning wheat	478,469	July 5	625	152	60	124
Rudd, Charles H., Evanston, assignor to Western Electric Company, Chicago, Ill. Testing apparatus for electric-lighting circuits	480,038	Aug. 2	449	114	60	667

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.

Alphabetical list of patentees, July to September, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Shadbolt, Lawrence. (See Salyerds and Shadbolt.)						
Shafer, Daniel. (See Neimeyer, John, assignor.)						
Shafer, William B., Somerset, Pa. Stamp or label affixer	478,704	July 12	1070	266	60	228
Shaffer, James R., deceased, Huntington, Ind.; J. Shaffer, administratrix. Picket-wiring machine	479,311	July 19	1915	478	60	400
Shaffer, Jane, administratrix. (See Shaffer, James R.)						
Shaffer, Katharine A., Harrisburg, Pa. Pad for bed-pans	482,388	Sept. 13	793	191	60	1505
Shaffer, William C., Milwaukee, Wis. Sprinkler system	480,747	Aug. 16	1598	401	60	915
Shafor, James C. (See Cokayne, William, assignor.)						
Shakespeare, James H., trustee. (See Bonta, James W., assignor.)						
Shakespeare, John, Dudley, England. Cash register and indicator	480,521	Aug. 9	1235	310	60	829
Shallenberger, Oliver B., Rochester, assignor, by mesne assignments, to Westinghouse Electric and Manufacturing Company, Pittsburg, Pa. Meter for alternating electric currents	481,975	Sept. 6	82	21	60	1351
Shanahan, John J., assignor to National Worsted Mills, Providence, R. I. Stop-motion for looms	482,930	Sept. 20	1645	414	60	1683
Shanbeck, Cornelius C., Pettit, Ind. Fender	481,065	Aug. 16	2109	524	60	1014
Shane, George P., *et al.* (See Lucas, Austin H., assignor.)						
Shannon, Alexander M., Galveston, Tex. Breakwater, &c	480,988	Aug. 9	869	221	60	761
Sharp, Christopher C., Chicago, Ill. Apparatus for generating ozone	481,676	Aug. 30	3120	762	60	1235
Sharp, Edward A., Rogers Park, Ill. Document-file	481,593	Aug. 30	2993	733	60	1211
Sharp, Kelly N., Mozelle, Ga. Plow	479,992	Aug. 2	362	89, 90	60	650
Sharpe, John, Toronto, Canada. Cash indicator and register	482,760	Sept. 20	1388	344, 345	60	1632
Sharpsteen, Stephen H., Honesdale, Pa. Device for removing armatures	481,833	Aug. 30	3395	834	60	1288
Shattuck, Charles A., Malden, assignor of one-half to H. L. Ayer, West Newton, Mass. Coin-controlled vending-machine	482,142	Sept. 6	353	84, 85	60	1405
Shattuck, Laforest A., Bloomsburg, Pa. Fountain-pen	482,592	Sept. 13	1122	271	60	1568
Shaver, George F., Yonkers, N. Y. Telephony	479,227	July 19	1792	449	60	375
Shaver, George F., Yonkers, assignor of one-half to S. F. Sherman, New York, N. Y. Telephone	479,226	July 19	1791	449	60	375
Shaw, Charles H., Brooklyn, N. Y. Numbering-machine	478,241	July 5	290	71	60	59
Shaw, Charles H., Brooklyn, assignor to R. H. Thompson, New York, and H. D. Norris, Brooklyn, N. Y. Satchel or other receptacle	480,675	Aug. 9	1486	370	60	878
Shaw, Clifford. (See Peters, George T., assignor.)						
Shaw, Elmer F. (See Bowman and Shaw.)						
Shaw, Florentine S. (See Clark and Shaw.)						
Shaw, Frederick A., Boston, Mass. Translucent sculpture	478,765	July 12	1071	266	60	228
Shaw, George, assignor of one-half to S. H. Brooks, Manchester, England. Differential gearing	479,108	July 19	1608	401, 402	60	341
Shaw, Henry C., Joliet, Ill. Hydraulic crane	479,468	July 26	2205	553, 554	60	472
Shaw, John H., assignor to Sargent & Company, New Haven, Conn. Door-spring	478,370	July 5	484	116	60	96
Shaw, John H., assignor to Sargent & Company, New Haven, Conn. Door-check	478,371	July 5	485	117	60	96
Shaw, John H., assignor to Sargent & Company, New Haven, Conn. Door-check	478,372	July 5	487	117	60	96
Shaw, John H., assignor to Sargent & Company, New Haven, Conn. Meat-cutter	478,823	July 12	1176	291	60	248
Shaw, Joseph. (See Walker and Shaw.)						
Shaw, Thomas, Newark, N. J. Die for cutlery	479,668	July 26	2519	627	60	530
Shaw, Thomas, Newark, N. J. Knife-holder	479,669	July 26	2520	627	60	531
Shea, Christopher A., Boston, Mass. Plug spring-jack	481,204	Aug. 23	2342	577	60	1072
Shearer, Arthur B., Reno, Nev. Life-saving and pleasure craft	481,427	Aug. 23	2725	670	60	1143
Sheargren, John, Burlington, Iowa. Meat-chopping machine	478,647	July 12	891	221	60	192
Shedd, William J. (See Field and Shedd.)						
Sheedy, Dennis, Denver, Colo. Bag for catching metallic fumes	480,834	Aug. 16	1733	433	60	942
Sheedy, Dennis, and M. W. Iles, Denver, Colo. Device for collecting metallic fumes	483,176	Sept. 27	2041	516	60	1775
Sheesley, William. (See Wadsworth and Sheesley.)						
Sheldon, Park C. (See Brooks, Sidney R., assignor.)						
Shelley, Abram C., Blythebourne, N. Y. Velocipede	481,428	Aug. 23	2726	670	60	1143
Shelley, William E., *et al.* (See Jenkins, Wilton F., assignor.)						
Shepard, Charles H., Brooklyn, assignor to Remington Standard Type Writer Manufacturing Company, New York, N. Y. Type-writing machine	480,289	Aug. 9	870	222	60	761
Shepard, Charles H., Brooklyn, assignor to Remington Standard Type Writer Manufacturing Company, New York, N. Y. Type-writing machine	480,290	Aug. 9	873	222	60	761
Shepard, Charles H., Brooklyn, assignor to Remington Standard Type Writer Manufacturing Company, New York, N. Y. Type-writing machine	480,291	Aug. 9	875	222	60	762
Shepard, Jason H., *et al.* (See Patnoe, George W., assignor.)						
Shepherd, Thomas W., Peabody, Mass. Thermostat	479,849	Aug. 2	111	28	60	604
Sherburne, Charles W., Boston, Mass. Track-sanding apparatus	481,594	Aug. 30	2994	734	60	1212
Sherburne, Charles W., Boston, Mass. Track-sanding apparatus	481,595	Aug. 30	2996	734	60	1212
Sherer, Charles M., Lawrence, Kans. Separable button	478,174	July 5	163	42	60	34
Sherman, Myron W., West Brookfield, Mass. Corset	479,312	July 19	1916	479	60	400
Sherman, Thomas H., *et al.* (See Garland, Frank, M., assignor.)						
Sherman, Stephen F. (See Shaver, George F., assignor.)						
Shero, Christopher C., assignor of one-half to I. Shero, Sherman, Tex. Combined rake and portable baling-press	483,515	Sept. 27	2568	644, 645, 646	60	1875
Shero, Isaac. (See Shero, Christopher C., assignor.)						
Sherrod, Albert T. (See Arnold, Oscar M., assignor.)						
Shettler, Reuben, Port Huron, Mich. Clutch	481,205	Aug. 23	2344	577	60	1073
Shiels, Alexander, Glasgow, Scotland. Apparatus for automatically regulating temperature	478,373	July 5	489	117, 118	60	96
Shilling, Jesse, Jr., Troy, Ohio. Cistern or well cleaner	479,228	July 19	1793	449	60	376
Shimer, John M. R. (See Young and Willever, assignors.)						
Shinn, William J. (See Ogborn, Harrison, assignor.)						
Shipe, Walter S., assignor to J. Morrison, Toronto, Canada. Sheet-metal-rolling machine	480,440	Aug. 9	1112	278	60	804
Shirreff, Charles J., assignor to himself and J. M. Gill, Brockville, Canada. Window or door screen	481,066	Aug. 16	2111	525	60	1015
Shirreff, Charles J., assignor to himself and J. M. Gill, Brockville, Canada. Manufacture of screen-doors	481,067	Aug. 16	2112	525	60	1015
Shoecraft, Byron and J., St. Louis, Mo. Automatic signal device for railways	482,203	Sept. 6	450	111	60	1425
Shoecraft, Byron and J., St. Louis, Mo. Automatic block system for railways	483,479	Sept. 27	2504	631	60	1863
Shoecraft, Judson. (See Shoecraft, Byron and J.)						
Shoemaker, Milton, assignor of two-thirds to J. W. Martin, Sioux City, Iowa, and J. Passmore, Duncannon, Pa. Electric-railway conduit	478,175	July 5	164	42	60	35

Alphabetical list of patentees, July to September, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Short Electric Railway Company. (See Short, Sidney H., assignor.)						
Short, Sidney H., Cleveland, Ohio. Electric locomotive	478,477	July 5	637	155, 156	60	127
Short, Sidney H., Cleveland, Ohio. Arc-extinguisher for electric switches	478,718	July 12	989	245	60	213
Short, Sidney H., assignor to Short Electric Railway Company, Cleveland, Ohio. Electric locomotive	478,242	July 5	293	71	60	59
Short, Sidney H., assignor to Short Electric Railway Company, Cleveland, Ohio. Motor-frame for electric locomotives	479,469	July 26	2207	554	60	473
Shorthill, Albert E. (See Travis, Owen J., assignor.)						
Shostak, Joseph, Milwaukee, assignor of one-half to J. Rubin, Whitewater, Wis. Cleaning boiler-flues	478,824	July 12	1178	291, 292	60	248
Shoup, James T., Jr., Springfield, Ohio. Wind-machine	479,993	Aug. 2	363	90	60	650
Showman, Henry F., Newark, Ohio. Beehive	479,725	July 26	2627	652	60	550
Shuff, Bernard, *et al.* (See Christy, James A., assignor.)						
Shreeve, John, *et al.* (See Marshall, William M., assignor.)						
Shreffler, Samuel, Jr., Joliet, Ill. Door-hanger	482,530	Sept. 13	1029	249	60	1550
Shrier, Isaac, Wilmington, N. C. Hat-gage	478,291	July 5	364	88	60	73
Shriver, William, Philadelphia, Pa. Slate-pencil sharpener	478,374	July 5	492	119	60	97
Shull, John H., and G. S. Dorney, Findlay, Ohio. Conveyer	480,939	Aug. 16	1887	472	60	973
Shuman, Frank, Philadelphia, Pa. Machine for embedding wire-netting in glass	483,020	Sept. 20	1799	454	60	1714
Shuman, Frank, Philadelphia, Pa. Embedding wire-netting in glass	483,021	Sept. 20	1801	454	60	1714
Shurmon, James D., Paint Rock, Tex. Rein-holder	478,375	July 5	493	119	60	97
Siar, William, and C. H. Dunn, Seneca, Pa. Bicycle-support	480,441	Aug. 9	1114	279	60	804
Sibley, Herbert J., Chicago, Ill. Dinner-bucket	482,761	Sept. 20	1399	345	60	1633
Siebert, Alfred, New York, N. Y. Pump	482,416	Sept. 13	834	200	60	1512
Siebert, Alfred, New York, N. Y. Gas-compressor	483,268	Sept. 27	2215	556	60	1807
Siemens Brothers & Co. (See Nebel, John, assignor.)						
Siemens & Halske. (See Wörner, Adolf, assignor.)						
Sievert, Henry H., assignor to L. Wolff Manufacturing Company, Chicago, Ill. Water-closet seat and cover	480,292	Aug. 9	876	223	60	762
Siglin, Nelson, Aurelia, Iowa. Hame-tug	480,629	Aug. 9	1415	352	60	864
Siller, Frederick S., Milwaukee, Wis. Game apparatus	482,484	Sept. 13	949	231	60	1533
Simcox, Thomas W., Fostoria, Ohio. Loose or idle pulley	478,292	July 5	365	89	60	73
Simmons, Abner. (See Gray and Simmons.)						
Simmons, Henry L., St. Day, England. Guard-shoe for railway-vehicles	481,068	Aug. 16	2112	525	60	1015
Simmons, William A., Buffalo, N. Y. Hame	482,656	Sept. 13	1206	294	60	1584
Simons, Thomas A., Columbus, Ohio. Cooking utensil	478,243	July 5	295	72	60	59
Simonson, James H., *et al.* (See Van Derzee, Cornelius, assignor.)						
Simonton, Thomas C., assignor of one-half to T. C. Simonton, Jr., Paterson, N. J. Machine for extracting gold from pulverized ores, &c	478,971	July 12	1381	341	60	288
Simpson, Alfred L., New York, N. Y. Acoustic telephone	479,736	July 26	2630	652	60	550
Simpson, Frederick, Boston, Mass. Voltaic glove	478,293	July 5	366	89	60	74
Simpson, Peter P., Henderson, assignor of one-half to W. J. Arnett, Mountain Home, Ark. Cotton-planter	482,277	Sept. 6	581	138	60	1448
Simpson, Washington, Argentine, Kans., and J. George, St. Joseph, Mo. Seal lock	481,206	Aug. 23	2345	578	60	1073
Simpson, William B., Benton, La. Water-elevator	483,396	Sept. 27	2402	604	60	1842
Sinclair, Finlay, Coventry, England, assignor to Pneumatic Tyre and Booth's Cycle Agency, Limited, Dublin, Ireland. Pneumatic tire	480,349	Aug. 9	965	244	60	777
Sinclair, James M., *et al.* (See Clow, William, assignor.)						
Singer Manufacturing Company of New Jersey. (See Diehl, Philip, assignor.)						
Singer Manufacturing Company of New Jersey. (See Douglas, John, assignor.)						
Singer Manufacturing Company of New Jersey. (See French, Charles A., assignor.)						
Singer Manufacturing Company of New Jersey. (See Greene, James G., assignor.)						
Singer Manufacturing Company of New Jersey. (See Steward, Hiram P., assignor.)						
Singer Manufacturing Company of New Jersey. (See Vannette, Jasper, assignor.)						
Sinn, Remy, Paris, France. Envelope-card	478,825	July 12	1179	292	60	249
Sinning, Charles, assignor to Sinning Lasting Machine Company, St. Louis, Mo. Lasting-machine	480,145	Aug. 2	615	156	60	700
Sinning Lasting Machine Company. (See Sinning, Charles, assignor.)						
Sintzenich, Edwin B., Rochester, N. Y. Balanced slide-valve	478,719	July 12	990	246	60	213
Sipe, Thalia E., Allegheny, Pa. Tracing-tool	481,721	Aug. 30	3205	783	60	1252
Sipp, Edward. (See Salick and Sipp.)						
Sisson, Isaac H., Providence, R. I. Button-setting machine	482,709	Sept. 13	1283	315	60	1600
Skanks, George W., assignor of one-half to G. D. Emery, Chelsea, Mass. Clothes-holder	482,531	Sept. 13	1030	249	60	1550
Skeel, Frank D., New York, N. Y. Milling attachment for lathes	478,244	July 5	296	72	60	60
Skekel, Donald, Georgetown, British Guiana. Cane-mill	480,522	Aug. 9	1237	311	60	830
Skilton, John W. (See Burt and Skilton.)						
Skinner, David. (See Gately and Skinner.)						
Skinner, Gardiner M., Clayton, N. Y. Spoon-bait	479,575	July 26	2375	592	60	503
Skinner, George C., Troy, Ohio. Brick or tile machine die	478,136	July 5	86	23	60	20
Skobis, Frank. (See Skobis, Joseph and F.)						
Skobis, Joseph and F., Milwaukee, Wis. Ventilator	482,389	Sept. 13	794	191	60	1505
Skorpil, Eduard, Nagy-Ugrocz, Austria-Hungary. Potato-planter	478,137	July 5	88	23	60	20
Slager, Albert L., assignor to G. S. Foos Company, Springfield, Ohio. Clutch	480,748	Aug 16	1601	401	60	916
Slangerup, August F., New Orleans, La. Apparatus for bleaching cane-juice	483,022	Sept. 20	1802	455	60	1715
Slater, John G. (See Hill, Ezra N., assignor.) (Reissue.)						
Slater, John S., Calcutta, India. Armillary sphere	482,278	Sept. 6	582	139	60	1448
Slater, William W., and H. C. Barnes, Oakland, Cal. Pneumatic electric-circuit-controlling and interlocking apparatus	481,430	Aug. 23	2729	671	60	1144
Slattery, Jeremiah J., Lansingburg, N. Y. Dust-beater	480,389	Aug. 9	1033	259	60	790
Slawson, Randolph E., Davenport, Nebr. Automatic gate	482,462	Sept. 13	906	220	60	1525
Sleeper, Francis H., Waterville, assignor to A. O. Norton, Coaticook, Canada. Screw-jack	479,850	Aug. 2	113	28	60	604
Sleeper, Frank S., Duluth, Minn. Curling or crimping iron	482,501	Sept. 13	978	237	60	1540
Sleight, William E., assignor to United States Swing Treadle Company, Milwaukee, Wis. Swinging treadle for organs	481,976	Sept. 6	83	21	60	1351
Slingland, Charles. (See Kuett and Slingland.)						
Sloan, Percy H. (See Higgins, Frank L., assignor.)						
Sloan, Sextus, Painesville, Ohio. Device for converting motion	483,177	Sept. 27	2042	516	60	1775
Sloane, George W., Brooklyn, N. Y. Steam-generator	481,069	Aug. 16	2113	526	60	1015
Sloat, Oliver M., Brooklyn, N. Y. Bridle-bit	479,670	July 26	2521	627	60	531
Slocum, James, Holly, Mich. Typograph attachment	483,023	Sept. 20	1803	455	60	1715
Slocum, Martha E., Meadville, Pa. Velocipede	481,070	Aug. 16	2114	526	60	1016

Snell, Edwin, Jr., Boston, Mass. Electric-arc lamp	481,246	Aug. 23	2385	578	60	1073
Snell, Edwin, Jr., Boston, Mass. Electric-arc lamp	481,247	Aug. 23	2386	578	60	1073
Snell, Edwin, Jr., Boston, Mass. Electric-arc lamp	481,

Alphabetical list of patentees, July to September, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Smalley, E. R. (See Carrick, James C., assignor.)						
Smallfield, Henry A., Kansas City, Mo., and H. Edwards, Kansas City, Kans. Sausage twisting and linking machine	480,293	Aug. 9	877	223, 224	60	762
Smallwood, Charles, Birmingham, Ala. Spark-arrester for electric-arc lamps	479,994	Aug. 2	366	91	60	650
Smallwood, George T., Washington, D. C., assignor of one-half to O. Cole, Rochester, N. Y. Toy or puzzle	479,158	July 19	1683	421	60	335
Smallwood, George T., Washington, D. C., assignor of one-half to O. Cole, Rochester, N. Y. Bicycle	479,470	July 26	2208	554, 555	60	473
Smart, Albert J., *et al.* (See Kilbourn, Washington H., assignor.)						
Smart, John W., and T. C. Cheatham, Burnet, Tex. Device for cooling milk, meat, vegetables, &c	478,720	July 12	992	246	60	213
Smead, Isaac D., Toledo, Ohio. Urinal	478,648	July 12	892	221	60	192
Smeal, Wilson B., Grahamton, Pa. Snap-hook	479,026	July 19	1479	368	60	317
Smedley, Edwin Dubuque, Iowa. Steam-actuated air-pump	482,814	Sept. 20	1461	362, 363	60	1647
Smith, Abia B., Pittsburg, Pa. Fruit-tree protector	481,311	Aug. 23	2547	625	60	1109
Smith, Albert, Colorado Springs, Colo. Apparatus for cooling water in the manufacture of ice	483,397	Sept. 27	2403	604	60	1842
Smith, Albert H., *et al.* (See Dow, Herbert H., assignor.)						
Smith, Albert M., Meadville, Pa. Machine for applying hose connections	482,593	Sept. 13	1125	271, 272	60	1568
Smith, Andrew J., assignor of one-half to C. Kroemke, St. Louis, Mo. Automatic release for cable-grippers	481,431	Aug. 23	2732	671	60	1144
Smith, Andrew J., assignor of one-half to T. H. Wurmb, St. Louis, Mo. Automatic gipsy for cable railways	482,279	Sept. 6	584	139	60	1449
Smith, Charles, assignor of one-half to W. R. Mills, Chicago, Ill. Smoke-preventer	480,630	Aug. 9	1416	353	60	865
Smith, Charles E., *et al.* (See Egge, Frederick, assignor.)						
Smith, Daniel E., Mobile, Ala. Trace-fastener	482,762	Sept. 20	1400	345	60	1633
Smith, Dwight L., assignor of one-half to E. A. Smith, Waterbury, Conn. Buckle	478,826	July 12	1179	292	60	249
Smith, Earl A. (See Smith, Dwight L., assignor.)						
Smith, Edgar W., and C. Sax, Morris, Minn. Spark-arrester	480,390	Aug. 9	1034	259	60	790
Smith, Edward C., and J. Brady, Brooklyn, N. Y., assignors to Smith Portable Rail Saw Company, of New Jersey. Rail-sawing machine	481,874	Aug. 30	3456	848	60	1301
Smith, Eugene C., New York, N. Y. Structural blank	481,207	Aug. 23	2349	578, 579	60	1074
Smith, Frank L. M., and W. J. Bryan, Chicago, Ill. Apparatus for producing variegated lights	479,673	July 26	2525	628, 629	60	531
Smith, Fred E., Boston, Mass. Valve-gear	481,072	Aug. 16	2117	527	60	1016
Smith, George. (See Garbutt, Hiram J., assignor.)						
Smith, George E. (See Blake, Smith, and Doig.)						
Smith, George H., Chicago, Ill. Pulverizer	481,532	Aug. 23	2899	712	60	1178
Smith, George K., Chipman, Tenn. Car-coupling	480,631	Aug. 9	1417	353	60	865
Smith, Georgia V., Princeton, Ill. Skirt-supporter	480,523	Aug. 9	1239	311	60	830
Smith, Hampton K., Union, S. C. Car-coupling	481,071	Aug. 16	2115	527	60	1016
Smith, Harry L., *et al.* (See Dow, Charles H., assignor.)						
Smith, Henry A., Detroit, Mich. Cast-iron sectional boiler	482,657	Sept. 13	1207	294, 295	60	1584
Smith, Henry C., Roanoke, Va. Spark-arrester	478,207	July 5	215	54	60	44
Smith, Henry F., Neenah, Wis. Fish-net	483,400	Sept. 27	2406	605	60	1843
Smith, Henry G. A., Buffalo, N. Y. Pick for stringed instruments	479,672	July 26	2522	628	60	531
Smith, Henry T., Pawtucket, R. I. Pen or pencil holder and making the same	481,534	Aug. 23	2901	712	60	1179
Smith, Henry V., South Yarra, near Melbourne, Victoria. Magnetic lock	478,245	July 5	298	72	60	60
Smith, Homer H. and W. L., Gloversville, N. Y. Glove	480,478	Aug. 9	1179	296	60	817
Smith, Israel C., and E. E. Herrinton, Grand Rapids, Mich. Wardrobe-bed	479,471	July 26	2213	556	60	474
Smith, James B., Brooklyn, assignor to E. Todd & Co., New York, N. Y. Pencil-case	480,479	Aug. 9	1180	296	60	818
Smith, James C., and C. Lardner, Topeka, Kans. Self-acting dumping apparatus	482,390	Sept. 13	796	191	60	1505
Smith, James G., New York, N. Y. Telegraphy	481,247	Aug. 23	2424	598, 599, 600	60	1088
Smith, John M., assignor of one-half to P. H. Gunckel, Minneapolis, Minn. Flax-thrasher	478,542	July 5	746	182	60	148
Smith, John R., Neosho, Mo. Machine for painting barbed-wire fences	483,503	Sept. 27	2543	639	60	1871
Smith, John T., San Francisco, Cal. Railway-rail	478,766	July 12	1072	266	60	229
Smith, John T., San Francisco, Cal. Oil-cup	481,312	Aug. 23	2548	625	60	1109
Smith, John W., Boston, Mass. Hair-clipper	481,977	Sept. 6	85	22	60	1351
Smith, Julius, Tom's River, N. J. Ring-holder	483,399	Sept. 27	2405	605	60	1842
Smith, Mark A. (See Ridgely and Smith.)						
Smith, Melvin L., assignor of one-half to S. B. Smith, Muncie, Ind. Wheel-hub casting	480,044	Aug. 2	464	117	60	670
Smith, Oliver C., *et al.* (See Egge, Frederick, assignor.)						
Smith, Orson J. (See Johnson and Smith.)						
Smith, Peter V., New York, N. Y. Umbrella-stand	479,671	July 26	2522	628	60	531
Smith & Phillips Manufacturing Company. (See Phillips, Francis V., assignor.)						
Smith Portable Rail Saw Company. (See Smith and Brady, assignors.)						
Smith, Robert D. O. (See Dodge and Smith.)						
Smith, Robert T. (See Monroe, David M., assignor.)						
Smith, Roswell T., Nashua, N. H. Street-railway switch	479,028	July 19	1482	369	60	317
Smith, Samuel, assignor to J. B. Jackson and G. Bentley, Bury, England. Molding-machine	478,377	July 5	494	119, 120	60	97
Smith, Samuel, assignor of two-thirds to J. T. McKone and C. E. Hill, Lawrence, Mass. Railway time-signal	481,533	Aug. 23	2900	712	60	1178
Smith, Sarah, Toledo, Ohio. Cooking utensil	478,376	July 5	494	119	60	97
Smith, Sarah A., Philadelphia, Pa. Bed-pan	481,375	Aug. 23	2632	647	60	1125
Smith, Sarah B. (See Smith, Melvin L., assignor.)						
Smith, Sheffield. (See Hancock, George, assignor.)						
Smith, Thomas. (See Chambers and Smith.)						
Smith, Thomas, Philadelphia, Pa. Railway-crossing	479,027	July 19	1481	368	60	317
Smith, Thomas G., Malmesbury, and F. W. Mayhew, London, England. Side saddle	481,073	Aug. 16	2118	527	60	1017
Smith, Thomas L. (See Kempsmith and Smith.)						
Smith, Thomas M., Bend, Tex. Gate	483,398	Sept. 27	2404	604	60	1842
Smith, Wesley, Toledo, Ohio, assignor to C. W. Morris, Jr., trustee, and C. W. Morris, Boston, Mass. Smoke-consuming apparatus for boiler and other furnaces	479,767	July 26	2698	672	60	563
Smith, William C. (See O'Donnell, Smith, and Bound.)						
Smith, William C., Goshen, Ind. Spring-tire	479,851	Aug. 2	114	28	60	605
Smith, William D. (See Higgins and Smith.)						
Smith, William H. M., Brooklyn, N. Y. Planer for ice-elevators	482,206	Sept. 6	467	112	60	1426

Thomson-Houston Electric Company. (See Sperry, Elmer A., assignor.)						
Thomson-Houston Electric Company. (See Thomson, Elihu, assignor.)						
Thomson-Houston Electric Company. (See Van Depoele, Charles J., assignor.)						
Thomson, Judson L., assignor to Judson L. Thomson Manufacturing Company, Waltham, Mass. Rivet	481,123	Aug. 16	2196	543	60	1031
Thomson, Judson L., assignor to Judson L. Thomson Manufacturing Company, Waltham, Mass. Lacing-stud	481,124	Aug. 16	2197	544	60	1031
Thornton, John B. (See Gninn, John L., assignor.)						
Thornton, John E., assignor of one-half to E. Pickard, Manchester, England. Photographic shutter	482,854	Sept. 20	1521	378	60	1659
Thornton, William, Chattanooga, Tenn. Clothes-wringer	480,297	Aug. 9	887	225	60	763
Thorp, Adelbert H., Toledo, Ohio. Railway time-signal	481,723	Aug. 30	3207	783	60	1252
Thorp, Henry H., Cleveland, Ohio. Bicycle	478,770	July 12	1077	268	60	230
Thorp, Thomas J. (See Adams and Thorp.)						
Thuener, William, Jr., and P. Herchenbach, assignors to Star Cornice and Furnace Company, St. Louis, Mo. Hot-air furnace	479,769	July 26	2701	673	60	564
Thum, Mandeville, Louisville, Ky. Safety device for electric circuits	479,035	July 19	1494	372	60	320
Thurston, Harrison F., Centre Bartlett, N. H. Culinary vessel	481,316	Aug. 23	2552	626	60	1110
Thurston, John L., Somerville, and F. B. How, Boston, Mass. Outlet-valve for set bowls	482,534	Sept. 13	1035	250, 251	60	1551
Thurston, Minnettie R., Kalamazoo, Mich. Cylindrical sewing-machine needle	480,150	Aug. 2	622	157	60	701
Tibbits, James H. (See Brown, George H., assignor.)						
Tidblad, Carl E., Jamaica Plain, Mass. Valve-gear	482,399	Sept. 13	909	194	60	1508
Tiffany Chemical Company. (See Tiffany, Walton C., assignor.)						
Tiffany, Walton C., New York, N. Y., assignor of one-half to B. Cameron, Tucson, Ariz. Ter. Making tanning-extracts	480,376	Aug. 9	1011	.....	60	786
Tiffany, Walton C., New York, N. Y., assignor to Tiffany Chemical Company, of New York. Hydrometer	480,480	Aug. 9	1181	297	60	818
Tilden, Frank W. (See Merriman and Tilden.)						
Tilton, Abram, Brooklyn, and A. Hormel, New York, N. Y. Machine for decorating wood	482,855	Sept. 20	1523	378	60	1660
Timm, Charles. (See Woodward and Timm.)						
Timms, Charles H., assignor of one-half to C. Johnson, John Day, Oreg. Door-check	480,222	Aug. 2	750	189	60	724
Tindall, Augustus, Brenton, Ill. Cultivator	480,529	Aug. 9	1250	314	60	832
Tiner, John F., assignor to himself and R. C. Houston, Lavernia, Tex. Spring draft attachment	479,681	July 26	2541	633	60	534
Tingley, David S., *et al.* (See Marvick, Frederick N., assignor.)						
Tinkler, Thomas, Whitchurch, Canada. Plow	479,036	July 19	1495	372	60	320
Tinsley, William J., Brooklyn, N. Y. Printer's quoin	483,185	Sept. 27	2059	520	60	1778
Titus, John C., assignor of one-half to New Bremen Machine Company, New Bremen, Ohio. Brick or tile machine	478,267	July 5	330	80	60	66
Tobey, Charles W., assignor to Burt & Tobey, New Bedford, Mass. Rheostat	480,151	Aug. 2	623	158	60	701
Tobey, Charles W., assignor to Burt & Tobey, New Bedford, Mass. Electric-cord tip	480,152	Aug. 2	627	159	60	702
Tobey, Fred W., assignor to Grand Rapids Brass Company, Grand Rapids, Mich. Screw-driving and washer-feeding machine	480,530	Aug. 9	1251	314, 315	60	832
Tobey, Samuel W., assignor to himself and C. J. Furer, Fairfield, Nebr. Milk-cooler	478,482	July 5	643	158	60	128
Todd, Charles A. (See Adams, Joseph C., assignor.)						
Todd & Co., Edward. (See Smith, James B., assignor.)						
Todd Cotton Harvester Company. (See Todd, George N., assignor.)						
Todd, George N., Chicago, Ill., assignor to Todd Cotton Harvester Company, of Illinois. Picker-stem and mechanism for operating the same	483,121	Sept. 20	1945	492	60	1745
Todd, John W., Portland, Oreg. Saw-tooth	481,836	Aug. 30	3400	835	60	1289
Todd, Paul P. (See Doremus, Victor E., assignor.)						
Todd, Richard, Manchester, England. Feed-regulating attachment for sewing-machines	478,660	July 12	907	225	60	195
Toledo Tin-Ware Manufacturing Company. (See Stollberg, Charles, assignor.)						
Tom, Joseph C., Pontotoc, Tex. Pump	483,406	Sept. 27	2416	607	60	1845
Tompkins, Cornelius B., assignor to himself, W. W. and S. D. Tompkins, Elmira, N. Y. Dry closet	482,987	Sept. 20	1742	440	60	1702
Tompkins, Jordan W., Amesbury, Mass. Reamer	479,682	July 26	2542	633	60	534
Tompkins, Stewart D., *et al.* (See Tompkins, Cornelius B., assignor.)						
Tompkins William W., *et al.* (See Tompkins, Cornelius B., assignor.)						
Tong, James H., assignor of seven-fifteenths to J. F. De Lassus, St. Louis, Mo. Car-brake	480,910	Aug. 16	1848	460	60	966

Weissenthanner, Achille, Paris, France. Jar	483 033	Sept. 20	1818	462	60	1718
Welch, Everett C., Friedens, Pa. Car-coupling	481,449	Aug. 23	2758	678	60	1149
Welch, Henry T. (See Bailey and Welch.)						
Welch, John S. (See Hinkley and Welch.)						
Welch, Robert K., assignor of one-half to G. E. Schlegelmilch, Philadelphia, Pa. Pipe-welding machine	478,669	July 12	919	228	60	197
Welch, Robert K., assignor of one-half to G. E. Schlegelmilch, Philadelphia, Pa. Pipe-flanging machine	478,670	July 12	921	229	60	198
Welch, Rosia W., assignor of two-thirds to W. A. Dunn and L. D. Passano, Baltimore, Md. Grain-scouring machine	480,042	Aug. 16	1891	473	60	974
Welker, Louis, Williamsport, Pa. Fastening for table-legs	480,536	Aug. 9	1262	317	60	835
Wellborn, Samuel H., Centre Point, Texas. Trace-carrier	479,160	July 19	1685	421	60	356
Welleba, Franz, Sr. and Jr., and L. Wächter, Vienna, Austria-Hungary. Advertising-clock	479,687	July 26	2547	634 / 635	60	535
Weller, George L., assignor to P. Foster and E. K. Mussey, Elyria, Ohio. Rock-drilling tool	479,041	July 19	1503	373	60	322
Weller, Gustavus A., assignor of one-half to C. L. Diesterweg, La Salle, Ill. Vending-machine	479,688	July 26	2552	635	60	536
Weller, Joel H., Boyertown, Pa. Alarm-bell for doors	480,001	Aug. 2	373	93	60	652
Wells, Harlan P., assignor of one-half to O. Morrill, Amesbury, Mass. Carriage	480,307	Aug. 9	908	229	60	767
Wells, John C. (See Bevin and Wells.)						
Wells, John C., East Hampton, Conn. Bell	483,332	Sept. 27	2311	581	60	1824
Wells, Lorenzo D., Morrisonville, Ill. Straw-stacker	482,513	Sept. 13	992	240	60	1543
Wells, Samuel J., *et al.* (See Marvick, Frederick N., assignor.)						
Wellsford, C. M. (See Citizen, Samuel P., assignor.)						
Wellstein, Joseph, and M. E. Maxfield, Milwaukee, Wis. Pneumatic tire	481,681	Aug. 30	3131	764	60	1238
Welsh, Thomas W., Wilmerding, Pa. Packing	480,643	Aug. 9	1436	358	60	869
Welty, Almond R., Shreve, Ohio. Picket-wiring fence-machine	481,086	Aug. 16	2134	531	60	1020
Welz, Franz, Klostergrab, Austria-Hungary. Manufacture of rose or orange stained glass	479,689	July 26	2553	.....	60	536
Wendell, Henry A. (See Wendell, Isaac P. and H. A.)						
Wendell, Isaac P. and H. A., assignors of one-third to W. R. Murphey, Philadelphia, Pa. Axle-lubricator	483,333	Sept. 27	2311	581	60	1825
Wendt, Henry D., Hoboken, N. J. Combined grate-bar and feed-water heater	478,726	July 12	999	248	60	215
Wenman, Joseph E., East Liverpool, Ohio. Medical and surgical cabinet	478,830	July 12	1185	293 / 294	60	250
Wennberg, John, Fertile, Minn. Sled-brake	482,029	Sept. 6	177	42	60	1369
Wenstrau, Swan P., and E. R. Blood, assignors to M. P. Blood, Ludlow, Pa. Making lamp-black	478,268	July 5	332	80	60	67
Wentworth, Richmond A., Hope, Me. Lamp-burner	481,607	Aug. 30	3020	738	60	1216
Wentz, Joseph H., Baraga, Mich. Scraper for hand-saw pulleys	478,148	July 5	115	29	60	26
Werline Electrical Specialty Company. (See Werline, Henry E., assignor.)						
Werline, Henry E., Lancaster, assignor to Werline Electrical Specialty Company, York, Pa. Incandescent-electric-lamp socket	478,149	July 5	116	29	60	26
Werner, Franz P., Munich, Germany. Producing an imitation of brocade or gold cloth	482,604	Sept. 13	1138	.....	60	1571
Werner, John H. (See Botsford, Frederick G., assignor.)						
Wertheimer, Lewis J., *et al.* (See Monday, Robert, assignor.)						
West, Derrick S., assignor of three-fourths to J. W. Drew, Boston, Mass., and C. H. Fish, Manchester, N. H. Breech-loading firearm	478,727	July 12	1001	248	60	215
West, Derrick S., assignor of three-fourths to J. W. Drew, Boston, Mass., and C. H. Fish, Manchester, N. H. Magazine breech-loading gun	478,728	July 12	1007	249	60	216

Weston, Edward, Newark, N. J. Electrical measuring-instrument	484,896	Aug. 16	1825	454, 455	60	961
Weston, Edward, Newark, N. J. Electrical measuring-instrument	480,897	Aug. 16	1829	455	60	961
Weston, Edward, Newark, N. J. Electrical measuring-instrument	480,898	Aug. 16	1831	456	60	962
Weston, Edward, Newark, N. J. Electrical measuring-instrument	480,899	Aug. 16	1832	456	60	962
Weston, Edward, Newark, N. J. Adapter or plug for incandescent-lamp circuits	480,900	Aug. 16	1835	457	60	963
Weston Engine Company. (See Longenecker, Charles K., assignor.)						
Weston, Frank C., Bangor, Me. Cyclometer	481,608	Aug. 30	3021	738	60	1216
Weston, John A., Providence, R. I. Latch for extension-ladders	478,384	July 5	503	122	60	99
Westover, Rollin B. L., Rutland, Vt. Roofing and siding screw or fastening	481,724	Aug. 30	3209	784	60	1252
Westphalen, Rudolf G., Vienna, Austria-Hungary. Metallic covering-plate	483,243	Sept. 27	2145	.....	60	1795
Westwood, John T., assignor to Wheeling Novelty Manufacturing Company, Wheeling, W. Va. Refrigerator and elevating cupboard	480,863	Aug. 16	1777	444	60	951
Wetherill, William H., Philadelphia, Pa. White-lead corroding-pit	478,898	July 12	1268	313	60	266
Wetmore, Jerome W., Erie, Pa. Vehicle-spring	478,488	July 5	651	159	60	130
Wetzel, Lewis C., Scottdale, Pa. Die-plate	482,933	Sept. 20	1649	415	60	1684
Weyburn, Elbert D., *et al.* (See Robertson, William, assignor.)	481,450	Aug. 23	2759	679	60	1150
Weyburn, Elbert D., assignor to Weyburn Special Machine Company, Chicago, Ill. Power-transmitting device	481,968	Sept. 6	101	25	60	1354
Weyburn Special Machine Company. (See Weyburn, Elbert D., assignor.)						
Whallon, Clement V, assignor of one-half to I. N. Booker, North Star, Ohio. Animal-poke	483,190	Sept. 27	2066	522	60	1779
Wharton, John C., and J. W. Braid, Nashville, Tenn. Electric signaling device for fire-hose	479,540	July 26	2324	581	60	495
Wharton, Joseph G., Harrisburg, Pa. Brake-shoe	478,671	July 12	922	229	60	198
Wharton, Richard, assignor of two-thirds to G. F. and J. B. Patterson, Philadelphia, Pa. Loom-picker	481,339	Aug. 23	2587	635	60	1116
Wheat, Edmond C., assignor of three-eighths to J. A. Best, Colmesneil, Tex. Motor	478,774	July 12	1084	269	60	231
Wheeler, Benjamin L. (See Ellis, Edward E., assignor.)						
Wheeler, Charles L., Jr., Bradford, Pa. Stopper for inkstands	482,051	Sept. 6	210	50	60	1376
Wheeler, David C., and W. W. Sperry; said Sperry assignor to D. Wheeler, Bridgeport, Conn. Nut-cracker	483,334	Sept. 27	2313	581	60	1825
Wheeler, Dwight. (See Wheeler and Sperry, assignors.)						
Wheeler, George A., New York, N. Y. Elevator	479,864	Aug. 2	132	32, 33	60	608
Wheeler, John H., Saugatuck, Mich. Multiplex musical instrument	481,451	Aug. 23	2760	679	60	1150
Wheeler, Schuyler S., assignor to Crocker-Wheeler Electric Company, New York, N. Y. Electrical spool	480,681	Aug. 9	1498	373	60	880
Wheeler & Wilson Manufacturing Company. (See Dial, Wilbur F., assignor.)						
Wheeler & Wilson Manufacturing Company. (See Dimond, George H., assignor.)						
Wheeling Novelty Manufacturing Company. (See Westwood, John T., assignor.)						
Whinfield, John H. R., and J. Horne, London, England. Gun carriage or mounting	478,899	July 12	1269	314, 315, 316	60	266
Whitcomb, Truman H., *et al.* (See June, Marcus M., assignor.)						
White, Daniel. (See Sage, Alfred C., assignor.)						
White, Edward D., Hartford, Conn. Spokeshave	483,294	Sept. 27	2255	567	60	1814
White, Henry, Bellville, Ohio. Road-locomotive	480,757	Aug. 16	1612	405	60	919
White, Holden B., *et al.* (See Moss, Julian, assignor.)						
White, James, Cleveland, Ohio. Safe-lock	481,319	Aug. 23	2555	627, 628	60	1111
White, James H. (See Dubbs, Jesse A., assignor.)						
White, John, Allegheny, assignor of one-half to J. L. Brown Company, Pittsburg, Pa. Corrugating-machine	483,192	Sept. 27	2068	522	60	1780
White, John B. (See Thompson, Robert J., assignor.)						
White, John D., Worthington, Iowa. Swinging gate	479,905	Aug. 2	194	48	60	620
White, Peter L., Grand Rapids, Mich. Bedstead	479,043	July 19	1506	375	60	323
White, Robert H., Madison, Ind. Window	480,682	Aug. 9	1500	373, 374	60	880
White, Samuel K. (See Lockwood and White.)						
White, Samuel T. (See Gardner, Fulton, assignor.)						
Whitehead, Rupert. (See Gilchrist, Raymond B., assignor.)						
Whitehead, William H., Erie, Pa. Sheet-metal-oven bottom for ranges	479,770	July 26	2703	673	60	565

Alphabetical list of patentees, July to September, inclusive—Continued.

Name, residence, and invention.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.

Whiteley, William H., Darby, Pa. Solar or other bath	478,385	July 5	504	122	60	100
Whiteley, William H., Darby, Pa. Apparatus for degumming silk or other fibers	483,335	Sept. 27	2314	581	60	1825
Whitfield, Samuel A., Chicago, Ill. Thill-coupling	480,052	Aug. 2	475	120	60	673
Whiting Manufacturing Company. (See Osborne, Charles, assignor.)						
Whiting & Son, John L. (See Wolcott, Arthur H., assignor.)						
Whitlock, Daniel, Newark, N. J. Pegging-jack	483,191	Sept. 27	2067	522	60	1780
Whitlock, Sturges, Shelton, Conn. Mechanism for operating beds of printing-machines	479,382	July 19	2043	510	60	426
Whitman, Willard O., Boston, Mass. Combined automatic relief and vacuum air-valve for radiators	478,489	July 5	652	160	60	130
Whitney, Christopher F., Newton, Mass. Aluminium alloy	480,445	Aug. 9	1123	.....	60	806
Whittall, Matthew J. (See Giles, Joseph S., assignor.)						
Whittelsey, Elbert A., *et al.* (See Appleton, Charles J., assignor.)						
Whittier Machine Company. (See Clark, John H., assignor.)						
Whitus, Charles. (See Wilks and Whitus.)						
Whitworth, Charles E., assignor of two-thirds to T. Hill and J. W. Buckley, Worcester, Mass. Wire puzzle	479,145	July 19	1666	416	60	352
Whitworth, Thomas A. (See Wilson, James N., assignor.)						
Whitworth, William, Worcester, Mass. Grate	478,775	July 12	1087	269	60	232
Wiard, Frederick, assignor of one-half to J. W. Pratt, Batavia, N. Y. Plow	479,927	Aug. 2	235	59	60	628
Wiberg, Peter, New York, N. Y. Baby-walker	481,609	Aug. 30	3022	739	60	1216
Wiborg, Pehr Jr., Boston, Mass. Potato-digger	481,645	Aug. 30	3072	750	60	1220
Wickers, Barney C., assignor of one-half to A. Wysong, Lebanon, Ind. Fence-wire tightener	481,880	Aug. 30	3466	850	60	1303
Widman, Nicholas, Mascoutah, Ill. Rock-drilling machine	481,610	Aug. 30	3023	739	60	1217
Wieden, Arthur. (See Brunkhurst, Wieden, and Richards.)						
Wiener, Paul, Chicago, Ill. Picture-frame	481,217	Aug. 23	2370	583	60	1079
Wiest, Isaiah D. (See Malin and Wiest.)						
Wiest, Jonas H. (See Malin and Wiest.)						
Wigert, David, Greenbush, Ill. Animal-trap	479,161	July 19	1686	422	60	356
Wigg, Edmund T., assignor of one-fourth to T. H. Robinson, London, Canada. Burner	482,145	Sept. 6	363	86, 87	60	1407
Wightman, Merle J., Scranton, Pa. Armature for dynamo-electric machines	480,537	Aug. 9	1264	317	60	835
Wilber, Crawford. (See Beugler, John B., assignor.)	479,179	July 19	1719	431	60	362
Wilcox, George L., H. F. Hallenbeck, and T. Wandell, Albany, Oreg. Cloth-measuring machine	478,531	July 5	726	177, 178	60	144
Wilcox, Margaret A., assignor to Wilcox Water Heater Company, Chicago, Ill. Combined cooking and hot-water-heating stove	482,772	Sept. 20	1410	348, 349	60	1635
Wilcox Water Heater Company. (See Wilcox, Margaret A., assignor.)						
Wilcoxon, M. H. (See Devore, Levi M., assignor.)						
Wild Engineering Company. (See Wild, William H., assignor.)						
Wild, William H., assignor to Wild Engineering Company, Valatie, N. Y. Jack-screw	483,487	Sept. 27	2515	633	60	1865
Wilder, Rufus A., Cressona, Pa. Merchandising-car	480,308	Aug. 9	909	229	60	767
Wilder, Rufus A., Cressona, Pa. Railway-car	480,355	Aug. 9	975	246	60	779
Wilder, William H. (See Lannert, Jeavons, and Wilder.)						
Wilder, William H., Caledonia, N. Y. Bean-harvester	479,480	July 26	2242	562	60	478
Wilder, William H., Florence, Mass., J. A. Lannert and W. R. Jeavons, Cleveland, Ohio. Oil and vapor burner	479,690	July 26	2554	635	60	536
Wile, Sol, and H. La Casse, assignors to Bottlers' Specialty Company, Rochester, N. Y. Bottle-wiring machine	479,342	July 19	1968	490, 491, 492, 493, 494	60	411
Wiles, Robert H., *et al.* (See Fordham, Arthur, assignor.)						
Wiley, Edward M., Shelbyville, Ind. Bill-holder	483,412	Sept. 27	2424	610	60	1846
Wiley, Ignatius. (See Farrell, George W., assignor.)						
Wilkerson, Basil M., Baltimore, Md., assignor, by mesne assignments, to S. S. White Dental Manufacturing Company, Philadelphia, Pa. Dental chair	478,672	July 12	923	229, 230	60	198
Wilkes, George, and F. Edwards, Southampton, England. Antifriction thrust-bearing	482,430	Sept. 13	859	206	60	1517
Wilkinson, Alfred, Philadelphia, Pa. Furnace-grate	480,538	Aug. 9	1265	317	60	835
Wilkinson, George W., Chicago, Ill. Car-coupling	482,605	Sept. 13	1139	275	60	1571
Wilkinson, Joseph W., Des Moines, Iowa. Boiler-furnace	478,210	July 5	218	55	60	45
Wilkinson, William A., Minneapolis, Minn. Friction-clutch	482,326	Sept. 6	681	162	60	1469
Wilks, John W., Wilksburg, and C. Whitus, Chester, S. C. Pin-lifter for car-couplings	483,193	Sept. 27	2070	523	60	1780
Wilks, John W., Wilksburg, and C. Whitus, Chester, S. C. Car-coupling	483,194	Sept. 27	2071	523	60	1781
Willan, Isaac, Detroit, Mich. Combined water and steam gage	480,309	Aug. 9	910	230	60	767
Willbrandt, Emil, assignor to W. H. Armstrong & Co., Indianapolis, Ind. Scalpel	479,102	July 19	1594	399	60	339
Willcox, Alfred B., assignor of two-thirds to M. L. Butler and S. E. Geer, Chicago, Ill. Doll-support	479,481	July 26	2242	562	60	478
Willcox, Vestus P., Trenton, N. J. Brush-block-boring machine	480,053	Aug. 2	476	121	60	673
Willcoxon, John W., Manassas, Va. Nut-lock	482,935	Sept. 20	1651	416	60	1684
Willer, Henry E., Milwaukee, Wis. Sash-lift	481,320	Aug. 23	2559	628	60	1111
Willever, George O. (See Young and Willever.)						
Willford, Joseph L., Minneapolis, Minn. Automatic feeder for roller-mills	482,419	Sept. 13	839	201, 202	60	1513
William Cramp & Sons Ship and Engine Building Company. (See Tait, William, assignor.)						
William Deering & Company. (See Appleby, John F., assignor.)						
William Deering & Company. (See Rand, Charles A. A., assignor.)						
William Schollhorn Company. (See Bernard, William A., assignor.)						
Williams, Benezette, and C. Poore, Chicago, Ill. Flush-tank	481,710	Aug. 30	3176	776	60	1247
Williams, David M., Edwardsdale, Pa. Chain-link	482,665	Sept. 13	1222	298	60	1587
Williams, Dyer, assignor to F. Williams, Cedar Rapids, Iowa. Car-coupling	482,445	Sept. 13	884	213	60	1520
Williams, Edward, Aberayron, England. Aeration of liquids	481,249	Aug. 23	2436	600	60	1091
Williams, Florence. (See Williams, Dyer, assignor.)						
Williams, George, and A. A. Cleveland, Astoria, Oreg. Pound-net	481,990	Sept. 6	104	26	60	1355
Williams, Harry B., Brooklyn, N. Y. Bathing-cap	482,773	Sept. 20	1411	349	60	1636
Williams, Henry, Glasgow, Scotland. Deflection-stand for switch and signal rods	479,906	Aug. 2	195	48, 49	60	620
Williams, James A., Walkerton, Ind. Machine for cutting the ends of spindles	482,934	Sept. 20	1650	416	60	1684
Williams, John F., Roanoke, Va. Machine for applying labels to cans	478,298	July 5	372	90, 91	60	75
Williams, Linus H., Akron, Ohio. Coffin-handle	479,044	July 19	1507	376	60	323
Williams, Orlando R. (See Macdonald, Williams, and Hitzeroth.)						
Williams, Robert E., assignor of two-thirds to V. E. Winston, Dallas, Tex., and D. Ferguson, Homer, La. Electric brush	479,321	July 19	1926	481	60	403
Williams, Sanford R., assignor of one-half to J. J. and S. Malloy, Monmouth, Oreg. Car-coupling	482,288	Sept. 6	600	143	60	1452

Stern Bros. & Co., New York, N. Y. Thimbles	21,408	July 5	60	154
Stericker, Richard P., Springfield, Ill. Medicated lotions and eye-waters	21,775	Sept. 20	60	1748
Stewart, Henry C., Cincinnati, Ohio. Cleaning and disinfecting soap	21,546	Aug. 2	60	733
Story, George H., New York, N. Y. Picture-varnish	21,588	Aug. 9	60	891
Swift and Company, Chicago, Ill. Smoked hams, shoulders, and bacon	21,487	July 19	60	435
Swiss Medicine Co., San Francisco, Cal. Remedy for the cure of rheumatism	21,424	July 5	60	156
Sylvan Toilet Co., Port Huron, Mich. Lotion for the complexion	21,617	Aug. 16	60	1047
Sylvan Toilet Co., Port Huron, Mich. Toilet soap	21,618	Aug. 16	60	1047
Taylor & Severance, Middleville, Mich. Remedy for dog-distemper	21,597	Aug. 9	60	892
Taylor, Young & Co., Portland, Oreg. Canned salmon	21,495	July 19	60	435
Thomas, Seth E., New York, N. Y. Time-keeping and time-recording instruments	21,684	Aug. 23	60	1187
Timms, Walter B., New York, N. Y. Canned fish, fruits, vegetables, soups, and milk	21,804	Sept. 27	60	1882
Town Topics Publishing Company, New York, N. Y. Society journal	21,694	Aug. 30	60	1323
Treadwell, Charles, St. Paul, Minneapolis, and Duluth, Minn., West Superior and Ashland, Wis. Shoes	21,646	Aug. 16	60	1049
Union Bag and Paper Company, Chicago, Ill. Paper bags	21,454	July 12	60	294
United Society of Christian Endeavor, Boston, Mass. Jewelry	21,469	July 19	60	434
United States Postage Stamp Delivery Company, Portland, Me., and Boston, Mass. Frangible boxes containing postage-stamps for delivery by a coin-controlled machine	21,746	Sept. 13	60	1608
United States Postage Stamp Delivery Company, Portland, Me., and Boston, Mass. Frangible boxes containing postage-stamps	21,788	Sept. 27	60	1881
Upshur, Custis P., Astoria, Oreg. Canned and preserved fish	21,805	Sept. 27	60	1882
Usine J. Clerèt, Beauvais, France, and Philadelphia, Pa. Pearl buttons	21,414	July 5	60	155
Van Buren, Martin, Philadelphia, Pa. Complexion-cream	21,595	Aug. 9	60	892
Van Camp Packing Company, Indianapolis, Ind. Canned soup	21,752	Sept. 13	60	1608
Van Camp Packing Company, Indianapolis, Ind. Canned tomatoes	21,753	Sept. 13	60	1608
Van Orden, John M., New York, N. Y. Corsets	21,799	Sept. 27	60	1882
Vapo-Cresolene Company, Stanley, N. J., and New York, N. Y. Medical compounds for the cure of lung and throat diseases	21,647	Aug. 16	60	1050
Volunteer Chicago Beef Co., New York, N. Y. Meats, smoked and unsmoked, and all kinds used for human food	21,690	Aug. 23	60	1188
W. J. Wilcox Lard and Refining Company, Guttenberg, N. J., and New York, N. Y. Lard and its substitutes	21,438	July 12	60	293
W. J. Wilcox Lard and Refining Company, Guttenberg, N. J., and New York, N. Y. Lard and its substitutes	21,439	July 12	60	293
W. J. Wilcox Lard and Refining Company, Guttenberg, N. J., and New York, N. Y. Lard and its substitutes	21,440	July 12	60	293
W. J. Wilcox Lard and Refining Company, Guttenberg, N. J., and New York, N. Y. Lard and its substitutes	21,441	July 12	60	294
W. J. Wilcox Lard and Refining Company, Guttenberg, N. J., and New York, N. Y. Lard and its substitutes	21,603	Aug. 9	60	892
W. J. Wilcox Lard and Refining Company, Guttenberg, N. J., and New York, N. Y. Lard and its substitutes	21,675	Aug. 23	60	1187
W. T. Hanson Company, Schenectady, N. Y. Pills	21,652	Aug. 23	60	1185
Wagner & Co., H. D., Grinnell, Iowa. Hair-restorative and dandruff-cure	21,442	July 12	60	294
Waterbury, Nathaniel, New York, N. Y. Ammonia-alum	21,574	Aug. 9	60	890
Waterbury, Nathaniel, New York, N. Y. Bicarbonate of soda	21,575	Aug. 9	60	890
Watson, Peter P. (See Penn, Watson, and Witten.)				
Weeks, William H., Hazleton, Pa. Candles	21,743	Sept. 13	60	1608
Wenham's Sons, A. J., Cleveland, Ohio. Canned fruits, fish, meats, and vegetables	21,800	Sept. 27	60	1882
Wheeler & Co., Hayden W., New York, N. Y. Watches and jewelry	21,725	Sept. 6	60	1475

Alphabetical list of registrants of trade-marks, July to September, inclusive—Continued.

Name, residence, and title.	No.	Date.	Official Gazette. Vol.	Page.
Whitney, Frank A., Athena, Oreg. Remedy for diseases of women	21 798	Sept. 27	60	1882
Wiedenmayer, George W., Newark, N. J. Ale and beer	21 695	Aug. 30	60	1393
Wieder, Moses L., St. Louis, Mo. White lead	21,668	Aug. 23	60	1186
Wilkes, Stephen, Bilston, England. Metallic bedsteads and wire mattresses	21,726	Sept. 6	60	1475
William Clark Company, Newark, N. J., and Stonington, Conn. Spool-cotton	21,539	Aug. 2	60	733
William Clark Company, Newark, N. J., and Stonington, Conn. Spool-cotton	21,540	Aug. 2	60	733
Williams, Joseph, Jr., Pittsburg, Pa. Line of remedies	21,760	Sept. 20	60	1747
Windsor Company, North Adams, Mass., and New York, N. Y. Dress fabrics, such as prints, calicoes, poplins, and alpacas	21,541	Aug. 2	60	732
Winslow, William H., Pittsburg, Pa. Medicinal sirup	21,649	Aug. 16	60	1050
Witten, Ancil D. (See Penn, Watson, and Witten.)				
Witwer, Clement S. (See Flowers and Witwer.)				
Wm. Bergenthal Company, Milwaukee, Wis. Whisky	21,594	Aug. 9	60	891
Woodward, Charles B., St. Louis, Mo. Prints and reproductions by photomechanical processes	21,547	Aug. 2	60	733
Worden, Arthur L., Detroit, Mich. Medicine for certain named diseases	21,519	July 26	60	572
Wright, Alfred, Rochester, N. Y. Perfumery	21,532	July 26	60	574
Wright Universal Electric Company, New York, N. Y. Battery compounds	21,611	Aug. 16	60	1046
Young, Wilbur F., Meriden, Conn. Liniments, embrocations, and like external remedies	21,489	July 19	60	435
Zucker & Levett Chemical Company, New York, N. Y. Polishing preparation	21,518	July 26	60	572

DISCLAIMER.

Name, residence, and invention.	No.	Filed.	Official Gazette. Vol.	Page.
Schulze-Berge, Hermann and Franz G. A., Brooklyn, N. Y.; disclaimer filed by patentees. Air-pumps	428,638	Sept. 2, 1892	60	1484

ALPHABETICAL LIST OF INVENTIONS.

Invention.	Name.	No.	Date.	Monthly volume. Specification.	Monthly volume. Drawing.	Official Gazette. Volume.	Official Gazette. Page.
Acid-resisting composition for lining tanks	J. Norton, Jr	480,934	Aug. 16	1881	.....	60	972
Acids. Restoring nitrating	H. Maxim	479,988	Aug. 2	357	88	60	649
Adding-machine	S. A. Potter	478,361	July 5	472	114	60	94
Adding-machine	R. S. Robertson	479,531	July 26	2311	578	60	492
Adding-machine	W. H. Wilson	479,343	July 19	1978	495	60	413
Addressing-machine	J. P. O'Malley	481,052	Aug. 16	2067	516	60	1008
Addressing-machine	F. D. Rettich	481,639	Aug. 30	3063	748	60	1225
Adhesive	J. W. Frank	478,229	July 5	261	.....	60	53
Adjustable chair	W. Richards	480,743	Aug. 16	1594	399, 400	60	915
Adjustable seat	C. H. Biggs and F. H. Fairchild	478,840	July 12	1198	297	60	252
Advertising apparatus for cash-registers	H. Cook	482,722	Sept. 20	1323	323	60	1619
Advertising-clock	F., Sr., and F. Welleba, Jr., and L. Wächter.	479,687	July 26	2547	634, 635	60	535
Advertising device	W. E. Irish	482,178	Sept. 6	425	101	60	1418
Advertising purposes. Apparatus for delivering cards and other articles for	R. H. Little	479,820	Aug. 2	67	16	60	595
Advertising-sign. Illuminated	C. R. McGimsey	478,204	July 5	211	53	60	43
Aerated liquids. Apparatus for the manufacture of	L. G. and S. M. Chinnery	482,841	Sept. 20	1502	373, 374	60	1655
Aerating liquids. Method of and apparatus for	J. H. Minto	483,259	Sept. 27	2204	553	60	1805
Aeration of liquids	E. Williams	481,249	Aug. 23	2436	600	60	1091
Agricultural implement	M. Macleod	479,094	July 19	1583	396	60	337
Agricultural machine	J. F. Thompson	483,026	Sept. 20	1808	457	60	1716
Air. Apparatus for heating compressed	R. A. Parke	481,623	Aug. 30	3041	743	60	1220
Air-brake	J. F. Carpenter	479,736	July 26	2643	655	60	553
Air-brake	T. J. Hogan	482,058	Sept. 6	221	52, 53	60	1378
Air-brake and car-coupling. Combined	P. Pelton	482,382	Sept. 13	784	189	60	1502
Air-brake coupling	J. T. Hayden	481,651	Aug. 30	3084	752	60	1229
Air-brakes. Slack take-up for	L. Guillemet	482,040	Sept. 6	190	46	60	1373
Air-compressor	M. Dillenburg	481,850	Aug. 30	3422	840	60	1294
Air-compressor	T. F. Farrell	479,260	July 19	1841	462	60	385
Air-compressor	J. G. Haines	480,193	Aug. 2	692	175	60	713
Air-compressor	A. H. Hutchinson	481,143	Aug. 16	2242	552	60	1039
Air-compressor. Coin-operated automatic hydraulic	R. F. Avery	482,775	Sept. 20	1414	350	60	1636
Air-compressor pistons. Speed-regulator for	E. C. Fasoldt	481,527	Aug. 23	2886	708	60	1175
Air-ducts. Sheet-metal	J. N. Lake	481,620	Aug. 30	3037	742	60	1220
Air motor. Compressed	P. Giffard	480,089	Aug. 2	526	133, 134	60	682
Air-ship	B. F. Barnes	478,905	July 12	1280	318	60	968
Alarm: *See* Burglar-alarm. Door-alarm. Electric alarm. Fire-alarm. High and low water alarm. Low-water alarm. Thermal alarm. Time-alarm. Water-alarm.							
Alarm	F. F. Boegner	478,982	July 19	1410	349	60	304
Alarm	D. P. Norcross	480,273	Aug. 9	846	215	60	756
Alarm-lock	F. Mahannah	479,374	July 19	2029	506	60	423
Alarm-lock	R. M. Metcalf	480,237	Aug. 2	771	194	60	728
Album-case	W. Bergner	478,390	July 5	509	124	60	100
Album-clasp	J. C. Koch	480,950	Aug. 16	1915	478, 479	60	977
Album. Photographic	G. Schwab	479,667	July 26	2518	627	60	580
Alcoholic liquors and other liquids. Apparatus for purifying and refining	S. Mason, Jr	482,018	Sept. 6	159	38	60	1366
Alkali. Apparatus for and process of recovering	H. Blackman	478,981	July 19	1405	348, 349	60	304
Alkali. Apparatus for recovering	H. Blackman	478,980	July 19	1402	348	60	303
Alkalies and chlorine. Production of caustic	F. M. Lyte	481,407	Aug. 23	2091	601	60	1136
Alloy	A. I. Cocker, G. W. Collyer, and C. Haines.	480,233	Aug. 2	767	.....	60	727
Alloy. Aluminium	C. F. Whitney	480,445	Aug. 9	1123	.....	60	806
Amalgam. Treating base bullion	B. Moebius	480,956	Aug. 16	1922	481	60	979
Amalgamating apparatus for crushed ores and like reduced bodies	W. W. Fyfe	480,366	Aug. 9	995	250	60	783
Amalgamating silver ore	A. Janin	481,031	Aug. 16	2033	507	60	1001
Amalgamator	W. J. Connors and W. W. Eddy	478,922	July 12	1308	326	60	274
Amalgamator and ore-concentrator	L. C. Moreland	479,140	July 19	1657	414	60	350
Ammonia-absorber	F. Kaiser	481,955	Sept. 6	51	12	60	1344
Ammonia-distilling apparatus	W. L. Rowland	478,132	July 5	76	20	60	17
Ammonia-still	N. W. Condict, Jr	478,407	July 5	537	131	60	106
Ammunition for submarine guns	H. Berdan	478,216	July 5	229	57	60	47
Anchor	R. S. R. Chrietzberg	481,782	Aug. 30	3313	809	60	1274
Anchors. Foot for dredge	W. Pike and N. McDairmid	483,012	Sept. 20	1789	451	60	1712
Angle-finish for rooms	A. D. Ellis	478,928	July 12	1319	328	60	276
Animal-power	J. Dick	478,575	July 12	792	195	60	172
Animal-shears	P. Ashberry and W. Barnes	479,109	July 19	1611	403	60	342

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Animal-shears	P. Ashberry and W. Barnes	479,110	July 19	1613	403	60	342
Animal-shears	C. and H. Burgon	480,997	Aug. 16	1986	497	60	991
Animal-shears	C. and H. Burgon	481,844	Aug. 30	3411	817	60	1292
Animal-training apparatus	C. C. Kelly	478,513	July 5	694	168	60	138
Animal-trap	E. R. and C. W. Knecht	480,593	Aug. 9	1348	336	60	851
Animal-trap	C. B. Trumble	481,707	Aug. 30	3171	775	60	1245
Annealing-box	D. Wigert	479,161	July 19	1686	422	60	356
Annealing-furnace	A. Beyer	479,345	July 19	1982	496	60	414
Annealing-oven	A. A. Cowles and J. F. Gilpin	479,115	July 19	1620	405	60	343
Annunciator. Electric	D. W. Murphy	482,048	Sept. 6	207	49	60	1376
Annunciator. Electric	E. D. Moore	482,263	Sept. 6	559	133	60	1444
Annunciator. Electrical	F. A. Pickernell	481,120	Aug. 16	2192	542	60	1030
Annunciator. Electrical drop	N. H. Raymond	483,310	Sept. 27	2278	572	60	1030
Annunciator. Train-order	T. W. Lane	480,729	Aug. 16	1573	394	60	1818
Ant or insect guard	L. T. Crabtree	480,073	Aug. 2	501	128	60	910
Antiseptic quinoline	J. Elwood	479,976	Aug. 2	317	78	60	678
Arch. Fireproof floor	J. Ziegler	478,495	July 5	662	.....	60	642
Arm. Artificial	P. M. Bruner	478,914	July 12	1295	322	60	131
Armature-conductor and means for insulating the same	J. E. Wortham	483,090	Sept. 20	1900	480	60	272
Armature for dynamo-electric machines	E. Kolben	480,727	Aug. 16	1570	393	60	909
Armature for dynamo-electric machines	J. Nebel	482,265	Sept. 6	562	133	60	1444
Armature for dynamo-electric machines	H. F. Parshall	480,740	Aug. 16	1591	398	60	914
Armature for dynamo-electric machines	M. J. Wightman	479,179	July 19	1719	431	60	362
Armature for dynamo-electric machines. Ventilating	E. Thomson	482,397	Sept. 13	806	193	60	1507
Armature for electric machines	E. A. Sperry	479,030	July 19	1485	369	60	318
Armature. Ring	E. Kolben	480,728	Aug. 16	1572	393	60	909
Armature-winding for dynamo-electric machines	R. Eickemeyer	482,825	Sept. 20	1475	367	60	1650
Armatures. Device for removing	S. H. Sharpsteen	481,833	Aug 30	3395	834	60	1288
Articles. Construction of legged	F. M. Harman and A. L. Eaton	478,857	July 12	1215	302	60	256
Asphalt blocks. Forming	S. McCarter	478,626	July 12	862	212	60	187
Asphaltum. Manufacture of	J. A. Dubbs	480,234	Aug. 2	767	.....	60	727
Asphaltum. Manufacture of	J. A. Dubbs	480,235	Aug. 2	768	194	60	728
Atomizer	H. M. Dunlap	483,435	Sept. 27	2454	617	60	1852
Atomizer	F. F. Ingram	481,951	Sept. 6	46	11	60	1343
Atomizer	R. Lockwood	478,118	July 5	62	16	60	14
Atomizer and sprayer. Convertible	T. E. Ogram	478,940	July 12	1333	331	60	279
Auger	J. K. Magee	482,407	Sept 13	820	197	60	1509
Auger. Coal	G. L. Savage	478,970	July 12	1384	341	60	287
Auger. Earth	F. W. Corrigan	483,210	Sept. 27	3095	531	60	1785
Auger. Earth	F. W. Brocksieper	481,345	Aug. 23	2593	637	60	1117
Auger. Mortising	W. H. Clark and H. C. Keefer	483,300	Sept. 27	2264	570	60	1816
Autographic register	A. L. Newton	479,377	July 19	2035	508	60	424
Automatic brake	W. L. Egry	481,937	Sept. 6	27	7	60	1339
Automatic brake	T. A. McCandless	482,378	Sept. 13	780	187	60	1501
Automatic brake	J. H. Priestley	481,190	Aug. 23	2320	571	60	1068
Automatic brake	J. M. Stone	479,577	July 26	2377	592 / 593	60	504
Automatic gate	R. E. Slawson	482,462	Sept. 13	906	220	60	1525
Automatic sprinkler	R. W. Newton	478,809	July 12	1148	284	60	943
Awning	B. Branner	480,553	Aug. 9	1287	323	60	840
Awning	B. Brooks	478,842	July 12	1201	298	60	953
Awning-frame	J. Pettit	480,437	Aug. 9	1108	277	60	803
Ax-helve attachment	W. Donlon	483,248	Sept. 27	2152	545	60	1796
Axes. Die for forming	J. P. Kelly	479,166	July 19	1693	424	60	357
Axle	J. Herby	483,444	Sept. 27	2464	620	60	1855
Axle	W. H. Matthews	479,223	July 19	1785	447	60	374
Axle-bearing	S. S. Arnold	481,545	Aug. 30	2919	718	60	1198
Axle-bearing	T. J. McGee	481,911	Aug. 30	3525	862	60	1314
Axle-box	O. Collins	483,045	Sept. 20	1833	466	60	1721
Axle-box	E. N. Wood	483,372	Sept. 27	2366	593	60	1835
Axle. Car	R. L. McLaren	483,470	Sept. 27	2494	628	60	1861
Axle. Carriage	H. Wecker	480,798	Aug. 16	1675	419	60	931
Axle-cutter	J. Swegles	482,767	Sept. 20	1405	347	60	1634
Axle dust-guard. Car	R. M. Lawless	483,385	Sept. 27	2490	600	60	1839
Axle-lubricator	J. T. Connelly	480,318	Aug. 9	923	233	60	770
Axle-lubricator	P. Donnan, Sr	480,705	Aug. 16	1628	408	60	921
Axle-lubricator	J. Q. Finch	482,918	Sept. 20	1633	410	60	1680
Axle-lubricator	J. S. Patten	479,077	July 19	1553	388	60	331
Axle-lubricator	W. H. Ward	482,503	Sept. 13	980	237	60	1540
Axle-lubricator	G. L. Weaver	482,770	Sept. 20	1408	348	60	1635

Book-support	J. A. Muir	481,505	Aug. 23	2847	700	60	1168
Boomerang	C. G. Stevens	482,852	Sept. 20	1518	377	60	1659
Boot	G. A. Brown	480,363	Aug. 9	992	249	60	782
Boot or shoe cleaning and polishing machine	J. W. Mason	480,821	Aug. 16	1716	428, 429	60	939
Boot or shoe creaser	H. P. Roberts	482,529	Sept. 13	1028	249	60	1550
Boot or shoe heel	N. S. Drake	479,560	July 26	2354	587	60	500
Boot or shoe heels. Attaching	H. A. Webster	483,293	Sept. 27	2253	567	60	1814
Boot-upper	O. Baker	478,550	July 12	759	186	60	166
Booth. Collapsible	E. C. Cook	482,078	Sept. 6	256	62	60	1386
Boring and mortising machine	G. A. Adams	481,383	Aug. 23	2652	650	60	1128
Boring and shaping machine	A. K. Phillips	481,307	Aug. 23	2534	622, 623	60	1107
Boring-machine	J. W. Day	482,231	Sept. 6	503	120	60	1433
Boring-machine	C. S. Harris	482,791	Sept. 20	1436	356	60	1641
Boring-machine	J. H. Synon	478,266	July 5	328	79	60	66
Boring-machine work-holder	F. Scheidt	481,737	Aug. 30	3234	788	60	1257
Bottle	F. F. Ingram	481,953	Sept. 6	48	11	60	1344
Bottle and stopper	H. Crimmel	482,230	Sept. 6	501	120	60	1433
Bottle and stopper	H. Heartfield	482,682	Sept. 13	1252	305	60	1593
Bottle-cleaning apparatus or machine	G. E. Wallace	482,110	Sept. 6	306	72	60	1395
Bottle-closure	R. Bloeser	480,168	Aug. 2	655	167	60	707
Bottle-corking machine. Power	D. Mueller	482,454	Sept. 13	898	217, 218	60	1523
Bottle designed to prevent refilling	E. L. Tevis	482,329	Sept. 6	685	163	60	1470
Bottle-filling apparatus	M. J. McHugh	479,298	July 19	1895	474	60	397
Bottle-filling machine	G. Clauss, Jr., and A. M. Schomburg	482,893	Sept. 20	1597	401	60	1672
Bottle-filling machine	G. Clauss, Jr., and A. M. Schomburg	482,894	Sept. 20	1600	401, 402	60	1673
Bottle. Siphon	P. M. Clark	480,763	Aug. 16	1624	407	60	921
Bottle-snap	J. Fithian	480,458	Aug. 9	1150	288	60	811
Bottle stand. Poison	G. L. Rands	478,818	July 12	1170	290	60	247
Bottle-stopper	G. F. Atwood	479,045	July 19	1508	376	60	323
Bottle-stopper	W. J. Ferris	481,616	Aug. 30	3032	741	60	1219
Bottle-stopper	J. E. Orr	479,833	Aug. 2	90	23	60	599
Bottle stopper and cover. Automatic	I. Traube and A. Kattentidt	478,483	July 5	644	158	60	128
Bottle-stoppering device	C. Weinedel	481,644	Aug. 30	3071	750	60	1226
Bottle-washing machine	M. L. Macauley	481,363	Aug. 23	2615	643	60	1122
Bottle-wiring machine	E. Raidline	480,135	Aug. 2	603	153	60	697
	S. Wile and H. La Casse	479,342	July 19	1968	490, 491, 492, 493, 494	60	411
Bottles. Apparatus for fixing capsules on	C. Scherer	483,019	Sept. 20	1798	453, 454	60	1714
Bottles, &c. Device for cleaning	C. F. Woessner	481,537	Aug. 23	2906	713	60	1179
Bottles. Implement for finishing the necks of	C. Leng	480,774	Aug. 16	1641	411	60	924
Box: *See* Ballot-box. Letter-box. Butter-box. Mail-box. Cake-box. Money-box. Cake or bread box. Paper box. Dice-box. Stuffing-box. Door parcel-box. Vehicle-box. Garbage-box. Wood and coal box.

Brick-machine	G. T. Jacobs	482,252	Sept. 6	536	128, 129	60	1439
Brick-machine	W. Johnson	480,726	Aug. 16	1569	392, 393	60	909
Brick-machine	T. T. Wood	481,454	Aug. 23	2766	680, 681, 682	60	1151
Brick or tile machine	J. C. Titus	478,267	July 5	330	80	60	66
Brick or tile machine die	G. C. Skinner	478,136	July 5	86	23	60	20
Brick. Paving	D. Lance	478,612	July 12	844	208	60	183
Brick-press	S. McCarter	478,625	July 12	860	212	60	186
Brick-press. Hydraulic	J. J. Koch	480,818	Aug. 16	1707	426, 427, 428	60	937
Brick-re-pressing machine	W. W. Wallace and R. C. Penfield	480,912	Aug. 16	1850	461	60	966
Brick-sanding machine	W. W. Wallace and R. C. Penfield	482,705	Sept. 13	1291	316	60	1601
Bricks. Compound for preserving the color of finishing	J. D. Graybill	479,640	July 26	2471	.....	60	521
Bridge	T. H. Kosure	478,438	July 5	580	140, 141	60	114

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Bridge-flooring	J. R. Worcester	480,483	Aug. 9	1186	298	60	819
Bridge for sidewalks, &c. Draw-	J. F. Schultz	479,533	July 26	2314	578	60	493
Bridge guard. Draw-	F. Boucher	482,291	Sept. 6	608	144	60	1453
Bridge. Iron	H. A. Loomis	482,017	Sept. 6	158	38	60	1366
Bridge. Suspension truss-	G. A. Stephenson	479,081	July 19	1560	391	60	332
Bridges. Guard-gate for draw-	W. Herrick	483,445	Sept. 27	2465	{620 621	60	1855
Bridges. Hinged expansion-gear for	C. J. Westwood and H. Rigby	480,863	Aug. 16	1777	444	60	951
Bridges. Safety-gate for draw-	W. Goddard	482,499	Sept. 13	976	236	60	1539
Bridle attachment	J. W. Peace	483,475	Sept. 27	2496	628	60	1861
Bridle-bit	J. U. Beckeman and D. W. Lukens	480,487	Aug. 9	1190	299	60	820
Bridle-bit	J. Dean	483,103	Sept. 20	1921	486	60	1739
Bridle-bit	C. E. Heinze	483,104	Sept. 20	1922	486	60	1740
Bridle-bit	J. W. James	481,172	Aug. 23	2295	566	60	1063
Bridle-bit	J. W. James	478,866	July 12	1225	304	60	258
Bridle-bit	O. M. Sloat	478,867	July 12	1226	304	60	258
Brocade or gold cloth. Producing an imitation of	F. P. Werner	479,670	July 26	2521	627	60	531
Broiler	J. W. Brady	482,604	Sept. 13	1138	.....	60	1571
Broiler	C. E. Watkins	480,316	Aug. 9	919	232	60	769
Broom-shoulder cutter	W. F. Settle	483,409	Sept. 27	2421	608	60	1846
Brush	S. P. Storrs	480,287	Aug. 9	867	221	60	760
Brush and making the same	A. H. Wolcott	479,082	July 19	1562	{391 392	60	333
Brush-block-boring machine	V. P. Willcox	482,666	Sept. 13	1223	298	60	1587
Brush case and pencil-holder combined. Tooth-	S. S. Fox	480,053	Aug. 2	476	121	60	673
Brush. Electric	R. E. Williams	482,631	Sept. 13	1178	285	60	1578
Brush-holder	F. J. Haeseler	479,321	July 19	1926	481	60	403
Brush. Revolving hair-	W. J. Miller	479,802	Aug. 2	42	10, 11	60	590
Brush. Scrubbing-	J. J. Bellmann and E. Levi	481,264	Aug. 23	2458	605	60	1095
Brush. Tanner's sigue-	C. Grau	483,128	Sept. 27	1958	496	60	1758
Brush. Tooth-	L. T. Foss	483,350	Sept. 27	2332	586	60	1829
Brushes, &c. Handle-holder for	W. E. Barnett and B. R. Chalk	479,796	Aug. 2	33	8	60	588
Bucket. Dinner-	J. C. Dunfee	482,221	Sept. 6	491	117	60	1431
Bucket. Dinner-	W. F. Janeway	480,184	Aug. 2	679	172	60	711
Bucket. Dinner-	H. J. Sibley	478,606	July 12	837	206	60	182
Bucket-elevator	J. Cavanagh	482,761	Sept. 20	1399	345	60	1633
Buckets. Apparatus for riveting ears upon	C. Stollberg	482,941	Sept. 20	1662	418	60	1686
Buckle	G. E. Adams	480,881	Aug. 16	1799	450	60	956
Buckle	T. J. Clark	480,540	Aug. 9	1268	318	60	836
Buckle	S. E. Cook	480,397	Aug. 9	1046	262	60	792
Buckle	S. T. Hisley	482,915	Sept. 20	1629	408	60	1678
Buckle	E. J. Kraetzer	479,003	July 19	1443	358	60	310
Buckle	F. H. La Pierre	483,356	Sept. 27	2339	588	60	1830
Buckle	A. G. Mead	478,285	July 5	356	86	60	72
Buckle	D. L. Smith	478,120	July 5	64	17	60	15
Buckle	J. Stovell	478,826	July 12	1179	292	60	249
Buckle	J. G. Taylor	480,217	Aug. 2	744	188	60	723
Buckle	J. A. Traut	481,079	Aug. 16	2126	529	60	1018
Buckle	J. A. Traut	481,213	Aug. 23	2459	581	60	1076
Buckle	G. Williamson and C. de Negri	482,030	Sept. 6	178	42	60	1370
Buckle. Cast-off	J. Zeigler	482,289	Sept. 6	601	143	60	1370
Buckle. Suspender-	J. A. Traut	480,791	Aug. 16	1666	416	60	1432
Buckle. Suspender-	B. J. Balliett	480,650	Aug. 9	1447	360	60	929
Buckle. Suspender-	H. Lieberthal	479,074	July 19	1550	387	60	871
Buggy spring-gearing	J. A. Traut	480,680	Aug. 9	1497	373	60	330
Buggy-tops. Lever for raising and lowering	S. E. O'Dell and C. Van Liew	480,274	Aug. 9	847	215	60	879
Building-block	H. Toresen	480,531	Aug. 9	1254	315	60	757
Building-block	G. E. Briggs	479,054	July 19	1519	378	60	833
Building-front	C. Grünzweig	482,890	Sept. 20	1590	.....	60	325
Building-front	A. Brunkhorst, A. Wieden, and C. T. Richards.	478,974	July 12	1392	{343 344	60	1671
Building-front	F. Mosker and T. O. Arbegust	481,115	Aug. 16	2185	541	60	289
Building-front	C. T. Richards	480,909	Aug. 16	1846	{459 460	60	1029
Building-front. Sheet-metal	C. D. Pruden	483,163	Sept. 27	2021	{511 512	60	965
Building-material elevator	J. J. Kierat	480,329	Aug. 9	936	{237 238	60	1771
Buildings. Metallic facing for	L. L. Sagendorph	483,240	Sept. 27	2142	543	60	772
Bullets. Machine for swaging and creasing	J. F. McGrail	481,731	Aug. 30	3321	786	60	1794
Bung	M. Anthony and W. C. Savage	483,035	Sept. 20	1820	462	60	1255
Bung	J. Baeumle	482,713	Sept. 20	1311	321	60	1719
Bung-extracting tool	J. Baeumle	482,714	Sept. 20	1313	321	60	1617
Bunsen burner	W. H. Stanton	480,835	Aug. 16	1733	433	60	1617
Bureau and wash-stand. Combined	G. Reimann	478,364	July 5	475	115	60	942
Burglar-alarm	H. Couillard	481,848	Aug. 30	3419	839	60	94
Burglar-alarm	F. H. Neal and J. R. Donnelly	480,340	Aug. 9	948	240	60	1293
Burglar-alarm	P. G. Trone	479,320	July 19	1925	481	60	775
Burial apparatus	H. T. Wilson	482,464	Sept. 13	909	221	60	402
Burial apparatus	J. B. Beugler	481,840	Aug. 30	3406	836	60	1525
Burial-case	S. D. Wagor	479,904	Aug. 2	193	48	60	1291
Burial-casket	J. G. Gray	480,427	Aug. 9	1097	274	60	620
Burial-casket	J. A. Jones and C. E. Myers	483,304	Sept. 27	2248	571	60	800
Burial-casket	J. A. Jones and C. E. Myers	483,305	Sept. 27	2269	571	60	1817
Burner:	J. N. Fraser	481,370	Aug. 23	2024	645	60	1817
See Bunsen burner. Oil-burner. Fuel-burner. Oil and vapor burner. Gas-burner. Smoke-burner. Hydrocarbon-burner. Straw-burner. Lamp-burner. Vapor-burner.							1124
Burner	E. T. Wigg	482,145	Sept. 6	363	86, 87	60	1407
Butter-box	G. R. Meloney and J. T. Criswell	481,801	Aug. 30	3342	818	60	1279
Butter. Manufacture of	W. Cole	478,736	July 12	1029	252	60	220
Butter-package	J. F. Bly	482,613	Sept. 13	1155	279	60	1573

Alphabetical list of patentees, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Butter-package	F. M. Peck	479,095	July 19	1585	396	60	337
Butter-worker	H. J. Anderson	483,201	Sept. 27	2085	528	60	1783
Butter-worker	P. L. Kimball	478,113	July 5	54	15	60	13
Button	C. A. Bryant	482,959	Sept. 20	1696	426	60	1692
Button	F. H. Larter	479,191	July 19	1740	437	60	306
Button	J. B. Righter	482,651	Sept. 13	1301	292	60	1583
Button and lacing hook. Combined	A. J. Miller	481,767	Aug. 30	3290	801	60	1269
Button-attaching machine	C. E. Denton	479,705	July 26	2582	643	60	542
Button-attaching machine	C. M. Platt	481,587	Aug. 30	2984	732	60	1210
Button-attaching machine	C. M. Platt	481,588	Aug. 30	2985	732	60	1210
Button-bars. Forming	I. G. Platt	480,032	Aug. 2	442	111	60	666
Button-fastener	A. W. Currier and G. Clark	482,621	Sept. 13	1166	282	60	1576
Button-fastener	J. C. Townsend	479,538	July 26	2320	580	60	494
Buttonhole-machine cam	J. F. Wischerth	480,054	Aug. 2	478	122	60	673
Button link. Sleeve or cuff	P. H. Lettré	479,649	July 26	2482	618	60	523
Button. Separable	R. Monday	480,336	Aug. 9	945	239	60	774
Button. Separable	C. M. Sherer	478,174	July 5	163	42	60	34
Button. Separable	W. A. Turner	480,352	Aug. 9	972	245	60	778
Button-setting machine	C. E. Denton	479,704	July 26	2579	643	60	541
Button-setting machine	I. G. Platt	480,031	Aug. 2	440	111	60	665
Button-setting machine	I. H. Sisson	482,700	Sept. 13	1283	315	60	1600
Button-setting tool	J. Mathison	479,824	Aug. 2	78	19, 20	60	597
Buttons from plastic material. Machine for making	M. Stirn	482,144	Sept. 6	360	86	60	1406
Buttons. Machine for making sheet-metal	J. Mathison	479,823	Aug. 2	73	{17 18 19	60	596
Buttons. Sale-card for	C. F. G. R. Schwerdt	481,832	Aug. 30	3394	834	60	1288
Cab	D. J. O'Donnell	479,300	July 19	1298	475	60	397
Cabinet	W. I. Ohmer	479,748	July 26	2664	661	60	556
Cable-conduits. Automatic trap for	I. Bishop and A. F. L. Bell	478,910	July 12	1289	320	60	270
Cable elevator. Sprocket-	M. Garland	482,239	Sept. 6	515	123	60	1435
Cable-gripper	W. A. Butler	480,489	Aug. 9	1192	299	60	820
Cable-grippers. Automatic release for	A. J. Smith	481,431	Aug. 23	2732	671	60	1144
Cable-grips. Lifting mechanism for	I. Bishop and A. F. L. Bell	478,911	July 12	1291	321	60	270
Cable-securing device	W. F. Bossert and J. H. Findlay	482,939	Sept. 20	1659	418	60	1686
Cable-traction system	G. Muller	481,413	Aug. 23	2703	{664 665	60	1139
Cables into conduits. Means for drawing	T. F. O'Connor and J. W. Marsh	482,270	Sept. 6	571	135	60	1446
Caddy. Grocer's	C. Toohey	482,285	Sept. 6	596	142	60	1451
Caisson	J. F. O'Rourke	480,127	Aug. 2	587	{149 150	60	694
Cake-box	E. E. Bailey	482,434	Sept. 13	863	207	60	1517
Cake or bread box	G. H. Ennis	480,718	Aug. 16	1560	389	60	907
Calculating-machine	W. M. McCafferty	478,885	July 12	1252	310	60	263
Calculator	C. H. Clarridge	479,629	July 26	2451	611	60	518
Calendar	C. N. Hoyt	481,563	Aug. 30	2949	{724 725	60	1203
Calendar	C. H. Rendell and E. S. Pinney	482,929	Sept. 20	1644	414	60	1682
Calendar-holder	W. E. Gary	479,876	Aug. 2	155	39	60	612
Caliper-joint	W. H. Isbell	483,065	Sept. 20	1860	472	60	1728
Caliper-point. Differential	G. T. Bechtol	482,331	Sept. 13	692	165	60	1485
Calipers. Micrometer-	E. L. Holcomb	479,807	Aug. 2	49	12	60	591
Calk-sharpener	J. H. E. Clark	479,204	July 19	1758	441	60	369
Camera:							
See Magazine-camera. Photographic camera.							
Camera attachment	E. De Moulin	480,606	Aug. 16	1694	422	60	934
Camera plate attachment	G. L. Minear	481,802	Aug. 30	3344	818	60	1279
Camera-shutter	T. H. Blair and F. H. Kelley	478,909	July 12	1288	320	60	270
Camera-shutter	W. H. Bristol	480,995	Aug. 16	1964	497	60	991
Camera-shutter	W. H. Bristol	481,343	Aug. 23	2591	{636 637	60	1117
Can:							
See Filter-can. Roving-can. Measuring-can. Sealed can. Oil-can. Tin can.							
Can-heading machine	L. E. Curtis	479,135	July 19	1646	412	60	348
Can for oil, &c	A. F. Kuhns	481,233	Aug. 23	2396	591	60	1083
Can machine	J. B. Foote	480,256	Aug. 9	810	208	60	748
Can-opener	S. Ehenger	479,256	July 19	1835	460	60	384
Can-opener	A. Fenton and J. Barnes	480,868	Aug. 16	1782	446	60	953
Can-opener	J. H Gooding	482,057	Sept. 6	220	52	60	1378
Can-opener	C. Morgan	479,011	July 19	1457	361	60	313
Can or vessel stopper. Fluid	W. H. Payne	483,082	Sept. 20	1884	477	60	1732
Can screw-top	C. N. Tyler	480,793	Aug. 16	1668	417	60	949
Can-stand	E. Thomas	479,099	July 19	1590	398	60	338
Can-testing machine	C. B. Kendall and H. Schaake	481,764	Aug. 30	3279	{799 800	60	1267
Can-washer	C. H. Southard	482,763	Sept. 20	1401	346	60	1633
Candlestick	J. P. Daleiden	481,225	Aug. 23	2384	588	60	1081
Candlestick	H. M. Hamrick	479,362	July 19	2011	502	60	420
Candy-machine	B. Thoens	480,149	Aug. 2	620	157	60	701
Candy. Machine for forming shapes of	C. M. Kurtz	481,234	Aug. 23	2397	592	60	1084
Candy-mold	M. M. June	480,469	Aug. 9	1165	293	60	814
Cane and flag. Combined	E. Gash	479,590	July 26	2493	596	60	507
Cane and stool. Combined	C. Wallis and R. Mader	482,214	Sept. 6	481	115	60	1429
Cane-cutter	F. B. Alexander	479,611	July 26	2428	605	60	513
Cane-juice-bleaching apparatus	A. F. Slangerup	483,022	Sept. 20	1802	455	60	1715
Cane-mill	J. Fisher	482,064	Sept. 6	265	64	60	1387
Cane-mill	D. Skekel	480,522	Aug. 9	1237	311	60	830
Cane. Whip-	M. O. Felker	482,895	Sept. 20	1603	402	60	1674
Canisters. Machine for making metal	A. E. Bentley	478,389	July 5	508	{123 124	60	100
Cannon. Breech-loading	S. Seabury	479,609	July 26	2421	604	60	512
Cannon. Breech-loading	S. Seabury	479,957	Aug. 2	286	71, 72	60	637
Caoutchouc balls. Process of and apparatus for the manufacture of hollow	G. L. Hille	482,068	Sept. 6	271	65, 66	60	1389

INDEX OF PATENTS ISSUED FROM THE

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume.		Official Gazette.	
				Spec.	Drgs.	Vol.	Page.
Cap. Bathing	H. B. Williams	482,773	Sept. 20	1411	349	60	1636
Capotasto	V. T. Johnson	480,429	Aug. 9	1099	274	60	801
Capping-machine	J. F. Wittemann	481,626	Aug. 30	3047	744	60	1221
Capsule-filling machine	W. K. Johnston	479,812	Aug. 2	56	13	60	593
Car	H. M. Jones	479,945	Aug. 2	265	65	60	633
Car. Air dump	C. H. Dow	479,253	July 19	1832	460	60	384
Car and air-brake coupling. Combined	J. B. Thomas	481,984	Sept. 6	95	24	60	1353
Car and hose coupling. Combined	J. H. Carroll	478,400	July 5	526	129	60	104
Car-brake	C. H. Allen	479,236	July 19	1804	452	60	378
Car-brake	F. A. Baier	478,902	July 12	1276	{316 / 317}	60	267
Car-brake	J. W. Barnes	483,414	Sept. 27	2427	610	60	1847
Car-brake	C. A. Dahlstrom	481,163	Aug. 23	2284	563	60	1061
Car-brake	J. B. Meadley	480,503	Aug. 9	1215	303	60	825
Car-brake. Automatic	J. H. Tong	480,910	Aug. 16	1848	460	60	966
Car-brake mechanism	R. Condon	480,250	Aug. 9	802	{205 / 206}	60	746
Car brake. Railway	H. V. Harts	479,420	July 26	2118	530	60	454
Car-brakes. Slack-adjuster for	G. L. McCallum	480,338	Aug. 9	947	240	60	774
Car-brakes. Slack-adjuster for	F. J. Cole	481,784	Aug. 30	3315	810	60	1274
Car bundle-rack	R. A. Parke	480,341	Aug. 9	949	241	60	775
Car-buffer	J. M. Cotton	483,283	Sept. 27	2236	562	60	1811
Car. Burglar-proof	T. A. Bissell	482,538	Sept. 13	1041	{251 / 252}	60	1552
Car carrying attachment. Hand	J. Beermaker	478,554	July 12	764	{186 / 187}	60	167
Car. Combined freight and passenger	J. W. Greene	481,021	Aug. 16	2021	505	60	998
Car. Combined freight and stock	J. Haish	479,068	July 19	1542	385	60	329
Car-coupling	E. R. Steinhilber	480,635	Aug. 9	1422	354	60	866
Car-coupling	D. L. Barnes	478,835	July 12	1191	296	60	251
Car-coupling	D. Bellon	478,778	July 12	1093	{270 / 271}	60	233
Car-coupling	A. Bittner	479,023	July 26	2443	609	60	516
Car-coupling	T. J. Booz	481,891	Aug. 30	3485	854	60	1306
Car-coupling	J. N. Braun	482,614	Sept. 13	1156	280	60	1574
Car-coupling	D. Brewer	482,615	Sept. 13	1158	280	60	1574
Car-coupling	E. Brockway	481,660	Aug. 30	3097	735	60	1231
Car-coupling	J. H. Browne	480,803	Aug. 16	1687	{420 / 421}	60	932
Car-coupling	H. C. Buhonp	480,839	Aug. 16	1737	434	60	943
Car-coupling	E. M. Butler	478,087	July 5	20	7	60	7
Car-coupling	J. C. Carrick	481,525	Aug. 23	2883	708	60	1175
Car-coupling	W. B. Clark	481,325	Aug. 23	2564	630	60	1113
Car-coupling	M. M. Clarke	482,546	Sept. 13	1056	257	60	1555
Car-coupling	J. H. Coleman	482,569	Sept. 13	1090	264	60	1561
Car-coupling	R. A. Cowell	480,807	Aug. 16	1693	422	60	934
Car-coupling	C. H. Dale	481,930	Sept. 6	15	4, 5	60	1337
Car-coupling	W. H. Davis	480,866	Aug. 16	1780	445	60	952
Car-coupling	J. C. Devlin	478,993	July 19	1427	{353 / 354}	60	307
Car-coupling	C. Demaurez. (Reissue)	11,265	Aug. 23	2912	715	60	1181
Car-coupling	S. B. Dover	479,635	July 26	2463	613	60	520
Car-coupling	W. Duechting	478,578	July 12	796	196	60	173
Car-coupling	J. M. Elliott, Jr.	483,047	Sept. 20	1835	467	60	1722
Car-coupling	J. M. Elliott, Jr.	483,048	Sept. 20	1837	467	60	1722
Car-coupling	J. Fanbion, Sr	479,262	July 19	1845	462	60	386
Car-coupling	T. W. Felton	480,456	Aug. 9	1148	287	60	811
Car-coupling	W. H. Foster	480,459	Aug. 9	1151	288	60	811
Car-coupling	W. E. Gallaher	482,121	Sept. 6	325	77	60	1398
Car-coupling	W. B. Gasser	479,497	July 26	2365	567	60	483
Car-coupling	E. Géant	483,437	Sept. 27	2457	618	60	1853
Car-coupling	C. H. Gohl	482,353	Sept. 13	735	{176 / 177}	60	1494
Car-coupling	C. A. Gould	478,747	July 12	1042	256	60	222
Car-coupling	G. C. Harlin	482,125	Sept. 6	330	78	60	1399
Car-coupling	W. H. Harris	481,399	Aug. 23	2680	657	60	1133
Car-coupling	W. Herrick	480,092	Aug. 2	530	134	60	683
Car-coupling	J. A. Hinson	482,358	Sept. 13	742	179	60	1495
Car-coupling	O. Hood	479,881	Aug. 2	162	40	60	613
Car-coupling	F. A. Hotchkiss	480,584	Aug. 9	1335	333	60	849
Car-coupling	J. S. Hunter	481,567	Aug. 30	2955	726	60	1204
Car-coupling	D. W. and G. Jewell	481,906	Aug. 30	3512	860	60	1312
Car-coupling	J. Kindleberger	481,907	Aug. 30	3514	860	60	1312
Car-coupling	R. S. Kirkpatrick	482,010	Sept. 6	139	34	60	1363
Car-coupling	R. Kleinert	482,904	Sept. 20	1614	404	60	1676
Car-coupling	E. Kling	479,371	July 19	2025	506	60	422
Car-coupling	W. A. Lee	479,665	Aug. 2	167	42	60	615
Car-coupling	G. R. Lewis	479,106	July 19	1601	400	60	340
Car-coupling	R. F. Ludlow	478,445	July 5	590	144	60	116
Car-coupling	R. F. Ludlow	478,446	July 5	592	144	60	117
Car-coupling	A. B. Luther	478,620	July 12	854	210	60	185
Car-coupling	J. B. Maines	480,110	Aug. 2	535	139	60	688
Car-coupling	A. C. McCord	482,500	Sept. 13	977	237	60	1539
Car-coupling	J. B. Meadley	480,504	Aug. 9	1216	304	60	825
Car-coupling	H. Moore	479,717	July 26	2608	648	60	546
Car-coupling	R. L. Munson	480,118	Aug. 2	570	145	60	691
Car-coupling	C. C. Neff	478,125	July 5	69	18	60	16
Car-coupling	B. H. Paugh	482,926	Sept. 20	1641	413	60	1682
Car-coupling	J. F. Pursley	482,809	Sept. 20	1454	361	60	1645
Car-coupling	R. Quatermass	478,463	July 5	617	150	60	122
Car-coupling	R. J. Reynolds	479,989	Aug. 2	358	88	60	649
Car-coupling	T. L. Rivers	482,833	Sept. 20	1490	{370 / 371}	60	1653
Car-coupling	R. S. Robertson	479,079	July 19	1556	389	60	331
Car-coupling	J. P. Rollins	479,990	Aug. 2	359	89	60	649

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume.		Official Gazette.	
				Spec.	Drgs.	Vol.	Page.
Car-coupling	J. E. Sague	480,628	Aug. 9	1414	352	60	864
Car-coupling	J. A. Sample	482,461	Sept. 13	906	220	60	1525
Car-coupling	G. K. Smith	480,631	Aug. 9	1417	353	60	865
Car-coupling	H. K. Smith	481,071	Aug. 16	2115	527	60	1016
Car-coupling	C. W. Stilllane	481,076	Aug. 16	2123	528	60	1017
Car-coupling	C. H. Taylor	480,836	Aug. 16	1734	433	60	942
Car-coupling	F. Thompson	482,598	Sept. 13	1131	273	60	1570
Car-coupling	C. A. Tower	482,105	Sept. 6	300	71	60	1394
Car-coupling	D. G. Turner	480,481	Aug. 9	1183	297	60	819
Car-coupling	W. H. Underwood and W. E. Clum	482,769	Sept. 20	1407	348	60	1635
Car-coupling	W. H. Violett	481,446	Aug. 23	2754	{577 / 578}	60	1149
Car-coupling	J. E. Walker	479,926	Aug. 2	235	58	60	627
Car-coupling	C. Weeks and J. E. Bush	482,566	Sept. 13	1086	263	60	1561
Car-coupling	E. C. Welch	481,449	Aug. 23	2758	678	60	1149
Car-coupling	G. W. Wilkinson	482,605	Sept. 13	1539	275	60	1571
Car-coupling	J. W. Wilks and C. Whitus	483,194	Sept. 27	2071	523	60	1781
Car-coupling	D. Williams	482,445	Sept. 13	884	213	60	1520
Car-coupling	S. R. Williams	482,288	Sept. 6	600	143	60	1452
Car-coupling	R. R. Wilson	479,739	July 26	2634	653	60	551
Car-coupling	J. J. Wisda	481,991	Sept. 6	105	26	60	1355
Car-coupling	J. A. Wiswall	482,774	Sept. 20	1413	349	60	1630
Car-coupling	R. M. Woodard	483,196	Sept. 27	2074	524	60	1781
Car-coupling	A. E. Woolf	478,492	July 5	656	161	60	130
Car-coupling	S. W. Wright	479,483	July 26	2345	563	60	479
Car-coupling brake	J. P. Seawell	479,024	July 19	1476	367	60	316
Car-couplings. Pin-lifter for	J. W. Wilks and C. Whitus	483,193	Sept. 27	2070	523	60	1780
Car-door	A. B. Taylor	479,143	July 19	1662	416	60	351
Car-door	A. B. Taylor	479,144	July 19	1664	416	60	351
Car door. Grain	S. W. Grosh	478,748	July 12	1043	256	60	223
Car door. Grain	E. A. Hill	479,070	July 19	1545	386	60	329
Car draft and dust guard	E. B. Jones	483,382	Sept. 27	2387	599	60	1838
Car draw-bar	J. L. Blessing	479,048	July 19	1511	377	60	324
Car draw-bar guide	J. L. Guinn	480,464	Aug. 9	1158	290	60	813
Car draw-gear	W. Pennock	480,827	Aug. 16	1726	431	60	941
Car driving mechanism	J. V. Motter	479,915	Aug. 2	206	52	60	622
Car. Dump	M. W. Iles	483,152	Sept. 27	2000	506	60	1766
Car-dump	J. Odorizzi	481,811	Aug. 30	3359	822	60	1282
Car-dumping apparatus	T. J. Phillips	481,968	Sept. 6	69	18, 19	60	1348
Car. Electric mine	E. A. Sperry	478,138	July 5	89	23, 24	60	29
Car. Freight and grain	J. F. Butz	481,928	Sept. 6	11	4	60	1337
Car gas-lighting tanks from gas-mains. Apparatus for charging	R. M. Dixon	483,106	Sept. 20	1923	487	60	1740
Car gate. Railway	L. Arnold	481,540	Aug. 23	2910	714	60	1180
Car guard. Railway	P. Barron	483,202	Sept. 27	2087	529	60	1783
Car-heater. Gas	S. Stewart	480,216	Aug. 2	743	188	60	732
Car-heating systems. Supply-station for	J. F. McElroy	480,777	Aug. 16	1644	412	60	925
Car journal-box	C. T. Schoen	482,200	Sept. 6	456	110	60	1424
Car-lighting system. Electric	S. Young and M. Moskowitz	478,183	July 5	176	46	60	37
Car-locker	J. E. Dempsey	478,740	July 12	1033	254	60	221
Car. Merchandising	R. A. Wilder	480,308	Aug. 9	909	229	60	767
Car motor. Street	J. G. Lightford	481,715	Aug. 30	3187	778	60	1248
Car-mover	N. B. Marston and W. M. Kimball	480,333	Aug. 9	941	239	60	773
Car-mover	C. W. Pierce	482,878	Sept. 20	1566	391	60	1668
Car. Parlor sleeping	D. C. Breed	479,240	July 19	1810	{453 / 454 / 455}	60	379
Car. Railway	J. M. Burton. (Reissue.)	11,254	July 19	2063	{516 / 517}	60	430
Car. Railway	R. A. Wilder	480,355	Aug. 9	975	246	60	779
Car-roof	J. C. Wands	483,032	Sept. 20	1817	461	60	1718
Car sanding device. Street	J. H. and G. L. Vogan	481,535	Aug. 23	2903	712	60	1179
Car-seal	F. W. Brooks	481,388	Aug. 23	2659	652	60	1130
Car-seats. Automatic mileage-recorder for	H. S. Squires	480,526	Aug. 9	1245	313	60	831
Car-sign	C. S. Reed	482,928	Sept. 20	1643	414	60	1682
Car-starter	D. Fuller	483,349	Sept. 27	2330	{585 / 586}	60	1828
Car-starter	G. B. Warner and L. J. Allen	479,127	July 19	1637	409	60	346
Car-step. Extensible	W. H. Voss	481,658	Aug. 30	3095	754	60	1230
Car-step extension	W. Dalenberg and C. Verduin	481,009	Aug. 16	2003	501	60	994
Car. Street	F. B. Brownell	481,467	Aug. 23	2793	687	60	1156
Car. Street	F. B. Brownell	481,468	Aug. 23	2794	687	60	1156
Car. Street	J. A. Mehling	481,800	Aug. 30	3341	817	60	1279
Car switch-operating device. Railway	J. Kelly. (Reissue)	11,269	Sept. 13	1304	319	60	1604
Car top buffer. Freight	H. H. Sessions	479,025	July 19	1478	{367 / 368}	60	316
Car. Tram	A. Wörner	480,310	Aug. 9	911	230	60	768
Car ventilator. Railway	W. S. Rogers	481,196	Aug. 23	2329	574	60	1050
Car. Vestibule	E. H. Beckley	479,546	July 26	2333	{582 / 583}	60	496
Car. Vestibule	G. Hancock	481,902	Aug. 30	3505	858	60	1310
Car. Vestibule	J. Krehbiel	482,744	Sept. 20	1361	337	60	1626
Car-vestibule	A. Fordham	482,006	Sept. 6	135	33	60	1361
Car-vestibule	G. Hancock	480,695	Aug. 9	1519	377	60	884
Car-wheel	H. Guela	481,862	Aug. 30	3437	843	60	1297
Car-wheel	B. F. Haugh	480,922	Aug. 16	865	465	60	969
Car-wheel	G. Hull	483,064	Sept. 20	1859	471	60	1727
Car-wheel	A. Hymas	479,366	July 19	2019	504	60	421
Car wheel and axle	A. and W. A. Johnston	478,512	July 5	693	168	60	138
Cars. Ball-bearing for railway	J. E. Norwood	478,351	July 5	457	112	60	92
Cars. Conduit-trolley for street	A. H. Heatzman	479,327	July 19	1932	483	60	404
Cars. Draw-timber for	J. and W. A. Rover	482,653	Sept. 13	1203	293	60	1583
Cars. Electrical distribution for	S. Young, M. Moskowitz, L. D. Adler, and J. Loewenberg.	478,182	July 5	175	45, 46	60	37
Cars. Means for dumping	W. E. Ludlow	483,360	Sept. 27	2343	589	60	1831

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Cars. Pipe-coupling and coupling attachment for railway.	F. Du Montier	482,304	Sept. 6	627	150	60	1458
Cars. Steam-pipe coupling for railway.	T. Curley	478,991	July 19	1424	352, 353	60	307
Cars. Trolley for electric	G. E. and C. W. Purple	480,240	Aug. 2	781	197, 198	60	729
Carbon-holder	E. P. Warner	482,820	Sept. 20	1468	365	60	1648
Carbureting apparatus. Air-	J. E. Mendenhall	483,003	Sept. 20	1766	446	60	1707
Card and Jacquard machine protector	S. Morgan	479,895	Aug. 2	183	45	60	618
Card. Christmas	C. Heymann	481,173	Aug. 23	2297	566	60	1063
Card. Envelope	R. Sinn	478,925	July 12	1179	292	60	249
Card or picture setting	M. Wirths	479,129	July 19	1639	410	60	346
Card shuffling and dealing mechanism	W. H. Ranney	483,364	Sept. 27	2349	590	60	1632
Carding-engine for grinding revolving flats when in situ.	J. Edge	481,228	Aug. 23	2389	589, 590	60	1082
Carding-engine stopping mechanism	E. Ashworth	480,987	Aug. 16	1974	494	60	989
Carding-engines. Device for supporting and adjusting the front and back covers of	W. P. Canning	481,222	Aug. 23	2379	586	60	1080
Carding-engines. Rubbing-apron for condensing	S. H. Gidley	480,088	Aug. 2	524	133	60	682
Carding-machines. Burr and shive extractor for	W. Sullivan	482,395	Sept. 13	804	193	60	1507
Carding-machines, &c. Feed-roll for	A. B. Hanscom	481,024	Aug. 16	2025	505	60	999
Carpet-stretcher	J. Albin	482,821	Sept. 20	1469	366	60	1649
Carpet-stretcher	R. Harrison	483,057	Sept. 20	1849	469	60	1735
Carpet-sweeper	T. H. Bedell	479,200	July 19	1752	439	60	368
Carpet-sweeper	H. Cadwalader	480,451	Aug. 9	1139	285	60	809
Carpet-sweeper	G. S. Sanford	481,826	Aug. 30	3387	830, 831	60	1287
Carpet-sweeper	G. S. Sanford	481,827	Aug. 30	3389	831, 832	60	1287
Carpet-sweeper	G. S. Sanford	481,828	Aug. 30	3391	832	60	1288
	G. S. Sanford	481,829	Aug. 30	3392	832, 833	60	1288
Carriage	A. N. Parry	482,189	Sept. 6	442	106, 107	60	1422
Carriage. Baby-	H. P. Wells	480,307	Aug. 9	908	229	60	767
Carriage. Child's	A. M. Reeves	478,172	July 5	160	41	60	34
Carriage-coupling	F. Bornemann	482,779	Sept. 20	1419	351	60	1638
Carriage-curtain fastener	N. D. Chapman	478,687	July 12	947	235	60	204
Carriage for elevated ways. Transfer-	A. Buker	480,067	Aug. 2	493	125	60	676
Carriage-gear coupling	H. B. Tefft	483,183	Sept. 27	2056	518, 519	60	1777
Carriage lock. Baby	N. A. Newton	478,128	July 5	72	19	60	16
Carriage mud-guard	G. A. Watkins	482,708	Sept. 13	1296	317	60	1602
Carriage. Steam-	J. Andersen	480,485	Aug. 9	1188	298	60	819
	A. Philion	482,649	Sept. 13	1198	291, 292	60	1582
Carriage-top	S. E. Kierolf	482,254	Sept. 6	546	130	60	1441
Carriage-top	G. B. St. John	480,295	Aug. 9	885	224	60	763
Carriage. Two-seated	F. N. and O. Vanier	482,858	Sept. 20	1527	379	60	1661

Cash and package carrier apparatus	S. W. Barr	482,822	Sept. 20	1470	366	60	1649
Cash-carrier	F. O. Farwell	479,261	July 19	1843	462	60	386

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Cash-carrier	E. C. Gipe	479,417	July 26	2113	529	60	458
Cash-carrier	G. P. Kenney	481,178	Aug. 23	2302	567	60	1065
Cash-carrier apparatus	C. W. Livermore	479,762	July 26	2084	666, 667, 668	60	561
Cash indicator and recorder	M. Leahy	478,798	July 12	1132	279	60	239
Cash indicator and recorder	W. T. McGraw	482,132	Sept. 6	337	81	60	1401
Cash indicator and register	G. Knapp and C. H. Little	481,037	Aug. 16	2047	511	60	1004
Cash indicator and register	E. B. Parkhurst and F. Ham	483,010	Sept. 20	1781	450, 451	60	1710
Cash indicator and register	J. Sharpe	482,760	Sept. 20	1388	344, 345	60	1632
Cash indicator, register, and check-printer	J. Jacques	480,698	Aug. 9	1521	378, 379	60	884
Cash indicator, register, and recorder	P. J. Landin	482,014	Sept. 6	145	35, 36	60	1364
Cash-register	H. R. Adams	479,776	Aug. 2	1	1	60	583
Cash-register	A. I. Blanchard	482,514	Sept. 13	993	240, 241	60	1543
Cash-register	H. A. Bierley. (Reissue)	11,256	Aug. 2	782	198, 199	60	729
Cash-register	T. Carney	482,517	Sept. 13	1003	242, 243, 244	60	1545
Cash-register	H. Cook	482,505	Sept. 13	982	238	60	1541
Cash-register	H. H. Koeller	480,594	Aug. 9	1350	336, 337	60	852
Cash-register	C. Leni	481,361	Aug. 23	2612	642	60	1121
Cash-register	W. K. Nichols	480,208	Aug. 2	718	182, 183, 184	60	718
Cash-register	H. G. O'Neill	480,614	Aug. 9	1387	344, 345	60	859
Cash-register	H. G. O'Neill	480,616	Aug. 9	1390	346	60	859
Cash-register	J. J. Range	479,334	July 19	1946	486	60	407
Cash-register	J. J. Range	479,335	July 19	1947	486	60	407
Cash-register	J. J. Range	479,336	July 19	1949	486, 487	60	407
Cash-register	W. H. Saunders, J. J. Range, and E. N. Foote.	479,337	July 19	1951	487	60	408
Cash-register	B. F. Wright	482,956	Sept. 20	1692	426	60	1692
Cash-register	N. B. Wright	478,532	July 5	730	178	60	145
Cash register and indicator	T. Carney	479,701	July 26	2572	640, 641, 642	60	540
Cash register and indicator	H. Cook	483,511	Sept. 27	2557	641, 642	60	1873
Cash register and indicator	M. Heintz	479,215	July 19	1773	445	60	372
Cash register and indicator	G. M. Howe	481,495	Aug. 23	2834	696, 697	60	1165
Cash register and indicator	C. S. Lewis	478,164	July 5	141	36, 37	60	31
Cash register and indicator	C. E. Lord	478,196	July 5	192	49, 50	60	40
Cash register and indicator	H. E. Marshall	482,375	Sept. 13	773	186	60	1500
Cash register and indicator	E. H. Murdock	480,957	Aug. 16	1924	481, 482	60	979
Cash register and indicator	H. G. O'Neill	480,122	Aug. 2	574	146	60	692
Cash register and indicator	H. G. O'Neill	480,123	Aug. 2	576	146, 147	60	692
Cash register and indicator	H. G. O'Neill	480,125	Aug. 2	583	148, 149	60	693
Cash register and indicator	H. G. O'Neill	480,126	Aug. 2	586	149	60	694
Cash register and indicator	H. G. O'Neill	480,612	Aug. 9	1378	342, 343	60	857
Cash register and indicator	H. G. O'Neill	480,613	Aug. 9	1383	343, 344	60	858
Cash register and indicator	H. G. O'Neill	480,615	Aug. 9	1388	345, 346	60	859
Cash register and indicator	E. F. Roberts	481,824	Aug. 30	3382	828, 829, 830	60	1286
Cash register and indicator	J. Shakespeare	480,521	Aug. 9	1235	310	60	829
Cash register and indicator and check-machine	W. Aldrich	481,459	Aug. 23	2775	683, 684, 685	60	1153
Cash register, indicator, and automatic change-maker	J. J. Hove	479,711	July 26	2594	646	60	544
Cash register, indicator, and check-printer	H. G. O'Neill	480,124	Aug. 2	578	147, 148	60	692
Cash register, indicator, and check-printer	H. G. O'Neill	480,617	Aug. 9	1392	347	60	860
Cash register, indicator, and recorder	W. F. Beck	481,777	Aug. 30	3304	806, 807, 808	60	1272
Cash register, indicator, and recorder	C. F. Brown	481,524	Aug. 23	2874	706, 707, 708	60	1173
Cash register, indicator, and recorder	H. Cook	482,165	Sept. 6	400	95, 96	60	1414
Cash register, indicator, and recorder	J. Pfeifer	479,720	July 26	2612	649, 650	60	547
Cash-register. Pocket	W. Ambruster	480,057	Aug. 2	481	122	60	674
Cash-registers. Complete-stroke mechanism for	T. Carney	482,161	Sept. 6	394	93, 94	60	1412
Cash registering and adding machine	C. Paine	483,009	Sept. 20	1774	449, 450	60	1709
Cash-registering and check-making machine	J. J. Webster and W. H. Saunders	479,341	July 19	1961	489, 490	60	409
Cash registering and indicating machine	E. N. Foote and J. J. Range	479,357	July 19	2000	500, 501	60	417

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Casket-handle	J. McCarthy	478,168	July 5	156	39	60	33
Casket-handle	J. D. Ripson	481,531	Aug. 23	2897	711	60	1178
Casket. Metallic	F. H. Hill	482,557	Sept. 13	1075	261	60	1559
Casks. Broaching device for	G. Gabb	478,852	July 12	1210	300	60	255
Caster	W. Gordon	479,980	Aug. 2	324	79	60	644
Caster. Furniture	A. A. Minor	481,963	Sept. 6	61	15	60	1346
Casting and working metals. Apparatus for use in	W. E. May	481,799	Aug. 30	3339	816	60	1278
Casting apparatus. Sash-weight	J. Carter	483,208	Sept. 27	3093	531	60	1785
Casting car-wheels. Chill for	C. A. Treat	481,442	Aug. 23	2749	676	60	1148
Casting cylindrical bodies. Apparatus for	W. C. Farnum	482,405	Sept. 13	814	196	60	1509
Casting draw-bars. Metallic mold for	J. Munton	482,688	Sept. 13	1262	{308 309}	60	1595
Casting machine. Type-	T. K. Hinshillwood	481,760	Aug. 30	3270	{796 797}	60	1265
Casting steel car-couplings. Mold for	J. Munton	482,687	Sept. 13	1260	{307 308}	60	1594
Casting stove-linings	J. McDermott	482,689	Sept. 13	1263	309	60	1595
Casting. Wheel-hub	M. L. Smith	480,044	Aug. 2	464	117	60	670
Castings. Making malleable-iron	B. Talbot	481,313	Aug. 23	2549	.....	60	1110
Catalogue. Library-	A. J. Rudolph	483,313	Sept. 27	2281	573	60	1819
Catamenial appliance	W. H. Masser	480,876	Aug. 16	1793	449	60	955
Cattle-guard. Surface	J. S. Berry	483,039	Sept. 20	1825	464	60	1720
Cattle-guard. Surface	G. W. Miller	480,733	Aug. 16	1581	395	60	911
Cattle. Suppressing horns in	J. March	478,877	July 12	1236	.....	60	260
Ceiling	A. Kaiser	480,927	Aug. 16	1872	467	60	970
Ceiling. Cohesive combined lintel	R. Guastavino, Jr.	481,755	Aug. 30	3265	795	60	1264
Ceiling. Metallic	W. W. and R. H. Old	481,813	Aug. 30	3364	824	60	1282
Celery-digging machine	M. M. Ranney	481,819	Aug. 30	3372	826	60	1284
Cellulose from wood. Preparing	H. A. A. Maste	480,334	Aug. 9	942	.....	60	773
Cement mill and furnace. Combined	H. H. Bourne	480,381	Aug. 9	1021	257	60	788
Cement pipes. Machine for making	E. Oehrle	479,451	July 26	2109	{543 544}	60	466
Cementing-machine	H. W. Brett	479,699	July 26	2567	639	60	539
Cementing-machine	W. Robertson	483,367	Sept. 27	2354	591	60	1833
Center-board for boats	F. M. Eaton	481,484	Aug. 23	2818	692	60	1162
Center-plate fastening	C. Lindström	480,408	Aug. 9	1050	265	60	794
Centering device	F. L. Canham	480,558	Aug. 9	1293	324	60	841
Centrifugal machine	B. Van Wie	478,484	July 5	646	158	60	128
Certificate representing value	W. W. C. Spencer	479,098	July 19	1580	398	60	338
Chafe-iron	H. S. Cowles	480,172	Aug. 2	660	168	60	708
Chain-block	J. R. Morgan	483,161	Sept. 27	2018	{510 511}	60	1770
Chain. Drive-	T. Corscaden	482,723	Sept. 20	1395	394	60	1690
Chain. Drive-	W. Dodd and A. T. Martin	478,416	July 5	540	134	60	108
Chain-link	C. P. Mars	480,853	Aug. 16	1763	441	60	948
Chain. Sheet-metal	D. M. Williams	482 605	Sept. 13	1222	298	60	1587
Chain-wrench	H. M. Eldridge	483,347	Sept. 27	2326	585	60	1828
Chains. Machine for making sheet-metal	W. H. Brock	483,419	Sept. 27	2433	612	60	1848
Chair: *See* Adjustable chair. Combination-chair. Convertible chair. Dental chair. Folding chair. Operating-chair. Rail-chair. Railway-chair. Railway-brace chair. Railway-rail chair. Reclining-chair. Chart for drafting garments	J. Blizzard	479,548	July 26	2337	583	60	497
Chase locking-bar	S. G. Crow	480,459	Aug. 9	1142	{285 286}	60	810
Chatelette. Program and score-card	J. S. Brown	482,160	Sept. 6	393	93	60	1412
Check. Meal-	E. R. Roehm	481,195	Aug. 23	2328	574	60	1070
Checks and the like from being raised. Protecting bank-	F. C. Gellenbeck	482,899	Sept. 20	1609	403	60	1675
Checking and recording apparatus. Workman's	T. S. Spivey	478,294	July 5	367	89	60	74
Checkrein	C. P. Cottrell	481,274	Aug. 23	2475	609	60	1098
Checkrein-hook	S. R. Brooks	480,865	Aug. 16	1770	445	60	952
Cheese. Making	C. R. Curtis	480,715	Aug. 16	1557	388	60	906
Cheese-vat	J. D. Frederiksen	482,897	Sept. 20	1605	.....	60	1674
Chill-plate for flasks	L. Meyer	478,880	July 12	1239	307	60	261
Chill-ring	F. Marty	478,622	July 12	857	211	60	185
Chimney-cap	W. A. Spring	479,958	Aug. 2	289	72	60	637
Chimney-cap	J. Keane	483,384	Sept. 27	2389	600	60	1839
Chimney cap or ventilator	W. A. Pearce	482,851	Sept. 20	1517	377	60	1659
Chimney-cleaner	G. M. McCloskey	482,905	Sept. 20	1616	404	60	1676
Chimney-thimble guard	D. Aiken	478,302	July 5	383	92	60	77
Chisel. Mortising-	J. T. Gendron	478,422	July 5	559	135	60	109
	C. L. Wall	482,704	Sept. 13	1290	316	60	1601
Chocolate. Making soluble	S. T. Achor	479,581	July 26	2381	.....	60	504
Chocolate. Soluble	S. T. Achor	479,580	July 26	2380	.....	60	504
Chopper: *See* Cotton-chopper.							
Chopper	J. E. Auzat	482,838	Sept. 20	1498	372	60	1654
Chopping-machine	G. W. Mason	481,766	Aug. 30	3288	800	60	1269
Chromatic pitch-pipe	C. H. Congdon	478,570	July 12	783	191	60	170
Chuck	W. F. Schmidt	481,496	Aug. 23	2724	660	60	1143
Chuck. Hollow-mandrel	F. A. Buck	482,616	Sept. 13	1159	280	60	1574
Chuck. Pinion-	G. B. Woodruff	483,195	Sept. 27	2072	523	60	1781
Churn	G. S. Agee	481,542	Aug. 30	2915	717	60	1197
Churn-dasher	F. L. McCoy	479,830	Aug. 2	87	22	60	599
Churn-power	W. T. Brown	483,134	Sept. 27	1970	499	60	1760
Churn-vent	F. E. Huggins	481,564	Aug. 30	2951	725	60	1204
Chute. Coal-	R. M. Hosea	482,009	Sept. 6	138	33, 34	60	1302
Chute. Coal-	G. L. Stuebner	483,404	Sept. 27	2412	606	60	1844
Chute counterbalancing mechanism	D. T. Denton	481,011	Aug. 16	2006	501	60	995
Cigar-bunch cutter	J. G. Miller and E. Yeiser	483,077	Sept. 20	1877	475	60	1730
Cigar-bunch machine	W. M. Steinle	479,472	July 26	2214	{556 557 558}	60	474
Cigar-bunching machine	N. Strotz	482,882	Sept. 20	1571	{392 393 394 395 396 397}	60	1669
Cigar-bunching machine	F. and E. H. Thompson	481,722	Aug. 30	3206	783	60	1252
Cigar-lighter	F. Michl	483,464	Sept. 27	2486	626	60	1859
Cigar-press	E. T. Zellner	480,055	Aug. 2	479	122	60	673
Cigar-rolling machine	J. S. Winget	481,453	Aug. 23	2763	680	60	1151
Cigarette-machine	V. H. Bazerque	482,567	Sept. 13	1086	264	60	1561
Cigarette-machine	H. S. Grace	483,380	Sept. 27	2382	{598 599}	60	1838
Circuit-changing apparatus	A. D. Page	481,281	Aug. 23	2491	613	60	1100
Circuit-switch	G. W. Russell, Jr., and D. B. Minor	483,123	Sept. 20	1950	493	60	1745
Circumference indicator and tire-gage	P. McCallum	480,607	Aug. 9	1372	341	60	856
Cistern-cleaner	E. B. Ravencroft	481,423	Aug. 23	2720	669	60	1142
Cistern or well cleaner	J. Shilling, Jr.	479,228	July 19	1793	449	60	376
Clamp: *See* Dental clamp. Electric conductor clamp. Hawser-clamp. Hose-clamp. Rail-clamp. Rope-clamp. Rubber-dam clamp.							
Clamp	W. B. Seward	478,822	July 12	1175	291	60	248
Clamp for fruit-jar caps, &c	C. E. Thomas	478,771	July 12	1070	268	60	230
Clapper	F. R. De Estenoz	482,570	Sept. 13	1091	264	60	1502
Clasp: *See* Album-clasp. Glove-cord clasp. Pencil-clasp. Suspender-end clasp.							
Clasp	J. L. Fredlihp	479,938	Aug. 2	253	62	60	631
Claw-bar	J. W. Gray	478,855	July 12	1213	301	60	256
Clay-conduit machine	J. J. Powers and R. Van Buren	478,462	July 5	616	150	60	122
Clay, &c. Drying and disintegrating	F. D. Cummer	482,823	Sept. 20	1471	366	60	1649
Clay with glass and in articles made accordingly	A. A. Houghton and R. D. Haines	479,365	July 19	2017	504	60	421
Plating							
Cleaner: *See* Case-cleaner. Chimney-cleaner. Cistern-cleaner. Cistern or well cleaner. Flue-cleaner. Fruit-cleaner. Gun-cleaner. Stove-flue cleaner. Window-cleaner.							
Clevis	O. Cannteson	480,364	Aug. 9	993	249	60	782
Clevis	J. M. Enschedé	479,208	July 19	1763	442	60	370
Clevis	M. E. Hunt and F. W. Lorch	483,221	Sept. 27	2110	535	60	1788
Clevis and gage-wheel. Combined	G. Moore	481,186	Aug. 23	2716	570	60	1067
Cloak-rack	F. Wolf	478,386	July 5	505	122	60	100
Clock. Alarm-	C. D. Brown	478,950	July 19	1347	334	60	982
Clock-case	W. T. Aulles	478,546	July 12	755	185	60	165
Clock. Electric alarm-	G. C. Darche	478,155	July 5	194	32	60	27
Clock. Electric alarm-	J. McMillan and G. H. Taylor	482,133	Sept. 6	339	81	60	1402
Clock. Electric central	N. Prokhoroff	481,916	Aug. 30	3331	{864 865}	60	1315
Clock. Electric self-winding	M. Mackellar and G. D. Weaver	479,520	July 26	2298	574	60	489
Clock-regulator	W. E. Porter	482,985	Sept. 20	1738	439	60	1701
Clock-synchronizing device and system	W. F. Gardner	480,577	Aug. 9	1318	{329 330}	60	846
Clod crushers or pulverizers. Roller for	C. H. Noblet	483,007	Sept. 20	1772	448	60	1709
Closet: *See* Dry closet. Water-closet.							
Cloth-cutting machines. Take-up device for	W. H. Kerr	482,128	Sept. 6	334	80	60	1400
Cloth-folding machine	S. T. Lockwood and S. K. White	482,373	Sept. 13	761	{184 185}	60	1499
Cloth-holder	G. M. Morris	479,914	Aug. 2	205	51	60	622
Cloth, &c. Machine for straightening and winding	A. and R. J. Edwards	478,255	July 5	312	76	60	63
Cloth-napping machine	E. W. Thomas	478,143	July 5	104	26, 27	60	23
Cloth-napping machine	E. W. Thomas	478,144	July 5	105	27	60	23
Cloth-piling machine	F. H. Dobeck	481,933	Sept. 6	18	5, 6	60	1338
Cloth-stretching machine	C. L. Goddard	479,501	July 26	2269	568	60	484
Cloth-winding machine	J. Conn	483,510	Sept. 27	2556	641	60	1873
Clothes-drier	H. Adler	483,275	Sept. 27	2226	559	60	1809
Clothes-drier	J. L. Mather	481,365	Aug. 23	2617	644	60	1122
Clothes-drier	G. W. North	482,269	Sept. 6	570	135	60	1446
Clothes-drier	E. Powell	481,189	Aug. 23	2319	571	60	1068

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Clothes-drying machine	F., H., and N. Schilz	481,738	Aug. 30	3236	788	60	1257
Clothes-holder	G. W. Skanks	482,531	Sept. 13	1030	249	60	1550
Clothes-line	J. W. Cadwell	483,299	Sept. 27	2263	569	60	1815
Clothes-line holder	M. R. Ethridge	479,136	July 19	1651	{412 413}	60	349
Clothes-line support	R. McNab	481,806	Aug. 30	3340	820	60	1280
Clothes-pin	J. W. Cook	480,072	Aug. 2	500	127	60	678
Clothes-pin	W. L. Pike	482,363	Sept. 13	787	199	60	1503
Clothes-pin	A. Watt	479,686	July 26	2545	636	60	534
Clothes-pin	J. Wilson	482,722	Sept. 20	1394	393	60	1690
Clothes-pin	J. Wilson	482,723	Sept. 20	1395	394	60	1690
Clothes-pin	J. Wilson	482,724	Sept. 20	1396	395	60	1690
Clothes-pin	J. Wilson

Clothes-drying machine	F., H., and N. Schilz	481,738	Aug. 30	3236	788	60	1257
Clothes-holder	G. W. Skanks	482,531	Sept. 13	1030	249	60	1550
Clothes-line	J. W. Cadwell	483,209	Sept. 27	2263	569	60	1815
Clothes-line holder	M. R. Ethridge	479,136	July 19	1651	412, 413	60	349
Clothes-line support	R. McNab	481,806	Aug. 30	3349	820	60	1280
Clothes-pin	J. W. Cook	480,072	Aug. 2	500	127	60	678
Clothes-pin	W. L. Pike	482,383	Sept. 13	787	189	60	1503
Clothes-pounder	A. Watt	479,685	July 26	2545	634	60	535
Clothes-tongs	D. D. Cady	480,069	Aug. 2	496	126	60	677
Clothes-wringer	H. Upton and W. Kennard	478,382	July 5	500	121	60	99
Clover-huller feeding device	W. Thornton	480,207	Aug. 9	887	225	60	763
Clutch	C. Pippenger	482,135	Sept. 6	341	82	60	1402
Clutch	D. T. Denton	481,010	Aug. 16	2004	501	60	995
Clutch	J. Hartness	482,523	Sept. 13	1020	246	60	1548
Clutch	A. Myers	481,046	Aug. 16	2062	514	60	1007
Clutch	R. Shettler	481,205	Aug. 23	2344	577	60	1073
Clutch	A. L. Slager	480,748	Aug. 16	1601	401	60	916
Clutch	E. Waldron	480,796	Aug. 16	1672	418	60	930
Clutch. Friction-	W. Kershaw	481,794	Aug. 30	3331	813	60	1277
Clutch. Friction-	F. H. Richards	481,194	Aug. 23	2296	573	60	1070
Clutch. Friction-	P. Weber	482,491	Sept. 13	954	233	60	1534
Clutch. Friction-	P. Weber	483,370	Sept. 27	2358	592	60	1834
Clutch. Friction-	J. D. Westgate	479,684	July 26	2543	633	60	535
Clutch. Friction-	W. A. Wilkinson	482,326	Sept. 6	681	162	60	1460
Clutch. Rope-	H. L. Bennett and R. B. Adams	478,839	July 12	1197	297	60	252
Clutch-treadle	A. C. Campbell	478,308	July 5	524	128	60	103
Coal cutter or drill	C. W. and L. B. Atkinson	482,033	Sept. 6	181	43	60	1371
Coal. Electrically-driven machinery for cutting	L. B. and C. W. Atkinson	481,775	Aug. 30	3299	804, 805	60	1271
Coal-loading machine	J. Grierson	479,641	July 26	2472	614, 615	60	521
Coal. Machine for handling	J. M. Dodge. (Reissue)	11,258	Aug. 9	1533	381	60	887
Coal or ore jigger and washer	S. Stutz	481,438	Aug. 23	2743	675	60	1146
Coal, ore, &c. Feeder for	L. Rosenfeld	482,652	Sept. 13	1202	293	60	1583
Coal-screen	S. Griffiths	481,754	Aug. 30	3264	794	60	1263
Coal-scuttle screen	H. S. Andrews	482,431	Sept. 13	866	206	60	1517
Coal-washer	S. Stutz	478,479	July 5	639	156	60	127
Coating metal sheets. Apparatus for	R. Heathfield	478,282	July 5	351	85	60	71
Cob pipes. Compound for filling	A. C. Bauscher	478,553	July 12	764	.....	60	167
Cock for casks	E. Cremer	478,574	July 12	792	195	60	172
Cock for pneumatic tools. Graduated	D. Drawbaugh	479,061	July 19	1520	381	60	327
Cock. Gage-	T. R. Butman	479,732	July 26	2637	654	60	551
Cock-grinding machine	P. Gerstenkorn	480,258	Aug. 9	816	209	60	749
Cock. Stop-	C. F. Logan	478,618	July 12	851	209	60	184
Cock. Waste and stop	G. H. Bailey and T. Grace	479,544	July 26	2330	582	60	495
Cocks, &c. Device for opening and closing	O. Loewe	478,444	July 5	589	143	60	116
Coffee-pot	J. W. Abbott	478,075	July 5	1	1	60	3
Coffee-pot	R. G. Brown	480,066	Aug. 2	492	125	60	676
Coffee-pot	W. H. Comstock	482,299	Sept. 6	621	148	60	1456
Coffee-pot	R. F. Randall	481,769	Aug. 30	3299	801	60	1270
Coffee-pots, &c. Sediment-gatherer for	J. C. W. Boice	481,547	Aug. 30	2921	718	60	1198
Coffee-huller	W. H. B. Stout	482,909	Sept. 20	1621	405, 406	60	1677
Coffin-handle	L. H. Williams	479,044	July 19	1507	376	60	323
Coffin-shell mold	W. J. Anthistle	480,986	Aug. 16	1974	493	60	989
Coin-actuated machine	J. M. Hunter	480,018	Aug. 2	415	104, 105	60	660
Coin-actuated mechanism	J. Evans	482,119	Sept. 6	322	77	60	1398
Coin-chute	R. F. Avery	480,360	Aug. 9	981	247, 248	60	780
Coin. Commercial	I. T. Alvord	478,304	July 5	384	93	60	77
Coin-controlled mechanism	H. E. Perry	481,816	Aug. 30	3366	825	60	1283
Coin-holder	G. D. O'Grady and J. R. Collins	480,960	Aug. 16	1929	483	60	980
Coin-operated machine	A. Larsen	480,431	Aug. 9	1101	275	60	801
Coin-receptacle. Pocket	F. H. Brown	481,523	Aug. 23	2273	706	60	1173
Coin-table	F. C. Lidke	478,105	July 5	144	37	60	21
Coin-tray	A. Isch	482,639	Sept. 13	1186	287	60	1580
Coke-loading appliance	A. M. Chambers and T. Smith	479,556	July 26	2149	586	60	499
Colander for mashing vegetables	P. Patroli	482,982	Sept. 20	1734	438	60	1700
Collar	O. C. Little	483,228	Sept. 27	2123	537	60	1791
Collar and cuff cabinet	H. Caspar	478,566	July 12	779	190	60	170
Collar and hame fastener. Combined	J. C. Weinman	482,492	Sept. 13	963	234	60	1537
Collar-fastener	N. Lage	478,116	July 5	60	16	60	14
Collar fastener. Horse-	J. Himmelstein	478,603	July 12	834	205	60	181
Collar holder. Shirt-	F. L. Robinson	481,425	Aug. 23	2723	669	60	1143
Collar. Horse-	J. B. Mueller	478,452	July 5	599	146	60	118
Collar. Horse-	A. D. Ulrich	480,000	Aug. 2	372	93	60	652
Collar pad. Horse-	R. O. Randall	483,016	Sept. 20	1795	452	60	1713
Collars and cuffs. Machine for turning	J. H. Young	482,859	Sept. 20	1528	380	60	1661
Collars. Machine for forming	A. W. Cummings	483,139	Sept. 27	1976	501	60	1761
Coloring-matter. Azo	M. Ulrich and J. Bammann	482,106	Sept. 6	301	.....	60	1394
Colors. Making azo	D. A. Rosenstiehl	483,368	Sept. 27	2355	.....	60	1833
Colter attachment. Plow-	J. C. F. Schenck	482,387	Sept. 13	792	190	60	1505
Colter. Plow-	G. A. Lambert	483,457	Sept. 27	2479	624	60	1858
Colter-yokes. Separable coupling for	N. J. Johnson	478,796	July 12	1130	278	60	239
Comb: *See* Curry comb.							
Comb	E. H. Harpham	483,058	Sept. 20	1850	469	60	1725
Combing fibrous materials. Machine for	G. E. Donisthorpe and T. Burrows	482,960	Sept. 20	1697	427, 428	60	1693
Combing-machine	H. L. Offermann and G. Ziegler	481,812	Aug. 30	3359	822, 823, 824	60	1282

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Combing machines. Dabbing apparatus for wool-	J. L. Ballantyne	479,695	July 26	2562	637, 638	60	538
Combination-chair	W. H. Tuttle	478,662	July 12	908	225	60	195
Combination-lock	G. L. Barney	482,222	Sept. 6	492	118	60	1431
Combination-lock	J. F. Foster	479,412	July 26	2100	526	60	451
Combination-lock	W. H. Thompson	478,658	July 12	903	224	60	195
Combustion. Total	E. A. Erb	478,693	July 12	952	236	60	205
Commode	J. W. Clerke	481,255	Aug. 23	2416	602	60	1092
Commode	D. H. Murphy	479,897	Aug. 2	185	45, 46	60	618
Commutator	W. H. Elkins	479,793	Aug. 2	28	7	60	587
Commutator for electro-magnetic machines	H. F. Parshall	480,739	Aug. 16	1590	398	60	913
Commutator for ring-armatures	G. Pfannkuche	480,780	Aug. 16	1650	413	60	926
Compasses	A. Kolesch	479,329	July 19	1936	484	60	405
Composition of matter	P. H. Holmes	482,176	Sept. 6	423	.....	60	1418
Compound engine	J. Player	481,056	Aug. 16	2078	518, 519, 520	60	1010
Compound engine	S. F. Prince, Jr	480,781	Aug. 16	1652	413	60	926
Compound engine	G. S. Strong	481,773	Aug. 30	3296	802, 803, 804	60	1271
Compressing-engine. Compound	S. St. Clair	480,527	Aug. 9	1247	313, 314	60	831
Computing-machine	P. J. Landin	482,312	Sept. 6	650	155	60	1462
Condenser-head	S. H. Woodbridge	481,518	Aug. 23	2865	704	60	1171
Condenser. Steam-	J. F. Fetters	480,572	Aug. 9	1311	328	60	845
Conductors. Cast joint for armored	C. Grohman	479,271	July 19	1856	465	60	368
Conduits. Cord-carrier for underground	F. M. Bennett	479,386	July 19	2053	512	60	426
Confectionery. Apparatus for the manufacture of tubular articles of	S. R. Bradley	479,397	July 26	2077	521	60	447
Conformator	C. E. Gardiner	478,279	July 5	347	84	60	70
Convertible chair	A. S. Adler	482,911	Sept. 20	1623	406, 407	60	1677
Conveyer	A. B. Stevens	480,636	Aug. 9	1424	355	60	866
Conveyer	E. B. Coxe	481,106	Aug. 16	2172	538	60	1026
Conveyer	T. L. Marvel	483,232	Sept. 27	2131	530	60	1792
Conveyer	J. H. Shull and G. S. Dorney	480,939	Aug. 16	1887	472	60	973
Conveyer and screen	P. C. Wilson	481,837	Aug. 30	3401	835	60	1290
Conveyer. Continuous-trough	R. L. Hassell	479,742	July 26	2654	658	60	555
Conveyer sprocket device	J. Pollock	483,475	Sept. 27	2499	629	60	1862
Conveying and hoisting device	M. Garland	480,010	Aug. 2	393	97	60	636
Conveying apparatus	E. G. Spilsbury	482,443	Sept. 13	881	212	60	1520
Conveying apparatus	T. S. Miller	4 8,348	July 5	453	111	60	91
Conveying apparatus	C. M. North	480,929	Aug. 2	436	110	60	664
Cooker	I. N. Rowe	483,120	Sept. 20	1943	491	60	1744
Cooker or boiler. Domestic	J. H. Gardner	482,898	Sept. 20	1606	403	60	1674
Cooking utensil	H. C. Joerden	478,331	July 5	492	103	60	85
Cooking utensil	T. A. Simons	478,243	July 5	295	72	60	59
Cooking-vessels. Fume-drainer for	S. Smith	478,376	July 5	494	119	60	97
Cooler: *See* Milk-cooler.	B. F. Fowler	481,901	Aug. 30	3504	858	60	1309
Cooling milk, meat, vegetables, &c. Device for	J. W. Smart and T. C. Cheatham	478,720	July 12	992	246	60	213
Coop. Chicken-	A. H. Kludle	479,514	July 26	2290	572	60	488
Coop. Folding	J. E. Marquis	482,644	Sept. 13	1193	289	60	1581
Coop or crate. Folding	G. Bender	480,914	Aug. 16	1852	462	60	967
Copying device	J. C. Ingram	479,220	July 19	1870	468	60	392
Copying-machine	C. Maine	478,119	July 5	63	16, 17	60	15
Copying-press	D. Healy	478,601	July 12	829	205	60	180
Core-barrel. Collapsible	F. Chambers	478,921	July 12	1306	325	60	273
Core-setter	J. D. Storie	482,394	Sept. 13	803	193	60	1507
Cores. Skeleton frame for sand	W. H. Cass	479,783	Aug. 2	14	4	60	585
Coring machine. Fruit-	J. Adams	482,327	Sept. 6	682	162, 163	60	1469
Cork-extractor	J. M. Barnes	481,093	Aug. 16	2152	534	60	1022
Cork-extractor	R. B. Gilchrist	478,545	July 5	751	183	60	149
Corn cutter or harvester	J. Kipp, Sr	479,815	Aug. 2	61	14	60	594
Corn cutting and shocking machine	G. D. Haworth	482,355	Sept. 13	738	177, 178	60	1494
Corn-popper	I. M. Palmer	482,632	Sept. 20	1487	370	60	1652
Corn-popper	D. Swenson	481,877	Aug. 30	3460	849	60	1302
Corn-popper. Portable	A. B. Olson	478,353	July 5	460	112	60	92
Corn-popping apparatus	N. B. Olson	480,779	Aug. 16	1648	413	60	926
Corn-shellers. Extension-feed for	W. H. Rush	483,239	Sept. 27	2141	542, 543	60	1794
Corn-shock loader	D. H. Good	480,767	Aug. 16	1630	408, 409	60	922
Corn-shocker	T. J. Mason	479,124	July 19	1633	408	60	345
Cornet. Convertible	J. Vivien	478,666	July 12	915	227	60	197
Corrugating-machine	J. White	483,192	Sept. 27	2068	522	60	1780
Corset	W. P. Bigelow	481,294	Aug. 23	2516	618	60	1104
Corset	L. Schiele	479,573	July 26	2373	591	60	503
Corset	L. Schiele	479,574	July 26	2374	592	60	503
Corset	M. W. Sherman	479,312	July 19	1916	479	60	400
Corset and dress-shield. Combined	J. S. Goldsmith	480,426	Aug. 9	1095	273, 274	60	800
Corset-steel clasp	L. A. Davis	479,492	July 26	2258	566	60	482
Cotton-chopper	E. A. Ellis and W. C. S. Wood	478,158	July 5	131	33	60	29
Cotton-chopper	E. A. Wright	479,683	July 26	2558	636	60	537
Cotton chopper and cultivator. Combined	L. H. Abernathy	479,083	July 19	1563	392	60	333
Cotton-cleaning machine	C. Young	482,669	Sept. 13	1228	299	60	1588
Cotton. Feeding mechanism for machinery for opening and preparing	J. C. Potter	482,194	Sept. 6	448	108	60	1423

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Cotton. Feeding mechanism for machinery for opening, cleaning, and preparing	J. C. Potter	482,193	Sept. 6	446	108	60	1422
Cotton-gin	S. Z. Hall	483,216	Sept. 27	2104	533	60	1787
Cotton-gin brush	S. B. Hall	482,478	Sept. 13	933	227	60	1530
Cotton-gin. Huller	W. G. Beckwith	482,672	Sept. 13	1231	300	60	1588
Cotton-gins. Pneumatic feeder for	J. Cornelison	482,916	Sept. 20	1630	408	60	1679
Cotton. Machine for handling, cleaning, and distributing seed	R. S. Munger	478,883	July 12	1244	308 / 309	60	261
Cotton opening and preparing machine	J. C. Potter	482,273	Sept. 6	575	136 / 137	60	1447
Cotton-pickers, &c. Trunk for use with	R. L. Cumnock	478,990	July 19	1423	352	60	306
Cotton. Pneumatic conveyer for unloading	G. A. Stafford	481,434	Aug. 23	2738	673	60	1145
Cotton-press	P. B. Marsh	478,753	July 12	1051	259	60	224
Cotton receiver. Seed	A. Schulze	478,473	July 5	630	153	60	125
Counterbalancing-collar	W. T. Webb	483,411	Sept. 27	2423	609	60	1846
Counter foot-railing	G. A. Schellinger	482,591	Sept. 13	1121	271	60	1568
Counter-rail, foot-bracket, and cuspidor. Combined	W. C. Huss	481,568	Aug. 30	2956	726	60	1205
Counter-shaft-supporting jack	H. J. Garbutt	481,486	Aug. 23	2820	693	60	1162
Coupling: *See* Air-brake coupling. Car-coupling. Car and air-brake coupling. Car and hose coupling. Carriage-coupling. Carriage-gear coupling. Gas-main safety-coupling. Hose-coupling. Pipe-coupling. Shaft-coupling. Stovepipe-coupling. Thill-coupling. Universal coupling. Wire coupling.							
Cover and adjustable ink-well	R. L. Boyd	479,132	July 19	1613	411	60	347
Cover-holder for tea-kettles, &c	J. Musgrove	478,967	July 12	1379	339	60	287
Cover. Kettle	N. Cosman	479,490	July 26	2255	560	60	481
Cradle	J. H. and G. W. Meek	478,450	July 5	597	145	60	118
Crane. Derrick	J. B. Anderson	479,730	July 26	2635	653	60	551
Crane. Hydraulic	H. C. Shaw	479,468	July 26	2205	553 / 554	60	472
Crane. Overhead traveling	J. R. Morgan	478,803	July 12	1139	281 / 282	60	241
Crane. Overhead traveling	J. R. Morgan	478,804	July 12	1141	282	60	242
Crane. Overhead traveling	J. R. Morgan	481,964	Sept. 6	62	15, 16	60	1346
Cranes. Brake for drums of overhead traveling	J. R. Morgan	483,467	Sept. 27	2488	626 / 627	60	1860
Crank-handle fastening	T. H. Heard and W. K. Birkinshaw	481,262	Aug. 23	2456	605	60	1094
Crank-pins. Means for securing collars to	S. K. Dickerson and C. D. Kee	479,406	July 26	2093	524	60	450
Crank-securing means	F. H. Bolte	483,342	Sept. 27	2323	584	60	1827
Crate	H. C. Burkhead	483,101	Sept. 20	1916	485	60	1738
Crate. Fowl	F. W. Ewert	478,930	July 12	1322	328	60	277
Crate-head	J. L. Emple	479,794	Aug. 2	30	7	60	588
Crate or coop. Shipper's folding	C. F. Baxter	479,545	July 26	2331	582	60	496
Cravat-holder	H. Lehmann	478,342	July 5	437	107	60	87
Crayon-molding machine	A. A. Fuchs	479,212	July 19	1708	443	60	371
Crematory. Garbage or refuse	A. G. Delanoy	479,405	July 26	2090	524	60	449
Crib and chair. Combined infant's	H. A. Hayden	483,218	Sept. 27	2107	534	60	1788
Cross-head	W. Laycock	479,818	Aug. 2	64	15	60	594
Crozing-machine	T. A. Cook	480,711	Aug. 16	1551	386	60	904
Crusher: *See* Clod-crusher. Ore-crusher. Ore and coal crusher. Rock-crusher. Quartz-crusher.							
Crutch	R. M. Lamp	483,118	Sept. 20	1940	491	60	1743
Crutch or cane tip	W. L. Scoville	483,174	Sept. 27	2039	515	60	1774
Cuff-holder	F. B. Gardner	478,101	July 5	37	12	60	10
Cuff-holder	H. W. Jones	482,311	Sept. 6	649	155	60	1462
Cuff-holder	H. E. Snow. (Reissue)	11,253	July 12	1397	345	60	290
Culinary vessel	H. F. Thurston	481,316	Aug. 23	2552	626	60	1110
Cultivator	A. Ellis	478,790	July 12	1118	276	60	237
Cultivator	J. Gedeohn	482,919	Sept. 20	1634	410	60	1680
Cultivator	C. Johnson and O. Olson	479,281	July 19	1871	468 / 469	60	392
Cultivator	J. G. Mallery and E. J. Youngs	482,746	Sept. 20	1366	338	60	1627
Cultivator	J. A. Martin	483,075	Sept. 20	1375	475	60	1730
Cultivator	G. Moore	478,624	July 12	858	211	60	196
Cultivator	E. D. Owen	480,128	Aug. 2	588	150	60	694
Cultivator	W. Sobey	481,208	Aug. 23	2351	579	60	1074
Cultivator	A. Tindall	480,529	Aug. 9	1250	314	60	832
Cultivator	E. Wages and S. H. Armstrong	483,031	Sept. 20	1816	461	60	1718
Cultivator adjusting device	H. H. Durr and H. D. Babcock	479,754	July 26	2671	663	60	558
Cultivator attachment	A. Dyer	482,729	Sept. 20	1731	326	60	1621
Cultivator attachment	A. S. Gilkey	481,667	Aug. 30	3108	758	60	1233
Cultivator for listed corn	L. P. Schrader	482,321	Sept. 6	669	159 / 160	60	1466
Cultivator. Hand	R. O. Osborn	482,693	Sept. 13	1272	319	60	1597
Cultivator. Hand	T. T. Rodes	478,468	July 5	624	153	60	193
Cultivator. Orchard	J. E. Daly and A. A. Neil	482,081	Sept. 6	261	63	60	1387
Cultivator replanting attachment	R. C. Summers and W. Bolinger	479,998	Aug. 2	369	92	60	951
Cultivator. Rotary	S. Gasser	479,800	Aug. 2	39	10	60	589
Cultivator-tooth	M. J. Cheney and H. Berch	482,226	Sept. 6	498	119	60	1432
Cultivator-tooth	J. S. Worcester	481,129	Aug. 16	2207	546	60	1033
Cultivator. Wheel	A. E. Morey	479,913	Aug. 2	203	51	60	622
Cultivators. Spring-tooth attachment for	D. E. Herrington	481,946	Sept. 6	40	9	60	1342
Cup: *See* Lubricating-cup. Oil-cup. Paint and varnish cup.							
Cups, mugs, &c. Drinking attachment for	J. S. Howard	478,861	July 12	1220	303	60	25

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Curb-bit. Ornamental	J. W. James	478,868	July 12	1227	304	60	258
Curling-iron	F. H. Deknetel	481,348	Aug. 23	2599	638	60	1118
Curling-iron holder	G. F. McInto	478,123	July 5	67	18	60	15
Curling-iron shield	T. Iremonger, Jr	482,360	Sept. 13	746	179	60	1496
Curling or crimping iron	F. S. Sleeper	482,501	Sept. 13	978	237	60	1540
Curling-tongs	G. L. Thompson	482,702	Sept. 13	1267	315	60	1600
Curling-tongs heater	A. W. Kent	478,437	July 5	570	140	60	114
Current generator. Pulsating	H. N. Marvin	479,951	Aug. 2	275	67	60	634
Current-motor	F. Dinwiddie	478,316	July 5	400	96, 97	60	90
Current motor. Alternating	O. T. Blathy	482,974	Sept. 20	1721	434	60	1697
Current motor. Alternating	T. H. Hicks	479,187	July 19	1734	435	60	364
Current motor. Alternating	W. Stanley, Jr., and J. F. Kelly	479,675	July 26	2528	630	60	532
Current motor. Alternating	W. Stanley, Jr., and J. F. Kelly	479,676	July 26	2530	630	60	532
Current motor. Alternating	W. Stanley, Jr., and J. F. Kelly	479,727	July 26	2630	653	60	550
Currycomb	T. H. Ireland	480,196	Aug. 2	697	176	60	714
Curtain-fixture	C. M. Banks	481,684	Aug. 30	3135	765	60	1238
Curtain-fixture	F. H. Bassett	482,716	Sept. 20	1316	321	60	1618
Curtain-fixture	S. H. Snavely	481,978	Sept. 6	85	22	60	1351
Curtain-rod	S. R. Scottron	481,720	Aug. 30	3209	782	60	1252
Cut-off. Rain-water	W. C. Maxfield	481,635	Aug. 30	3039	747	60	1224
Cut-out. Ceiling-rosette	J. Pass and A. P. Seymour	481,624	Aug. 30	3043	743	60	1220
Cut-out. Safety	R. Furgang	480 009	Aug. 2	392	97	60	656
Cut-out switch	W. B. Cleveland	478,689	July 12	949	235	60	204
Cut-out. Thermal	A. P. Seymour	481,246	Aug. 23	2423	598	60	1088
Cutlery-die	T. Shaw	479,668	July 26	2519	627	60	530
Cutlery rolling-machine	I. Hirsch	480,325	Aug. 9	932	236	60	771
Cutter: *See* Axle-cutter. Bale-tie cutter. Band-cutter. Bolt-cutter. Broom-shoulder cutter. Cane-cutter. Cigar-bunch cutter. Coal-cutter. Corn-cutter. Dovetail-cutter. Meat-cutter. Meat and vegetable cutter. Miter-cutter. Paper-cutter. Potato-cutter. Spoke-tenon cutter. Stalk-cutter. Straw-cutter. Straw or ensilage cutter. Strawberry-vine cutter. Tube-cutter. Weed-cutter.							
Cutter-bar	G. A. Vandament	481,318	Aug. 23	2555	627	60	1111
Cutter-head	C. L. Goehring	480,463	Aug. 9	1157	290	60	813
Cutter-head and knife	C. Grotz	481,861	Aug. 30	3436	843	60	1297
Cutter-head. Rotary	J. T. Rhodes	480,137	Aug. 2	605	153 / 154	60	698
Cutter or drill applicable to coal, &c	H. Renold, W. T. Goolden, L. B. Atkinson, and S. C. G. Gold.	481,656	Aug. 30	3092	754	60	1230
Cutting and scouring device. Combined	E. K. Patten	479,332	July 19	1939	485	60	405
Cutting-knife	W. E. Taft	478,381	July 5	499	121	60	98
Cutting-machine. Rotary-blade	F. Kircher	480,387	Aug. 9	1032	259	60	790
Cutting off machine	J. A. Gilmore	480,461	Aug. 9	1153	289	60	812
Cutting right-angled structural shapes. Machine for	R. W. Grace	479,066	July 19	1536	383 / 384	60	328
Cycle-wheel	C. E. W. Woodward	483,373	Sept. 27	2367	593	60	1836
Cyclometer	F. C. Weston	481,608	Aug. 30	3021	738	60	1216
Cyclometer for velocipedes. Electric	J. Butcher	478,086	July 5	18	6	60	6
Cylinder-lock	J. B. Price	481,421	Aug. 23	2714	668	60	1141
Cylinder locks and keys	H. G. Voight	480,299	Aug. 9	889	225 / 226	60	764
Cylinder mold. Closed	F. X. Black	481,295	Aug. 23	2517	619	60	1104
Dam or levee	C. E. Wright	479,543	July 26	2128	581	60	495
Damper. Automatic	C. D. Howard	480,263	Aug. 9	832	212	60	753
Damper-operating mechanism. Time	O. Briggs, Jr	478,562	July 12	775	189	60	169
Damper-regulator	J. E. Spencer	479,854	Aug. 2	118	29	60	605
Damper regulator. Automatic steam	G. Newton	478,127	July 5	71	19	60	16
Damper. Self-acting wind-proof	A. J Ginther	479,801	Aug. 2	42	10	60	590
Damper. Stovepipe	L. M. Devore	478,414	July 5	547	133	60	108
Darning-last	S. H. Garwood	482,351	Sept. 13	731	176	60	1493
Data. Instrument for facilitating the use of tabulated	I. D. Boyer	480,245	Aug. 9	790	201	60	743
Davit-hook	S. B. Butler	483,421	Sept. 27	2435	613	60	1849
Deck-cleaning machine	S. Lowberg	478,443	July 5	587	143	60	116
Decorticating ramie, &c. Machine for	W. T. Forbes	480,084	Aug. 2	519	132	60	681
Dehorner	J. M. Mills	480,932	Aug. 16	1679	409	60	972
Dehorning implement	A. C. Brosius	480,246	Aug. 9	791	202	60	743
Demijohn-holder	E. W. H. Holme	480,095	Aug. 2	539	135	60	684
Dental burring-tool	R. G. Stanbrough	481,740	Aug. 30	3241	789	60	1250
Dental cabinet	C. A. Herr	480,261	Aug. 9	830	212	60	752
Dental chair	W. H. Gilbert	478,589	July 12	811	200	60	176
Dental chair	A. P. Gould	478,590	July 12	812	200 / 201	60	176
Dental chair	B. M. Wilkerson	478,672	July 12	923	229 / 230	60	198
Dental chair. Portable	F. H. and C. H. Field	482,590	Sept. 13	1011	245	60	1547
Dental clamp	J. S. Deardorff	481,479	Aug. 23	2811	691	60	1160
Dental disk-carrier	M. S. Nichols	480,121	Aug. 2	573	145	60	691
Dental drill	L. Maillard	482,558	Sept. 13	1077	261	60	1559
Dental engine	F. A. Damon	478,992	July 19	1425	353	60	307
Dental engine	F. A. Damon	481,164	Aug. 23	2286	563	60	1061
Dental engine	C. W. Thomas	480,678	Aug. 9	1494	372	60	879
Dental flask clamp	M. R. B. Creery	478,312	July 5	395	95	60	79
Dental forceps	C. E. Blake, Sr	478,217	July 5	231	58	60	47
Dental jaw-brace	A. E. Worthen	480,357	Aug. 9	977	246	60	779
Dental moistening-pad	G. W. Melotte	480,471	Aug. 9	1167	294	60	815

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Dental syringe	J. M. Drennan	479,407	July 26	2094	525	60	450
Dental tool	C. P. Lennox	478,343	July 5	438	108	60	87
Dental tool	E. C. Moore	478,881	July 12	1241	307	60	261
Dental-tool sterilizer	W. G. Flanders	482,552	Sept. 13	1069	259	60	1557
Dental vulcanizer	J. Johnson	478,871	July 12	1230	305	60	259
Derrick-drum	A. C. French	483,052	Sept. 20	1843	468	60	1724
Derrick. Portable	G. W. Patnoe	482,528	Sept. 13	1026	248	60	1550
Desk	M. J. Hafgar	478,594	July 12	818	202	60	178
Desk-cover	C. A. Bennett	483,128	Sept. 27	1959	496	60	1758
Desk. School-	C. S. Barnes	482,465	Sept. 13	910	222	60	1525
Desk. School-	R. Parker and S. W. Le Neve	480,620	Aug. 9	1399	348	60	861
Desk. Writing-	O. Kissling	478,336	July 5	427	104	60	86
Detergent paste	J. Judge	478,870	July 12	1229	.....	60	259
Dial-transmitter	F. Pearce	482,877	Sept. 20	1561	{390 391}	60	1667
Dice-box. Puzzle	H. Goujon	481,398	Aug. 23	2079	657	60	1133
Die: *See* Cutlery-die. Screw-threading die. Screw-swaging die.							
Die	H. C. Dickinson	479,354	July 19	1995	499	60	416
Die-plate	L. C. Wetzel	481,450	Aug. 23	2759	679	60	1150
Diffusion apparatus	E. F. and H. P. Dyer	480,812	Aug. 16	1701	424	60	935
Diffusion apparatus	S. Faron	480,571	Aug. 9	1310	328	60	845
Digger: *See* Post-hole digger. Potato-digger.							
Dipper. Fruit-	E. E. Thomas	482,283	Sept. 6	593	141	60	1450
Dish-washer	M. A. Crosby	479,703	July 26	2578	642	60	540
Dish-washing machine	A. W. Heinly	481,027	Aug. 16	2029	506	60	1000
Dish-washing machine	H. F. Low	482,313	Sept. 6	653	156	60	1463
Dish-washing machine	S. A. Walter	482,706	Sept. 13	1292	{316 317}	60	1601
Disinfectant	B. R. Seifert	482,102	Sept. 6	295	.....	60	1393
Disinfectants. Making	B. R. Seifert	482,101	Sept. 6	293	.....	60	1393
Disinfectants. Manufacture of	H. Heidenhain	479,710	July 26	2593	.....	60	544
Disinfecting and deodorizing cover for commodes, water-closets, &c.	J. Kinney	482,966	Sept. 20	1708	431	60	1695
Disinfecting apparatus	C. B. Hyslip	478,697	July 12	957	238	60	260
Disintegrating-roller	R. C. Penfield	480,937	Aug. 16	1885	471	60	973
Disintegrating vegetable substances	H. J. Bird	482,537	Sept. 13	1040	.....	60	1552
Displaying goods. Rack for	E. A. Foster	481,942	Sept. 6	34	8	60	1341
Distilling apparatus	A. Feldmann	480,842	Aug. 16	1741	435	60	943
Distilling apparatus	H. Propfe	478,265	July 5	327	79	60	66
Ditching-machine	J. Cornelius	478,408	July 5	538	131	60	106
Divers. Microtelephonic apparatus for	R. Wreden	478,493	July 5	658	{161 162}	60	131
Dividers	W. A. Bernard	479,112	July 19	1616	404	60	342
Dock. Hydraulic lifting	R. Moran	481,411	Aug. 23	2698	683	60	1137
Doll-support	A. B. Willcox	479,481	July 26	2242	562	60	478
Dolls. Composition for and method of making heads and limbs of	S. D. Hoffmann	480,094	Aug. 2	532	.....	60	684
Door-alarm. Electric	M. W. Bessey	481,711	Aug. 30	3177	776	60	1247
Door bolt. Prison-	F. O. Weary and G. W. Kramer	478,146	July 5	109	28	60	24
Door-check	W. J. Conner	482,227	Sept. 6	498	119	60	1432
Door-check	J. Keene	479,813	Aug. 2	58	14	60	593
Door-check	J. H. Shaw	478,371	July 5	485	117	60	96
Door-check	J. H. Shaw	478,372	July 5	487	117	60	96
Door-check	C. H. Timms	480,222	Aug. 2	750	180	60	724
Door-check. Pneumatic	G. W. Wright	478,388	July 5	507	123	60	100
Door-closer	E. W. Daily	483,140	Sept. 27	1976	501	60	1761
Door-closer	A. D. Lodge	481,798	Aug. 30	3337	815	60	1278
Door-closer	E. M. Wyant	482,836	Sept. 20	1404	371	60	1654
Door-closer. Automatic	J. B. Stoner	478,216	July 5	300	73	60	60
Door-closer. Gravitating	H. Schneewind	483,169	Sept. 27	2032	513	60	1773
Door-fastener	W. W. Tanner and T. W. Burch	482,817	Sept. 20	1465	364	60	1648
Door-hanger	S. Shreffler, Jr.	482,530	Sept. 13	1020	249	60	1550
Door-jamb setter	J. Ritterbeck	481,245	Aug. 23	2421	{597 598}	60	1087
Door-lock	C. F. Garland	480,236	Aug. 2	709	194	60	728
Door lock. Sliding	A. B. Pullman	483,326	Sept. 27	2301	579	60	1623
Door-opener. Electric	L. Bates	480,546	Aug. 9	1277	320	60	838
Door or window screen. Electric	W. S. Hull	480,100	Aug. 2	540	137	60	685
Door parcel-box. House-	G. Benicke	480,704	Aug. 16	1541	384	60	902
Door-spring	J. A. Cooper	481,475	Aug. 23	2801	680	60	1158
Door-spring	A. A. Page	478,354	July 5	464	113	60	93
Door-spring	A. A. Page	478,355	July 5	465	113	60	93
Door-spring	J. H. Shaw	478,370	July 5	484	116	60	96
Door-spring	G. W. Wright	478,387	July 5	506	123	60	100
Door track. Barn-	J. H. Lawrence	480,501	Aug. 9	1212	303	60	824
Doors. Manufacture of screen	C. J. Shirreff	481,067	Aug. 16	2112	525	60	1015
Doors. Mechanism for opening and closing jail	P. J., Sr., and P. J. Pauly, Jr	482,316	Sept. 6	658	157	60	1464
Doors. Mechanism for opening, closing, and locking jail-	P. J., Sr. and P. J. Pauly, Jr.	480,476	Aug. 9	1175	{295 296}	60	817
Doors. Mechanism for operating and locking jail-	C. H. Sparks	483,178	Sept. 27	2043	516	60	1775
Dovetail-cutter	A. G. Mead	479,075	July 19	1551	387	60	331
Dovetailing-machine	H. J. Cordesman and E. Cheshire	478,544	July 5	750	183	60	149
Dovetailing-machine	C. Cristadoro	480,251	Aug. 9	863	206	60	747
Draft attachment. Spring	H. Barber	481,384	Aug. 23	2653	{650 651}	60	1129
Draft attachment. Spring	J. F. Tiner	479,681	July 26	2541	633	60	534
Draft attachment. Spring	R. Boettler	482,504	Sept. 13	992	238	60	1541
Draft attachment. Vehicle	H. Barber	482,973	Sept. 20	1718	434	60	1697
Draft-equalizer	T. J. Fredericks	479,088	July 19	1574	394	60	335

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Draft-equalizer	J. L. Hoover	480,262	Aug. 9	831	212	60	753
Draft-equalizer	A. Hunt	481,357	Aug. 23	2609	641	60	1121
Draft-equalizer	J. Lamuth	482,370	Sept. 13	758	183	60	1498
Draft-equalizer	A. McKee	480,339	Aug. 9	947	240	60	774
Draft-equalizer	E. Roadifer	480,517	Aug. 9	1229	308	60	828
Draft-equalizer	J. S. Thompson	479,034	July 19	1493	371	60	320
Drainage-trap	G. Wing	480,837	Aug. 16	1735	434	60	943
Drainage system	E. E. Gold	481,727	Aug. 30	3214	{784 785}	60	1253
Drainer-plate	J. and F. H. Nicholson	483,236	Sept. 27	2138	541	60	1793
Drapery-fixture. Cornice	H. Strater	481,981	Sept. 6	90	23	60	1352
Draw-bar carrier-iron	M. E. Clark and F. S. Shaw	479,787	Aug. 2	20	5	60	586
Drawer-pull	W. D. Minton and A. S. Douglas	483,465	Sept. 27	2487	626	60	1859
Drawer stop and guide	R. Eichstaedt	481,853	Aug. 30	3426	841	60	1295
Drawing apparatus	H. E. Spaunhorst	480,861	Aug. 16	1773	444	60	950
Drawing-roll	A. H. Johnson	482,127	Sept. 6	332	79	60	1400
Dredge. Hydraulic	P. H. Holmes	480,195	Aug. 2	696	176	60	714
Dredging-machine	C. H. Booth	479,486	July 26	2250	{564 565}	60	480
Dress-form	J. M. Miller	479,375	July 19	2031	507	60	423
Dress-form	H. Baer	480,703	Aug. 16	1540	383	60	902
Dress-pad	W. Vogler	479,232	July 19	1798	450	60	377
Dress-shield	E. Goldman	481,788	Aug. 30	3320	811	60	1275
Dress-stay	E. N. Gaillard	480,574	Aug. 9	1314	328	60	845
Dress-waist form	I. Bray	480,994	Aug. 16	1983	496	60	991
Dresser and table. Combined	H. A. Brown	478,308	July 5	380	94	60	78
Drier: *See* Brick-drier. Phosphate-rock drier. Clothes-drier. Tea and fruit drier. Paper-machine drier.	B. Wilms	480,799	Aug. 16	1676	419	60	931
Drier	S. A. Menzemer	480,112	Aug. 2	557	140	60	688
Drill: *See* Dental drill. Prospecting-drill. Electric drill. Rock-drill.							
Drill	A. G. Turner	480,978	Aug. 16	1964	491	60	987
Drilling-machine	A. G. Turner	480,979	Aug. 16	1965	491	60	987
Drilling-machine	J. Kindred	480,907	Aug. 16	1845	459	60	965
Drilling-machine. Portable	O. Sternoff-Beyer	479,086	July 19	1570	394	60	334
Drilling-tool and sand-bailer. Combined	J. R. Saylor	480,040	Aug. 2	452	115	60	668
Drinking-fountain for fowls	L. N. Ireland	478,605	July 12	836	206	60	181
Drive-gate	F. G. Botsford	479,549	July 26	2340	584	60	497
Drum	J. M. Thomas	479,319	July 19	1924	481	60	402
Drum	J. Knittel	478,611	July 12	842	207	60	183
Drum for stoves. Detachable heating-	A. G. Soistmann and J. W. Pepper	478,378	July 5	495	120	60	98
Drum. Hand-	W. J. Loth	478,874	July 12	1233	306	60	260
Drum. Heating	E. H. Droop	479,636	July 26	2464	613	60	520
Drum. Heating	S. M. Kamp	483,116	Sept. 20	1938	490	60	1743
Drum-snares. Device for adjusting	J. Seither	482,276	Sept. 6	580	138	60	1448
Drums. Waterproof woven snare-string for	E. Boulanger	480,064	Aug. 2	489	124	60	675
Dry closet	E. Boulanger	480,063	Aug. 2	488	124	60	675
Dry closet	J. S. Rush	481,155	Aug. 16	2263	{558 559}	60	1043
Drying apparatus	C. B. Tompkins	482,987	Sept. 20	1742	440	60	1702
Drying-kiln	W. D. Sunderlin	481,212	Aug. 23	2357	581	60	1075
Drying-line support	C. J. Dion	480,253	Aug. 9	806	207	60	747
Dulcimer	J. and J. A. Paglinghi and F. De Canio,	479,898	Aug. 2	186	46	60	618
Dumping apparatus. Self-acting	I. D. Baglasarian	479,323	July 19	1928	482	60	403
Duplicating apparatus	J. C. Smith and C. Lardner	482,390	Sept. 13	796	191	60	1505
Dust-beater	H. T. C. Wise	479,968	Aug. 2	310	76	60	641
Dust-collector	J. J. Slattery	480,389	Aug. 9	1033	259	60	790
Dust collector and conveyer	P. Van Gelder	479,231	July 19	1797	450	60	376
Dust from air. Apparatus for separating	B. F. Mohr	481,185	Aug. 23	2313	570	60	1067
Dust-guard for attrition-mills	P. Van Gelder	479,267	July 19	1851	{463 464}	60	387
Dye and making the same. Red	T. Blass	479,547	July 26	2336	583	60	497
Dye. Diazo	C. Duisberg	481,934	Sept. 6	23	.....	60	1339
Dye. Olive	M. Hoffmann	480,326	Aug. 9	933	.....	60	772
Dyes. Manufacture of yellow	R. Lauch	479,515	July 26	2291	.....	60	488
Dyeing or scouring machine	M. Hoffmann. (Reissue)	11,267	Sept. 6	686	.....	60	1470
Dyeing with alizarin	J. H. Lorimer	480,502	Aug. 9	1213	303	60	824
Dynamo. Compound-wound alternating-current	H. N. F. Schaeffer	481,591	Aug. 30	2990	.....	60	1211
Dynamometer	H. Lemp	479,170	July 19	1697	{425 426}	60	358
Dynamos and motors. Brush-holder for	E. P. Warner	480,981	Aug. 16	1968	492	60	988
Dynamos. Ventilated brush for	M. H. Hathaway	478,104	July 5	41	13	60	11
Ear-muff	H. H. Cherry and S. D. Younglove	480,762	Aug. 16	1620	407	60	720
Ear-ring	H. Hadden	479,185	July 19	1733	434	60	364
Earth-closet	T. F. Gaynor	483,214	Sept. 27	2101	533	60	1787
Easel attachment for chairs and other supports	H. A. Jukes	479,712	July 26	2599	647	60	544
Easel rest or bracket	H. J. Muhlfeld and F. J. Spillane	481,045	Aug. 16	2060	514	60	1007
Eraseur	W. Rochlitz	480,280	Aug. 9	855	218	60	758
Edge-protector. Metallic	C. H. Harris	480,870	Aug. 16	1784	447	60	953
Edge. Straight-	F. F. Atkinson	480,241	Aug. 9	787	201	60	743
Edged tools. Apparatus for whetting and sharpening the edges of	C. T. Ridgely and M. A. Smith	480,516	Aug. 9	1228	307	60	898
Educational appliance	C. Spruce	480,634	Aug. 9	1421	354	60	866
Egg-carrying package	S. S. Barrett	480,164	Aug. 2	648	164	60	705
Egg-tester	R. G. Dale and W. S. Weightman	478,924	July 12	1310	326	60	274
Eggs. Device for separating the white and yelk of	J. B. Garland	481,487	Aug. 23	2821	693	60	1162
Eggs. Preserving	L. F. Pettee	479,016	July 19	1463	364	60	314
	E. T. Burnette	479,970	Aug. 2	312	.....	60	641

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Dental syringe	J. M. Drennan	479,407	July 26	2094	525	60	450
Dental tool	C. P. Lennox	478,343	July 5	438	108	60	87
Dental tool	E. C. Moore	478,881	July 12	1241	307	60	261
Dental-tool sterilizer	W. G. Flanders	482,552	Sept. 13	1069	259	60	1557
Dental vulcanizer	J. Johnson	478,871	July 12	1230	305	60	259
Derrick-drum	A. C. French	483,052	Sept. 20	1843	468	60	1734
Derrick. Portable	G. W. Patnoe	482,528	Sept. 13	1026	248	60	1550
Desk	M. J. Hafgar	478,504	July 12	818	202	60	178
Desk-cover	C. A. Bennett	483,129	Sept. 27	1959	496	60	1758
Desk. School	C. S. Barnes	482,465	Sept. 13	910	232	60	1525
Desk. School	R. Parker and S. W. Le Neve	480,620	Aug. 9	1399	348	60	861
Desk. Writing	O. Kissling	478,336	July 5	427	104	60	96
Detergent paste	J. Judge	478,870	July 12	1229	.....	60	259
Dial-transmitter	F. Pearce	482,877	Sept. 20	1561	{390 391}	60	1667
Dice-box. Puzzle	H. Goujon	481,398	Aug. 23	2679	657	60	1133
Die: *See* Cutlery-die. Screw-threading die. Screw-swaging die.							
Die	H. C. Dickinson	479,354	July 19	1905	499	60	416
Die-plate	L. C. Wetzel	481,450	Aug. 23	2759	679	60	1150
Diffusion apparatus	E. F. and H. P. Dyer	480,812	Aug. 16	1701	424	60	935
Diffusion apparatus	S. Faron	480,571	Aug. 9	1310	328	60	845
Digger: *See* Post-hole digger. Potato-digger.							
Dipper. Fruit	E. E. Thomas	482,283	Sept. 6	566	141	60	1450
Dish-washer	M. A. Crosby	479,703	July 26	2578	642	60	540
Dish-washing machine	A. W. Heinly	481,027	Aug. 16	2020	500	60	1000
Dish-washing machine	H. F. Low	482,313	Sept. 6	653	156	60	1463
Dish-washing machine	S. A. Walter	482,706	Sept. 13	1292	{316 317}	60	1601
Disinfectant	B. R. Seifert	482,102	Sept. 6	295	.....	60	1393
Disinfectants. Making	B. R. Seifert	482,101	Sept. 6	293	.....	60	1393
Disinfectants. Manufacture of	H. Heudenhain	479,710	July 26	2593	.....	60	544
Disinfecting and deodorizing cover for commodes, water-closets, &c.	J. Kinney	482,966	Sept. 20	1708	431	60	1695
Disinfecting apparatus	C. B. Hyslip	478,697	July 12	957	238	60	260
Disintegrating-roller	R. C. Penfield	480,937	Aug. 16	1885	471	60	973
Disintegrating vegetable substances	H. J. Bird	482,537	Sept. 13	1040	.....	60	1552
Displaying goods. Rack for	E. A. Foster	481,942	Sept. 6	34	8	60	1341
Distilling apparatus	A. Feldmann	480,842	Aug. 16	1741	435	60	943
Distilling apparatus	H. Propfe	478,265	July 5	327	79	60	66
Ditching-machine	J. Cornelius	478,408	July 5	538	131	60	106
Divers. Microtelephonic apparatus for	R. Wreden	478,493	July 5	658	{161 162}	60	131
Dividers	W. A. Bernard	479,112	July 19	1616	404	60	342
Dock. Hydraulic lifting	R. Moran	481,411	Aug. 23	2698	663	60	1137
Doll-support	A. B. Willcox	479,481	July 26	2242	562	60	478
Dolls. Composition for and method of making heads and limbs of	S. D. Hoffmann	480,094	Aug. 2	532	.....	60	684
Door-alarm. Electric	M. W. Bessey	481,711	Aug. 30	3177	776	60	1247
Door bolt. Prison	F. O. Weary and G. W. Kramer	478,146	July 5	109	28	60	24
Door-check	W. J. Conner	482,227	Sept. 6	498	119	60	1432
Door-check	J. Keene	479,813	Aug. 2	58	14	60	593
Door-check	J. H. Shaw	478,371	July 5	485	117	60	96
Door-check	J. H. Shaw	478,372	July 5	487	117	60	96
Door-check	C. H. Timms	480,222	Aug. 2	750	189	60	724
Door-check. Pneumatic	G. W. Wright	478,388	July 5	507	123	60	100
Door-closer	E. W. Daily	483,140	Sept. 27	1976	501	60	1761
Door-closer	A. D. Lodge	481,798	Aug. 30	3337	815	60	1278
Door-closer	E. M. Wyant	482,836	Sept. 20	1494	371	60	1654
Door-closer. Automatic	J. B. Stoner	478,246	July 5	300	73	60	60
Door-closer. Gravitating	H. Schneewind	483,169	Sept. 27	2032	513	60	1773
Door-fastener	W. W. Tanner and T. W. Burch	482,817	Sept. 20	1465	364	60	1648
Door-hanger	S. Shreffler, Jr.	482,530	Sept. 13	1029	249	60	1550
Door-jamb setter	J. Ritterbeck	481,245	Aug. 23	2421	{597 598}	60	1087
Door-lock	C. F. Garland	480,236	Aug. 2	769	194	60	728
Door lock. Sliding	A. B. Pullman	483,326	Sept. 27	2301	579	60	1823
Door-opener. Electric	L. Bates	480,546	Aug. 9	1277	320	60	838
Door or window screen. Electric	W. S. Hull	480,100	Aug. 2	540	137	60	685
Door parcel-box. House	G. Bènicke	480,704	Aug. 16	1541	384	60	902
Door-spring	J. A. Cooper	481,475	Aug. 23	2801	689	60	1158
Door-spring	A. A. Page	478,354	July 5	464	113	60	93
Door-spring	A. A. Page	478,355	July 5	465	113	60	93
Door-spring	J. H. Shaw	478,370	July 5	484	116	60	96
Door-spring	G. W. Wright	478,387	July 5	506	123	60	100
Door track. Barn	J. H. Lawrence	480,501	Aug. 9	1212	303	60	824
Doors. Manufacture of screen	C. J. Shirreff	481,067	Aug. 16	2112	525	60	1015
Doors. Mechanism for opening and closing jail	P. J., Sr., and P. J. Pauly, Jr	482,316	Sept. 6	658	157	60	1464
Doors. Mechanism for opening, closing, and locking jail	P. J., Sr. and P. J. Pauly, Jr.	480,476	Aug. 9	1175	{295 296}	60	817
Doors. Mechanism for operating and locking jail	C. H. Sparks	483,178	Sept. 27	2043	516	60	1775
Dovetail-cutter	A. G. Mead	479,075	July 19	1551	387	60	331
Dovetailing-machine	H. J. Cordesman and E. Cheshire	478,544	July 5	750	183	60	149
Dovetailing-machine	C. Cristadoro	480,251	Aug. 9	803	206	60	747
Draft attachment. Spring	H. Barber	481,384	Aug. 23	2653	{650 651}	60	1129
Draft attachment. Spring	J. F. Tiner	479,681	July 26	2541	633	60	534
Draft attachment. Spring	R. Boettler	482,504	Sept. 13	922	238	60	1541
Draft attachment. Vehicle	H. Barber	482,973	Sept. 20	1718	434	60	1697
Draft-equalizer	T. J. Fredericks	479,088	July 19	1574	394	60	335

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Draft-equalizer	J. L. Hoover	480,262	Aug. 9	831	212	60	753
Draft-equalizer	A. Hunt	481,357	Aug. 23	2609	641	60	1121
Draft-equalizer	J. Lamuth	482,370	Sept. 13	758	183	60	1496
Draft-equalizer	A. McKee	480,339	Aug. 9	947	240	60	774
Draft-equalizer	E. Roadifer	480,517	Aug. 9	1229	308	60	828
Draft-equalizer	J. S. Thompson	479,034	July 19	1493	371	60	320
Drainage-trap	G. Wing	480,837	Aug. 16	1735	434	60	943
Drainage system	E. E. Gold	481,727	Aug. 30	3214	{784 785}	60	1253
Drainer-plate	J. and F. H. Nicholson	483,236	Sept. 27	2138	541	60	1793
Drapery-fixture. Cornice	H. Strater	481,981	Sept. 6	90	23	60	1352
Draw-bar carrier-iron	M. E. Clark and F. S. Shaw	479,787	Aug. 2	20	5	60	586
Drawer-pull	W. D. Minton and A. S. Douglas	483,465	Sept. 27	2487	626	60	1859
Drawer stop and guide	R. Eichstaedt	481,853	Aug. 30	3426	841	60	1295
Drawing apparatus	H. E. Spaunhorst	480,861	Aug. 16	1773	444	60	950
Drawing-roll	A. H. Johnson	482,127	Sept. 6	332	79	60	1400
Dredge. Hydraulic	P. H. Holmes	480,195	Aug. 2	696	176	60	714
Dredging-machine	C. H. Booth	479,486	July 26	2250	{564 565}	60	480
Dress-form	J. M. Miller	479,375	July 19	9031	507	60	423
Dress-form	H. Baer	480,703	Aug. 16	1540	383	60	902
Dress-pad	W. Vogler	479,232	July 19	1708	450	60	377
Dress-shield	E. Goldman	481,788	Aug. 30	3320	811	60	1275
Dress-stay	E. N. Gaillard	480,574	Aug. 9	1314	328	60	845
Dress-waist form	I. Bray	480,094	Aug. 16	1903	496	60	991
Dresser and table. Combined	H. A. Brown	478,308	July 5	389	94	60	78
Drier: *See* Brick-drier. Phosphate-rock drier. Clothes-drier. Tea and fruit drier. Paper-machine drier.	B. Wilms	480,799	Aug. 16	1676	419	60	931
Drier	S. A. Menzemer	480,112	Aug. 2	557	140	60	688
Drill: *See* Dental drill. Prospecting-drill. Electric drill. Rock-drill.							
Drill	A. G. Turner	480,978	Aug. 16	1964	491	60	987
Drilling-machine	A. G. Turner	480,979	Aug. 16	1965	491	60	987
Drilling-machine	J. Kindred	480,907	Aug. 16	1845	459	60	965
Drilling-machine. Portable	O. Sternoff-Beyer	479,086	July 19	1570	394	60	334
Drilling-tool and sand-bailer. Combined	J. R. Saylor	480,040	Aug. 2	452	115	60	668
Drinking-fountain for fowls	L. N. Ireland	478,605	July 12	836	206	60	181
Drive-gate	F. G. Botsford	479,549	July 26	2340	584	60	497
Drum	J. M. Thomas	479,319	July 19	1924	481	60	402
Drum	J. Knittel	478,611	July 12	842	207	60	183
Drum for stoves. Detachable heating	A. G. Soistmann and J. W. Pepper	478,378	July 5	495	120	60	98
Drum. Hand	W. J. Loth	478,874	July 12	1233	306	60	260
Drum. Heating	E. H. Droop	479,636	July 26	2464	613	60	520
Drum. Heating	S. M. Kamp	483,116	Sept. 20	1938	490	60	1743
Drum-snares. Device for adjusting	J. Seither	482,276	Sept. 6	580	138	60	1448
Drums. Waterproof woven snare-string for	E. Boulanger	480,064	Aug. 2	489	124	60	675
Dry closet	E. Boulanger	480,063	Aug. 2	488	124	60	675
Dry closet	J. S. Rush	481,155	Aug. 16	2263	{558 559}	60	1043
Drying apparatus	C. B. Tompkins	482,987	Sept. 20	1742	440	60	1702
Drying-kiln	W. D. Sunderlin	481,212	Aug. 23	2357	581	60	1075
Drying-line support	C. J. Dion	480,253	Aug. 9	806	207	60	747
Dulcimer	J. and J. A. Pagliughi and F. De Canio.	479,898	Aug. 2	186	46	60	618
Dumping apparatus. Self-acting	I. D. Bagdasarian	479,323	July 19	1928	482	60	403
Duplicating apparatus	J. C. Smith and C. Lardner	482,390	Sept. 13	796	191	60	1505
Dust-beater	H. T. C. Wise	479,968	Aug. 2	310	76	60	641
Dust-collector	J. J. Slattery	480,389	Aug. 9	1033	259	60	790
Dust collector and conveyer	P. Van Gelder	479,231	July 19	1797	450	60	376
Dust from air. Apparatus for separating	B. F. Mohr	481,185	Aug. 23	2313	570	60	1067
Dust-guard for attrition-mills	P. Van Gelder	479,267	July 19	1851	{463 464}	60	387
Dye and making the same. Red	T. Blass	479,547	July 26	2336	583	60	497
Dye. Diazo	C. Duisberg	481,934	Sept. 6	23	.....	60	1339
Dye. Olive	M. Hoffmann	480,326	Aug. 9	933	.....	60	772
Dyes. Manufacture of yellow	R. Lauch	479,515	July 26	2291	.....	60	488
Dyeing or scouring machine	M. Hoffmann. (Reissue)	11,267	Sept. 6	686	.....	60	1470
Dyeing with alizarin	J. H. Lorimer	480,502	Aug. 9	1213	303	60	824
Dynamo. Compound-wound alternating-current	H. N. F. Schaeffer	481,591	Aug. 30	2990	.....	60	1211
Dynamometer	H. Lemp	479,170	July 19	1697	{425 426}	60	358
Dynamos and motors. Brush-holder for	E. P. Warner	480,981	Aug. 16	1968	492	60	988
Dynamos. Ventilated brush for	M. H. Hathaway	478,104	July 5	41	13	60	11
Ear-muff	H. H. Cherry and S. D. Younglove	480,762	Aug. 16	1626	407	60	720
Ear-ring	H. Hadden	479,185	July 19	1733	434	60	364
Earth-closet	T. F. Gaynor	483,214	Sept. 27	2101	533	60	1787
Easel attachment for chairs and other supports	H. A. Jukes	479,712	July 26	2599	647	60	544
Easel rest or bracket	H. J. Muhlfeld and F. J. Spillane	481,045	Aug. 16	2060	514	60	1007
Ecraseur	W. Rochlitz	480,220	Aug. 9	855	218	60	758
Edge-protector. Metallic	C. H. Harris	480,870	Aug. 16	1784	447	60	953
Edge. Straight	F. F. Atkinson	480,241	Aug. 9	787	201	60	743
Edged tools. Apparatus for whetting and sharpening the edges of	C. T. Ridgely and M. A. Smith	480,516	Aug. 9	1228	307	60	828
Educational appliance	C. Spruce	480,634	Aug. 9	1421	354	60	866
Egg-carrying package	S. S. Barrett	480,164	Aug. 2	648	164	60	705
Egg-tester	R. G. Dale and W. S. Weightman	478,924	July 12	1310	326	60	274
Eggs. Device for separating the white and yelk of	J. B. Garland	481,487	Aug. 23	2821	693	60	1102
Eggs. Preserving	L. F. Pettee	479,016	July 19	1463	364	60	314
	E. T. Burnette	479,970	Aug. 2	312	.....	60	641

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Elastic wheel	J. von Olivier	480,738	Aug. 16	1589	398	60	913
Election-booth	J. Jones	481,571	Aug. 30	2904	727	60	1206
Electric accumulator	G. Gandini	480,575	Aug. 9	1315	329	60	846
Electric alarm	R. L. Keith	479,282	July 19	1872	469	60	393
Electric battery	P. Stieus	481,075	Aug. 16	2120	528	60	1017
Electric battery	C. F. Waldron	478,485	July 5	647	159	60	129
Electric cable	J. A. Barrett	482,328	Sept. 6	683	163	60	1469
Electric cable	T. Guilleaume	483,285	Sept. 27	2239	563	60	1811
Electric cable	W. H. Sawyer	478,367	July 5	477	116	60	95
Electric circuit and cable	J. A. Barrett	482,152	Sept. 6	380	89	60	1409
Electric-circuit connection	A. Noll	481,914	Aug. 30	3528	863	60	1315
Electric-circuit connector	W. E. Gill	479,325	July 19	1930	483	60	404
Electric-circuit connector	J. F. Wollensak	479,322	July 19	1927	482	60	403
Electric-circuit-controlling and interlocking apparatus. Pneumatic	W. W. Slater and H. C. Barnes	481,430	Aug. 23	2729	671	60	1144
Electric-circuit safety device	L. B. Atkinson	482,433	Sept. 13	862	207	60	1517
Electric-circuit safety device	M. Thum	479,035	July 19	1494	372	60	320
Electric-circuit time-switch	B. E. Waters	478,180	July 5	172	45	60	37
Electric conducting-wires. Safety attachment for	R. Furgang	481,666	Aug. 30	3106	758	60	1233
Electric conductor	J. A. Barrett	482,150	Sept. 6	373	88	60	1409
Electric conductor	J. A. Barrett	482,151	Sept. 6	375	88	60	1409
Electric conductor	F. A. C. Perrine	479,525	July 26	2303	575	60	490
Electric-conductor clamp	J. Ingmanson and R. Lorang	479,216	July 19	1776	445	60	372
Electric-conductor conduit	A. Noll	481,912	Aug. 30	3526	863	60	1314
Electric-conductor conduit	A. Noll	481,913	Aug. 30	3527	863	60	1315
Electric-conductor joint	J. W. Marsh	483,074	Sept. 20	1873	475	60	1730
Electric conductors. Safety attachment for	R. Furgang	481,665	Aug. 30	3105	757, 758	60	1232
Electric-cord tip	C. W. Tobey	480,152	Aug. 2	627	159	60	702
Electric-current meter	J. F. Ott and A. E. Kennelly	479,172	July 19	1702	427	60	359
Electric-current regulator	A. S. Krotz	479,886	Aug. 2	169	42	60	615
Electric currents. Distribution of	E. Thomson	478,722	July 12	994	247	60	214
Electric currents. Meter for alternating	O. B. Shallenberger	481,975	Sept. 6	82	21	60	1351
Electric currents. System of distributing	C. J. Van Depoele	479,964	Aug. 2	301	74	60	639
Electric cut-out and switch-box	L. D. McMunn	483,235	Sept. 27	2137	541	60	1793
Electric cut-out. Automatic	C. O. Mailloux	482,374	Sept. 13	771	185, 186	60	1500
Electric dispatch system	A. Bryson, Jr	480,804	Aug. 16	1689	421	60	933
Electric drill. Reciprocating	F. F. Loomis	479,948	Aug. 2	269	66	60	633
Electric element. Thermo-	C. W. Iden	479,596	July 26	2401	598	60	508
Electric elevator	W. Baxter, Jr	481,386	Aug. 23	2656	651	60	1129
Electric elevator	F. E. Herdman	480,845	Aug. 16	1747	436, 437	60	945
Electric elevator	F. E. Herdman	480,846	Aug. 16	1749	438, 439	60	945
Electric elevator	A. B. See and W. L. Tyler	478,821	July 12	1174	291	60	248
Electric engine. Reciprocating	C. J. Van Depoele	479,962	Aug. 2	297	73, 74	60	638
Electric furnace generator	E. Berliner	481,999	Sept. 6	117	29, 30	60	1358
Electric generation. Means for controlling	T. A. Edison	482,549	Sept. 13	1059	257	60	1556
Electric heater	T. Ahearn	483,124	Sept. 27	1953	495	60	1757
Electric indicator	W. E. Decrow	478,274	July 5	341	82	60	68
Electric-light brackets. Swing-joint for	H. P. Drew	478,417	July 5	550	134	60	108
Electric-light fixture	E. R. Crolius	482,339	Sept. 13	702	167	60	1487
Electric-light fixture	J. T. Robb	480,745	Aug. 16	1596	400	60	915
Electric light. Incandescent	E. McQuat	481,047	Aug. 16	2063	515	60	1007
Electric-lighting circuits. Testing apparatus for	C. H. Rudd	480,038	Aug. 2	449	114	60	667
Electric-lighting rosette	E. W. Buffinton	480,915	Aug. 16	1853	462	60	967
Electric-lighting system	E. T. Cooke and W. H. Mackay	478,186	July 5	181	47	60	38
Electric-lighting system	P. Cravath	481,785	Aug. 30	3316	810	60	1274
Electric-lighting system	E. Huber	481,904	Aug. 30	3507	859	60	1310
Electric-lighting system	G. F. Myers	480,372	Aug. 9	1004	252, 253	60	785
Electric-lighting system	M. J. Quirk and C. Bach, Jr	480,782	Aug. 16	1653	413	60	926
Electric-lighting system	C. Selden	480,375	Aug. 9	1008	254	60	786
Electric machine. Dynamo-	W. S. Andrews and T. Spencer. (Reissue.)	11,266	Aug. 30	3552	869	60	1319
Electric machine. Dynamo-	R. Eickemeyer	479,118	July 19	1625	406	60	344
Electric machine. Dynamo-	C. W. Thomas	478,529	July 5	790	174, 175, 176	60	143
Electric machine or motor. Dynamo-	E. A. Sperry	478,142	July 5	101	26	60	22
Electric machines. Field-magnet frame for dynamo-	E. P. Warner	480,049	Aug. 2	469	119	60	671
Electric meter	L. V. Brillié	479,932	Aug. 2	245	60, 61	60	629
Electric meter	J. F. Ott and A. E. Kennelly	479,171	July 19	1700	426	60	359
Electric meter	F. Teague	482,324	Sept. 6	677	161, 162	60	1468
Electric meter	A. G. Waterhouse	483,189	Sept. 27	2065	521	60	1779
Electric motor	W. M. Dresskell	483,431	Sept. 27	2448	616	60	1851
Electric motor	H. F. Ong	478,968	July 12	1380	339, 340	60	287
Electric motor	J. B. Secor	478,475	July 5	633	154, 155	60	126
Electric motor and generator	C. S. Bradley and J. J. Wood	481,220	Aug. 23	2376	585	60	1080
Electric motor and regulating device therefor	F. J. Sprague	481,739	Aug. 30	3237	788	60	1258
Electric motor or dynamo-electric machine	R. Lundell	481,701	Aug. 30	3162	772, 773	60	1244
Electric push	J. F. Wollensak	480,683	Aug. 9	1502	374	60	880
Electric-service systems. Time cut-out for	S. R. Linville	480,369	Aug. 9	999	251, 252	60	784
Electric snap-switch	S. F. Alden	483,316	Sept. 27	2288	575	60	1890
Electric switch	J. H. Clark	481,247	Aug. 23	2521	610	60	1105
Electric switch	J. S. Gibbs	480,694	Aug. 9	1517	377	60	884
Electric switch	F. F. Loomis	479,949	Aug. 2	271	66	60	633

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Electric switch	A. P. Lundberg	479,821	Aug. 2	71	17	60	596
Electric switch and case	A. Wright	482,936	Sept. 20	1652	416	60	1684
Electric switches. Arc-extinguisher for	S. H. Short	478,718	July 12	989	245	60	213
Electric-wire conduit	S. H. Flagg	480,573	Aug. 9	1313	328	60	845
Electric-wire joint	W. E. Harrington	481,025	Aug. 16	2027	506	60	999
Electric-wire support	W. B. Bragdon	479,052	July 19	1517	378	60	325
Electrical apparatus	L. G. Woolley	482,668	Sept. 13	1225	299	60	1587
Electrical circuit and cable	J. A. Barrett	482,149	Sept. 6	371	88	60	1408
Electrical circuits. Temperature-regulating device for	E. Weston	480,891	Aug. 16	1815	453	60	959
Electrical conductor	P. H. Holmes	482,177	Sept. 6	424	101	60	1418
Electrical distribution. System of	H. W. Leonard	478,344	July 5	439	108, 109	60	87
Electrical furnace	T. Parker	482,586	Sept. 13	1112	269	50	1566
Electrical heater	J. V. Capek	482,074	Sept. 6	248	60	60	1384
Electrical instruments. Apparatus for retarding or dampening the motion of moving bodies in	E. Weston	480,889	Aug. 16	1810	452	60	958
Electrical meter	A. E. Kennelly	479,167	July 19	1694	424	60	358
Electrical meter for three-wire systems	A. E. Kennelly and J. F. Ott	479,168	July 19	1695	425	60	358
Electrical regulation	H. E. Vineing	480,393	Aug. 9	1040	261	60	791
Electrical spool	S. S. Wheeler	480,681	Aug. 9	1498	373	60	880
Electrical switchboards. Mold for the manufacture of	J. B. Lyon	479,891	Aug. 2	177	44	60	617
Electricity. Influence-generator of	W. Henry	479,941	Aug. 2	256	63	60	631
Electricity. Time-registering apparatus for	H. H. Pattee	478,537	July 5	277	68, 69	60	56
Electro-magnetic machine	A. E. Kennelly and J. F. Ott	479,169	July 19	1696	425	60	358
Electro-magnetic motor	J. F. Kelly and W. Stanley, Jr	479,746	July 26	2661	660	60	556
Electrode	A. Vanden-Kerckhove	478,664	July 12	913	226	60	196
Electrode. Storage-battery	H. Tudor	478,661	July 12	907	225	60	195
Electrolytic apparatus	T. Craney	482,724	Sept. 20	1325	324	60	1620
Electrolytic cell	E. B. Cutten	480,491	Aug. 9	1194	300	60	821
Electrostatic switch and phase-indicator	A. U. Alcock	482,032	Sept. 6	180	43	60	1370
Elevator. *See* Bucket-elevator. Cable-elevator. Electric elevator. Hand-elevator. Hydraulic elevator. Lumber-elevator. Milk-elevator. Mine-elevator. Stone-crusher elevator. Water-elevator.							
Elevator	W. N. Anderson	480,542	Aug. 9	1270	318, 319	60	830
Elevator	C. M. Bartholomew	483,277	Sept. 27	2228	560	60	1809
Elevator	M. Y. Calcutt	479,390	July 19	2061	515, 516	60	429
Elevator	C. A. Case	478,986	July 19	1414	350	60	305
Elevator	C. W. Collins	479,559	July 26	2353	587	60	500
Elevator	W. D. Ewart and J. M. Dodge	480,659	Aug. 9	1462	364	60	874
Elevator	F. Giles	483,145	Sept. 27	1982	502	60	1762
Elevator	S. H. Hale	482,247	Sept. 6	529	126	60	1437
Elevator	P. D. Harper	479,990	July 19	1438	357	60	309
Elevator	F. E. Herdman	480,847	Aug. 16	1753	439	60	946
Elevator	F. E. Herdman	480,848	Aug. 16	1754	439, 440	60	946
Elevator	F. E. Herdman	480,849	Aug. 16	1755	440	60	947
Elevator	L. M. Hosea	479,943	Aug. 2	261	64	60	632
Elevator	T. Mason	481,577	Aug. 30	2970	729	60	1207
Elevator	E. W. Moon	480,202	Aug. 2	708	181	60	716
Elevator	J. R. Moss	478,263	July 5	325	78, 79	60	65
Elevator	C. M. Stearns	479,314	July 19	1918	479	60	401
Elevator	G. A. Wheeler	479,864	Aug. 2	132	32, 33	60	608
Elevator and carrier	P. H. Brodesser	481,926	Sept. 6	7	2, 3	60	1336
Elevator-belt drive	D. A. Robinson	481,150	Aug. 16	2255	556, 557	60	1041
Elevator controlling device	N. C. Bassett	482,405	Sept. 13	971	235	60	1538
Elevator-controlling mechanism	E. S. Matthews	481,560	Aug. 30	2975	730	60	1208
Elevator-controlling mechanism	A. J. McAdam	482,131	Sept. 6	336	80	60	1401
Elevator-door-operating apparatus	D. Tufts	483,407	Sept. 27	2418	608	60	1845
Elevator-doors. Device for operating	H. Rowntree	479,956	Aug. 2	283	71	60	636
Elevator-gate	E. D. Toops	482,286	Sept. 6	597	142	60	1451
Elevator-gearing	N. C. Bassett	483,203	Sept. 27	2087	520	60	1784
Elevator-indicator	T. W. Heermans	479,442	July 26	2124	531	60	456
Elevator-indicator	E. Wylde	479,484	July 26	2246	563	60	479
Elevator limit-stop	T. W. Heermans	480,583	Aug. 9	1334	332, 333	60	849
Elevator safety attachment	M. J. O'Donnell, W. C. Smith, and H. Bound.	478,169	July 5	157	40	60	33
Elevator safety attachment	A. A. Stoltzenburg	483,025	Sept. 20	1804	456	60	1715
Elevator-shafts. Device for closing	N. J. Blagen	483,416	Sept. 27	2428	611	60	1847
Elevators. Carrier attachment for bucket-	M. Garland	478,322	July 5	410	98	60	82
Elevators. Means for operating safety cut-offs for grain-	W. G. Cogswell	482,468	Sept. 13	914	223	60	1526
Embalming-table foot-rest	W. Clouser	478,568	July 12	782	191	60	170
Embossing-machine	W. Crahan and T. Nesom	483,247	Sept. 27	2150	545	60	1796
Embroidering-machine	E. and R. Cornely	479,057	July 19	1523	379, 380	60	396
Embroidering-machines. Fabric-holder for	T. D. Elsner	481,553	Aug. 30	2935	721	60	1200
Embroidering-machines. Fabric-holding frame for	H. Gehnrich	478,853	July 12	1211	301	60	255
Embroidering-machines. Fabric-holding frame for	F. Hürzeler	478,192	July 5	189	48	60	39
End-gate	W. D. Hawk and O. S. French	481,491	Aug. 23	2826	695	60	1163
End-gate tightener for cars and wagons	A. E. S. Lindsey	480,664	Aug. 9	1471	366	60	875
End-gate. Wagon	B. F. Clark and J. C. Carrick	480,383	Aug. 9	1023	257	60	788
End-gate. Wagon	G. H. Johnson	479,810	Aug. 2	54	13	60	592
End-gate. Wagon	P. Millet	479,076	July 19	1552	388	60	331
End-gate. Wagon	G. S. Sneer	482,835	Sept. 20	1493	371	60	1638

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Engine:

Petroleum or similar engine. Pulp-engine. Pumping-engine. Rotary engine. Rotary fluid-pressure engine. Rotary steam-engine. Steam-engine. Traction-engine. Wind-engine.							
Engine	R. M. Lowne	479,651	July 26	2484	{618 619}	60	524
Engine driving mechanism. Road	C. F. Christopher	483,281	Sept. 27	2233	561	60	1810
Engines. Controlling mechanism for reciprocating electric	C. J. Van Depoele	479,960	Aug. 2	291	72, 73	60	637
Engines. Feed mechanism for electric reciprocating	C. J. Van Depoele	479,961	Aug. 2	295	73	60	638
Engines. System of supplying currents to reciprocating electric	C. J. Van Depoele	479,963	Aug. 2	300	74	60	639
Engraver's block	A. Muehlmatt	481,238	Aug. 23	2402	593	60	1084
Envelope-fastener	J. W. Gibboney	478,538	July 5	740	180	60	146
Envelope-machine	L. P. Bouvier	481,779	Aug. 30	3309	808	60	1273
Envelope-machine feeding device	C. Beyer and D. M. Lester	478,779	July 12	1095	271	60	233
Envelope-making machine	J. West	479,042	July 19	1503	{374 375}	60	322
Envelope-opener	W. D. Rogers and J. D. Van Buren	478,889	July 12	1259	311	60	264
Envelopes. Manufacture of	A. Schwanenberger	478,474	July 5	631	154	60	126
Envelopes. Means for detecting the opening of sealed	L. P. Callmeyer	482,073	Sept. 6	247	60	60	1384
Evaporating apparatus. Liquid	C. W. Cooper	482,340	Sept. 13	703	168	60	1487
Evaporating apparatus. Portable	T. E. Richard	481,675	Aug. 30	3119	{761 762}	60	1235
Excavating apparatus. Sewer	W. Davy	478,254	July 5	311	76	60	62
Excavating device	T. McBride and E. Fisher	483,004	Sept. 20	1768	447	60	1707
Excavator. Trench	A. J. Mason	482,260	Sept. 6	552	{131 132}	60	1442
Exercising apparatus	W. Madsen	478,166	July 5	145	38	60	31
Exercising apparatus	M. W. Newton	480,271	Aug. 9	844	215	60	756
Exercising machine	C. G. Miller	481,730	Aug. 30	3219	785	60	1254
Exhaust-head	J. L. Robertson	481,373	Aug. 23	2629	647	60	1124
Exhibiting case, Needle	E. R. Denny	479,117	July 19	1623	406	60	344
Exhibiting pictures, &c. Stand for	V. L. M. Renard	478,887	July 12	1256	311	60	264
Exhibition apparatus. Subterranean	H. Hardy	482,736	Sept. 20	1344	{333 334 335}	60	1624
Exhibitor. Bedstead	J. R. Moore	479,894	Aug. 2	182	45	60	617
Exhibitor. Button	S. T. Mosser	483,460	Sept. 27	2493	628	60	1860
Explosive compound	A. C. Rand	478,819	July 12	1171	.....	60	247
Explosive compound	S. Rodgers	478,366	July 5	477	.....	60	95
Explosive engine	J. Joyce	480,019	Aug. 2	418	105	60	661
Extension-table	H. Cabham, Jr.	482,620	Sept. 13	1163	{281 282}	60	1575
Extension-table	C. W. Munz	483,361	Sept. 27	2344	589	60	1831
Extractor:							
See Cork-extractor. Ingot-extractor. Nail-extractor. Pen-extractor. Spoke-extractor. Stopper-extractor. Stump-extractor. Stump or rock extractor.							
Eyeglass guard	G. Banach	478,836	July 19	1192	296	60	951
Eyeglass-holder	E. C. Perkins	482,191	Sept. 6	444	107	60	1492
Eyeglasses	J. Currin	479,907	Aug. 2	196	49	60	621
Eyeglasses	A. H. Hartmann	481,400	Aug. 23	2081	658	60	1133
Eyeglasses	J. Lining	478,616	July 12	840	209	60	184
Eyeleting-machine	M. H. Pearson	478,760	July 12	1057	{261 262}	60	220
Fabric:							
See Knit fabric. Waterproof fabric. Woven fabric.							
Fabrics. Finish or border for the edges of	J. M. Merrow	480,335	Aug. 9	943	239	60	773
Fan. Electric	F. H. Beers	481,646	Aug. 30	3074	750	60	1227
Fan-operating device	R. F. Hunt	479,425	July 26	2129	532	60	457
Fanning-mill	H. Bush	479,241	July 19	1814	456	60	380
Fanning-mill	O. D. Dickey	480,809	Aug. 16	1695	423	60	934
Fare collecting, registering, and recording device	W. T. Wood	481,993	Sept. 6	109	27	60	1356
Fare-register	F. C. Boyd and R. Martin	479,388	July 19	2055	{513 514}	60	428
Fare-register	J. W. Meaker	478,167	July 5	147	38, 39	60	32
Fare register and recorder	C. Crook	483,102	Sept. 20	1917	{485 486}	60	1738
Fare-register operating device	J. W. Meaker	480,732	Aug. 16	1579	395	60	911
Fastening device	J. W. Bankson	480,242	Aug. 9	787	201	60	743
Fatty substances. Purification of	J. Massignon	481,502	Aug. 23	2344	599	60	1167
Faucet	J. M. Gilmour	480,090	Aug. 2	527	134	60	682
Faucet and bung	R. Marsh	482,408	Sept. 13	890	197	60	1510
Faucet and connection	S. Schlangen	478,716	July 12	984	245	60	212
Faucet. Automatic cut-off cask-filling	J. H. Driller	482,342	Sept. 13	708	{168 169}	60	1488
Faucet. Beer	F. A. Frümviller	482,474	Sept. 13	928	226	60	1529
Faucet. Measuring	C. W. Steinmetz	482,815	Sept. 20	1462	363	60	1647
Faucet or valve	F. Pomper	482,049	Sept. 6	208	50	60	1376
Faucet. Registering and measuring	H. F. Read	479,721	July 26	2022	{650 651}	60	549

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Faucet. Self-closing	A. Mayer	478,199	July 5	205	52	60	42
Faucets. Soap-holder attachment for water	A. R. Miranda	479,330	July 19	1937	484	60	405
Feed-bag attachment	F. S. Kerr	479,646	July 26	2478	617	60	523
Feed mechanism	H. Janssen	478,511	July 5	692	168	60	137
Feed mechanism. Slide	F. H. Richards	480,347	Aug. 9	963	243	60	777
Feed-water. Filtering or purifying	J. B. Edmiston	481,409	Aug. 16	2175	539	60	1027
Feed-water heater	J. De Vries	478,315	July 5	399	96	60	80
Feed-water heater	J. J. Wilson	482,069	Sept. 6	227	58	60	1382
Feed-water heater and boiler. Combination	A. T. Brewer	478,395	July 5	516	126	60	102
Feed-water heater and purifier	J. P. Warner	480,534	Aug. 9	1259	316	60	834
Feed-water heater. Locomotive	N. S. Chapman	479,348	July 19	1987	497	60	415
Feeder. Automatic stock	W. P. Kellogg	482,366	Sept. 13	754	182	60	1497
Feeding device. Mechanical	A. Conkling	479,630	July 26	2455	612	60	518
Feeding rack. Stock	H. G. Chamberlain	478,402	July 5	529	129	60	104
Felly and tire. Cushion	C. Stein	482,392	Sept. 13	798	192	60	1506
Felting-machine	J. Kittel	480,592	Aug. 9	1347	335	60	851

Fuel burner. Liquid-	E. Squire, G. H. Cobb, and F. M. Towl.	478,295	July 5	368	89	60	74
Fuel-feeder	H. L. Day	482,424	Sept. 13	850	{203 204}	60	1515
Fuel-feeding apparatus for straw. Pneumatic	B. Jackson	479,644	July 26	2475	{615 616}	60	522
Fulling-stock	J. H. and I. Mitchell	479,605	July 26	2414	602	60	511
Fume. Refining	F. L. Bartlett	480,686	Aug. 9	1509	375	60	882
Fumes. Bag for catching metallic	D. Sheedy	480,834	Aug. 16	1733	433	60	942
Fumes. Device for collecting metallic	D. Sheedy and M. W. Iles	483,176	Sept. 27	2041	516	60	1775
Fumigator	F. A. Hoffman	483,484	Sept. 27	2510	632	60	1864
Fumigator	J. T. Phelan	480,624	Aug. 9	1405	{349 350}	60	862
Funnel	K. Kiefer	482,578	Sept. 13	1100	267	60	1564
Fur-carrotting machine	J. H. Sanders and J. E. Carlin	478,470	July 5	626	152	60	124
Furnace: *See* Annealing-furnace. Blast-furnace. Boiler-furnace. Electrical furnace. Gas-furnace. Heating-furnace. Hot-air furnace. Open-hearth furnace. Smelting-furnace. Smoke-consuming furnace.							
Furnace	E. F. Edgar	478,319	July 5	405	98	60	81
Furnace	T. R. Freeman	480,086	Aug. 2	521	133	60	681
Furnace	F. L. Higgins	482,741	Sept. 20	1357	336	60	1625
Furnace	A. I. Hovland	480,769	Aug. 16	1636	409	60	923
Furnace	W. S. Hutchinson	480,327	Aug. 9	934	237	60	772
Furnace	V. J. Pannell	482,458	Sept. 13	903	219	60	1524
Furnace	H. Schoenwaelder	480,969	Aug. 16	1947	487	60	983
Furnace	S. R. Smythe	478,767	July 12	1074	{266 267}	60	229
Furnace	W. Walters	479,771	July 26	2704	674	60	565
Furnace	R. R. Zell	480,378	Aug. 9	1014	254	60	780
Furnace air-feeding device	H. H. E. Schomburg	479,022	July 19	1472	366	60	315
Furnace and attachment therefor	W. S. Hutchinson	480,328	Aug. 9	935	237	60	772
Furnace-boiler	E. B. Parkhurst	482,188	Sept. 6	440	106	60	1421
Furnace-charging machine	J. F. Lundahl	479,437	July 26	2148	536	60	461
Furnace. Combined radiating and hot water or air heating	J. H. Keyser	480,103	Aug. 2	545	138	60	686
Furnace. Downward-draft	J. F. Bliss	479,697	July 26	2565	638	60	539
Furnace drawing and charging apparatus	T. James	479,863	Aug. 2	164	41	60	614
Furnace for reducing metals	H. S. Blackmore	478,908	July 12	1285	{319 320}	60	269
Furnace-grate	J. L. Mason	480,951	Aug. 16	1916	{479 480}	60	978
Furnace-grate	J. L. Mason	480,952	Aug. 16	1918	480	60	978
Furnace-grate	E. C. Sooy	481,596	Aug. 30	2998	{734 735}	60	1212
Furnace-grate	A. Wilkinson	480,538	Aug. 9	1265	317	60	835
Furnace. Liquid-fuel	G. Rose	482,834	Sept. 20	1492	371	60	1653
Furnace-valve casing	J. D. Swindell	478,769	July 12	1076	{267 268}	60	229
Furnace water-cooling device	J. Kennedy	479,430	July 26	2135	533	60	458
Furnaces. Air-supply for boiler-	I. V. Scholfield, Jr	481,831	Aug. 30	3393	833	60	1288
Furnaces. Smoke-consuming apparatus for boiler and other	W. Smith	479,767	July 26	2698	672	60	563
Furniture-leg fastening	H. M. Hanson	479,363	July 19	2012	503	60	490

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Furniture. School	W. B. Cogger	478,786	July 12	1112	274, 275	60	235
Fuse and file holder. Combined	J. Lobaugh	482,642	Sept. 13	1191	288	60	1581
Fuse box. Electric	G. W. Baumhoff	480,651	Aug. 9	1448	360	60	871
Fuse. Electric	O. T. Blathy	480,902	Aug. 16	1686	420	60	932
Fuse for explosive projectiles or shells	J. C. Thompson	482,533	Sept. 13	1032	250	60	1551
Fuse-ignitor	W. J. C. Doyle	481,012	Aug. 16	2007	501	60	995
Gaff-hook	A. G. Benson	481,463	Aug. 23	2789	686	60	1155
Gaff-hook and landing-net. Combined	A. G. Benson	481,464	Aug. 23	2789	686	60	1156
Gage: *See* Hat-gage. Liquid-gage. Marking-gage. Railway-track gage. Shingle-gage. Sirup-gage. Surface-gage. Water-gage. Water and steam gage.							
Gaging and sorting spherical rollers or balls. Means or apparatus for	W. Hillman	482,636	Sept. 13	1183	286	60	1579
Galley-lock	J. Phelan	479,840	Aug. 2	99	25	60	601
Galley. Self-locking job	N. G. Duffy	483,434	Sept. 27	2453	617	60	1852
Galvanic battery	M. M. Clark	479,786	Aug. 2	20	5	60	586
Galvanic battery	H. H. Dow	480,384	Aug. 9	1025	257	60	788
Galvanic battery	T. T. Eckert	482,425	Sept. 13	852	204	60	1515
Galvanic battery	W. J. Engledue	481,664	Aug. 30	3103	757	60	1232
Galvanic battery	F. de Lalande	479,887	Aug. 2	171	42, 43	60	615
Gambrel	H. Garwick	482,633	Sept. 13	1180	285	60	1578
Game apparatus	F. H. Adams	480,056	Aug. 2	480	122	60	674
Game apparatus	J. W. Back	481,548	Aug. 30	2922	719	60	1198
Game apparatus	D. L. Falardeau	479,638	July 26	2467	614	60	521
Game apparatus	P. S. Faulkner	478,100	July 5	36	12	60	10
Game apparatus	W. Fuld	479,266	July 19	1849	463	60	387
Game apparatus	M. H. Gleason	480,662	Aug. 9	1469	366	60	875
Game apparatus	J. Green	483,109	Sept. 20	1928	488	60	1741
Game apparatus	E. D. Howell	483,062	Sept. 20	1855	470, 471	60	1726
Game apparatus	S. N. Johnson	483,115	Sept. 20	1936	490	60	1742
Game apparatus	F. E. Knight	483,324	Sept. 27	2299	578	60	1822
Game apparatus	C. N. and N. H. Maxwell	479,195	July 19	1744	438	60	366
Game apparatus	M. V. Miller	482,685	Sept. 13	1256	306, 307	60	1594
Game apparatus	A. Scholz	481,830	Aug. 30	3393	833	60	1288
Game apparatus	F. S. Siller	482,488	Sept. 13	949	231	60	1533
Game apparatus	E. H. Truman	479,683	July 26	2543	633	60	534
Game apparatus. Coin-operated	W. R. Pope	479,459	July 26	2190	549	60	469
Game-board	E. L. McConaughy	479,569	July 26	2367	590	60	502
Game-counter	F. A. Gilbert	482,961	Sept. 20	1700	429	60	1693
Game-counter	P. Hale, Jr	480,815	Aug. 16	1704	425	60	936
Game-counter	W. B. Herbert	482,575	Sept. 13	1097	266	60	1563
Game-counter	P. H. Hillard	481,947	Sept. 6	42	9, 10	60	1342
Game-counter	S. D. Sturgis, Jr., and F. P. Peck	481,657	Aug. 30	3094	754	60	1230
Game for amusement	J. S. Malin, I. D. and J. H. Wiest	482,747	Sept. 20	1368	338	60	1627
Game-marker	R. F. Foster	478,694	July 12	953	237	60	205
Game or puzzle	E. Kemble	480,872	Aug. 16	1789	446	60	954
Game. Parlor	S. George	481,859	Aug. 30	3434	843	60	1297
Garbage and fecal matter. Apparatus for drying or cremating	J. H. Parke	481,147	Aug. 16	2949	554	60	1040
Garbage-box	J. Harbolsheimer	483,492	Sept. 27	2522	635	60	1866
Garbage-receptacle	E. B. Merritt	478,702	July 12	963	239	60	207
Garment cutting and marking machine	S. A. Cooke	478,988	July 19	1415	350, 351	60	305
Garment-fastener	G. Bradshaw	479,163	July 19	1689	422	60	357
Garment-stay	D. Grotta	478,961	July 12	1366	337	60	285
Garment-supporter	G. J. Cline	481,256	Aug. 23	2447	603	60	1092
Garment-supporter	T. Manning	480,820	Aug. 16	1715	428	60	938
Garter attachment	P. H. Flynn	482,629	Sept. 13	1177	284	60	1578
Gas and electric-light fixture. Combined	A. T. Enos	480,813	Aug. 16	1701	424	60	936
Gas and petroleum motor	B. Stein	478,651	July 12	895	222	60	193
Gas. Apparatus for consumption of sewer	J. Eckhardt	481,108	Aug. 16	2174	538	60	1027
Gas. Apparatus for manufacturing	J. H. Collins, Jr., and I. N. Knapp.	480,248	Aug. 9	793	202, 203, 204	60	744
Gas. Apparatus for manufacturing	W. P. Elliott	480,910	Aug. 16	1859	463, 464, 465	60	968
Gas. Apparatus for the manufacture of	J. Askins	480,161	Aug. 2	642	163	60	704
Gas. Apparatus for the manufacture of	A. Coze and A. Lencauchez	478,571	July 12	784	192	60	170
Gas. Apparatus for the manufacture of	T. McBride and E. Fisher	483,005	Sept. 20	1769	447, 448	60	1708
Gas. Apparatus for the manufacture of	L. C. Parker	480,211	Aug. 2	732	185	60	720
Gas. Apparatus for the manufacture of water	J. Askins	478,305	July 5	385	93	60	77
Gas apparatus. Fuel	J. M. Bailey	478,549	July 12	758	185	60	165
Gas-black machine. Hydrocarbon	L. J. McNutt	481,240	Aug. 23	2404	593, 594	60	1085
Gas-burner	B. C. Wilson	479,128	July 19	1638	410	60	340
Gas-burner attachment	G. Le Vesconte	482,580	Sept. 13	1103	267	60	1564
Gas burner. Natural	T. A. Little	478,117	July 5	61	16	60	14
Gas-compressor	A. Siebert	483,268	Sept. 27	2215	556	60	1807
Gas-engines. Ignitor for	E. I. Nichols	480,272	Aug. 9	845	215	60	756
Gas from gas-mains. Means for detecting the escape of	A. Guéguen	478,424	July 5	502	136	60	110
Gas-furnace. Regenerative	F. Danner	482,117	Sept. 6	318	75, 76	60	1395
Gas. Generating	W. H. Harris	478,425	July 5	564	136	60	110
Gas-generator	J. J. Kirkham	479,647	July 26	2480	617	60	523
Gas generator and heater. Combined	P. H. Nelson	480,436	Aug. 9	1106	277	60	802

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Gas generator. Carbonic-acid	P. J. Maguire	478,198	July 5	202	51	60	41
Gas-governor	S. G. Cabell	479,553	July 26	2346	585	60	498
Gas governor and burner	H. Schrader	481,771	Aug. 30	3294	802	60	1270
Gas-governor. Mercurial	V. H. Higgins and W. D. Smith	483,517	Sept. 27	2579	646	60	1877
Gas heater or radiator	A. Wolff	481,742	Aug. 30	3244	789	60	1259
Gas heating and lighting device. Combined	O. H. P. Cornell	481,139	Aug. 16	2234	550, 551	60	1037
Gas-holder	K. G. Barkhausen	482,891	Sept. 20	1590	399	60	1671
Gas-lighter. Electrical	J. E. Hamilton	482,172	Sept. 6	415	99	60	1416
Gas-lighting device	D. J. Quinn and P. W. Hoffmann	478,522	July 5	708	171	60	140
Gas-machines. Air-supplying device for	E. B. Badlam	479,238	July 19	1807	452, 453	60	379
Gas-main safety-coupling	A. Garretson	481,397	Aug. 23	2678	657	60	1133
Gas-making apparatus	I. S. Elkins and R. Boeklen	483,107	Sept. 20	1924	487, 488	60	1740
Gas. Manufacture of	R. M. Bildelman	483,489	Sept. 27	2517	634	60	1865
Gas. Manufacturing	F. D. Moses	479,293	July 19	1867	473	60	395
Gas. Manufacturing	H. Pierson	478,459	July 5	608	148, 149	60	120
Gas-mixer	S. K. Wagner	481,604	Aug. 30	3017	737	60	1215
Gas or lamp lighter	R. J. G. Corner	478,953	July 12	1350	334	60	282
Gas or oil motor engine	H. Schumm	482,202	Sept. 6	458	110, 111	60	1425
Gas or petroleum motor	A. Niemczyk	480,737	Aug. 16	1589	397	60	913
Gas-producers. Automatic steam-regulator for	E. Ruud	482,320	Sept. 6	668	159	60	1466
Gas-producing apparatus	J. H. Collins, Jr., and I. N. Knapp	480,249	Aug. 9	798	204, 205	60	745
Gas purifier and condenser	G. Scharfe	482,141	Sept. 6	348	83, 84	60	1404
Gas-regulator	J. M. Sweeny	478,480	July 5	641	156	60	128
Gas-tubing. Attaching tips to flexible	A. Caldwell	480,247	Aug. 9	792	202	60	744
Gases. Impregnating liquids with	U. Bachmann	481,838	Aug. 30	3402	835	60	1290
Gaseous-fuel generator and burner	N. Horn	481,494	Aug. 23	2831	695, 696	60	1164
Gate: *See* Automatic gate. Car-gate. Drive-gate. Elevator-gate. End-gate. Fence-gate. Flood-gate. Flume-gate. Folding gate. Railway-gate. Sliding gate. Swinging gate. Tilting gate. Wire gate.							
Gate	E. A. Casper	479,702	July 26	2576	642	60	540
Gate	W. S. Coulter	482,301	Sept. 6	623	148	60	1456
Gate	J. F. Dougherty	480,008	Aug. 2	391	97	60	656
Gate	U. Dreesman and J. Wagler	482,005	Sept. 6	134	32	60	1361
Gate	G. Ford	480,085	Aug. 2	520	132	60	681
Gate	J. M. Fross	480,460	Aug. 9	1152	288	60	811
Gate	D. Gensinger	479,498	July 26	2266	568	60	483
Gate	F. Hopkins	482,792	Sept. 20	1438	356	60	1641
Gate	P. Johnson	482,640	Sept. 13	1188	287, 288	60	1580
Gate	J. N. Morgan	478,451	July 5	598	146	60	118
Gate	A. Peterson	479,457	July 26	2186	547, 548	60	469
Gate	F. K. Plumbly	483,387	Sept. 27	2392	601	60	1839
Gate	J. W. Ruhl	479,665	July 26	2513	625	60	529
Gate	W. H. H. Sallee	479,532	July 26	2313	578	60	492
Gate	T. M. Smith	483,398	Sept. 27	2404	604	60	1842
Gate	G. W. Spidel	481,876	Aug. 30	3459	849	60	1301
Gate	C. Talbot	481,078	Aug. 16	2125	529	60	1018
Gate-actuating mechanism	J. F. Houston	479,278	July 19	1867	467	60	391
Gear for high-speed rotary machines. Starting	J. Head	478,541	July 5	745	181	60	148
Gear. Reduction	W. M. Thomas	480,679	Aug. 9	1495	372, 373	60	879
Gear-wheel	A. Walker	479,233	July 19	1800	451	60	377
Gear-wheel. Yieldable	B. C. Seaton	480,439	Aug. 9	1112	278	60	803
Gearing	F. H. Richards	480,671	Aug. 9	1481	368, 369	60	877
Gearing. Differential	G. Shaw	479,108	July 19	1608	401, 402	60	341
Gelatinous food product	R. B. Beaumont	480,687	Aug. 9	1510	375	60	882
Generator: *See* Current-generator. Electric furnace generator. Fuel-generator. Gas-generator. Steam-generator.							
Girth. Saddle	R. A. Lane	481,180	Aug. 23	2305	568	60	1065
Glass: *See* Opera or field glass.							
Glass-battery-jar mold	J. Gayner	478,792	July 12	1124	277	60	237
Glass-cutting implement	J. Urbanek	482,601	Sept. 13	1135	274	60	1570
Glass. Embedding wire-netting in	F. Shuman	483,021	Sept. 20	1801	454	60	1714
Glass-heating oven	A. O. Hurley	478,328	July 5	416	100, 101	60	83
Glass. Leer or annealing-furnace for sheet or plate	J. W. Bonta	480,230	Aug. 2	762	192	60	726
Glass. Machine for embedding wire-netting in	F. Shuman	483,020	Sept. 20	1799	454	60	1714
Glass. Manufacture of rose or orange stained	F. Welz	479,689	July 26	2553	....	60	536
Glass molds. Apparatus for mechanically operating paste	M. J. Owens	482,526	Sept. 13	1024	247	60	1549
Glass-molds. Supporting-holder for	U. S. Huggins	481,142	Aug. 16	2240	552	60	1039
Glass, &c. Mounting metallic ornaments upon	C. H. Headly and J. S. Carrow	479,743	July 26	2657	650	60	555
Glass tube. Multiplex	P. J. McElroy	481,805	Aug. 30	3348	819	60	1280
Glazing-bar for skylights	W. H. Heywood	479,275	July 19	1802	466	60	390

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Glove	P. B. Lee	479,285	July 19	1877	470	60	393
Glove	H. H. and W. L. Smith	480,478	Aug. 9	1179	296	60	817
Glove-cord clasp	A. E. McDonald	483,263	Sept. 27	2208	554, 555	60	1805
Glove-fastener	F. Maisch	480,874	Aug. 16	1791	448	60	954
Glove-fastening	J. Lye	479,896	Aug. 2	177	43	60	616
Glove. Tennis	C. C. Obear	482,647	Sept. 13	1197	290	60	1582
Glove. Voltaic	F. Simpson	478,293	July 5	366	89	60	74
Gloves, shoes, &c. Hook and fastening for	F. S. McKenney	478,520	July 5	705	171	60	140
Glue cutting and spreading apparatus	C. Keller	482,042	Sept. 6	192	46, 47	60	1373
Glycerine. Apparatus for rectifying	R. O. Unglaub	481,879	Aug. 30	3465	850	60	1303
Gold and silver from ores. Composition of matter for the extraction of	E. D. Kendall	482,577	Sept. 13	1100	.....	60	1564
Gold and silver from their ores. Method of and apparatus for extracting	J. W. Aylsworth and A. C. Payne	481,683	Aug. 30	3133	764, 765	60	1238
Gold from pulverized ores, &c. Machine for extracting	T. C. Simonton	478,971	July 12	1384	341	60	288
Governor	J. Hemphill and J. Fawell	482,448	Sept. 13	800	215	60	1521
Governor	J. Hemphill and J. Fawell	482,449	Sept. 13	891	215, 216	60	1522
Governor	J. Hemphill and J. Fawell	482,450	Sept. 13	893	216	60	1522
Governor. Engine	M. A. Green	480,580	Aug. 9	1329	331	60	848
Governor. Engine	T. H. Nace	480,778	Aug. 16	1645	412	60	925
Governor. Steam-engine	F. C. Dietz	481,141	Aug. 16	2238	551, 552	60	1038
Governors. Safety attachment for engine	F. W. Dean	482,404	Sept. 13	813	195	60	1509
Grader. Road	H. J. Schneider	479,466	July 26	2200	552	60	471
Grades, &c. Device for ascertaining	D. C. Wolfe	478,491	July 5	655	160	60	130
Grading and sorting machine. Pneumatic	H. O. Mooney	478,516	July 5	697	169, 170	60	139
Grading-machine	C. Lampitt	483,225	Sept. 27	2116	536, 537	60	1790
Grain-binder	M. E. Benedict	480,226	Aug. 2	755	191	60	725
Grain-binder	H. F. Crandall	478,572	July 12	785	193, 194	60	171
Grain-binder	G. Esterly	480,079	Aug. 2	512	130	60	680
Grain-binder	H. E. Pridmore	481,244	Aug. 23	2416	596, 597	60	1087
Grain-binder	H. E. Pridmore	481,530	Aug. 23	2890	709, 710, 711	60	1176
Grain-binder	G. Schubert	481,974	Sept. 6	78	21	60	1350
Grain-binder	G. Schubert	482,758	Sept. 20	1383	343	60	1631
Grain-binder bundle-carrier	A. Stark	479,677	July 26	2531	630, 631	60	532
Grain-conveyer for binders, &c	G. Schubert	479,467	July 26	2202	553	60	472
Grain cut-off	P. D. Thompson	481,080	Aug. 16	2127	529	60	1018
Grain-drier conveyer	E. M. Parker	481,078	Aug. 30	3115	760	60	1234
Grain-dump	J. P. Peterson	483,011	Sept. 20	1787	451	60	1712
Grain-meter. Oscillating	H. H. Boenker	483,417	Sept. 27	2430	611	60	1848
Grain-sampling machine	J. Bigelow	480,354	Aug. 9	1453	362	60	879
Grain-scouring machine	R. W. Welch	480,942	Aug. 16	1801	473	60	974
Grain-separator	J. Menge	481,366	Aug. 23	2618	644	60	1122
Grain-treating apparatus	F. B. Gesler	482,700	Sept. 20	1435	353	60	1641
Granite, &c. Device for polishing	G. L. Badger	481,341	Aug. 23	2588	636	60	1117
Graphoscope	F. E. Housh	482,793	Sept. 20	1439	356	60	1640
Grapple-hook	C. W. Abbott	479,871	Aug. 2	147	36	60	611
Grate	T. Henderson	482,556	Sept. 13	1074	260	60	1538
Grate	W. W. Sweetland	479,728	July 26	2632	653	60	550
Grate	W. Whitworth	478,775	July 12	1067	260	60	232
Grate-bar and feed-water heater. Combined	H. D. Wendt	478,726	July 12	999	248	60	215
Grate-bar. Sectional	B. A. Ellison	480,568	Aug. 9	1306	327	60	844
Grate. Fire	R. Glichriest	479,080	July 19	1575	394, 395	60	335
Grate. Fire	J. H. Mehrtens	481,237	Aug. 23	2400	592	60	1084
Grate. Open fire	J. H. McIlvain	479,916	Aug. 2	207	52	60	623
Grate. Portable	D. H. Watts	483,410	Sept. 27	2422	609	60	1846
Grate. Shaking	C. E. Mark	482,452	Sept. 13	895	217	60	1523
Grating. Jail	G. L. Norrman	481,915	Aug. 30	3530	864	60	1315
Gravel-trains. Means for unloading	W. D. Stratton and J. H. Drake	482,951	Sept. 20	1626	424	60	1690
Grinder	J. E. Trawick	482,400	Sept. 13	810	194, 195	60	1508
Grinder. Cutlery	D. Reed	480,035	Aug. 2	445	113	60	666
Grinding and polishing machine	A. Manecke	479,822	Aug. 2	72	17	60	596
Grinding cutlery and other handles. Machine for	F. C. Feicker	481,259	Aug. 23	2451	603, 604	60	1093
Grinding-fixture	W. W. Tucker	482,212	Sept. 6	477	114	60	1428
Grinding-machine	A. Fryer	483,249	Sept. 27	2153	545, 546	60	1796
Grinding-machine	A. B. Landis	483,288	Sept. 27	2242	564, 565, 566	60	1812
Grinding-machine	O. S. Walker	481,380	Aug. 23	2647	649	60	1128
Grinding-machine tool-rest	D. L. Brown	483,042	Sept. 20	1628	464, 465	60	1720
Grinding-mill	G. R. Cullingworth	478,252	July 5	308	75	60	62
Grinding-mill	C. C. L. Lucht	482,873	Sept. 20	1554	388	60	1666
Grinding-mill	I. E. Overpeck	483,363	Sept. 27	2346	590	60	1832
Grinding mower-knives. Machine for	R. Dutton	481,275	Aug. 23	2477	610, 611	60	1098
Grinding mowing-machine knives. Machine for	M. Balmes	481,886	Aug. 30	3477	852	60	1305
Grinding-wheel attachment	J. H. Göetsche	478,854	July 12	1212	301	60	255
Grounding-machine	J. Hope	482,947	Sept. 20	1682	423	60	1689

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Guard: *See* Axle dust-guard. Bridge-guard. Car-guard. Carriage mud-guard. Cattle-guard. Chimney-thimble guard. Eyeglass-guard. Hub dust-guard. Keyhole-guard. Ladder-guard. Lamp-guard. Railway stock and cattle guard. Rein-guard. Shaft-guard. Trousers-guard.							
Guest-call. Electric	F. Benner	481,919	Aug. 30	3535	865, 866	60	1316

Harness attachment	J. W. McNeill	478,124	July 5	68	18	60	15
Harness. Hanger for swinging	R. G. Armstrong	481,627	Aug. 30	3048	744	60	1222
Harness-pad	W. D. Underwood	481,289	Aug. 23	2509	617	60	1102
Harness-snap	T. V. Wallace	482,885	Sept. 20	1584	398	60	1670
Harness. Strap-attaching device for	T. J. Magruder	478,876	July 12	1235	306	60	260
Harness-support	J. Leininger	479,947	Aug. 2	268	66	60	633
Harrow	C. A. Anderson, A. W. and F. D. England	483,317	Sept. 27	2289	575, 576	60	1820
Harrow	R. B. Graves and D. F. Merritt	478,960	July 12	1365	336	60	284
Harrow	W. W. Green	478,259	July 5	319	77	60	64
Harrow	W. Richards, W. Garwood, and H. N. Rosebrook	483,501	Sept. 27	2540	638	60	1870
Harrow	G. T. Songer	478,649	July 12	804	221	60	193
Harrow and cultivator. Side	A. H. and P. E. Teschner	479,476	July 26	2230	560	60	476
Harrow. Disk	T. J. Croft	480,174	Aug. 2	662	169	60	708
Harrow for listed corn	R. W. Hardie	478,596	July 12	822	203	60	179
Harrow. Spring-tooth	R. Lyons	481,634	Aug. 30	3058	746	60	1224
Harrows. Planter attachment for disk	J. W. Brant	480,705	Aug. 16	1541	384	60	902
Harvester	J. E. Gallup	482,692	Sept. 13	1179	285	60	1578
Harvester	M. Kimberlin	482,924	Sept. 20	1640	412	60	1681
Harvester	M. H. Melrose	482,968	Sept. 20	1711	432	60	1696
Harvester and binder	J. T. Mider	481,410	Aug. 23	2096	662	60	1137
	J. M. Trier	481,706	Aug. 30	3170	774	60	1245

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Harvester and shocker. Corn	G. G. Kimmell	481,036	Aug. 16	2039	508, 509, 510, 511	60	1002
Harvester. Bean	J. F. King and S. B. Stokely	479,600	July 26	2406	509	60	509
Harvester. Bean	W. H. Wilder	479,480	July 26	2242	502	60	478
Harvester-binder sheaf-carrier	L. M. Jones and J. K. Wedlake	480,468	Aug. 9	1163	292, 293	60	814
Harvester bundle-carrier	L. W. Ellis	480,944	Aug. 16	1894	474	60	975
Harvester. Corn	R. W. Ermeling	478,849	July 12	1207	300	60	254
Harvester. Corn	G. A. Farrall	482,551	Sept. 13	1062	258, 259	60	1556
Harvester. Corn	D. W. Hanson and J. S. Farnham	482,945	Sept. 20	1675	421, 422	60	1688
Harvester. Corn	J. T. Hess	479,165	July 19	1691	423, 424	60	357
Harvester. Corn	H. Morrison	482,186	Sept. 6	436	105	60	1421
Harvester. Corn	H. C. and A. E. Peoples	482,065	Sept. 6	249	55, 56	60	1380
Harvester. Corn	R. S. Rinker	481,050	Aug. 16	2090	521, 522	60	1012
Harvester. Cotton	A. Stark	480,975	Aug. 16	1955	489, 490	60	986
Harvester. Cotton	G. Beekman	482,156	Sept. 6	386	91	60	1411
Harvester cutting apparatus	A. G. Perry	480,131	Aug. 2	593	151, 152	60	695
Harvester. Flax	G. Mischler	479,508	July 26	2365	500	60	502
Harvester gear-shifting mechanism	W. Morrow	480,434	Aug. 9	1105	276	60	802
Harvester. Grain-binding	G. Schubert	481,202	Aug. 23	2338	576	60	1072
Harvester. Grain-binding	L. Miller	480,113	Aug. 2	558	140, 141	60	688
Harvester. Grain-binding	L. Miller	480,114	Aug. 2	561	141, 142	60	689
Harvester. Grain-binding	L. Miller	480,115	Aug. 2	564	143	60	690
Harvester. Potato	L. Miller	480,116	Aug. 2	567	144	60	690
Harvester-reel mechanism	P. H. Munroe	480,776	Aug. 16	1643	411	60	924
Harvester-reel support	G. Schubert	479,848	Aug. 2	109	27	60	603
Harvester-reel support	J. F. Appleby	481,218	Aug. 23	2371	583	60	1079
Harvester. Traveling	C. A. A. Rand	481,191	Aug. 23	2321	571, 572	60	1068
Harvester. Traveling	D. Best	480,006	Aug. 2	380	94	60	653
Harvesters. Raising and lowering mechanism for	B. Holt	483,449	Sept. 27	2470	621, 622	60	1856
Harvesters. Sheaf-carrier for self-binding	G. Schubert	478,717	July 12	985	245	60	212
Hat	J. F. Steward	482,931	Sept. 20	1647	414, 415	60	1683
Hat	S. Cohen	478,952	July 12	1349	334	60	282
Hat and coat hanger and cigar-cutter. Combined	D. Schlesinger	480,041	Aug. 2	454	116	60	668
Hat, cap, &c	W. R. Cole	481,929	Sept. 6	14	4	60	1337
Hat-case	A. Rosenthal	482,950	Sept. 20	1686	424	60	1690
Hat-curling machine	N. F. Hurdel	479,643	July 26	2474	615	60	522
Hat-gage	W. J. McGall	480,877	Aug. 16	1794	449	60	955
Hat-hook	I. Shrier	478,291	July 5	364	88	60	73
Hat-pouncing machine	T. Corscaden	479,058	July 19	1526	381	60	327
Hat-supporter	J. B. Howe	480,098	Aug. 2	535	136	60	684
Hat-trimming machine	W. Applegath	481,156	Aug. 23	2275	561	60	1059
Hat-ventilator	L. Bulasky	482,541	Sept. 13	1045	252	60	1553
Hatchway-doors. Device for operating	W. P. O'Connor	482,429	Sept. 13	858	206	60	1516
Hawser-clamp	S. G. Tufts	478,297	July 5	371	90	60	74
Hay and grain loader	R. Ashworth	479,777	Aug. 2	6	2	60	583
Hay-carrier	F. J. Lovell	481,699	Aug. 30	3160	771, 772	60	1943
Hay-carrier and track	J. L. Hoffman	479,423	July 26	2126	532	60	456
Hay-carrier track	J. E. Porter	482,412	Sept. 13	826	198	60	1510
Hay-loader	H. L. Ferris	481,349	Aug. 23	2600	639	60	1119
Hay-loader	G. A. Dickerman and J. P. Ellacott	479,353	July 19	1993	499	60	416
Hay-press	P. D. Miller and W. N. De Vault	480,269	Aug. 9	841	214	60	755
Hay-press. Hand	H. Copeland	480,917	Aug. 16	1855	463	60	967
Hay-rack	W. H. Carse, W. T. Blackburn, and R. P. Owens.	480,382	Aug. 9	1022	257	60	788
Hay-rack	J. E. and C. B. Haynes	479,878	Aug. 2	159	39	60	613
Hay-rack	H. S. Hoy	481,175	Aug. 23	2299	567	60	1064
Hay-rack	J. F. Moore	479,826	Aug. 2	83	21	60	598
Hay-rake	S. H. Plomberg	481,420	Aug. 23	2713	668	60	1141
Hay-rake. Horse	J. H. Thomas	482,532	Sept. 13	1031	249	60	1550

Horseshoe	G. T. Chapman	483,209	Sept. 27	2094	531	60	1785
Horseshoe	C. E. Devine and G. La Chapelle	481,932	Sept. 6	17	5	60	1338
Horseshoe	E. A. Hills	480,924	Aug. 16	1868	466	60	969
Horseshoe	J. F. Jarvis	478,435	July 5	576	139	60	113
Horseshoe	W. Kondakoff	482,845	Sept. 20	1507	375	60	1656
Horseshoe	R. F. Lewis	479,137	July 19	1654	413	60	349
Horseshoe	G. Martin	480,731	Aug. 16	1579	395	60	911
Horseshoe	H. Olson	481,716	Aug. 30	3189	779	60	1249
Horseshoe-fastening	C. A. Reade	482,650	Sept. 13	1200	292	60	1583
Horseshoe. Nailless	G. Calls and F. J. Tetley	481,000	Aug. 16	1989	498	60	992
Horseshoe-nails. Manufacturing	J. McCaffrey	478,455	July 5	602	147	60	119
Horseshoe. Open-toed	W. W. Miner	481,962	Sept. 6	60	14	60	1346
Horseshoe-pad	A. D. Baker	479,111	July 19	1615	404	60	342
Horseshoe plug-calk	N. G. Mooney	479,912	Aug. 2	202	50	60	622
Horseshoe. Rubber-tread	E. P. Noyes	480,611	Aug. 9	1377	342	60	857
Horseshoe. Sectional	W. Davis	479,790	Aug. 2	24	6	60	586
Horseshoe. Spring-heel	C. H. Doran	480,563	Aug. 9	1300	325	60	842
Horseshoe toe-calk	D. C. Dwyer	482,998	Sept. 20	1759	444	60	1705
Horseshoeing-rack	T. S. Very	481,336	Aug. 23	2584	634	60	1116
Horseshoer's tool	J. Wagner and G. B. Sunderland	481,083	Aug. 16	2130	530	60	1019
Hose-clamp	O. Handeland	481,490	Aug. 23	2925	694	60	1163
Hose-clamp	A. R. Dickinson	483,302	Sept. 27	2366	570	60	1816
Hose-clamp	L. H. Redfield	480,513	Aug. 9	1925	307	60	827
Hose-clamp	L. H. Redfield	480,514	Aug. 9	1226	307	60	827
Hose-clamp	L. H. Redfield	480,515	Aug. 9	1227	307	60	828
Hose connections. Machine for applying	A. M. Smith	482,593	Sept. 13	1125	271, 272	60	1568
Hose-connector. Electric	C. F. Kellom	482,181	Sept. 6	429	102	60	1419
Hose-coupling	A. W. Jackson	480,197	Aug. 2	698	176, 177	60	714
Hose-nozzle holder	C. R. Robinson	479,841	Aug. 2	100	25	60	601
Hose-reel	S. F. Reynolds	483,390	Sept. 27	2395	602	60	1840
Hot-air furnace	W. Thuener, Jr., and P. Herchenbach.	479,769	July 26	2701	673	60	564
Hot-air register	R. S. T. Cissel	479,586	July 26	2386	595	60	505
Hot-water boiler	C. Behre	480,059	Aug. 2	483	123	60	674
Hot-water heater	W. Kennedy	480,406	Aug. 9	1057	265	60	794
Hub-attaching collar. Vehicle	L. Faris	482,627	Sept. 13	1174	284	60	1577
Hub-attaching device	M. F. Deininger	482,571	Sept. 13	1091	265	60	1562
Hub-attaching device	I. Van Winkle	481,603	Aug. 30	3017	737	60	1215
Hub dust-guard	J. T. Richards	478,466	July 5	622	151	60	123
Hub. Lubricating	F. W. Randolph	482,195	Sept. 6	450	109	60	1423
Hub. Vehicle	A. G. Burrows	480,090	Aug. 9	1513	376	60	883
Hub. Vehicle	F. W. Fiedler	478 277	July 5	345	83	60	69
Hub. Vehicle-wheel	A. A. Minor	478,287	July 5	359	87	60	72
Hubs. Band-shell for wheel	L. Swenson	482,418	Sept. 13	838	201	60	1513
Huller:	H. Higgin	480,093	Aug. 2	531	135	60	683
See Coffee-huller.							
Hydrant	E. J. Bachelder	480,313	Aug. 9	916	231	60	768
Hydrant	C. G. Ette	479,259	July 19	1840	461	60	385
Hydraulic elevator	J. E. Barry	480,486	Aug. 9	1188	299	60	819
Hydraulic jack. Horizontal	J. Weeks	478,530	July 5	725	177	60	143
Hydraulic machinery	G. S. Duncan	478,225	July 5	251	61, 62	60	51
Hydraulic motor	S. Forter	482,732	Sept. 20	1334	327, 328, 329	60	1622
Hydraulic motor	S. S. Marsh	479,201	July 19	1885	472	60	395
Hydraulic motor	M. Van Ensley	482,976	Sept. 20	1723	435	60	1698
Hydraulic motor	W. A. Wood	479,868	Aug. 2	144	35	60	610
Hydraulic press	J. F. Taylor	479,317	July 19	1923	480	60	402
Hydrocarbon-burner	A. Chaney and E. T. Wires	481,088	Aug. 16	2137	532	60	1020
Hydrocarbon-burner and device for automatically feeding the same.	C. F. A. Convert	481,273	Aug. 23	2471	609	60	1097
Hydrocarbon-burning apparatus	J. H. Bullard	483,099	Sept. 20	1913	484	60	1738
Hydrocarbon-burning apparatus	J. H. Bullard	483,100	Sept. 20	1914	484	60	1738
Hydrometer	W. C. Tiffany	480,480	Aug. 9	1181	297	60	818
Ice. Apparatus for cooling water in the manufacture of	A. Smith	483,397	Sept. 27	2403	604	60	1842
Ice-cream freezer	H. W. Atwater	479,931	Aug. 2	242	60	60	628
Ice-cream freezer	T. W. Crozier	480,714	Aug. 16	1556	387, 388	60	905
Ice-cream freezer	C. T. Van Sicklen	483,028	Sept. 20	1811	450	60	1717
Ice-cream freezer	E. P. Voisard	483,030	Sept. 20	1813	400	60	1717
Ice elevators. Planer for	W. H. M. Smith	482,906	Sept. 6	467	112	60	1426
Ice-machine	M. J. Palson	482,694	Sept. 13	1273	312	60	1597
Ice-plow	H. Pray	483,015	Sept. 20	1793	452	60	1713
Ice-shave	J. Stubbs	482,863	Sept. 20	1582	397	60	1609
Identification device	B. H. Weeks	481,448	Aug. 23	2757	678	60	1149
Illuminating device for stage-scenery and for other purposes.	W. Jordan and E. Broadbridge, Jr.	482 362	Sept. 13	748	180	60	1496
Implement. Hand	M. Ryan	483,477	Sept. 27	2502	630	60	1802
Implement-holder for tablets, &c	O. T. Hougen and G. W. Paulus	478,794	July 12	1127	278	60	238
Incubator	J. S. Rubel	482,755	Sept. 20	1379	342	60	1630
Index	F. S. Dewey	479,206	July 19	1760	441	60	369

Lamp. Standard oil	A. G. V. Harcourt	480,013	Aug. 2	397	98	60	657
Lamp-support	A. H. Lucas	483,071	Sept. 20	1866	473	60	1729
Lamp support. Electric	A. Wright	482,112	Sept. 6	308	72, 73	60	1395
Lamp support. Electric-arc	A. Wright	480,539	Aug. 9	1266	318	60	835
Lamp supports. Line-wire tightening device for electric-	C. A. Pfluger	482,486	Sept. 13	945	230	60	1532
Lamp supporting-ring	T. Hipwell	479,880	Aug. 2	160	40	60	613
Lamp suspension-bar. Electric	T. Dillon	478,275	July 5	343	82	60	69
Lamp suspension device	F. G. Echols	479,874	Aug. 2	150	37	60	611
Lamp-wick lift	H. L. Clark	481,748	Aug. 30	3255	792	60	1262
Lamp-wick raiser	E. McDowell	480,205	Aug. 2	711	182	60	717
Lamps and similar globes. Holder for arc	F. D. Goold	480,720	Aug. 16	1561	{389, 390}	60	907

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Lamps. Ceiling-block for incandescent	L. Stieringer	482,104	Sept. 6	298	70	60	1394
Lamps. Inverted burner for gas	D. W. Sugg	479,922	Aug. 2	229	57	60	626
Lamps. Means for utilizing heat of	J. J. Johnston	479,367	July 19	2019	501	60	421
Lamps. Means for utilizing heat of	J. J. Johnston	479,368	July 19	2021	505	60	421
Lamps. Reflecting-shade for incandescent	L. T. Stanley	481,378	Aug. 23	3645	648	60	1127
Lamps. Reflecting-shade for incandescent electric	L. T. Stanley	481,388	Aug. 23	2508	617	60	1102
Lamps. Shade for incandescent electric	W. J. Edmond and T. J. Keon	479,207	July 19	1761	441, 442	60	369
Lamps. Spark-arrester for electric-arc	C. Smallwood	479,994	Aug. 2	366	91	60	650
Lamps. Supplementary lens for bicycle and carriage	A. L. France	480,661	Aug. 9	1469	366	60	874
Lamps. Supporting device for electric-arc	J. Maier	480,470	Aug. 9	1166	294	60	815
Lamps. Suspension-bracket for electric	T. Dillon	482,727	Sept. 20	1329	325	60	1020
Lamps. Wick-raiser for central-draft	W. L. Upson	481,741	Aug. 30	3242	789	60	1259
Land-roller	E. Geisendorfer	482,406	Sept. 13	818	197	60	1509
Land-roller	B. A. Thomas	483,242	Sept. 27	2144	543, 544	60	1795
Land-roller, pulverizer, and harrow. Combined	J. H. Wilts	478,490	July 5	653	160	60	130
Lantern	A. L. Baron and B. F. Cockayne	482,671	Sept. 13	1231	300	60	1588
Lantern	D. W. Cronin	479,247	July 19	1824	458	60	382
Lantern	H. P. Merriman	480,931	Aug. 16	1878	468	60	971
Lantern	C. I. Mitchell	480,734	Aug. 16	1582	396	60	911
Lantern and foot-warmer. Combined stirrup	T. F. Baird	482,219	Sept. 6	488	117	60	1430
Lantern. Signal	G. A. Bischoff	483,507	Sept. 27	2551	640	60	1872
Lantern. Tubular	J. S. Gall	481,276	Aug. 23	2484	611	60	1099
Larynx-tube	G. Ermold	478,582	July 12	803	198	60	175
Last	J. B. Cass	479,628	July 26	2450	611	60	518
Last. Extension shoe	J. H. Livermore	480,596	Aug. 9	1356	337	60	852
Lasting	H. H. V. Lilley	482,016	Sept. 6	157	38	60	1366
Lasting-machine	F. Chase	478,501	July 5	672	164	60	133
Lasting-machine	I. Frechette	482,349	Sept. 13	720	172, 173, 174, 175	60	1490
Lasting-machine	C. Sinning	480,145	Aug. 2	615	156	60	700
Latch	J. K. Clark	480,171	Aug. 2	659	168	60	708
Latch	G. N. Duncan	480,075	Aug. 2	507	128, 129	60	679
Latch	C. Gagnon and L. Lefebvre	481,557	Aug. 30	2942	723	60	1202
Latch	M. R. Hubbell	482,794	Sept. 20	1440	356	50	1642
Latch	C. W. Monroe	481,910	Aug. 30	3524	862	60	1314
Latch and lock combined	J. E. Armstrong	483,318	Sept. 27	2290	576	60	1820
Latch and lock combined	J. A. Giese	481,261	Aug. 23	2454	604	60	1094
Latch attachment	G. G. Rupert	479,723	July 26	2025	651	60	549
Latch-bolt. Sheet-metal	H. D. Allen	479,582	July 26	2381	594	60	504
Latch. Gate	B. Bennett	480,005	Aug. 2	379	94	60	653
Latch. Gate	C. F. Bettmann, Jr	478,556	July 12	767	187	60	167
Latch. Gate	J. T. Fox	480,189	Aug. 2	687	174	60	712
Latch. Gate	C. M. Lamb	482,482	Sept. 13	939	229	60	1531
Lath-yarns. Machine for cutting	H. S. Dix	482,917	Sept. 20	1631	409	60	1679
Lathe	C. H. Baush	482,991	Sept. 20	1747	441, 442	60	1703
Lathe	C. G. Richardson	481,717	Aug. 30	3190	779, 780	60	1249
Lathe-centers. Machine for grinding or truing	H. E. Hawes	478,599	July 12	826	204	60	180
Lathe. Gage	L. C. Trask	478,178	July 5	169	43, 44	60	36
Lathe-mandrel	J. H. McGraw	480,435	Aug. 9	1105	277	60	802
Lathe milling attachment	F. D. Skeel	478,244	July 5	296	72	60	60
Lathe. Turret	J. Hartness	481,356	Aug. 23	2607	640, 641	60	1120
Lathe turret mechanism	F. H. Richards	480,963	Aug. 16	1933	484	60	981
Lathes. Reversing attachment for screw-cutting	J. J. Messing	482,261	Sept. 6	556	132	60	1443
Lathes. Stop mechanism for turret	F. H. Richards	481,192	Aug. 23	2323	572, 573	60	1069
Laundry drying-room	J. E. Chappell	481,845	Aug. 30	3413	837, 838	60	1292
Lawn-sprinkler	N. L. Rigby	483,017	Sept. 20	1796	453	60	1713
Lawn-sweeper	O. D. Thompson	481,269	Aug. 23	2464	607	60	1096
Lawn-trimmer	H. P. Hansen	482,307	Sept. 6	633	151	60	1459
Lead-corroding apparatus	G. D. Coleman	481,004	Aug. 16	1993	499	60	993
Lead corroding-pit. White	W. H. Wetherill	478,468	July 5	651	159	60	130
Lead. Desilverizing argentiferous	H. Roessler	480,416	Aug. 9	1077	.....	60	797
Lead-fumes. Enriching	A. Chaunte and M. W. Iles	479,489	July 26	2255	.....	60	481
Lead. Making white	G. D. Coleman	481,007	Aug. 16	1999	500	60	994
Lead. Manufacturing white	G. D. Coleman	481,006	Aug. 16	1998	500	60	994
Lead protoxide. Making	G. D. Coleman	481,005	Aug. 16	1996	500	60	993
Leather. Composition for softening enameled	R. L. Tudor	481,516	Aug. 23	2862	.....	60	1171
Leather. Finishing	J. Sanzenbacher	482,199	Sept. 6	455	.....	60	1424
Leather. Process of and apparatus for degreasing	F. N. Turney	482,661	Sept. 13	1213	296, 297	60	1586
Leather-skiving machine	C. H. Bayley	479,583	July 26	2382	594	60	504
Leather-splitting machine	S. H. Randall	479,461	July 26	2194	551	60	470
Leggin	M. Schener	480,348	Aug. 9	965	244	60	777
Lens. Illuminating	L. E. Davenport	478,739	July 12	1033	253	60	220
Letter-box	L. T. Light	483,070	Sept. 20	1865	473	60	1728
Letter-box	J. Spear	479,576	July 26	2376	592	60	503
Letter-box	J. Spear	481,772	Aug. 30	3295	802	60	1270
Letter-box. House	P. C. Brown	482,292	Sept. 6	609	144	60	1454
Letter-press and cabinet	G. Paul	481,586	Aug. 30	2983	732	60	1210
Letter. Sign	L. Levett	480,106	Aug. 2	549	138	60	687
Lettering, &c., in relief on sheets of ductile metal. Apparatus for producing	J. M. Newton	482,267	Sept. 6	565	134	60	1445
Lettering-tablet	A. Clark	481,002	Aug. 16	1992	499	60	992
Level for measuring tapes. Spirit	E. McCullough	479,521	July 26	2299	574	60	489
Level. Plumb	J. F. Hall	479,981	Aug. 2	325	80	60	644

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Level. Plumb	J. T. Rider	482,026	Sept. 6	173	41	60	1368
Level. Spirit	T. L. Burchinal	478,309	July 5	390	94	60	78
Level. Spirit	J. Dobelman	478,848	July 12	1206	299	60	254
Leveling-instrument	C. H. Lockwood	479,518	July 26	2296	573	60	489
Lever. Compound	T. A. Briggs	480,450	Aug. 9	1138	284	60	809
Lid-holder for pans or vessels	E. E. Ward	483,408	Sept. 27	2420	608	60	1845
Lid-lifter for kettles, &c	A. E. Cobb	479,055	July 19	1520	379	60	326
Life-boat	W. H. Taylor	481,602	Aug. 30	3015	737	60	1215
Life-saving and pleasure craft	A. B. Shearer	481,427	Aug. 23	2725	670	60	1143
Lifter. *See* Pickle-lifter. Transom-lifter. Plate or pan lifter.							
Lifting-jack	A. P. Aiken	480,685	Aug. 9	1507	375	60	881
Lifting-jack	W. Y. Fisher and C. Perry	482,628	Sept. 13	1176	284	60	1577
Lifting-jack	W. A. Wolfinger	479,692	July 26	2556	636	60	537
Lifting-jack	H. York and F. W. Austin	480,646	Aug. 9	1442	359	60	870
Lifting-machine	J. S. Crouch	481,224	Aug. 23	2382	587	60	1081
Light-fixtures. Adjustable canopy for	E. C. Schmalz	483,171	Sept. 27	2033	514	60	1773
Light: *See* Electric light. Signal-light.							
Light-fixtures. Thimble for	J. J. Miller	479,139	July 19	1656	413, 414	60	350
Light. Magnifying-globe for the diffusion of artificial	H. Eldridge	483,482	Sept. 27	2508	631	60	1863
Lights. Apparatus for producing variegated	F. L. M. Smith and W. J. Bryan	479,673	July 26	2525	628, 629	60	531
Lighter and match-safe. Combined pocket	A. J. Fredrikson	479,756	July 26	2674	664	60	559
Lighting and heating apparatus	J. D. Luther	482,874	Sept. 20	1555	388	60	1666
Lighting device	E. Kronenberg	480,500	Aug. 9	1209	303	60	823
Lighting device	W. W. McKenney	480,207	Aug. 2	715	182	60	718
Lighting device	B. H. Pendleton	482,587	Sept. 13	1113	269	60	1567
Lighting device. Pocket	W. W. McKenney	480,206	Aug. 2	712	182	60	717
Lightning-arrester	C. S. Van Nuis	478,383	July 5	501	121, 122	60	99
Lightning-arrester cut-out	J. P. Freeman	481,617	Aug. 30	3034	741	60	1219
Line-holder	D. Sweeney	480,351	Aug. 9	971	245	60	778
Link-lifter	J. Finney	478,932	July 12	1324	329	60	277
Links. Method of and apparatus for equalizing	T. Murphy	478,454	July 5	601	146	60	119
Linoleum floor-cloth. Device for manufacturing	T. Mitchell	482,948	Sept. 20	1683	423	60	1690
Liquid-cooling apparatus	P. Bender	479,778	Aug. 2	7	2	60	583
Liquid-dispensing apparatus	R. H. Little	481,698	Aug. 30	3156	770, 771	60	1243
Liquid-distributing machine. Automatic	E. B. Lundy	480,598	Aug. 9	1359	338	60	853
Liquid-gage	C. Pinel	483,485	Sept. 27	2512	632	60	1864
Liquid-heating device	A. Selkirk	481,151	Aug. 16	2257	557	60	1042
Liquid-level-indicator system	H. A. McGrory	480,736	Aug. 16	1586	397	60	912
Liquor purifying and aging apparatus	C. Heintz	482,843	Sept. 20	1505	374	60	1656
Liquid-purifying device	F. K. Way	479,381	July 19	2042	510	60	426
Liquid receptacle and pump. Combined	J. H. Bullard	480,068	Aug. 2	494	126	60	676
Liquids. Purifying	C. W. Brunson	479,781	Aug. 2	11	3	60	584
Liquors in bottles. Apparatus for impregnating	E. Stern	478,652	July 12	896	222	60	193
Lobster-trap	J. S. Palmer and C. R. Watrous	483,471	Sept. 27	2495	628	60	1861
Lock: *See* Alarm-lock. Bicycle-lock. Carriage-lock. Combination-lock. Cylinder-lock. Door-lock. Galley-lock. Indicator-lock. Magnetic lock. Nut-lock. Nut and bolt lock. Permutation-lock. Safe-lock. Seal-lock. Till-lock. Time-lock.							
Lock	W. H. Blaney	481,889	Aug. 30	3483	853	60	1306
Lock	H. Bruns	483,298	Sept. 27	2261	569	60	1815
Lock	C. E. Candee	478,781	July 12	1099	272, 273	60	234
Lock	C. E. Candee	478,782	July 12	1102	273	60	234
Lock	C. E. Candee	478,783	July 12	1104	273	60	234
Lock	C. E. Candee	478,784	July 12	1108	273, 274	60	235
Lock	C. E. Candee	478,016	July 12	1298	323	60	272
Lock	C. E. Candee	478,017	July 12	1301	324	60	272
Lock	G. Fleischel and J. Bertrand	479,104	July 19	1595	399	60	330
Lock	B. Goldenberg	483,147	Sept. 27	1985	503	60	1763
Lock	J. Loch	481,235	Aug. 23	2398	592	60	1084
Lock	F. F. and L. F. Marshall	478,754	July 12	1050	258	60	224
Lock	W. Nehring	482,970	Sept. 20	1714	433	60	1696
Lock	J. B. Price	481,422	Aug. 23	2718	668	60	1142
Lock	C. Richtmann	478,239	July 5	284	70	60	58
Lock	J. Roche	481,736	Aug. 30	3231	787	60	1257
Lock	N. G. Sörensen	481,597	Aug. 30	3003	735	60	1213
Lock	W. E. Sparks	480,973	Aug. 16	1953	488, 489	60	985
Lock	P. Zimmermann, Jr	480,359	Aug. 9	979	247	60	779
Lock mechanism. Time	E. and H. C. Stockwell	479,379	July 19	2037	508, 509	60	425
Locker for apparel, &c	J. M. Cotton	483,282	Sept. 27	2235	562	60	1811
Locomotive	C. L. Heisler	482,828	Sept. 20	1480	368, 369	60	1651
Locomotive ash-pan	J. W. Eads	482,235	Sept. 6	508	121	60	1434
Locomotive-boiler	L. W. Lester	479,648	July 26	2481	618	60	523
Locomotive, Compound	H. C. Reagan, Jr	481,149	Aug. 16	2253	556	60	1041
Locomotive draw-bar	S. R. Heidelberg	480,923	Aug. 16	1867	466	60	969
Locomotive, Electric	N. C. Bassett	483,204	Sept. 27	2088	529, 530	60	1784

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Locomotive. Electric	C. M. Conradson	482,863	Sept. 20	1534	382	60	1662
Locomotive. Electric	R. Eickemeyer	480,918	Aug. 16	1857	463	60	967
Locomotive. Electric	J. Gray	478,591	July 12	814	201	60	477
Locomotive. Electric	S. H. Short	478,242	July 5	293	71	60	59
Locomotive. Electric	S. H. Short	478,477	July 5	637	155, 156	60	127
Locomotive. Electric	W. H. Soley and W. W. Perkins	482,594	Sept. 13	1127	272	60	1569
Locomotive. Electric	E. A. Sperry	478,139	July 5	93	24	60	21
Locomotive-engine	A. R. Cavner	478,681	July 12	939	233	60	201
Locomotive-engine	A. R. Cavner	478,682	July 12	940	233, 234	60	202
Locomotive-engine	A. R. Cavner	478,684	July 12	943	234	60	203
Locomotive-engine	A. R. Cavner	478,685	July 12	945	234	60	203
Locomotive-engines. Apparatus for lighting	A. R. Cavner	478,683	July 12	942	234	60	202
Locomotive-engines. Speed and whistle recorder for	B. F. Stockford	482,393	Sept. 13	799	192, 193	60	1506
Locomotive fire-boxes. Brick arch for	F. W. Johnstone	481,232	Aug. 23	2395	591	60	1083
Locomotive. Road	H. White	480,757	Aug. 16	1612	405	60	919
Locomotive steam-boiler	G. J. Perkins	483,473	Sept. 27	2497	629	60	1861
Locomotive steam-engine. Compound	H. Monk	480,668	Aug. 9	1476	368	60	876
Locomotives and cars. Pilot or guard for	R. A. Crawford	480,713	Aug 16	1553	387	60	905
Locomotives. Motor-frame for electric	S. H. Short	479,469	July 26	2207	554	60	473
Locomotives. Starting-gear for compound	R. Lindner	481,181	Aug. 23	2306	568, 569	60	1065
Log-binder	R. J. Thompson	478,972	July 12	1386	341, 342	60	288
Log-carrier	R. E. Terry	481,314	Aug. 23	2550	626	60	1110
Log-carriers, &c. Hanger or support for	G. W. Cole	482,163	Sept. 6	398	94	60	1413
Logging-machine. Cable	J. Buckley	481,927	Sept. 6	9	3	60	1336
Longitude and time. Machine for calculating and illustrating	W. W. Hallett	480,367	Aug. 9	997	250	60	783
Loom	H. Wyman and J. A. Clark	480,684	Aug. 9	1503	374	60	881
Loom drop-box mechanism	H. P. Mallison	478,621	July 12	854	210, 211	60	185
Loom for weaving tufted fabrics	H. Dixon	482,446	Sept. 13	885	213	60	1521
Loom-picker	L. Teweles and T. A. Robinson	479,903	Aug. 2	192	47, 48	60	620
Loom-picker	R. Wharton	481,339	Aug. 23	2587	635	60	1116
Loom picker-staff buffer	E. Hamilton	482,977	Sept. 20	1724	435, 436	60	1698
Loom picker-staffs. Means for operating	A. Murch	478,453	July 5	600	146	60	118
Loom-pickers. Machine for punching leather	W. Wadsworth	480,419	Aug. 9	1082	271	60	798
Loom pile-wire	G. Segschneider	478,368	July 5	481	116	60	95
Loom pile-wire	G. Segschneider	478,369	July 5	483	116	60	95
Loom-shuttle tension device	H. Bardsley	479,084	July 19	1565	392	60	333
Loom-shuttle tension device	J. P. Thompson	478,695	July 12	1264	312	60	265
Loom stop-motion	W. M. Aikley	481,292	Aug. 23	2513	618	60	1103
Loom stop-motion	J. J. Shanahan	482,930	Sept. 20	1645	414	60	1683
Loom take-up mechanism	G. F. Hutchins	480,851	Aug. 16	1760	440	60	948
Loom weft-hammer	R. Derbyshire and C. H. Mullen	478,413	July 5	546	133	60	107
Looms for weaving pile fabrics. Method of and means for lubricating the wires in	G. Marchetti and H. N. Mellor	483,073	Sept. 20	1870	473, 474	60	1730
Looms. Let-off mechanism for double-pile-fabric	M. Leach, J. Heaton, and J. Bentley.	479,372	July 19	2026	506	60	422
Loss by accident. Means for insuring travelers against	E. N. Hill. (Reissue)	11,270	Sept. 13	1306	319	60	1604
Lounge	W. S. Bowie	482,673	Sept. 13	1233	301	60	1589
Low-water alarm. Electric	E. Rothlisberger	480,673	Aug. 9	1484	369	60	877
Lubricant	D. Harmon	482,249	Sept. 6	533	.....	60	1438
Lubricating-cup	I. J. Briggs	482,674	Sept. 13	1235	301	60	1589
Lubricator: *See* Axle-lubricator.							
Lubricator	W. H. Craig	479,116	July 19	1621	405, 406	60	343
Lubricator	M. H. Fine	482,346	Sept. 13	716	171	60	1489
Lubricator	J. J. Martin and W. H. Brownfield	482,559	Sept. 13	1078	261	60	1559
Lubricator	F. W. Marvin and G. B. Essex	479,911	Aug. 2	200	50	60	621
Lubricator	A. Nees	482,560	Sept. 13	1078	262	60	1559
Luggage-carrier	A. S. Comstock	483,346	Sept. 27	2325	585	60	1827
Lumber. Barbed strap for bunching	E. C. Binet	481,040	Sept. 20	1826	464	60	1720
Lumber-carriers. Hanger for	J. E. Harder	481,355	Aug. 23	2606	640	60	1120
Lumber, &c. Conveyer for handling	M. Garland	480,496	Aug. 9	1201	301	60	822
Lumber-elevator	H. McKinnon	480,824	Aug. 16	1720	430	60	939
Machinery. Electro-mechanical apparatus for starting or reversing	A. Plat	478,816	July 12	1165	288, 289	60	246
Magazine-camera	S. C. Fay and H. Willis	479,587	July 26	2388	595	60	506
Magnetic brake	A. de Bovet	481,812	Aug. 30	3409	837	60	1292
Magnetic lock	H. V. Smith	478,245	July 5	298	72	60	60
Magnetic separator	C. M. Ball and S. Norton	478,551	July 12	759	186	60	166
Magnetic separator	G. Conkling	481,474	Aug. 23	2800	689	60	1158
Magnets. Measuring the strength of	C. R. Rudd	483,168	Sept. 27	2030	513	60	1772
Mail-bag catcher	J. W. Horton	478,604	July 12	835	206	60	181
Mail-bag catcher	G. W. Moore, Jr	481,654	Aug. 30	3089	753	60	1230
Mail-bag catcher and deliverer	A. P. Hauss	480,385	Aug. 9	1027	258	60	789
Mail-bag thrower	C. B. Winsor and G. W. Cummings	481,322	Aug. 23	2561	628, 629	60	1112
Mail-bags. Crane for suspending	E. A. Ray	481,673	Aug. 30	3116	761	60	1234
Mail-box	G. S. Light	481,021	Aug. 30	3039	749	60	1240
Mail-pouch. Expansible hinged mouth	G. F. Windfeilder	480,645	Aug. 9	1440	359	60	869
Mailing attachment for books, &c	C. S. Hardy	480,582	Aug. 9	1332	332	60	848
Mailing-case	G. J. Johnson	483,287	Sept. 27	2241	564	60	1812
Main. Water or gas	H. F. Dunham	481,935	Sept. 6	24	6	60	1339
Malt-drying kiln	C. G. Bosch	481,687	Aug. 30	3139	765	60	1239
Malt liquors. Apparatus for cooling	C. C. Hanford and C. D. Stanford	479,419	July 26	2116	529	60	454
Malt liquors. Heater and cooler for fermented	J. H. Kersenbrock	480,928	Aug. 16	1873	467	60	970

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Malt liquors. Hopping	C. H. and B. O. Fringa	478,189	July 5	185	.....	60	39
Malt-manufacturing apparatus	C. Hauptman and J. Schwarz	479,421	July 26	2122	531	60	455
Malting apparatus	G. A. Krause	481,958	Sept. 6	54	13	60	1345
Mandrel	W. O. Dixon	479,634	July 26	2461	613	60	519
Mangle	C. A. Oveson	482,410	Sept. 13	923	198	60	1510
Mangle. Steam	F. Baldwin	482,609	Sept. 13	1151	278	60	1573
Mantel. Adjustable	E. B. Benbow	482,333	Sept. 13	694	166	60	1486
Manual motor	M. Johnson	482,180	Sept. 6	427	101, 102	60	1419
Manure-spreader	W. Compton	482,785	Sept. 20	1429	354	60	1640
Marker. Gore	W. B. Kinsley	481,305	Aug. 23	2531	621	60	1106
Marker. Land	H. C. McBroom	482,002	Sept. 6	226	54	60	1379
Marking-gage	J. A. Traut	481,515	Aug. 23	2861	703	60	1170
Marking material. Package of	E. C. Hunt	483,453	Sept. 27	2476	622	60	1857
Mashing apparatus	A. C. Wagner	478,667	July 12	916	227	60	197
Mashing-machine. Brewer's	C. Kaestner	479,189	July 19	1737	435, 436	60	365
Mason's hawk	C. W. Blay	483,132	Sept. 27	1963	498	60	1759
Masonry. Pointing mechanism for	E. R. Kruck	482,369	Sept. 13	757	183	60	1498
Massage apparatus	A. Kahn	481,359	Aug. 23	2611	642	60	1121
Mast-arm	A. Wright	481,381	Aug. 23	2649	649	60	1128
Mat: *See* Wire mat.							
Mat	W. M. Marshall	482,980	Sept. 20	1730	437	60	1700
Match and toothpick machine	J. Boulard	481,522	Aug. 23	2871	706	60	1173
Match-card. Friction	J. Pusey	483,165	Sept. 27	2024	512	60	1771
Match. Flexible	J. Pusey	483,166	Sept. 27	2026	512	60	1771
Match-safe	M. R. Land	482,371	Sept. 13	759	183, 184	60	1499
Match-safe. Automatic	G. W. Heffner	481,696	Aug. 30	3153	769	60	1242
Matrices. Forming	C. L. Redfield	481,308	Aug. 23	2539	674	60	1107
Matrix-making machine	S. C. Beckwith and W. W. Street	480,361	Aug. 9	983	248	60	780
Matrix-making machine	G. A. Goodson	478,257	July 5	316	77	60	63
Matrix-making machine	G. A. Goodson	478,258	July 5	317	77	60	63
Matrix-making machine	G. A. Goodson	479,773	July 26	2715	675, 676	60	568
Matrix-making machine	G. A. Goodson and A. S. Capehart	479,772	July 26	2706	674, 675	60	565
Matrix-making machine	C. L. Travis	479,539	July 26	2321	580	60	494
Matrix-making machines. Justifying attachment for	W. W. Street and C. L. Travis	480,350	Aug. 9	966	244	60	778
Matrix material	F. A. Johnson	478,333	July 5	425	103	60	85
Measure. Ammunition	H. O. French	482,120	Sept. 6	323	77	60	1398
Measure. Grain	L. Bronson	479,551	July 26	2342	584	60	498
Measure. Grade	J. M. Haise	479,803	Aug. 2	44	11	60	590
Measure. Tailor's	I. Geraci	480,579	Aug. 9	1327	330, 331	60	847
Measurement of electrical resistances. Apparatus for the	S. Evershed	478,098	July 5	34	11	60	10
Measuring and drafting device for garments	C. Mannebach	482,748	Sept. 20	1368	339	60	1628
Measuring apparatus. Grain	K. G. Jensen	478,111	July 5	49	14	60	12
Measuring apparatus. Tailor's	J. H. Rensen	480,036	Aug. 2	446	113	60	667
Measuring apparatus. Tailor's	A. Trochu	483,271	Sept. 27	2220	557	60	1807
Measuring can	L. G. Souder	480,146	Aug. 2	616	156	60	700
Measuring device. Fabric	L. H. Huntoon	479,091	July 19	1577	395	60	336
Measuring device. Liquid	J. Roos	481,872	Aug. 30	3452	847	60	1300
Measuring electrical currents. Device for	C. H. Rudd	480,039	Aug. 2	451	114, 115	60	668
Measuring-instrument. Electric	S. Evershed	478,097	July 5	32	10	60	9
Measuring-instrument. Electrical	E. Weston	480,888	Aug. 16	1809	452	60	958
Measuring-instrument. Electrical	E. Weston	480,894	Aug. 16	1822	454	60	960
Measuring-instrument. Electrical	E. Weston	480,895	Aug. 16	1823	454	60	961
Measuring-instrument. Electrical	E. Weston	480,896	Aug. 16	1825	454, 455	60	961
Measuring-instrument. Electrical	E. Weston	480,897	Aug. 16	1829	455	60	961
Measuring-instrument. Electrical	E. Weston	480,898	Aug. 16	1831	456	60	962
Measuring-instrument. Electrical	E. Weston	480,899	Aug. 16	1832	456	60	962
Measuring instrument. Lens	M. J. Hinden	483,354	Sept. 27	2336	587	60	1830
Measuring machine. Cloth	G. L. Wilcox, H. F. Hallenbeck, and T. Wandell.	478,531	July 5	726	177, 178	60	144
Measuring machine. Fence	F. Hutchinson	481,792	Aug. 30	3329	812	60	1276
Measuring machine. Warp or line	W. H. Kynett	478,115	July 5	57	15	60	13
Measuring-receptacle	C. T. Menze	479,151	July 19	1673	418	60	353
Measuring shot. Device for	J. M. Heath	479,982	Aug. 2	326	80	60	644
Measuring the velocity of fluids. Gage for	S. W. Robinson	481,310	Aug. 23	2544	625	60	1108
Meat and vegetable cutter	W. R. Ellis	480,569	Aug. 9	1307	327	60	844
Meat-chopping machine	J. Sheargren	478,647	July 12	891	221	60	192
Meat-cutter	J. H. Shaw	478,823	July 12	1176	291	60	248
Meat cutter	O. D. Woodruff	480,002	Aug. 2	374	93	60	652
Meat-cutter	O. D. Woodruff	481,882	Aug. 30	3468	851	60	1303
Meat-cutter	O. D. Woodruff	482,146	Sept. 6	365	87	60	1407
Meat-mixing apparatus	J. H. Schaefer	480,674	Aug. 9	1485	369	60	878
Meat-slicer	J. V. Bohannan	481,150	Aug. 23	2277	561	60	1059
Meat-tenderer	O. M. Arnold	478,547	July 12	756	185	60	165
Meat-tenderer	F. B. Jordan	483,002	Sept. 20	1766	446	60	1707
Mechanical motor	G. Cochins	478,068	July 5	21	7	60	7
Mechanical motor	D. J. Dean	483,046	Sept. 20	1833	466	60	1722
Mechanical motor	S. Hicks	480,724	Aug. 16	1567	392	60	908
Mechanical movement	P. A. Bouchet	483,041	Sept. 20	1827	464	60	1720
Mechanical movement	J. Gregory	479,503	July 26	2397	597	60	508
Mechanical movement	C. A. Holcomb	482,743	Sept. 20	1360	336, 337	60	1626
Mechanical movement	F. P. Hummel	478,795	July 12	1129	278	60	239
Mechanical movement	H. D. Mentzel. (Reissue)	11,271	Sept. 13	1307	319, 320	60	1605

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drgs.	Official Gazette. Vol.	Official Gazette. Page.
Mechanical movement	F. Mény	481,409	Aug. 23	2694	661, 662	60	1136
Mechanical movement	G. H. Reynolds	479,526	July 26	2304	576	60	490
Mechanical movement	H. A. W. Wood	481,128	Aug. 16	2202	545	60	1032
Mechanism	E. Patten	481,508	Aug. 23	2850	700	60	1168
Mechanisms. Means for controlling the operation of	H. E. Vincing	483,272	Sept. 27	2222	558	60	1808
Medical and surgical cabinet	J. E. Wenman	478,830	July 12	1185	293, 294	60	250
Medical compound	T. L. Page and J. Apfel	481,815	Aug. 30	3366	.....	60	1283
Medicine-case	H. D. Capitain	480,709	Aug. 16	1548	386	60	904
Melting-pot cover	J. A. St. John	482,880	Sept. 20	1569	392	60	1668
Merchandise. Apparatus for dispensing articles of	R. H. Little	481,908	Aug. 30	3515	860, 861	60	1312
Merry-go-round	W. D. Bennage	478,838	July 12	1196	297	60	252
Mesquite-beans. Converting	T. H. Jacobs	479,512	July 26	2288	572	60	487
Messenger's picket	J. C. Hays	481,867	Aug. 30	3446	846	60	1299
Metal-heating. Electric	C. L. Coffin	483,426	Sept. 27	2442	614	60	1850
Metal lattice-work	E. Kuechle	483,358	Sept. 27	2340	589	60	1831
Metal melting and casting apparatus	C. C. Carroll	480,232	Aug. 2	765	193	60	727
Metal pipes or tubes. Making	W. S. McManus	479,952	Aug. 2	377	68	60	634
Metal-planing machine	G. F. McIndoe	479,606	July 26	2416	603	60	511
Metal-plate-bending machine	L. C. Crowell	478,090	July 5	23	7, 8	60	7
Metal-plate fastening	W. C. Hunter	481,566	Aug. 30	2954	725	60	1204
Metal plates. Apparatus for pickling	D. M. Somers and W. H. Atkinson	482,489	Sept. 13	950	231, 232	60	1533
Metal-shears	H. Aiken	479,392	July 26	2069	519	60	445
Metal-shears	H. Aiken	482,113	Sept. 6	310	73	60	1396
Metal strips. Machine for twisting	E. Kuechle	483,357	Sept. 27	2339	588	60	1830
Metal tubes. Apparatus for making	P. Keil, Jr	482,364	Sept. 13	752	181, 182	60	1497
Metal tubes. Apparatus for manufacturing	E. F. Hartshorn	479,507	July 26	2282	570	60	486
Metal tubes. Shaping	J. Robertson	481,060	Aug. 16	2096	522, 523	60	1013
Metal wheels. Making	E. H. Scott	478,644	July 12	888	220	60	191
Metal-working device. Electric	C. L. Coffin	483,424	Sept. 27	2440	614	60	1850
Metal-working. Electric	C. L. Coffin	483,427	Sept. 27	2443	615	60	1850
Metal-working. Electric	C. L. Coffin	483,428	Sept. 27	2444	615	60	1851
Metals. Process of and apparatus for purifying, refining, and carburizing	B. Brazelle	482,001	Sept. 6	123	31	60	1359
Metals. Reducing	H. S. Blackmore	478,907	July 12	1282	319	60	209
Metallic covering-plate	R. G. Westphalen	483,243	Sept. 27	2145	.....	60	1795
Meter: *See* Electric meter. Electric-current meter. Electrical meter. Fluid-meter. Grain-meter. Piston meter. Proportional metal.							
Meter-diaphragm	W. N. Milsted	482,185	Sept. 6	437	104	60	1421
Metric model	J. McCourt	480,119	Aug. 2	571	145	60	691
Microphone	E. Noriega	481,048	Aug. 16	2064	515	60	1007
Microphone	E. Noriega	481,050	Aug. 16	2066	516	60	1008
Milk-cooler	W. C. Eberhardt	479,494	July 26	2261	567	60	492
Milk-cooler	S. W. Tobey	478,482	July 5	643	158	60	128
Milk-elevator	C. J. Jeppesen	478,161	July 5	135	34	60	29
Milk-receiver	S. J. Morgan	482,264	Sept. 6	560	133	60	1444
Milk-tester	F. B. Fargo	478,099	July 5	35	11	60	10
Milk. Testing	H. Leffmann and W. Beam	479,193	July 19	1742	.....	60	366
Milk-testing apparatus	M. J. Cushman	478,737	July 12	1030	253	60	220
Mill: *See* Cane-mill. Cement-mill. Fanning-mill. Grinding-mill. Rolling-mill. Sawmill.							
Mill appliance	J. A. Burns	482,861	Sept. 20	1530	380, 381	60	1661
Mill appliance	W. H. Maddock	480,200	Aug. 2	703	178, 179, 180	60	715
Mills. Means for preventing explosions in	C. Kaestner	479,188	July 19	1736	435	60	365
Milling-machine	F. Kempsmith and T. L. Smith	480,198	Aug. 2	699	177	60	714
Millstone and making the same	T. L. Sturtevant and W. H. Ellis	483,504	Sept. 27	2544	639	60	1871
Millstones. Making composite	T. L. Sturtevant	483,179	Sept. 27	2048	517	60	1776
Mine-elevator	S. Hamilton	478,595	July 12	820	202, 203	60	178
Mine-shafts. Electric signal for	F. W. Bacorn	479,046	July 19	1509	376	60	323
Miner's register	B. Gately and D. Skinner	480,843	Aug. 16	1742	435	60	944
Miner's tool	N. W. Woodey	479,444	July 26	2161	539	60	464
Mining cage or car	E. Schillo	481,592	Aug. 30	2991	733	60	1211
Mining-machine	J. L. Lechner	483,156	Sept. 27	2006	508	60	1768
Mining-machine	B. A. Legg	482,045	Sept. 6	200	48	60	1374
Mining-machine	B. A. Legg	482,046	Sept. 6	204	48, 49	60	1375
Mining-machine	G. F. Myers	481,187	Aug. 21	2317	570	60	1068
Mining-machine	E. A. Sperry	478,141	July 5	95	24, 25	60	21
Mining-machine	F. W. Syler	480,418	Aug. 9	1079	270, 271	60	798
Minerals. Apparatus for cutting	L. B. Atkinson, H. W. Ravenshaw, and F. Mori.	481,921	Sept. 6	1	1	60	1335
Mirror. Hand-	W. A. Julian	479,092	July 19	1579	395	60	336
Miter-cutter	W. R. Fox	483,436	Sept. 27	2455	618	60	1853
Miter-machine	A. L. Maxim	478,449	July 5	596	145	60	117
Miter-tool	A. Van Bibber	482,107	Sept. 6	302	71	60	1394
Mitten	F. J. Kahu	480,852	Aug. 16	1761	441	60	948
Mixing or separating machine	H. M. Gabel	478,587	July 12	808	199	60	176
Mold: *See* Candy-mold. Coffin-shell mold. Cylinder-mold.							
Mold	F. F. Ingram	481,952	Sept. 6	47	11	60	1343

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drgs.	Official Gazette. Vol.	Official Gazette. Page.
Molding	F. E. Gordon	482,901	Sept. 20	1611	.....	60	1675
Molding-flask	J. G. Newbury	482,063	Sept. 6	227	54	60	1379
Molding-machine	W. Edgar	480,566	Aug. 9	1302	326	60	843
Molding-machine	W. Evans	479,755	July 26	2672	663	60	558
Molding-machine	J. A. Field	481,017	Aug. 16	2012	503, 504	60	996
Molding-machine	S. Smith	478,377	July 5	494	119, 120	60	97
Molding-machine	F. H. Van Houten	480,444	Aug. 9	1118	280	60	805
Molding-machine	N. Hoffend	482,742	Sept. 20	1359	336	60	1526
Moldings. Means for hanging	W. W. Carson	478,154	July 5	122	31	60	27
Mole, dike, or dam for silt-bearing streams	C. Oerther and J. W. Dillingham	481,585	Aug. 30	2982	732	60	1210
Mole-trap	J. C. F. Dick	482,004	Sept. 6	131	32	60	1360
Money-box. Registering	J. D. Mattison	479,825	Aug. 2	80	20, 21	60	597
Monocycle	J. Mitchell	481,367	Aug. 23	2620	644	60	1123
Monument. Memorial	L. A. Tarring	478,657	July 12	903	224	60	194
Mop-holder	B. F. Warner	480,303	Aug. 9	805	227	60	765
Mop-tub and mop-wringer. Combined	A. H. Hafer	480,192	Aug. 2	691	175	60	713
Mop-wringer	H. A. Spiller	480,215	Aug. 2	740	187	60	722
Mortar-carriage	W. H. Morgan	479,445	July 26	2162	539, 540	60	464
Mortar-mounting	W. H. Morgan	479,446	July 26	2164	540, 541	60	464
Mortar-mounting	T. R., Sr., J. R., T. R., Jr., and W. H. Morgan.	479,764	July 26	2692	669, 670	60	562
Mortising-machine	L. A. Belmont and A. C. Cload	482,224	Sept. 6	494	118	60	1431
Mortising-machine	E. J. Gisvold	482,242	Sept. 6	522	125	60	1436
Mortising-machine	L. Houston	478,431	July 5	571	138	60	112
Mortising-machine	W. F. Larish	481,039	Aug. 16	2049	511, 512	60	1004
Mother-of-pearl articles and making the same	O. C. Eckert and L. Cohen	482,548	Sept. 13	1058	257	60	1558
Motion. Device for converting	G. E. Morrison and W. A. Dye, Jr.	482,584	Sept. 13	1109	268	60	1566
Motion. Device for converting	S. Sloan	483,177	Sept. 27	2042	516	60	1775
Motion. Device for converting oscillatory into reciprocating	T. A. Briggs	480,449	Aug. 9	1136	284	60	809
Motion. Device for transmitting rotary	F. W. Gordon	478,959	July 12	1303	336	60	284
Motor: *See* Car-motor. Current-motor. Electric motor. Electro-magnetic motor. Fluid-motor. Gas and petroleum motor. Gas or petroleum motor. Hydraulic motor. Manual motor. Mechanical motor. Pump-motor. Spring-motor. Water-motor.							
Motor	R. F. Nichols, Sr	479,570	July 26	2368	590, 591	60	502
Motor	G. B. Sellers	480,972	Aug. 16	1951	488	60	985
Motor	E. C. Wheat	478,774	July 12	1084	269	60	231
Motto-plate	C. M. Underwood	482,662	Sept. 13	1216	297	60	1586
Mower	W. R. Baker	481,219	Aug. 23	2373	584, 585	60	1079
Mower and header	A. D. Marble	480,730	Aug. 16	1575	394	60	910
Mower clutch. Lawn-	G. D. Leedle	479,192	July 19	1741	437	60	365
Mower grass-receiver. Lawn-	F. L. Golibart	481,277	Aug. 23	2485	611	60	1099
Mower. Horse-power lawn-	A. B. Robbins	480,831	Aug. 16	1730	432	60	942
Mower. Lawn-	W. A. Loud	483,157	Sept. 27	2011	508	60	1768
Mower. Lawn-	W. E. and F. J. Prindle	482,752	Sept. 20	1374	340, 341	60	1629
Mower. Lawn-	J. V. Rowlett	479,843	Aug. 2	102	26	60	602
Mowers and reapers. Sickle-bar movement for	A. W. Lanphere	480,104	Aug. 2	546	138	60	686
Mowers. Foot-lever for the cutter-bars of	L. L. Folsom	482,347	Sept. 13	718	171	60	1490
Mowing-machine	C. M. Brown	480,706	Aug. 16	1543	384, 385	60	902
Mucilage-holder	F. H. Palmer	482,750	Sept. 20	1371	339	60	1628
Muff	C. C. Ashbaugh	482,432	Sept. 13	861	207	60	1517
Multiple switchboards. Test system for	O. A. Bell	483,506	Sept. 27	2549	640	60	1871
Multiple switchboards. Test system for	C. E. Scribner	483,175	Sept. 27	2039	515	60	1774
Music-box damping device	G. A. Brachhausen and P. Riessner	480,993	Aug. 16	1992	496	60	991
Music-chart	H. S. Sutton	479,902	Aug. 2	191	47	60	619
Music-leaves. Tab for	C. F. Pidgin	481,735	Aug. 30	3229	787	60	1237
Music or like engravings. Producing	C. A. Ker	482,871	Sept. 20	1551	387	60	1665
Music-rack	I. W. Zavadil	483,244	Sept. 27	2147	544	60	1795
Music-rack and telescopic stand therefor. Folding	H. W. Potter	478,460	July 5	612	149	60	121
Musical instrument	C. Bozza	480,315	Aug. 9	918	232	60	769
Musical instrument	J. B. Galloway	481,694	Aug. 30	3149	768	60	1241
Musical instrument	F. G. Haney	480,816	Aug. 16	1705	425	60	936
Musical instrument	J. F. Henning	478,933	July 12	1325	329	60	277
Musical instrument	D. Kempton	481,035	Aug. 16	2037	508	60	1002
Musical-instrument key	L. K. Fuller	483,378	Sept. 27	2378	597	60	1837
Musical instrument. Multiplex	J. H. Wheeler	481,451	Aug. 23	2760	679	60	1150
Musical-instrument rack	F. W. Hedgeland	478,602	July 12	833	205	60	181
Musical instrument. Stringed	W. J. Christy	483,136	Sept. 27	1972	500	60	1760
Musical instruments. Accompaniment-indicator for	G. P. O. Héroux	478,107	July 5	45	13	60	11
Musical instruments. Action for mechanical	J. L. Müller	480,854	Aug. 16	1763	441	60	949
Musical instruments. Bow for stringed	E. A. Kretschmer	482,255	Sept. 6	547	130	60	1441
Musical instruments. Mute for	D. Genese	480,578	Aug. 9	1326	330	60	847
Musical notation	J. W. Robberson	482,442	Sept. 13	880	211, 212	60	1519
Musk and making the same. Artificial	A. Baur	481,685	Aug. 30	3136	.....	60	1239
Muzzle	M. S. Moremen	478,882	July 12	1242	308	60	261
Nail-extractor	M. D. Converse	482,338	Sept. 13	702	167	60	1487
Nail-machine	J. M. E. Baackes and C. Richards	481,997	Sept. 6	114	28, 29	60	1357
Nail-machine attachment. Cut-	C. F. Roth	483,085	Sept. 20	1889	478, 479	60	1733

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Nail-puller	C. M. Spencer	480,974	Aug. 16	1954	489	60	985
Nailing implement. Hand	W. J. Brown	482,540	Sept. 13	1044	252	60	1553
Nailing machine. Box	B. M. Gunston	481,863	Aug. 30	3438	{844 845	60	1207
Name-plate for monuments, signs, &c	R. H. Follenius	482,237	Sept. 6	511	122	60	1435
Napkin-holder	I. T. Brown	481,161	Aug. 23	2289	562	60	1060
Napkin ring and holder. Combined	A. M. Spaulding	483,331	Sept. 27	2310	580	60	1824
Necktie-fastener	L. Greenwald	483,215	Sept. 27	2103	531	60	1787
Necktie-fastener	B. Kersting	479,884	Aug. 2	166	41	60	614
Necktie-fastener	L. Uechting	480,754	Aug. 16	1609	404	60	918
Necktie or band	C. S. Cole	482,547	Sept. 13	1058	257	60	1555
Needle. Ribbon	G. G. Welgand	481,338	Aug. 23	2386	635	60	1116
Needle. Tape	E. Stott	478,827	July 12	1181	293	60	249
Net bow or hoop	A. G. Benson	481,461	Aug. 23	2788	685	60	1155
Net. Dip	F. Hanish	482,635	Sept. 13	1182	286	60	1579
Net fabrics. Knot for	R. Semmler, Sr	483,291	Sept. 27	2250	566	60	1813
Net. Fish	H. F. Smith	483,400	Sept. 27	2406	605	60	1843
Net. Fly	W. H. Osmer	478,708	July 12	971	241	60	209
Net. Fly	G. Sollenberger	482,417	Sept. 13	837	201	60	1512
Net frame. Landing	J. Reed	479,157	July 19	1682	{420 421	60	355
Net. Pound	G. Williams and A. A. Cleveland	481,990	Sept. 6	104	26	60	1355
Newspapers and other publications. Preventing fraud in the sale of	L. C. Crowell	480,423	Aug. 9	1090	273	60	799
Newspapers and other publications. Preventing fraud in the sale of	L. C. Crowell	480,424	Aug. 9	1093	273	60	800
Nickel-matte. Treating	P. Manhes	479,290	July 19	1883	472	60	395
Nitro-glycerine blasting-powder	L. Brown	478,844	July 12	1203	.....	60	254
Nitro-glycerine from waste acids. Recovering	J. Lawrence	482,372	Sept. 13	760	.....	60	1499
Nose-bag	W. Ehrhardt	482,730	Sept. 20	1332	326	60	1621
Note and envelope. Combined promissory	C. Carroll	479,555	July 26	2348	586	60	499
Nozzle. Automatic	C. A. King	478,698	July 12	958	238	60	206
Nozzle. Exhaust	P. Swenson	481,334	Aug. 23	2379	{633 634	60	1115
Nozzle-holder	C. W. Umholtz	481,082	Aug. 16	2129	530	60	1019
Number device. Adjustable	A. Cuthbert	479,249	July 19	1827	{458 459	60	383
Numbering-machine	J. F. Evert	480,841	Aug. 16	1740	435	60	943
Nut and bolt lock	C. H. Shaw	478,241	July 5	290	71	60	59
Nut and bolt lock	J. E. Arthur	479,131	July 19	1642	411	60	347
Nut and bolt wrench	T. A. Flanigan	482,472	Sept. 13	926	226	60	1529
Nut-blank-threading device	J. Hoval	481,230	Aug. 23	2394	590	60	1083
Nut-cracker	J. C. Stuchel	481,437	Aug. 23	2742	674	60	1146
Nut. Lock	D. C. Wheeler and W. W. Sperry	483,334	Sept. 27	2313	581	60	1825
Nut-lock	V. E. Doremus	478,742	July 12	1036	254	60	221
Nut-lock	C. A. Bartliff	479,162	July 19	1688	422	60	357
Nut-lock	J. Bender	482,610	Sept. 13	1152	278	60	1573
Nut-lock	J. Broadley	481,344	Aug. 23	2592	637	60	1117
Nut-lock	W. Cokayne	482,518	Sept. 13	1009	244	60	1546
Nut-lock	S. Durben	478,096	July 5	32	10	60	9
Nut-lock	H. Frobird	479,065	July 19	1535	383	60	328
Nut-lock	J. C. Grimes	478,907	July 19	1437	356	60	309
Nut-lock	C. Ives	479,511	July 26	2287	572	60	487
Nut-lock	J. C. McQuilkin	481,417	Aug. 23	2709	666	60	1140
Nut-lock	G. A. Miller	480,667	Aug. 9	1475	367	60	876
Nut-lock	A. P. Nelms	482,949	Sept. 20	1684	424	60	1690
Nut-lock	J. G. Perry	482,907	Sept. 20	1618	405	60	1676
Nut-lock	J. Putman	478,637	July 12	877	216	60	190
Nut-lock	A. Stockdale	483,241	Sept. 27	2143	543	60	1794
Nut-lock	L. F. Wankey	478,725	July 12	998	247	60	215
Nut-lock	A. Warenskjold	481,214	Aug. 23	2361	592	60	1076
Nut-lock	J. W. Willcoxon	482,935	Sept. 20	1651	416	60	1684
Nut-lock	W. H. Willis	480,758	Aug. 16	1613	405	60	919
Nut-lock	C. C. Wrenshall	482,910	Sept. 20	1622	406	60	1677
Nut-lock and bolt-tightener	L. H. Young	478,300	July 5	379	92	60	76
Oarsman's recorder	J. G. Perry	482,906	Sept. 20	1617	405	60	1676
Oil and vapor burner	J. and J. H. Banks and W. B. Peet	478,270	July 5	334	80, 81	60	67
Oil and vapor burner	J. A. Lannert, W. R. Jeavons, and W. H. Wilder.	479,747	July 26	2662	661	60	556
Oil-burner	W. H. Wilder, J. A. Lannert, and W. R. Jeavons.	479,690	July 26	2554	635	60	536
Oil-burning apparatus	J. F. Coates	479,558	July 26	2352	587	60	500
Oil-can	G. H. Harvey	482,508	Sept. 13	587	230	60	1542
Oil-can	U. Reiffer and J. F. Stauffer	480,742	Aug. 16	1593	399	60	914
Oil-can. Lamp-filling	H. H. Thiellesen	479,318	July 19	1923	480	60	402
Oil-can. Safety	J. Geary	482,680	Sept. 13	1248	304	60	1592
Oil-cup	H. Kaplan	479,217	July 19	1777	446	60	372
Oil-cup	W. H. and A. J. Bailey	478,977	July 19	1490	347	60	303
Oil-cup	J. M. Coale	479,246	July 19	1823	457	60	382
Oil-cup	F. J. Cole and G. B. Hazlehurst	478,224	July 5	249	61	60	51
Oil-extracting apparatus	J. T. Smith	481,312	Aug. 23	2548	625	60	1109
Oil-motor engine	C. Mann	482,581	Sept. 13	1104	267	60	1565
Oil-press	H. Schumm	482,201	Sept. 6	457	110	60	1424
Oil projectile	A. Estrayer	480,867	Aug. 16	1781	445	60	952
Oil purifier and reservoir	E. D. Moore	478,705	July 12	967	240	60	208
Oil-receptacle filler-cap	R. Metz	482,583	Sept. 13	1108	268	60	1565
Oil upon water. Device for distributing	W. Frosch	478,421	July 5	558	135	60	109
Oils. Compound of sulphureted	S. I. Prescott	481,818	Aug. 30	3370	826	60	1281
Oils. Desulphurizing	W. D. Field	478,955	July 12	1353	.....	60	283
Oils. Desulphurizing	O. P. Amend and J. H. Macy	480,311	Aug. 9	912	230	60	768
Oiler for handsaws	O. P. Amend and J. H. Macy	480,312	Aug. 9	914	231	60	768
Oiling device. Loom	S. Parmele	480,621	Aug. 9	1401	348	60	862
Oiling device. Loom	J. S. Giles	481,558	Aug. 30	2943	723	60	1202
	J. S. Giles	481,559	Aug. 30	2944	723	60	1202

Alphabetical list of patentees, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Open-hearth furnace	H. Aiken, F. W. Wood, and H. H. Campbell.	481,885	Aug. 30	3476	852	60	1305
Opera-glass holder	A. B. Nicholson	478,350	July 5	455	111	60	91
Opera or field glass	E. Lüddeckens	480,370	Aug. 9	1092	252	60	784
Operating-chair. Physician's	S. Longanecker	481,040	Aug. 16	2052	512	60	1005
Operator's seat	C. H. Colby	478,987	July 19	1415	350	60	305
Optician's trial-frame	A. G. McKenzie	479,607	July 26	2419	603	60	512
Ordnance. Breech-loading	S. Seabury	483,207	Sept. 27	2213	556	60	1807
Ordnance. Means for operating heavy	F. Bex	483,130	Sept. 27	1960	497	60	1758
Ordnance. Tool for boring breech-loading	G. Gerdom	481,300	Aug. 23	2525	620	60	1105
Ore and coal crusher and separator	S. B. Price, Jr., C. E. Martin, and B. Purser.	479,018	July 19	1466	365	60	315
Ore-concentrating belts. Fluid-support for	F. G. Corning	478,502	July 5	675	165	60	133
Ore-concentrator	W. H. H. Bowers	481,101	Aug. 16	2164	536	60	1024
Ore-concentrator	G. D. Huseman	479,279	July 19	1868	468	60	391
Ore-concentrator	C. E. Seymour	482,322	Sept. 6	670	{160 161	60	1467
Ore-concentrator	P. R. Stanhope and F. Wood	480,860	Aug. 16	1770	443	60	950
Ore-concentrators. Magnetic separator for	C. B. Walker	480,301	Aug. 9	892	226	60	764
Ore-crusher	C. E. Seymour	482,323	Sept. 6	674	161	60	1468
Ore crusher and grinder	E. R. Galo	478,588	July 12	890	199	60	176
Ore-pulverizer	N. F. Acers	482,330	Sept. 13	689	165	60	1485
Ore. Reduction of iron	J. J. Stuart	478,209	July 5	217	54	60	45
Ore-separator	C. J. Eames	479,408	July 26	2095	.....	60	450
Ore-separator. Centrifugal	H. H. Taylor	482,853	Sept. 20	1519	377	60	1659
Ore-separator. Centrifugal	O. B. Peck	479,456	July 26	2184	{546 547	60	468
Ore-separator. Centrifugal	O. B. Peck	479,954	Aug. 2	280	69, 70	60	635
Ore washer and concentrator	O. B. Peck	479,955	Aug. 2	282	70, 71	60	636
Ore-washing-machine feeding device	A. L. Dana	481,550	Aug. 30	2925	{719 720	60	1199
Ores containing hydrated sesquioxide of iron. Treating	C. A. E. Meinicke	482,582	Sept. 13	1106	268	60	1565
Ores of zinc and lead. Treating sulphide	C. Jones	480,405	Aug. 9	1056	.....	60	394
Ores. Reducing unsmelted	G. T. Lewis and C. V. Petraeus	481,499	Aug. 23	2841	.....	60	1166
Ores. Treating sulphide	J. T. Wainwright	482,213	Sept. 6	478	115	60	1420
Organ-key coupler	G. T. Lewis and C. V. Petraeus	481,500	Aug. 23	2842	.....	60	1166
Organ. Pipe	J. Lloyd, Jr	479,434	July 26	2141	535	60	459
Organ. Reed	R. W. Jackson	480,949	Aug. 16	1906	{477 478	60	977
Organ stop-action. Combination	J. H. Lane	479,565	July 26	2361	589	60	501
Organ-tremolo	J. Woodberry	481,089	Aug. 16	2138	{532 533	60	1021
Organs. Swinging treadle for	I. Bassett	478,552	July 12	762	186	60	166
Oscillating engine	W. E. Sleight	481,976	Sept. 6	83	21	60	1351
Overseam	J. Moss	479,012	July 19	1458	{302 363	60	313
Oysters. Apparatus for making fried	W. Raenchle	480,783	Aug. 16	1635	414	60	927
Ozone-generating apparatus	F. F. Warthen	481,337	Aug. 23	2585	635	60	1116
Package-carrier	C. C. Sharp	481,676	Aug. 30	3120	762	60	1235
Package for pulverized substances	F. H. Palmer	480,618	Aug. 9	1397	348	60	861
Package-wrapper	J. Bina	481,521	Aug. 23	2870	705	60	1172
Packing	W. J. Acheson	483,198	Sept. 27	2076	524	60	1782
Packing-case	T. W. Welsh	480,643	Aug. 9	1430	358	60	869
Packing. Corrugated	G. W. Banker	482,715	Sept. 20	1315	321	60	1617
Packing for piston or other rods	R. H. Thompson	479,999	Aug. 2	371	92	60	451
Packing-jar	F. Pinch	483,013	Sept. 20	1790	451	60	1712
Packing. Metallic	J. W. Meyer	483,258	Sept. 27	2202	553	60	1804
Packing. Metallic rod	W. H. Bodfish	480,943	Aug. 16	1892	474	60	974
Packing. Rod	J. C. Chapman	481,662	Aug. 30	3101	756	60	1232
Packing. Rod	R. Carlin	478,919	July 12	1304	325	60	273
Pad:	C. L. Cook	481,105	Aug. 16	2170	537	60	1026
See Blowpipe-pad. Collar-pad. Dental moistening-pad. Dress-pad. Harness-pad. Horseshoe-pad.							
Paddle-wheel boat	J. S. Baker	482,115	Sept. 6	313	74	60	1396
Paddle-wheel. Feathering	C. H. McCready	482,455	Sept. 13	901	218	60	1523
Paddle-wheel. Feathering	G. T. Riguel	479,528	July 26	2307	{576 577	60	491
Paddle-wheel for steamers	J. Howard	481,668	Aug. 30	3109	759	60	1233
Paddle-wheel. Recessed	J. S. Baker	480,225	Aug. 2	754	190	60	725
Padlock	V. P. Brown	482,070	Sept. 6	239	58	60	1342
Padlock	E. T. Fraim	478,850	July 12	1207	300	60	255
Padlock	E. T. Fraim	479,414	July 26	2107	527	60	452
Padlock	E. A. Judd	483,383	Sept. 27	2388	600	60	1819
Padlock. Combination	N. J. Zell	481,458	Aug. 23	2773	683	60	1152
Pail, pan, wash-boiler, &c	H. H. Daniels	481,551	Aug. 30	2926	720	60	1199
Pail. Sanitary	T. D. Brown	480,555	Aug. 9	1290	323	60	840
Paint	C. Baron	483,026	Sept. 20	1821	463	60	1719
Paint	S. P. Citizen	479,785	Aug. 2	19	.....	60	586
Paint and varnish cup	J. H. Palmer. (Reissue)	11,255	July 26	2724	.....	60	570
Paint. Fireproof	S. R. Wilmot	478,831	July 12	1136	294	60	250
Paint. Fireproof	W. Church	478,785	July 12	1111	.....	60	235
Paint-pot	R. W. Lamprey	483,307	Sept. 27	2272	.....	60	1817
Painting barbed-wire fences. Machine for	W. B. Deming and H. C. Fuller	482,062	Sept. 6	202	63	60	1367
Painting with distemper and other colors	J. R. Smith	483,503	Sept. 27	2543	639	60	1871
Pan:	A. Pereira	481,282	Aug. 23	2493	.....	60	1101
See Baking-pan. Bed-pan. Bread-pan. Frying-pan. Vacuum-pan.							
Pantograph tracing and engraving machine	J. Bryce and A. Knox	481,893	Aug. 30	3487	{854 855	60	1307

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Paper and composition for coating the same. Transfer	W. Schwartz	478,892	July 12	1261	.....	60	265
Paper. Apparatus for severing sheets from webs of	J. L. Cox	478,409	July 5	540	132	60	106
Paper-bag holder	H. F. Elton and J. W. Cadwell	482,056	Sept. 6	218	52	60	1378
Paper-bag machine	A. C. Getten	481,650	Aug. 30	3081	752	60	1228
Paper-bag machine	A. C. Getten	482,170	Sept. 6	413	98	60	1416
Paper-board tubs. Manufacture of	W. W. McEwan	481,239	Aug. 23	2404	593	60	1085
Paper box	W. B. Howe	482,482	Sept. 13	1026	262	60	1536

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Pencil-sharpener	W. G. Price	479,303	July 19	1901	476	60	398
Pencil-sharpener and holder. Combined	J. W. Battelle	480,547	Aug. 9	1278	321	60	838
Pencil-sharpener for school-slates	W. D. Black	481,097	Aug. 16	2158	535	60	1024
Pencil-sharpener. Slate	W. Shriver	478,374	July 5	492	119	60	87
Perforating-machine	C. G. Hoffmann	482,124	Sept. 6	362	87	60	1396
Perforating-machine	C. G. Hoffmann	482,125	Sept. 6	363	87	60	1396
Perforating-machine	C. G. Hoffmann	482,126	Sept. 6	364	87	60	1396
Perforating-machine	C. G. Hoffmann

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Paper and composition for coating the same. Transfer-	W. Schwartz	478,892	July 12	1261	.....	60	265
Paper. Apparatus for severing sheets from webs of	J. L. Cox	478,409	July 5	540	132	60	106
Paper-bag holder	H. F. Elton and J. W. Cadwell	482,056	Sept. 6	218	52	60	1378
Paper-bag machine	A. C. Getten	481,650	Aug. 30	3081	752	60	1228
Paper-bag machine	A. C. Getten	482,170	Sept. 6	413	98	60	1416
Paper-board tube. Manufacture of	W. W. McEwan	481,239	Aug. 23	2404	593	60	1085
Paper box	W. B. Howe	482,480	Sept. 13	936	228	60	1530
Paper box	T. F. W. Schmidt	483,502	Sept. 27	2542	639	60	1870
Paper cabinet. Toilet-	J. T. Hoyt	478,863	July 12	1222	303	60	257
Paper-cutter	A. L. Karshner	478,935	July 12	1327	329 330	60	278
Paper cutting and trimming machine	J. J. Manning	480,111	Aug. 2	555	140	60	688
Paper-cutting machine	R. D. Crawford	482,228	Sept. 6	499	119	60	1433
Paper-cutting machine	B. J. Pavyer and T. Burns	479,302	July 19	1900	475	60	397
Paper drying and cutting apparatus	G. T. Leonhard	478,975	July 12	1395	344 345	60	290
Paper feeding and cutting mechanism	R. T. Johnston	481,497	Aug. 23	2838	698	60	1166
Paper-feeding apparatus	J. W. Hutt and A. J. Phillips	478,329	July 5	418	101 102	60	84
Paper-feeding machine	T. A. Briggs	480,447	Aug. 9	1125	280 281 282 283	60	806
Paper-feeding machine	W. Womersley	481,992	Sept. 6	106	26, 27	60	1355
Paper-hanger	G. Carr	479,971	Aug. 2	312	76	60	641
Paper-hanging machine	L. D. Barton	481,251	Aug. 23	2440	601	60	1091
Paper-holder	L. Elias	481,167	Aug. 23	2290	564	60	1062
Paper holder and cutter. Roll-	E. R. Granger	482,039	Sept. 6	189	45	60	1372
Paper holder. Toilet-	M. A. Brown	481,612	Aug. 30	3026	740	60	1217
Paper holder. Toilet-	J. M. Keep	481,034	Aug. 16	2036	508	60	1002
Paper-jogger	R. A. Hart	480,768	Aug. 16	1633	409	60	922
Paper-machine drier	T. Lindsay	480,407	Aug. 9	1058	265	60	794
Paper-machine suction mechanism	J. Reynolds	483,329	Sept. 27	2306	580	60	1824
Paper-machine suction-roll	E. B. Benham	483,340	Sept. 27	2318	583	60	1826
Paper-making machine	E. E. Johnson	480,770	Aug. 16	1637	410	60	923
Paper. Means for preventing spots in	R. W. Allan	480,446	Aug. 9	1123	280	60	806
Paper. Mechanism for delivering and cutting roll-	D. L. Goff	478,231	July 5	263	65	60	54
Paper-mill suction apparatus	E. Sanderson and F. C. Base	478,290	July 5	362	88	60	73
Paper-polishing machine	H. E. Rogers	478,762	July 12	1067	265	60	228
Paper-pulp. Apparatus for manufacturing	J. B. Carter	479,943	July 19	1819	456	60	381
Paper-roll holder and cutter. Knockdown	A. S. Beach and A. Booth	481,839	Aug. 30	3404	836	60	1290
Paper. Safety-	A. Schlumberger	481,770	Aug. 30	3393	801	60	1270
Paper-slitting machine	L. P. Clawson and J. A. Keller	479,349	July 19	1984	497	60	415
Paper. Toilet-	E. Jerome	478,869	July 12	1298	365	60	258
Paper-tube sizing and polishing machine	A. C. Hobbs and C. R. Richards	480,017	Aug. 2	407	101 102 103 104	60	659
Paper tubes. Composition coating for	S. Bergmann	482,718	Sept. 20	1318	322	60	1618
Paper-wrapping machine	J. F. Linthicum	478,345	July 5	442	109 110	60	88
Parallel bars	T. Peterson	481,509	Aug. 23	2852	701	60	1168
Parer and corer	P. T. Gates	481,528	Aug. 23	2887	709	60	1176
Partition or ceiling. Fireproof	C. F. W. Doehring	478,318	July 5	405	97	60	81
Pasting-machine. Bindery	J. L. Dennis	481,258	Aug. 23	2449	603	60	1093
Pastry-rack. Portable	C. F. Jesser	481,404	Aug. 23	2686	660	60	1135
Pavement	R. D. Duff	480,183	Aug. 2	678	171	60	710
Pavement. Brick	E. Hill	479,002	July 19	1442	358	60	310
Peanut-heater	J. R. Haldeman	481,756	Aug. 30	3267	795	60	1264
Pegging-jack	E. Taunay	478,721	July 12	993	246	60	214
Pegging-jack support	D. Whitlock	483,191	Sept. 27	2067	522	60	1780
Pegging machine. Wire-	W. M. Sawyer	481,374	Aug. 23	2631	647	60	1125
Pelts. Machine for removing water-hairs from	T. Barrett	478,732	July 12	1021	250 251	60	218
Pen. Drawing-	J. Derbohlow	483,142	Sept. 27	1979	501	60	1762
Pen. Drawing-	F. A. Alteneder	480,541	Aug. 9	1269	318	60	836
Pen-extractor	O. F. Grant	479,270	July 19	1855	465	60	388
Pen. Fountain-	W. F. Stanley	479,959	Aug. 2	290	72	60	637
Pen. Fountain-	D. T. Perkins	478,635	July 12	873	215	60	189
Pen. Fountain-	A. H. Robinson	478,941	July 12	1338	332	60	280
Pen. Fountain-	L. A. Shattuck	482,502	Sept. 13	1122	271	60	1368
Pen. Fountain-	W. W. Stewart	478,653	July 12	898	222 223	60	193
Pen. Fountain-	W. W. Stewart	480,294	Aug. 9	882	224	60	762
Pen. Fountain-	W. W. Stewart	480,751	Aug. 16	1604	402	60	917
Pen. Fountain-	L. B. Woolfolk	480,800	Aug. 16	1677	419 420	60	931
Pen. Fountain-	L. B. Woolfolk	481,090	Aug. 16	2142	533	60	1021
Penholder	W. B. Blalock and J. A. Muir	481,158	Aug. 23	2277	561	60	1059
Penholder	G. McElwain	479,522	July 26	2300	574	60	489
Penholder	G. McElwain	482,925	Sept. 20	1641	413	60	1681
Penholders and lead-pencils. Hand-support for	W. G. Croom	478,787	July 12	1113	275	60	236
Pen or pencil holder and making the same	H. T. Smith	481,534	Aug. 23	2901	712	60	1179
Pen. Writing-	F. C. Colburn	482,298	Sept. 6	620	148	60	1456
Pencil	C. W. Boman	481,100	Aug. 16	2162	536	60	1024
Pencil	A. Fornander	480,188	Aug. 2	686	174	60	712
Pencil-case	J. B. Smith	480,479	Aug. 9	1180	296	60	818
Pencil-clasp	E. W. Mildrum	482,409	Sept. 13	822	197	60	1510
Pencil-holder	O. A. Elliott	478,537	July 5	739	180	60	146
Pencil or other article of fibrous material. Lead-	B. B. Goldsmith. (Reissue)	11,250	Aug. 16	2265	559	60	1043
Pencil-pointer	F. E. Flagg	481,018	Aug. 16	2016	504	60	997
Pencil-sharpener	C. Faber	482,826	Sept. 20	1478	367	60	1650
Pencil-sharpener	W. A. Phillips	479,658	July 26	2496	622	60	526

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Pencil-sharpener	W. G. Price	479,303	July 19	1901	476	60	398
Pencil sharpener and holder. Combined	J. W. Battelle	480,547	Aug. 9	1278	321	60	838
Pencil-sharpener for school-slates	W. D. Black	481,097	Aug. 16	2158	535	60	1024
Pencil sharpener. Slate-	W. Shriver	478,374	July 5	492	119	60	97
Perforating-machine	C. O. Morgan	479,294	July 19	1889	473	60	395
Permutation-lock	W. S. Chedister	478,567	July 12	780	191	60	170
Petroleum distillation. Separation of waste products of	J. P. Engle	481,392	Aug. 23	2664	653	60	1130
Petroleum or similar engine	G. W. Weatherhogg	480,535	Aug. 9	1260	316 317	60	834
Petroleum. Recovering waste products of	J. P. Englo	481,391	Aug. 23	2663	653	60	1130
Phonograph	V. Lahola	479,431	July 26	2136	534	60	459
Phonograph coin-controlled device	J. F. Ott	478,709	July 12	972	242	60	209
Phosphate rock. Apparatus for treating	S. Hughes and W. B. Chisolm	483,452	Sept. 27	2475	622	60	1857
Phosphate-rock drier	W. B. Chisolm	479,872	Aug. 2	148	36	60	611
Phosphate-separator and screen-washer	G. R. Boaz	480,549	Aug. 9	1280	321 322	60	838
Photographic-background holder	A. C. Caswell	482,002	Sept. 6	126	31	60	1359
Photographic camera	H. A. Benedict	478,837	July 12	1193	296 297	60	251
Photographic camera	W. H. Bristol	478,780	July 12	1097	272	60	233
Photographic films. Manufacture of	H. M. Reichenbach	479,305	July 19	1904	.....	60	398
Photographic lenses. Diaphragm for	E. R. Bullard	483,135	Sept. 27	1971	499	60	1760
Photographic plate carrier	C. H. Lohman	478,235	July 5	274	68	60	55
Photographic plate-holder	J. H. Hare	479,186	July 19	1733	434	60	364
Photographic printing machine	J. Urie, Jr.	478,663	July 12	910	226	60	196
Photographic shutter	J. E. Thornton	482,854	Sept. 20	1521	378	60	1659
Photographs, pictures, and analogous articles. Support for	A. Hunter	482,978	Sept. 20	1725	436	60	1696
Piano-action	E. C. Baughan	479,047	July 19	1510	376	60	323
Piano-action	W. L. Hawes	480,014	Aug. 2	393	98	60	657
Piano-action pilot	J. Herrburger	482,008	Sept. 6	137	33	60	1362
Piano-action rail	J. W. Reed	480,829	Aug. 16	1728	432	60	941
Piano-action. Transposing	C. G. George	478,323	July 5	411	99	60	82
Piano action. Upright	A. Hicks	482,740	Sept. 20	1356	336	60	1625
Piano attachment	H. A. Hauff	482,737	Sept. 20	1354	335	60	1625
Piano expression-regulator	J. Y. Druckenmiller	482,168	Sept. 6	410	98	60	1415
Pianoforte damper-action	J. P. Richardson and G. F. Dyer	481,121	Aug. 16	2194	541	60	1030
Pianoforte sounding-board	C. Brambach	480,488	Aug. 9	1101	299	60	820
Pianofortes. Stringing	D. L. Bollermann	478,912	July 12	1293	322	60	271
Piano or organ attachment	J. M. Stukes	480,296	Aug. 9	886	224 225	60	763
Piano pedal-foot	A. H. Hastings	480,606	Aug. 9	1519	378	60	884
Piano-string	T. Gill	478,746	July 12	1041	256	60	222
Pianos. Stringing	C. S. Weber	482,512	Sept. 13	991	240	60	1543
Picker-stem and mechanism for operating the same	G. N. Todd	483,121	Sept. 20	1945	492	60	1745
Picket-wiring machine	J. R. Shaffer	479,311	July 19	1915	478	60	400
Pickle-lifter	J. A., Jr., and J. W. Currie	481,691	Aug. 30	3146	767	60	1240
Picture-frame	J. Mauerhofer	480,953	Aug. 16	1919	480	60	978
Picture-frame	P. Wiener	481,217	Aug. 23	2370	583	60	1079
Picture-frame fastener	C. F. Naegele	481,117	Aug. 16	2186	541	60	1029
Picture-hanger	E. A. Snow	480,632	Aug. 9	1418	353	60	865
Picture-holder	A. D. Stewart	478,478	July 5	638	156	60	127
Picture, mirror, and the like and forming the same. Framed	J. Jacobson	479,004	July 19	1444	358	60	310
Picture-stretcher. Folding	E. R. Butler	483,280	Sept. 27	2233	561	60	1810
Pile driver. Reciprocating electric	C. J. Van Depoele	479,965	Aug. 2	303	74, 75	60	640
Pile fabrics. Apparatus for cutting	J. J. Mann	478,515	July 5	696	169	60	138
Pile fabrics. Pegging-machine for	H. Heywood and J. Holland	479,274	July 19	1860	466	60	390
Pillow-sham holder	A. J. Robberson	481,424	Aug. 23	2721	669	60	1142
Pin: *See* Clothes-pin. Safety-pin. Pin. Spiral hair or other	J. T. Larkin	482,257	Sept. 6	549	130	60	1441
Pin-sticking machine	E. A. Burgess	481,746	Aug. 30	3250	791	60	1261
Pins, studs, &c. Safety-guard for scarf-	W. E. Trott	479,578	July 26	2378	593	60	504
Pinch-bar	A. M. Collett	480,398	Aug. 9	1047	263	60	792
Pinchers. Lasting-	G. W. Morrill	480,433	Aug. 9	1104	276	60	802
Pineapples. Machine for treating	G. W. Zastrow	482,493	Sept. 13	965	234	60	1537
Pipe: *See* Stovepipe. Wooden pipe. Tobacco-pipe.							
Pipe and nut wrench	M. J. Wilson	483,336	Sept. 27	2314	582	60	1825
Pipe-coupling	D. A. Barnes	481,250	Aug. 23	2438	601	60	1091
Pipe-coupling	R. Herman	482,922	Sept. 20	1638	412	60	1681
Pipe-coupling	G. W. Seebach	480,374	Aug. 9	1007	253	60	785
Pipe coupling. Flexible	J. Suydam	479,856	Aug. 2	122	30	60	606
Pipe-coupling. Flexible-steam	J. E. Marble	480,875	Aug. 16	1792	448	60	954
Pipe-coupling. Valved	E. Bartholomew	481,130	Aug. 16	2208	546	60	1033
Pipe-flanging machine	R. K. Welch	478,670	July 12	921	229	60	198
Pipe for the conveyance of liquids or gases	E. Walker and J. Shaw	483,274	Sept. 27	2225	559	60	1808
Pipe-holder	C. H. Alapaw	479,384	July 19	2051	512	60	427
Pipe-threading machine	A. W. Cash	482,296	Sept. 6	617	147	60	1455
Pipe-threading machine	D. O. James	480,871	Aug. 16	1785	447	60	953
Pipe-wrench	A. Bareis	478,948	July 12	1344	333	60	281
Pipe-wrench	W. H. Dechant	481,257	Aug. 23	2448	603	60	1093
Pipe-wrench	D. R. Porter	482,527	Sept. 13	1025	247	60	1549
Pipe-wrench. Chain	W. J. Walker	482,109	Sept. 6	305	72	60	1395
Pipes. Protecting-thimble for steam or heating	J. F. Sauerman	480,140	Aug. 2	609	155	60	698
Pipes. Service-box for water or gas	S. Vanstone	481,126	Aug. 16	2199	544	60	1031
Pipes. Tapering-tool for lead	J. M. Hurley	479,909	Aug. 2	198	49	60	621
Pipes. Tool for cutting off	M. Fritsche	481,169	Aug. 23	2291	565	60	1062
Piperazin. Making	J. F. Mason	479,892	Aug. 2	170	44	60	617
Piston meter	P. Volkmann	482,108	Sept. 6	304	.....	60	1395
	T. Blein and E. Beraud	483,278	Sept. 27	2231	560	60	1810

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Piston meter	J. A. Myers	480,606	Aug. 9	1370	340, 341	60	856
Pitcher. Ice-	R. Arnold	481,544	Aug. 30	2918	718	60	1197
Pitman	P. Y. Barber	480,545	Aug. 9	1270	320	60	837
Placer-machine	W. M. Jewell	479,744	July 26	2658	659	60	555
Planing-machine	A. B. Hutchinson	482,481	Sept. 13	938	228	60	1531
Planing-machine	L. T. Pyott	481,371	Aug. 23	2025	646	60	1124
Plank. Walk and bridge	A. Zagelmeyer	482,536	Sept. 13	1039	251	60	1552
Planograph. Self-recording	J. Soler	481,432	Aug. 23	2734	672, 673	60	1145
Planter	L. E. Waterman	480,304	Aug. 9	807	227, 228	60	765
Planter and fertilizer-distributer	A. Bush	482,783	Sept. 20	1426	353, 354	60	1639
Planter. Check-row	S. B. Sare	482,437	Sept. 13	870	208	60	1518
Planter. Corn-	F. Bayless	478,408	July 5	665	163	60	132
Planter. Corn-	O. P. Cranmer	483,376	Sept. 27	2371	594	60	1836
Planter. Corn-	H. H. Dougherty	481,852	Aug. 30	3424	840	60	1294
Planter. Corn-	L. P. Graham	479,067	July 19	1538	384, 385	60	398
Planter. Corn-	P. P. Hayes	483,217	Sept. 27	2106	534	60	1787
Planter. Corn and seed	A. Griesemer	481,170	Aug. 23	2292	565	60	1062
Planter. Cotton	P. P. Simpson	482,277	Sept. 6	581	138	60	1448
Planter. Cotton and corn	J. W. Lehr	478,441	July 5	584	142	60	115
Planter marking attachment	C. W. Chafee	482,075	Sept. 6	250	60, 61	60	1385
Planter. Potato-	S. C. Schofield	481,642	Aug. 30	3067	749	60	1295
Planter. Potato-	E. Skorpil	478,137	July 5	88	23	60	90
Planter. Potato-	C. Wright	481,456	Aug. 23	2771	682, 683	60	1159
Planter. Seed-	J. C. Haas	480,091	Aug. 2	528	134	60	683
Planter. Seed-	E. R. Knight	483,066	Sept. 20	1861	472	60	1728
Planter. Tobacco-	E. A. Rollman	478,980	July 5	361	87	60	73
Planting attachment. Corn-	W. P. Goins	479,260	July 19	1851	465	60	388
Plaster	C. Casateel	478,951	July 12	1348	.....	60	292
Plastering. Composition of matter for	E. W. Dickie	479,060	July 19	1529	.....	60	327
Plastic composition	B. G. de Vassom	479,967	Aug. 2	309	.....	60	641
Plastic material. Toilet and other articles of	J. R. France	478,851	July 12	1209	300	60	255
Plate or pan lifter	C. L. Waldron	481,986	Sept. 6	98	25	60	1354
Plate-straightening machine	H. C. Jones	479,745	July 26	2660	660	60	556
Platform: *See* Hoisting-platform.							
Platform	J. Matthews	483,233	Sept. 27	2132	530	60	1792
Pliers and calipers. Balance-wheel	J. E. Eckert	481,936	Sept. 6	26	6	60	1339
Pliers and cutter. Combined	W. A. Bernard	479,113	July 19	1618	404	60	343
Plotter	L. P. Watson	479,198	July 19	1748	438	60	367
Plow	B. F. Cadenhead and M. E. Butt	478,273	July 5	340	82	60	68
Plow	G. N. Dexter, Jr	479,706	July 26	2586	644	60	512
Plow	O. T. Jensen	481,630	Aug. 30	3051	745	60	1222
Plow	F. F. Landis	482,847	Sept. 20	1500	375	60	1657
Plow	J. F. B. Lorentzen	481,633	Aug. 30	3057	746	60	1223
Plow	C. A. Pfeifer	482,751	Sept. 20	1372	340	60	1638
Plow	S. Remaly	483,311	Sept. 27	2279	573	60	1818
Plow	K. N. Sharp	479,992	Aug. 2	362	89, 90	60	650
Plow	G. W. Swinson	480,637	Aug. 9	1425	355	60	866
Plow	T. Tinkler	479,036	July 19	1495	372	60	320
Plow	C. H. Vanderburg	482,884	Sept. 20	1583	398	60	1670
Plow	E. L. Ward	481,708	Aug. 30	3172	775	60	1246
Plow	F. Wiard	479,927	Aug. 2	235	59	60	628
Plow and harrow. Combined sulky	M. A. McClellan	478,627	July 12	864	213	60	187
Plow attachment	C. H. Warrington	482,602	Sept. 13	1135	274	60	1571
Plow attachment	G. Watson	481,215	Aug. 23	2362	582	60	1076
Plow. Combination-	H. M. McCafferty	478,824	July 12	1250	309	60	262
Plow. Ditching-	B. H. Rinehart	483,476	Sept. 27	2501	630	60	1862
Plow. Double-mold-board	C. E. Parks	482,380	Sept. 13	782	188	60	1502
Plow-fender	G. N. Spencer	482,595	Sept. 13	1128	272	60	1569
Plow. Gang-	R. L. Penn	478,634	July 12	872	215	60	188
Plow. Listing-	B. Blankenship	479,779	Aug. 2	10	3	60	584
Plow. Listing-	C. N. Leatherwood	479,987	Aug. 2	356	88	60	649
Plow planter attachment	J. P. Nugent	481,242	Aug. 23	2408	594, 595	60	1086
Plow-point. Reversible	C. J. Abbott	478,730	July 12	1020	249	60	218
Plow-point. Reversible	T. M. Bissell and J. B. Huber	479,696	July 26	2564	638	60	538
Plow. Rotary	M. T. Hancock. (Reissue)	11,257	Aug. 9	1530	380, 381	60	886
Plow standard and attachment	W. T. Stapler	482,510	Sept. 13	989	239	60	1542
Plow. Sulky-	L. S. Flatau	482,943	Sept. 20	1667	419	60	1687
Plow. Sulky-	M. Glynn	482,734	Sept. 20	1342	332	60	1623
Plow. Sulky-	J. Wolpert	483,480	Sept. 27	2506	631	60	1863
Plow. Wheel-	E. Stock	482,816	Sept. 20	1464	364	60	1647
Plows. Foot-latch for reversible	O. H. Eddy	480,077	Aug. 2	500	129	60	679
Plowing machine. Land-	G. M. Clark	478,311	July 5	392	94, 95	60	79
Plowing machine. Land-	G. M. Clark	478,500	July 5	669	163, 164	60	133
Plug spring-jack	C. A. Shea	481,204	Aug. 23	2342	577	60	1072
Pneumatic or other dispatch systems. Automatic receiver for	A. Bryson, Jr	480,805	Aug. 16	1690	422	60	933
Pneumatic tool	D. Drawbaugh	482,942	Sept. 20	1664	419	60	1687
Pocket-book or purse	E. Schnopp	480,143	Aug. 2	613	156	60	690
Pocket-knife	W. O'Hara	478,812	July 12	1152	285	60	244
Pocket-register	J. B. Reed	478,363	July 5	474	115	60	94
Poison-receptacle	A. L. De Shon	478,691	July 12	951	236	60	205
Poke. Animal-	A. Bolding	483,508	Sept. 27	2552	640	60	1872
Poke. Animal-	C. V. Whallon	483,190	Sept. 27	2066	522	60	1779
Pole. Coupling-	A. Drew	482,678	Sept. 13	1244	303	60	1591

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Pole tip. Vehicle-	T. J. Houghton	481,701	Aug. 30	3327	819	60	1276
Pole. Vehicle-	J. P. Johnson	481,619	Aug. 30	3036	749	60	1219
Pole. Vehicle-	W. L. Pike	480,510	Aug. 9	1222	306	60	827
Pole. Vehicle-	W. L. Pike	480,511	Aug. 9	1223	306	60	827
Poles. Detachable step for	V. A. Thomas	480,977	Aug. 16	1902	491	60	987
Polishing-wheel	J. McClellan	481,415	Aug. 23	2706	665	60	1130
Pool rack and spotter	C. H. Fuchs	479,213	July 19	1770	444	60	371
Portable tubular boiler	G. Selden	479,901	Aug. 2	360	89	60	649
Portfolio or pocket-case	C. Galle	480,067	Aug. 2	523	133	60	682
Post: *See* Fence-post.							
Post-hole digger	W. Z. Brown	481,688	Aug. 30	3140	766	60	1239
Post-top	M. E. Loughlin	479,123	July 19	1432	408	60	345
Pot: *See* Coffee-pot. Paint-pot. Floating pot.							
Potassium chlorate. Electrolytically producing	E. B. Cutten	480,492	Aug. 9	1196	300	60	821

Pressure-indicator. Electrical	J. W. Howell	480,947	Aug. 16	1903	476	60	976
Pressure-regulating device	C. F. A. Convert	481,272	Aug. 23	2468	608	60	1097
Pressure-regulator	G. Harris	482,842	Sept. 20	1504	374	60	1656
Pressure regulator. Fluid-	V. H. Higgins and W. D. Smith	483,516	Sept. 27	2575	646	60	1876
Pressure regulator. Fluid-	W. B. Mason	481,579	Aug. 30	2972	730	60	1208
Printer's galley	E. Webb	479,234	July 19	1801	451	60	377
Printer's press-guide	N. G. Duffy	483,481	Sept. 27	2507	631	60	1863
Printer's quoin	J. A. Boehringer and F. X. Müller	478,679	July 12	937	233	60	201
Printers' rollers. Inclosure for packing and carrying	W. J. Tinsley	483,185	Sept. 27	2059	590	60	1778
Printer's rule-bender	H. M. Bingham and G. Runge	481,465	Aug. 23	2791	686	60	1156
Printing	E. Buck	478,085	July 5	17	6	60	6
Printing and adding machine. Check	W. F. Heald	479,508	July 26	2284	571	60	486
Printing apparatus	C. W. Weiss	481,709	Aug. 30	3173	775, 776	60	1246
Printing-block	J. W. Hutt and A. J. Phillips	480,467	Aug. 9	1161	291, 292	60	814
Printing device. Column-	S. H. Horgan	478,750	July 12	1045	257	60	223
Printing-machine	W. W. Rosenfield	478,524	July 5	710	172	60	141
Printing-machine	T. Gibson	482,733	Sept. 20	1337	329, 330, 331, 332	60	1622
Printing-machine	W. Scott	480,042	Aug. 2	455	116	60	669
Printing-machine	W. Scott	480,970	Aug. 16	1949	487, 488	60	984
Printing-machine beds. Mechanism for operating	S. Whitlock	479,382	July 19	2043	510	60	496
Printing machine. Music-	L. Durdilly	482,728	Sept. 20	1329	325	60	1621
Printing machine. Plate-	H. Lee	479,516	July 26	2293	573	60	488
Printing-machine sheet-delivery apparatus	F. Meisel	478,347	July 5	459	111	60	90
Printing-machines. Bed-motion for cylinder	L. C. Crowell	478,091	July 5	25	8, 9	60	8
Printing-machines. Bed-motion for cylinder	L. C. Crowell	478,573	July 12	789	194, 195	60	172
Printing-machines. Bed-motion for cylinder	L. C. Crowell	480,321	Aug. 9	925	234, 235	60	770
Printing-machines. Bed-motion for cylinder	L. C. Crowell	480,454	Aug. 9	1143	286, 287	60	810
Printing-machines. Bed-motion for cylinder	L. C. Crowell. (Reissue)	11,272	Sept. 27	2581	648, 649	60	1877
Printing-machines. Bed-motion for cylinder	L. C. Crowell. (Reissue)	11,273	Sept. 27	2585	646, 647	60	1878
Printing-machines. Registering mechanism for double-cylinder flat-bed	S. D. Tucker	479,860	Aug. 2	125	31	60	607
Printing oil-cloth. Machine for	G. E. Eisenhardt	478,927	July 12	1317	327	60	276
Printing plate and block	S. H. Horgan	478,749	July 12	1044	256	60	223
Printing plate. Surface-	J. Mullaly and L. L. Bullock	483,498	Sept. 27	2532	637	60	1869
Printing-press	J. L. Cox	478,503	July 5	676	165, 166	60	134

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Printing-press	D. I. Eckerson	483,377	Sept. 27	2372	594, 595, 596	60	1836
Printing-press	J. Hackett	480,191	Aug. 2	689	174	60	712
Printing-press	E. Prouty	478,760	July 12	1061	262, 263, 264	60	226
Printing-press	W. Scott	482,204	Sept. 6	461	111	60	1425
Printing-press	A. W. Vaughn	479,579	July 26	2370	593	60	504
Printing-press addressing attachment	I. W. Newman	479,917	Aug. 2	208	53	60	623
Printing-press feed-machine attachment	T. A. Briggs	480,448	Aug. 9	1135	283	60	808
Printing-press folding attachment	R. C. Seymour	481,203	Aug. 23	2340	576, 577	60	1072
Printing-press inking attachment	T. G. Spence	479,674	July 26	2527	629, 630	60	532
Printing-press paper-straightener	A. Binkard	478,079	July 5	7	2	60	4
Printing-press stopping and reversing mechanism	W. S. Huson	482,359	Sept. 13	744	179	60	1495
Printing-presses. Attachment to roll-carrying spindles for web-	A. A. Houghtlin	480,499	Aug. 9	1207	302	60	823
Printing-presses. Combined paper-folding and sheet-delivering mechanism for	J. H. Stonemetz	479,768	July 26	2700	672	60	564
Printing rolls. Machine for shading the surfaces of calico-	G. Hancock	478,540	July 5	744	181	60	148
Printing wall-paper. Apparatus for	G. K. Birge	479,346	July 19	1983	496, 497	60	414
Projectile	J. E. Schlorff	480,142	Aug. 2	612	155	60	699
Projectile for small-arms. Compound	M. Tweedie	481,081	Aug. 16	2128	530	60	1019
Proof-press	N. G. Duffy	483,433	Sept. 27	2451	617	60	1852
Propeller	W. R. Bonham	482,225	Sept. 6	496	118	60	1432
Propeller	L. Gayon	480,945	Aug. 16	1899	475	60	975
Propeller. Screw-	J. MacHaffie	483,158	Sept. 27	2013	508, 509	60	1769
Propeller. Vessel-	D. Urch	482,122	Sept. 20	1946	492, 493	60	1745
Propeller-wheel	C. J. Lowe	479,008	July 19	1450	360	60	812
Propelling boats. Means for	A. M. Haswell	481,113	Aug. 16	2182	540	60	1028
Propelling mechanism for row-boats	G. Vogel	479,924	Aug. 2	231	58	60	627
Propelling power	J. B. Hall	478,962	July 12	1367	337	60	285
Proportional meter	W. D. Hawley and S. J. Hogan	479,759	July 26	2680	665	60	560
Propulsion of vessels. Hydraulic	J. C. Walker	480,533	Aug. 9	1258	316	60	834
Prospecting-drill	A. Ball	478,077	July 5	3	1, 2	60	3
Protector: *See* Book-cover protector. Tree-protector. Trolley-protector. Edge-protector.							
Puller: *See* Nail-puller. Sprout-puller.							
Pulley	O. C. Little	483,227	Sept. 27	2122	537	60	1790
Pulley	E. A. Long	479,221	July 19	1782	447	60	373
Pulley. Grip-	A. S. Hallidie	483,442	Sept. 27	2462	619, 620	60	1854
Pulley. Hay-elevator	W. Louden	481,203	Aug. 23	2456	605	60	1094
Pulley. Loose or idle	T. W. Simcox	478,292	July 5	365	89	60	73
Pulley. Sash-	F. V. Phillips	481,510	Aug. 23	2353	701	60	1168
Pulley. Split	D. G. Reitz	481,871	Aug. 30	3451	846, 847	60	1300
Pulp-engine	G. Miller	482,184	Sept. 6	434	103, 104	60	1420
Pulp-grinding machines. Feed for	A. W. Lefebvre	483,458	Sept. 27	2480	624	60	1858
Pulp machines. Hydraulic feed for wood-	J. T. Horton	481,174	Aug. 23	2298	566	60	1064
Pulp. Press for forming hollow articles from	E. Hubbard	480,466	Aug. 9	1160	291	60	813
Pulp-reducing machines. Rubbing-surface for	J. B. Carter	482,619	Sept. 13	1162	281	60	1575
Pulp. Strainer for chemical wood	C. Wandel	478,179	July 5	171	44, 45	60	36
Pulp-strainer. Rotary	T. Volstorf	483,030	Sept. 20	1814	460, 461	60	1717
Pulverizer	G. H. Smith	481,532	Aug. 23	2899	712	60	1178
Pulverizing-machine	U. Cummings	478,253	July 5	309	75	60	62
Pump	O. Brünler	480,707	Aug. 16	1546	385	60	903
Pump	D. B. Cahow	480,169	Aug. 2	656	167	60	707
Pump	M. M. Grove	481,022	Aug. 16	2022	505	60	998
Pump	M. W. Hall	482,921	Sept. 20	1636	411, 412	60	1680
Pump	E. D. Middlekauff	481,043	Aug. 16	2058	513	60	1006
Pump	W. Peterson	482,588	Sept. 13	1115	269	60	1567
Pump	R. H. Raprager	478,464	July 5	619	150	60	122
Pump	A. Siebert	482,416	Sept. 13	834	200	60	1512
Pump	J. C. Tom	483,406	Sept. 27	2416	607	60	1845
Pump	A. N. Woodard	483,034	Sept. 20	1819	402	60	1718
Pump and mixer. Combined	A. M. Phillips	479,378	July 19	2037	508	60	424
Pump. Centrifugal	B. F. Bee	478,307	July 5	387	93	60	78
Pump. Chain-	D. K. Keller	478,112	July 5	51	14	60	12
Pump. Double-acting	G. J. Neth	482,692	Sept. 13	1270	311	60	1596
Pump. Dredging-	J. D. McRae	479,765	July 26	2695	670, 671	60	563
Pump for condensers. Air-	B. V. Nordberg	482,315	Sept. 6	656	157	60	1464
Pump for refrigerating apparatus	M. Grimm	479,877	Aug. 2	157	39	60	612
Pump. Force-	M. W. Hall	482,944	Sept. 20	1660	419, 420, 421	60	1688
Pump. Hydraulic mining-	W. A. Rockliff and J. P. Foley	482,810	Sept. 20	1456	361	60	1646
Pump. Measuring-	S. F. and A. Bowser	480,550	Aug. 9	1281	322	60	838
Pump. Measuring-	S. F. and A. Bowser	480,551	Aug. 9	1283	322	60	839
Pump. Measuring-	S. F. and A. Bowser	480,552	Aug. 9	1285	322	60	839
Pump-motor	J. H. Miller and J. H. Oswalt	482,800	Sept. 20	1447	359	60	1644

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Pump. Oil-well	G. Allen	480,701	Aug. 16	1537	383	60	901
Pump or compressor. Air	R. F. Avery	482,776	Sept. 20	1416	350	60	1637
Pump or compressor. Fluid	J. J. Duffy	480,811	Aug. 16	1699	423, 424	60	935
Pump-piston and valve	J. R. Collins	478,089	July 5	22	7	60	7
Pump. Portable garden or spraying	G. D. Hamblin	482,681	Sept. 13	1251	305	60	1593
Pump. Purifying-	G. W. and J. L. Horn	480,096	Aug. 2	533	135	60	684
Pump-rod. Elastic	W. C. Westaway	480,756	Aug. 16	1611	404	60	918
Pump. Rotary	J. Menge	480,473	Aug. 9	1169	294	60	815
Pump. Steam-	C. H. Booth	482,840	Sept. 20	1500	373	60	1655
Pump. Steam-actuated air-	E. Smedley	482,814	Sept. 20	1461	362, 363	60	1617
Pump. Steam vacuum-	D. P. Burdon	482,072	Sept. 6	244	59, 60	60	1363
Pump valve and case	J. Neumann	479,299	July 19	1297	475	60	397
Pumps by means of treadles. Device for operating	R. F. Avery	482,777	Sept. 20	1417	250	60	1637
Pumps. Locomotive attachment for supplying steam to	R. Zinsmayer	479,870	Aug. 2	146	35	60	610
Pumping-engine. Hydraulic	G. W. Dawson	478,314	July 5	397	96	60	80
Pumping mechanism. Oil-well	O. A. Knox	482,011	Sept. 6	142	34	60	1363
Punch and laying-out machine. Multiple-	C. E. Brown	480,557	Aug. 9	1292	323, 324	60	840
Punch. Perforating-	H. H. Norrington	481,583	Aug. 30	2979	731	60	1209
Punch. Ticket-	A. W. Coffin	480,560	Aug. 9	1295	324	60	841
Punching and shearing machine	F. N. Helfrich	482,356	Sept. 13	739	178	60	1495
Punching-machine	T. Barrow	483,095	Sept. 20	1908	482	60	1736
Punching-machine	J. Long	481,574	Aug. 30	2968	720	60	1207
Punching presses. Feeding device for card-	J. P. Odgers	482,981	Sept. 20	1731	437, 438	60	1700
Puzzle	P. W. Anderson	483,276	Sept. 27	2228	560	60	1809
Puzzle	A. Assorati and A. Cuyás	478,497	July 5	664	162	60	132
Puzzle	H. C. Guertin	479,418	July 26	2115	529	60	454
Puzzle	C. E. O. Hager	476,998	July 19	1438	356	60	309
Puzzle	J. W. Hale	481,561	Aug. 30	2947	724	60	1203
Puzzle	M. W. Marsden	478,799	July 12	1135	279	60	240
Puzzle	A. C. Proctor	481,589	Aug. 30	2987	733	60	1210
Puzzle	L. F. Stutz	479,475	July 26	2228	559	60	476
Puzzle	W. T. Walker	478,668	July 12	918	228	60	197
Puzzle. Wire	C. Wolf	480,983	Aug. 16	1970	493	60	988
Pyrotechnic suit	C. E. Whitworth	479,145	July 19	1666	416	60	352
Pyroxyline. Manufacture of compounds of	H. J. Pain	479,899	Aug. 2	188	46	60	619
Quartz-crusher	J. H. Stevens	478,543	July 5	746	.....	60	149
Quilling-frames. Friction-collar for spindles on long-chain	A. P. Anderson	480,647	Aug. 9	1443	359	60	870
Quoin	W. F. West	478,269	July 5	332	80	60	67
Quoit-peg	C. W. Waldron	481,605	Aug. 30	3018	738	60	1216
Race-horses. Device for starting	F. A. O. Bedingfeld	479,614	July 26	2432	606	60	514
Racers. Apparatus for starting	J. J. Sullivan	481,835	Aug. 30	3399	834, 835	60	1288
Rack: *See* Book-rack. Musical-instrument rack. Car bundle-rack. Pastry-rack. Cloak-rack. Pool-rack. Feeding-rack. Towel-rack. Hay-rack. Suspended rack. Horseshoeing-rack. Wagon-rack. Music-rack.	E. Forbes	481,260	Aug. 23	2453	604	60	1094
Radiator	G. E. Longard	480,597	Aug. 9	1357	337, 338	60	852
Radiator. Gas-	W. J. Frazier	479,977	Aug. 2	819	78	60	643
Radiator. Gas-	W. J. Mullen	480,117	Aug. 2	869	144	60	691
Radiator. Graduating steam-	J. T. Hawkins	481,789	Aug. 30	3321	811	60	1276
Radiator. Semi-direct	A. H. Fowler	479,413	July 26	2104	527	60	451
Radiator-shield	G. E. Dixon	481,900	Aug. 30	3502	858	60	1309
Radiators. Fitting or connection for supply-pipes and branch pipes of	J. E. Russell	483,392	Sept. 27	2397	602, 603	60	1841
Rail-aligning device. Track-	W. E. Longbrey and A. H. McGrew.	479,435	July 26	2144	535	60	460
Rail and chair. Channel-	A. J. Moxham	482,803	Sept. 20	1449	359	60	1644
Rail-bond. Electric	T. J. McTighe	478,629	July 12	867	213	60	187
Rail-brake	C. W. Howlett	481,029	Aug. 16	2031	507	60	1000
Rail-chair	C. E. Mark	481,575	Aug. 30	2969	729	60	1207
Rail-chair and coupling for permanent ways	R. Cardwell and S. Watson	478,399	July 5	525	128	60	104
Rail-chairs. Method of and die for making	P. J. Lavelle	482,092	Sept. 6	277	67	60	1390
Rail-clamp	H. R. Wolpert	479,867	Aug. 2	143	34	60	610
Rail. Guard-	S. H. Stupakoff	482,766	Sept. 20	1404	347	60	1634
Rail-joint	T. J. Kennedy	482,796	Sept. 20	1442	357	60	1642
Rail-joint	M. C. Niles	480,506	Aug. 9	1217	304	60	826
Rail-joint	G. G. Stacy	481,433	Aug. 23	2737	673	60	1145
Rail-joints. Roll for forming connecting-plates for	D. H. Lents and A. W. Thompson	481,697	Aug. 30	3154	770	60	1242
Rail-sanding apparatus	G. Lents	481,797	Aug. 30	3336	815	60	1278
Railway and truck	J. G. Johnson	478,332	July 5	423	103	60	85
Railway-beds. Device for indicating washouts in	J. Ortega y Espinosa	479,834	Aug. 2	91	23	60	600
Railway brace-chair	G. Murray	482,807	Sept. 20	1452	360, 361	60	1645
Railway. Cable	J. H. Pendleton	479,919	Aug. 2	210	53, 54	60	624
Railway. Cable	J. H. Pendleton	479,920	Aug. 2	215	54, 55	60	624
Railway. Cable	J. H. Pendleton and A. Bryson	479,921	Aug. 2	224	55, 56, 57	60	626
Railway-chair	S. D. Root and G. C. Vineyard	480,519	Aug. 9	1231	308, 309	60	828
Railway-chair	S. Harris	478,426	July 5	566	137	60	111
	S. Harris	478,427	July 5	566	137	60	111

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Railway-chair	S. Harris	478,428	July 5	567	137	60	111
Railway-chair	S. H. Stupakoff	482,765	Sept. 20	1403	346	60	1634
Railway-coach	M. Goetze	482,634	Sept. 13	1181	285	60	1578
Railway collisions. Device for preventing	J. Stierle	482,143	Sept. 6	358	85	60	1406
Railway conductor. Electric-	R. M. Hunter	483,494	Sept. 27	2524	635	60	1867
Railway conduit. Electric-	F. O. Blackwell	482,719	Sept. 20	1319	322	60	1618
Railway conduit. Electric-	R. M. Hunter	482,964	Sept. 20	1704	430	60	1694
Railway conduit. Electric-	W. F. Jenkins	481,403	Aug. 23	2685	659	60	1134
Railway conduits. Trolley for electric-	M. Shoemaker	478,175	July 5	164	42	60	35
Railway construction	W. F. Jenkins	481,402	Aug. 23	2683	{658 659}	60	1134
Railway-crossing	W. J. Morden	481,368	Aug. 23	2621	645	60	1123
Railway-crossing	E. B. Gibson	482,352	Sept. 13	732	176	60	1493
Railway-crossing	J. McCarthy	479,829	Aug. 2	86	22	60	598
Railway-crossing. Adjustable	T. Smith	479,027	July 19	1481	368	60	317
Railway-crossing protector	D. McNamara	480,608	Aug. 9	1374	341	60	856
Railway-crossing protector	R. J. M. Danley	482,422	Sept. 13	847	203	60	1514
Railway-crossing signal mechanisms. Circuit-closer for	R. J. M. Danley	482,423	Sept. 13	848	203	60	1514
	I. W. Loy and R. O'Toole	483,231	Sept. 27	2128	538	60	1791
Railway curve. Cable-	G. Muller	481,412	Aug. 23	2699	{663 664}	60	1138
Railway. Electric	F. B. Badt	480,543	Aug. 9	1272	{319 320}	60	837
Railway. Electric	C. H. Baker	480,004	Aug. 2	377	94	60	652
Railway. Electric	M. W. Dewey	479,493	July 26	2258	566	60	482
Railway. Electric	R. M. Hunter	480,850	Aug. 16	1757	440	60	947
Railway. Electric	R. M. Hunter	481,905	Aug. 30	3510	859	60	1311
Railway-frog foot-guard	F. Mansfield	478,346	July 5	445	110	60	89
Railway-gate	W. Driscoll	478,504	July 5	682	166	60	135
Railway-gate	L. S. Barnett	478,978	July 19	1400	347	60	302
Railway gate. Automatic	M. B. Mills	480,955	Aug. 16	1921	481	60	979
Railway grip. Cable-	E. A. Morrow and J. Wilson	479,295	July 19	1890	{473 474}	60	396
Railway grip. Cable-	G. and L. Schorpp	481,512	Aug. 23	2857	702	60	1160
Railway-joint	C. Vogel	478,773	July 12	1081	269	60	230
Railway-joint	F. W. Bond	478,983	July 19	1410	349	60	305
Railway-joint	U. H. Hane	481,171	Aug. 23	2295	565	60	1063
Railway-joint chair	H. T. Hey	481,758	Aug. 30	3269	795	60	1264
Railway or tramway support. Street-	T. Sayers	481,122	Aug. 16	2196	543	60	1031
Railway-rail	J. M. Price	478,362	July 5	473	115	60	94
Railway-rail and chair and making the same. Combined	J. T. Smith	478,766	July 12	1072	266	60	229
	A. J. Moxham	482,805	Sept. 20	1451	360	60	1645
Railway-rail bender	W. H. Cowell	479,401	July 26	2257	566	60	482
Railway-rail brace-chair	G. Murray	478,806	July 12	1145	283	60	243
Railway-rail chair	B. Jennings	481,032	Aug. 16	2034	507	60	1001
Railway-rail chair	A. J. Moxham	482,801	Sept. 20	1447	359	60	1644
Railway-rail chair and making the same	A. J. Moxham	482,802	Sept. 20	1448	359	60	1644
Railway-rail fastening	A. J. Moxham	482,804	Sept. 20	1450	360	60	1644
Railway-rail joint	H. A. Lyddon	479,289	July 19	1882	471	60	304
Railway-rail joint	W. H. Carr	478,990	July 12	1305	325	60	272
Railway-rails from spreading. Device for preventing	C. E. Mark	481,576	Aug. 30	2969	729	60	1207
	J. H. Burns	480,998	Aug. 16	1987	497	60	992
Railway-signal	R. T. Bowne	479,395	July 26	2073	{520 521}	60	446
Railway-signal	S. Emrich	479,258	July 19	1898	461	60	385
Railway-signal. Automatic mechanical block	G. C. Young and G. O. Willever	481,884	Aug. 30	3472	851	60	1304
Railway signal device. Automatic	B. and J. Shoecraft	482,203	Sept. 6	459	111	60	1425
Railway signal. Electric-	C. K. Hall	482,306	Sept. 6	631	151	60	1458
Railway signal. Electric-	F. F. Loomis	479,138	July 19	1654	413	60	349
Railway stock and cattle guard. Automatic	T. A. B. Putnam	479,333	July 19	1940	485	60	406
Railway-switch	J. Walton	481,447	Aug. 23	2756	678	60	1149
Railway-switch	L. Marchand, Jr.	480,601	Aug. 9	1364	339	60	854
Railway-switch	J. D. Mattison	478,879	July 12	1238	307	60	260
Railway-switch	S. Peterson and A. Baland	481,967	Aug. 23	2461	606	60	1095
Railway-switch appliance. Street-	A. A. Strom. (Reissue)	11,261	Aug. 16	2268	560	60	1043
Railway-switch. Automatic	J. Lipman and C. J. Rinderknecht	482,903	Sept. 20	1613	404	60	1675
Railway-switch. Automatic	W. Spielman	479,373	July 19	2028	506	60	423
Railway-switch fastening	S. H. Corson	481,248	Aug. 23	2435	600	60	1090
Railway-switch operating mechanism	A. Bixby	480,320	Aug. 9	925	234	60	770
Railway-switch signal	F. M. Nye	479,584	July 26	2384	594	60	505
Railway switch. Street-	I. F. Harris	480,825	Aug. 16	1723	{430 431}	60	940
Railway switch. Street-	T. L. Johnson	478,858	July 12	1216	302	60	256
Railway switch. Street-	R. T. Smith	482,426	Sept. 13	853	{204 205}	60	1515
Railway switching device. Street-	I. F. Harris	479,028	July 19	1482	369	60	317
Railway system. Electric-	A. L. Riker	478,859	July 12	1217	302	60	257
Railway-tie	A. G. Budington	483,366	Sept. 27	2352	591	60	1633
Railway-tie	W. R. Kinnear	479,625	July 26	2445	610	60	516
Railway-tie. Metal-	R. E. Daniels	483,154	Sept. 27	2002	{506 507}	60	1767
Railway-tie. Metallic	C. B. Macneal	482,997	Sept. 20	1757	444	60	1705
Railway time-signal	D. W. and E. L. Mitchell	482,967	Sept. 20	1710	431	60	1695
Railway time-signal	W. Scott	481,581	Aug. 30	2977	730	60	1209
Railway time-signal	S. Smith	482,699	Sept. 13	1281	314	60	1599
Railway time-signal	A. H. Thorp	481,533	Aug. 23	2900	712	60	1178
Railway-track	C. W. Parks	481,723	Aug. 30	3207	783	60	1252
Railway track construction	T. W. Hutchins	479,836	Aug. 2	94	24	60	600
Railway-track gage	E. E. Buchwald	479,908	Aug. 2	51	12	60	592
Railway-track nut-lock	J. D. Cay	479,552	July 26	2345	585	60	498
		478,686	July 12	947	235	60	204

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Railway-tracks. Circuit closing and breaking device for	T. H. Patenall	480,507	Aug. 9	1219	305	60	826
Railway-tracks. Device for illuminating	W. E. Ferguson	481,016	Aug. 16	2011	503	60	996
Railway-tracks. Weed-cutter for	W. G. Hay	483,150	Sept. 27	1990	504	60	1764
Railway-train signal apparatus	C. Selden	478,135	July 5	82	21, 22	60	19
Railway-trains. Electric control of	R. C. Sayer	481,062	Aug. 16	2105	{523 524}	60	1014
Railway trolley. Electric-	C. A. Adams and T. J. Thorp	482,031	Sept. 6	178	43	60	1370
Railway trolley. Electric-	W. F. Jenkins	481,401	Aug. 23	2682	658	60	1124
Railway trolley. Electric-	J. M. C. Tyner and S. S. Irving	482,325	Sept. 6	679	162	60	1468
Railway trolley-stand. Electric-	J. C. Hough	483,061	Sept. 20	1853	470	60	1726
Railway-vehicles. Guard-shoe for	H. L. Simmons	481,068	Aug. 16	2112	525	60	1015
Railways. Automatic block system for	B. and J. Shoecraft	483,479	Sept. 27	2504	631	60	1863
Railways. Automatic gipsy for cable	A. J. Smith	482,279	Sept. 6	582	139	60	1449
Railways. Closed conduit for electric	L. P. Bunce	482,993	Sept. 20	1750	442	60	1703
Railways. Closed conduit for electric	E. H. Johnson	479,909	Aug. 2	52	12	60	592
Railways. Closed conduit for electric	A. L. Lineff	480,409	Aug. 9	1060	{265 266}	60	794
Railways. Conduit system for electric	W. H. Ford	478,956	July 12	1354	335	60	283
Railways. Conduit system for electric	R. Lawrence	481,959	Sept. 6	56	13, 14	60	1345
Railways. Crossing for underground cable	W. H. Page	481,966	Sept. 6	66	17	60	1347
Railways. Inclosed conductor for electric	G. A. Dupuis	482,343	Sept. 13	710	169	60	1488
Railways. Trolley-track hanger for electric	W. Q. Prewitt	483,388	Sept. 27	2302	601	60	1840
Rake: *See* Hay-rake. Hand-rake.							
Rake	J. V. Rowlett	479,842	Aug. 2	101	26	60	602
Rake and portable baling-press. Combined	C. C. Shero	483,515	Sept. 27	2568	{644 645 646}	60	1875
Rake-tooth	J. Dain, Jr	479,780	Aug. 2	23	6	60	586
Rakes. Combined guard and cleaner for lawn-	J. H. Haldeman	479,940	Aug. 2	255	63	60	631
Rakes. Making	W. H. Cowdery	481,663	Aug. 30	3102	756	60	1232
Range. Field-	J. Marcee	479,652	July 26	2467	{619 620}	60	524
Range hot-closet door	J. Tettelbach	479,857	Aug. 2	123	30	60	606
Ranges. Oven and closet door for	F. W. Born	481,924	Sept. 6	0	2	60	1336
Ranges. Sheet-metal-oven bottom for	W. H. Whitehead	479,770	July 26	2703	673	60	565
Ratchet-wrench	J. E. Brendlinger	478,690	July 12	937	233	60	201
Ratchet-wrench	P. Cossette	481,690	Aug. 30	3145	767	60	1240
Razor	F. A. Clauberg	480,916	Aug. 16	1854	462	60	967
Razor-pivot	J. G. Bestgen	482,992	Sept. 20	1749	442	60	1703
Razor-sharpening device	E. A. Sutphen	480,976	Aug. 16	1961	490	60	966
Razor-strop	W. C. Howard	478,934	July 12	1326	329	60	278
Razor-strop	A. E. Witherell	478,946	July 12	1343	333	60	281
Reamer	J. W. Tompkins	479,682	July 26	2542	633	60	534
Reaming and drilling machine	O. C. Opsion and J. V. Hooper	481,418	Aug. 23	2710	667	60	1140
Reclining-chair	G. B. Valentine	478,247	July 5	301	73	60	60
Record, diary, and ledger. Combined	H. Meyer	481,670	Aug. 30	3111	759	60	1224
Recorder: *See* Oarsman's recorder. Time-recorder.							
Reel: *See* Bolting-reel. Hose-reel. Fishing-reel. Wire-reel. Fishing-line reel.							
Reel-carrier	E. E. Kittleson	481,328	Aug. 23	2569	{630 631}	60	1114
Reel-carrier	J. F. Schneider	481,641	Aug. 30	3066	{748 749}	60	1225
Reel-carrier and wire-stretcher. Combined	W. H. Johnson	483,355	Sept. 27	2337	588	60	1830
Reel for unwinding tubular-knitted goods and winding the yarn	N. Tourangeau	482,932	Sept. 20	1648	415	60	1683
Reel-support	F. S. Reager	483,389	Sept. 27	2304	601	60	1840
Reflector	C. A. Meadows	480,201	Aug. 2	707	180	60	716
Reflector. Arc-light	A. Zalud	483,197	Sept. 27	2075	524	60	1781
Reflector. Side	R. S. Dobbie	479,183	July 19	1727	433	60	363
Refrigerating apparatus	C. E. Plumtree	481,055	Aug. 16	2077	518	60	1010
Refrigerating apparatus	C. W. Nason and C. H. Leinert	482,268	Sept. 6	567	{134 135}	60	1445
Refrigerating-machine	C. E. Peirce	483,500	Sept. 27	2536	{637 638}	60	1869
Refrigerating-machines. Gas-compressor for	C. F. Miller	481,140	Aug. 16	2246	{553 554}	60	1040
Refrigerator	B. H. Munsch	482,876	Sept. 20	1560	389	60	1667
Refrigerator	C. A. Bluhm	478,060	July 5	8	2, 3	60	4
Refrigerator and elevating cupboard	A. I. Dexter	479,633	July 26	2460	612	60	519
Refrigerator-car	J. T. Westwood	478,898	July 12	1268	313	60	266
Refrigerator-car	G. A. Fowler	478,995	July 19	1432	{354 355}	60	308
Refrigerator-door	O. Vezin	482,703	Sept. 13	1288	316	60	1600
Refuse of cities. Apparatus for treating the	R. G. Chase	479,973	Aug. 2	314	77	60	642
Register: *See* Autographic register. Hot-air register. Miner's register. Cash-register. Pocket-register. Fare-register.	J. J. Storer	481,680	Aug. 30	3129	764	60	1237
Regulator: *See* Clock-regulator. Pressure-regulator. Damper-regulator. Temperature-regulator. Electric-current regulator. Water-supply regulator. Windmill-regulator. Gas-regulator.							
Rein-button	W. H. Sanborn	479,847	Aug. 2	107	27	60	603
Rein-guard	A. C. Massey	478,800	July 12	1135	280	60	240

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Rein-holder	E. Rankin, Jr.	479,096	July 19	1586	397	60	337
Rein-holder	J. D. Shurmon	478,375	July 5	493	119	60	97
Rein-spreader	J. H. and F. S. Pew	478,712	July 12	977	243	60	210
Relay. Electrically-adjusting	W. S. Richards	482,137	Sept. 6	344	82	60	1403
Reproducing characters. Device for	H. C. Bridger	478,152	July 5	120	30	60	27
Resawing-machine	F. R. Lee	483,226	Sept. 27	2121	537	60	1790
Resonator	H. Crocker	482,786	Sept. 20	1431	354	60	1640
Respirator. Nasal	J. E. Midgley and D. D. Case	480,505	Aug. 9	1217	304	60	825
Retorts, &c. Machine for making	E. Rooms	480,138	Aug. 2	607	154	60	698
Rheostat	C. E. Carpenter	481,781	Aug. 30	3312	809	60	1273
Rheostat	W. P. Esyrs	478,276	July 5	343	83	60	69
Rheostat	H. W. Lawrence	482,093	Sept. 6	278	67	60	1390
Rheostat	C. W. Tobey	480,151	Aug. 2	623	158	60	701
Rheostat	J. Waring	479,101	July 19	1593	399	60	338
Rheostat	E. Weston	480,892	Aug. 16	1817	453	60	959
Rheostat	E. Weston	480,893	Aug. 16	1819	454	60	960
Ribbon and show case	E. Stewart	483,024	Sept. 20	1804	455, 456	60	1715
Ribbon-holder	G. H. Brown	480,556	Aug. 9	1290	323	60	840
Rice-scourer	S. A. Pickett	482,192	Sept. 6	445	107	60	1422
Ring: *See* Chill-ring. Ear-ring. Finger-ring. Napkin-ring. Spinning-ring. Traverse-ring.							
Ring	R. B. Ackerman	482,670	Sept. 13	1229	299	60	1588
Ring-holder	J. Smith	483,399	Sept. 27	2405	605	60	1842
Ring-traveler	A. F. Bentley	481,131	Aug. 16	2210	546	60	1033
Rivet	J. L. Thomson	481,123	Aug. 16	2196	543	60	1031
Rivet	J. J. Unbehend	481,125	Aug. 16	2198	544	60	1031
Riveter	J. J. Kropacek	478,114	July 5	56	15	60	13
Road. Gravel	F. J. Hoyt	478,862	July 12	1221	.....	60	257
Road-roller. Combination	R. C. Ruthven	482,757	Sept. 20	1381	342, 343	60	1630
Road-working machine	M. G. Bunnell	479,700	July 26	2569	639, 640	60	539
Rock-channeling tool	G. M. Githens	479,499	July 26	2267	568	60	483
Rock-crusher	H. L. Kent	482,795	Sept. 20	1441	357	60	1642
Rock-drill	P. P. Belt	479,615	July 26	2433	606	60	514
Rock-drill	T. F. Farrell	479,356	July 19	1998	500	60	417
Rock-drill. Steam-actuated	S. and W. R. Lloyd	481,632	Aug. 30	3054	746	60	1223
Rock-drilling machine	W. X. Stevens	481,598	Aug. 30	3004	735	60	1213
Rock-drilling machine	N. Widman	481,610	Aug. 30	3023	739	60	1217
Rock-drilling tool	G. L. Weller	479,041	July 19	1503	373	60	322
Rocket. Dynamite	P. Cunningham	479,738	July 26	2646	656	60	553
Rocking-horse	E. Keuser	479,370	July 19	2023	505	60	422
Rod: *See* Curtain-rod. Gun-rod. Wantage-rod.							
Roller: *See* Disintegrating-roller. Land-roller. Road-roller. Shade-roller.							
Roller-mills. Adjustable scraper for	J. Harvey	481,866	Aug. 30	3444	845	60	1299
Roller-mills. Automatic feeder for	J. L. Willford	482,419	Sept. 13	839	201, 202	60	1513
Rolling machine. Sheet-metal	W. S. Shipe	480,440	Aug. 9	1112	278	60	804
Rolling mill. Metal	F. Nevegold	480,609	Aug. 9	1375	342	60	857
Rolling-mill. Universal	A. Reese	481,058	Aug. 16	2086	520	60	1011
Rolling thin sheet steel or iron	B. C. Lauth	478,193	July 5	189	48	60	40
Rolling up stripe or webs. Apparatus for	C. Faure	479,875	Aug. 2	152	37, 38	60	612
Roof	J. J. McCarthy	483,202	Sept. 27	2207	554	60	1805
Roof. Portable	J. H. Rice	480,859	Aug. 16	1768	443	60	949
Roof-scaffold bracket	H. McCornack	482,096	Sept. 6	221	68	60	1391
Roofs. Gutter or valley on	C. C. Meader	480,602	Aug. 9	1306	339	60	834
Roofing and siding	J. Winslow	481,541	Aug. 23	2911	714	60	1180
Roofing and siding screw or fastening	R. B. L. Westover	481,724	Aug. 30	3209	784	60	1252
Roofing. Machine for joining and rolling sheets for	W. A. List	480,665	Aug. 9	1472	367	60	875
Roofing-tile. Metallic	E. B. Repp	482,025	Sept. 6	171	41	60	1368
Roofing-tool	L. L. Sagendorph	478,642	July 12	886	219	60	191
Rope-clamp	R. M. Downie	480,810	Aug. 16	1697	423	60	934
Rope-driving apparatus	T. H. Macdonald, O. R. Williams, and L. D. Hitzeroth.	478,875	July 12	1234	306	60	260
Rope-grip	T. J. Cope	482,975	Sept. 20	1722	435	60	1698
Rope-guiding sheave	S. Murray	479,296	July 19	1893	474	60	396
Rope-hold	E. T. Rugg	482,756	Sept. 20	1380	342	60	1630
Rotary engine	A. Beard	478,271	July 5	337	81	60	68
Rotary engine	H. Betten	481,096	Aug. 16	2156	535	60	1023
Rotary engine	A. F. G. Brown	478,843	July 12	1202	298	60	253
Rotary engine	J. Snelling	479,080	July 19	1557	389, 390	60	331
Rotary engine	E. Towlson	483,027	Sept. 20	1809	457, 458, 459	60	1716
Rotary engine	E. Waldron	479,479	July 26	2236	561, 562	60	477
Rotary fluid-pressure engine	E. Towlson	481,441	Aug. 23	2748	676	60	1147
Rotary machines. Reversing mechanism for	J. G. Johnson	483,456	Sept. 27	2479	624	60	1858
Rotary shears	S. Trethewey	479,037	July 19	1496	372	60	321
Rotary steam-engine	W. B. Coulter	482,166	Sept. 6	405	96, 97	60	1414
Rotary steam-engine	J. L. Rowan	478,240	July 5	287	70	60	58
Roundabout	W. Schäfer	480,477	Aug. 9	1178	296	60	817
Roving-can	A. B. Fisher	481,554	Aug. 30	2937	722	60	1201
Rubber-dam clamp	A. I. F. Buxbaum	482,618	Sept. 13	1161	281	60	1575
Rubber-heater. Steam	G. W. Melotte	480,472	Aug. 9	1168	294	60	815
Rubber shoe	B. Horovitz	480,097	Aug. 2	534	135	60	684

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Rubber stamps. Apparatus for making	J. C. Barton	480,490	Aug. 9	1084	271, 272	60	798
Rudder-indicator	C. Cory	482,421	Sept. 13	844	202, 203	60	1514
Ruler, gage, and circle-scriber. Combined	L. M. Weaver and Z. C. Leiser	482,886	Sept. 20	1585	398	60	1670
Ruling-machine	J. Hope	480,498	Aug. 9	1206	302	60	823
Sack	H. V. W. Stivers and J. Hoagland	483,402	Sept. 27	2410	606	60	1844
Sack-holder	J. C. Bratney	478,913	July 12	1294	322	60	271
Sacks for filling same. Device for holding open grain and other	A. L. Klank	481,957	Sept. 6	53	12	60	1345
Sad-iron	C. G. Ette and B. H. Sanders	478,929	July 12	1320	328	60	276
Saddle. Harness	A. B. Arnold	478,535	July 5	738	180	60	146
Saddle. Harness	J. G. and H. Bruggeman	480,996	Aug. 16	1985	497	60	991
Saddle. Harness	D. F. Maine	481,765	Aug. 30	3287	800	60	1269
Saddle. Harness	S. A. Nolen	478,205	July 5	213	53	60	44
Saddle. Riding	V. D. Hart	481,945	Sept. 6	38	9	60	1342
Saddle. Side	T. G. Smith and F. W. Mayhew	481,073	Aug. 16	2118	527	60	1017
Saddle-tree	R. C. Barry	483,037	Sept. 20	1823	463	60	1719
Saddle-tree	O. Taber	480,218	Aug. 2	746	188	60	723
Saddle-tree	O. Taber	480,219	Aug. 2	747	189	60	723
Saddle-tree	O. Taber	480,220	Aug. 2	748	189	60	723
Saddle-tree	O. Taber	480,221	Aug. 2	749	189	60	724
Safe	T. M. Brintnall	481,137	Aug. 16	2229	549, 550, 551, 552	60	1036
Safe	W. Corliss	478,989	July 19	1421	352, 353	60	306
Safe	W. C. Ireland	483,153	Sept. 27	2001	506	60	1766
Safe	A. A. Root	479,464	July 26	2198	552	60	471
Safe-lock	J. White	481,319	Aug. 23	2555	627, 628	60	1111
Safes. Slot-protector for money	J. Loch	480,108	Aug. 2	552	139	60	688
Safety-pin	A. T. Snell	481,834	Aug. 30	3397	834	60	1289
Safety-switch	M. M. Turner and I. H. Grant	481,153	Aug. 16	2261	558	60	1042
Sail	A. S. Comstock	481,614	Aug. 30	3029	740	60	1218
Sail-cringle	W. R. Cutler	479,404	July 26	2089	523	60	449
Sail for vessels	J. H. Coffin	479,133	July 19	1644	411	60	347
Salicylaldehyde-alphaphenylmethyl hydrazone. Making	I. Roos	483,290	Sept. 27	2250	.....	60	1813
Salts of fluoride of antimony and sulphate of ammonia. Double	C. Wachendorff	479,925	Aug. 2	233	.....	60	627
Sand and slimes. Separating	G. Gates	482,241	Sept. 6	521	124	60	1436
Sand. Plant for heating and controlling	F. V. Greene	481,489	Aug. 23	2823	694	60	1163
Sand-screen	C. Monjean	482,020	Sept. 6	163	39	60	1367
Sanding apparatus	W. W. Wallace and R. C. Penfield	483,068	Sept. 20	1896	479	60	1734
Sandpapering-roll	J. A. Everett and J. Finn, Jr.	481,938	Sept. 6	29	7	60	1340
Sanitary ventilator	W. L. Potter	479,224	July 19	1786	447	60	374
Sash-balance	H. P. Cayce	481,103	Aug. 16	2160	537	60	1025
Sash-balance	N. Hamlet	481,302	Aug. 23	2527	620	60	1106
Sash-balance	S. Jenkinson	478,160	July 5	134	34	60	29
Sash-balance	F. N. Kimball	479,150	July 19	1671	418	60	353
Sash-balance	J. P. Magney	481,145	Aug. 16	2245	553	60	1040
Sash-balance	J. J. O'Connor	478,352	July 5	459	112	60	92
Sash-balance	G. T. Peters	479,657	July 26	2496	621	60	526
Sash-cord fastener	W. Hutchins	478,234	July 5	273	67	60	55
Sash-fastener	E. S. Bennett	480,688	Aug. 9	1511	375	60	882
Sash-fastener	C. O. Birney	481,546	Aug. 30	2920	718	60	1198
Sash-fastener	T B. Bomar	478,272	July 5	338	81	60	68
Sash-fastener	J L. Ebert	479,409	July 26	2096	525	60	450
Sash-fastener	G. G Hopkins	479,595	July 26	2400	598	60	508
Sash-fastener	E. L. King	481,669	Aug. 30	3110	759	60	1233
Sash-fastener	S. McClellan	479,152	July 19	1674	418	60	353
Sash-fastener	F. J Rabbeth	480,343	Aug. 9	956	242	60	776
Sash-fastener	D. H Taylor	481,440	Aug. 23	2747	675	60	1147
Sash-fastener	E. R. Theby	480,148	Aug. 2	620	157	60	701
Sash-fastener. Automatic	G. Solari	482,280	Sept. 6	586	139, 140	60	1449
Sash-holder	E. Broggelwirth	479,324	July 19	1930	482	60	403
Sash-holder	W. H. Dalbey	483,710	Sept. 13	1299	318	60	1603
Sash-holder	R. Monday	480,337	Aug. 9	946	240	60	774
Sash-holder	S. B. Morse	481,692	Aug. 30	3040	742	60	1220
Sash-lift	H. E. Willer	481,390	Aug. 23	2559	628	60	1111
Sash-pull	R. Schenck	478,471	July 5	628	153	60	194
Sash. Window	E. Moore	480,203	Aug. 2	709	181	60	716
Sash. Window or door	G. B. Lee	479,433	July 26	2140	535	60	459
Sashes, &c. Bar and fastening for	W. Henderson	482,087	Sept. 6	269	65	60	1388
Satchel or other receptacle	C. H. Shaw	480,675	Aug. 9	1486	370	60	878
Sausage twisting and linking machine	H. A. Smallfield and H. Edwards	480,293	Aug. 9	877	223, 224	60	762
Saw	D. C. Schlabach	481,201	Aug. 23	2337	576	60	1072
Sawbuck	J. Chattaway	482,162	Sept. 6	397	94	60	1413
Saw. Buck	P. Woodring	482,606	Sept. 13	1140	275	60	1571
Saw. Butcher's or bow	H. Hoefer	480,697	Aug. 9	1520	378	60	884
Saw. Crosscut	W. H. H. Kelzur	482,365	Sept. 13	753	182	60	1497
Saw. Crosscut	I. S. Wilson	481,321	Aug. 23	2559	628	60	1112
Saw filing and setting machine	J. Richardson	481,823	Aug. 30	3379	827, 828	60	1285
Saw-filing machine	T. S. Disston	482,572	Sept. 13	1092	265	60	1502
Saw gummer. Stave	A. Scamahorn	482,386	Sept. 13	791	190	60	1504
Saw-handle	J. Neimeyer	480,856	Aug. 16	1765	442	60	949
Saw handle. Crosscut	J. Green	479,361	July 19	2010	502	60	419
Saw mill. Band	D. C. Prescott	478,817	July 12	1166	289, 290	60	247
Sawmill-dog	G. F. Knight	483,223	Sept. 27	2113	536	60	1789
Sawmill-dog	G. F. Knight	483,224	Sept. 27	2115	536	60	1789

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Sawmill variable feed	C. Harbaugh	479,272	July 19	1857	465	60	389
Saw pulleys. Scraper for band	J. H. Wentz	478,148	July 5	115	29	60	26
Saw-set	C. Baker	479,239	July 19	1809	453	60	379
Saw-set	S. W. Buence and A. Bash	481,221	Aug. 23	2377	585	60	1080
Saw-set	W. M. Greilick	480,581	Aug. 9	1331	331, 332	60	848
Saw set and gage	C. F. Heath	482,250	Sept. 6	533	127	60	1438
Saw-setting machine	F. J. Drake	482,024	Sept. 13	1169	283	60	1576
Saw-straining device	M. Jincks	481,496	Aug. 23	2837	698	60	1166
Saw-swaging device	A. L. Navone	478,886	July 12	1254	310	60	263
Saw. Swinging	B. Bronson	481,744	Aug. 30	3246	790	60	1260
Saw-tooth	J. W. Todd	481,836	Aug. 30	3400	835	60	1289
Saw-tooth-setting machine	J. R. Little	483,497	Sept. 27	2529	636	60	1868
Saw. Veneer	A. E. Hoffman	480,428	Aug. 9	1097	274	60	800
Sawing-machine	D. Chase	479,244	July 19	1821	457	60	381
Sawing-machine	A. Rodgers, Sr	482,319	Sept. 6	665	159	60	1465
Sawing-machine	A. Rodgers, Sr	482,697	Sept. 13	1279	313	60	1599
Sawing-machine	A. Wadsworth	483,315	Sept. 27	2284	574, 575	60	1819
Sawing-machine. Cut-off	M. E. and C. C. Blood	479,049	July 19	1512	377	60	324
Sawing machine. Drag	L. Forsman	481,555	Aug. 30	2938	722	60	1201
Sawing machine. Rail	E. C. Smith and J. Brady	481,874	Aug. 30	3456	848	60	1301
Sawing-machine. Portable band	A. C. Speer	482,103	Sept. 6	297	70	60	1393
Sawing machine. Power hack	O. Colborne	479,309	July 26	2081	522	60	447
Sawing up slabs, &c. Machine for	S. Maffett and R. Weir	482,799	Sept. 20	1445	358	60	1643
Scaffold	J. Dunbar	482,625	Sept. 13	1171	283	60	1577
Scaffold-bracket	F. B. Gilbreth	479,591	July 26	2394	596	60	507
Scaffold. Portable window	C. Ragsdale	479,662	July 26	2501	623	60	527
Scale attachment	A. and C. Stauber	480,046	Aug. 2	466	118	60	671
Scale. Registering pendulum	L. F. Robare	482,138	Sept. 6	345	83	60	1403
Scale. Pendulum	J. P. Armstrong	478,534	July 5	735	179	60	146
Scale. Spring	D. Olmsted	482,831	Sept. 20	1485	370	60	1652
Scales. Weighing	L. E. A. Kovsky	478,699	July 12	959	238	60	206
Scalpel	E. C. Judd	480,020	Aug. 2	419	105	60	661
Scissors-sharpener	E. Willbrandt	479,102	July 19	1594	399	60	339
Scourer: *See* Rice-scourer.	G. S. Collum	479,737	July 26	2645	656	60	553
Scraper. Earth	J. D. Brainard	482,711	Sept. 13	1301	318	60	1603
Scraper or cleaner for boots or shoes	F. A. Cahn	478,845	July 12	1203	299	60	254
Scraper. Road	J. M. Brooks	481,160	Aug. 23	2279	562	60	1060
Scraper. Road	S. B. Jamieson	483,303	Sept. 27	2267	570, 571	60	1816
Scraper. Wheeled	J. S. Palmer	483,081	Sept. 20	1883	477	60	1732
Screen: *See* Coal-screen. Sand-screen. Coal-scuttle screen. Window-screen. Door or window screen. Window and door screen.	C. Rath	482,414	Sept. 13	829	199	60	1511
Screw	L. J. H. Vinson	481,445	Aug. 23	2753	677	60	1149
Screw and making the same. Wood	C. D. Rogers	479,175	July 19	1712	429, 430	60	361
Screw-cutting machine	J. A. Hamer	483,112	Sept. 20	1932	489	60	1742
Screw-driver. Changeable-speed	H. Hubbell	481,304	Aug. 23	2529	621	60	1106
Screw-driving and washer-feeding machine	F. W. Tobey	480,530	Aug. 9	1251	314, 315	60	832
Screw-jack	F. H. Sleeper	479,850	Aug. 2	113	28	60	604
Screw. Jack	W. H. Wild	483,487	Sept. 27	2515	633	60	1865
Screw-stopper for water-bags, &c	G. H. F. Schrader	483,330	Sept. 27	2308	580	60	1824
Screw-swaging die	H. P. Boyd	478,219	July 5	237	58	60	49
Screw-threading die	R. J. Dearborn	480,175	Aug. 2	663	169	60	708
Scrubbing and sweeping machine. Combined	G. M. Bennett	479,616	July 26	2434	606	60	514
Scrubbing-machine	H. Prud'homme	478,636	July 12	874	215, 216	60	189
Sculpture. Translucent	F. A. Shaw	478,765	July 12	1071	266	60	228
Sea-walls. Construction of	B. C. Kenway	482,059	Sept. 6	224	53	60	1379
Seal	E. J. Brooks	481,892	Aug. 30	3486	854	60	1307
Seal. Envelope	S. E. Cheeseman	481,472	Aug. 23	2798	688	60	1157
Seal-lock	H. Denis	479,975	Aug. 2	317	78	60	642
Seal-lock	J. Dowling	482,118	Sept. 6	320	76	60	1398
Sealed can	W. Simpson and J. George	481,206	Aug. 23	2345	578	60	1073
Sealing device	G. W. Carnrick	482,055	Sept. 6	217	51	60	1377
Seam folder. Double	L. Wurzburg	482,216	Sept. 6	485	116	60	1429
Seam-pressing frame	H. L. Totten	478,723	July 12	996	247	60	214
Seaming-machine	F. J. Kellogg	480,589	Aug. 9	1343	335	60	851
Seaming machine. Can	G. F. E. Kanzleiter	481,033	Aug. 16	2035	508	60	1001
Seat: *See* Adjustable seat. Vehicle jump-seat. Operator's seat. Velocipede-seat. Tilting seat. Window-seat. Vehicle-seat.	C. W. Ellsworth	478,580	July 12	799	197	60	174
Seat	C. C. A. Schindler	483,265	Sept. 27	2211	555	60	1806
Seat	C. C. A. Schindler	483,266	Sept. 27	2212	556	60	1806
Seats and valves. Hardening	J. Powell	481,332	Aug. 23	2577	633	60	1115
Seats. Reversible back for car or other	M. N. Forney	482,447	Sept. 13	886	213, 214	60	1521
Secondary battery	A. E. Colgate	479,753	July 26	2069	663	60	558
Secondary battery	J. H. Gerry and C. E. Long	478,230	July 5	202	65	60	53
Secondary battery	W. W. Griscom	481,560	Aug. 30	2946	723	60	1203
Sectional boiler. Cast-iron	H. A. Smith	482,657	Sept. 13	1207	294, 295	60	1584
Seed-delinting machine. Cotton	J. H. McCormick	481,416	Aug. 23	2708	666	60	1140

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Seeder	F. A. Crane	482,470	Sept. 13	924	225	60	1598
Seeder, roller, and pulverizer	H. W. Campbell	479,342	July 19	1818	455, 456	60	381
Seeding-machine driving-gear	T. H. Noxon	481,539	Aug. 23	2909	714	60	1180
Seesaw	C. A. Woodbury	481,994	Sept. 6	111	28	60	1356
Semaphore-signal	P. G. Stuart	479,316	July 19	1921	480	60	401
Separating apparatus	E. L. Howe	478,159	July 5	132	33	60	29
Separating particles of different degrees of specific gravity	O. B. Peck	479,453	July 26	2178	544	60	467
Separating powdered or finely-divided particles, &c	O. B. Peck	479,455	July 26	2182	545, 546	60	468
Separating powdered or finely-divided particles	O. B. Peck	479,953	Aug. 2	278	68, 69	60	635
Separator: *See* Grain-separator. Phosphate-separator. Magnetic separator. Wheat-separator. Ore-separator.	A. A. Gonbert	482,354	Sept. 13	737	177	60	1494
Separator	J. R. Berthelet	479,617	July 26	2436	607	60	514
Separator for crushed cement, &c	J. Wilson	479,865	Aug. 2	139	34	60	608
Sewage-purifying apparatus	J. Wilson	479,866	Aug. 2	140	34	60	609
Sewage-purifying apparatus	J. Wilson	482,052	Sept. 6	211	50	60	1376
Sewage-purifying apparatus	J. Wilson	482,053	Sept. 6	213	51	60	1377
Sewage separating and purifying apparatus	W. F. Goodhue	478,539	July 5	741	181	60	147
Sewer-trap	R. Newton	478,808	July 12	1147	284	60	243
Sewerage system. Pneumatic	C. T. Liernur	482,439	Sept. 13	873	208, 209	60	1519
Sewing-machine	A. W. Bigelow	480,229	Aug. 2	761	192	60	726
Sewing-machine	W. F. Dial	480,181	Aug. 2	670	170, 171	60	710
Sewing-machine	G. H. Dimond	479,739	July 26	2647	656, 657	60	554
Sewing-machine	G. H. Dimond	479,740	July 26	2650	657	60	554
Sewing-machine	C. B. Hunt	483,454	Sept. 27	2477	623	60	1857
Sewing-machine	F. Kern	479,369	July 19	2022	505	60	422
Sewing-machine	E. Patten	481,266	Aug. 23	2460	606	60	1095
Sewing-machine	M. H. Pearson	479,838	Aug. 2	96	24, 25	60	601
Sewing-machine	J. Vannette	480,298	Aug. 9	888	225	60	763
Sewing-machine attachment	A. A. Bouton	483,097	Sept. 20	1910	483	60	1737
Sewing-machine clamp. Buttonhole	C. A. French	478,586	July 12	807	199	60	175
Sewing-machine feed-regulating attachment	R. Todd	478,660	July 12	907	225	60	195
Sewing-machine for finishing buttonhole-pieces	J. Reece	479,572	July 26	2371	591	60	503
Sewing-machine frame	B. F. Bellows	482,958	Sept. 20	1695	426	60	1692
Sewing-machine quilting attachment	J. W. Clayton	482,467	Sept. 13	913	223	60	1526
Sewing-machine loop-taker	W. F. Dial	480,180	Aug. 2	668	170	60	709
Sewing-machine loop-taker	W. F. Dial	480,182	Aug. 2	674	171	60	710
Sewing-machine needle-bar	P. Diehl	478,576	July 12	794	196	60	173
Sewing-machine needle. Cylindrical	M. R. Thurston	480,150	Aug. 2	622	157	60	701
Sewing-machine needle-threader	E. C. Jenkins	479,426	July 26	2131	532	60	457
Sewing-machine needle-threader	E. C. Jenkins	479,427	July 26	2132	533	60	458
Sewing-machine needle-threader	E. C. Jenkins	479,428	July 26	2133	533	60	458
Sewing-machine. Overseaming	P. Diehl	478,994	July 19	1429	354	60	308
Sewing-machine plaiting attachment	J. G. Greene	480,260	Aug. 9	828	211, 212	60	752
Sewing-machine presser-foot	J. Douglas	478,095	July 5	31	10	60	9
Sewing-machine quilting attachment	C. W. Delany	480,252	Aug. 9	805	207	60	747
Sewing-machine quilting-frame	G. M. Moore and G. W. Steen	479,654	July 26	2402	621	60	525
Sewing-machine scalloping attachment	G. W. Kemp	483,496	Sept. 27	2527	636	60	1868
Sewing machine. Shoe	J. A. True	480,882	Aug. 16	1800	450	60	956
Sewing-machine shuttle	A. M. Leslie	482,850	Sept. 20	1515	377	60	1658
Sewing-machine thread-controlling device	S. W. Wardwell, Jr	482,215	Sept. 6	483	115, 116	60	1429
Sewing-machine trimmer	R. G. Woodward and C. Timm	480,377	Aug. 9	1012	254	60	786
Sewing-machine tuck-creaser	H. P. Steward	481,599	Aug. 30	3008	736	60	1214
Sewing-machine waxing device	M. H. Pearson	483,083	Sept. 20	1886	477	60	1732
Sewing-machines. Carriage for carrying and operating	M. W. Lawrence	482,829	Sept. 20	1483	369	60	1652
Sewing straw covers for bottles. Machine for	V. Fleckenstein	480,082	Aug. 2	515	131, 132	60	680
Shade attachment. Window	H. L. Hall	483,490	Sept. 27	2519	634	60	1866
Shade fixture. Window	J. C. Perkins	479,766	July 26	2696	671	60	563
Shade-holder	F. Adams	482,887	Sept. 20	1580	398, 399	60	1670
Shade-holder	E. F. Gennert and J. F. Cunningham	480,425	Aug. 9	1095	273	60	800
Shade or screen. Window	M. M. Killinger	482,798	Sept. 20	1443	358	60	1643
Shade-roller. Spring	J. C. Perkins	481,733	Aug. 30	3224	787	60	1255
Shade-rollers. Spindle-tip for spring	J. C. Perkins and L. E. Leigh	482,563	Sept. 13	1082	263	60	1560
Shade. Window	M. M. Killinger	482,797	Sept. 20	1442	357	60	1642
Shaft-coupling	C. W. Barnaby	481,092	Aug. 16	2150	534	60	1022
Shaft guard. Vehicle	F. De La Matyr	482,726	Sept. 20	1328	324	60	1620
Shaft. Sectional vehicle	W. J. Pohrer	483,474	Sept. 27	2498	629	60	1862
Shaft support. Vehicle	H. L. Cordrey	479,631	July 26	2457	612	60	519
Shaft. Vehicle	G. A. Fraas	480,860	Aug. 16	1783	440	60	953
Shafts. Bending vehicle	O. A. Goldsworthy	482,475	Sept. 13	929	227	60	1529
Shafts. Vehicle	W. R. Cullison	482,471	Sept. 13	925	226	60	1528
Shafting-hanger	A. H. Wagner	482,287	Sept. 6	599	142	60	1452
Shavings-washing machine	R. H. Herder	482,684	Sept. 13	1254	306	60	1593
Sheaf-carrier	W. A. Kirby	481,144	Aug. 16	2343	552, 553	60	1039
Shearing-machine	J. M. Long	479,122	July 19	1631	408	60	345
Shears: *See* Animal-shears. Rotary shears. Metal-shears.	H. Herder	479,090	July 19	1576	395	60	395
Shears	E. A. Sanders	481,900	Aug. 23	2395	575	60	1071

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Shears	T. N. Underwood	482,857	Sept. 20	1526	379	60	1660
Sheep-shearing machine	A. Melchior	478,286	July 5	357	87	60	72
Sheet-metal articles. Forming-machine for	S. O'Brien	483,362	Sept. 27	2345	590	60	1831
Sheet-metal articles. Means for ornamenting	B. M. Abell and W. Ostrander	482,837	Sept. 20	1495	372	60	1654
Sheet-metal-bending machine	J. Clark	480,396	Aug. 9	1044	262	60	792
Sheet-metal cans. Apparatus for forming and soldering	W. P. Quentell	480,034	Aug. 2	443	112	60	666
Sheet metal. Die for drawing	E. Norton	483,008	Sept. 20	1773	113	60	1709
Sheet metal. Forming hollow balls, &c., from	J. Burkhardt	480,708	Aug. 16	1547	449	60	1709
Sheet metal. Machine for edge-curling	W. J. Gordon and E. D. Gilbert	482,902	Sept. 20	1701	385	60	903
Sheet metal. Scaling	J. W. Britton	479,780	Aug. 2	10	429	60	1693
Sheet-metal vessels. Method of and machine for treating the margins of	C. M. Brown and E. P. Holden	479,181	July 19	1722	430	60	584
Shelf. Corner bracket	J. D. Legg	483,069	Sept. 20	1864	472	60	1728
Shelf. Hanging window	W. A. Thompson	482,502	Sept. 13	979	237	60	1540
Shelving. Adjustable	C. H. Godfrey	478,509	July 5	987	167	60	136
Shingle-gage	J. W. Bacon	478,306	July 5	387	93	60	78
Shingle scoring and marking machine	J. T. Rush	481,198	Aug. 23	2329	574	60	1071
Ship conveyance. Overland	W. R. Kinipple	481,405	Aug. 23	2088	660	60	1135
Ships. Ash-ejector for	H. See	482,759	Sept. 20	1367	344	60	1632
Ship's log	J. S. Negus	481,941	Aug. 23	2407	594	60	1085
Ships' magazines. Device for flooding	W. Tait	482,982	Sept. 6	590	140	60	1450
Shipping-flask for anhydrous ammonia	T. J. Goldschmid	479,592	July 26	2396	141	60	507
Shirt	C. H. Brown	478,082	July 5	12	597	60	5
Shirt	A. Meyère	481,504	Aug. 23	2847	3	60	1167
Shock-controlling device	P. H. Irgens	478,434	July 5	575	609	60	112
Shoe	E. McDonald	482,456	Sept. 13	901	139	60	1524
Shoe	H. Newcomb	482,134	Sept. 6	340	219	60	1402
Shoe-fastening	A. D. Field	483,144	Sept. 27	1980	81	60	1762
Shoe-fastening	J. H. Poulter	480,133	Aug. 2	599	501	60	696
Shoe-fastening	H. S. Pullman	481,638	Aug. 30	3062	152	60	1224
Shoe-fastening	E. E. Stacy	479,965	Aug. 2	367	748	60	651
Shoe-horn	D. Cady	481,253	Aug. 23	2443	91	60	1092
Shoe-nailing machine	E. D. Childs	479,784	Aug. 2	15	602	60	585
Shoe-soles. Machine for grooving	G. Bryant	483,319	Sept. 27	2292	4, 5	60	1821
Shoe-upper	J. C. Daggett	481,299	Aug. 23	2524	576	60	1105
Shoe. Ventilated	W. M. Helbach	479,805	Aug. 2	47	620	60	591
Shoe. Waterproof	E. Roche	483,289	Sept. 27	2240	11	60	1813
Shoes, gloves, &c., and lace therefor. Fastening for	P. Koppenhöfer	479,218	July 19	1778	566	60	373
Shopping-bag. Lady's	H. C. Milligan	481,116	Aug. 16	2185	446	60	1029
Shoulder-brace	W. J. Teufel	482,768	Sept. 20	1406	541	60	1635
Shovel	P. Poulson	481,972	Sept. 6	76	347	60	1349
Show-case	J. C. Loughry	478,619	July 12	853	20	60	184
Shutter-bower	H. Reichwein	480,136	Aug. 2	604	209	60	697
Shutter-fastener	G. H. Glad	481,111	Aug. 16	2179	539	60	1098
Shutter-fastener	E. W. Hagee	482,946	Sept. 6	528	540	60	1437
Shutter-fastener	C. L. Walters	482,111	Sept. 6	307	196	60	1395
Shutter. Fire-protecting	W. H. Brodie	480,394	Aug. 9	1042	72	60	791
Shutter stand. Window	A. D. Webster	480,771	Sept. 20	1400	262	60	1635
Shutter-worker	J. S. Patten	482,562	Sept. 13	1081	348	60	1560
Shutter-worker	E. H. Price	479,155	July 19	1677	262	60	354
Shutter-worker	N. Saltmarsh	481,705	Aug. 30	3169	419	60	1245
Sieve	W. L. Armstrong	478,976	July 19	1399	774	60	303
Sieve-surface	O. Schnelle	483,170	Sept. 27	2032	347	60	1773
Sifter	J. Charlesworth	482,545	Sept. 13	1055	514	60	1555
Sifter. Flour	I. M. Ingram	482,576	Sept. 13	1099	256	60	1563
Sifter. Hand	J. R. Storie	482,511	Sept. 13	990	366	60	1543
Sign-board. Interchangeable	I. Emmer	480,255	Aug. 9	809	240	60	748
Sign having ornamental letters or designs in relief formed of a composite material and making the same	E. E. M. Mandigo	480,371	Aug. 9	1003	308	60	785
Sign. Lamp-post	C. F. Knechler	479,006	July 19	1446	252	60	311
Signal:							
See Fog-signal. Railway-signal. Railway-switch signal. Railway time-signal. Semaphore-signal. Torpedo-signal. Train-signal.							
Signal and stand	G. T. Brown	483,420	Sept. 27	2434	359	60	1849
Signal apparatus. Individual alarm	P. Seller	479,308	July 19	1909	612	60	1849
Signal-compensator	J. J. Turner	479,230	July 19	1795	477	60	399
Signal-compensator	J. J. Turner	479,380	July 19	2040	450	60	376
Signal-light	H. Cochran	479,164	July 19	1690	509	60	425
Signal-rocket for vessels	T. W. Hand and W. Teale	480,012	Aug. 2	396	423	60	357
Signal-sounding device. Coin	C. W. Holbrook	481,903	Aug. 30	3506	98	60	657
Signal-timing apparatus	H. A. Chase	481,613	Aug. 30	3027	859	60	1310
Signal-wires. Compensator for	S. W. Babcock	481,922	Sept. 6	3	740	60	1217
Signaling apparatus. Electric	W. L. Denio	478,789	July 12	1114	1	60	1335
Signaling apparatus. Electric	A. J. Wilson	479,928	Aug. 2	236	275	60	236
Signaling apparatus. Train	J. M. Henry and R. B. Wilson	482,126	Sept. 6	331	276	60	628
Signaling apparatus. Train	H. R. Mason	483,256	Sept. 27	2196	59	60	1400
Signaling apparatus. Train	H. R. Mason	483,257	Sept. 27	2199	592	60	1804
Signaling device	R. T. Bowne	479,396	July 26	2076	553	60	1804
Signaling-system indicator. Electrical	C. F. Gillette	478,324	July 5	412	591	60	446
Silk-manufacturing machinery	L. Dimock	483,284	Sept. 27	2238	99	60	83
Silk or other fibers. Apparatus for degumming	W. H. Whiteley	483,335	Sept. 27	2314	562	60	1811
Siphon	J. Hilditch	478,108	July 5	46	563	60	1825
Siphon. Elevating	E. Etève and J. Lemichel	479,411	July 26	2099	581	60	11
Sirup-gage	J. E. Jacobs	478,330	July 5	421	526	60	450
Skate	W. Nielson	480,610	Aug. 9	1376	102	60	24
					342	60	857

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Skate	J. Warner	480,051	Aug. 2	472	121	60	672
Skate. Roller	J. Carrie	482,721	Sept. 20	1321	323	60	1619
Skewer or needle for closing fowls, &c	E. Musso	482,969	Sept. 20	1713	432	60	1696
Skewer-pointing machine	J. H. and H. L. Berst	483,205	Sept. 27	2089	530	60	1784
Skins, &c. Apparatus for scouring and washing	T. Burns	478,499	July 5	667	163	60	132
Skins, &c. Machine for treating	O. Potelunc	479,460	July 26	2191	549	60	470
Skirt-elevator	J. Asten	478,076	July 5	1	1	60	3
Skirt-supporter	G. V. Smith	480,523	Aug. 9	1239	311	60	830
Skiving machine. Counter	M. C. Bowman, A. F. Rose, and C. B. Morse.	483,500	Sept. 27	2553	640	60	1872
Slabs, &c. Apparatus for making	A. McLean	478,757	July 12	1054	259	60	225
Sled. Bob	S. F. Sparr	481,643	Aug. 30	3069	749	60	1226
Sled-brake	P. T. Denio	481,480	Aug. 23	2812	691	60	1160
Sled-brake	J. Wennberg	482,029	Sept. 6	177	42	60	1369
Sleigh	A. F. Pine	479,154	July 19	1677	419	60	354
Sleigh-brake	D. Collard	483,429	Sept. 27	2444	615	60	1851
Sleigh-runner. Detachable	C. G. Warner	480,302	Aug. 9	894	227	60	765
Sliding gate	D. Walker	480,155	Aug. 2	630	159	60	703
Sliding gate	M. L. Walters	480,755	Aug. 16	1610	404	60	918
Slipper	J. D. Chantler	483,346	Sept. 27	2149	544	60	1795
Smelting-furnace	J. S. Oliver	480,699	Aug. 9	1528	379	60	886
Smelting-furnace. Reverberatory	H. Mathey	481,703	Aug. 30	3165	773	60	1244
Smoke and spark arrester and consumer	E. J. Hadlock	483,055	Sept. 20	1846	469	60	1794
Smoke-burner	T. Lustig	478,447	July 5	594	144	60	117
Smoke-consumer	T. Gunning	482,124	Sept. 6	329	78	60	1399
Smoke-consumer	J. Sargent	481,719	Aug. 30	3201	782	60	1251
Smoke-consuming furnace	E. Cartwright	478,401	July 5	598	129	60	104
Smoke-consuming furnace	W. Oehlstrom	483,237	Sept. 27	2139	542	60	1793
Smoke-consuming furnace	R. L. Walker	479,100	July 19	1591	398	60	338
Smoke-excluding hood	C. Herlick	478,429	July 5	568	137	60	111
Smoke-preventer	C. Smith	480,630	Aug. 9	1416	353	60	865
Smoke-stack spark and cinder attachment	B. W. Sweet	478,296	July 5	369	90	60	74
Snap-hook	J. L. Cox	482,302	Sept. 6	624	149	60	1457
Snap-hook	W. R. Smeal	479,026	July 19	1479	368	60	317
Snap-hook	J. A. Trant	480,792	Aug. 16	1667	417	60	929
Snap-switch	F. D. Goold	480,722	Aug. 16	1564	390	60	907
Snap-switch	J. Hutchinson	480,948	Aug. 16	1905	476	60	977
Snatch-block	A. C. French	481,020	Aug. 16	2020	505	60	998
Snow-plow	A. B. Black	482,720	Sept. 20	1320	322	60	1618
Soap	H. J. and G. F. Ecker	480,840	Aug. 16	1730	.....	60	943
Soap	J. Gray and A Simmons	481,860	Aug. 30	3436	.....	60	1297
Soda-ash. Apparatus for reclaiming	L. D. Armstrong	480,702	Aug. 16	1538	383	60	901
Solar or other bath	W. H. Whiteley	478,385	July 5	604	122	60	100
Solder for aluminium	J. W. Richards	478,238	July 5	263	.....	60	57
Soldering clamp. Can	R. Clark	480,550	Aug. 9	1294	324	60	841
Soldering. Electric	E. Thomson	480,302	Aug. 9	1038	201	60	791
Soldering machine. Can	D. M. Monroe	483,234	Sept. 27	2133	540	60	1702
Soldering machine. Can	W. P. Quentell	479,174	July 19	1710	541	60	360
Sole	H. W. Merrill	481,909	Aug. 30	3523	802	60	1314
Sole	H. Wooding	481,682	Aug. 30	3132	764	60	1238
Sole-edge-burnishing machine	G. A. Knox	480,021	Aug. 2	420	105	60	661
Sole-edge-laying machine	E. C. Woodard	478,299	July 5	378	91	60	76
Sole-machine	M. V. Bresnahan and J. J. Heys	479,053	July 19	1518	378	60	325
Sole-machine	F. A. Bugbee	480,317	Aug. 9	920	232	60	769
Sole or heel plate	G. J. Davison	481,478	Aug. 23	2810	691	60	1160
Sole-pressing machine	W. E. Forster	478,420	July 5	556	135	60	109
Sole-trimming machine	J. R. Scott	483,393	Sept. 27	2398	603	60	1841
Solution of myrrh-resin and making the same	A. Fligge	479,935	Aug. 2	251	.....	60	630
Spade	P. Poulson	479,661	July 26	2500	623	60	527
Spark-arrester	J. F. Landreth	479,283	July 19	1873	469	60	393
Spark-arrester	F. B. Pope	478,359	July 5	470	114	60	93
Spark-arrester	H. C. Smith	478,207	July 5	215	54	60	44
Spark-arrester	E. W. Smith and C. Sax	480,390	Aug. 9	1034	259	60	790
Spatula	C. W. Fox	479,937	Aug. 2	252	62	60	631
Speaking-tube exchange	L. Stronse	478,380	July 5	498	121	60	98
Spear. Casing	J. Carruthers	479,933	Aug. 2	249	61	60	630
Spectacles	M. W. Davis	481,552	Aug. 30	2934	720	60	1200
Speed-governor attachment	W. B. and H. F. Warner	479,040	July 19	1501	373	60	321
Speed-indicator	I. N. Lewis	480,107	Aug. 2	550	139	60	687
Sphere. Armillary	J. S. Slater	482,278	Sept. 6	582	139	60	1448
Spinal brace	C. G. Gümpel	479,326	July 19	1931	483	60	404
Spindle:							
See Spinning and twisting machine spindle. Spinning-machinery spindle.							
Spindle	J. Longinus	482,259	Sept. 6	551	131	60	1442
Spindle and flier	J. Baldner	480,163	Aug. 2	646	164	60	705
Spindle-driving device	W. G. Morrison	479,806	Aug. 2	184	45	60	618
Spindle ends. Machine for cutting	J. A. Williams	482,934	Sept. 20	1650	416	60	1684
Spindle-support	H. F. Woodmancy	480,985	Aug. 16	1972	493	60	989
Spindles. Means for driving	H. Greenwood	478,260	July 5	349	84	60	70
Spinning and twisting frames. Holder for rings in	J. H. Bennett	480,227	Aug. 2	758	192	60	726
Spinning and twisting machine spindle	H. F. Woodmancy	480,984	Aug. 16	1971	493	60	988

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Spinning and twisting machines. Traverse-motion for	R. Dawes	481,787	Aug. 30	3319	810	60	1275
Spinning frames. Traveler for ring	S. S. Fowler	478,256	July 5	315	811	60	63
Spinning-machine	L. D. Croes, E. Rodenbach-Mergaert, and J. Lapin.	482,003	Sept. 6	129	31, 32	60	1360
Spinning-machine	W. S. Hunter and W. H. Avis	481,278	Aug. 23	2485	612	60	1099
Spinning-machinery spindle	E. F. Krafft	482,091	Sept. 6	276	67	60	1390
Spinning mule. Cotton	C. A. Dam	478,738	July 12	1031	253	60	220
Spinning mule. Cotton	C. A. Dam	483,301	Sept. 27	2265	570	60	1816
Spinning-ring	J. Booth	483,297	Sept. 27	2260	569	60	1815
Spinning-spindle support	J. Blair	482,860	Sept. 20	1529	380	60	1661
Spirometer	H. G. Cady	482,336	Sept. 13	699	167	60	1496
Spirometer. Coin-controlled	O. D. Orvis	481,965	Sept. 6	63	16, 17	60	1347
Spittoon. Combustible pocket	J. Koehler	478,873	July 12	1232	306	60	259
Split wheel	C. M. Conradson	482,864	Sept. 20	1537	382	60	1662
Spoke-extractor	W. F. Bowe	481,342	Aug. 23	2589	636	60	1117
Spokeshave	E. D. White	483,294	Sept. 27	2255	567	60	1814
Spoke-tenon cutter	A. Bruner	481,469	Aug. 23	2795	687	60	1156
Spool-boring mechanism	J. M. Parker	479,173	July 19	1704	427	60	360
					428		
Spool-holder	E. Carpenter	479,554	July 26	2347	585	60	498
Spool-holder and thread-cutter. Combined	A. Eichhorn	480,455	Aug. 9	1147	287	60	810
Spoon	P. C. Goodwin	483,379	Sept. 27	2381	597	60	1838
Spoon-blank-swaging die	H. C. Hart	478,860	July 12	1218	302	60	257
Sporting-trap	R. S. Pease	480,130	Aug. 2	591	150	60	695
					151		
Spraying-machine	F. Salisbury	481,718	Aug. 30	3197	781	60	1250
Spring: *See* Bicycle-saddle spring. Door-spring. Vehicle-spring.							
Spring	G. L. Potter	481,971	Sept. 6	75	20	60	1349
Spring bending and forming machine	E. W. Ansted	483,094	Sept. 20	1907	482	60	1736
Spring-coiling machine. Spiral	J. Vermeulen	481,443	Aug. 23	2750	676	60	1148
Spring-motor	J. F. Lang and J. W. Roper	481,714	Aug. 30	3182	777	60	1248
					778		
Springs. Machine for knotting the ends of spiral	P. Fraser	481,396	Aug. 23	2675	656	60	1132
					657		
Springs. Machine for making spiral	P. Fraser	481,395	Aug. 23	2668	654	60	1131
					655		
					656		
Springs. Shackle for coupling	C. E. Dobbins	481,107	Aug. 16	2174	538	60	1026
Sprinkler: *See* Automatic sprinkler. Lawn-sprinkler.							
Sprinkler	J. B. Haberle	479,506	July 26	2281	570	60	486
Sprinkler	J. R. Steitz	480,047	Aug. 2	467	118	60	671
Sprinkler-heads. Device for plugging	J. R. Steitz	480,048	Aug. 2	468	119	60	671
Sprinkler system	G. E. Wright	478,181	July 5	174	45	60	37
Sprinkling apparatus	W. C. Shaffer	480,747	Aug. 16	1598	401	60	915
Sprinkling device	G. S. Glenn	479,979	Aug. 2	322	79	60	643
Sprout-puller	J. L. Sardy	481,873	Aug. 30	3455	847	60	1300
					848		
Square. Adjustable T	G. T. Cull	481,897	Aug. 30	3498	857	60	1308
Square. Folding	R. McCheseney	483,499	Sept. 27	2533	637	60	1869
Square. Separable	W. H. Goldsberry	482,900	Sept. 20	1609	403	60	1675
Squaring metallic boxes, frames, &c. Machine for	F. F. Poole	481,637	Aug. 30	3061	747	60	1224
Stage. Balanced	J. Baum	481,998	Sept. 6	116	29	60	1358
Stair-builder's tool	M. Richter	478,467	July 5	623	151	60	123
Stairs, &c. Tread for	W. T. Gagnebin	482,350	Sept. 13	730	175	60	1493
Stalk-cutter	J. and J. Mason and W. S. Codner	481,702	Aug. 30	3164	773	60	1244
Stamp-affixing machine	H. W. Allen	478,676	July 12	933	232	60	200
Stamp. Coin-actuated	W. M. Gray	483,250	Sept. 27	2155	546	60	1797
Stamp. Hand	H. W. Rosenbaum and E. Neubert	480,966	Aug. 16	1940	485	60	992
Stamp. Hand	H. Baumgarten	479,199	July 19	1751	439	60	367
Stamp. Hand	T. S. Buck	483,343	Sept. 27	2323	584	60	1827
Stamp holder. Postal	F. C. Lidke	481,362	Aug. 23	2614	643	60	1121
Stamp or label affixer	B. Pickering	480,509	Aug. 9	1221	306	60	826
Stamp. Post-office hand	W. B. Shafer	478,764	July 12	1070	266	60	228
Stamp. Registering	E. J. Brooks	481,296	Aug. 23	2519	619	60	1104
Stamp. Registry	H. W. Rosenbaum and E. Neubert	480,965	Aug. 16	1918	485	60	992
Stamp. Rotary hand	F. A. Lovecraft	480,819	Aug. 16	1714	426	60	938
Stamp-shoes. Die-holder and die for making	G. A. Picknp and W. J. Towry	481,969	Sept. 6	72	19	60	1349
Stamp. Steam	J. Wilson, Sr.	481,067	Aug. 16	2136	522	60	1020
Stamp. Steam	E. S. Brett	478,393	July 5	513	125	60	101
Stamp. Steam-power	C. W. Tremain	480,223	Aug. 2	752	190	60	724
	C. A. Marlitt	480,332	Aug. 9	940	238	60	773
					239		
Stamp. Time	S. H. Hoggson	483,151	Sept. 27	1992	505	60	1764
					506		
Stanchion. Cattle	J. Wasson	481,987	Sept. 6	99	25	60	1354
Stand: *See* Barrel-stand. Blacking-stand. Bottle-stand. Can-stand. Folding stand. Switch-stand. Umbrella-stand. Wash-stand.							
Stand for beer-glasses, &c	E. Weigel	482,603	Sept. 13	1137	274	60	1571
Stands. Folding base for	S. E. Reutter	480,346	Aug. 9	962	243	60	777
Standard	L. T. Stanley	480,749	Aug. 16	1602	401	60	916
Staple-driving implement	E. A. Porter	481,970	Sept. 6	74	19	60	1349
Staple forming and driving machine	T. L. Knudtson and J. Uhri	483,254	Sept. 27	2186	550	60	1802
					551		
Staples. Device for holding metallic	W. J. Brown	483,374	Sept. 27	2368	593	60	1836
Stapling implement	G. Hay	482,357	Sept. 13	741	178	60	1495
Stapling-machine attachment	H. E. Cunningham	481,786	Aug. 30	3318	810	60	1275
Starch and making the same. Perfumed	F. C. Norfolk	480,669	Aug. 9	1479	.....	60	876

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Starching-machine	C. T. Ray	480,344	Aug. 9	958	242	60	776
Steam and hot air. Apparatus for producing mixtures of	E. Field	479,707	July 26	2587	644	60	542
Steam, &c. Apparatus for recording and registering quantities of	F. Seiler	481,287	Aug. 23	2504	615	60	1102
					616		
Steam-boiler	G. L. Allen	478,677	July 12	934	232	60	200
Steam-boiler	H. F. Cook	478,690	July 12	950	236	60	204
Steam-boiler	O. Crosby	482,787	Sept. 20	1432	355	60	1640
Steam-boiler	D. Donahue	479,252	July 19	1831	459	60	384
Steam-boiler	E. F. Edgar	478,320	July 5	407	98	60	82
Steam-boiler	G. Lentz	481,796	Aug. 30	3334	813	60	1277
					814		
					815		
Steam-boiler	M. H. Plunkett	482,384	Sept. 13	788	189	60	1504
Steam-boiler	J. Pollock	482,459	Sept. 13	904	219	60	1524
Steam-boiler	M. Scovel	479,023	July 19	1473	366	60	316
					367		
Steam-boiler	F. T. Stevens	480,880	Aug. 16	1798	450	60	956
Steam-boiler	A. Stirling	479,678	July 26	2535	631	60	533
Steam-boiler and boiler-furnace	S. Runser	482,197	Sept. 6	452	109	60	1424
Steam-boiler and furnace	R. Müller	483,260	Sept. 27	2306	554	60	1805
Steam-boiler. Sectional	G. P. Steel	478,208	July 5	216	54	60	44
Steam-engine	M. A. Beck	483,127	Sept. 27	1955	496	60	1757
Steam-engine	W. E. Good	482,038	Sept. 6	187	45	60	1372
Steam-engine	J. C. Henderson and F. A. Phelps, Jr.	480,946	Aug. 16	1900	475	60	976
					476		
Steam-engine	J. D. Jackson	482,089	Sept. 6	273	66	60	1389
Steam-engine	J. W. Powers	483,014	Sept. 20	1791	452	60	1712
Steam-engine	T. Scheffler	480,213	Aug. 2	735	185	60	721
					186		
Steam-engine	C. W. Tremain and S. Johnson	480,153	Aug. 2	627	159	60	702
Steam-engine. Compound	R. Berg	482,116	Sept. 6	315	74, 75	60	1397
Steam-generator	H. C. Fish	480,365	Aug. 9	991	250	60	783
Steam-generator	H. Goering	480,719	Aug. 16	1561	389	60	907
Steam-generator	E. A. Magee	479,009	July 19	1452	360	60	312
					361		
Steam-generator	G. W. Sloane	481,069	Aug. 16	2113	526	60	1015
Steam-generator	T. L. and T. J. Sturtevant	480,417	Aug. 9	1078	270	60	797
Steam-power. Generation of	C. C. Peck	479,454	July 26	2179	545	60	467
Steam-trap	W. C. Baker	481,098	Aug. 16	2158	537	60	1024
Steam-trap	J. McKellar	481,507	Aug. 23	2849	700	60	1168
Steam-trap	N. Nilson	483,119	Sept. 20	1942	491	60	1744
Steam-trap	C. Taylor	481,601	Aug. 30	3011	736	60	1214
Steamer	V. F. Fagg	481,940	Sept. 6	32	7	60	1340
Steamer, lawn, or invalid chair	D. Parks	481,119	Aug. 16	2191	542	60	1030
Steaming or tempering grain. Device for	R. L. Rodman	482,590	Sept. 13	1119	270	60	1568
Steering-gear. Electric	E. H. Mumford	479,828	Aug. 2	85	21, 22	60	598
Stencils. Apparatus for making	E. de Zuccato	478,301	July 5	380	92	60	76
Stencils. Method of and apparatus for producing	J. L. Young	478,675	July 12	930	231	60	200
Step. Movable	F. Forster	482,572	Sept. 13	1094	266	60	1563
Stereopticons, magic lanterns, &c. Attachment for	H. W. Force	482,238	Sept. 6	513	122	60	1435
Still. Water	J. Petterson and L. H. Liebeck	478,458	July 5	606	148	60	120
Stirrup	R. H. Dacus	482,996	Sept. 20	1757	443	60	1705
Stirrup	E. A. Peacock	478,633	July 12	871	214	60	188
Stitching with staples. Machine for	R. Burnet	481,747	Aug. 30	3252	792	60	1261
Stocking	H. C. McClurg	482,095	Sept. 6	280	68	60	1391
Stocking-ribs. Device for transferring	F. Lasher	478,613	July 12	845	208	60	183
Stockings. Assortment of	W. H. Howard	478,751	July 12	1046	257	60	223
Stone and ore crushing machine	E. H. Booth	480,761	Aug. 16	1618	406	60	920
					407		
Stone. Blasting	G. M. Githens	479,500	July 26	2268	568	60	483
Stone. Composition of matter for artificial	J. E. Keseling and C. Fuchs, Jr	482,367	Sept. 13	755	.....	60	1498
Stone, &c. Composition of matter for cleaning brown-	H. J. and G. F. Ecker	483,143	Sept. 27	1980	.....	60	1762
Stone. Composition of matter for the manufacture of artificial	J. E. Keseling and C. Fuchs, Jr	480,591	Aug. 9	1346	.....	60	851
Stone. Composition of matter for the manufacture of artificial	J. E. Keseling and C. Fuchs, Jr	481,279	Aug. 23	2488	.....	60	1100
Stone-crusher elevator	I. P. Cribb	480,490	Aug. 9	1193	300	60	820
Stone cutting and dressing machine	J. Rawle	482,098	Sept. 6	284	69	60	1392
Stone cutting and dressing machine	J. Rawle	482,099	Sept. 6	288	69	60	1392
Stone-molding machine	W. H. Evans	478,226	July 5	256	62, 63	60	52
Stone paving-block. Artificial	F. Haines	481,352	Aug. 23	2602	639	60	1119
Stone paving-block. Artificial	F. Haines	481,353	Aug. 23	2604	640	60	1120
Stone paving-block. Artificial	F. Haines	481,354	Aug. 23	2605	640	60	1120
Stone slabs. Machine for molding	W. H. Evans	478,227	July 5	257	63, 64	60	52
Stool	P. H. Fuhrmann	482,553	Sept. 13	1070	260	60	1558
Stool and coal-receptacle. Combined	F. Bornemann	482,912	Sept. 20	1625	407	60	1678
Stop-motion for textile machinery. Electric	S. L. Foster	479,358	July 19	2003	501	60	418
Stopper: *See* Bottle-stopper. Can or vessel stopper. Inkstand-stopper. Screw-stopper.							
Stopper-extractor	R. Puccini	480,414	Aug. 9	1072	268	60	797
Storage-battery	P. Kennedy and C. J. Diss	482,043	Sept. 6	196	47	60	1374
Storage-battery	P. Kennedy and C. J. Diss	482,044	Sept. 6	199	47	60	1374
Storage-battery	E. R. Knowles	482,979	Sept. 20	1796	436	60	1699
					437		
Storage-battery	E. P. Usher	480,883	Aug. 16	1802	450	60	956
Storage-battery	E. P. Usher	480,885	Aug. 16	1804	451	60	957
Storage-rooms. Construction of	W. Griesser	482,889	Sept. 20	1588	399	60	1671
Store-service apparatus	J. J. Crist	481,346	Aug. 23	2594	637	60	1118
					638		
Store-service apparatus	J. H. Goodfellow	479,502	July 26	2270	569	60	484

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Store-service apparatus	J. H. Goodfellow	479,503	July 26	2275	569	60	485
Store-service apparatus	J. H. Goodfellow	479,504	July 26	2277	569, 570	60	485
Store-service apparatus	J. H. Goodfellow	479,505	July 26	2279	570	60	485
Store-service apparatus	C. W. McCormick	482,646	Sept. 13	1195	289, 290	60	1581
Stove	I. De Haven	481,226	Aug. 23	2386	588	60	1081
Stove	J. Fischer and E. Preiser	479,210	July 19	1766	443	60	370
Stove and draft-regulator therefor. Heating-	F. H. Riepe, Jr., and C. E. Hilgeman	481,870	Aug. 30	3450	846	60	1300
Stove and furnace. Combined	C. Brandt	482,466	Sept. 13	911	222	60	1526
Stove ash-box	L. Kahn and R. Christ	478,334	July 5	425	104	60	85
Stove attachment	W. Price	480,828	Aug. 16	1727	431	60	941
Stove-base. Auxiliary	J. D. Rasey	480,212	Aug. 2	734	185	60	721
Stove broiler attachment	T. P. Dunne	480,076	Aug. 2	508	129	60	679
Stove. Combined cooking and hot-water-heating	M. A. Wilcox	482,772	Sept. 20	1410	348, 349	60	1635
Stove. Cook	W. L. McDowell	478,807	July 12	1146	283, 284	60	243
Stove. Cooking, heating, and illuminating lamp	J. F. Myers	481,768	Aug. 30	3291	801	60	1209
Stove. Culinary and heating oil	V. E. Randall	481,511	Aug. 23	2854	701	60	1169
Stove-flue cleaner	T. B. Mothershed	479,447	July 26	2165	541	60	465
Stove for bricks, &c. Drying	A. Schaaf	483,018	Sept. 20	1797	453	60	1713
Stove for heating ovens for japanning, enameling, and glazing	T. M. Lincoln	482,485	Sept. 13	944	230	60	1532
Stove. Gas	J. B. Michener	482,094	Sept. 6	279	68	60	1390
Stove. Gas heating	E. Rund	483,086	Sept. 20	1893	479	60	1733
Stove-grate	C. L. Beers	483,295	Sept. 27	2257	568	60	1814
Stove-grates. Fuel-saving attachment for	A. Stocker	479,536	July 26	2318	579	60	494
Stove. Lamp	B. F. Brown	480,395	Aug. 9	1043	262	60	702
Stove. Oil	D. Balsley	480,544	Aug. 9	1275	320	60	837
Stove. Oil	W. M. Bowman and E. F. Shaw	482,539	Sept. 13	1042	252	60	1552
Stove or warm-air furnace	W. H. Turner	483,187	Sept. 27	2061	520, 521	60	1778
Stovepipe	G. G. Calderwood	483,207	Sept. 27	2092	530	60	1785
Stovepipe	T. S. Evans	481,856	Aug. 30	3431	842	60	1296
Stovepipe collar and fastener	A. D. and C. J. Grubb	483,441	Sept. 27	2461	619	60	1854
Stovepipe-coupling	F. P. Hart	481,026	Aug. 16	2028	506	60	1000
Stovepipe drying-rack	L. M. Dowler	480,658	Aug. 9	1461	363	60	873
Stovepipe-fastener	J. R. McGoron	482,808	Sept. 20	1453	361	60	1645
Stovepipe-fastener	C. Rusch	479,844	Aug. 2	103	26	60	602
Stovepipe-fastening	J. H. Johnston	478,965	July 12	1378	339	60	286
Stovepipe-holding device	C. F. Spencer	479,313	July 19	1917	479	60	400
Stovepipes. Elbow for facilitating the cleaning of	O. G. Cranston	480,173	Aug. 2	661	168	60	708
Stove. Portable	F. T. Schneider	478,820	July 12	1173	290	60	248
Stove. Tile	R. Meyer	480,603	Aug. 9	1367	339	60	854
Stove. Vapor	R. Flick	483,051	Sept. 20	1840	468	60	1723
Stove. Vapor	H. Ruppel	480,281	Aug. 9	856	218, 219	60	758
Stove. Vapor	L. Stockstrom	479,315	July 19	1919	479, 480	60	401
Stoves and furnaces. Means for securing glass plates in windowe of	L. C. Ballentine	478,904	July 12	1279	317	60	268
Stoves. Gas attachment for cooking	R. Bigley	478,558	July 12	770	188	60	168
Stoves or ranges. Oven-door for cooking	F. V. Knauss	483,117	Sept. 20	1939	491	60	1743
Stoves. Oven for oil, gas, or gasoline	H. F. Bartlett	478,211	July 5	219	55	60	45
Stoves. Valve for hot-blast	J. Kennedy	478,610	July 12	842	207	60	182
Stoves. Wick-tube for oil	R. Z. Liddle	480,268	Aug. 9	840	214	60	755
Strainer. Lid	H. S. Diack	481,166	Aug. 23	2389	564	60	1062
Straw and ensilage cutter	C. A. Pettet	480,508	Aug. 9	1221	305	60	826
Strawberry-vine cutter	W. H. Starks	479,996	Aug. 2	368	91	60	651
Straw-burner	G. A. Byor	482,862	Sept. 20	1532	381, 382	60	1662
Straw-cutter	J. Raatz	482,413	Sept. 13	828	198, 199	60	1511
Straw-stacker	J. R. Cooper	482,080	Sept. 6	258	62, 63	60	1386
Straw-stacker	C. E. Gaumer	483,213	Sept. 27	2098	532, 533	60	1786
Straw-stacker	L. D. Wells	482,513	Sept. 13	992	240	60	1543
Street-sweeper	H. F. Palmer	481,054	Aug. 16	2075	517, 518	60	1009
Street-sweeping machine	S. H. Rathburn	482,196	Sept. 6	451	109	60	1423
Street-sweeping machine	A. Voelkle	482,663	Sept. 13	1218	297	60	1586
Stringed instruments. Pick for	H. G. A. Smith	479,672	July 26	2522	628	60	531
Structural blank	E. C. Smith	481,207	Aug. 23	2349	578, 579	60	1074
Structure. Circular-roofed	C. Cunningham, Jr	481,347	Aug. 23	2597	638	60	1118
Studs, &c. Machine for closing the edges of	F. Mossberg	478,517	July 5	700	170	60	139
Stuffing-box	C. K. Longenecker	481,406	Aug. 23	2689	660	60	1135
Stump-extractor	P. Hansen	481,944	Sept. 6	36	8, 9	60	1341
Stump or rock extractor	O. S. Dietrich	479,974	Aug. 2	315	77	60	642
Submarine grapple	W. D. Walsh and J. A. Dowling	480,640	Aug. 9	1430	356	60	868
Sugar-mill feed-chute	J. Fisher	482,065	Sept. 6	267	64	60	1388
Sugar solutions. Apparatus for clarifying	E. W. Deming	479,250	July 19	1829	459	60	383
Sugar-washing apparatus	R. P. Johnson	482,179	Sept. 6	426	101	60	1418
Sulky	J. B. Armstrong	482,114	Sept. 6	312	74	60	1396
Sulky	E. S. Frazier	481,556	Aug. 30	2940	722	60	1202
Sulphur, carbonate of soda, and iron oxide. Recovering	G. Lunge and J. Dewar	480,109	Aug. 2	553	.....	60	688
Supporter: *See* Garment-supporter. Skirt-supporter. Hat-supporter. Umbrella-supporter.							
Supporting fixtures. Device for	J. T. Robb	480,744	Aug. 16	1595	400	60	915
Surface-gage	C. Neri	480,959	Aug. 16	1928	482	60	980
Surf-boat. Safety	W. C. Soule	478,650	July 12	894	221	60	193

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Surgical appliance	J. A. Vance	480,911	Aug. 16	1850	460	60	966
Surgical instrument	S. V. Bates	480,165	Aug. 2	649	164	60	706
Suspended rack	J. J. Newberry	479,523	July 26	2301	575	60	490
Suspender-end	C. C. Krouse, H. E. Myers, and C. L. Girard.	478,337	July 5	428	104	60	86
Suspender-end attachment	J. Lees, Jr.	481,360	Aug. 23	2612	642	60	1121
Suspender-end clasp	C. C. Krouse, H. E. Myers, and C. L. Girard.	478,339	July 5	430	105	60	86
Suspenders	J. P. Galvin	478,958	July 12	1362	336	60	284
Suspenders	E. Gutmann	482,963	Sept. 20	1702	430	60	1694
Suspenders	J. Katzenberg	478,335	July 5	426	104	60	85
Suspenders	C. C. Krouse, H. E. Myers, and C. L. Girard.	478,338	July 5	429	105	60	86
Suspension device	G. W. Baldwin	481,157	Aug. 23	2275	561	60	1059
Swaging-machine	J. Berry	480,228	Aug. 2	759	192	60	736
Swaging-machine	C. H. Yarington	483,091	Sept. 20	1901	480, 481	60	1735
Sweeping-machine	C. Bruso	480,231	Aug. 2	763	193	60	736
Sweeping-machine	E. O. Pease	478,942	July 12	1336	332	60	279
Swing	C. C. and I. Z. Alexander	482,217	Sept. 6	485	116	60	1430
Swing	J. H. Nicholson	479,524	July 26	2302	575	60	490
Swing	J. B. Sweetland	481,439	Aug. 23	2745	675	60	1147
Swinging bracket. Adjustable	N. R. Streeter	482,207	Sept. 6	469	112	60	1427
Swinging gate	M. Anderson	482,218	Sept. 6	487	116	60	1430
Swinging gate	J. D. White	479,905	Aug. 2	194	48	60	620
Switch: *See* Circuit-switch. Railway-switch. Cut-out switch. Safety-switch. Electric switch. Snap-switch. Electrolytic switch. Trolley-switch.							
Switch and signal apparatus	J. G. Schreuder	479,225	July 19	1787	448	60	374
Switch and signal apparatus	J. G. L. Schreuder	479,666	July 26	2514	635, 636	60	530
Switch and signal rods. Deflection-stand for	H. Williams	479,906	Aug. 2	195	48, 49	60	690
Switch-shifter	J. Gilstrap and M. L. Brown	483,053	Sept. 20	1844	468	60	1794
Switch-stand	V. J. Goetz	479,268	July 19	1852	464	60	388
Switch-stand	S. Jobe	482,870	Sept. 20	1550	387	60	1665
Syringe	F. W. Snow	480,676	Aug. 9	1487	370	60	878
Syringe	J. A. Flexner	478,583	July 12	804	198	60	175
Syringe and air-cushion. Combined fountain-	G. F. Miles	478,703	July 12	965	239	60	207
Syringe-case	J. P. Schan	480,785	Aug. 16	1658	414	60	927
Syringe. Vaginal	A. B. Botsford	478,081	July 5	12	3	60	5
Syringe. Vaginal	J. D. Kirkwood	478,872	July 12	1231	305	60	259
Table: *See* Coin-table. Ironing-table. Extension-table. Telescope table. Folding table. Wall-table.	J. H. Morrison	478,202	July 5	209	52	60	43
Table and embroidery-frame	M. Schmirk	478,891	July 12	1260	312	60	264
Table-leg fastening	L. Welker	480,536	Aug. 9	1262	317	60	835
Tablet. Memorandum	G. H. Seymour	481,429	Aug. 23	2728	671	60	1143
Tablet. Writing	F. Bentel	481,686	Aug. 30	3138	765	60	1239
Tablet. Writing	C. D. Crane	479,632	July 26	2458	612	60	519
Tack-driving mechanism	F. Chase	483,375	Sept. 27	2369	594	60	1836
Tacking implement. Hand	N. Lombard	481,653	Aug. 30	3066	753	60	1229
Tag	T. C. Barnum	478,185	July 5	180	47	60	38
Tag-fastener	O. E. Abbey	481,382	Aug. 23	2651	650	60	1128
Tag for cloth-boards	J. V. Moore	478,938	July 12	1332	331	60	279
Tag-holder	I. J. True	483,314	Sept. 27	2283	573	60	1819
Tally-sheet	A. L. Nichols	479,449	July 26	2166	542	60	465
Tank: *See* Flush-tank.							
Tank	H. L. Lipman	479,602	July 26	2412	601	60	510
Tank-feeder	M. Burt and J. W. Skilton	482,617	Sept. 13	1160	280, 281	60	1575
Tannic extracts. Purifying	G. Delvaux	483,141	Sept. 27	1978	.....	60	1761
Tanning-extracts. Making	W. C. Tiffany	480,376	Aug. 9	1011	.....	60	786
Tap. Collapsible	W. W. Doolittle	481,648	Aug. 30	3077	751	60	1228
Tap. Pipe	E. M. Wolfe	482,955	Sept. 20	1691	425	60	1691
Tapping mains. Machine for	W. S. Payne	478,711	July 12	975	242, 243	60	210
Tape-folding machine	J. A. Barrett	482,153	Sept. 6	381	89	60	1410
Tea and fruit drier	B. L. Ryder	478,134	July 5	79	21	60	18
Tea-kettle	V. C. Baker	482,972	Sept. 20	1718	433	60	1697
Teaching chemistry. Appliance for	J. Osorio	480,275	Aug. 9	848	216	60	757
Telegraph. Duplex	T. A. Edison	480,567	Aug. 9	1305	326	60	844
Telegraph. Fac-simile	T. A. Edison and P. Kenny	479,184	July 19	1728	433, 434	60	363
Telegraph. Fire-alarm	A. J. Coffee	481,847	Aug. 30	3415	838	60	1293
Telegraph indicator. Fire-alarm	F. F. Loomis	479,950	Aug. 2	272	67	60	634
Telegraph-instrument. Mechanical	B. F. Butler	479,782	Aug. 2	13	3	60	585
Telegraph-key	A. E. McClaren	480,475	Aug. 9	1173	295	60	816
Telegraph-key	A. F. Tucker	479,859	Aug. 2	125	31	60	607
Telegraph-key and circuit-closer. Combined	W. F. Lott	481,114	Aug. 16	2183	541	60	1029
Telegraph key and sounder. Combinod	D. J. Ludwig	482,129	Sept. 6	335	80	60	1400
Telegraph-keys. Automatic circuit-closer for	C. W. Bradford	480,689	Aug. 9	1512	376	60	882
Telegraph. Printing or recording	Z. T. Lillard and U. Erhard	482,015	Sept. 6	152	37, 38	60	1365
Telegraph-relay	W. Maver, Jr.	482,440	Sept. 13	877	210	60	1519
Telegraph. Ship's	A. B. W. H. Cords	481,223	Aug. 23	2381	586, 587	60	1080
Telegraph. Signal	C. V. Boughton	482,780	Sept. 20	1422	352	60	1638
Telegraph-transmitter	C. Willoughby	480,644	Aug. 9	1438	358, 359	60	869
Telegraphic repeater	R. H. Weiny	479,178	July 19	1718	431	60	361

Telephone-exchange apparatus	A. S. Hibbard	482,174	Sept. 6	419	100	60	1417
Telephone-exchange system. Multiple-switchboard	C. E. Scribner	481,678	Aug. 30	3125	763	60	1236
Telephone. Mechanical	W. J. Bowen	481,133	Aug. 16	2211	547	60	1034
Telephone-repeater	T. A. Edison	478,743	July 12	1037	255	60	221
Telephone speaking attachment	D. Eldredge	479,062	July 19	1531	382	60	327
Telephone-switchboard	W. Oesterreich	479,107	July 19	1601	400, 401	60	340
Telephone system	R. N. Dyer	481,483	Aug. 23	2816	692	60	1161
Telephony	J. W. Gibboney	481,529	Aug. 23	2888	709	60	1176
Telephony. System of	G. F. Shaver	479,227	July 19	1792	447	60	375
Telescope table	E. Thomson	481,878	Aug. 30	3461	849	60	1302
Telltale for electrolytic refineries	C. Jonas and I. Bauch	480,368	Aug. 9	908	251	60	783
Temperature. Apparatus for automatically regulating	F. B. Badt	482,148	Sept. 6	370	88	60	1408
Temperature-regulator	A. Shiels	478,373	July 5	489	117, 118	60	96
Tenoning-machine	W. H. Kilbourn	479,761	July 26	2683	666	60	561
Tent	G. W. Bugbee and F. Danner	479,389	July 19	2059	514, 515	60	429
Terret. Harness	G. N. Duncan	481,014	Aug. 16	2009	502	60	996
Testing device. Strength	F. Park	478,632	July 12	871	214	60	188
Theatrical appliance	P. J. Dooling	482,923	Sept. 13	1168	282	60	1516
Therapeutical coating	J. Herrera y Gutierrez	479,001	July 19	1441	358	60	310
Thermal alarm	L. O. Helmers	478,100	July 5	44	.....	60	11
Thermometer-case	H. F. Maxim and J. M. Price	478,701	July 12	961	239	60	207
Thermometer. Indicating	J. D. Ward	482,050	Sept. 6	200	50	60	1376
Thermometer-scale	A. T. Rapkin and F. Cossor	483,365	Sept. 27	2350	591	60	1892
Thermostat	F. Brandt	478,984	July 19	1411	349	60	305
Thermostat	I. F. and F. C. Beers	483,339	Sept. 27	2317	582	60	1826
Thermostat. Adjustable	T. W. Shepherd	479,849	Aug. 2	111	28	60	604
Thermostat. Electrical	M. D. Compton	482,420	Sept. 13	842	202	60	1513
Thill-coupling	W. L. Dento	478,788	July 12	1113	275	60	236
Thill-coupling	G. H. Allen	478,678	July 12	936	232	60	201
Thill-coupling	J. C. Bailey	480,648	Aug. 9	1444	360	60	870
Thill-coupling	J. N. Berry	480,244	Aug. 9	789	201	60	743
Thill-coupling	A. A. Froehlich	478,957	July 12	1361	335	60	984
Thill-coupling	H. Greenland and J. C. Carrick	483,440	Sept. 27	2460	619	60	1854
Thill-coupling	W. H. Hannan. (Reissue)	11,260	Aug. 16	2267	550	60	1043
Thill-coupling	J. A. Kirby	480,772	Aug. 16	1639	410	60	924
Thill-coupling	J. E. Miller	481,961	Sept. 6	59	14	60	1346
Thill-coupling	J. V. Myers	483,261	Sept. 27	2206	554	60	1805
Thill-coupling	R. D. Patton	480,622	Aug. 9	1402	349	60	862
Thill coupling	H. A. Sevigne	481,064	Aug. 16	2108	524	60	1014
Thill-coupling	A. L. Straw	481,436	Aug. 23	2740	674	60	1146
Thill-coupling	S. A. Whitfield	480,052	Aug. 2	475	120	60	673
Thill couplings. Anti-rattler for	W. C. Williams	479,146	July 19	1667	416	60	352
Thill-support	C. A. Carman	481,549	Aug. 30	2924	719	60	1198
Thill. Vehicle	J. A. Bean	480,652	Aug. 9	1450	361	60	871
Thrasher. Bean	W. Patterson and L. Swenson	480,129	Aug. 2	590	150	60	695
Thrasher. Flax	P. Bourgin	481,841	Aug. 30	3408	836	60	1291
Thrashing and separating machine. Grain	J. M. Smith	478,542	July 5	746	182	60	148
Thrashing-cylinder	A. B. Farquhar, H. W. Eisenhart, and S. S. Morton.	480,660	Aug. 9	1465	364, 365	60	874
Thrashing-machine	S. Hamilton	481,864	Aug. 30	3442	845	60	1298
Thrashing-machine	W. Alpert	480,484	Aug. 9	1187	298	60	819
Thrashing-machine	O. Anderson	482,494	Sept. 13	968	234, 235	60	1538
Thrashing-machine	J. N. Wilson	482,709	Sept. 13	1298	317, 318	60	1603
Thrashing-machine and grain-separator. Combined	J. Galland	482,554	Sept. 13	1071	260	60	1558
Thrashing-machine attachment	A. Reason	479,156	July 19	1679	420	60	354
Thrashing-machine band-cutter and feeder	C. F. Graham	478,996	July 19	1433	355, 356	60	308
Thrashing-machine band-cutter and feeder	J. W. Turner	479,477	July 26	2223	560, 561	60	476
Thrashing-machine belt-tightener	E. Huber	481,176	Aug. 23	2300	567	60	1064
Thrashing-machine fan and regulator	F. F. Landis	482,846	Sept. 20	1508	375	60	1657
Thrashing-machine feeder and cutter	F. Dworshak	480,254	Aug. 9	809	207	60	747
Ticket. Time-limit	J. H. Stedman	481,210	Aug. 23	2354	580	60	1075
Tickets. Excess-baggage stamp or check for railway-	T. M. Cunningham	478,923	July 12	1309	326	60	274
Tie: *See* Bale-tie. Railway-tie.							
Tie-plate and brace	W. H. Phillips	482,318	Sept. 6	664	158	60	1465
Tile	F. N. Marvick	479,442	July 26	2157	538	60	463
Tile	F. N. Marvick and J. Walter	479,441	July 26	2155	538	60	462
Tile	A. M. Strusholm	478,656	July 12	902	223	60	194
Tile	H. Sturm	483,180	Sept. 27	2049	517	60	1776
Tile. Illuminating	J. Jacobs	479,645	July 26	2477	616, 617	60	523

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Tile-molding apparatus	M. Scott	483,486	Sept. 27	2513	633	60	1864
Tile-press	A. M. Strusholm	479,749	July 26	2665	661, 662	60	557
Tile. Roofing	J. Rapp	478,171	July 5	160	41	60	34
Till-lock	H. Brav	478,392	July 5	512	124, 125	60	101
Till-lock	W. R. Van Vliet	478,607	July 12	1206	313	60	965
Tilting gate	A. J. Duck, W. S. Savidge, and G. W. Wolfe.	483,432	Sept. 27	2450	616	60	1858
Tilting seat	S. W. Peregrine	480,961	Aug. 16	1930	483	60	981
Time-alarm. Electric	J. Jacobi	478,865	July 12	1224	303, 304	60	256
Time-indicating apparatus. Electric	E. Weston	480,800	Aug. 16	1812	459	60	958
Time-lock	L. N. Bedford	478,212	July 5	220	55	60	45
Time-lock	L. N. Bedford	478,213	July 5	221	55	60	46
Time-lock attachment	J. X. Kaiser	481,572	Aug. 30	2965	738	60	1206
Timepiece setting mechanism	E. E. Ellis	478,321	July 5	408	98	60	82
Timepieces. Bearing for balance-staffs of	G. Newton	482,585	Sept. 13	1110	268	60	1566
Timepieces. Calendar attachment for	P. J. Johnson and J. H. Hamill	481,793	Aug. 30	3330	812	60	1277
Time-recorder. Watchman's electric	E. R. Heyser	482,251	Sept. 6	534	127	60	1438
Time-recorder. Watchman's electric	N. H. Raymond	483,308	Sept. 27	2273	572	60	1818
Time-recorder. Workman's	W. L. Bundy	482,203	Sept. 6	611	144, 145, 146	60	1454
Time-recorder. Workman's	J. C. Koch	478,284	July 5	354	86	60	71
Time systems. Method of and apparatus for testing circuits for electric	W. F. Gardner	480,576	Aug. 9	1315	329	60	846
Time-table. Perpetual train	J. I. Covington	483,138	Sept. 27	1974	500	60	1761
Tin can	E. E. Oerzen	479,015	July 19	1461	364	60	314
Tin can or receptacle	W. Pratt. (Reissue)	11,264	Aug. 16	2272	560	60	1044
Tin from other metals. Separating	I. A. F. Bang and M. C. A. Ruffin	483,245	Sept. 27	2148	544	60	1795
Tin-plate. Recovering tin from	M. R. Garcia	480,920	Aug. 16	1892	465	60	968
Tire. Bicycle	A. A. and H. C. Kupfer	481,038	Aug. 16	2048	511	60	1004
Tire. Cycle	T. H. Stone and H. Corser	481,435	Aug. 23	2739	674	60	1146
Tire. Elastic	C. Wagner	482,819	Sept. 20	1466	365	60	1648
Tire for cycles. Pneumatic	T. H. Hicks	483,492	Sept. 27	2522	635	60	1866
Tire for vehicle-wheels. Elastic	F. H. Bullard and F. Harrington	478,564	July 19	1757	440	60	369
Tire. Pneumatic	F. H. Bolte	479,202	July 19	1754	439, 440	60	368
Tire. Pneumatic	F. H. Bolte	479,203	July 19	1757	440	60	368
Tire. Pneumatic	J. H. Bullard	483,344	Sept. 27	2394	584	60	1827
Tire. Pneumatic	C. M. Lungren	482,162	Sept. 6	430	102, 103	60	1419
Tire. Pneumatic	L. J. Phelps	482,487	Sept. 13	946	231	60	1533
Tire. Pneumatic	C. H. Roth	481,197	Aug. 23	2330	574	60	1070
Tire. Pneumatic	F. Sinclair	480,349	Aug. 9	905	244	60	777
Tire. Pneumatic	J. Wellstein and M. E. Maxfield	481,681	Aug. 30	3131	764	60	1238
Tire. Pneumatic wheel	A. F. Wyman	481,323	Aug. 23	2563	629	60	1112
Tire. Spring	K. Lehmann	480,595	Aug. 9	1355	337	60	852
Tire. Vehicle-wheel	W. C. Smith	479,851	Aug. 2	114	28	60	605
Tire. Velocipede-wheel	J. H. Bingham	483,131	Sept. 27	1962	497	60	1759
Tobacco-casing machine	F. H. Bolte	479,201	July 19	1752	439	60	368
Tobacco-curing barn	J. T. Carter	480,070	Aug. 2	497	126, 127	60	677
Tobacco granulating, grading, and separating machine.	J. R. Jewel	481,954	Sept. 6	50	11, 12	60	1344
Tobacco-hanger	W. W. Smith and G. R. Hayes	483,292	Sept. 27	2251	567	60	1813
Tobacco. Machine for stripping and booking leaf	B. B. Byrnside	478,153	July 5	122	31	60	37
Tobacco. Machine for treating leaf	C. Bowman	479,550	July 26	2341	584	60	497
Tobacco-ordering apparatus	C. A. Snyder	483,401	Sept. 27	2406	605, 606	60	1843
Tobacco-pipe	S. P. Mayo and G. A. Peple	478,801	July 12	1136	280	60	240
Tobacco-pipe	T. T. Ely	480,570	Aug. 9	1309	327	60	845
Tobacco-shaver	A. Osterloh	480,209	Aug. 2	729	184	60	720
Toe-weight	J. B. Tarr	480,638	Aug. 9	1426	355, 356	60	867
Toe-weight for horses	C. M. McMillan	479,831	Aug. 2	88	22	60	599
Tongs. Blacksmith's	H. Armstrong	481,611	Aug. 30	3025	739	60	1217
Tongue. Metallic wagon	W. M. Haworth	478,600	July 12	820	204	60	180
Tool	W. P. Bettendorf	479,022	July 26	2442	608	60	516
Tool-handle	C. E. Harris	481,865	Aug. 30	3443	845	60	1298
Tool-handle. Flexible	A. Landon and L. Martel	482,256	Sept. 6	548	130	60	1441
Tool-heater	J. S. Surbaugh	479,032	July 19	1489	370	60	319
Tool-holder	A. Weller	479,686	July 26	2545	634	60	535
Tool-holding device	G. M. O., and J. G. Rehfuss	478,943	July 12	1337	332	60	280
Tool-sharpening device	F. H. Richards	481,193	Aug. 23	2325	573	60	1069
Tooth. Artificial	G. A. Kelat	478,608	July 12	839	207	60	182
Toothed wheel	J. W. Moffitt	482,377	Sept. 13	779	187	60	1501
Top rolls. Saddle for	J. Lindsay	480,930	Aug. 16	1877	468	60	971
Top. Spinning	E. Dixon	482,789	Sept. 20	1434	355	60	1641
Torch. Signal	F. M. Idle	480,817	Aug. 16	1706	426	60	937
Torpedo	F. D. Marston	478,623	July 12	857	211	60	186
Torpedo-case	J. H. Bates	483,126	Sept. 27	1955	495	60	1757
Torpedo clip-fastening	W. S. Lowe and G. W. Van Rensselaer.	482,060	Sept. 6	224	54	60	1379
Torpedo. Railway	W. C. Schooley	480,590	Aug. 9	1234	309	60	829
Torpedo-signal	E. N. Hill	479,879	Aug. 2	159	40	60	613
Torpedoes and other vessels. Depth-regulating mechanism for marine	W. H. Milliken	482,019	Sept. 6	159	39	60	1366
Torpedoes and other vessels. Speed-regulating mechanism for	F. H. Paine	478,813	July 12	1153	285, 286, 287	60	244
Towel-grip	F. H. Paine	478,814	July 12	1160	288	60	245
	G. S. Chamberlin	479,934	Aug. 2	250	62	60	630

Alphabetical list of patentees, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Towel-rack	J. F. Huber and G. L. Marvin	482,869	Sept. 20	1549	387	60	1665
Toy	J. A. Allen	482,957	Sept. 20	1694	426	60	1692
Toy	S. M. Boyd	480,065	Aug. 2	490	125	60	676
Toy	C. W. Delaney	481,931	Sept. 6	16	5	60	1338

Transplanting machine. Plant-	G. S. Gundersen. (Reissue)	11,262	Aug. 16	2270	560	60	1044
Transportation system	L. F. Cook	482,469	Sept. 13	916	{224 225	60	1527
Trap: *See* Animal-trap. Bedbug-trap. Drainage-trap. Fly-trap. Lobster-trap. Mole-trap. Sewer-trap. Sporting-trap. Steam-trap.							
Traverse-ring	J. W. Leslie	479,713	July 26	2600	647	60	545
Traverse-ring	J. W. Leslie	479,714	July 26	2602	647	60	545
Tray	M. S. Rosenzweig	479,664	July 26	2512	625	60	529
Tray and egg-tester. Combined dumping-	J. B. Garland	481,488	Aug. 23	2822	694	60	1162
Tray filling and emptying machine	R. A. Bauer	483,488	Sept. 27	2516	634	60	1865
Tray. Jeweler's	H. B. Sommer	480,045	Aug. 2	465	118	60	670
Tree protector. Fruit-	A. B. Smith	481,311	Aug. 23	2547	625	60	1109
Triangle. Compound	A. T. Page	482,023	Sept. 6	166	40	60	1368
Tricycle	A. Hunter	483,495	Sept. 27	2525	{635 636	60	1867
Trimmer: *See* Lawn-trimmer. Sewing-machine trimmer.							
Trip-slip. Conductor's	E. H. Murdock	481,369	Aug. 23	2622	645	60	1123
Tripod	O. H. Hanenstein	479,000	July 19	1440	357	60	310
Tripod	J. Hewitt	478,233	July 5	272	67	60	55
Tripod-head for engineers' transits and analogous instruments.	J. Paoli	479,196	July 19	1746	438	60	366
Trolley	J. W. Davis	478,410	July 5	543	132	60	107
Trolley	F. F. Poole	479,608	July 26	2420	604	60	512
Trolley-carriage for conduits	S. L. Platt	481,817	Aug. 30	3360	{825 826	60	1283
Trolley-disconnector. Automatic	G. A. Kimball	481,956	Sept. 6	52	12	60	1344
Trolley-protector	J. Walsh	481,517	Aug. 23	2863	704	60	1171
Trolley-switch	J. S. Merkins	481,503	Aug. 23	2845	699	60	1167
Trolley. Underground	J. Fischer	482,506	Sept. 13	985	238	60	1542
Trolley-wire splice	E. A Sperry	478,140	July 5	95	24	60	21
Trolleys. Guide for replacing electric	C. Fortin	480,766	Aug. 16	1628	408	60	922
Trolling-spoon	H. Loftis	481,652	Aug. 30	3085	752	60	1229
Trough. *See* Watering-trough.							
Trousers	J. Bernstein	480,060	Aug. 2	484	123	60	675
Trousers	S. A. Isaacson	479,564	July 26	2360	589	60	501
Trousers, &c., and pattern therefor	R. Hamilton and J. G. Lewis	478,190	July 5	187	48	60	39
Trousers, &c., and pattern therefor	R. Hamilton and J. G. Lewis	478,281	July 5	350	85	60	71
Trousers, &c., and pattern therefor	J. G. Lewis and R. Hamilton	478,195	July 5	191	49	60	40
Trousers and similar garments. Supporter for	C. S. Rogers	480,672	Aug. 9	1482	369	60	877
Trousers-guard	C. Sulzner	479,229	July 19	1794	449	60	376
Trousers-guard	J. A. Trant	478,772	July 12	1080	268	60	230
Trousers-shield	J. H. Prutzman	483,164	Sept. 27	2023	512	60	1771
Trousers-stretcher	G. S. Macdonald	480,199	Aug. 2	702	177	60	715
Truck	A. Nichleps	483,006	Sept. 20	1771	448	60	1708

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Truck. Barrel-	M. E. Parham	478,710	July 12	974	249	60	210
Truck. Beam-	J. B. Bancroft and A. E. Rhoades	478,731	July 12	1020	250	60	216
Truck. Car	J. E. Anger	479,237	July 19	1605	459	60	378
Truck. Car	G. M. Brill	478,218	July 5	232	58	60	48
Truck gear. Car	H. L. Ellery	483,211	Sept. 27	2096	532	60	1760
Truck-handle support	E. Peckham	481,704	Aug. 30	3107	774	60	1244
Truck. Lumber-	C. F. Woessner	479,542	July 26	2327	581	60	495
Truck. Motor-	A. T. Bemis	482,332	Sept. 13	693	165	60	1485
Truck. Railway-car	J. A. Brill	480,362	Aug. 9	985	{248 249	60	780
Truck. Weighing-	E. D. Dorchester	480,495	Aug. 9	1199	301	60	822
Trucks. Corner structure for	E. E. Chandler	478,403	July 5	530	129	60	104
Trucks. Means for radiating car-	E. Dietz	480,716	Aug. 16	1558	388	60	906
Trunk	H. Resley	480,830	Aug. 16	1798	432	60	941
Trunk	F. Lyford	479,438	July 26	2149	{536 537	60	461
Trunk-stand	P. B. Yaeger	479,485	July 26	2249	564	60	480
Trunk-strap holder	E. J. Fletcher	483,348	Sept. 27	2327	585	60	1828
Trunk. Telescopic	A. E. McDonald	483,264	Sept. 27	2209	555	60	1806
Truss	F. J. Palica	479,153	July 19	1675	419	60	354
Truss	C. A. Harvey	482,946	Sept. 20	1680	423	60	1689
Truss	J. A. Marvin	480,775	Aug. 16	1642	411	60	924
Tub: *See* Mop-tub.	J. M. Oakey	481,584	Aug. 30	2981	731	60	1209
Tubs. Waste and overflow connection for cement laundry-	J. Clifford and J. H. Gavin	480,692	Aug. 9	1515	376	60	883
Tube: *See* Glass tube. Larynx-tube.							
Tube-cutter	M. C. Coppage	482,496	Sept. 13	972	236	60	1538
Tubes. Manufacturing	F. E. and A. S. Elmore	480,186	Aug. 2	683	173	60	711
Tubes. Manufacturing collapsible	H. C. Sanders	478,525	July 5	713	172	60	141
Tubing. Shoe for cistern-	E. Sahland	482,812	Sept. 20	1459	362	60	1646
Tug. Hame-	N. Siglin	480,629	Aug. 9	1415	352	60	864
Tug. Harness-	S. P. Chandler	481,471	Aug. 23	2797	688	60	1157
Tug-hook	A. Ryan	479,465	July 26	2200	552	60	471
Tug-loop	H. Armbruster	480,003	Aug. 2	376	93	60	652
Tug. Shaft-	J. L. Gregory	482,243	Sept. 6	525	125	60	1437
Tug. Thill-	N. F. Mathewson	479,603	July 26	2412	602	60	511
Tug. Thill-	S. Stewart	482,764	Sept. 20	1402	346	60	1633
Tuning-forks. Making	L. K. Fuller	483,513	Sept. 27	2564	643	60	1874
Turbine wheel	J. C. Lansing	480,929	Aug. 16	1874	{467 468	60	971
Turn-table	N. W. Thillman and C. W. Firme	479,858	Aug. 2	123	30	60	607
Turning. Machine for taper-	W. W. Tucker	482,210	Sept. 6	472	{113 114	60	1427
Turning machine. Handle-	W. D. Snyder	481,875	Aug. 30	3457	{848 849	60	1301
Turning machine. Wood-	J. D. Carey	481,661	Aug. 30	3098	{755 756	60	1231
Turret-clamping device	F. H. Richards	480,962	Aug. 16	1931	483	60	981
Turret mechanism	F. H. Richards	480,964	Aug. 16	1935	{484 485	60	982
Tweezers. Watchmaker's	C. W. Delaney	482,232	Sept. 6	504	120	60	1433
Twine-making machines. Automatic feeder for	G. A. Lowry	480,873	Aug. 16	1789	448	60	954
Twisting-frame	A. Combe	482,164	Sept. 6	399	95	60	1413
Twisting machine. Skein-	L. Dimock	481,227	Aug. 23	2387	{588 589	60	1082
Type	A. Coleman	482,784	Sept. 20	1428	354	60	1640
Type-bars. Machine for producing	J. C. Fowler	481,920	Aug. 30	3536	{866 867 868 869	60	1317
Type-case and galley support	J. E. Hamilton and F. Kaufmann, Jr	482,522	Sept. 13	1019	246	60	1548
Type-holder	L. K. Scotford	481,286	Aug. 23	2502	615	60	1101
Type-justifying apparatus	A. Lagerman	478,340	July 5	431	{105 106 107	60	86
Type-plate and blank for the same	G. D. Morse and M. Chase	480,033	Aug. 16	1880	469	60	979
Type-setting machine	W. W. Hastings and F. D. Foster	480,497	Aug. 9	1203	{301 302	60	822
Type-writer counter	F. W. Jones	482,361	Sept. 13	747	180	60	1496
Type-writing machine	H. T. Beauregard and F. S. Flower	479,065	July 19	1566	{392 393	60	333
Type-writing machine	G. M. Beerbower	480,314	Aug. 9	917	231	60	769
Type-writing machine	B. A. Brooks	482,781	Sept. 20	1423	352	60	1638
Type-writing machine	H. D. Clemons	478,223	July 5	248	60	60	51
Type-writing machine	J. D. Daugherty	478,925	July 12	1311	{326 327	60	275
Type-writing machine	J. D. Daugherty	481,477	Aug. 23	2803	690	60	1158
Type-writing machine	L. P. Diss	481,750	Aug. 30	3257	793	60	1302
Type-writing machine	W. S. Edwards	482,519	Sept. 13	1010	245	60	1546
Type-writing machine	A. M. English	481,855	Aug. 30	3428	{841 842	60	1295
Type-writing machine	J. M. Fairfield	478,228	July 5	259	64	60	53
Type-writing machine	B. Granville	482,521	Sept. 13	1015	{245 246	60	1547
Type-writing machine	R. H. Ingersoll	478,109	July 5	47	14	60	12
Type-writing machine	W. M. Jenne	478,964	July 12	1371	{337 338	60	286
Type-writing machine	A. N. Petit	482,317	Sept. 6	661	158	60	1465
Type-writing machine	C. L. Redfield	481,309	Aug. 23	2540	624	60	1106
Type-writing machine	C. H. Shepard	480,289	Aug. 9	870	222	60	761
Type-writing machine	C. H. Shepard	480,290	Aug. 9	873	222	60	761

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Type-writing machine	C. H. Shepard	480,291	Aug. 9	875	222	60	762
Type-writing machine	C. Spiro	481,376	Aug. 23	2633	647, 648	60	1125
Type-writing machine	C. Spiro	481,377	Aug. 23	2638	648	60	1126
Type-writing machine	W. W. Street	480,677	Aug. 9	1189	370, 371	60	878
Type-writing machine	G. B. Webb	478,147	July 5	111	29	60	25
Type-writing machine	G. B. Webb	480,305	Aug. 9	901	228	60	766
Type-writing machine	G. B. Webb	480,306	Aug. 9	903	229	60	766
Type-writing machine	G. B. Webb	480,641	Aug. 9	1431	356, 357	60	868
Type-writing-machine cleaning attachment	S. Ford	480,257	Aug. 9	814	208	60	749
Type-writing machines. Aligner for	F. M. Spaulding	481,513	Aug. 23	2859	702	60	1170
Type-writing machines. Cleaning device for	O. Cohn	478,406	July 5	536	130	60	105
Type-writing machines. Device for inking	A. S. Dennis	479,351	July 19	1991	498	60	416
Type-writing machines. Line-spacing mechanism for	A. S. Dennis	479,352	July 19	1992	498	60	416
Typograph attachment	J. Slocum	483,023	Sept. 20	1803	455	60	1715
Typographic machine	T. T. Heath and A. N. Verdin	483,252	Sept. 27	2158	547, 548, 549	60	1797
Umbrella. Folding	G. H. Seymour	479,310	July 19	1913	478	60	400
Umbrella. Folding	H. C. Ward	480,482	Aug. 9	1184	297	60	819
Umbrella-frame	J. Willis	478,150	July 5	118	30	60	26
Umbrella or parasol	H. A. Fleuss	483,212	Sept. 27	2097	532	60	1786
Umbrella or parasol gear	J. Willis	479,691	July 26	2555	635	60	537
Umbrella-rib	W. L. Uhlenhart	480,353	Aug. 9	974	245	60	779
Umbrella ribs and stretchers. Guide for	H. G. Practorius	481,283	Aug. 23	2494	614	60	1101
Umbrella-runner	L. B. Couch	478,250	July 5	305	74	60	61
Umbrella-runner	J. F. Mason	482,130	Sept. 6	335	80	60	1401
Umbrella-stand	G. R. Davis	480,657	Aug. 9	1461	363	60	873
Umbrella-stand	S. S. Sencenbaugh and A. J. Ives	478,645	July 12	889	220	60	192
Umbrella-stand	S. S. Sencenbaugh and A. J. Ives	478,646	July 12	890	220	60	192
Umbrella-stand	P. V. Smith	479,671	July 26	2522	628	60	531
Umbrella-stick	G. C. Wolfe	479,929	Aug. 2	239	59	60	628
Umbrella-supporter	J. Devereaux	481,481	Aug. 23	2813	692	60	1161
Undershirt and making the same	J. Holroyd	479,276	July 19	1862	467	60	390
Unicycle	J. Imlah	480,585	Aug. 9	1336	333	60	849
Unicycle	J. Rawle	482,100	Sept. 6	291	70	60	1393
Unicycle	A. and F. Yost	481,883	Aug. 30	3471	851	60	1304
Universal coupling	R. S. Brown	481,780	Aug. 30	3311	809	60	1273
Universal joint	A. J. Oehring	478,811	July 12	1151	285	60	244
Universal-jointed brace	A. C. Derlon	481,526	Aug. 23	2884	708	60	1175
Unloading vessels, cars, &c. Device for	J. Socci	482,565	Sept. 13	1085	263	60	1560
Upholstery spring-support	J. A. Staples	482,908	Sept. 20	1619	405	60	1676
Urinal	W. S. Ross	482,754	Sept. 20	1378	341, 342	60	1629
Urinal	I. D. Smead	478,648	July 12	892	221	60	192
Urinal and patrol-box	W. Eglin	478,505	July 5	683	166	60	135
Urn. Coffee	F. Doering	481,851	Aug. 30	3424	840	60	1294
Vacuum-pans. Feed-pipe for	H. Basanta	478,906	July 12	1282	319	60	269
Valve	J. B. Case and W. H. Hendrick	481,001	Aug. 16	1990	498	60	992
Valve	G. B. Moore	482,187	Sept. 6	439	105	60	1421
Valve	B. D. Northrup	479,450	July 26	2168	542	60	465
Valve	G. Vining	478,665	July 12	914	226	60	197
Valve. Air-brake	G. A. Boyden	481,134	Aug. 16	2212	547	60	1034
Valve. Air-brake	J. F. Carpenter	478,846	July 12	1204	299	60	954
Valve. Air-brake	W. M. Gilmore	479,978	Aug. 2	320	78	60	643
Valve. Ammonia dipper	J. Dreisörner	482,233	Sept. 6	504	120	60	1433
Valve. Automatic relief	F. Schreidt	479,734	July 26	2625	651	60	549
Valve. Balanced slide	M. A. Green	483,054	Sept. 20	1845	468	60	1724
Valve. Balanced slide	E. B. Sintzenich	478,719	July 12	990	246	60	213
Valve. Ball-cock	W. A. Turner	481,317	Aug. 23	2533	627	60	1110
Valve. Boiler-blow-off	C. J. Gustafson	480,723	Aug. 16	1566	391	60	908
Valve casing. Furnace	W. Swindell	482,463	Sept. 13	908	221	60	1526
Valve. Combined intercepting and reducing	J. Player	481,148	Aug. 16	2250	555	60	1040
Valve. Compound-engine	J. Player	481,057	Aug. 16	2084	520	60	1011
Valve-controller	C. L. Fortier	479,795	Aug. 2	30	8	60	588
Valve-controller. Electric	E. F. Roberts	482,130	Sept. 6	346	83	60	1403
Valve. Cut-off piston	F. J. Waters	482,707	Sept. 13	1295	317	60	1609
Valve device. Radiator	J. Collis	479,400	July 26	2083	522	60	448
Valve. Distributing	S. Gustin	481,943	Sept. 6	34	8	60	1341
Valve. Electrical stop	A. Franke	483,108	Sept. 20	1927	488	60	1741
Valve. Fluid-pressure	H. G. Manning	479,439	July 26	2151	537	60	461
Valve for automatic air-brakes	G. A. Boyden	481,136	Aug. 16	2223	548, 549	60	1035
Valve for elevators. Automatic stop	H. J. Reedy	480,278	Aug. 9	851	217	60	757
Valve for engines. Cut-off	O. E. Brown and P. Stetson	482,516	Sept. 13	1001	242	60	1545
Valve for pneumatic tires	E. R. De Wolfe	480,460	Aug. 9	1050	263	60	793
Valve for pneumatic tires	J. F. Ives and F. B. Colman	481,762	Aug. 30	3277	798	60	1266
Valve for pneumatic tires	G. H. F. Schrader	483,172	Sept. 27	2034	514	60	1773
Valve for radiators. Automatic relief	A. S. Hodge	479,806	Aug. 2	48	12	60	591
Valve for radiators. Combined automatic relief and vacuum air-	W. O. Whitman	478,489	July 5	652	160	60	130
Valve for set bowls. Outlet	J. L. Thurston and F. B. How	482,534	Sept. 13	1085	250, 251	60	1551
Valve for steam or high-pressure fluids	W. G. Adams and J. S. Forbes	479,391	July 26	2067	519	60	445
Valve for tanks. Slow-closing	J. V. Glover	478,793	July 12	1125	277	60	238
Valve-gear	J. R. Frikart	482,007	Sept. 6	136	33	60	1362
Valve-gear	W. H. von Mengeringhausen	480,474	Aug. 9	1171	295	60	816
Valve-gear	F. E. Smith	481,072	Aug. 16	2117	527	60	1016
Valve-gear	C. E. Tidblad	482,399	Sept. 13	809	194	60	1508
Valve-gear. Engine	F. J. Waters	478,973	July 12	1387	342, 343	60	287

Alphabetical list of inventions, July to September; inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Valve-gear. Steam-engine	R. Radley	483,328	Sept. 27	2304	579, 580	60	1823
Valve. Globe	F. M. Moore	481,803	Aug. 30	3346	819	60	1280
Valve mechanism. Steam-radiator	L. H. Prentice, P. R. McLeod, R. T. Crane, and L. Pilkington.	480,512	Aug. 9	1294	306	60	827
Valve-motion indicator for steam-engines	J. Millis	481,671	Aug. 30	3112	760	60	1234
Valve. Oil-well	H. D. Jones	480,265	Aug. 9	834	213	60	753
Valve. Piston	M. E. Hershey	479,273	July 19	1858	466	60	389
Valve. Pressure-regulating	W. Gustafsson	478,856	July 12	1214	301	60	256
Valve. Pressure-regulating	C. A. Rempen and E. Andre	479,462	July 26	2196	551	60	470
Valve. Regulating	J. S. McDaniel	478,939	July 12	1333	331	60	279
Valve. Relief	A. S. Thoms	480,528	Aug. 9	1249	314	60	832
Valve. Reversing	J. Clark	481,162	Aug. 23	2282	562, 563	60	1060
Valve. Reversing	W. Miller	480,604	Aug. 9	1368	340	60	855
Valve. Safety	S. M. Beery	478,949	July 12	1345	334	60	281
Valve. Slide	A. T. Doyle	481,013	Aug. 16	2008	502	60	995
Valve. Slide	C. G. Walle	478,829	July 12	1184	293	60	249
Valve. Steam-actuated	E. Bartholomew	481,520	Aug. 23	2867	705	60	1172
Valve. Steam-actuated	W. H. Blake	480,167	Aug. 2	651	165, 166, 167	60	706
Valve. Steam-engine	J. R. Cook and C. S. Hinchman	479,401	July 26	2085	523	60	448
Valve. Steam-engine	E. L. Sauer	482,415	Sept. 13	832	200	60	1512
Valve. Tank	C. Birkery	483,296	Sept. 27	2258	568	60	1815
Valves. Machine for milling plug	W. W. Tucker	482,211	Sept. 6	475	114	60	1428
Vamp-marking machine	J. F. Rogers	480,438	Aug. 9	1109	277, 278	60	803
Vapor-burner	H. S. Giles	482,920	Sept. 20	1635	410	60	1680
Vapor-burner	J. A. Lannert and W. R. Jeavons	479,220	July 19	1780	446	60	373
Vaporization of liquids. Generator for the	L. Serpollet	480,286	Aug. 9	865	220, 221	60	760
Varnishing frame or holder	A. G. Weissenborn	482,664	Sept. 13	1220	298	60	1586
Vault-cover. Ventilated	W. Lake	482,013	Sept. 6	144	35	60	1364
Vault. Grave	J. G. Gray	478,102	July 5	38	12	60	10
Vegetable cleaning and peeling machine	F. Groos	479,502	July 26	2356	588	60	500
Vehicle	C. Comstock	480,421	Aug. 9	1086	272	60	799
Vehicle	J. Spofford, Jr	480,442	Aug. 9	1116	279	60	804
Vehicle-box	D. R. Couch	480,764	Aug. 16	1625	407	60	921
Vehicle-brake	E. W. Broadhead	481,466	Aug. 23	2792	687	60	1156
Vehicle-brake	E. Swarts and D. S. Beemer	482,027	Sept. 6	174	41	60	1360
Vehicle-brake mechanism	C. L. Munger and T. R. Capwell	478,966	July 12	1379	339	60	287
Vehicle-fender	C. Freese	478,585	July 12	806	199	60	175
Vehicle for carrying grain	R. W. Jones	479,328	July 19	1935	484	60	405
Vehicle-gear	T. R. Capwell and W. C. Fuller	480,691	Aug. 9	1514	376	60	883
Vehicle-gear	C. H. Holdredge	483,381	Sept. 27	2386	599	60	1838
Vehicle jump-seat	G. H. Hutton	481,358	Aug. 23	2610	641	60	1121
Vehicle. Road	E. V. Santee	478,715	July 12	982	244	60	211
Vehicle running-gear	C. S. Beebe	482,154	Sept. 6	382	89	60	1410
Vehicle running-gear	C. M. Blydenburgh	482,839	Sept. 20	1499	372	60	1655
Vehicle running-gear	E. Deusing	482,234	Sept. 6	507	121	60	1434
Vehicle running-gear	B. H. Paugh and G. W. Fridley	478,758	July 12	1056	261	60	225
Vehicle running-gear	J. W. Taylor	482,597	Sept. 13	1130	273	60	1569
Vehicle sand-band	W. Klockau	481,795	Aug. 30	3333	813	60	1277
Vehicle-seat	T. B. Padgitt	482,064	Sept. 6	228	55	60	1380
Vehicle-seat	J. E. Scott	480,144	Aug. 2	614	156	60	699
Vehicle-seats. Lazy-back for	A. G. Brunsman and H. H. Uckotter	481,745	Aug. 30	3247	790, 791	60	1260
Vehicle-spring	W. Atkinson	483,505	Sept. 27	2546	639	60	1871
Vehicle-spring	G. W. Farrell	481,394	Aug. 23	2668	654	60	1131
Vehicle-spring	G. T. Glover	481,695	Aug. 30	3150	768, 769	60	1241
Vehicle-spring	D. C. Hamlin	481,303	Aug. 23	2529	621	60	1106
Vehicle-spring	H. R. Raudenbush	482,385	Sept. 13	780	190	60	1504
Vehicle-spring	J. W. Wetmore	482,932	Sept. 20	1649	415	60	1684
Vehicle. Spring	T. D. Lines	478,937	July 12	1330	330	60	278
Vehicle spring-draft attachment	H. Barber	478,777	July 12	1090	270	60	232
Vehicle top-joint	A. M. Hess	478,696	July 12	955	237	60	205
Vehicle-tops. Storm-curtain for	P. Lugenbell	479,910	Aug. 2	199	50	60	621
Vehicle. Two-wheeled	J. W. Hewitt	482,739	Sept. 20	1355	335	60	1695
Vehicle-wheel	W. E. Baker	480,109	Aug. 2	945	103	60	705
Vehicle-wheel	C. D. Cannon	478,918	July 12	1303	324	60	273
Vehicle-wheel	T. F. and J. E. Foley	479,495	July 26	2202	567	60	482
Vehicle-wheel	G. Hollafolla	482,175	Sept. 6	422	100	60	1418
Vehicle-wheel	E. G. Latta	479,566	July 26	2462	589	60	501
Vehicle-wheel	E. G. Latta	479,946	Aug. 2	206	55, 56	60	633
Vehicle-wheel	W. W. Taylor	482,658	Sept. 13	1209	295	60	1585
Velocipede	W. A. W. Eager	479,792	Aug. 2	27	7	60	587
Velocipede	C. Fell	479,064	July 19	1533	382	60	328
Velocipede	M. J. O'Donnell	481,118	Aug. 16	2188	542	60	1030
Velocipede	H. S. Owen	481,053	Aug. 16	2069	516, 517	60	1009
Velocipede	J. Pfleger	479,839	Aug. 2	98	25	60	601
Velocipede	A. C. Shelley	481,428	Aug. 23	2726	670	60	1143
Velocipede	M. E. Slocum	481,070	Aug. 16	2114	526	60	1016
Velocipede	J. R. Wright	478,674	July 12	928	231	60	199
Velocipede attachment	G. Openshaw and C. A. Carr	482,271	Sept. 6	573	136	60	1446
Velocipede driving-gear	J. Magennis	480,600	Aug. 9	1362	339	60	853
Velocipede fork	C. Kehr	482,090	Sept. 6	275	66	60	1389
Velocipede. Ice	P. H. Claes	483,432	Sept. 27	2437	613	60	1849
Velocipede package-carrier	E. N. Heath	479,060	July 19	1544	386	60	329
Velocipede-pedal	F. C. Rockwell	483,238	Sept. 27	2140	542	60	1794
Velocipede-saddle	B. F. Peet	479,656	July 26	2494	621	60	525
Velocipede-saddle	D. D. Wright and W. R. Berry	479,969	Aug. 2	311	76	60	641

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Velocipede-seat	H. E. Cooke	479,056	July 19	1521	379	60	326
Velocipede speed-gear	C. Vogel	479,177	July 19	1716	430	60	361
Velocipede-wheel	J. B. Dunlop	479,255	July 19	1834	460	60	384
Velocipede-wheel	A. C. Hide	478,191	July 5	188	44	60	39
Velocipede-wheels. Spring-rim for	W. J. Pizzey	480,630	Aug. 2	439	111	60	665
Velvets, &c. Machine for waxing	E. T. and E. H. Marble	478,236	July 5	275	68	60	56
Vender. Newspaper	A. E. Dain	482,824	Sept. 20	1473	{366 {367	60	1649
Vending apparatus	B. Adriance and J. H. Volkmann	483,199	Sept. 27	2076	{524 {525	60	1782
Vending apparatus	J. H. Reford	478,714	July 12	981	244	60	211
Vending apparatus. Coin-controlled	A. S. Kibby	481,280	Aug. 23	2488	612	60	1100
Vending apparatus. Coin-controlled	J. G. MacPherson	482,875	Sept. 20	1556	389	60	1666
Vending-machine	A. B. Chandler and G. H. Powell	481,689	Aug. 30	3141	{766 {767	60	1240
Vending-machine	A. J. Henry	482,683	Sept. 13	1253	305	60	1593
Vending-machine	V. A. Kreppa	479,005	July 19	1445	359	60	311
Vending-machine	G. A. Weller	479,688	July 26	2552	635	60	536
Vending-machine. Coin-actuated	W. S. Van Sant	480,639	Aug. 9	1428	356	60	867
Vending-machine. Coin-controlled	E. L. Pickard	481,331	Aug. 23	2573	{632 {633	60	1114
Vending-machine. Coin-controlled	C. A. Shattuck	482,142	Sept. 6	353	84, 85	60	1405
Vending-machine. Coin-operated	R. H. Little	483,255	Sept. 27	2194	{551 {552	60	1803
Vending-machine. Coin-operated	W. R. Ziegler	483,093	Sept. 20	1905	{481 {482	60	1736
Vending-machines. Coin conveyer and tester for automatic	J. H. Volkmann	483,188	Sept. 27	2063	521	60	1779
Veneer-cutting machines. Adjustable pressure-bar for	M. D. Williamson	479,750	July 26	2666	662	60	557
Vent-closure	J. L. Bartels, Jr	482,223	Sept. 6	404	118	60	1431
Ventilating sewers, &c. Appliance for	R. McKenzie	480,958	Aug. 16	1927	482	60	980
Ventilator: *See* Car-ventilator. Window-ventilator. Sanitary ventilator.							
Ventilator	J. and F. Skobis	482,389	Sept. 13	794	191	60	1505
Vessel. Anti-rust	G. W. Lisk	479,517	July 26	2295	573	60	488
Vessel. Portable	A. C. Kimber	482,368	Sept. 13	756	182	60	1496
Vessel supporting and carrying device	J. Mailliard and J. H. Jones	482,643	Sept. 13	1192	288	60	1581
Vessels. Covering for false bottoms of	A. McDougall	480,823	Aug. 16	1719	430	60	939
Vest and drawers holder	A. Luetig	483,462	Sept. 27	2484	625	60	1859
Veterinary truss	H. Haussmann	480,323	Aug. 9	930	236	60	771
Victoria. Convertible	A. C. Sage	478,641	July 12	883	{218 {219	60	191
Vinegar-making apparatus	R. M. Hughes	483,063	Sept. 20	1858	471	60	1727
Violin tail-piece	J. A. Close	481,783	Aug. 30	3314	809	60	1274
Vise, pipe-tongs, and cutter. Combined	J. Ellis	481,168	Aug. 23	2291	564	60	1062
Volatilizer	G. B. Underwood	478,896	July 12	1265	313	60	265
Volt-ammeter	F. A. La Roche	481,573	Aug. 30	2906	728	60	1207
Voltaic pile	W. E. Washburn	482,444	Sept. 13	883	213	60	1520
Voter's compartment and shelf	A. A. Hinkley and J. S. Welch	480,925	Aug. 16	1870	466	60	970
Voting-booth	F. K. Plumbly	479,458	July 26	2188	{548 {549	60	469
Wagon bodies or seats. Corner-iron for	E. Finn	480,187	Aug. 2	685	173	60	712
Wagon-body	G. F. Thompson	482,398	Sept. 13	807	194	60	1507
Wagon-bolster	W. P. Bettendorf	479,621	July 26	2440	608	60	516
Wagon-box	C. Nelson	478,706	July 12	968	{240 {241	60	208
Wagon-box. Dump	F. B. Southwick	478,379	July 5	496	120	60	98
Wagon-brake	E. G. and W. A. Haney	483,056	Sept. 20	1847	469	60	1725
Wagon-brake	J. Miller	478,349	July 5	454	111	60	91
Wagon. Delivery	C. H. Supplee	479,031	July 19	1488	370	60	319
Wagon. Dumping	C. Abresch	478,834	July 12	1189	295	60	251
Wagon. Dumping	J. S. Field and W. J. Shedd	482,731	Sept. 20	1332	{326 {327	60	1621
Wagon. Dumping	S. J. Forsgard	482,498	Sept. 13	975	236	60	1539
Wagon. Farm	S. Howe	478,432	July 5	572	138	60	112
Wagon-frame	A. G. Turner	480,980	Aug. 16	1966	491	60	987
Wagon-frame. Metallic	W. P. Bettendorf	479,618	July 26	2437	607	60	515
Wagon-frame. Metallic	W. P. Bettendorf	479,619	July 26	2438	{607 {608	60	515
Wagon-frame. Metallic	W. P. Bettendorf	479,620	July 26	2439	608	60	515
Wagon-jack	M. C. Jackson	481,713	Aug. 30	3150	777	60	1247
Wagon-loader. Portable	J. E. Eveleth	482,169	Sept. 6	411	98	60	1416
Wagon-rack	G. T. Stebling and J. Bloomer	482,490	Sept. 13	952	232	60	1534
Wagon running-gear	J. H. Baker	480,379	Aug. 9	1016	{255 {256	60	787
Wagon running-gear	J. H. Baker	480,380	Aug. 9	1019	256	60	787
Wagon. Tip	G. Anderson	483,200	Sept. 27	2079	{525 {526 {527 {528	60	1782
Wagons. Vertically-extensible platform for	G. H. Bodette	478,841	July 12	1200	298	60	253
Waist	A. Bouchard	480,062	Aug. 2	487	124	60	675
Wall decoration. Composition of matter for	G. A. Casselman	482,544	Sept. 13	1055	.....	60	1555
Wall-paper. Machine for pasting, cutting, and trimming	J. P. McMurray	480,120	Aug. 2	573	145	60	691
Wall-paper. Roller-knife for trimming	L. Stock	479,473	July 26	2224	558	60	475
Wall-paper-supporting device	D. S. Morgan	482,830	Sept. 20	1485	370	60	1652
Wall-table	E. D. Milks	482,645	Sept. 13	1194	289	60	1581
Wallet	G. W. Curtis	480,008	Aug. 16	2002	500	60	994
Wantage-rod	G. K. Morton	479,655	July 26	2483	621	60	525
	J. F. Barker	480,058	Aug. 2	483	123	60	674

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Drg.	Official Gazette. Vol.	Official Gazette. Page.
Wardrobe, chiffonier, &c	T. W. Purcell and J. B. Craig	479,078	July 19	1555	{388 {389	60	331
Warp-chains. Mechanism for wrapping	C. E. Scrimgeour and H. Gildard	482,066	Sept. 6	233	57	60	1381
Warping-machine	G. F. Knett and C. Slingland	478,162	July 5	138	35, 36	60	30
Warping-machine	A. E. Rhoades	478,523	July 5	709	172	60	141
Washboard	J. C. Gearhart	483,438	Sept. 27	2458	618	60	1853
Wash-stand	N. O. Bond	479,148	July 19	1669	417	60	352
Washer: *See* Can-washer. Ore-washer. Coal-washer. Window-washer. Dish-washer.							
Washing-machine	R. Bitner	481,659	Aug. 30	3096	754	60	1231
Washing-machine	F. L. Buckley	482,036	Sept. 6	185	44	60	1371
Washing-machine	M. Burgess	481,102	Aug. 16	2167	537	60	1025
Washing-machine	R. K. Burt	482,295	Sept. 6	616	146	60	1455
Washing-machine	Z. T. Chambers	479,488	July 26	2254	565	60	481
Washing-machine	G. A. Coffee	481,003	Aug. 16	1992	499	60	993
Washing-machine	C. C. Davis	482,341	Sept. 13	706	168	60	1488
Washing-machine	M. Dissinger	478,094	July 5	30	10	60	9
Washing-machine	E. A. Egelston	478,926	July 12	1316	327	60	276
Washing-machine	J. Flynn	480,083	Aug. 2	518	132	60	681
Washing-machine	M. R. Gibbs	483,439	Sept. 27	2459	{618 {619	60	1854
Washing-machine	J. P. Hallsten and C. J. Anderson	483,443	Sept. 27	2463	620	60	1855
Washing-machine	S. La Point	478,440	July 5	583	141	60	115
Washing-machine	F. A. Lapham	480,105	Aug. 2	547	138	60	687
Washing-machine	S. P. Lowell	481,183	Aug. 23	2309	569	60	1066
Washing-machine	H. Ogborn	478,707	July 12	970	241	60	208
Washing-machine	I. B. Owens	481,419	Aug. 23	2712	667	60	1140
Washing-machine	J. W. Spangler	480,214	Aug. 2	736	{186 {187	60	721

Watch. Stop	W. Piguet	479,900	Aug. 2	188	47	60	619
Water alarm. Shallow	H. Euler	482,550	Sept. 13	1061	258	60	1566
Water and steam gage. Combined	I. Willan	480,309	Aug. 9	910	230	60	767
Water. Apparatus for electrically purifying	L. T. Stanley	481,979	Sept. 6	87	22, 23	60	1351
Water. Apparatus for the propulsion and transmission of	M. P. Schetzel	482,655	Sept. 13	1205	294	60	1584
Water-boiler. Sectional	T. Doherty	479,873	Aug. 2	149	36, 37	60	611
Water-closet	E. Hammann	480,402	Aug. 9	1053	264	60	793
Water-closet	S. E. Hughes	481,761	Aug. 30	3275	797	60	1266
Water-closet	S. Jennings and J. Morley	482,923	Sept. 20	1639	412	60	1681
Water-closet seat and cover	G. J. Kremelberg	481,498	Aug. 23	2839	698	60	1166
Water-closet. Siphon	H. H. Sievert	480,292	Aug. 9	876	223	60	762
Water-closet valve	G. F. Brown	479,182	July 19	1726	432	60	363
Water-closets. Automatic valve-operator for	J. Hankenhof	478,963	July 12	1370	337	60	286
Water elevating and conveying apparatus	J. S. Daniel	480,494	Aug. 9	1197	301	60	821
Water-elevator	V. Boatwright	481,099	Aug. 16	2160	536	60	1024
Water-gage	W. B. Simpson	483,396	Sept. 27	2402	604	60	1842
Water-gage	J. A. and J. Hopkinson	481,493	Aug. 23	2828	695	60	1164
Water-heater	W. A. Woods	479,235	July 19	1802	451	60	377
	E. Nagel	479,141	July 19	1659	415	60	350
Water-heater	C. Stees and G. Graupensperger	481,211	Aug. 23	2356	{580 {581	60	1075
Water-heater	R. F. Walsh	480,913	Aug. 16	1851	461	60	966
Water-heater	G. W. Washburn	478,486	July 5	648	159	60	129
Water-heater. Electric	T. Ahearn	481,291	Aug. 23	2519	618	60	1103
Water-heater. Electrical	R. Kennedy	479,814	Aug. 2	60	14	60	593
Water-heater. Gas	W. S. Wright	479,869	Aug. 2	145	35	60	610
Water-heating apparatus	H. B. Clarke	482,076	Sept. 6	253	61	60	1385
Water-motor	B. S. Partridge	478,457	July 5	604	147	60	119
Water-motor	L. Porter	482,927	Sept. 20	1642	413	60	1682
Water-motor	W. E. Seelye	483,394	Sept. 27	2399	603	60	1841
Water-motor	I. H. Spencer	479,097	July 19	1587	397	60	337
Water-purifying apparatus	J. H. Blessing	482,515	Sept. 13	998	{241 {242	60	1544
Water-supply regulator	F. G. Schuerman	478,526	July 5	714	173	60	142
Water-tower and fire-escape. Combined	F. M. Hughes	483,001	Sept. 20	1763	{445 {446	60	1706
Water-tube boiler	R. and R. Munroe, Jr	478,756	July 12	1053	259	60	225
Water-wheel	F. M. Bookwalter and W. W. Tyler	483,133	Sept. 27	1964	{498 {499	60	1759
Water-wheel	W. G. Spencer	481,074	Aug. 16	2118	{527 {528	60	1017
Water-wheel	W. W. Tyler	480,753	Aug. 16	1607	{403 {404	60	917

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Water-wheel and means for transmitting power therefrom. Current	I. R. Beery	482,034	Sept. 6	183	44	60	1371
Watering apparatus. Stock	A. Rockfellow	479,197	July 19	1747	438	60	367
Watering device. Automatic	G. W. Schroeder	478,472	July 5	629	153	60	124
Watering device. Stock	G. W. Funk	478,745	July 12	1040	255	60	222
Watering-trough. Automatic	J. A. Brown	478,397	July 5	523	128	60	103
Waterproof composition	S. Huff	483,451	Sept. 27	2474	.....	60	1857
Waterproof fabric	J. R. France	481,485	Aug. 23	2818	692	60	1162
Wax-ends. Machine for making	R. M. Macintosh	479,093	July 19	1580	396	60	336
Wax mold. Sealing	J. C. Eckert	483,512	Sept. 27	2563	643	60	1874
Weaner. Calf	W. H. Tyler	481,985	Sept. 6	96	25	60	1353
Weather-strip	A. M. Ewers	481,229	Aug. 23	2392	590	60	1062
Weather-strip	D. D. Mayfield	483,076	Sept. 20	1876	475	60	1730
Weaving machine. Slat-and-wire-fabric	W. H. Nixon	482,022	Sept. 6	165	40	60	1368
Weed-cutter	M. S. Cadwell	479,487	July 26	2252	565	60	481
Weed-exterminator	G. S. Andrus	479,612	July 26	2429	605	60	513
Weigher. Automatic grain	W. Vreeland	480,300	Aug. 9	891	226	60	764
Weigher. Rotating grain	D. J. O'Connor	481,810	Aug. 30	3356	821	60	1281
Weighing apparatus for liquids. Automatic	W. Swartout	479,537	July 26	2319	580	60	494
Weighing apparatus. Grain	J. P. Baldwin	479,694	July 26	2359	{636 / 637}	60	538
Weighing asphalt. Apparatus for	C. Reuther	478,465	July 5	621	151	60	123
Weighing-machine	S. R. Scharf	480,141	Aug. 2	610	155	60	699
Weighing-machine	E. W. Spear	479,852	Aug. 2	114	28	60	605
Weighing-machine. Automatic	E. W. Spear	479,853	Aug. 2	116	29	60	605
Weighing machine. Grain	J. B. Stoner	480,752	Aug. 16	1605	{402 / 403}	60	917
Welding and heating apparatus. Arc	G. W. Wakefield	481,084	Aug. 16	2131	531	60	1019
Welding. Electric	P. I. Unwin and H. Howard	480,794	Aug. 16	1669	417	60	929
Welding. Electric	C. L. Coffin	483,423	Sept. 27	2439	613	60	1850
Welding. Electric metal	H. Howard	481,030	Aug. 16	2032	507	60	1001
Welding machine. Link	C. L. Coffin	483,425	Sept. 27	2441	614	60	1850
Welding machine. Pipe	J. W. Bonta	483,418	Sept. 27	2432	{611 / 612}	60	1848
Welding metal wheels	R. K. Welch	478,669	July 12	919	228	60	197
Well adjusting apparatus. Oil	E. H. Scott	478,643	July 12	887	220	60	191
Well-boring apparatus	G. H. Wadsworth and W. Sheesley	482,818	Sept. 20	1466	{364 / 365}	60	1648
Well-boring apparatus	F. Gardner	478,791	July 12	1120	{276 / 277}	60	237
Well-curbing	D. L. Monroe	481,636	Aug. 30	3060	747	60	1224
Well-drilling machine	A. Möhle	479,010	July 19	1455	361	60	313
Well-drilling machine	J. W. and F. Draper and W. Ellsworth.	481,482	Aug. 23	2815	692	60	1161
Well-excavator	J. Gardner	480,906	Aug. 16	1843	458	60	965
Well-packer	G. W. Gale	479,149	July 19	1670	417	60	352
Well-sinking machine	I. N. Hoadley	480,926	Aug. 16	1871	466	60	970
Wells, &c. Apparatus for drilling	T. G. Chapman and J. W. Hunt	480,904	Aug. 16	1841	958	60	964
Wheat-cleaning machine	J. R. Davis	479,059	July 19	1527	381	60	327
Wheat-heater steaming attachment	J. Rudasill	478,469	July 5	625	152	60	124
Wheat. Process of and apparatus for treating	S. M. Braden	478,151	July 5	119	30	60	26
Wheat-separator	C. O. Webb	482,068	Sept. 6	236	57	60	1381
Wheel:	A. H. Kirk	479,816	Aug. 2	62	14, 15	60	594
See Barrow-wheel. Bicycle-wheel. Car-wheel. Cycle-wheel. Elastic wheel. Fifth-wheel. Gear-wheel. Hoisting-wheel. Paddle-wheel. Polishing-wheel. Propeller-wheel. Split wheel. Toothed wheel. Traction-wheel. Turbine wheel. Vehicle-wheel. Velocipede-wheel. Water-wheel. Wind-wheel. Winnowing-wheel.							
Wheel	R. W. Dixon	478,577	July 12	795	196	60	173
Wheel	R. Jewell	480,586	Aug. 9	1338	334	60	850
Wheel	A. Levedahl	480,022	Aug. 2	426	107	60	662
Wheel	T. C. Munz	482,806	Sept. 20	1452	360	60	1645
Wheel	J. Rees	481,821	Aug. 30	3376	827	60	1285
Wheel	J. W. Rhodes	481,822	Aug. 30	3377	827	60	1285
Wheel	F. H. Rundquist-Wanner	479,722	July 26	2624	651	60	549
Wheel	C. E. W. Woodward	481,340	Aug. 23	2587	635	60	1117
Wheel rim and tire	J. Fransmann	479,708	July 26	2590	645	60	543
Wheel-shoe	F. G. Davis	478,954	July 12	1352	335	60	283
Wheels. Device for packing vehicle	W. F. Henry, W. P. Bolles, and A. McKee.	481,028	Aug. 16	2030	506	60	1000
Whiffletree	W. J. Rose	482,698	Sept. 13	1280	314	60	1509
Whiffletree connection	A. Haggerty	481,301	Aug. 23	2527	620	60	1106
Whiffletree draft device	Q. V. P. Day	482,622	Sept. 13	1167	282	60	1576
Whiffletree-hook	A. N. Green	479,939	Aug. 2	254	63	60	631
Whiffletree-hook	H. E. Harris	480,465	Aug. 9	1159	291	60	813
Whip-holder	J. E. Woodward	480,356	Aug. 9	976	246	60	779
Whip-socket	F. E. Benton	482,717	Sept. 20	1318	322	60	1618
Whip-socket	G. A. L. Johnson	479,811	Aug. 2	55	13	60	593
Whip-socket	H. E. Schreader	481,063	Aug. 16	2107	524	60	1014
Whip-socket and rein-holder	T. F. Burkhard	478,310	July 5	391	94	60	79
Whisky. Making	W. E. Bradley	481,925	Sept. 6	7	.....	60	1336
Whist. Apparatus for duplicate	M. C. Work	481,995	Sept. 6	113	28	60	1357
Whistle. Steam	J. Einig	480,078	Aug. 2	510	130	60	680
Wick-adjusting device	F. Rhind	478,288	July 5	360	87	60	72
Wick-raiser	G. S. Brown	483,279	Sept. 27	2232	561	60	1810
Wick-tube	J. D. Luther	479,519	July 26	2297	574	60	489
Wind-engine	S. A. Rouse	478,945	July 12	1340	{332 / 333}	60	280

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Wind-machine	J. T. Shoup, Jr	479,903	Aug. 2	363	90	60	650
Wind-wheel	E. Brégier	483,098	Sept. 20	1912	484	60	1737
Wind-wheel governor. Automatic	J. H. Berky	481,095	Aug. 16	2155	534	60	1023
Winding cops or balls	S. W. Wardwell, Jr	480,158	Aug. 2	637	{161 / 162}	60	704
Winding cops or balls. Apparatus for	S. W. Wardwell, Jr	480,157	Aug. 2	633	{160 / 161}	60	703
Winding machine. Thread	C. Hill	482,308	Sept. 6	635	{152 / 153 / 154}	60	1459
Winding-machines. Driving mechanism for the spindles of circular	F. A. Ludwig	481,329	Aug. 23	2570	631	60	1114
Windlass	J. J. Hamblin	483,113	Sept. 20	1933	489	60	1742
Windmill	G. W. Campbell	481,712	Aug. 30	3179	{776 / 777}	60	1247
Windmill attachment	H. D. Bixler and G. C. Ferguson	483,206	Sept. 27	2091	530	60	1785
Windmill-regulator	E. C. Norton	483,060	Sept. 20	1881	476	60	1731
Windmill-regulator. Automatic	E. T. Crowe	480,399	Aug. 9	1048	263	60	792
Window	J. W. Cooper	480,806	Aug. 16	1692	422	60	934
Window	O. M. Edwards	482,344	Sept. 13	711	170	60	1489
Window	R. H. White	480,682	Aug. 9	1500	{373 / 374}	60	880
Window-chair	A. Boettcher	480,991	Aug. 16	1980	496	60	990
Window-cleaner	A. L. Lewis	483,359	Sept. 27	2342	589	60	1831
Window-cleaners. Safety device for	R. d'Heureuse	482,865	Sept. 20	1538	383	60	1663
Window-frame	W. T. Gregg	478,593	July 12	817	202	60	178
Window-frame	F. Meaker and T. O. Arbegust	480,908	Aug. 16	1846	459	60	965
Window frame and sash	J. Anderson	481,091	Aug. 16	2149	533	60	1022
Window frame and sash	J. Wilson	482,989	Sept. 20	1744	441	60	1702
Window or door screen	C. J. Shirreff	481,066	Aug. 16	2111	525	60	1015
Window-screen	W. E. Cobb	479,752	July 26	2669	662	60	558
Window-screen	H. B. Dodge	480,562	Aug. 9	1299	325	60	642
Window-screen	S. Roebuck	482,811	Sept. 20	1458	362	60	1646
Window seat	W. Engler	481,854	Aug. 30	3427	841	60	1295
Window-ventilator	G. W. Greig	483,483	Sept. 27	2509	632	60	1864
Window-washer. Rotating	H. B. Davis	481,140	Aug. 16	2236	551	60	1038
Winnowing-wheel for separating granular substances.	O. Sundgren	478,828	July 12	1183	293	60	249
Wire-box-strap machine	J. Vermeulen	481,444	Aug. 23	2751	677	60	1148
Wire coiling and cutting machine	E. J. Fulghum and L. Roberts	483,321	Sept. 27	2294	577	60	1821
Wire-coiling machine	W. Edenborn	480,564	Aug. 9	1300	326	60	842
Wire-coiling machine	W. Edenborn	480,565	Aug. 9	1301	326	60	843
Wire coupling. Underground	J. J. Purcell	483,327	Sept. 27	2303	579	60	1823
Wire fabric for bed-bottoms. Machine for making coiled	F. L. Bryant	482,071	Sept. 6	240	58, 59	60	1382
Wire fabric. Machine for weaving coiled	O. P. Briggs and F. L. Bryant	480,007	Aug. 2	381	{94 / 95 / 96}	60	653
Wire-feeding mechanism	F. H. Hardman	478,598	July 12	825	204	60	179
Wire gate	C. Berryman	479,394	July 26	2071	520	60	446
Wire machine. Barb	I. A. Kilmer	479,985	Aug. 2	329	81, 82	60	645
Wire. Machine to plait	O. Preston	482,589	Sept. 13	1117	{269 / 270}	60	1567
Wire, &c. Manufacture of rubber-coated	T. Guilleaume	483,110	Sept. 20	1929	489	60	1741
Wire mat	T. Midgley	482,061	Sept. 6	225	54	60	1379
Wire. Method of and apparatus for coiling and inserting	C. Jackson	482,965	Sept. 20	1706	{430 / 431}	60	1695
Wire. Method of and apparatus for tempering	F. Purdy	482,879	Sept. 20	1567	391	60	1668
Wire-netting machine	E. S. Bond	478,561	July 12	773	189	60	168
Wire-netting machine	H. K. Swinscoe	483,181	Sept. 27	2050	{517 / 518}	60	1776
Wire-netting machine	H. K. Swinscoe	483,182	Sept. 27	2053	518	60	1777
Wire. Pile	C. Ford	479,211	July 19	1767	443	60	371
Wire-reel	R. E. Miller and J. D. Bowman	481,306	Aug. 23	2533	621	60	1107
Wire rope. Process of and apparatus for manufacturing	A. F. W. Partz	482,190	Sept. 6	443	107	60	1422
Wire springs and couplings. Machine for making	S. Konz	482,427	Sept. 13	855	205	60	1516
Wire straightening and cutting machine	C. B. Brainard	482,000	Sept. 6	121	30	60	1358
Wire-stretcher	W. D. Fulbright	479,265	July 19	1848	463	60	387
Wire-stretcher	J. N. Hatcher	482,555	Sept. 13	1073	260	60	1556
Wire-stretcher	C. F. Steinkamp	479,901	Aug. 2	190	47	60	619
Wire stretcher and fastener	G. Chamberlain	483,320	Sept. 27	2293	577	60	1821
Wire stretcher or clamp	J. M. Klein	481,179	Aug. 23	2303	568	60	1065
Wire-tightener	J. L. Buckingham	482,035	Sept. 6	184	44	60	1371
Wire-tightener	L. M. Johnson	481,763	Aug. 30	3278	798	60	1267
Wire with fibrous material. Apparatus for covering	J. Buckner	483,043	Sept. 20	1830	465	60	1721
Wood and coal box	R. Federroll	478,931	July 12	1323	328	60	277
Wood-carving machine	W. R. Snyder	480,521	Aug. 9	1239	{311 / 312}	60	830
Wood-cutting tool	R. Roberts	479,306	July 19	1906	476	60	398
Wood-decorating machine	A. Tilton and A. Hormel	482,855	Sept. 20	1523	378	60	1660
Wood. Means for ornamenting	C. L. Goehring	480,462	Aug. 9	1154	{289 / 290}	60	812
Wood-molding machine	F. H. Van Houten	480,443	Aug. 9	1117	279	60	805
Wood. Process of and machine for bending and drying	R. P. Burkhardt	482,762	Sept. 20	1425	353	60	1639
Wood. Tool for ornamenting the surfaces of	C. M. Haynes	481,868	Aug. 30	3447	846	60	1299
Wooden pipe	A. M. Hawks	478,105	July 5	43	13	60	11
Woodworkers. Work-holder and safety-guard for universal	J. C. Thom	481,983	Sept. 6	93	24	60	1358
Woodworking-machine fence	G. W. Bugbee and F. Danner	480,902	Aug. 16	1839	457	60	963
Wool. Extracting fat from	W. T. Cutter	482,995	Sept. 20	1754	443	60	1704
Wool-washing machine	W. T. Forbes	478,410	July 5	555	134	60	108
Wool-washing machine	F. G. and A. C. Sargent	480,263	Aug. 9	858	219	60	759

Alphabetical list of inventions, July to September, inclusive—Continued.

Invention.	Name.	No.	Date.	Monthly volume. Spec.	Monthly volume. Dr'g.	Official Gazette. Vol.	Official Gazette. Page.
Woolen boot	W. H. Dodge and R. D. O. Smith	479,251	July 19	1830	459	60	383
Woven fabric	I. McCallum	480,855	Aug. 16	1764	441	60	949
Woven fabric. Figured	A. and J. Morton	483,078	Sept. 20	1878	476	60	1731
Wrapper	J. J. Cochran	481,846	Aug. 30	3414	838	60	1293
Wrapping-machine	M. E. Brigham	478,396	July 5	518	127, 128	60	102
Wrapping-machine	C. R. Schilling	480,239	Aug. 2	773	195, 196, 197	60	729
Wrench: *See* Carriage-wrench. Pipe-wrench. Chain-wrench. Pipe and nut wrench. Nut and bolt wrench. Ratchet-wrench.							
Wrench	R. Belles	480,801	Aug. 16	1684	420	60	932
Wrench	H. Bornstein	479,698	July 26	2586	638	60	539
Wrench	H. P. Christensen and H. Nelson	478,405	July 5	535	130	60	105
Wrench	E. A. Cochran	481,389	Aug. 23	2661	652	60	1130
Wrench	R. S. Gillespie and H. James	481,110	Aug. 16	2177	539	60	1027
Wrench	J. H. Guiley and J. E. Wright	482,245	Sept. 6	527	125	60	1437
Wrench	J. C. Johnson	483,222	Sept. 27	2112	535	60	1788
Wrench	J. A. Litel	483,461	Sept. 27	2483	625	60	1859
Wrench	B. McGilvray	481,506	Aug. 23	2848	700	60	1168
Wrench	W. Miller and W. S. Duvall	478,121	July 5	65	17	60	15
Wrench	F. Mossberg	482,021	Sept. 6	164	39	60	1367
Wrench	F. Mossberg	482,749	Sept. 20	1370	339	60	1628
Wrench	J. Ryan	482,198	Sept. 6	453	110	60	1424
Wrench	G. B. Stevenson	482,281	Sept. 6	589	140	60	1449
Wringer: *See* Clothes-wringer. Mop-wringer.							
Wringing-machine	J. W. Finegan	480,457	Aug. 9	1149	288	60	811
Writing and drawing device	J. J. Pauls	478,129	July 5	73	19	60	17
Yard-stick holder	E. R. Northam	481,188	Aug. 23	2318	571	60	1068
Yeast-cells. Separating	E. Allert	479,130	July 19	1641	410	60	347
Yoke. Draft	C. W. Snedeker	479,535	July 26	2317	579	60	493
Yoke. Neck	L. W. Rothrock	481,825	Aug. 30	3386	830	60	1287
Yoke. Neck	J. Ziegler	481,996	Sept. 6	114	28	60	1357
Zinc or spelter from ores. Reducing	C. James	478,110	July 5	48	.....	60	12
Zinc plates to their bed. Device for straining	E. S. Jones	478,607	July 12	838	206	60	182
Zinc. Reducing	C. James	482,438	Sept. 13	872	.....	60	1519
Zither attachment	P. Stark and K. Gütter	480,750	Aug. 16	1603	402	60	917

ALPHABETICAL LIST OF DESIGNS.

Design.	Name.	No.	Date.	Official Gazette. Volume.	Official Gazette. Page.
Advertising game-board	R. G. Martindale	21,679	July 5	60	150
Andiron	E. T. Schoonmaker	21,726	July 19	60	432
Badge	J. Best	21,859	Sept. 13	60	1606
Badge	J. K. Davison	21,688	July 5	60	152
Badge	E. Gash	21,758	Aug. 9	60	887
Badge	W. B. Munger	21,846	Sept. 6	60	1472
Badge	G. B. Rand	21,790	Aug. 23	60	1182
Badge	L. Reichert	21,779	Aug. 16	60	1045
Badge	J. F. Roche	21,704	July 12	60	291
Badge	G. A. Schlechter	21,745	Aug. 2	60	730
Badge. Campaign	G. A. Schlechter	21,866	Sept. 27	60	1879
Badge or similar article	H. W. Welles	21,814	Aug. 30	60	1320
Baking-pan	G. H. Reinnagel	21,744	Aug. 2	60	730
Balloon	G. B. Gifford	21,754	Aug. 2	60	731
Basin slabs. Standard for wash	T. B. Dixey	21,874	Sept. 27	60	1880
Bedstead	J. Totham	21,724	July 19	60	431
Bottle	F. E. Wilcox	21,856	Sept. 13	60	1605
Bottle	J. B. Grommes	21,826	Aug. 30	60	1322
Bottle	B. I. Mott	21,711	July 12	60	292
Bottle. Pocket	F. H. Thuemler	21,736	July 26	60	571
Bowl	H. N. Fraser	21,728	July 19	60	432
Bowl	J. D. Bergen	21,681	July 5	60	150
Box	G. Wilkinson	21,755	Aug. 2	60	731
Box	E. L. Button	21,796	Aug. 23	60	1183
Box	C. L. Dobrick	21,840	Sept. 6	60	1472
Bread-pan	W. C. Estes	21,762	Aug. 9	60	887
Bridle-bit frame	T. H. Murphy and P. M. Zoeggele	21,710	July 12	60	292
Brooch-pin	W. W. Hall	21,872	Sept. 27	60	1880
Broom-rack	T. Tugby	21,759	Aug. 9	60	887
Brushes, &c. Backs for	P. E. Whitson and O. G. Noaker	21,708	July 12	60	291
Brushes or similar articles. Backs of	G. L. Crowell, Jr.	21,709	July 12	60	292
Buckle. Suspender	C. C. Wientge	21,847	Sept. 6	60	1473
Button, &c.	C. R. Harris	21,791	Aug. 23	60	1182
Button	A. A. Bushee	21,869	Sept. 27	60	1879
Button. Campaign	W. J. Van Keuren	21,843	Sept. 6	60	1472
Button. Campaign	W. S. How	21,815	Aug. 30	60	1320
Button-hook	R. Liebmann	21,729	July 19	60	432
Cane-handle	C. Wester	21,792	Aug. 23	60	1182
Cap	F. S. Evans	21,784	Aug. 23	60	1181
Car body. Railway	M. S. Brundage	21,712	July 12	60	292
Carpet	R. I. Sloan and R. D. Gallagher	21,824	Aug. 30	60	1321
Carpet	P. C. Chambellan	21,829	Aug. 30	60	1322
Carriage-body	H. T. George	21,857	Sept. 13	60	1605
Carriage-step	A. T. Demarest	21,773	Aug. 9	60	889
Chain. Watch	W. R. Wilson	21,780	Aug. 16	60	1045
Chair	D. L. Fry	21,689	July 5	60	152
Clasp	Z. Nuttall	21,849	Sept. 6	60	1473
Cloak	S. Baxter	21,845	Sept. 6	60	1472
Clutch-frame	A. Popkin	21,828	Aug. 30	60	1322
Coffin-handle	H. W. Hill	21,767	Aug. 9	60	888
Coffin-pedestal	O. McCarthy	21,775	Aug. 9	60	889
Coffin-plate	G. G. Kregel	21,757	Aug. 2	60	731
Columns. Casing for urania	O. McCarthy	21,774	Aug. 9	60	889
Confection	L. Schupmann	21,865	Sept. 27	60	1879
Corkscrew	D. E. Mapother	21,760	Aug. 9	60	887
Cornice	C. Puddefoot	21,761	Aug. 9	60	887
Cup	A. Carlewitz	21,731	July 19	60	432
Decorative fabric	C. E. Haviland	21,686	July 5	60	151
Decorative fabric	S. M. Schwab, Jr.	21,734	July 26	60	570
Dental punch	S. M. Schwab, Jr.	21,735	July 26	60	570
Dish. Cover	C. E. Blake, Sr.	21,771	Aug. 9	60	888
Fabrics. Ornamentation of	C. E. Haviland	21,687	July 5	60	151
Finger-ring	H. Sturm	21,795	Aug. 23	60	1183
Fireplace-front	J. A. Dawley	21,691	July 5	60	152
Flag	R. M. Hovey	21,725	July 19	60	432
Floral lapel ornament	J. W. MacNamara	21,788	Aug. 23	60	1182
Glass vessels. Ornamentation of	H. F. G. Fuchs	21,690	July 5	60	152
Glass vessels. Ornamentation of	T. G. Hawkes	21,705	July 12	60	291
Handle for cutlery, &c.	L. A. Rose	21,727	July 19	60	432
Handle for cutlery, &c.	W. W. Hayden	21,809	Aug. 30	60	1320
Handle for cutlery, &c.	W. W. Hayden	21,810	Aug. 30	60	1320
Handle for cutlery, &c.	W. W. Hayden	21,811	Aug. 30	60	1320
Handle for spoons, &c.	W. W. Hayden	21,812	Aug. 30	60	1320
Handle for spoons, &c.	J. Larson and J. M. Van Slyke	21,854	Sept. 13	60	1605
Handle for spoons, &c.	J. Larson and J. M. Van Slyke	21,855	Sept. 13	60	1605
Handle for spoons, &c.	J. W. Maillot	21,837	Sept. 6	60	1471
Handle for spoons, &c.	C. C. Wientge	21,838	Sept. 6	60	1471
Hat-rack	G. Wilkinson	21,839	Sept. 6	60	1471
Horn. Campaign	J. Honecker	21,781	Aug. 23	60	1181
Knife-handle	H. L. Millis	21,789	Aug. 23	60	1182
	F. J. Kaldenberg	21,693	July 5	60	152
